BÖLÜM 13

GÖRGÜ TANIKLIĞININ GÜVENİLİRLİĞİNİ ETKİLEYEN PSİKOLOJİK FAKTÖRLER

Nesrin Duman

Ön Söz

Bir suça tanık olduğunuzu varsayın. Bu bir hırsızlık, gasp, soygun, arabadan ateş etme veya yağma suçu olabilir. O sırada bir suçun işlendiğini biliyor veya bilmiyor olabilirsiniz. Belki de birkaç dakika içinde patlayacak olan bir binadan çıkan birini görmüşsünüzdür. Belki olaydaki mağdur kişi sizsiniz ya da belki de bir görgü tanığıydınız. Koşullar ne olursa olsun, güçlü ya da zayıf, adaletin işleyişi için önemli sonuçlar doğurabilecek bazı hafıza izleri vardır. Suçluyu gördüğümüz için polis sizden bir açıklama yapmanızı isteyecektir. Daha sonra, belki sadece saatler sonra veya belki aylar sonra, suçlunun kimliğini tespit etmeye çalışmak için karakola çağrılacaksınız. Daha sonra size bir odada yan yana sıralanmış insanlar ya da masaya yayılmış fotoğraflar gösterilecek ve o vahim olayda gördüğümüz kişinin karşınızda duran ya da resimdeki insanlardan biri olup olmadığını belirtmeniz istenecek... (akt. Lorenza, 2003; Wells, 1993)

Giriş

Görgü tanıklığı, hukuki bir terimdir. Kişilerin şahit (tanık) oldukları bir olayı anlatmalarını ifade eder. Görgü tanıklığı, mahkeme sürecinde oldukça önemli bir yere sahiptir. Tanık beyanı hem ceza hem de hukuk yargılamasında takdiri delil olarak kabul edilmektedir. Özellikle bazı olaylarda ve tabi davalarda, tanık beyanı delilinden başka bir delille ispat imkânının olmaması durumunda görgü tanıklığı daha da önem kazanmaktadır. Bu noktada yargılamanın selameti için delilin yani görgü tanığının beyanlarının güvenilir olması elzemdir.

Tanık, bir olayla ilgili olarak beş duyu organından (görme, duyma, dokunma, tatma, koklama) en az birisi ile bilgi edinen kişidir (Altunkaya, 2022). Bir kimsenin bir olay veya konu ile ilgili olarak tanıklık yapabilmesi daha doğrusu beyanlarının mah-

eşitsizliği, aşağılanma ve baskı, aile problemleri, sevilen birinin kaybı ise terör suçu işleyen kadınların motivasyonlarındandır (Berko ve ark., 2010; Jacques ve Taylor, 2009). Bölüm kapsamında son olarak ise kadın suçluların tedavi ihtiyaçlarına ve önerilerine değinilmiştir. Cinsiyete özgü suç riski yönetimi ve tedavi planlarının uygulanmasında önemli olabilecek noktalar vurgulanmıştır.

Anahtar Kelimeler

Kadın suçluluğu, kadın ve şiddet, feminist kriminoloji, mağduriyet-suç döngüsü, psikopatoloji ve kadın suçluluğu, kadın suçlularda psikopati, travma sonrası stres bozukluğu, kadın ve adam öldürme suçu, filisid, kadın cinsel suçlular, kadın ve terör suçu.

Tartışma Soruları

1. Psikopatoloji ve suç arasında kesin ve nedensel bir ilişki bulunmamasına rağmen suça yönelen kadınlarda görülen psikolojik sağlık sorunlarını nasıl açıklarsınız?
2. Kadın suçluluğu ile ilişkilendirilen ataerkil toplum yapısı ve cinsiyet rolleri, ülkemizde kadın suçluluğu ile nasıl ilişki göstermektedir?
3. Suça yönelen kadınlar için cinsiyete özgü bir müdahale programı hazırlasanız çalışma alanlarınızda hangi ihtiyaçlara odaklanırsınız?
4. Grup terapilerine, sizce kadın suçluluğuna yönelik rehabilitasyon çalışmalarında nasıl yer verilmelidir.

BÖLÜM 14

MAĞDURİYET PSİKOLOJİSİ

Hilal Kaya Bal

“Büyük bir millet, gururunda, haklarında, tarihinde mağdur ve muzdaripti.”

Ahmet Hamdi Tanpınar

Giriş

Mağduriyet olgusunun en az suçun tarihi kadar eski olduğunu söylemek yanlış olmayacaktır. Nitekim suç mağduru denildiğinde, cürmün (suçun) ortaya çıkışı ile zarar gören bireyler ya da başka kurbanlar anlaşılmaktadır (Katoğlu, 2012). Ceza muhakemesi ve ceza hukuku açısından kritik olan suç mağduriyeti (Katoğlu, 2012), uzun yıllar göz ardı edilmiş; suç ve suçlunun araştırıldığı kadar öncelikli bir araştırma alanı olamamıştır (Erem, 1988).

Mağduriyet, ceza hukuku ve ceza muhakemesinin olduğu kadar kriminoloji, sosyoloji ve psikoloji gibi farklı bilim dallarının da inceleme alanı içerisinde yer alır. Erem (1988), suçluyu araştırmak kadar mağdurun neden mağdur olduğunun araştırılması, suça eğilim gibi suç mağduriyetine eğilimin de incelenmesi gerektiğine işaret ederken klasik ceza adalet sisteminin, toplumsal boyutta infiale sebep olmuş olgular da dâhil olmak üzere zamanla mağduru sürecin dışında bıraktığına ve mağdurun kendisini nasıl koruyabileceğine odaklanmaktan ziyade; toplumun kendisini suça karşı korumasına odaklandığını ifade eder.

Bölümün ilerleyen aşamalarında mağdurbilime ilişkin tarihsel süreçlere, mağdurbilim kuramlarına ve mağduriyetin psikoloji perspektifinden ele alınışına değinilecektir.

14.1. Mağdurbilim (Viktimoloji)

Mağdur kelimesi, Türk Dil Kurumunca “haksızlığa uğramış, zarar görmüş kişiyi” tanımlamaktadır (2023). Ferguson ve Turvey (2009), Latince bir terim olarak ‘victima’

oluşu, mağdurların yeterince destek alamayışı ve ihmal edilişi, suç olgusunun toplumsal bir sorun olarak devam ediyor olması gibi etmenler toplumun güvenlik ve adalet algısını zedeler ve suç korkusunu besler görünmektedir.

Özet

Bu bölümde ele alınan suç mağduriyeti kavramı, yalnızca psikoloji perspektifinden değil yanı sıra hukuksal boyutu ve yasal tanımlamaları ile ek olarak adalet sistemi içerisinde mağdurun konumuna değinilmiştir. Alanyazında suç mağduriyetini inceleyen bir bilim dalı olarak viktimolojiden ve viktimoloji kuramlarından kısaca bahsedilmiştir. Yeni bir yaklaşım olarak ortaya atılan, Amerika ve Avrupa ülkelerinde pratikte kullanımı bulunan onarıcı adalet yaklaşımına ilişkin bilgiler paylaşılmıştır. Suç mağduriyetinin bireysel boyutta yol açtığı zorluklara ve bu kişilerde görülebilecek belirtilere odaklanılmış; psikologların suç mağduriyeti ile çalışırken sorumluluk alanlarının neler olabileceği üzerinde durulmuştur. Suç mağduriyetinin toplumsal boyutta etkileri olabileceği alanyazın ışığında suç korkusu kavramı ile ilişkilendirilerek kısaca ele alınmıştır.

Anahtar Kelimeler

Suç mağduriyeti, viktimoloji, mağduriyet psikolojisi.

Tartışma Soruları

1. Adli psikolojik değerlendirmelerin klinik psikolojik değerlendirmeden farkları nelerdir?
2. Mağduriyetin oluşması için gereken unsurlar nelerdir?
3. Onarıcı adalet yaklaşımı ile klasik ceza adalet yaklaşımının farkları nelerdir?
4. Kırık camlar kuramının öne sürdüğü sav nedir?

BÖLÜM 15

ADLİ GÖRÜŞME VE ETİK

Beyzanur Kovan

Ön Söz

Adli görüşme, çoğu zaman kişilerde gizemli ve heyecan dolu bir dizi olay içerdiği yönünde izlenim bıraktığından oldukça ilgi çekici bir kavramdır. Bu durum üzerinde çeşitli televizyon programları, diziler ve filmler etkili olabilmektedir. Bununla birlikte mağdur kişinin hakkını savunabildiği ve bunun sonucunda suçlunun etkin bir şekilde suça konu eyleminin karşılığını aldığı düşüncesi adil dünya inancımızla örtüşmektedir ve adli görüşmelerin çoğunlukla yalnızca bu amaca hizmet ettiği düşüncesi yaygındır. Ancak adli sistem içerisinde yalnızca bir suçun mağduru olan bireyler bulunmaz. Boşanma gibi kişiler arası ilişkilerde, kamu yararını ilgilendiren velayet düzenlemesinde, korunmaya ihtiyacı olan bir çocuk ya da suça sürüklenen bir çocuk tespit edildiğinde ilgili kişilerle yapılan görüşmeler de birer adli görüşmedir.

Adalet sistemi, kurallı ve sınırları keskin bir şekilde kanunlarla belirlenmiş bir yapıdır. Dolayısıyla adli destek görevlileri tarafından bireylerin olumlu ya da olumsuz yaşam deneyimlerine dair sonsuz ayrıntıları ve ihtimalleri içeren görüşmelerin de belirli sınırlar içerisinde adalet sistemine uyumlanması gerekmektedir. Bu noktada bir adli destek görevlisinin sınırlılıklarını belirleyen ve güvenli bir şekilde görevini ifa etmesini sağlayan şey etik kurallardır.

Giriş

Adli Destek Görevlisi Nedir?

Üniversitelerin psikoloji, psikolojik danışmanlık ve rehberlik ile sosyal hizmetler bölümlerinden mezun olarak Adli Destek ve Mağdur Hizmetleri Dairesi Başkanlığı

nır, beni zorlamak istemiyorsanız bildirmeyin” açıklamasında bulundu. Bu durumda;

- a. Adli destek görevlisi yarar-zarar dengesini gözeterek suç duyurusunda bulunmalı mıdır?
 - b. Adli destek görevlisinin suç duyurusunda bulunması görüşmede bulunduğu kişi ile arasındaki profesyonel ilişkiye zarar verir mi?
 - c. Adli destek görevlisinin suç duyurusunda bulunması hâlinde aynı dosyada çalışmaya devam etmesi uygun mudur?
2. Adli destek görevlisi, adli görüşme içerisinde kişinin ifadelerinde çelişkili bir durum tespit ettiğinde bunu kişiye doğrudan sormalı mıdır? Ceza yargılaması dosyası ya da hukuk yargılaması dosyası olması durumunda adli destek görevlisinin tutumu farklı mı olmalıdır?
 3. Adli destek görevlisi velayet değişikliği için açılmış olan bir dava dosyası kapsamında yaptığı bir görüşme içerisinde velayete konu olan çocuğun başka bir olay dolayısıyla mağdur ya da tanık olarak ifade vermesi gerektiğini ve bu sebeple de çok heyecanlı ve korkuyor olduğunu fark ettiğinde bu duruma ilişkin çocuğa genel bilgilendirme yapması sınırlarını aşması olarak değerlendirilebilir mi?
 4. Kapalı ve açık uçlu sorular hangi durumlarda kullanılmalıdır? Hangi durumlarda kapalı uçlu sorular yönlendirmeye sebep olabilir?

ADLİ PSİKOLOJİDE BİLİRKİŞİLİK VE ADLİ RAPOR HAZIRLAMA

Gülşah Şükran Kale Yolcu

Giriş

Psikolojinin alt dallarının biri olan adli psikoloji, hukuk ve psikolojinin kesişiminde yer alması sebebiyle hem psikoloji disiplininde hem de hukuk alanında yer alan konuları içermektedir. Bu konulardan önemli bir tanesi de bilirkişiliktir. Nitekim adli psikoloji uygulamalarının büyük bir kısmı bilirkişilik uygulaması olarak gerçekleşmektedir. Yargılama süreçlerinde psikolojinin konusuna giren her konuda (*gelişim psikolojisi, bilişsel psikoloji, klinik psikoloji, trafik psikolojisi vb. gibi*) psikologlar uzman oldukları konular hakkında yazılı ya da sözlü olarak bilirkişi görüşü sunabilmektedirler. Yargı kararlarının psikologların bilirkişi olarak sundukları görüşler doğrultusunda şekillendiği düşünüldüğünde konunun önemi daha iyi anlaşılabilir. Özellikle de genel adalet sisteminden ayrı ve özel bir önem taşıyan çocuk adalet sistemine özgü olarak düşünüldüğünde uzman görüşlerinin olmazsa olmaz olduğu vurgulanmalıdır. Çocuk suçluluğu, velayet, kişisel ilişki kurulması, evlat edinme gibi konularda verilen yargı kararlarında, hazırlanan bilirkişi raporlarının çocukların geleceklerini etkileyen en önemli dayanaklardan olduğu unutulmamalıdır.

Ön Söz

Hukuk sisteminin temel amacının toplumsal düzeni sağlamak olduğu söylenebilir. Toplumı meydana getiren bireyler ve kurumların nasıl davranması veya nasıl davranmaması gerektiğini ortaya koyan hukuk kuralları devlet gücüyle desteklenir. Nitekim yapılmaması gereken bir davranış yapıldığında ya da yapılması gereken bir davranış yapılmadığında bunun yaptırımını sağlayacak bir otoriteye ihtiyaç vardır. Böylece her devlet, kendi hukuk sisteminin işleyişini sağlayabilecek bir adli sistem oluşturmuştur. Adli süreçler adli kararların alındığı ve işletildiği süreçler olarak tanımlanabilir. Sağlıklı bir adli karar alma süreci ise doğru ve en kesin bilgiyi elde etmekten geçer.

Bölüm 1

PREOPERATİF DEĞERLENDİRME

Fatma Işıl Şengül, Betül Kozanhan

Preoperatif yani ameliyat öncesi dönem, operasyonun planlanması ile başlar ve anestezi indüksiyonu ile son bulur. Bu dönemde hastanın kapsamlı olarak değerlendirilmesi, cerrahi prosedür ve anestezi işleminin başarısı açısından oldukça önemlidir. Preoperatif değerlendirmede temel amaç cerrahi tedaviyi olumsuz yönde etkileyebilecek risk faktörlerini erken saptamak ve eğer mümkün ise bu durumu ameliyat öncesi dönemde düzelterek olası komplikasyonları önlemek ya da en aza indirmektir. Yeterli bir preoperatif değerlendirme; planlanan cerrahi işlemin ertelenmesini önleyerek ve oluşabilecek komplikasyonları minimuma indirerek perioperatif morbiditeyi ve hastanede yatış süresini kısaltır ve perioperatif bakım maliyetini azaltır. Preoperatif değerlendirme için en uygun zamanlama, hastanın genel sağlık durumu, diğer bakım sağlayıcılarla olan ilişkisi, planlanan prosedür risk derecesi ve prosedürün aciliyetine bağlıdır. Preoperatif dönemde anestezi ve postoperatif bakım için bir plan oluşturulur ve hasta bilgilendirilerek onamı alınır. Bu bölümde preoperatif değerlendirme konusu kapsamlı bir biçimde ele alınmıştır.

I. Tıbbi Öykü ve Sistemlerin Gözden Geçirilmesi

Preoperatif değerlendirmede hasta hikâyesinin sağlıklı bir şekilde elde edilmesi, fizik muayene bulguları ve laboratuvar testleri kadar önemlidir. Bu amaçla perioperatif olumsuz olaylarla ilişkili olduğu gösterilen koşulları tespit etmek için hazırlanmış çeşitli tarama soruları kullanılabilir (Tablo 1) (1). Hastanın tıbbi geçmişi, mevcut hastalıkları ve bunların süresi ve ciddiyeti, kullandığı ilaçlar, alerji varlığı, tütün ve madde bağımlılığı, geçmiş cerrahi öyküsü ve hasta ya da aile üyelerinde anestezi ile geçmiş deneyimler ve sorunlar öğrenilmelidir. Daha önceki ameliyatlarda hava yolu yönetimi zorluğu, ameliyat sonrası ciddi bulantı ve kusma varlığı, malign hipertermi veya psödokolinesteraz eksikliği açısından aile öyküsü sorulmalıdır. Anestezi sonrası aşırı boğaz ağrısı, anestezi ile ilgili dış yaralanması veya “küçük boy solunum tüpü gerektirmesi” öyküsü, solunum yolu yönetiminde zorluğa işaret eder. Önceki anestezi işlemine ait kayıtların gözden geçirilmesi hava yolu yönetimini planlamaya yardımcı olabilir. Hava yolu yönetimi sırasında zarar görme

Tablo 8. Elektif Cerrahi Öncesi Açlık Süreleri (19)

		Elektif cerrahi	Acil cerrahi
Risk faktörü olmayan hasta Aspirasyon riski önemsenmeyecek kadar düşük	Berrak sıvı	Kısıtlama yok	Kısıtlama yok
	Anne sütü	Kısıtlama yok	
	Yemek, mama, anne sütü dışındaki sütler	2 saat açlık süresi	
Hafif riskli Hasta açısından; <ul style="list-style-type: none"> • Ciddi sistemik hastalık • Sınırdan obezite (VKİ 30-39 kg/m²) • Bir yaşına kadar olan çocuklar • Hiyatal herni İşlem açısından; <ul style="list-style-type: none"> • Endoskopi • Bronkoskopi 	Berrak sıvı	Kısıtlama yok	Kısıtlama yok
	Anne sütü	2 saat açlık süresi	
	Yemek, mama, anne sütü dışındaki sütler	4 saat açlık süresi	
Orta riskli Hasta açısından; <ul style="list-style-type: none"> • Hayatı tehdit eden ciddi sistemik hastalık varlığı, • Ciddi obezite (VKİ ≥40 kg/m²), OSA • Hava yolu anormallikleri • Hiperemezis, özefageal anormallikler (akalazyza, atrezi, TOF, gastroparezi), bağırsak obstrüksiyonu (ileus, pilor stenozu vb.) İşlem açısından; <ul style="list-style-type: none"> • Ventilasyon desteği öngörülen hasta 	Berrak sıvı	2 saat açlık süresi	Kısıtlama yok, uygunsuzsa ketamin kullanılmalı
	Anne sütü	4 saat açlık süresi	
	Yemek, mama, anne sütü dışındaki sütler	6 saat açlık süresi	

VKİ: Vücut kitle indeksi, OSA: Obstrüktif uyku apnesi TOF: Trekea-özefageal fistül

GENEL ANESTEZİ ÖNCESİ MALZEME VE HASTA HAZIRLIĞI

Aslı Alkan, Handan Güleç

Genel anestezi, cerrahi ve diğer ağrılı müdahalelerin, yeterli analjezi ve yeterli kas gevşemesi ile hızlı ve güvenli bir şekilde uygulanmasını sağlar. Bu sürecin başarılı olabilmesi için preoperatif klinik değerlendirmenin yanı sıra; yapılacak cerrahi müdahaleye yönelik ameliyathane odasının ve odadaki malzemelerin eksiksiz bir şekilde hazırlanması gerekmektedir. Bu hazırlık sürecinde anestezi teknisyenleri kilit rol oynamaktadır. Kullanılacak ilaçlar, cihazlar ve monitörlerin muhafaza edilmesi, hazırlığı, kullanımı ve kullanım esnasında karşılaşılabilecek olası sorunların yönetimi konusunda anestezi teknisyenleri yeterli bilgi sahibi olmalıdır. Ayrıca, hastanın servisten ameliyathaneye kabulü yanı sıra operasyon öncesinde uygun monitörizasyonu ve intraoperatif olası sorunların yönetimi konusunda bilgi ve beceri kazanmaları gerekmektedir (1, 2). İşte bu bölümde genel anestezi öncesi malzeme ve hasta hazırlığından ayrıntılarıyla bahsedilmiştir.

I. Genel Anestezi Öncesi Malzeme Hazırlığı

1. İlaç ve Diğer Malzemelerin Hazırlanması

Yapılacak cerrahiye uygun kullanılacak infüzyon sıvıları, ilaçlar ve gerekli malzemelerin eksiksiz olarak temin edilmesi, uygun şartlarda muhafaza edilmesi ve gerektiği takdirde en hızlı şekilde ulaşılabilmesinin sağlanması zorunludur. Preoperatif hazırlıkta ilk aşama anestezi teknisyeninin ameliyat odasına hastanın kabulünden önce gelerek ilaç ve diğer malzemeleri hazırlaması ile başlar.

Anestezi Teknisyeninin Görev ve Yükümlülükleri

- Perioperatif dönemde kullanılan her türlü ilaç, sıvı, tıbbi malzeme ve sarf malzemenin temini,
- Kullanılan malzemelerin belirli aralıklarla kontrol edilmesi, bitmekte olan veya azalan malzemelerin temininin sağlanması,

dir. Damar yolu açmak için kullanılacak kateter hastanın yaşı ve cerrahi işlemin kanama riskine göre belirlenmelidir. Kalından inceye doğru 16, 18, 20, 22 ve 24 F numaralı intraketler masada hazır bulunmalıdır.

Hastanın genel durumu, cerrahi sürenin uzunluğu, kanama riskinin fazla olması gibi durumlarda standart monitörizasyon ve damar yoluna ek olarak arteriyel kan basıncı ölçümü, santral venöz kateter gibi ek hazırlıklar gerekebilir. Bu işlemler için gerekli malzemeler steriliteye özen gösterilerek hazırlandıktan sonra, sterilite kurallarına uyularak anestezi teknisyenin de yardımı ile anestezi uzmanı tarafından uygulanır.

Postoperatif ağrı için ameliyat sonrası analjezi sağlamak amacıyla epidural veya devamlı periferik sinir bloğu kateterleri takılması gerekebilir. Bu gibi durumlarda anestezi uzmanı ile önceden iletişim kurularak ek hazırlık yapılmalıdır.

Bölüm 3

PREMEDİKASYON VE SEDASYON

Handan Güleç, Abdulkadir But

Operasyon öncesi ameliyata gireceği anı bekleyen her hasta, bir ameliyat endişesi ile beraber anksiyeteye sahiptir. Özellikle çocuklar, anne-babadan ayrılmanın verdiği endişe ile daha fazla anksiyete hissedebilir. Preoperatif stresin hasta üzerinde olumsuz biyolojik ve psikolojik sonuçları vardır. Premedikasyon ve sedasyon cerrahi öncesi sadece anksiyeteyi gidermez, aynı zamanda kolay bir anestezinin ön hazırlığını da sağlar. Örneğin premedikasyon ile ağız içi sekresyonların azalması, daha konforlu bir entübasyona olanak verir. Bu bölümde premedikasyon ve sedasyonun amaçları ve bu amaçla kullanılan çeşitli ilaçların özelliklerinden bahsedilmiştir.

I. Premedikasyon ve Sedasyonun Amaçları

Premedikasyon terimi ilk kez 1920 yılında Amerikalı Mc Meckan tarafından kullanılmıştır. Halk arasında cesaret iğnesi olarak da bilinen premedikasyon, ameliyat öncesi, özellikle korku ve heyecanı gidermek için gerekli ilaçların uygun yollar-
dan hastaya uygulanması olarak tanımlanır.

Premedikasyonun Amaçları

- Operasyon öncesi korku, heyecan ve endişeyi gidermek,
- Sekresyonları azaltmak,
- İstenmeyen refleksleri önlemek,
- Metabolizmayı yavaşlatarak anestezik madde gereksinimini azaltmak,
- Amnezi sağlamak,
- Mide pH ve volümünü azaltarak aspirasyon riskini ortadan kaldırmak,
- Postoperatif bulantı ve kusmayı önlemektir.

d. Nizatidin

Famotidin gibi uzun etki süreli bir H₂ reseptör blokeridir. Büyük bir kısmı değişmeden böbreklerden atılır. Duodenum ülserlerinin tedavisi için kullanılır. Böbrek yetmezliği varlığında doz kreatinin klerensindeki düşme ile orantılı bir şekilde azaltılır. En sık görülen yan etkileri terleme ve ürtikerdir.

3. Metoklopramid (Metpamid)

Metoklopramid alt özafageal sfinkter tonüsünü artırır ve gastrik boşalımı kolaylaştırır. Etki başlangıcı oral uygulamadan 30-60 dk, İM ya da İV uygulamada ise 1-3 dakikadır. Özellikle, diyabet hastaları, gebeler, gastroparezisi olan hastalarda preoperatif gastrik boşalmayı hızlandırır ve gastrik sıvı volümünü azaltmak için kullanılır. Metoklopramid ilişkili yan etkiler; anksiyete, huzursuzluk ve depresyon gibi santral yan etkiler ile hiperprolaktinemi ve QT interval uzamasıdır. Dozu 10 mg'dır.

Bölüm 4

MONİTÖRİZASYON VE İZLEM

İsmail Tuna Geldigitti, Necla Dereli

Monitörizasyon Latince’de uyarmak, hatırlatmak ya da ihtar etmek anlamına gelen *monere* kelimesinden gelir. Anestezi sırasında hastanın mevcut klinik verilerinin yorumlanarak o andaki veya gelecekteki istenmeyen talihsizlikler veya olayların fark edilmesini sağlar. Anestezi sırasında anestezi ajanlarının kardiyopulmoner depresan etkileri, homeostaz değişiklikleri ve hastaların farmakolojik, cerrahi veya fizyolojik müdahalelere yanıt vermeleri nedeniyle anestezi alan her hasta monitörize edilmelidir. Hastaların monitörize edilmesi; solunum devresinden ayrılma, hipoventilasyon, endobronşiyal ya da özofageal entübasyonu, hipoksi, hipovolemi, anestezi aşırı dozu, pnömotoraks, hava embolisi, hipotermi, hipertermi, asit baz dengesi bozuklukları ve kardiyak disritmiler gibi istenmeyen olayların fark edilmesini sağlar.

Anestezi sırasında sirkülasyon, ventilasyon, oksijenizasyon ve doku perfüzyonunun yeterli olup olmadığı monitörize edilmelidir. Bu standartlar tüm anestezi süresince geçerlidir. Ancak acil durumlarda yaşam destekleyici önlemler önceliklidir. Tüm bu önlemler, kaliteli bir hasta bakımını sağlamak içindir. Bu bölümde temel monitörizasyon parametrelerinden ve bu parametrelerin izleminden bahsedilmiştir.

I. Temel Anestezi Monitörizasyonu

Monitörizasyon tüm genel anestezi, rejonel anestezi ve monitörize anestezi işlemleri sırasında kullanılır. Temel anestezi monitörizasyonu ilk kez 1986’da Amerikan Anesteziyolojistler Derneği (ASA) tarafından belirlenmiş ve standardize edilmiştir (1). Devamlı monitörizasyon sırasında kısa kesintiler olabilir. Bu standartlar doğumdaki hastanın izleminde veya ağrı yönetimi sırasında kullanıma uygun değildir.

tasyona ve serebral ödeme neden olur. Tedavide geç kalmırsa hastalar organ yetmezlikleri veya dissemine intravasküler koagulyasyon ile kaybedilebilir.

Anestezi indüksiyonunu takiben masseter spazmı veya kas rijiditesi meydana gelmesi, taşikardi ve EtCO₂ artışı anestezi ekibini uyarmalıdır. Ateş daha geç ortaya çıkan bir belirti olup vücut sıcaklığı 5 dakikada 1°C yükselebilir.

BUNU BİLİYOR MUSUNUZ?

EtCO₂'nin beklenmedik şekilde 2-3 kat yükselmesi malign hipertermi'nin en erken ve en duyarlı belirtisidir.

Malign hipertermi hayatı tehdit eden bir olay olup tanı konulduğu anda volatil anestetik uygulaması kesilmeli, hastalar %100 oksijen ile ventile edilmeli ve hızla dantrolen tedavisine başlanmalıdır (10).

Bölüm 5

HAVA YOLU AÇIKLIĞI VE ALTERNATİF HAVA YOLU YÖNTEMLERİ

Gökhan Yıldız, Handan Güleç

Hava yolu açıklığının sağlanması ve hava yolu kontrolünün devam ettirilmesi anestezi pratiğinin en temel becerilerinden biridir. Anestezi uzmanlarının yanı sıra anestezi teknisyenleri de hava yolunun kontrolü konusunda yeterli bilgi ve beceriye sahip olmalıdır. Hava yolu anatomisine hakim olmak, anamnez ve fizik muayeneye gereken önemi göstermek ve kullanılacak hava yolu araçlarını tam ve eksiksiz sağlamak özellikle acil durumlarda anestezi ekibi ve hasta açısından hayat kurtarıcı olacaktır.

Endotrakeal tüpün bir laringoskop ya da alternatif araçlar aracılığıyla trakea içerisine yerleştirilmesi işlemine *entübasyon* denir. Entübasyon işlemi hava yolunun açık tutulması, solunumun kontrol altına alınması, aspirasyon riskinin azaltılması, cerrahi esnasında hava yolunun güvence altına alınması ve resusitasyon esnasında hava yolu kontrolü sağlar. Bu nedenle entübasyon işleminin sağlanabilmesi için her türlü bilgi ve alet kullanımı anestezi uzmanlarının ve anestezi teknisyenlerinin öncelikli alanıdır. Entübasyon işlemi gerçekleştirilemediğinde veya zor olduğu düşünüldüğü durumlarda ise alternatif hava yolu yöntemlerine ve gereçlerine hakim olunması gerekir (1).

Hava yolunun devamlılığının sağlanmasının zor olduğu olgular, yıllar içerisinde “zor hava yolu” kavramının gelişmesine ve “zor hava yolu algoritmalarının” gelişmesine neden olmuştur. “Zor entübasyon” 2003 yılında Amerikan Anestezist Derneği (ASA) tarafından “geleneksel laringoskopi ile uygun bir tüpün, deneyimli bir anestezist tarafından üçten fazla girişim, 10 dakikadan fazla süre veya her ikisi ile uygun yerleştirilememesi” olarak tanımlanmıştır. Zor entübasyon insidansı genel popülasyonda %1.5-13.2 olarak raporlanmış ve obez hastalarda bu oran %10.3-20.2 olarak tespit edilmiştir (2). Tüm bu gelişmeler ve bilgilerin ışığında bu bölümde üst hava yolu anatomisi, hava yolunun değerlendirilmesi ve muayenesi, hava yolu açıklığının kontrolü için donanım ve yöntemler konularına değinilecektir.

I. Anatomi

Üst hava yolu; ağız ve burun boşluğu, larinks (gırtlak), farinks (yutak)’ten oluşur. Farinks; kafa tabanından özafagus (yemek borusu) girişine kadar olan bölüme verilen addır. Ağız ve burun boşlukları burada birleşir. Orofarinks, nazofarinks ve

f. Özofageal Trakeal Kombitüp

Yapışık iki tüpten oluşur, özofagus ya da trakeaya yerleşmeleri havalandırma açısından problem oluşturmaz. Uçlarında 15 mm'lik konnektörleri bulunur. Uzun olan tüpün ucu kapalıdır, bu sayede gaz tüpün yan tarafında bulunan deliklerden çıkar. Kısa olan tüpün ucu açıktır ve yan tarafında delik yoktur. Oral yolla körlemesine yerleştirilir. İki adet kafı bulunur, proksimaldeki orofarengal balon 100 cc, distaldeki özofagealbolon 15 cc'lidir ve ikisinin arasında hava delikleri bulunur. Özofageal balon mide içeriğinin aspire edilmesini önler.

g. King Laringel Tüp

Tek lümenlidir, küçük özofageal ve büyük hipofarengal olmak üzere iki adet kafı vardır. İki kaf da tek bir şişirme hattından şişirilir. İki kaf arasında yanlarda hava geçişine izin veren delikler vardır. Resim 7 ve Resim 8'de LMA örnekleri gösterilmiştir.

Resim 7. Klasik LMA

Resim 8. Proseal LMA

Bölüm 6

GENEL ANESTEZİ İNDÜKSİYONU

Nuran Akıncı Ekinci, Betül Kozanhan

Genel anestezi; anestezi ajanlar ile oluşturulan, otonom, kardiyovasküler, solunum ve termoregülatör sistemlerde fizyolojik stabilitenin sürdürülmesi ile birlikte bilinçsizlik, amnezi, antinosisepsiyon ve immobilité gibi spesifik davranışsal ve fizyolojik özellikler içeren geri dönüşümlü bir durumdur. 1930'lu yıllarda eter ve kloroform ile maruz kalma süresi ve dozu ile ilişkili ortaya çıkan belirtilere göre genel anestezinin 4 evresi; indüksiyon, eksitasyon, cerrahi anestezi ve medüller depresyon (doz aşımı) olarak tanımlanmıştır. Günümüzde ise modern anestezi ajanlar çok daha hızlı etki sağladığı için bu fazlar; indüksiyon (anesteziye başlama), idame (anestezinin devamı) ve recovery (anesteziden uyanma) olarak değiştirilmiştir. Bu bölümde, genel anestezi indüksiyonunun özellikleri, indüksiyon teknikleri ve indüksiyonda kullanılan anestezi ajanlar ayrıntılı olarak anlatılmıştır.

I. Tanım ve İndüksiyona Hazırlık

Genel anestezi indüksiyonu; anestezi ilaçlarının verilmesi ile başlayan ve bilinç kaybı ile sonuçlanan anestezinin başlangıç safhasıdır. Bu dönem preoksijenasyonun başlamasından itibaren hastanın solunum ve hemodinamik parametrelerinin stabil hâle gelip gerekli anestezi derinliğe ulaşmasını sağlayan süreyi kapsar. İndüksiyon, özellikle solunum sistemi ve kardiyovasküler sistemde akut değişikliklerin gözlemlendiği bir evre olması nedeniyle önemlidir. Aynı zamanda, indüksiyon aşaması hastanın cerrahi sonrası hatırlayabileceği bir evre olması sebebi ile daha sonraki uygulamalar için belirli bir deneyim oluşturur. Bu nedenle indüksiyon öncesinde sessiz ve sakin bir ortamda hasta ile iletişim sağlanmalı ve sırasıyla yapılacak işlemlerle ilgili kısa ve anlaşılır bilgiler verilerek hastanın kaygı ve korkusu azaltılmaya çalışılmalıdır. Yapılan işlemler sırasında hastanın mahremiyetine saygı gösterilmelidir.

Tablo 3. Nöromusküler Bloke Edici Ajanların Özellikleri

NMB Ajan	Veküronyum	Roküronyum	Panküronyum	Mivakur-yum	Atrakur-yum	Sisatrakur-yum	Süksinilkolin
Etki süresi	Orta	Orta	Uzun	Kısa	Orta	Orta	Ultra kısa

Bölüm 7

ENDOTRAKEAL ENTÜBASYON

Nil Kaan

Endotrakeal entübasyon; hava yolu açıklığını sağlamak, güvenli hâle getirmek, solunumu kontrol etmek ve desteklemek amacıyla laringoskopi yardımıyla trakea içine bir tüpün yerleştirilmesidir. Bu işlem için belli bir eğitim ve beceri gerektirdiği için deneyimli sağlık çalışanları tarafından yapılmalıdır. Hastanelerde genellikle anestezi uzmanlarının ve anestezi teknikerlerinin sorumluluğundadır.

Endotrakeal entübasyon, en sık cerrahi girişim nedeniyle genel anestezi uygulamalarında kullanılmaktadır. Bunun yanında acil servislerde ve yoğun bakımlarda, kardiyopulmoner resüsitasyon sırasında, solunum desteği sağlamak ve sürdürmek amacıyla acil ve elektif durumlarda da uygulanır.

Anestezi teknikerleri, endotrakeal entübasyon için gerekli alet ve ekipman hazırlığını yapmak yanında hava yolu anatomisi hakkında bilgi sahibi olmalı, hastanın entübasyonu ile ilgili olarak anamnez alabilmeli ve fizik muayeneyi değerlendirebilmelidir.

I. Endotrakeal Entübasyon Endikasyonları

Genel Anestezi Altında Ameliyat Olacak Hastalarda Endotrakeal Entübasyon Endikasyonları

- Kas gevşetici verilmesi ve pozitif basınçla solunum desteğinin sağlanması gereken ameliyatlarda,
- Baş-boyun ameliyatları; hava yolunun cerrahi ekiple paylaşıldığı ve anestezi uzmanının ameliyat sırasında hava yoluna uzak kalacağı durumlar,
- Anestezi uzmanının hava yolunu kolayca kontrol edemediği, hastanın yüz üstü, oturur, yan yatar veya baş aşağı pozisyonlarda olduğu ameliyatlarda,
- Göğüs, karın veya kafa içi ameliyatlarında,

3. Endotrakeal Ekstübasyondan Sonraki Komplikasyonlar

Ekstübasyondan sonra en sık görülen komplikasyon boğaz ağrısı ve yutma güçlüdür. Hastaya uygun olandan daha büyük endotrakeal tüp kullanılması, kaf balonunun fazla şişirilmesi riski artırabilir. Boğaz ağrısı genellikle kendi kendini sınırlar ve 24 ila 72 saat içinde düzelir. Aynı travmalara bağlı ses kısıklığı da görülebilir.

Larinks spazmı (laringospazm); özellikle çocuklarda sık görülen hava yollarının refleks olarak daralması veya ödemlenmesi sonucu ekstübasyondan sonra hastanın yeterince ventile edilememesine yol açan ciddi bir komplikasyondur. Maske ile %100 oksijen verilerek pozitif basınçlı ventilasyon uygulanır, çene mandibula köşelerinden yukarı ve öne doğru kaldırılır-itilir. Laringospazm devam ederse kas gevşeticisi ve/veya propofol gibi bir İV anestezi ilaç verilip tekrar entübasyon gerekebilir.

Endotrakeal entübasyonun süresi uzadıkça hava yollarında tüpün neden olduğu travmatik komplikasyon riski de artar. Bunlar trakea mukozasında iskemi, kıkırdak hasarı, larinkste granülom, polip gelişimi vb. komplikasyonlardır.

BUNU BİLİYOR MUSUNUZ?

Laringospazm noktası: Kulak kepçesinin arka alt bölümünün çene kemiği ile birleştiği noktaya kuvvetli bası yapılması laringospazmı tedavi edebilir.

DİKKAT ET!

Entübasyondan sonra endotrakeal tüpün kafi, ventilasyon yaparken hava kaçacağını engelleyecek kadar şişirilmelidir. Gereğinden fazla şişirilen kafflar trakeaya bası yaparak kan dolaşımının azalmasına ve travmatik yaralanmalara yol açabilir.

Bölüm 8

GENEL ANESTEZİ İDAMESİ

Ezgi Erkuç

Anestezi idame dönemi, hastanın yaşamsal fonksiyonlarının korunarak, anestezi hâlinin cerrahi girişim süresince uygun derinlikte devam ettirildiği safhadır. Anestezinin bu döneminde, hastanın dikkatli izlemi indüksiyon ve sonlandırma aşamaları kadar önemlidir. Hangi anestezi tipi uygulanırsa uygulansın iyi yetişmiş yetkin bir anestezi personeli mutlaka ameliyat odasında bulunmalıdır. Anestezi teknisyeni, yaşamsal bulgulardaki normalden sapmaları zamanında fark etmek, gerekli önlemleri almak, anestezi uzmanına zamanında haber vermek ve acil durumlarda yapılacak ilaçları hazır bulundurmak durumundadır.

Anestezinin İdame Aşamasındaki Hedefler

- Cerrahi için anesteziyi sağlamak (bilinçsizlik, amnezi, hareketsizlik, cerrahi uyarılara cevapsızlık).
- İstenmeyen hoş olmayan cerrahi uyarılara karşı yeterli analjezi sağlamak.
- Fizyolojik dengeyi devam ettirmek (hemodinamik denge, oksijenizasyon, solunum, ısı).
- İlaçların takibini yapmak (kas gevşeticiler, inhalasyon anesteziikleri, narkotik ilaçlar ve anestezi olmayan ilaçlar).
- Sıvı dengesi ve kanama takibini yapmak (1).

Tüm bu hedeflerin yerine getirilebilmesi için anestezi teknisyen/teknikerinin genel anestezi idamesi ile ilgili konular hakkında detaylı bilgi sahibi olması gerekmektedir. Bu bölümde genel anestezi idamesi ile ilgili ayrıntılara yer verilmiştir.

lemeler yapılmalıdır. Ameliyat devam ederken herhangi bir bası (göz, göğüs, dış genital organlar, yüze yakın geçen sinirler) olasılığına dikkat edilmelidir. Herhangi bir bası durumu ile karşılaşırsa gerekli önlemler alınmalı ve cerrahi ekip uyarılmalıdır (10).

V. İntraoperatif Dokümantasyon

Anestezi indüksiyonu tamamlanıp idame dönemine geçtikten sonra hastaya ait bilgilerin, kullanılan ilaç ve malzemelerin anestezi fişine yazılarak dokümanite edilmesi gerekir. Başlangıçtan itibaren aksi bir durum belirtilmediyse 5 dk ara ile saturasyon, tansiyon ve nabız not edilmelidir. Ek olarak yapılan ilaçların ne zaman ve hangi dozda yapıldığını anestezi formunda işaretlemek önemlidir. Anestezi ve cerrahi ekipte yer alan çalışanlar, hastaya yapılan ek monitörizasyon işlemleri, anestezi tekniği, hasta pozisyonu, periferik kanülasyonun yeri, sıvılar, kullanılan kanın numarası, idrar miktarı, kan gazları ve zor entübasyon gibi önemli parametrelerde özellikle belirtilmelidir.

Bölüm 9

GENEL ANESTEZİ ESNASINDA GELİŞEBİLECEK KOMPLİKASYONLAR

Aysun Kurtay, Handan Güleç

Anestezi uygulamalarında hastanın yaşı, genel durumu, yandaş hastalıkları, kullandığı ilaçlar ve yapılacak cerrahi girişim türü anesteziye özellik kazandırır. Ancak hangi anestezi yöntemi uygulanırsa uygulansın girişim sırasında ve sonrasında hafif bir reaksiyondan ölüme kadar götürebilen çeşitli komplikasyonlar görülebilir. Daha iyi monitörizasyon ve anestezi teknikleri, kesintisiz hasta takibi, gelişmiş eğitim, daha kapsamlı protokoller, uygulama standartları ve aktif risk yönetme programları gibi stratejiler ile ciddi anestezi komplikasyonlarının sıklığı azaltılabilir.

Genel anestezi esnasında gelişebilecek komplikasyonlar solunum ve dolaşım sistemi, ısı değişiklikleri, periferik sinir hasarı, alerjik reaksiyonlar ve farkında olma başlıkları altında toplanabilir. Bu bölümde bu konulara ayrıntılı olarak değinilmiştir.

I. Solunum Sistemi ile İlgili Komplikasyonlar

Güvenli bir anestezi için hava yolunun devamlılığı şarttır. Hava yolu ile en sık karşılaşılan sorunlar anestezi devresinde basınç ve hacimle ilgilidir. Devrede kaçak olması, vaporizatörlerin yanlış doldurulması, birden fazla vaporizatörün aynı anda kullanılması, inspirasyon ve ekspirasyon yollarında tıkanma, anestetik ajanın yeterince verilmemesi, otomatik ventilasyonun başlamaması, hastada uygulanan pozisyon değişikliği ya da hastanın baş kısmında yapılan uygulamalar sırasında endotrakeal tüpün anestezi sisteminden ayrılması (diskonneksiyon) sık rastlanılan sorunlardır.

Hava yolunda daralma veya tıkanıklık durumlarında yetersiz tidal volüm, göğüs duvarı, substernal ve klavikular çekilme, yardımcı solunum kaslarının kullanılması, gürültülü solunum, göğüs ve karın hareketlerinde uyumsuzluk, siyanoz ve cerrahi sahada kan renginin koyulaşması gibi belirtiler görülmektedir (1-4).

İntraoperatif dönemde görülen solunum bozuklukları birçok nedene bağlı gelişebilir. Solunum bozukluklarında nedene yönelik araştırma yapılarak gerekli önlemler alınmalıdır.

Ameliyat sonrası dönemde bulantı-kusma (POBK) anestezi ve cerrahinin en sık görülen komplikasyonlarından birisidir. Cerrahi sonrası 24-48 saat içinde gelişen bulantı, öğürme veya kusma olarak tanımlanır. POBK hasta memnuniyetini azaltır, iyileşme süresini uzatır. Aspirasyon, dehidratasyon, elektrolit imbalansı ve sütür hatlarının ayrılmasına neden olabilir. POBK gelişiminde hastaya özgü risk faktörleri (kadın cinsiyet, taşıt tutma öyküsü, sigara içmeme, 50 yaşından küçük olmak), anestezi risk faktörleri (volatil anestezipler, anestezi süresi, postoperatif opioid kullanımı, nitroz oksit kullanımı) ve cerrahiye ait risk faktörleri (kolesistektomi, laparoskopik cerrahi ve jinekolojik cerrahiler, çocuklarda şaşılık cerrahisi) rol oynar. POBK yönetiminde, riskli hastaları belirleme, risk faktörlerini azaltma ve uygun profilaksi ve tedavi uygulanmalıdır.

Bölüm 10

GENEL ANESTEZİNİN SONLANDIRILMASI

Mehmet Şahap, Abdulkadir But

Başarılı bir anestezi yönetiminin en önemli parçalarından biri uyanma safhasının iyi yönetilmesidir. Anesteziyi sonlandırma dönemine geçici olarak kaybolan bilinç ve refleksler geri döndürülür, kas tonusu tekrar eski haline gelir. Uyanma döneminde yaşanan olumsuz durumlar nedeni ile hastalar da anestezi ile ilgili deneyimlerinin kötü hatırlanmasına neden olmaktadır. Anestezi teknisyen/teknikerinin genel anestezinin sonlandırılması aşamasında da hastanın takibini dikkatli bir şekilde yapması gerekmektedir. Bu bölümde genel anestezinin sonlandırılması ilgili ayrıntılara değinilmiştir.

I. Ekstübasyon İçin Hazırlık

Genel anestezi uygulaması için trakeaya yerleştirilen endotrakeal tüpün anestezi sonunda yerinden çıkarılmasına ekstübasyon adı verilir. Başarılı bir ekstübasyon için gerekli tüm ekipmanlar ve ilaçlar hazır tutulmalı hasta güvenli bir şekilde anesteziden uyandırılmalıdır. Başarılı bir ekstübasyon için planlama yaparken aşağıdaki sıralama gözetilmelidir.

- Ekstübasyonu planlamak
- Ekstübasyon için hazırlık yapmak
- Ekstübasyon
- Ekstübasyon sonrası bakım ve takip.

Genel anesteziden uyanma anestezinin riskli safhalarından biridir. Bu döneme hastayı hazır hale getirmek, ekstübasyon sırasında büyük kolaylıklar sağlar. Genel anestezinin sistemlere ve reflekslere olan hakimiyeti yavaş yavaş azalacak ve hasta tekrar normal fizyolojik metabolizmasına dönecektir. Bu değişiklikler sırasıyla kontrole solunumdan spontan solunuma geçiş, gevşemiş olan vücut kaslarının tonusunun tekrar kazanılması, öksürük, yutkunma gibi reflekslerin tekrar geri kazanıl-

basıncı ve nabızda dalgalanmalar görülebilir. Ekstübasyon sonrasında hasta normal fizyolojik durumuna dönene kadar çok yakın ve dikkatli bir takip yapılmalıdır. Anestezi sonrası gelişen komplikasyonların yarısı ilk bir saatte gerçekleşir ve anestezi derlenme dönemindeki komplikasyonların prognozu anestezi sırasındaki komplikasyonlardan daha kötüdür (10).

Genel anestezi uyanan hasta kendi başına yeterli ventilasyon sağlayana kadar ve yeterli kas tonusuna ulaşana kadar ameliyat odasında bekletilmelidir. Bu koşulları sağladıktan sonra hastalar anestezi sonrası derlenme ünitesine (ASDÜ) transport edilmelidir. Hasta ameliyat odasından ASDÜ'ye transfer edilirken mutlaka üst solunum yollarının açıklığı ve etkili solunumunun devam ettiği eşlik eden anestezi doktoru veya anestezi teknisyeni tarafından izlenmelidir. Yeterli ventilasyon varlığı göğüs kafesinin kalkması ve inmesi ile takip edilmeli ya da mobil pulse oksimetri yardımıyla oksijen saturasyonu izlenmelidir. Ekstübasyon döneminde solunum yetmezliği olan hastaların ASDÜ'ye transferinde oksijen desteği gerekebilmektedir. Bu durumda seyyar oksijen tüpleri ile hastalar hipoksemiden korunmalıdır. ASDÜ'ye getirilen hastalar orada bulunan doktor, hemşire ya da anestezi teknisyenine ayrıntılı bir şekilde sunulmalıdır. Hastanın kısa demografik bilgileri, ameliyat bilgisi, mevcut hastalıkları, vaka sırasında yaşanan önemli hadiseler, anestezi şekli, cerrahi veya anestezi açısından dikkat edilmesi gereken uyarılar ASDÜ'ye ekibine aktarılmalıdır (11).

Hastaların solunum, dolaşım ve nörolojik fonksiyonları ASDÜ'de deneyimli personellerce dikkatlice izlenmelidir. Hastalar ağrı ve postoperatif gelişebilecek komplikasyonlar açısından takip edilmeli ve gerektiğinde ilgili doktorlara haber verilmelidir. Genel anestezi uygulanan hastalar ASDÜ'e geldiklerinde ilk olarak periferik oksijen saturasyonu ve kan basıncı ölçülmeli ve gerekirse oksijen desteği verilmelidir. Kan basıncı ölçümü 5'er dakika aralıklarla yapılmalı ve kayıt edilmelidir. Hastaların vücut sıcaklıkları ölçülmelidir. Hipotermiye bağlı titreme ile oksijen ihtiyacı artacağından hastalar normotermik olana kadar ısıtılmalıdır. Özellikle pediatri grubunda hipotermi oluşmamasına özen gösterilmelidir (2).

Bölüm 11

HASTA TRANSFERİ

Berrin Koşar, Handan Güleç

Cerrahi işlemi tamamlanan hastanın operasyon masasından anestezi sonrası bakım ünitesine (ASBÜ) transferi güvenli bir şekilde gerçekleştirilmelidir. Diğer taraftan kritik durumdaki bir hastanın tedavi ve bakım olanaklarının daha iyi olduğu başka bir bölüme, ameliyathaneye, yoğun bakım ünitesine ya da diğer bir kuruma transferi gerekebilir. Transfer sırasında hastada gelişebilecek riskler, dikkatli bir planlama, uygun personel ve malzeme seçimi ile mümkün olduğunca azaltılmaya çalışılmalıdır. Bu bölümde hasta transferi ile ilgili karşılaşılabilecek riskler ve alınması gereken önlemler detaylı bir şekilde bahsedilmiştir.

I. Hastane İçi Transfer

Hastanın acil biriminden, ameliyathanelerden veya servislerden yoğun bakıma gelmesi veya hastanın yoğun bakımdan tetkik ve girişimsel işlemler için nakil edilmesidir. Transfer kararında, planlanan girişimin yararı ve transferin riski göz önüne alınmalıdır. Transfer riski, tıbbi risk ve seyahat risklerini kapsar. Tıbbi risk, hastanın tıbbi durumu, transfer sırasındaki ısı değişikliği, hızlı veya yavaş hareket etme etkisi olabilir. Seyahat riski, transfer sırasında vibrasyon ve çarpışma riski olabilir (1).

Transfer risklerini en aza indirmek için öncesinde hasta durumu stabilize edilmelidir. Güvenli bir seyahate hazırlamak için gerekli tanı ve tedaviler (venöz girişimler, entübasyon gibi) yapılmalıdır. Kurum içi veya kurumlar arası hasta taşınması sırasında, eşlik eden deneyimli personel tarafından yaşamsal fonksiyonların aralıksız izlenmesi, herhangi bir durumda hasta için gerekli olan girişimlerin yapılabilmesine olanak sağlayacaktır.

Hastanın bulunduğu ve gönderileceği birimlerde hekim-hekim ve yardımcı sağlık çalışanı-yardımcı sağlık çalışanı arasında gerekli iletişim sağlanmalıdır. Hastane

göz önünde bulundurularak entübe olmayan hastalara da oksijen vermek gerekebilir. Hastaların uçakla uzun mesafeli transferi tolere edebilmeleri için stabil olmaları gereklidir. Örneğin akut miyokard infarktüsünden iki hafta sonra hastanın medikal transferi uygundur (9). Transfer, karadan (kara ambulansı) veya havadan (helikopter ve sabit kanatlı uçaklar) sağlanabilir. Tüm transport şekillerinde gürültü, vibrasyon ve türbülans artar.

Sonuç olarak, kritik durumdaki hastanın, transfer sırasında olumsuz etkilenmemesi ve risklerin ortadan kaldırılması ancak dikkatli bir planlama yapılması, deneyimli sağlık personelinin olması ve uygun donanım seçimi ile mümkündür.

DİKKAT ET!

Eğer hava yolu transportu yapılıyor ise ortaya çıkabilecek sorunlara hazırlıklı olunmalıdır. Artan yükseklikle beraber oksijen basıncı azalırken; gaz hacimleri artar, eğer hacim artmıyorsa basınç artar. Uçakla yapılan transportta entübe olmayan hastalarda SpO₂ takibi yapılmalı ve ek oksijen desteği verilmelidir. Entübasyon tüplerinin kaf basınçları uçuş sırasında ayarlanmalı veya kaf su ile şişirilmelidir.

Bölüm 12

REJYONEL ANESTEZİ HAZIRLIĞI

Murat İzgi, Fatma Sarıcaoğlu

Rejyonel anestezi hastanın bilinç durumu değiştirilmeden, lokal anestetik ajanlar kullanılarak vücudun belirli bir bölgesindeki ağrı duyusunun ortadan kaldırılması olarak tanımlanabilir. Nöroaksiyel sinir blokları (spinal anestezi ve epidural anestezi) ve periferik sinir blokları bu kapsamda uygulanan çeşitli rejyonel anestezi yöntemleridir. Bu işlemler operasyondan hemen önce operasyonun gerçekleştirileceği ameliyat odasında uygulanabileceği gibi daha ideal olarak ayrı bir rejyonel blok odasında da uygulanabilir. Bu işlemler için ayrılmış bir blok odası, hastanın ameliyathaneye devir süresini kısaltırken aynı zamanda ideal ortamın temin edilmesini sağlayacaktır (1). Yakın dönemde, özellikle periferik sinir bloğu uygulamalarında, sinir stimülatörü ve ultrasonografi (USG)'nin klinik kullanımda yerini alması ile rejyonel anestezi uygulamalarının popülerliği artmıştır. Bu bölümde rejyonel anestezi işlemleri esnasında kullanılacak olan ve hazır bulundurulması gereken ekipman ve ilaçlar ile hasta hazırlığına değinilmiştir.

I. Monitörizasyon ve Hasta Hazırlığı

Hastalar işlemin yapılacağı odaya alındıktan sonra standart ASA kriterlerine göre vital bulgular (EKG, pulse oksimetri ve tansiyon manşonu) monitörize edilmelidir. Ardından venöz damar yolu açılarak uygun kristalloid sıvı infüzyonu başlanır. Uygulanacak bloğa göre hastaya pozisyon verilir (oturma pozisyon, lateral dekübit pozisyonu vb.) ve işlem yapılacak alan steril şartlarda boyanıp örtülür (Resim 1-3)

BUNU BİLİYOR MUSUNUZ?

Rejyonel anestezi hastanın bilinç durumu değiştirilmeden, lokal anestetik ajanlar kullanılarak vücudun belirli bir bölgesindeki ağrı duyusunun ortadan kaldırılması işlemidir.

önerilmektedir (1, 10). Açılmamış ambalajları 25°C'nin altındaki oda sıcaklığında saklanmalıdır. Açıldıktan sonra 24 saat içerisinde kullanılmalıdır (11, 12).

3. Sedatif İlaçlar

- a. Midazolam
- b. Fentanil
- c. Ketamin
- d. Propofol

DİKKAT ET!

%20 intralipit solüsyonu lokal anestezi-
lerin sistemik toksisitesinin tedavisinde,
özellikle kardiyak arrest gelişen hastalarda
kardiyopulmoner resüsitasyona dirençli
durumlarda hayat kurtarıcıdır.

NÖROAKSİYEL ANESTEZİ UYGULAMALARI

Halil Çetingök

Nöroaksiyel anestezi uygulamaları spinal, epidural, kaudal ve kombine spinal/epidural anestezi yöntemlerini kapsar. Nöroaksiyel anestezi uygulamasında iğne ucu ile vertebral kolon içerisine girilerek lokal anesteziklerin direk olarak spinal kord ve/veya sinirler çevresine verilmesi ve sonucunda nöral iletinin bloke edilmesi sağlanır. Nöral iletinin başlıca üç komponenti olan sempatik, duysal ve motor ileti bu blokajdan etkilenir. Blokajın kuvveti ve etkilediği vücut alanı uygulanan teknik, seviye ve kullanılan ilaç miktarına göre değişmektedir. Tek seferlik enjeksiyon yapılabileceği gibi kateter takılması yoluyla devamlı blokaj da uygulanabilir.

Nöroaksiyel anestezi yöntemleri 100 yıldan uzun zamandır uygulanagelmektedir. Tek başına veya genel anestezi ile kombine olarak uygulanmasının perioperatif morbidite ve mortaliteyi düşürdüğü, postoperatif venöz tromboz ve pulmoner tromboemboli insidansını azalttığı, kanama ve buna bağlı transfüzyon ihtiyacını azalttığı, kronik akciğer hastalığı olanlarda solunum sistemi komplikasyonları azalttığı, periferik doku kan akımı ve oksijenasyonunu arttırdığı, cerrahiye sekonder ortaya çıkan nöroendokrin stres yanıtı azalttığı ve bu yolla bazı kanserlerde rekürrens ihtimalini azalttığı çeşitli çalışmalar ile gösterilmiştir. Bu avantajlar sayesinde nöroaksiyel anestezi/analjezi teknikleri uygun hastalarda genel anesteziye iyi bir alternatif oluşturmaktadır ya da genel anestezi ile birlikte uygulanarak daha düşük bir komplikasyon oranına ulaşmasını sağlamaktadır.

Bu bölümün ilk kısmında nöroaksiyel anestezi yöntemlerine ait temel bilgiler, ikinci kısmında ise spinal, epidural, kaudal ve spinal/epidural kombine blokların spesifik özellikleri anlatılmıştır.

I. Nöroaksiyel Anestezide Temel Bilgiler

Başarılı ve güvenli bir nöroaksiyel anestezi tekniği uygulaması teknik ile ilgili anatomi ve fizyoloji, işlemin etki mekanizması, hazırlık, pozisyon vb. temel bilgi altyapısının yeterli olmasına bağlıdır.

c. Kaşıntı

Çoğunlukla opioidlerin intratekal verilmesi sonrası gözlenir. Ortaya çıkması ve rahatsız edici boyutta olması durumunda opioid antagonistleri kullanılabilir.

d. Bulantı ve Kusma

Çoğunlukla nöroaksiyel anestezi sonrası hipotansiyon gelişmesi veya uyanık hastalarda visseral uyarı sonrası gelişir. Uyarı sonlandığında veya hipotansiyona müdahale edildiğinde düzelir.

e. Bel Ağrısı

Genellikle pozisyon verilmesi sırasında kas ve ligamanlarda oluşan zorlanma veya iğnenin kemik yapıların periostuna sürtünmesi nedenlidir. İstirahat, sıcak uygulama, masaj ve basit analjezikler ile kendiliğinden düzelir.

Bölüm 14

PERİFERİK SİNİR BLOĞU UYGULAMA HAZIRLIĞI

Gözen Öksüz, İsmet Topçu

Rejyonel anestezi uygulamaları tüm dünyada giderek yaygınlaşmaktadır. Özellikle ultrasonografinin kullanımının artması periferik blok uygulamalarının hem çeşitliliğini hem sıklığını arttırmıştır (1). Blok ve hastaya göre ilaç dozları, teknik ekipmanların kullanımı ve blok hazırlığında farklılıklar görülebilmektedir (2). Blok öncesi hazırlık aşamasında, uygulama esnasında ve uygulama sonrasında intraoperatif ve postoperatif hasta takibini yapan anestezi teknikerlerinin periferik blok uygulamaları ilgili bilgi sahibi olmaları çok önemlidir.

Periferik blok işlemleri ayrı bir blok uygulama alanında ya da ameliyathane odasında uygulanabilir. Her iki mekanda da gerekli ekipman ve ilaçların hazır olması gerekmektedir. Blok uygulaması yapılacak hastanın genel anestezi alacak şekilde anestezi hazırlığı tamamlanmalıdır. Blok uygulamalarının endikasyon, kontraendikasyon, komplikasyon ve yan etkilerin iyi bilinmesi ve gerekli önlemlerin alınması bu hazırlığın bir parçasıdır (3). Bu bölümde, periferik blok uygulama hazırlığı konusunda önemli hususlara detaylı olarak değinilmiştir.

I. Blok Uygulama Alanı Genel Hazırlığı

Bir periferik blok uygulamasından önce, işlemin steril koşullarda uygulanabilmesi ve yarıda kalmaması açısından, bazı hazırlıkların önceden yapılması gerekmektedir. Bu hazırlıklar hem hasta güvenliği hem de yapılacak işlemin kalitesi açısından oldukça önemlidir.

Periferik Blok İşlemi Öncesi Hazırlanması Gereken Malzeme ve İlaçlar

- Hasta onam formu ve blok takip formu bulunmalıdır.
- Monitörizasyon için gerekli ekipman hazırlanmalıdır.
- Ultrasonografi cihazı probu ve cilt sterilizasyonu için gerekli malzemeler hazırlanmalıdır.

III. Hasta Kontrollü Analjezi (HKA) Hazırlama

HKA, bir kateter yerleştirilerek sinir bloğunun etki süresini uzatmak için sinir etrafına lokal anestezi infüzyonu ile yapılabileceği gibi, sinir bloğuna destek olarak İV yoldan infüzyon şeklinde opioid verilmesiyle de uygulanabilir. HKA hazırlanırken bolus doz, kilitli kalma süresi, infüzyon hızı veya saatlik maksimum verilebilecek dozlar belirlenir. Dozlar hasta özellikleri, ağrının şiddeti ve bloğun etki süresine bağlı olarak ayarlanmalıdır (13).

Bölüm 15

PERİFERİK SİNİR BLOĞU UYGULAMALARI

Gözen Öksüz, İsmet Topçu

Periferik sinir blokları anestezi uygulamalarının önemli bir parçasıdır. Anestezi teknikleri periferik sinir blok uygulama hazırlığında, uygulama sırasında ve hasta takibinde çok önemli bir yere sahiptirler. Periferik sinir blokları genellikle alt ve üst ekstremitelerde cerrahilerinde anestezi amacı ile toraks ve batin cerrahilerinde ise analjezi amacı ile uygulanmaktadır (1). Ultrasonografi (USG) cihazı kullanımının yaygınlaşması blok uygulamalarının çeşitliliğini artırmıştır. Anestezi tekniklerinin periferik sinir blok uygulama tekniklerinin ekipman ve ilaç hazırlığı yanı sıra blok için kontrendike durumlar ve olası komplikasyonlar hakkında da bilgi sahibi olmaları gerekmektedir (2). Bu bölümde üst ve alt ekstremitelerde sık uygulanan periferik sinir bloklarının genel özellikleri, endikasyon, kontrendikasyon ve komplikasyonlarına yer verilmiştir.

I. Üst Ekstremité İçin Periferik Sinir Blokları

1. Servikal Pleksus Bloğu

Üst dört servikal sinirin anterior dalı ile oluşan servikal pleksus transvers proseslerinin lateralinde yer alır. C2-4 sinirlerin kutanöz dalları sternokleidiomastoid kasını orta arkasından çıkar ve boynun anterolateralinin duyusunu inerve eder. Diyafragma frenik sinir (C3, 4, 5) tarafından innerve edilir. Blok alanı antiseptik solüsyonu ile temizlendikten sonra USG eşliğinde C2, C3, C4 köklerinin duyusal sinirlerini bloke edecek şekilde 10-20 ml lokal anestezi (%0,5 bupivakain %2 lidokain karışımı veya benzer etkinlikte lokal anestezikler) ile yüzeysel servikal pleksus bloğu uygulanır (Resim 1). Ayrıca, daha az tercih edilen, C2, 3, 4 spinal sinirlerin foramen çıktıkları yerde bloke edilmesi ile derin servikal blok uygulanmasıdır (3).

Servikal Pleksus Bloğu Endikasyonları

- Karotis cerrahisi
- Yüzeysel boyun cerrahisi

Bölüm 16

REJYONEL İNTRAVENÖZ ANESTEZİ UYGULAMASI VE TAKİBİ

Pakize Kırdemir, Sabri Özden

Rejyonel intravenöz anestezi (RİVA) arteriyel dolaşımın sistemik basınç üzerinde bir basınçla turnike ile bloke edildiği bir ekstremitenin distal bölümünden intravenöz olarak lokal anestezi enjeksiyonu ile analjezi sağlama yöntemidir. Mekanizması dolaşımın durdurulması sonucu gelişen iskemi ve anoksiye bağlı olarak damar permeabilitesinin artmasıyla damar içine verilen lokal anestezi solüsyonunun yavaşça doku içine difüze olması ve sinir liflerini bloke etmesidir. Kullanılan ajan dokuda kalıcı hasar oluşturmadan, geçici fonksiyonel bozulma yapar. Basit ve hızlı etkili bir yöntemdir. Teknik başarısızlık oranı düşüktür ve yüksek güvenilirlik derecesine sahiptir (1). Doku içine difüze olan lokal anestezi daha sonra dolaşıma absorbe olarak ortamdaki uzaklaştırılır (2). Özellikle kısa süreli üst ekstremitte cerrahisinde daha yaygın olmak üzere alt ekstremitte cerrahilerinde de uygulanır. Bu bölümde bir anestezi tekniker/teknisyenin RİVA ile ilgili bilmesi gerekenlere detaylı olarak değinilmiştir.

I. Tarihçe

Spinal blok uygulamaları ile bilinen cerrahi profesörü August Bier tarafından 1908'de RİVA uygulamaları tanımlanmıştır. Bu nedenle günümüzde Bier blok olarak adlandırılır. Bier RİVA uygulamak için kolun bir bölümünün dolaşımını engellemek için iki turnike kullanmış ve sonra bu bölümden bir vene %0,5'lik prokain solüsyonu enjekte etmiştir. Uygun ilaç seçimi ile daha kaliteli ve uzun anestezi sağlanabilir (3). Bier'den önce Berlin'de çalışan cerrahi profesörü Von Es-march cerrahi girişimlerde kullanılmak üzere kauçuktan yapılmış bandajı geliştirmiştir. Es-march bandajının en önemli problemi 1000 mmHg'e kadar ulaşan yüksek basıncı olmasıydı (4). 1963'de Holmes prokainden daha güvenilir anestezi verdiği görülen lidokaini ve çift lümenli turnikeyi kullanmıştır (5). Günümüzde yeni lokal anestezi ajanlarının gelişmesi, opioid ve lokal anestezi kombinasyonlarının kullanımı ile daha uygun ve güvenli RİVA uygulamaları geliştirilmiştir (3).

RİVA'nın bir diğer sınırlayıcısı da turnikenin indirilmesinden sonra postoperatif ağrı kontrol eksikliğidir, çünkü anestezi solüsyon genel sirkülasyona hızlıca dağılır. Brakiyal pleksus analjezinin geleneksel olarak RİVA ile karşılaştırıldığında üstün olduğu düşünülür. Son yıllarda ropivakain ile yapılan çalışmalarda turnike indirildikten sonra analjezinin devam ettiği gösterilmiş ve ropivakain daha çok kullanılır hâle gelmiştir (4).

İdeal RİVA solüsyonu (hızlı başlangıç, azaltılmış lokal anestezi dozları, azalmış turnike ağrısı ve uzamış analjeziyi) sağlayabilmek için günümüzde lokal anesteziyelere adjuvan ajanlar eklenmektedir. En çok kullanılanlar arasında opioidler, non-steroid antiinflatuar ilaçlar, klonidin, kas gevşeticiler, neostigmin ve bikarbonat bulunmaktadır (4).

SEDOANALJEZİ UYGULAMASI VE TAKİBİ

Gökçe Gişi Akgöz, Hafize Öksüz

Sedoanaljezi günümüz anestezi pratiğinde ameliyathanede ve ameliyathane dışı ortamlarda birçok girişim sırasında uygulanmakta ve girişimin başarıyla tamamlanmasını sağlamaktadır. Bu işlem sırasında hayatı tehdit eden ciddi komplikasyonlarla karşılaşılacağı için teknik ve sedatif/analjezik ilaçların farmakolojisi iyi bilinmeli ve komplikasyonlarla mücadele edebilecek bilgi ve beceriye sahip olunmalıdır. Bu bölümde sedoanaljezi uygulaması ve bu uygulama esnasında dikkat edilmesi gereken hususlara değinilmiştir.

I. Tanımlar

Prosedürel sedasyon ve analjezi; ağrı ve rahatsızlık oluşturabilecek işlemlerin etkin bir şekilde yapılmasını sağlamak için kısa etkili sedatif ve analjezik ilaçların kullanıldığı ve oluşabilecek yan etkilerin monitörizasyonla takip edildiği bir anestezi uygulamasıdır. Sedasyon ve analjezi Amerikan Anestezolojist Derneği'nin (ASA) tanımına göre minimal sedasyondan genel anesteziye kadar değişen bir süreklilik içerir. ASA'nın tanımına göre sedasyon düzeyleri Tablo 1'de gösterilmiştir. Aşağıdaki gibi sedasyon ve analjezi farklı düzeylerde tanımlanmasına rağmen ayrı klinik aşamalara bölünmesi zordur.

POSTOPERATİF AĞRI VE TEDAVİSİ

Ferdi Gülaştı, Sinem Sarı

Postoperatif ağrı cerrahi kesi ile başlayan, inflamatuvar sürecin de dâhil olduğu akut bir ağrıdır. Postoperatif ağrı kişiye sadece ızdırap veren bir durum değil, aynı zamanda başta kardiyovasküler ve solunum sistemi olmak üzere pek çok sistemi olumsuz etkileyerek yüksek morbidite ve mortaliteye sebep olan ciddi bir sorundur. Postoperatif ağrı ile mücadele etmek için çeşitli tedavi programları geliştirilse de günümüzde hâlâ önemli bir sorundur. Bu bölümde postoperatif ağrının mekanizmasına ve tedavisine ayrıntılı bir şekilde değinilmiştir.

I. Postoperatif Ağrının Oluşumu

Cerrahi kesi ile başlayan, ameliyat sırasındaki doku hasarı ve inflamasyon sebebiyle devam eden uyarılar, substans P, glutamat, bradikinin, histamin, prostoglandinler ve serotonin gibi nörotransmitterlerin salınımına yol açar. Bu uyarılar tekrarlayıcı bir şekilde duyuşal sinir uçlarında elektrokimyasal aktiviteye dönüştürülür. Sonrasında oluşan elektriksel durum spinal kordun arka boynuzundan geçerek ağrının algılandığı talamusa iletilir (1).

II. Ağrı ve Sistemler

Şiddetli ağrı sempatik aktivitede artış, kas spazmı ve hastada hareketsizlik yaratır. Postoperatif ağrı ile artan sempatik aktivite taşikardi, periferik direnç artışı ve hipertansiyona sebep olur. Kalp üzerinde artan bu iş yükü akut miyokard enfarktüsü ile sonuçlanabilir (2). Ayrıca artan sempatik aktivite intestinal ve gastrik hareketleri azaltmakta ve idrar retansiyonuna neden olmaktadır. Ağrının sebep olduğu kas spazmları akciğer havalanmasını azaltarak hipoksi ve hiperkarbi ile sonuçlanabilmektedir (2). Hareketsizlik ise kan pıhtılaşmasına yatkınlık oluşturmakta, sonrasında derin ven trombozu ve pulmoner emboli gelişebilmektedir.

den fazla analjezik ilaç ve yöntemin birlikte kullanılması ile tek analjezik ilacın yüksek dozda kullanılması ile ortaya çıkabilecek yan etki riski azaltılır.

Hasta Kontrollü Analjezi (HKA); ağrının bireysel olduğu, tüm hastalara uygulanacak ilaç dozlarının aynı olmaması gerektiği prensibine dayanarak ve hastanın kendisinin bu tedaviyi kontrol etmesi gerektiği düşünülerek tasarlanan bir tedavi yöntemidir. Bu amaçla hastanın analjezi dozunu belirlerken aktif rol aldığı bir sistem yaratılmıştır (13).

HKA; intravenöz, subkutan, oral, nazal, inhalasyon, sublingual, epidural ve intratekal yollar ile uygulanabilir (13, 14). Bu yöntemin kullanılması için HKA infüzyon pompası gerekmektedir. HKA infüzyon pompalarının ortak özelliği hastaya belirlenmiş doz sınırları ve kilitli kalma süre içerisinde analjezik vermektedir. Bu cihazın kullanımı için belirli parametrelerin cihaz üzerinde ayarlanması gerekir. Bunlar;

BUNU BİLİYOR MUSUNUZ?

Multimodal analjezi, farklı etki mekanizmasına sahip birden fazla analjezik ilaç ve yöntemin birlikte kullanılmasıdır.

- **Yükleme Dozu:** Erken postoperatif dönem ağrının en çok olduğu dönem olup yükleme dozu ile analjezik etkinin hızlı başlanması sağlanır. İlaç yükleme dozuyla analjezi sağlayacak plazma düzeyine en kısa sürede ulaştırılır.
- **Bolus Doz:** Sedasyon oluşturmadan yeterli analjeziyi sağlayacak bir doz belirlenmelidir. Düşük miktarda belirlenen bu doz hastanın butona basması ile hastaya verilir.
- **Bazal İnfüzyon:** Sürekli infüzyon olan bu doz ilacın plazma düzeyinin etkili konsantrasyon düzeyinin altında kalmamasını sağlamaktır.
- **Kilitli Kalma Süresi:** Bolus dozlar arasındaki süreyi belirler. Bu süre dolmadan hasta istese de cihaz bolus doz uygulamaz.

V. Postoperatif Kronik Ağrı

Cerrahi sonrası postoperatif akut ağrının 3 aydan daha uzun sürmesi postoperatif kronik ağrı (PKA) olarak adlandırılır (15). PKA oluşması hastaların yaşamlarının sonraki dönemlerinde hayat kalitesini olumsuz etkileyen ciddi bir komplikasyondur. PKA oluşumunun engellenmesinde ana rol anestezi ekibindedir.

GÜNÜBİRLİK VE AMELİYATHANE DIŞI ANESTEZİ UYGULAMALARI

Hüseyin Yıldız

Günümüzde tıp ve teknolojiadaki gelişmeler sayesinde birçok cerrahi müdahale günübirlik yapılmaktadır. Sağlık harcamalarını en aza indirmek için, ameliyathane dışında tanı ve tedavi amacıyla uygulanan invaziv olmayan girişimlerle birlikte daha invaziv girişimler de uygulanır hâle gelmiştir. Bu durum anestezi uygulamalarında yeni bir alan oluşturmuş ancak aynı zamanda potansiyel komplikasyon ve uygulama alanlarına ait zorluklar ve riskleri de beraberinde getirmiştir (1-3). Cerrah tarafından günübirlik işlemlerin hızlı bir şekilde yönetilmesi, ameliyathane dışı işlemlerde anestezi uygulamalarına aşına olmayan personelle çalışma zorunluluğu ve yeterli anestezi ekipmanının yokluğu durumu daha da vahim hâle getirebilir. Hem anestezi hekimi hem de anestezi tekniker/teknisyeni açısından azami dikkat gerektiren bu alan hakkında geniş bilgi sahibi olmak, günübirlik ve ameliyathane dışı anestezi uygulamalarının daha güvenilir bir şekilde gerçekleştirilmesini sağlayacaktır. Bu bölümde günübirlik ve ameliyathane dışı anestezi uygulamalarına detaylı olarak değinilmiştir.

I. Günübirlik Anestezi Uygulamaları

Cerrahi tedavinin uygulandığı gün evine gönderilmesi planlanan hastalara uygulanan cerrahiye, günübirlik cerrahi tanımı kullanılır. Bu cerrahi için, uygulanan anesteziye ise günübirlik anestezi denir (1-3). Günübirlik cerrahi uygulamalarının; hasta, sağlık çalışanı ve hastaneler için birçok avantajları vardır (örn. hastanın hastanede kalış süresinin kısalması, enfeksiyon riskinin azalması, beslenme ve aile düzeninin etkilenmemesi, kaynakların verimli kullanılması, personel ihtiyacı ve maliyeti azalması vb.). Cerrahi teknolojinin gelişmesi, minimal invaziv girişimlerin yapılması, modern anestezi ilaçlar, kısa etkili opioidler ve kas gevşeticiler, revers ajanların etkinliği (flumazenil, naloksan, sugammadex) gibi birçok faktöre bağlı olarak, günümüzde birçok cerrahi türünün günübirlik yapılabilmesine olanak sağlamıştır. Genel anestezi uygulanan ameliyathanedeki standart donanım günübirlik operasyon odalarında da uygulanmalıdır. Günübirlik cerrahi işlemlerde, operasyon süresi önemli kriterlerden biridir. Ortala-

21. Solunumun düzenli hâle gelmesi gözlemlenir.
22. Maske ile oksijen verilir.
23. Kas gücünün geri döndüğünü gösteren bulgular takip edilir.
24. Nöbet aktivitesi santral ve periferik olarak monitörize edilir. Santral monitörizasyonda EEG nöbetin süresini kaydeder. Periferik monitörizasyonda turnike uygulanarak dolaşımdan izole edilen el veya ayak hareketleri nöbet süresini gösterir.
25. Yapılan işlemler kayıt altına alınır.

6. Obstetrik/Jinekolojik Müdahaleler

a. Yumurta Toplama (Oocyte Pick Up, OPU)

Genellikle ASA I- II grubu hastalardır. İşlem 15-30 dakika sürer. İşlem sırasında steril ortam gerekmektedir. Sıklıkla ameliyathane ortamlarında yapılır. Ortamda gamet ve embriyoyu etkileyecek, radyasyon, dezenfektan kokusu vs. gibi maddeler bulunmamalıdır. Gamet ve embriyo için en az zararlı anestezi ajanları kullanılmalıdır. Sıklıkla propofol, midazolam, fentanil veya remifentanil kullanılır. Ketamin gamet ve embriyo için riskli bir ajandır.

b. Histerosalpingografi (HSG) İşlemlerinde Uygulama

Genelde ASA I-II grubu genç bayan hastalardır. İşlem, kadın-doğum, radyoloji ve anestezi ekipleri ile yapılır. Ağrılı bir işlemdir. Sedasyonla gerçekleştirilir. Sedasyonda propofol en uygun ajandır. Kontrast madde alerjisi, radyasyon maruziyeti ve işlem sonrası hemoraji ve karın ağrısına dikkat etmek gerekmektedir (18).

Bölüm 20

ZOR VE BAŞARISIZ HAVA YOLUNUN ACİL YÖNETİMİ

Hamit Yoldaş

Anestezi uygulanan hastalarda optimum oksijenasyon ve ventilasyonun sağlanması en temel uygulamalardan biridir. Ancak hava yolu yönetimindeki zorluk ya da başarısızlıklar istenmeyen minör (dişlerde veya vokal kordlarda yaralanma gibi) ve majör (anoksik beyin hasarı, kalp iskemisi, kalp yetmezliği ve nihayetinde ölüm gibi) olaylarla sonuçlanabilir. Zor hava yolları acil pratikte oldukça yaygındır ve tüm acil entübasyonların %20'si gibi büyük bir oranda olduğu tahmin edilmektedir. Genel entübasyon başarısızlığının insidansı ise düşük olup, yaklaşık %1 veya daha azdır. Entübe edilemez, oksijenize edilemez (CICO) durumunun acil entübasyon ortamındaki insidansı 1/5000 ve tüm ameliyathane entübasyonlarında ise 1/20000 olarak tahmin edilmektedir. Zor hava yolu öngörülen olgularda, anestezi indüksiyonu öncesi, zor hava yolu algoritmalarını da içine alan bir plan yapılarak entübasyonu başarmak hedeflenmelidir. Bu bölümde zor ve başarısız hava yolunun tanımı, algoritması ve bu durumda uygulanan yaklaşımlara yer verilmiştir.

I. Zor Hava Yolu

Zor hava yolu klasik eğitim almış bir uzmanın maske, entübasyon veya her ikisinde zorlukla karşılaştığı durum olarak tanımlanmaktadır.

1. Preoperatif Değerlendirme ve Planlama

Cerrahi öncesi hava yolu ile ilgili potansiyel problemlerin saptanması ve planlama yapılması ile hava yolu girişimi güvenilir bir şekilde yönetilebilir. Bu şekilde bir strateji benimsenmesi komplikasyon riskini azaltmada önemlidir (1). Maske ventilasyonu, supraglottik hava yolu yerleştirilmesi, trakeal entübasyon ve ön boyun değerlendirilmesinde zorluğa yol açabilecek faktörlerin saptanması açısından preoperatif hava yolu değerlendirmesi rutin olarak her hastada yapılmalıdır. Benzer olarak aspirasyon riskinin değerlendirilmesi de hava yolu yönetimi planlamasının temel bir bileşenidir. Cerrahi öncesinde gastrik içeriğin hacimi ve pH derecesini azaltmak

ve regürjitasyon riski nedeni ile uygulanmamaktadır. Başarısız entübasyon sonrası hastanın uyandırılması her zaman için optimum seçenek olmayabilir. Bununla birlikte anne veya fetüs ile ilgili bir risk söz konusu değil ise uyandırmak ve daha sonra alternatif bir anestezi teknik ile devam etmek doğru seçim olabilir.

Bölüm 21

TEMEL VE İLERİ YAŞAM DESTEĞİ

Bahar Kuvaki

Temel yaşam desteği tüm vatandaşların bilmesi gereken hayat kurtarıcı bir ilk yardım uygulamasıdır, ancak ülkemizde tüm vatandaşların ilk yardım eğitimi almalarını sağlamak oldukça zordur (1). Avrupa Resüsitasyon Konseyinin başlattığı ve Resüsitasyon Derneğinin de iş birliği yaptığı çeşitli kampanyalar (örn. Restart a Heart Day/Hayata El Ver) ile halktan kişilerin ilk yardım eğitimi alması, kardiyak arresti tanınması ve kardiyak kompresyonlara başlaması teşvik edilmektedir (2).

22 Mayıs 2014 tarihli 29007 sayılı Resmî Gazetede, sağlık meslek mensupları ile sağlık hizmetlerinde çalışan diğer meslek mensupları, yetkili kişilerce acil sağlık hizmeti ulaşıma kadar almış olduğu eğitim doğrultusunda ilk yardım gereklerini yerine getirir denilmektedir. Anestezi teknikerleri ile ilgili yönetmelikte de “almış oldukları eğitim doğrultusunda kardiyopulmoner resüsitasyon gibi ilk yardımın gereklerini yerine getirir” denilmektedir. Ayrıca normal ameliyathane uygulamaları yanı sıra ileri yaşam desteği gibi uygulamalarda ekip anlayışı içerisinde sağlık hizmeti sunumun devamlılığının sağlanmasında anestezi teknikerlerinin önemli rolleri vardır (3). Bu bölümde anestezi tekniker/teknisyenin bilmesi gereken temel ve ileri yaşam desteği ile ilgili detaylara değinilmiştir.

I. Kardiyak Arrestin Tanımı ve Tanınması

1. Kardiyak Arrest Nedir?

Kardiyak arrest kalbin dolaşıma kan pompalama yetisini yitirmesi, yani kalbin durmasıdır. Kardiyak arrest farklı şekillerde ortaya çıkabilir. Bazı durumlarda kalpte elektriksel bir aktivite vardır ve EKG monitöründe kalp kasının çalıştığı izlenimi veren görüntüler olabilir. Yani kalp kasında “seğirme” olabilir, ancak mekanik aktivite yoktur. Kalbin içindeki kan organların dolaşımını sağlayan damarlara pompalanamaz ve dolaşım durmuştur.

Bölüm 22

ANAFİLAKSİ

Bilal Katipoğlu, Eyüp Horasanlı

Anafilaksi, ani başlayan ve yaşamı tehdit eden sistemik bir aşırı duyarlılık reaksiyonudur (1). Mast hücreleri ve bazofillerden salınan histamin gibi mediyatörlere bağlı olarak gelişir. Gıdalar, ilaçlar, böcek veya arı sokması en sık rastlanan anafilaksi nedenleridir (2). Klinik semptom ve belirtiler doğrultusunda anafilaksi tanısı hızla konulmalı ve acilen tedavi başlanmalıdır.

Perioperatif anafilaksi, operasyon sırasında gelişen, ölümcül seyredabilen sistemik alerjik bir reaksiyon olarak tanımlanır (3). Genel anestezi sırasında birden fazla farmakolojik ajan kullanılması nedeniyle anafilaksi görülen olguların kapsamlı olarak değerlendirilmesi gerekir. Ayrıca, genel anestezi altında alerjik bir reaksiyonun tanınması zor olabilir. Bu nedenle, anafilaksi konusunda farkındalık oluşması önemlidir. Bu bölümde; perioperatif anafilaksi insidansı, etiyolojisi, risk faktörleri, klinik bulguları, tanı ve tedavisi gözden geçirilecektir.

I. Etiyoloji ve İnsidans

Anafilaksi, ilk defa 1902 yılında Paul Jules Portier ve Charles Richet tarafından köpeklerde deniz anası toksini ile yapılan çalışmada tanımlanmıştır (4). Zaman içerisinde, besinler, ilaçlar ve pek çok kimyasal ajanlarla da açığa çıktığı görülmüştür. Anestezi esnasında en sık ilaçlara bağlı anafilaksi görülmektedir. Genel anestezi sırasında anafilaksi insidansı 1:10.000–1:20.000 arasındadır (5).

II. Perioperatif Anafilaksi Nedenleri

Perioperatif anafilaksi nedenleri; intravenöz (İV) anestezikler, nöromusküler bloke edici ajanlar (kas gevşeticiler), sugammadeks, lokal anestezikler, lateks, klorheksidin, protamin sülfat, antibiyotikler ve kolloidler olarak sayılabilir.

3. Sıvı Tedavisi

Anafilakside damar yolu açılır ve sıvı tedavisi 10 dk içinde 10-20 ml/kg (%0,9 NaCl/izotonik) olarak başlanır. Daha sonra hastanın kliniğine göre bu miktar 100 ml/kg'a kadar artırılabilir.

4. Diğer İlaçlar

Yeterli kanıt olmamasına rağmen, kortikosteroidler uzamış reaksiyonları önlemeye yardımcı olabilir. Metilprednizolon 2 mg/kg İM veya İV olarak yavaş infüzyon ile verilir. Altı saatte bir gerekirse doz tekrarı yapılabilir. Antihistaminikler anafilaksi tedavisinde sıklıkla kullanılan ilaçlardır ancak yalnızca kaşıntı ve ürtiker gibi semptomları azaltmak amacı ile kullanılması önerilmektedir (23). Anafilakside tedaviye cevap alınmadığı durumlarda hastanın beta bloker kullanımı mutlaka sorgulanmalıdır. Eğer beta bloker kullanım öyküsü varsa glukagon erişkinlerde 1-5 mg, çocuklarda ise 20-30 µg/kg iv yolla verilmelidir (24).

Perioperatif anafilaksi tedavisi, anafilaksi tedavisine benzer şekilde adrenalin ve sıvı replasmanı ile hızlı hemodinamik resüsitasyona dayanır. Ameliyathanede veya yoğun bakım ünitesinde hastaların İV erişimi olduğundan, ilk tedavide İV adrenalin yaygın olarak kullanılır (25). Diğer birçok alanda ise anafilaksi için İM adrenalin kullanılmalıdır. Perioperatif anafilaksi gelişen erişkin hastalarda, şiddetli hipotansiyon veya şok durumunda 10-100 µg İV bolus adrenalin yapılır ve 1-2 dakika içerisinde doz tekrarlanır veya 2-10 µg/dk hızında infüzyona başlanarak etkili doza kadar titre edilir. Çocuk hastalarda ise başlangıç dozu 0,1-1 µg/kg/dk'dır (21). Kardiyopulmoner arrest gelişen hastalarda hızla resüsitasyona başlanmalıdır. Eş zamanlı olarak hava yolu güvenliği de sağlanmalıdır.

Perioperatif anafilaksi gelişen hastalar, olası etkenin belirlenmesi için mutlaka alerji uzmanına yönlendirilmelidir. Bu yaklaşım özellikle gelecekte güvenli bir şekilde anestezi alması için önemlidir.

BUNU BİLİYOR MUSUNUZ?

Perioperatif anafilaksi tedavisinde öncelikle İV adrenalin tercih edilmelidir.

MALİGN HİPERTERMİ

Pakize Kırdemir, Mustafa Soner Özcan

Günümüzde anestezi pratiğinde, rejyonel anestezi tekniklerinin gelişmesine rağmen, hastaların birçoğu genel anestezi altında opere olmaktadır. Genel anestezi uygulanacak hastalar, premedikasyon dâhil olmak üzere, herhangi bir dönemde (indüksiyon, idame, uyanma/derlenme) komplikasyonlar ile karşı karşıya kalabilmektedirler. Genel anestezi uygulamalarında süksinilkolinin kullanımının sınırlı olmasına karşın, inhalasyon anestezi indüksiyonda ve sıklıkla idamede kullanılmaktadır.

Malign hipertermi (MH) tüm inhale volatil anesteziyelere (halotan, izofluran, sevofluran, desfluran) ve depolarizan kas gevşeticilere (süksinilkolin) bağlı gelişen, ilerleyici kas yıkımı ve hipermetabolizma ile karakterize, nadir görülen farmakogenetik bir kas hastalığıdır. Nadir görülür, ancak erken tanınmaz ve müdahale edilmezse oldukça ölümcül bir durumdur. Bu bölümde, bir anestezi acili olan MH krizinin nasıl tanınması ve tedavi edilmesi gerektiğinden ayrıntılı olarak bahsedilmiştir.

I. Epidemiyoloji

MH dünyanın tüm bölgelerinde ve tüm etnik gruplarda görülebilmektedir. MH atağı görülme sıklığı 1:3000-1:100.000 arasında olduğu tahmin edilmektedir (1). Erkeklerde kadınlara oranla 2 kat fazla görülmektedir. Görülen ataklar çocuklarda, özellikle 15 yaş altında daha fazladır (%52) (1). Akut kriz tetikleyici ajanlarla olan ilk maruziyette ortaya çıkabilmesine karşın, genellikle hastaların yarıya yakınında daha önce birçok defa aynı ajanlarla genel anestezi aldıkları bilinmektedir. Hatta ABD’de bir hastada 31. maruziyet sonrası akut kriz geliştiği kaydedilmiştir (2).

BUNU BİLİYOR MUSUNUZ?

Daha önce deneyimlenmiş sorunsuz genel anestezi öyküsü, bu hastaların malign hipertermi krizi açısından güvende olduğunu göstermez.

3. Mutlaka hastalara yeni solunum devresi, LMA (laringeal maske), endotrakeal tüp kullanılmalıdır.
4. Dantrolen mutlak suretle temin edilmelidir, olmadan hastaya anestezi verilmemelidir.
5. Bu tip MH gelişme riski olan hastalara, gerekli bilgiler verilerek eğer mümkünse reyonel anestezi de ilk olarak düşünülebilir.
6. Anestezi verilmeden önce MH kriz yönetimini gözden geçirmek faydalı olacaktır.

Bölüm 24

MASİF HEMORAJI

Güray Demir

Günlük anestezi pratiğinde ameliyathane ya da ameliyathane dışı anestezi uygulamalarında anestezi ekibinin sıklıkla karşılaştığı hayati tehlike oluşturan ve gerçek anlamda acil olan durumlardan biri masif hemorajiler (kanamalar)'dir. Masif hemoraji hastaneye travma nedeni ile getirilmiş hastalarda olabileceği gibi ameliyatlarda ya da endoskopi gibi işlemler sırasında beklenmedik bir şekilde de ortaya çıkabilir. Hızlı bir şekilde cerrahi olarak müdahale edilmez ise sıklıkla ölüm ile sonuçlanırlar.

Masif hemorajinin tedavisi esnasında, anestezi tekniker/teknisyenleri ekibinin bir parçası olarak anestezi hekimleri ve hastaya müdahale eden cerrahlar ile iş birliği içinde olmalıdırlar. Durumun ciddiyetinin farkında olarak hastaya nelerin yapılması gerektiğini çok iyi bilmek zorundadırlar. Bilgili ve deneyimli bir ekip masif hemorajisi olan bir hastayı doğru adımlar ile hızlı bir şekilde müdahale ederek hayata döndürebilir. Bu bölümde masif hemoraji ile ilgili bir anestezi tekniker/teknisyeninin bilmesi gereken konulara detaylı olarak değinilmiştir.

I. Temel Bilgiler ve Tanımlar

Kan, bütün organların beslenmesini sağlayan eritrosit gibi hücreler ve plazmadan oluşan ve damar içi alanda tüm vücudu dolaşan sıvıdır.

Kanın Görevleri

- Gazların taşınması (hücrelere oksijen götürülmesi, oluşan karbondioksitin vücuttan atılması için akciğerlere taşınması),
- Hücreler için gerekli besinlerin taşınması,
- Hemostazın (pıhtılaşmanın) sağlanması,
- Bağışıklığın sağlanması,
- Hormon ve enzimlerin ilgili organlara taşınması olarak sıralanabilir.

- Dilüsyonel trombositopeni: Masif transfüzyon sırasında yeterinde trombosit verilmemesi trombosit sayısının düşmesine neden olur. Trombosit sayısının düşmesi kanamaya eğilimi artırır.
- Dissemine intravasküler koagülasyon (DİC)/Yaygın Damar İçi Koagülasyon Bozukluğu: Normalde çalışmaması gereken durumda pıhtılaşma sisteminin çalışarak damar içinde kontrolsüz pıhtıların oluşmasıdır. Bu durum damar içinde tıkanıkların olmasına neden olduğu gibi pıhtılaşma faktörlerinin ve trombositlerin tükenmesine de neden olarak kanamanın artmasına da neden olur.
- Hemolitik transfüzyon reaksiyonu: Bu durum daha çok yanlış kan verilmesi durumunda ortaya çıkar. Fakat masif transfüzyon durumunda kişiye O Rh (-) kan gurubundan anti-A, anti-B antikorları içeren kan ürünlerinin verilmesi durumunda bu antikorlar hastanın eritrositleri ile etkileşime girerek eritrositlerin parçalanmasına yani hemolize neden olabilir.
- Sitrat zehirlenmesi ve hiperkalemi: Banka kanlarında sitrat kan ürünlerinin hazırlanmasında pıhtılaşmayı önleyici olarak kullanılır. Hastaya fazla miktarda kan verildiğinde vücut için belli bir düzeyin üzerinde zararlı olan sitrat miktarı artar ve sitrat zehirlenmesine neden olur. Benzer olarak potasyum düzeyinin hazırlanmış kanda yüksek olması hiperkalemiye neden olabilir.
- Hipotermi: Kan bankalarında kan ürünleri 4° korunurlar. Fazla miktarda kan verilmesi vücut ısısının 36,5° olduğu bir durumda vücut ısısını ciddi olarak düşürecektir.
- Bu durumlar dışında masif transfüzyon yapılması vücutta asit-baz bozuklukları, hava embolisi, demir fazlalığı, bakteriyel bulaş, hipervolemi (sıvı fazlalığı) gibi sorunlara da yol açabilir.

Bölüm 25

ŞOK

Yaşar Gökhan Gül, Yunus Oktay Atalay

Çeşitli cerrahi ve tıbbi hastalıklar sonucu gelişebilen ve bir klinik acil olan şok, oksijen sunumunun azalması ve/veya oksijen tüketiminin artması sonucu hücresel düzeyde doku hipoksisi olarak tanımlanmaktadır. Şokun etkileri başlangıçta geri dönüşümlüdür ancak hızla geri dönüşümsüz bir hâle gelip multiorgan yetmezliğine ve ölüme neden olabilir. Bu bakımdan erken tanı ve tedavi çok önemlidir (1). Bu bölümde şokun tanımı, evreleri, tipleri tanımlanacak, tanı ve tedavisinden bahsedilecektir.

I. Şokun Tanımı ve Tipleri

Şok çoğunlukla dolaşım sal yetmezlikten (hipotansiyon, doku perfüzyonunun azalması) kaynaklanır. Doku kanlanmasındaki azalma ile dokuya oksijen sunumu azalır, hücre enerji metabolizması değişir ve sonuç olarak doku hasarı başlar. Oksidatif metabolizma yerini anaerobik metabolik yola bırakır. Hücresel hipoksi, hücre membranı iyon pompasında disfonksiyon, intraselüler ödem, intraselüler içeriğin ekstraselüler alana kaçması ve intraselüler pH regülasyonunun bozulmasına neden olur. Bu biyokimyasal değişiklikler, sistemik asidoza ve endotelial disfonksiyona neden olur. Sonuç olarak bölgesel kan akımında azalma ortaya çıkar. Serum laktat düzeyinin artması hipoperfüzyon ve doku hipoksisinin bir göstergesidir (2,3).

BUNU BİLİYOR MUSUNUZ?

Şokun etkileri başlangıçta geri dönüşümlüdür ancak hızla geri dönüşümsüz bir hale gelip multiorgan yetmezliğine ve ölüme neden olabilir. Bu bakımdan erken tanı ve tedavi çok önemlidir.

Şokun 3 Evresi

Pre-şok evresi: Kompanse şok ya da kriptik şok olarak da adlandırılır. Azalmış doku perfüzyonuna kompensatuar yanıt ile karakterizedir. Başka bir sağlık problemi olmayan sağlıklı bireyde, hipovolemik şokun pre-şok/erken evresinde ortaya çıkan kompensatuar taşikardi ve periferik vazokonstriksiyon semptomatik bir seyire ne-

solüsyon infüzyonunun koagülasyon faktörlerinde ve plateletlerde dilüsyona neden olarak koagülopatiyeye neden olabileceği unutulmamalıdır (22-24). Ayrıca fazla sıvı replasmanı kalp yetmezliği, pulmoner hipertansiyon gibi klinik durumlarda dekompanzasyona neden olarak hastanın genel durumunu daha da bozabilir. Travma hastalarında da kristaloid ve kolloidin birbirine üstünlüğü gösterilememiştir (25).

Travmatik şok resüsitasyonunda; ortalama arter basıncı penetran yaralanma var ise >65 mmHg, künt travma var ise >85 mmHg üzerinde, kalp atım hızı 60-100 atım/dk, oksijen saturasyonu $> \%94$, idrar çıkışı 0.5 ml/kg/saat olacak şekilde tutulmalıdır. Serum laktat düzeyi her saat başı değerlendirilmeli, laktat düzeyinin 2 mmol/L altında olması sağlanmalıdır. Asit baz defisitinin normal sınırlarda, mikst santral venöz oksijen basıncının $> \%70$ olması hedeflenir. Kan transfüzyonu yapılacak hastalarda mutlaka hasta kan grubu ile uyumlu, cross-match yapılmış kan ürünleri kullanılmalıdır. Transfüzyon güncel kılavuzlar rehberliğinde yapılmalıdır. (26, 27, 28).

İÇİNDEKİLER

BÖLÜM YAZARLARI	iii
ÖN SÖZ	V

BÖLÜM 1

DOĞA, FİZİKSEL SAĞLIK VE HAREKET BAĞLANTISI

1. Doğal ve Yapay Çevrenin Beden Üzerindeki Etkileri ile Fiziksel Sağlıkla Bağlantısı	1
1.1. Işık ve Aydınlatma	2
1.2. Havalandırma	3
1.3. Ses	4
1.4. Isı ve Nem	6
1.5. Renk	7
1.6. Koku	7
2. Doğa, Sağlık ve Fiziksel Aktivite Düzeyi Arasındaki Güçlü Bağ	8
3. Doğanın Hareket Gelişimi Üzerindeki Etkileri	11
4. Doğanın Yürüme Becerisinin Gelişimi Üzerindeki Etkilerinin Örneklerle İncelenmesi ..	14
Kaynakça	18

BÖLÜM 2

DOĞA VE PSİKOLOJİK SAĞLAMLIK

1. Psikolojik Sağlık Kavramının Doğuşu	23
2. Psikolojik Sağlık	26
3. Risk ve Koruyucu Faktörler	28
3.1. Bireysel Koruyucu Faktörler	30
3.2. Ailesel Koruyucu Faktörler	31
3.3. Çevresel Koruyucu Faktörler	32
4. Doğa ve Psikolojik Sağlık İlişkisi	33
4.1. Doğada Olmanın Sağladığı Yararlar	34
5. Çocuklarda Psikolojik Sağlamlığın Geliştirilmesine Dönük Öneriler	36
5.1. Doğa Temelli Okul Felsefesi	37

5.2. Doğada Mutlu Aileler	39
Kaynakça	43

BÖLÜM 3

ÇOCUK, DOĞA VE ÖZ DÜZENLEME

1. Öz Düzenleme Nedir?	47
2. Doğada Olmanın Öz Düzenleme Becerilerine Etkisi	49
3. Doğanın Dikkat Üzerine Etkisi	52
4. Öz Düzenlemeli Öğrenme	55
5. Doğa ve Öz Düzenlemeli Öğrenme	56
Kaynakça	57

BÖLÜM 4

ÖZEL GEREKSİNİMLİ ÇOCUKLAR İÇİN DOĞA

1. Özel Gereksinimli Çocuklar ve Öğrenme Süreçleri	63
2. Özel Gereksinimli Çocuklar İçin Doğal Öğrenme Ortamı	65
3. Özel Gereksinimli Çocuklar İçin Doğada Eğitim: Planlama ve Uygulama	68
4. Doğayı Oyun Ortamı Olarak Değerlendirmek	75
Kaynakça	78

BÖLÜM 5

ERKEN ÇOCUKLUK YILLARINDA ÇOCUK-DOĞA İLİŞKİSİ

1. Giriş	81
1.1. Doğanın Bireyler Üzerindeki Etkileri	82
1.2. Erken Çocukluk Yıllarında Çocuk-Doğa İlişkisi	84
1.3. İnsan-Doğa Bağlantısı (Human Nature Connection, HNC)	86
1.4. Çocuk-Doğa Bağlantısı	87
1.5. Doğaya Bağlı Olma, Doğa ile İlişkili Olma ve Biyofili	89
1.6. Modern Dünyada İnsan-Doğa İlişkisi	91
1.7. Doğa Pedagojisi ve Doğa Temelli Eğitim Modellerine Giriş	93
1.8. Orman Okulu	95
2. Sonuç	101
Kaynakça	102

BÖLÜM 6

DOĞAYLA UYUM: ÇOCUĞUN BİLİŞSEL GELİŞİMİ

1. Bilişsel Gelişime Bakış	110
1.1. Doğadaki Çocuk: Bilişsel Gelişimde Köşe Taşları	110
1.2. Bilişsel Gelişimin Beş Gerçeği	119
2. Bilişsel Gelişim Hakkında Bilim İnsanları Neler Diyor?	121
2.1. Jean Piaget ve Bilişsel Gelişim	121

2.2. Lev S. Vygotsky ve Bilişsel Gelişim	125
2.3. Jerome Bruner ve Bilişsel Gelişim	127
2.4. Bilgi İşleme Kuramı	128
2.5. Zihin Kuramı	129
3. Büyümüş de Küçülmüş, Her Şeyi Biliyor!	130
3.1. Öğrenme.....	131
3.2. Dikkat	131
3.3. Algı.....	133
3.4. Bellek	134
3.5. Bilişsel İşlevler	134
3.6. Yürütücü İşlevler.....	135
3.7. Problem Çözme	137
3.8. Üst Biliş.....	138
4. Doğanın Bilişsel Gelişim ve Düşünmeye Yansıması	139
5. Ekran Arka Planı: Doğa Manzarası	140
6. Çocuklar ve Yaşamlarındaki Yetişkinler İçin Doğada Etkinlik Önerileri	142
Kaynakça	147

BÖLÜM 7 DOĞA VE BİLİM

1. Erken Çocuklukta Bilim Neden Önemlidir?	152
2. Erken Çocuklukta Bilim Eğitiminin İçeriği	156
3. Doğada Bilim Deneyimlerinde Yetişkin Rolü.....	164
4. Bildiklerimin / Öğrendiklerimin Ötesine Nasıl Geçebilirim?	171
Kaynakça	174

BÖLÜM 8 DOĞA VE MATEMATİK

1. Giriş	177
2. Doğa ve Matematik İlişkisi.....	178
3. Doğa ve Matematik Eğitimi	179
4. Doğada Matematiği Öğrenmede Doğal Materyaller	183
5. Doğada Matematik İçin Öğretimsel Stratejiler ve Öneriler	184
Kaynakça	188

BÖLÜM 9 DOĞA VE ÇOCUK EDEBİYATI

1. Uygarlık Tarihinde İnsan ve Doğa İlişkisi	191
2. Çocuk Edebiyatı ve Doğa	193
2.1. Şiir ve Şarkılar	198
2.2. Masal ve Fabllar	199

2.3. Tekerlemeler	201
2.4. Parmak Oyunları.....	202
2.5. Bilmeceler.....	203
2.6. Hikâyeler ve Resimli Çocuk Kitapları	204
Kaynakça	209

BÖLÜM 10

DOĞA VE ERKEN OKURYAZARLIK

Giriş	213
1. Erken Okuryazarlık Becerileri.....	214
2. Erken Okuryazarlık Becerilerinin Alt Bileşenleri.....	215
2.1. Sözcük Bilgisi	216
2.2. Dinlediğini Anlama	217
2.3. Harf Bilgisi	217
2.4. Sesbilgisel Farkındalık.....	218
2.5. Yazı Farkındalığı.....	219
3. Doğada Erken Okuryazarlık Becerileri	219
3.1. Doğada Sözcük Bilgisi	221
3.2. Doğada Dinlediğini Anlama	228
3.2. Doğada Harf Bilgisi	232
3.3. Doğada Sesbilgisel Farkındalık.....	234
3.4. Doğada Yazı Farkındalığı.....	238
4. Doğada Yapılabilecek Etkinliklere Yönelik Web Siteleri	241
Kaynakça	243

BÖLÜM 11

DOĞA VE OYUN

1. Oyun	248

DOĞA, FİZİKSEL SAĞLIK VE HAREKET BAĞLANTISI

Zeynep Kılıç

1. Doğal ve Yapay Çevrenin Beden Üzerindeki Etkileri ile Fiziksel Sağlıkla Bağlantısı

İnsan hayatı, insan eli değmemiş ve hiçbir müdahale olmadan varlığını devam ettiren doğal çevre (Daniel, 2001) ve bu doğal çevre içerisinde insanların doğaya müdahale ederek kendi elleriyle oluşturdukları şehirler, yollar, barajlar, binalar gibi yaşam alanlarını içeren yapay çevrede (Hartig vd., 2011, akt; Çabuk, 2019) geçmektedir.

Yapay çevreyi oluşturan, içinde yaşanan, çalışılan ve eğitim alınan binaların insan bedeninin alışık olduğu doğal yaşam şartları ile insanların istek ve ihtiyaçlarını karşılayabilmesi gerekmektedir. Soygeniş (2019), insanların binalara yani kendi oluşturdukları yapay çevrelere ilişkin isteklerinin ışık, hava sirkülasyonu, ses, ısı ve nem ile ilgili olduğunu ifade etmektedir. Murphy ve Thorne (2010) da okul binalarının tasarlanması noktasında belirtilen gereksinimlerin karşılanmasının önemli olduğunu belirtmiştir. Belirtilen tüm bu gereksinimler insan bedenindeki fizyolojik fonksiyonlar üzerinde etkiye sahiptir ve dolayısıyla da fiziksel sağlığa etki etmektedir. Bakır ve arkadaşlarının (2014) da belirttiği üzere gelişim çağında olan çocuklar, çevresel koşullara karşı yetişkinlerden daha duyarlıdır. Bu nedenle doğal çevreye bağlı insan gereksinimleri ve bu gereksinimlerin fiziksel sağlığa olan etkileri ele alınırken belirtilen gereksinimlerin yapay çevre içerisinde nasıl sağlandığına da yoğun bir şekilde değinilmiştir. Çünkü günümüz çocukları; sokaklarda, oyun bahçelerinde ya da herhangi bir açık hava ortamında geçirdiği zamandan çok daha fazlasını okul, kurs, oyun merkezi gibi yapay çevreye dâhil olan kapalı alanlarda (binalarda) geçirmektedirler.

İnsanların oluşturdukları yapay çevrede yaşamak için doğal çevreden alışık oldukları ve talep ettikleri gereksinimler olan ışık, aydınlatma, havalandırma, ses, ısı,

desteklemektedir. Bu nedenle her zaman ayakkabı ile değil zemin özelliklerinin uygun olduğu, çıplak ayakla yürümenin uygun olduğu zeminlere sahip olan yerlerde çocukların ayakkabısız yürümeye de teşvik edilmesi gerekmektedir. Böylece çocuk, bastığı zemine uygun bir şekilde ayak tabanının yerleşmesini hissedebilecektir.

Tek bir hareket becerisi üzerinden kısaca açıklanmaya çalışıldığında bile doğal çevrenin çocukların hareket becerilerinin gelişiminde ve desteklenmesinde ne kadar önemli bir etkiye sahip olduğu görülmektedir. Bu nedenle aileler ve öğretmenlerin, çocukların doğal çevrelerde zaman geçirmesi gereken imkânları sağlamaları elzemdir. Kitabın diğer bölümlerinde de aktarılacağı üzere şunu söyleyebiliriz; doğa, çocuğun bütüncül olarak gelişimi için ona birçok fırsatı aynı anda sunmaktadır. Çocuğun lehine çok yoğun fırsatlar sunan bu ortamın en iyi şekilde değerlendirilebilmesinde ise yetişkinlere görev düşmektedir. Kendisine görev düşen yetişkinlerden kasıt ise sadece ebeveynler ve öğretmenler değil, yerel ve ulusal yönetimde söz sahibi olan, çocuğun gelişimi ve eğitimi üzerine politikalar geliştiren herkesi kapsamaktadır.

Bölüm 2

DOĞA VE PSİKOLOJİK SAĞLAMLIK

Firdevs Burçak

DOĞA VE PSİKOLOJİK SAĞLAMLIK

“Doğa, bir çocuğa anne ve babasının dünyasından farklı, daha bilge ve büyük bir dünya sunar. Yıkıcı bir ailede ya da mahallede yaşayan bir çocuk için şifa sunar.

Bir şans verildiğinde, bir çocuk dünyanın karmaşasını ormana getirecek, onu derede yıkayacak, o karmaşanın görünmeyen tarafında nelerin yaşadığını görmek için üzerinde düşünecektir.

Doğada çocuk özgürlük, hayal gücü ve mahremiyet bulur: yetişkinlerin dünyasından uzak bir yer, farklı bir huzur”.

Richard Louv

Last Child in the Woods

(Doğadaki Son Çocuk)

1. Psikolojik Sağlamlık Kavramının Doğuşu

Psikolojik sağlamlığa ilişkin araştırmaların kökleri, 50 yıl öncesine kadar uzanmaktadır. Başlangıçta çok geniş olmayan bu araştırma alanı, son 20 yılda yaşanan değişimler sonucunda önemli ölçüde yol katederek psikolojik sağlamlığa ilişkin yeni araştırmaların açığa çıkmasında önemli bir rol oynamıştır. Bu duruma yol açan faktörler, yirminci yüzyılın sonlarına doğru ortaya çıkan teknolojik gelişmelerin sonucunda oluşan karmaşıklık ve çeşitli zorluklarla karşılaşan gençlerin sayısının artması; psikolojik sağlamlıkla ilişkili olan risk ve koruyucu faktörlerin işleyişinin anlaşılmasındaki zorluklara karşı daha sağlam bir zihniyetin tüm gençlikte yaygınlaştırılma çabası olarak sıralanabilir (Goldstein ve Brooks, 2013).

bütüncül olarak destekleyerek, psikolojik sağlık için gerekli olan koruyucu mekanizmaların desteklenmesinde önemli bir rol oynayacaktır.

Bölüm 3

ÇOCUK, DOĞA VE ÖZ DÜZENLEME

Dilan Bayındır

Doğada olmanın çocuklar için pek çok faydası olduğu bilinmektedir. Öncelikle doğada olmanın çocukların öz düzenleme becerileri için önemi ele alınmıştır. Bu bölümde, öncelikle öz düzenleme kavramı açıklanacak, sonrasında öz düzenleme becerileri ile doğada olmanın ilişkisine dair çalışmalara ve önerilere yer verilecektir. Bölümün son kısmında ise öz düzenlemeli öğrenme davranışları ile doğada olmak arasındaki ilişkiye değinilecektir.

1. Öz Düzenleme Nedir?

Araştırmacıların karşılaştığı önemli bir sorun, öz düzenleme ve öz düzenlemeli öğrenmenin açık tanımlarını sağlamaktır (Dinsmore vd., 2008). Bu konuda çalışmalar yapan araştırmacıların standart tanımlar kullanmadıkları görülmektedir. Bu durum, anlaşılabilir olmakla birlikte sorunludur (Schunk 2000). Süreçleri nasıl tanımladığımız, onları değerlendirmek için kullandığımız yöntemleri ve araştırma sonuçlarımızı nasıl yorumladığımızı etkilemektedir. Bu nedenle bu bölüme başlarken öncelikle öz düzenleme kavramı hakkında net bir tanımın bulunmadığını vurgulayarak başlamak yerinde olacaktır.

Sosyal bilişsel kuram, bilgiyi işleme kuramı, sosyal kültürel kuram başta olmak üzere farklı kuramlar öz düzenleme kavramını tanımlar. Bu alandaki çağdaş araştırmalar; Flavell (üstbiliş), Bandura (öz düzenleme) ve Zimmerman'dan (öz düzenlemeli öğrenme) büyük ölçüde etkilenmiştir (Schunk, 2008). Öz düzenleme kavramı üzerinde en önemli etkinin ise Bandura (1986) tarafından şekillendirilen sosyal bilişsel gelenek ve bu geleneğin takipçisi araştırmacılar tarafından ortaya konduğu söylenebilir. Bandura sonrasında, Zimmerman, Schunk, Pintrich ve Pajares'in çalışmaları bu konudaki önemli çalışmalar olarak kabul edilmektedir (Sakız ve Yetkin-Özdemir, 2014). Schunk (2001), öz düzenlemeyi bireylerin belli bir amaca ulaşmak için bilişsel, üstbilişsel ve motivasyonel stratejilerden faydalanarak

Sibthorp ve arkadaşları (2015), bir dönem boyunca süren dış alan macera eğitimi programına katılan üniversite çağındaki öğrencilerin, daha fazla kendi kendini yöneten öğrenciler olacaklarını varsaymıştır. Çalışma sonunda, açık hava macera eğitimine katılan öğrencilerde motivasyon ve öz yeterlilik düzeylerinin değişmediği, bunun nedeninin öğrenen özelliklerinden kaynaklandığı sonucuna varılmıştır. Ancak dış alan macera eğitimi sırasında özellikle girişim ve kontrol düzeyi ölçümlerinde önemli gelişmeler olduğu görülmüştür. Bu ölçümler, öğrenme sürecini planlama, uygulama ve değerlendirme için proaktif olarak kontrol ve inisiyatif almayı gösteren eylemleri değerlendirmektedir.

İlgili literatürün bize gösterdiği gibi doğada olmak öz düzenlemeli öğrenme için katkı sağlamakta olup bu konuda daha fazla araştırma yapılması gerektiği açıktır.

ÖZEL GEREKSİNİMLİ ÇOCUKLAR İÇİN DOĞA

Tringa Shpendi Şirin

1. Özel Gereksinimli Çocuklar ve Öğrenme Süreçleri

Çocukların dinamik varlıklar olarak kabul edilmesi, onlara erken dönemden itibaren öğrenme fırsatları sunulmasına yol açacaktır (Tuğrul, 2002). Çocuklara sunulan bu fırsatlar onların yeni olgular öğrenmelerine ve deneyimler edinmelerine olanak sağlayacaktır. Erken dönemde çocuklar birbirinden farklı şekillerde öğrenirler, bundan dolayı çocuklara doğrudan ve dolaylı öğrenme sürecinde farklı durumları deneyimleme fırsatı vermemiz, onların öğrenmelerini desteklemek anlamına gelmektedir (Lind, 2005; Saçkes, Trundle ve Flevares, 2009). Aileler ve öğretmenler, çocukların bu öğrenme ihtiyacını yeni bilgiler ve deneyimler sunarak desteklemeye çalışmaktadırlar (Tuğrul, 2002). Ancak bu noktada dikkat edilmesi gereken bir konunun altını çizmek çok önemlidir, bu da çocuğun gelişim düzeyi ve buna bağlı olarak gereksinim ve ihtiyaçlarıdır. Anlaşılacağı üzere her çocuğun kendine özgü bireysel farklılıkları vardır ve öğrenme sürecin planlanmasında aile ya da öğretmen olarak çocukların ihtiyaçlarını göz önünde bulundurmak çok önemlidir (DEC, 2007; Snow ve Van Hemel, 2008). Öğrenme her çocuğun hakkıdır ancak bunun yanı sıra her çocuğun ihtiyaç duyduğu şekilde öğrenim görmeye hakkı olduğunu da bilmemiz gerekmektedir. Diğer çocuklardan farklı olarak bazı çocukların gelişim alanlarında özel gereksinimlerine bağlı ihtiyaçları vardır; bu ihtiyaçlar özellikle fiziksel, bilişsel, sosyal duygusal gibi alanları kapsamaktadır. Bunun için eğitim sürecini tasarlarken her çocuğun ihtiyaçlarını göz önünde bulundurmak önemlidir (Cavkaytar, 2015).

Özel gereksinimli çocuklar, özel eğitime ihtiyacı olan çocuklardır ve genellikle görme yetersizliği, zihinsel yetersizlik, işitme yetersizliği, fiziksel (bedensel) yetersizlik, dil ve konuşma bozukluğu, duyu ve davranış bozukluğu, öğrenme güçlüğü, otizm spektrum bozukluğu, çoklu yetersizlikler ve özel yetenekli çocuklar olarak bilinmektedirler [Özel Eğitim Hizmetleri Yönetmeliği, Millî Eğitim Bakanlığı

- Hareket özgürlüğü,
- Farklı ortamlarda ve farklı alanlarda nasıl davranmaları gerektiğini tecrübe ederek öğrenmeleri,
- Sınıfı içerisinde bulunan materyallerin yanı sıra farklı materyallerle öğrenmeleri,
- Öğretmen ve ailelerinden öğrenmelerini desteklemek için sınıfta uygulanan yöntemlerin yanı sıra alternatif öğrenme yöntemlerini de deneyimlemeleri,
- Arkadaş edinme,
- Sosyal açıdan kabul görmeleri için fırsat sunmaktadır.

Doğada yapılan eğitimden özel gereksinimli çocuklar faydalanabileceği gibi tipik gelişim gösteren çocuklar, öğretmenler ve aileler de faydalanabilmektedirler. Doğa, farklılıkları gözetmeksizin bütün insanlara kendilerini bulmalarına ve özgür hissetmelerine olanak sağlamaktadır.

Sonuç olarak özel gereksinimli çocukların ihtiyaç ve ilgileri doğrultusunda onlara fırsatlar sunan bir ortamda öğretim yapılması, onların bilişsel, fiziksel, dilsel, sosyal ve duygusal açılardan gelişme göstermelerini sağlayacaktır. Kendileri tanıma, yeni deneyimler edinme, diğer çocuklarla bir arada olmak ve ilgi duydukları konulara daha yakın olmak doğada yapılan eğitimin sunduğu bir fırsattır. Burada dikkat etmemiz gereken bir konu ise her şeyi doğadan beklememek, söz konusu özel gereksinimli çocuklar olduğunda iyi bir öğretim planlamasının ne kadar önemli olduğunu göz önünde bulundurmanız gerekmektedir. Ayrıca öğretim sürecinde öğretmen ve aile iş birliği de bir o kadar önemlidir. Özel gereksinimli çocukların okulda ya da evde edindikleri beceriler ya da kazandıkları olumlu davranışlar/söndürdükleri problem davranışlar açısından öğretmen ve ailelerin birlikte çalışması bu beceri/davranışların kalıcı olması ve genelleme yapmaları açısından önemlidir. Özel gereksinimli çocukların kazandıkları becerileri genelleyebilmeleri ise onların topluma uyum sağlamaları ve kabul görmeleri anlamına gelmektedir. Bu da özel gereksinimli çocukların birey olarak, bizim de toplum olarak en önemli hedefimizdir. Doğanın sunduğu öğretim fırsatlarını ve doğada öğrenmenin çocuklar için önemi göz önünde bulundurularak, doğanın daha etkin bir şekilde kullanılması için öğretmenler ve aileler olarak bizler de elimizden gelenini yapmalıyız.

ERKEN ÇOCUKLUK YILLARINDA ÇOCUK-DOĞA İLİŞKİSİ

Simge Yılmaz Uysal

1. Giriş

Bu bölümde;

- Doğanın bireylerin fiziksel ve ruhsal sağlıkları üzerindeki etkileri,
- Erken çocukluk yıllarında çocukların doğa ile ilişkisinin nasıl kurulduğu ve bu ilişkide erken yıllarda önemli yaşam deneyimlerinin rolü,
- Çocuk-doğa ilişkisinin kurulmasının doğa için ne gibi katkılar sağlayacağı,
- İnsan-doğa ilişkisi ve bu ilişkinin boyutları,
- Çocukların doğa ile bağ kurmaları sonucunda öğrendikleri somutlaştırılmış yetenekler ve bu yeteneklerin ne ifade ettiği,
- Doğaya bağlı olma, doğa ile ilişkili olma ve biyofili kavramları,
- Günümüzde insan doğa ilişkisindeki kopukluklar ve nedenleri,
- Doğadan uzaklaşmaya bağlı olarak gelişen biyofobi,
- Biyofobinin etkilerini azaltabilecek önlemler,
- Bireyleri doğa ile buluşturmada eğitimin rolü,
- Doğa pedagojisi ve doğa temelli eğitim,
- Doğa temelli eğitim modellerinden Orman Okulu,
- Avustralya'da Doğa Anaokulları çerçevesinde Çalı Okulu (Bush School/Bush Kinder ve Beach School (Sahil Okulu) örnekleri ele alınacaktır.

doğa ile etkileşim kurabilecekleri ve tüm duyularını aktif olarak kullanabilecekleri doğrudan doğa deneyimlerinin sunulması, kısa ve uzun vadede onların doğaya karşı tutumlarını ve davranışlarını olumlu yönde etkileyecektir. Özellikle küçük çocukların doğa ile güçlü bağlar kurmaları, onların çevre yanlısı davranışlar göstermelerine zemin hazırlayacak ve onların doğayı seven, doğaya sahip çıkan ve doğa için harekete geçen aktif bireyler olmaları konusunda katalizör rolü görecektir. Bu anlamda, çevre eğitimi kapsamında açık alanda gerçekleştirilen doğa temelli eğitim yaklaşımlarının (ör.; Orman Okulu, Çalı Okulu, Sahil Okulu vb.) öneminin anlaşılması ve bu yaklaşımların etkili bir şekilde yaygınlaşması; bireylerin çevre ile ilgili istedik kazanımlar elde etmeleri, doğa ile bağlarını güçlü tutmaları ve uzun soluklu olarak sürdürülebilir bir yaşama katkıda bulunmaları bakımından önemli sayılabilir. Türkiye'nin ve dünyadaki pek çok ülkenin dâhil olduğu geniş topraklarda yeşeren ormanların ve farklı doğal açık alanların, uygun pedagojik uygulamalar yapan donanımlı öğretmenlerle günden güne "öğrenme alanı" olarak algılanmaya ve kullanılmaya devam etmesi, hem sağlıklı nesillerin yetişmesi hem de sağlıklı ve sürdürülebilir dünyanın geleceği bakımından umut vaat etmektedir.

Bölüm 6

DOĞAYLA UYUM: ÇOCUĞUN BİLİŞSEL GELİŞİMİ

Ezgi Akşın Yavuz, Öznur Arslan Nizam

Ormanlardan denizlere, nehirlerden volkanlara, topraktan yıldızlara, yeryüzü ve gökyüzünde doğayla ilgili her şey bir bütündür. Bu bütünlüğün her bir parçası, sürekli bir diğeri ile etkileşim hâindedir. Birbirlerinden etkilenir ve birbirlerini etkilerler. Hastalıkları da iyileşmeleri de birlikte deneyimlerler. Doğanın bir parçası olarak insanoğlu da doğanın dönüşümü sırasında kendisini konumlandığı yeri zamanla değiştirmiş hatta öyle ki doğayı değiştirmeye çalışmıştır. 2000’li yıllar itibarıyla somut olarak deneyimlediğimiz ısı değişiklikleri, seller, buzulların erimesi, ozon tabakasının delinmesi gibi pek çok olumsuzlukla birlikte doğaya saygıyla yaklaşan ve onun parçası olarak yaşamlarını sürdürmeyi tercih edenlerimiz de vardır.

Bütünlüğü sağlamak için ahenk gereklidir. Doğayla uyum çok boyutlu olsa da bir çocuğun doğayla uyumunda bilişsel gelişimine neler olduğu onun *düşünceleri* ile ilgilidir. Evrendeki varlığımızda olduğu gibi doğa ve insanı ayrı düşünememe hâli, bireyin gelişim alanlarını da birbirinden bağımsız düşünememe için geçerlidir. Ancak konuyu daha detaylı ele alabilmek adına bilmek/biliş kökeninden gelen ve çoğu zaman düşünmekle ilişkilendirilen bilişsel gelişimi doğayla uyum çerçevesinde yeniden ele almanın gerekli olduğu inancındayız. Bu kapsamda öncelikle bilişsel gelişimin ne olduğundan ve çocuğun bilişsel gelişimin *gelişimsel köşe taşlarını* doğada nasıl deneyimlediğinden ve bilişsel gelişimin beş gerçeğinden bahsedeceğiz. Ardından bilişsel gelişime dair bilim insanlarının bakış açılarını sunacak ve bilişsel gelişimle ilgili önemli kavramlardan bahsedeceğiz. Çağımızda çokça ele alınan dikkat ile ilgili durumların burada sizlere farklı bakış açısı kazandıracığını düşünüyoruz.

Son olarak doğanın bilişsel gelişim ve düşünmeye yansımalarına değinerek birkaç etkinlik önerisiyle sizlerle fikir paylaşımında bulunacağız. Hazırsanız çamurlu ayakların, ıslanmış kıyafetlerin, ayak izlerinin, böceklerin, taşların, hayvanların, rüzgârın, ışığın, gölgenin, sıcaklığın, yağmur sesinin, dalgaların ve yağmur ardından gelen enfes kokunun eşliğinde beynimizde, öğrenmemizle, düşünmemizle ilgili neler oluyor yakından bakalım.

DOĞA VE BİLİM

Nilgün Cevher Kalburan , Eda Bayraktarođlu

Bir Öğrenme Hikâyesi*

Bademli Anaokulu, her yıl komşu okulda düzenlenen, tüm okulların katılabildiđi takas etkinliğinde aldıkları kabak çekirdeklerini okul bahçesine ekeli yaklaşık 2 ay oldu ve tüm okul olgunlaşmış balkabaklarını hasat etmenin heyecanını yaşıyordu.

Okuldaki tüm sınıfların program dahilinde suladıđı, toprađını havalandırıp yabani otlardan temizlediđi bahçede herkese yetecek kadar balkabađı yetişmişti. Cem Öğretmenin 5 yaş sınıfı hasat ettikleri kabakları saydılar, ağırlıklarını ölçtüler, balkabađı ile ilgili geçmiş deneyimlerini paylaştılar ve bir dizi çocuk kitabı, bitkiler ansiklopedisi, eğlenceli şarkılar ve bilmeceler sürece dahil edildi.

Sırada bu balkabaklarını nasıl tüketebilecekleri ile ilgili güzel bir tartışma vardı. Deniz, büyükannesinin meşhur bir balkabađı çorbası tarifi olduğundan bahsetti; Gökçen ise babasının yaptıđı balkabađı tatlısını anlattı. Okulun mutfađı sınıf etkinliklerine destek vermek için her zamanki gibi açık ve yemek personeli de katkı sağlamak için hazırıldı. Çocuklar balkabađını nasıl değerlendirecekleri ile ilgili oylama yapıp grafik üzerinde işaretlediler. Çorba da tatlı da çocuklar tarafından seçilince (kaç kişinin seçtiđi önemli deđil) sonraki birkaç günün planı ortaya çıktı.

Cem Öğretmen, emekli bir sanat öğretmeni olan Deniz'in büyükannesi ile buluşup çocuklar için tarif kartı (görsel-yazılı) hazırlamasına yardımcı oldu. Ardından Gökçen'in babası ile çocuklarla birlikte tatlı yapabilecekleri gün için randevulaştılar ve sürecin nasıl gerçekleşeceđi hakkında ortak kararlar aldılar.

Öğretmen çocuklarla oluşturulan planı, aylık planında belirlediđi kazanımlar ve kavramlar üzerine inşa ederek günlük eğitim akışlarını oluşturdu. Gökçen'in babasıyla birlikte hazırlanan balkabađı tatlısından sonra geriye kalan kabak

doğal unsurların bir parçası olduklarını hissettirmeli ve sistemi değiştirecek müdahaleler yerine doğada kendi işlevlerini keşfedecekleri deneyimler yaşamalarını teşvik etmeliyiz. Dolayısıyla doğanın bir parçası olduğumuzu hatırlayarak kararlarımızın ve eylemlerimizin doğa üzerindeki etkilerini göz önünde bulundurmamız. Bilim keşfindeki pusulamız “Doğaya Saygı” olmalıdır.

Bölüm 8

DOĞA VE MATEMATİK

Melda Kılıç

1. Giriş

“Doğanın muazzam kitabının dili matematiktir. Evren dediğimiz kitap, yazıldığı dil ve harfler öğrenilmedikçe anlaşılabilir. O, matematik dilinde yazılmış; harfleri üçgen, daire ve diğer geometrik şekillerdir. Bu dil ve harfler olmaksızın kitabın bir tek sözcüğünü anlamaya olanak yoktur”.

Galileo Galilei

Her köşesinde merakı ve öğrenmeyi teşvik eden önemli fırsatlar barındırması nedeniyle doğa, çocuklar için “harika bir öğretmen ve arkadaş” olarak nitelendirilmektedir (Keeler, 2008). Doğada olmak, çocuklar için heyecan verici ve eğlencelidir. Çocukların yeni bilgileri öğrenmelerinde bu heyecandan yararlanmak ve onlar için farklı öğrenme deneyimleri yaratmak etkili bir yoldur (McLennan, 2017). Günümüzde çocukların doğadan yoksun ve doğayla anlamlı bir bağ kurmadan büyüdükleri gerçeğiyle karşı karşıyayız. Louv (2016), çocukların doğadan yoksun kalmasının onlarda zihinsel, fiziksel ya da ruhsal pek çok soruna (dikkat bozukluğu, obezite, depresyon vb.) neden olabileceğini, bunun aksine doğayla deneyimlerinin de bu alanlarda çocukların gelişimlerine önemli katkılar sağlayacağını altını çizmiştir. Doğayla iç içe olmak; sağlık, odaklanma yeteneği gibi bilişsel beceriler, yaratıcılık, çevreye duyarlılık ve sorumluluk açısından önemli faydalar getirir. Araştırmacılar, doğada öğrenmenin ve olumlu deneyimlerin çocukların odaklanma ve konsantrasyon yeteneğinde gelişme (Taylor ve diğerleri, 2001), iletişim ve iş birliği becerilerinin gelişimi (Moore ve Wong, 1997), stres yönetimi ve problemlerle başa çıkma yeteneğinin güçlenmesi (Wells ve Evans, 2003) açısından yararlarına dikkat çekmektedir.

kendi buldukları doğal nesnelere örüntüler oluşturma çalışmaları yapılabilir. İlk çalışmalarda basit ABAB (örneğin, yaprak-taş-yaprak-taş) örüntü modeli üzerinde çalışmak uygun olacaktır. Çalışmalar, çocukların gelişim özelliklerine göre AABAAB, ABBABB, ABCABC gibi farklı örüntü modelleri çerçevesinde genişletilebilir.

Çocukların simetriyi anlamalarında doğada yapacakları etkinlikler önemlidir. Çocuklarla doğal çevrede simetri örnekleri aramak eğlenceli ve çok öğretici olacaktır. Çocukların çevrelerinde nerede simetri örnekleri gördükleri ya da nelerin simetrik olmadığını düşündükleri üzerinde çalışılabilir. Çocuklar, buldukları örnek nesnelere bir araya getirebilirler. Bu nesnelere incelendikten sonra fotoğraflanabilir. Fotoğrafların çıktısı alınarak küçük bir ayna yardımıyla simetri çizimleri bulunarak test edilebilir. Hatta bu fotoğraflardan simetrik olmayan ve simetrik nesnelere olarak gruplandırılarak grafik oluşturulabilir.

Sonuç olarak doğada matematiği öğrenmenin ya da doğa temelli bir matematik eğitiminin çocuklar açısından önemli fırsatlar barındırdığı görülmektedir. Erken yaşların çocuğun gelişimi ve öğrenmesi açısından kritik olduğu göz önünde bulundurulduğunda konu daha da dikkat çekmektedir. Yukarıda yer alan öğretimsel stratejiler ve öneriler dışında çocukların gelişimsel özellikleri ve bireysel farklılıkları dikkate alınarak okulların imkân ve çevre olanakları bağlamında düzenlemelere gidilerek eğitim etkinliklerinin düzenlenmesi mümkün olabilmektedir. Tüm bu bilgiler ışığında okul öncesi eğitimcilerinin doğanın matematikle buluştuğu noktada yer almaları ve bu uğurda gereken gayreti göstermeleri son derece önemlidir.

1. Uygarlık Tarihinde İnsan ve Doğa İlişkisi

İnsanın doğa ile olan ilişkisi insanlığın varoluşu kadar eskidir. İnsan, doğayı etkilemiş ve ondan etkilenmiştir (Gülay ve Önder, 2011). Uygarlık tarihi boyunca insan-çevre ilişkisi incelendiğinde *ilkel dönemde* avcı-toplayıcı insanların doğayı olduğu gibi kabul ettikleri ve uyum sağlama gayretinde oldukları görülmektedir. Bu dönemde ateşin bulunması; savunma ve avlanma araçları edinmeye, beslenme ve enerji kaynağı oluşmasına, ölüm oranının düşüp yaşam süresinin uzamasına ve nüfusun artmasına katkı sağlamıştır. *Tarım ve yerleşme döneminde* yerleşik hayata geçilmiş, avcılık ilerlemiş, bitkisel üretim ve hayvancılık faaliyetleri görülmüş ve buradan iki ayrı uzmanlık alanı doğmuştur. İhtiyaç duyulan aletlerin yapılması ve ilkel ticaretin gelişmesi ile üçüncü uzmanlık alanı ortaya çıkmıştır. Gelişen bu sistemler, ilkel dönemde mikro ölçekli tahribatın tarım ve yerleşme döneminde makro ölçekli tahribata doğru ilerlemesine yol açmıştır (Atasoy, 2015).

Sanayileşme ve kentleşme dönemi buhar makinası ve kömür kullanımı ile başlamıştır. Sanayi Devrimi öncesinde toplam enerjinin %80-85'i canlıların emeği ve kas gücünden elde edilirken Sanayi Devrimi ile doğadaki petrol, kömür ve doğal gaz gibi yenilenemeyen enerji kaynakları kullanılmaya başlanmıştır. Ekonomik büyüme, göçler ve kentleşme, sağlık sistemindeki gelişmeler ve artan yaşam süresi/nüfus, dünya savaşları, endüstri ürünlerinin doğada birikmesi ve artan enerji üretimi/tüketimi küresel çapta değişikliklere neden olmuştur (Atasoy, 2015; Ertürk, 1996).

İçinde bulunduğumuz dönem ise *iklimsel ve kozmik dönemdir*. Bu dönemde insan, dünyanın eksenini dışındaki canlıları ve uygarlıkları arama çabası içerisinde. Yeni uzay sistemlerini ve yeni yaşamları keşfetmeyi hedeflemektedir. Bilim ve teknolojiye gelişmeler müthiş bir hızda ilerlemektedir, öyle ki tarım devrimi 5000 yıl sürerken ABD nüfusunun dörtte birinin elektriğe kavuşması 46 yıl, internete

(Uyanık Balat ve Arslan Çiftçi, 2019). Bazı resimli çocuk kitapları, çocukları doğada gözlem yapmaya ve yeni bakış açıları kazandırmaya yönelik olarak tasarlanmıştır. Örneğin, *Bir Orman* isimli çocuk kitabında çocuğa farklı bir bakış açısı sunulmaktadır: “Bir yaprağı ışığa tutup, ona arkasından bakarsan yaprağın damarlarını görürsün” (Resim 11). Gözlem yapmak çocukların anlama ve anlatma becerilerini destekler, doğadaki varlıkları ezber ile değil gerçek ortamında öğrenmelerini sağlar, zihin gelişimine katkı sağlar, araştırma ve öğrenme merakını artırır (Şimşek ve Çınar, 2017). Doğadaki yaşantılarını kaydetmesini sağlayan *Yeşil Günlük* ise bir anı kitabı olarak kullanılabilir. Hem bilgilendirici öğeler hem de etkileşim unsurları içeren bu kitapta çocuk tohumları keselere koyabilir, anılarını resmedebilir ya da büyük yaş gruplarında not edebilir ve farklı ağaç türlerini öğrenebilir.

Etkileşimi artıran bu kitaplar ile çocuk, doğada bilimsel araştırmalar yapan bir bilim insanı gibi yaşantılar geçirebilir. Aynı zamanda yetişkin için neler yapılabileceğine dair fikir veren ve etkili kullanılabilecek eğitsel materyale dönüşebilir.

Bölüm 10

DOĞA VE ERKEN OKURYAZARLIK

Yakup Burak, Emel Özdemir

Giriş

Dünyanın ilk üniversitesi olarak kabul edilen Platon'un okulu "Akademia" zeytin ağaçlarıyla çevrili yemyeşil bir bahçenin içerisindeydi ve öğrenciler, günün çoğunu burada geçirmekteydiler. Yine Antik Yunan'da Samoslu Epikuros tarafından açılan okulda ise bahçede yapılan toplantılar sebebiyle öğrenciler, "Bahçe Filozofları" olarak adlandırılmışlardır. Zaman geçtikçe Comenius, Rousseau, Pestalozzi, Goring, Locke, Froebel ve Dewey gibi büyük düşünürler de doğada eğitimin önemini vurgulamış ve bu konuda pek çok akıma öncülük etmişlerdir. 18. yüzyıla gelindiğinde ise Alman Philantropolar, çocuğun doğa ve atölye gezileri ile teorik bilgilerini pratiğe dökerek deneyim, beceri ve bilgi kazanacaklarını belirtmişlerdir (Aytaç, 2018). Kuzey Avrupa ülkelerindeki yaşam tarzının veya kültürünün gözlemlenmesi ve bu kültürün dünyaya yayılması sonucu popülerliği artan yeni bir yaklaşım olarak kabul edilen doğa/orman okulları özellikle Türkiye'de geleneksel eğitim ortamına alternatif olarak kabul edilmektedir (Canlı ve Temel, 2022).

Geleneksel eğitim sisteminden farklı olan doğada öğrenme kavramı aslında var olan öğrenme merakına çok daha uygundur. Ama nedendir bilinmez; insanlık, yüzyıllardır içi sıralarla dolu olan kapalı alanlara ve masa başında oturmayı gerektiren geleneksel yapıya emanet etmiştir. Ancak yapılan akademik çalışmalar, çocuğun gerçek deneyimler yaşamasının çok önemli olduğunu vurgulamaktadır (Civelek ve Akamca, 2017; Öztürk ve Bayrak, 2017). Ucu bucağı olmayan ve sürekli değişen doğanın bir parçası olan çocuğun, ait olduğu yerde çok daha anlamlı deneyimler yaşayacağı ise şüphesizdir. Zıplanacak su birikintileri, kazılmayı bekleyen çukurlar, yapış yapış çamurlar, tırmanılacak ağaçlar, kovalanacak hayvanlar, yayılan kokular, rengârenk çiçekler, çatırtılar, vızıltılar ve cıvıltılar... Keşfedilmeyi bekleyen doğa, yaparak yaşayarak öğrenme için bulunmaz bir hazinedir. Bu hazine, bütün zenginliği

Bölüm 11

DOĞA VE OYUN

Şeyma Değirmenci

“Doğa ziyaret edilen bir yer değil yuvamızdır”.

Gary Snyder

Çocuklar, gün boyu dokunmak, tatmak, denemek ve keşfetmekle meşgul insanlardır. Sürekli hareket hâlinde geçen bu sürecin kendi içindeki sihirli anlarını göremeyen bazı yetişkinler, çocukluğu sadece yetişkinliğe geçiş sürecindeki bir çeşit hazırlık aşaması olarak düşünürler. Bu bakış açısı, çocukluğun barındırdığı zenginliklerin yok sayılması, onu sadece bir ara dönem olarak ele alınması sorununu beraberinde getirir. Oysa çocukluk dönemi, başlı başına macera ve keşif dolu bir dönem olarak hayatın başrolünü almayı hak etmektedir (Wilson, 2007).

Hayatın bu kıymetli döneminde çocukların anaokullarında oynadıkları oyunlarla veya belirli branşların spor antrenmanlarıyla yeterli düzeyde hareket ettikleri düşünmek, bu ortamların sunduğu hareketin dışında bir seçeneğin olmadığına inanmak çok sağlıklı değildir. Çocuklar, yapılandırılmış ortam ve zamanlarda yaptığı fiziksel aktivitelerin yanı sıra kendi sınırlarını keşfedebildikleri, yetişkin liderliğinden uzakta aktif serbest oyunlar oynamaya ihtiyaç duyarlar. Bu ihtiyaçlarını karşıladıkları yer de tıpkı yetişkinler gibi doğadır. Erken çocukluk dönemindeki çocukların günlük olarak doğada oyun oynama ihtiyaçları bulunmaktadır. Önceki bölümlerde de işlendiği gibi çocuğun doğa ile geçirdiği zaman, bütünsel gelişimine olumlu destek veren oldukça önemli bir etmendir. Bu desteği sağlarken doğanın sunduğu taş, toprak, dal, yaprak, çiçek gibi doğal materyalleri nasıl kullanacağını keşfetmek, çocukların hayal gücü egzersizi yapmalarına olanak tanıyacaktır. Çocuk, bu materyallerin her birini tanıır; benzerlik ve farklılıklarına göre sınıflandırmasını yapar. Bir dalın ilk koptuğundaki hâlini görebilir; günler geçtikçe, yapraklarının nasıl canlılığını kaybederek kurduğunu fark edebilir ve en sonunda dökülüşünü gözlemleyebilir. Doğal malzemelerin yılın veya günün her zamanında aynı olmayışı (günebakan çiçeğindeki

başında dışarı çıkma kısıtlamaları sebebiyle zorunlu olarak doğadan uzaklaşıldı. Bu süreç, birçok insanın açık havayı özlemesi ve kısıtların kalkmasının ardından hızla doğaya koşmalarını sağlarken bir kısım insanın ise çocuklarını dışarıdaki “virüslerden” korumak amacıyla doğadan daha da uzaklaştıkları görülmüştür (De Lannoy vd., 2020; Guerrero vd., 2020; Mitra vd., 2020).

Her yaş ve kültürde doğada oynanan oyunlara rastlanmaktadır. Üstelik bu durum insanlık tarihi boyunca böyle devam etmektedir. Doğanın bir parçası olan insanın doğa içerisinde var olması, kendisini çevreleyen doğayı tanıması ve saygı duyması çocukluktan itibaren doğayı deneyimleyebilmesi ile mümkündür. Çocuk bu deneyimleri sayesinde kendisini, kültürünü, sosyal ve fiziksel çevresini anlamlandırabilecektir. Tüm bu sürecin yetişkinlerin uygun desteklemeleri ile daha sağlıklı bir hâle geleceği, bu konunun her mevkideki yetişkinin görev ve sorumluluğu dâhilinde olduğu unutulmamalıdır. İçinde yaşadığımız yüzyılda çocukların doğaya ulaşmaları konusu, özellikle kentlerde yaşayan çocukların doğaya ulaşmaları, şehir içlerine doğal ortamların entegre edilmesi toplumsal otoritelerin sorumluluğundadır. Toplumsal otoritelerin sorumluluk bilinciyle oluşturdukları doğa ortamlarına çocukların ulaştırılması ve en verimli kullanılması ise öğretmenlerin ve ebeveynlerin sorumluluğundadır. Elbette doğa ile buluşma bir sorumluluk ve ödev olarak algılanamaz. Çünkü daha önce de bahsettiğimiz gibi doğada olmak, her yaşta insan için en önemli ihtiyaçtır; mutluluk ve neşe kaynağıdır. Bu sebeple doğa ile yapılan bu buluşmalarda Gary Snyder’ın da dediği gibi “Doğa ara sıra ziyaret edilen bir yer değil yuvamızdır.” düşüncesini benimsemek gerekir. Doğa ile bu düşünce ışığında gerçek bir buluşma yaşamak; kendimizi, hayatı ve evreni anlamlandırmamızda, hayata anlam ve neşe katmamızda en büyük kaynağımız, yuvamız olan doğa ile uyum içerisinde yaşamamızın yolunu bulmamızla mümkündür.

Bölüm 12

DOĞA VE YARATICILIK

Hande Arslan Çiftçi

“Ağaca tırmanmak, bir çocuğun yeni bir dünya keşfetmesidir”.

Froebel, İnsanın Eğitimi, 1826

Dünyamız, yaratıcılığını geliştirme ve ifade etme fırsatı bulan ve bu niteliğini çok çeşitli yaşam koşullarında uygulayabilen kişilere ihtiyaç duymaktadır. Yaratıcı düşünme; iklim değişikliği, biyolojik çeşitlilik kaybı, kaynak tükenmesi ve zamanımızın diğer acil çevre sorunlarının çözümünde ayrılmaz bir parça olacaktır (Csikszentmihalyi ve Wolfe, 2014). Bu nedenle yaratıcılık, sadece okulda değil okul ortamının ötesinde önemli bir rol oynamaktadır.

Dünyamızın sürdürülebilirliği için yaratıcı bireylere ihtiyaç duyulmasının yanı sıra çocukların doğa ile olumlu deneyimlerinin temel faydalarından biri yaratıcılıklarını geliştirme fırsatı bulmalarıdır. Bu bağlamda bu bölümde, doğa ve erken çocuklukta yaratıcılık arasındaki bu karşılıklı ilişki ayrıntılı bir şekilde ele alınmaktadır.

1. Yaratıcılık Nedir?

Yaratıcılık, herhangi bir alanda veya disiplinde fikir üretmek veya bir şeyler üretmek ve bunları değerli bir şeye dönüştürmekle ilgilidir. Yaratıcılık karmaşıktır ve gelişiminde birçok faktör rol oynar. Herkesin yaratıcı olma potansiyeli vardır. Bu, geliştirilebilen ve geliştirilmesi gereken bir beceridir ancak küçük çocukların doğal olarak sahip oldukları ve beslenmesi gereken bir kapasitedir (Education Scotland, 2011). Gardner (1993), her çocuğun yaratıcı potansiyelle doğduğunu ve üç ile beş yaş arasındaki yaşların yaratıcılığın gelişimi için kritik yıllar olduğunu belirtmiştir.

Yaratıcılığın ana ilkelerinin şunlar olduğu öne sürülmüştür (Duffy, 1998, s. 18):

- Bir şeyleri yeni bir şekilde görme yeteneği,
- Geçmiş deneyimlerden öğrenme ve bunu yeni durumlarla ilişkilendirme,

	18. İnşaat ve bahçe alanları için araçlar, bakım araçları, tekerlekli oyuncaklar, kum oyun ekipmanları gibi dış mekân oyun ekipmanları için depo. Depo, binanın veya çitin yanında olabilir ve çocukların görüşünü engellemelidir. Depolama, çocukların her oyun süresinin sonunda ekipmanı toplamasına ve kaldırmasına yardımcı olmalıdır.
	19. Dış mekân oyun alanlarından montlara, tuvaletlere ve çeşmelere kolay erişim. Grup etkinlikleri (sanat, okuma vb.) için gölgeli alanlar, banklar, masalar ve destek malzemeleri.
	20. Engeli olan tüm çocuklar için erişilebilirlik, materyaller ve ekipman.

Bölüm 13

DOĞA VE SANAT

Banu Özkan, Ezgi Baş

1. Giriş

Sanat; kişinin duygu ve düşüncelerini en iyi ifade ettiği yoldur. Sanat eğitimi, insana çocukluktan başlayarak akıl yürütme, yaratıcılığını geliştirme, hayal kurma, problem çözme, el, zihin ve göz koordinasyonu geliştirme gibi becerileri kazandırır. Yaratıcılık sanat için önemli bir beceridir. Yaratıcılık ve sanat, birbirini besleyen bir döngü hâlinindedir. Yaratıcılığın geliştirilmesinde ise sanat eğitiminin önemli bir yeri vardır. Doğa ise yaratıcılığın gelişimi için çocuğa sayısız fırsat sunar.

Sanat eğitimi, çevreyle ilk tanışma, görme, algılama, adlandırma ve düzenleme ile başlayarak ürün verme, üründen tat alma olarak gelişme gösterir (Kırıçoğlu, 2005). Çocuklar doğayla iç içe olmayı çok severler. Çünkü doğa içinde bulunan unsurlar, çocuklar için birer oyun materyalidir. Bir ağaç dalı, bir taş, çimler, böcekler gibi doğada pek çok şey, çocuklar tarafından keşfedilmeyi bekler. Tüm bu keşif süreci ve oyunlar, çocukta yaratıcılığın ve estetik zevklerin gelişimine de destek olur. Doğayı sanatsal olarak yorumlayan ve anlamlandıran bireyin kendisidir.

Doğa, çocuğun içindeki yaratıcılığı, keşfetme ve merak duygusunu ortaya çıkaran bir unsurdur. Doğadaki materyaller (taş, ağaç, çiçek, kozalak gibi), çocuklar için bir oyun materyalidir. Çocuklar, bunları kullanarak oluşturdukları oyunlarda sanatsal yaratıcılıklarını da kullanırlar. Sanatın özünde üretmek vardır. Çocuk, doğada bulunan malzemelere şekil vererek kendi oyununu ve oyun materyalini üretmiş olur.

2. Sanat Nedir?

Sanat, bir duygu, güzellik ve tasarımın anlatımında kullanılan yöntemlerin tümü veya bu anlatımlar sonucunda oluşan üstün yaratıcılık olarak tanımlanmaktadır (TDK, 2022). Bir nevi insanın kendini özgün yollarla ifade edebilmesi olarak tanımlanan

gelişimine katkıda bulunmaya çalışmalıdırlar. Çocuklar, yeteri kadar tanındıklarında güçlü ve yetenekli olduğu alanları keşfedilip yardıma ihtiyacı olduğu zamanlarda desteklenebilmektedirler (Uysal ve İnce, 2020). Öğretmenler de bu alanda gerekli ortam düzenlemeleri yapmalı ve çocuğun etkili öğrenmesine katkıda bulunmalıdırlar. 2-6 yaşlardaki küçük çocuklara sanat eğitimi verilirken onun bedensel, ruhsal, zihinsel, fiziksel, psikomotor özellikleri göz önünde bulundurulmalı ve ona göre programlanmalıdır (San, 2019).

Küçük çocuklar birbirlerinden doğal olarak öğrendikleri için yetişkinlerin yanı sıra çocukların çalışmaları için de modeller sağlanarak çocukların konuşması teşvik edilebilir. Çocuklar sanat eserlerini tartışmaya ve yorumlamaya teşvik edilerek uygun olduklarında kesme ve yapıştırma teknikleri gibi manipülatif becerileri modellenebilir. Tartışma yaptırabilmek için yetişkinlerin eserlerinden ve diğer çocukların eserlerinden örnekler kullanılabilir (Smith, 1982; Wilson ve Wilson, 1982; Stokrocki 1995 Akt: Enid Zimmerman ve Laura Zimmerman, 2000).

Okul öncesi eğitimin, çocuklarda doğayla ilgili tutum ve davranış geliştirmeleri açısından oldukça önemli bir payı vardır. Bunun yerine getirilebilmesi, çok sayıda unsura bağlıdır. Bu unsurlardan birisi, uygulanan eğitim programıdır. Bu program, konu öğretimini hedef almayan, buna karşın çocukların gelişim özelliklerini dikkate alan, esnek bir içeriğe sahip olmalıdır. Öğretmenin kullandığı programın dayandığı ilkeleri doğru anlaması ve uygulamalarını buna göre yapması, eğitim amaçlarının gerçekleştirilebilmesi için temel şarttır. Çevre eğitiminde, bireylere yeni davranışlar kazandırmada birçok faktör etkindir. Bunlar çevre eğitim programı, eğitim ve öğretim kademeleri ile müfredat içeriği ilişkisi, çalışma ortamları, eğiticilerin niteliği gibi faktörlerdir. Çevre eğitiminin etkin bir şekilde verilmesi bu parametrelerdeki bilgi birikimine bağlıdır (Oluk, 2008; Evren, 2008).

DOĞA VE ÇOCUK BAĞLAMINDA SOSYAL ÇEVRE VE YETİŞKİN ROLÜ

Özlem Dönmez

1. Giriş

Erken çocukluk yılları, çocuğun hayatında gelişim ve öğrenmenin en hızlı olduğu yıllardır. Çocuğun doğduğu andan itibaren doğayla iç içe olması gereklidir (Yılmaz ve Olgan, 2017). Çocukların erken yaşlarda öğrenmesini tetikleyen en önemli şey meraktır. Çocuklar, bu dönemde duyularını kullanarak, gözlem yaparak, soru sorarak, merak ederek, deneyerek, problem çözerek, yaparak yaşayarak ve oyun oynayarak keşifler yapar ve öğrenirler.

Doğa ile iç içe olan ve bağ kuran çocuklar doğadaki yaşamı, çeşitliliği ve düzeni erken yaşlarda fark eder, saygı duyar; merak ve keşif duygusu tetiklenir, gözlem yapma becerileri gelişir; açık uçlu deneyimler sayesinde daha çok risk alır; bağımsız bir birey olma yolculuğunda sorumluluk alır, yaşam becerileri desteklenir; bilişsel, sosyal, duygusal, dil, fiziksel gelişimi desteklenir; ekosistemin ve çevresel süreçlerin farkındalığını kazanır; başarabilme duygusunu tadar, takdir etme duygusunu geliştirir; dikkat, odaklanma ve konsantrasyonu geliştirir; bilimsel süreç becerileri desteklenir; düşünme kapasiteleri zenginleşir, eleştirel düşünme, neden-sonuç ilişkisi ve problem çözme becerileri gelişir; yeni oyunlar kurar, oynayarak ve eğlenerek öğrenir; kendini ifade etme becerileri gelişir; yaratıcılıkları desteklenir; iş birliği içinde grup çalışmaları yapabilme becerileri desteklenir; öz düzenleme, öz farkındalık ve öz güveni geliştirir (Savolainen, 2021; Paslı, 2019; Köşker, 2019; Cooper, 2015; Samborski, 2010).

Kitabın bu bölümünde doğa ve çocuk bağında sosyal çevrenin rolü ve önemi; okul öncesi eğitim programı, akranlar, öğretmenler, okul yöneticileri ve aileler bağlamında ele alınmıştır. Bu kapsamda çocukla etkileşim hâlinde olan öğretmenler, okul yöneticileri, akranlar, kardeşler ve ailelerin doğa-çocuk ilişkisindeki yeri ve önemine ilişkin bilgiler ile doğa-çocuk bağının desteklenmesi için öneriler sunulmuştur.

yetişkinin gözetiminde güvenli bir ortamda insanlarla iletişim kurması desteklenmelidir.

6. Çocuğun doğaya çıkarken bez bir çanta içinde bir kalem ve bir defter ile çıkması, fotoğraf çekmesi, çizim yapması, yaprak, taş, kozalak toplaması ve bunları eve getirip tek tek anlatması, sohbet etmesi, topladığı doğal materyalleri kullanarak bir sanat çalışması yapması gibi etkinlikler çocuğun doğadaki deneyimlerini ev ortamına taşımasına destek olacaktır.
7. Günlük hayatın bir parçası olan yemek yeme, resim yapma gibi eylemler, çocuğun doğayla bağ kurabilmesi için balkon, bahçe gibi dış mekânlarda gerçekleştirilebilir.

Tüm bu öneriler ışığında, doğa-çocuk bağında ebeveyne, öğretmene ve okul yöneticilerine sorumluluklar düştüğü söylenebilir. Doğa ile kurulan bağ, erken çocukluk yıllarından itibaren başlayarak yaşam boyu sürmektedir. En etkili öğrenmeler bu dönemde gerçekleşir. Sosyal çevrede çocuğa sunulan deneyimler, öğrenmede büyük rol oynar. Hem çevresel hem sosyal uyaranlarla desteklenen çocuklar doğa ile olumlu bağlar kurmaktadır.

Çocuğun ilk sosyal çevresi ailesidir. Ailede ebeveynleri ve kardeşleri ile edindiği deneyimler çocuk için hayati öneme sahiptir. Okul öncesi eğitim kurumunun hayatına girmesi ile sosyal çevresi genişlemeye başlayan çocuk, öğretmenleri ve akranları ile de etkileşime girmeye başlar. Çocuğun hem ev hem okul ortamındaki yetişkinler ve çocuklarla doğadaki deneyimleri, doğa ile bağını belirlemektedir.

Bu bölümde, doğa ve çocuk bağında sosyal çevrenin rolü ve önemi; akranlar, öğretmenler, okul yöneticileri ve ebeveynler bağlamında incelenmiştir. Bu doğrultuda çocukla etkileşim hâlinde olan yetişkinler ve çocukların doğa-çocuk ilişkisindeki yeri ve önemine ilişkin bilgiler verilmiş, doğa-çocuk bağının desteklenmesi için öneriler sunulmuştur. Özetle, çocuğun doğa ile olumlu etkileşimler kurabilmesi için yetişkinlerin çevre düzenlemesine, kullandıkları dile ve çocuklarla etkileşimlerine dikkat etmeleri ve çocuğun doğa ile olan bağını desteklemeleri önerilmektedir.

Çocuk ve Ergenlerle Psikolojik Danışmanın Tarihsel Gelişimi

Ruh sağlığı hizmetleri içinde çocuk ve ergenlere yönelik sunulan ruh sağlığı hizmetlerinin tarihsel gelişimi eski bir geçmişe dayanmaktadır. Duygusal sorunları, davranış bozuklukları olan çocukların anlaşılması, bakımı ve tedavisine artan ilgi olmasına rağmen bunlar, ruh sağlığı alanında nispeten yeni bir olaydır. Yetişkin ruh sağlığı tedavi literatürü, eski uygarlıklarda Trepanasyon (baş delgi ameliyatı) ve şeytan çıkarma gibi tedavi uygulamaların dayanan oldukça geniş bir literatüre sahipken, çocuk ruh sağlığı tedavisi literatürü ancak 20. yüzyılın başlarına dayanmaktadır (Achenbach, 1974; Kanner, 1948). Oysaki çocuk ruh sağlığı tedavisi literatüründeki önemli gelişmeler şöyle sıralanmaktadır: Fransız Jean Marc Gaspard Itard'ın 1799'da başlayan "*Aveyron'un Vahşi Çocuğu*"nu tedavi etme girişimleri, Amerikalı Clifford Whittingham Beers'in zihin sağlığı ile ilgili olarak Ulusal Zihinsel Hijyen Hareketi'nin öncülüğünü yapması ve çocuk kliniklerinin kurulması, Fransız Alfred Binet'in zekâ testi geliştirmeye ilgili çalışmalarının zihinsel yetersizliği olan çocuklar için bireyselleştirilmiş öğretim ve özel eğitim sınıfları sağlamak üzere öncü bir hareket olması ve son olarak Anna Freud ve Melanie Klein'in Freudyen psikanalizin çocuklara uygulanması-na ilişkin çalışmalarıdır (Morris ve Kratochwill, 2007).

mesini sağlarlar. Aileye ve okullarda öğretmenlere uzmanlıkları dâhilinde rehberlik ederler.

Giriş

Gelişim, doğum öncesi evreden başlayan, ölüme kadar devam eden; biyolojik, psikolojik ve sosyal alanlarda meydana gelen, belli bir sıra ile ortaya çıkan değişim ve olgunlaşma sürecidir. Gelişimi bütüncül bir bakış açısı ile ele almak, hangi yaşta olursa olsun insanı bütünüyle görebilmemizi sağlar. Gelişimin genel seyrinde bir alanın baskın olduğu bir zaman dilimi olsa da bu, diğer gelişim alanlarının baskın alandan etkilenmediği ya da kendi gelişimini durdurduğu anlamına gelmez. Çünkü bir insanın duyuşsal, fiziksel, zihinsel, duygusal, ilişkisel gelişimi eş zamanlı ve kendi içinde etkilidir. Örneğin, ergenlik dönemine giren bir çocuğun baskın gelişim alanı biyolo-

Ergenler genellikle mizahtan hoşlanırlar. Ancak özellikle fiziksel görünüşleri, ilgileri ve arkadaşlarıyla ilgili kendilerine yapılan esprilerden rahatsız olurlar ve öyle olmasa bile kendileriyle alay ediliyormuş düşüncesine kapılabilirler. Bu yüzden mizahın keskin bir bıçak gibi olduğu söylenebilir. Doğru zamanda ve hassas bir şekilde yapıldığında bağı güçlendirirken dikkatsizce ve nezaket dışı yapıldığında öfkeyi tetikleyip ilişkinin kesilmesine neden olabilir.

Metaforlar ve anekdotlar, okul çağı çocukları ve ergenler tarafından genellikle dikkat çekici bulunur. Metafor kullanırken danışanın diliyle ve bilişsel kapasitesiyle uyumlu metaforlar, anlamı güçlendirerek danışanın konuyu anlamlandırmasına yardımcı olur. Erken çocukluk döneminde ve okul çağı çocuklarında resimli terapötik kitaplar ve çocuk edebiyatı eserleri metafor olarak kullanılabilir. Örneğin, bedensel sınırların öğreniminde “Bedenim Bana Ait”, travma çalışırken “Çok Kötü Bir Şey Oldu” ya da “Boşluk”, yılmazlıkla ilgili “Pes Etmek Yok” gibi kitaplardan yararlanılabilir. Kitaplar, çocukların hikâyedeki kahramanla özdeşim kurup kendi durumlarını daha rahat anlamaları ve ifade etmelerine yardımcı olur. Bu nedenle, çocuk ve ergenlerle yapılan psikolojik danışma oturumlarında ihtiyaç dâhilinde kitaplara, hikâyelere ve metaforlara yer verilmelidir.

Özet

Çocuk ve ergenlerle çalışmak, gelişimi ve gelişimle birlikte gelen ihtiyaçları bütünsel olarak ele almayı gerektirir. Çocukla ilişki kuran ve yardım sunan ruh sağlığı çalışanlarının çocuğun bilişsel, duygusal ve sosyal gelişimini doğru değerlendirmesi ve ona uygun yaklaşımı, seçtiği yaklaşım doğrultusunda kullanacağı materyalleri hassas şekilde belirlemesi uygun psikolojik müdahaleyi beraberinde getirecektir. Gelişimsel yaklaşım, ebeveynlere çocuğunun gelişimsel gerçekliği ve ihtiyaçları hakkında doğru yönlendirmeler yapmasına imkân verecektir. Gelişimsel süreçlere hâkim, bireysel farklılıkları ve ihtiyaçları gözeten psikolojik müdahale yaklaşımı, çocuk ve ergen açısından en kapsamlı ve güvenli yaklaşımlar arasında yer almaktadır.

Etik

Psikolojik danışman, okul psikolojik danışmanı olarak, aile psikolojik danışmanı olarak ya da pedagoğ olarak farklı ünvanlarla farklı kurumlarda hizmet verebilir. Özellikle 18 yaş altı reşit olmayan çocuk ve ergen bireylere ve çevrelerindeki yetişkinlere koruyucu, önleyici, gelişimsel ve iyileştirici işlevleri olan ruh sağlığı hizmetini sunar. Hangi kurumda hangi ünvanla olursa olsun aile, çocuk ve genç ile çalışacak olduğunda mesleki etik ilkelere ve yasalara uygun davranmakla yükümlüdür. Psikolojik danışma-

almalıyız. Üçüncüsü, çalıştığımız kurum ya da kuruluşun yasal yükümlülüklerine uygun olanlar çerçevesinde yaklaşmalıyız.

Bir çocuk veya ergen psikolojik danışmanı olarak etkili bir şekilde performans sergilemek, neredeyse her zaman ebeveynler veya velilerle iletişim ve etkileşimi içerir. Çocuk psikolojik danışmanları, özellikle çocuk velayeti anlaşmazlıkları olmak üzere dava ile sonuçlanabilecek durumların farkında olmalıdırlar. Çocuk ve ergenlerle psikolojik danışma uygulaması, danışana ve ailesine kendi tepkilerimizi ve onların bize ve tedavi durumuna olan tepkilerini sürekli olarak izleme sorumluluğunu bize sunar. Psikolojik danışmanın dikkat etmesi gereken ebeveynlerin özerk kararlar alma hakları ile ebeveynlerin çocuklarının yüksek yararını destekleme görevini dengelemek ve en iyi karara varmaya çalışmaktır. Her şey sadece aktarım ve karşı aktarım değildir. Saygılı olmanın yanı sıra çocuk veya ergen, psikolojik danışmayı başkaları tarafından dayatıldığı gibi deneyimlemek yerine bilinçli bir kararla sürece katıldığını hissettiğinde ergenle çalışma ittifakı güçlenir.

Unutulmaması gereken husus şudur: Psikolojik danışman etik ve yasal çerçeveye uygun davranırsa hem danışanlar zarar görmez hem uzmanın kendisi zarar görmez, hem de aileye ve topluma fayda sağlanmış olur.

Çocuk ve Ergenlerle Psikolojik Danışmada Süreci Yapılandırma

Gelişim üzerinde uzun yıllardır yapılan çalışmalar, çocuk ve ergenlerin yetişkinlerden farklı olduklarını ortaya çıkarmış ve yaşa göre bu farklılaşmayı açıklayan çeşitli gelişim kuramları geliştirilmiştir. Dolayısıyla çocuk ve ergenleri içeren herhangi bir çalışma yapılırken, alan yazına hâkim olan bu araştırma ve kuramlar göz ardı edilemez. Çocuklar ve ergenler söz konusu olduklarında psikolojik danışmanlar tarafından bilişsel, duygusal, sosyal, dil gelişimi açısından yetişkinden farklı oldukları, sorunlarını yetişkinlerden farklı tepkilerle gösterebilecekleri, tipik gelişimin ne olduğu gibi konuların dikkate alınması ve gelişme duyarlı olunması gerekmektedir (Belser, 2017; Dixon vd., 2021; Paladine ve Delorenzi, 2021; Swank ve Anthony, 2021; Tucker, 2021a; 2021b). Ayrıca psikolojik danışma süreci yürütülürken, çocuğun ve ergenin kendi isteğiyle danışmanlık

Özet

Özetle; çocuk ve ergenle psikolojik danışma, bu konuda yetkinlik ve yeterliliğe sahip psikolojik danışmanlar tarafından gerekli donanımlara sahip danışma ortamında yetişkin olmayan danışanlara verilen bir psikolojik danışma hizmetidir. Danışma ortamının, hem gizliliği sağlayacak görüşme odasına hem de danışanlar ve ebeveynleri için bir bekleme odasına sahip olması beklenmektedir. Ayrıca odada kil, oyuncak, kitap gibi donanımlar, çocuğun boyutuna uygun sandalye ve çocuğun hareket edebileceği bir alan olması gerekmektedir. Psikolojik danışmanın görevi, psikolojik danışmanın ne olduğunu, süreçte danışan ve danışman rol ve sorumluluklarını, etik ilkeleri çocuk ve ergenlerin anlayabileceği bir şekilde açıklamaktır. Çocuk ve ergenlerle psikolojik danışmada hedef belirlerken de iyi bir değerlendirme yapılması gerekmektedir. Psikolojik değerlendirmede çeşitli test teknikleri ve test dışı teknikler kullanılmaktadır. Her ne kullanılırsa kullanılsın elde edilen verilerin yorumlanmasında kullanılan tekniklerin sınırlılıklarına dikkat edilerek bir değerlendirme yapılmalıdır.

Giriş

Tarihsel sürecinde ilk psikolojik danışma kuramları daha çok yetişkinler esas alınarak geliştirilmiş ve yetişkin sağaltımında kullanılmıştır. Bu durum, kuramların ve kuramlara ilişkin tekniklerin, çocuk ve ergenlere uyarlanmasını geciktirmeye birlikte nasıl uygulanacağı konusunda tartışmaların da uzun süre devam etmesine neden olmuştur. Çocuk ve ergenler, gerek gelişimsel gerekse kişisel ve sosyal gereksinimleri açısından toplumdaki diğer bireylerden farklılık göstermektedirler. Dolayısıyla çocuk ve ergenlere yönelik yapılacak psikolojik danışma hizmetleri, kendine özgü birtakım beceri ve yeterlilikleri gerektirmektedir. Çocuk ve ergenlerle çalışacak olan ruh sağlığı uzmanlarının bu süreci yürütürken psikolojik danışma kuramlarını ve bu kuramlara ait temel kavramları, teknikleri ve uygulamaları iyi bilmeleri, danışanlarına daha yararlı olmaları açısından oldukça önem taşımaktadır.

danışanın bundan sonraki adımlarının neler olabileceğine yönelik düşünmesini sağlayacaktır.

7. Kamtın Kayıt Altına Alınması: Öyküsel terapide yeni öyküleri destekleyecek ya da takdir edecek bir grubun olması hâlinde yerleşik hâl alabileceğine inanılmaktadır. Dolayısıyla yeni öyküleri takdir edebilecek bir grubun bilinçli olarak aranması söz konusudur. Diğer bir kayıt yöntemi ise danışmanın oturumlar arası danışana yolladığı mektuplardır. Danışman mektuplarda oturumlar arası farkları kayıt altına alır. Mektupta bir taraftan danışanın katettiği gelişmelere değinilirken aynı zamanda danışanın bunu görmesi de fark ettirilir. Danışanın sorunla baş etmedeki gücünün kanıtını gösterir (White, 1997).

Özet

Çocuk ve ergenler, gelişimin doğası gereği yetişkinlerden farklılık göstermektedirler. Dolayısıyla çocuk ve ergenlere yönelik yapılacak psikolojik danışma hizmetleri, kendine özgü birtakım beceri ve yeterlilikleri gerektirmektedir. Çocuk ve ergenlerle psikolojik danışma hizmeti yürütürken, psikolojik danışma kuramlarını ve bu kuramlara ait temel kavramları, çocuk ve ergenlerle kullanılan teknikleri ve uygulamaları iyi bilmek, danışanlara daha yararlı olmak açısından oldukça önem taşımaktadır. Geleneksel ve modern kuramlara dayalı bir psikolojik danışma bir psikolojik danışma süreci yürütmek için iyi bir eğitim ve süpervizyon desteği almak, psikolojik danışman yetkinliği açısından gereklidir. Çocuk ve ergenlerin yaşadıkları sorunlara profesyonel yaklaşım, danışanla kurulan terapötik ilişki etrafında terapötik koşulları oluşturmak, temel psikolojik danışma becerilerine sahip olmak, kurama dayalı teknik kullanmak ile gerçekleşmektedir.

Yaratıcılık

Yaratıcılık sözcüğü, Latince “creare” kelimesinden türetilmiştir. “Creare”; yapmak, inşa etmek, biçimlendirmek gibi anlamlara gelmektedir (Holm-Hadulla ve Hofmann, 2012). En basit şekilde yaratıcılık; bir şeyi yapmayı, şekillendirmeyi ya da var etmeyi anlatır. Yaratıcılık, yeni ve uygun bir ürün (düşünce ya da iş) ortaya koyma yeteneğidir. Bu bağlamda yaratıcılığın iki ana bileşeni vardır: (1) **yenilik** ve (2) **uygunluk**. Yenilik orijinal, beklenmedik ya da şaşırtıcı olmayı; uygunluk ise işlevsel, yararlı ya da değerli bir ürün ortaya koymayı ifade etmektedir (Fisher, 2004; Gladding, 2011; Kaufman, 2016; Sternberg ve Lubart, 1999). Yaratıcılık, doğuştan gelen bir yetenek

deki ve en gizli kalmış duyguların keşfedilmesine yardımcı olmaktadır. Bu süreçte çocuklar kendilerini sözel olarak ifade etme konusunda henüz yeterince iyi olmadıklarından, çocukların sadece konuşmaya dayalı bir psikolojik danışma sürecinden fayda görmeleri mümkün değildir. Psikolojik danışma sürecinde kullanılan yaratıcı sanat uygulamaları, çocukların kaygısını azaltarak daha rahat hissetmelerini sağlar. Psikolojik danışma sürecinde yaratıcılık; müzik, dans ve hareket, görsel sanatlar (çizim, boyama, fotoğraf vb. gibi), oyun ve oyuncaklar, drama ya da edebiyat (şiir, roman, öykü vb. gibi) kullanımı ile karşımıza çıkmaktadır.

Giriş

Normal gelişimin bebeklik, çocukluk ve ergenlik boyunca incelenmesi, çocukluk çağındaki normal dışı davranışın anlaşılması bakımından oldukça değerlidir. Normal gelişimin, normal dışı davranışı dışlayacağını düşünmek yanlış olur. Her ne kadar normal gelişim görülse de gelişim aşamalarındaki normal süreçlerin içsel ya da dışsal etkilerle kesintiye uğraması, davranışsal sorunlarının görülmesine yol açabilmektedir (Kapur, 2011). Davranış sorunlarının nedenlerini anlamak, hem koruyucu ve önleyici hem de sağaltıcı süreçlerde uygun planlamalar yapabilmek için önem arz eder.

Özet

Gelişim sorunu göstermeyen çocuklarda net bir biçimde patolojik olarak da nitelenebilecek ancak hem çocukların hem de ailelerin yaşamını zorlaştırabilen pek çok davranış sorunundan bahsedilebilir. Bu bölümde, içselleştirmeye ve dışsallaştırmaya dayalı davranış sorunları ele alınmıştır. İçselleştirmeye dayalı davranış sorunları, çocuğun iç dünyasında kalan, iç dünyasında onu rahatsız eden ve pek çok davranış problemi-ne yol açma özelliği taşıyan sorunlardır. Elbette bu içsel sıkıntıların dışarıda belirli görünüşleri vardır ancak çoğu zaman dışı vurumundan asıl içsel sorunu fark edebilmek kolay değildir. Dışsallaştırmaya dayalı davranış sorunları ise çok daha açık ve görünür davranışsal örüntülerle ortaya çıkar ve çeşitli yaşam alanlarında etkin sonuçları vardır.

İster içselleştirme ister dışsallaştırma özelliğinde olsun çocuk ve ergenlerin davranışlarının altında yatan mantık dışı inanışları ve düşünce hatalarını ortaya çıkarmak için çabalamak, hem davranışın ortaya çıkış sebebini bularak odaklanmak hem de danışanda farkındalık sağlamak adına oldukça kıymetlidir. Hangi gelişim döneminde olduğundan bağımsız olarak çocuklar, çeşitli davranışsal sorunlar ile başa çıkmada sosyal desteğe ihtiyaç duyacaklardır. En yakın sosyal destek unsuru ise ailedir. Çocuğun geliştirdiği mantık dışı inanışlar ve bilişsel hataların çoğu zaman ailenin çeşitli konuları ele alış şekilleri gözlemlenerek yerleştiği düşünülürse davranış sorunları ile baş ederken üzerinde çalışılan irrasyonel inanışlar ve düşünce hataları konusunda ebeveynlerin de eğitilmesi önem arz edecektir. Bu bağlamda hem çocuğu baş ettiği sorunlarla yeniden ilişkilenecek konusunda hem de bir güç kaynağı olarak yanında durmak konusunda desteklemek adına ailenin çalışmaya dâhil edilmesi kaçınılmazdır.

Bu bölüme dâhil edilen egzersizler sıklıkla danışma sürecine katkı sunma amacı taşımaktadırlar ancak aynı zamanda sürecin bir parçası olan ebeveynlerin egzersizleri kullanma ve uygulamada iş birliği yapması da oldukça kıymetlidir.

Gelişimsel Farklılıklar

Yaşam boyu devam eden gelişim sürecinde gelişimin temelini oluşturan bebeklik ve çocukluk yılları ayrı bir öneme sahiptir. Pek çok çocuk normal gelişim sürecinden geçerek büyüye de çocukların bir bölümü, doğum öncesi, bebeklik, çocukluk veya daha ileri yaşlarda gelişimsel farklılıklara yol açan risklere maruz kalmakta, bu risklerden az ya da çok etkilenmektedir.

Bedensel özellikleri ve öğrenme yetenekleri açısından tüm bireyler farklılıklar gösterirler. Ancak çoğu zaman bu farklılıklar büyük değildir ve normal koşullarda genel eğitim hizmetlerinden yararlanmada ciddi problemlere yol açmazlar. Bununla birlikte özel gereksinimli bireyler olarak adlandırılan bireylerin bedensel özellikleri ve/veya

nış problemlerinin ortaya çıkmasını önleyici olmaktadır. Ancak uzun vadede iyi planlanmış müdahale programlarının uygulanmasına ihtiyaç duyulmaktadır.

Travmatik Stres ve Kriz Yaşayan Çocuklara ve Ergenlere Yapılan Psikolojik

Müdahalelerden Üç Örnek

Travma Odaklı Bilişsel Davranışçı Terapi

Travma Sistemleri Terapisi

Birinci ve İkinci Düzey Krize Müdahale

Travmatik Stres ve Kriz Yaşayan Çocuklara ve Ergenlere Yönelik Eğitimde Bir

Uygulama Örneği: Travmaya Duyarlı Okullar

Özet

Kaynakça

Giriş

Yaşamın farklı farklı dönemlerinde stresli yaşam olayları ile karşılaşan çocuklar ve ergenler, yaşadıkları olumsuz deneyimler neticesinde gelişimsel sorunlar yaşamaktadırlar. Bununla birlikte çeşitli ruhsal problemlerle boğuşan çocuklar ve ergenler, mevcut travmatik stresle başa çıkamamaktadırlar. Dünya genelinde çocuklarda ve ergenlerde travmatik stresin ne kadar yaygın olduğunu araştıran çalışmalar, oldukça yaygın bir popülasyonun varlığına dikkat çekmektedir. Dünya Sağlık Örgütü'nün (WHO) 8

2019). İlgili projenin bulguları ele alındığında travmaya dair psikoeğitsel çalışmaların, önleyici müdahalelerin ve travma sonrası stres belirtileri sergileyen çocuklara ve ergenlere yönelik yapılan psikolojik hizmetlerin oldukça değerli olduğu görülmüştür. Özellikle öğretmenlerin travmaya dair bilgilerinin artmasıyla birlikte güvenli sınıf iklimini oluşturabilmeleri ilgili projenin çıktıları arasındadır (Maya Vakfı, 2019). Adı geçen proje dışında Türkiye’de Psikososyal Koruma, Önleme ve Krize Müdahale Hizmetleri Yönergesi temel alınarak okullarda psikolojik danışmanlar, travma konusunda gerekli psikoeğitsel çalışmalarla, konsültasyon ve bireysel psikolojik danışma hizmetleriyle buldukları okulların travmaya karşı hazırlıklı olmalarında etkindirler (T.C. Millî Eğitim Bakanlığı Özel Eğitim ve Rehberlik Hizmetleri Genel Müdürlüğü, 2019). Ancak ilgili yönergeden anlaşılacağı üzere yapılan tüm çalışmalar, okul psikolojik danışmanın yaptıklarıyla sınırlıdır. Bu anlamda Türkiye’de travmaya duyarlı okul kültürünün yaygınlaştırılabilmesi önemli bir gerekliliktir.

Tartışma Soruları

- 1) *Stres, travma ve kriz kavramları arasında farklılıklar neler olabilir?*
- 2) *Okul çağı döneminde bir çocuğun travmatik stres karşısında verdiği tepkiler, okul öncesi dönemde olan bir çocuktan nasıl farklılaşmaktadır?*
- 3) *Bir çocuğun travmatik bir olayı (ör.; depresyon, taşkın vb.) deneyimlediğini varsayalım. Çocuğun travma öncesi, travma anı ve travma sonrası maruz kalabileceği risk faktörleri neler olabilir?*
- 4) *Travma Sistemleri Terapisi ile Travma Odaklı Bilişsel Davranışçı Terapinin arasındaki farklılıklar neler olabilir?*
- 5) *Travmaya duyarlı okul kültürünün gelişmesi için okul psikolojik danışmanları çalıştıkları eğitim kurumlarında neler yapabilirler?*

Aileyi nasıl iyileştireceğimi bilince, dünyayı da iyileştirebileceğime inanıyorum.

Virginia Satir

Toplumun en küçük birimi ailedir. Ailelerin ruhsal açıdan sağlıklı olma hâli toplumun da ruhsal sağlığını gösterir. Aile üyelerinin birbirleriyle ilişkileri, ebeveynlerin birbirlerine ve çocuklarına davranışları, çocukların arkadaşlarına ve diğer yetişkinlere davranışlarını doğrudan ya da dolaylı yolla etkilemektedir. Aile içindeki problemler,

konuşmalarında duyguları ifade etmede, duyguları fark etmede, yatıştırma da kullanılan yöntemleri paylaştıkça, aralarındaki ortak noktaları gördükçe rahatladıklarını ve yeni deneyimlere daha cesaretle açık hâle geldiklerini görmüştür. Grup oturumları sonlandığında grubun duygularını ifade etmede ve sınır belirlemede daha rahat olduklarının bilgisi alınmış; bu durum, psikolojik danışmanca da gözlemlenmiştir. Grup oturumları ve bireysel görüşmeler bittiğinde ölçekler tekrar uygulanmıştır. Tüm üyelerin puanlarında anlamlı düzeyde azalma olmuştur. Danışanların bireysel ve grup danışma sürecinin yardımıyla ikincil maladaptif üzüntü duygusu birincil haklı öfke duygusuna dönüşmüştür.

Özet

Psikolojik danışma, en yalın tanımıyla psikolojik danışman ile danışan arasındaki etkileşimlerle gerçekleşen profesyonel yardım sürecidir. Sürecin psikolojik danışman ve danışan arasında olduğunu söylesek de psikolojik danışma tek bir danışanla olabileceği gibi grupla psikolojik danışma şeklinde de yapılabilir. Yine danışanlar çiftler ya da aileler de olabilir. Çocuk ve ergenlerle yapılan psikolojik danışma süreci temel prensipleri açısından değişiklik göstermese de kullanılan teknikler ve işleyiş açısından yetişkinle sürdürülen psikolojik danışmadan farklıdır. Sözü kullanmayan çocuklarla bireysel ve grupla psikolojik danışmada oyun, çocuğu anlamada ve problemi çözmede en etkin yollardandır. Konuşma becerisi olsun ya da olmasın çocuklarla hem oyun hem de oyun dışı, kum-hamur-resim-kutu oyunları-kartlar ve farklı sanatsal faaliyetler psikolojik danışma sürecinde kullanılır. Oyun ve diğer uygulamalardaki sembolleri ve sözsüz dili anlamak çocuk ve ergenlerle çalışan psikolojik danışmanın becerileri arasında olmalıdır. Zira ergenler, sözle kendilerini ifade etmeyi tercih etmektedirler. Bireysel psikolojik danışmada çocuk ve ergenin bireysel sorunlarına çözüm üretmeye yönelik çalışılır. Grupla psikolojik danışma, çocuk ve ergenlerin ortak problemlerine yönelik uygulamaları içerir. Grup danışmalarına ortalama 4-6 çocuk, 8-10 ergen alınır. Grupla psikolojik danışmada ergenler duygularını ifade ederler, kabul gördüklerini hissederek; kendilerini yalnız hissetmezler ve olaylara farklı çözüm yolları üretebilmeyi öğrenirler.

Çocuk ve Ergenlerle Psikolojik Danışmada Çok Kültürlü Yaklaşım

Psikolojik Danışmanların Çok Kültürlü Psikolojik Danışma Yetkinliği

Özet

Kaynakça

Giriş

Dil, dinî inanç, engellilik durumu, ekonomik sınıf, ırk, etnik köken, cinsiyet kimliği ve cinsel yönelim, ulusal köken gibi bireyin kültürel kimliğini, hayat içerisinde kendini algılayışını şekillendiren her bir etmen aynı zamanda psikolojik danışmanlık sürecinin önemli noktalarını oluşturmaktadır. Psikolojik destek sürecinin en işlevsel ve kabul edici bir şekilde yürütülebilmesi de danışanın kültürel değerlerinin, yargılarının, danışana sunulan destekte onun kültürel dinamiklerinin göz önünde bulundurulmasına bağlıdır.

Birleşmiş Milletler Mülteciler Yüksek Komiserliği (BMMYK) (2021); doğal afetler, siyasi nedenler, savaşlar gibi çok sayıda nedenden ötürü dünya nüfus hareketliliğinin en yüksek hacminin yaşandığına dikkati çekmiştir. Birleşmiş Milletlerin 2021 raporuna göre 2019 yılı itibarıyla yaklaşık 80 milyon insanın yerinden edilmiş olduğu ve yerinden edilen bu grubun ise 26 milyonunun mülteci statüsüne sahip olduğu belirtilmiştir (The United Nations, 2021). Söz konusu raporda da belirtildiği üzere en çok sayıda mülteciye

kinlikleri edinebilmek ve mesleki müdahaleler çerçevesinde uygulayabilmek için eyleme dönüştürmek yetkinliklerine yer verilmektedir. Ayrıca, söz konusu model, danışmanların bu yetkinlikleri sosyal adalet savunuculuğu müdahaleleri olarak kişiler arası, kurumsal, topluluk, kamu politikası ve uluslararası/küresel olmak üzere birden fazla düzeyde hareket etmelerini tavsiye etmektedir (Ratts ve ark., 2016).

Özet

Psikolojik destek sürecinin işlevsel ve kabul edici yürütülmesi, danışanların kültürel değerlerinin, yargılarının, inançlarının ve özelliklerinin fark edilmesine ve danışana onun kültürel bağlamı kapsamında müdahale edilmesine bağlıdır. Son yıllardaki nüfus hareketlilikleri ve beraberinde gelen toplumsal ve bireysel temelli müdahale yaklaşımlarında kültürel duyarlılık ön plana çıkmaktadır. Bu noktada çok kültürlülük, çeşitlilik, farklılıklara yönelik duyarlılık 21. yüzyıl psikolojik danışmanlık yaklaşımının merkezinde bulunmaktadır.

Bu nedenle, çocuk ve ergenlerle çok kültürlü yaklaşım kapsamında çocuk, ailesi ve çevresi hakkında edinilen bilgilerin yanı sıra bireyin geçmiş ve mevcut zamandaki kültürleşme geçmişine, ırk/etnik olarak kendini nasıl tanımladığına, parçası olduğu grubun toplum içerisindeki statüsünü nasıl algıladığına, kültürel olarak benimsediği kimliğe ve bu alanlarla kendini nasıl ilişkilendirdiğine dair bilgileri edinmek önemlidir. Bu nedenle, söz konusu bölümde, Jones'un (2003) Üç Aşamalı Çok Kültürlü Danışmanlık ve Terapi Modeli'ne değinilmiş; çocuk ve ergenlerle yapılan çok kültürlü psikolojik danışma görüşme modelinde aile, akran, ırk, etnik köken ve bireysel konular başlıklarına yer verilmiştir. Kategoriler kapsamında çok kültürlü psikolojik danışma yaklaşımına uygun çocuk ve ergenlerle yapılan görüşmelerde psikolojik danışmanların kullanılabilecekleri örnek sorular paylaşılmıştır.

Giriş

Aile, eş alt sistemi, ebeveyn alt sistemi ve kardeş alt sistemi olmak üzere alt sistemlerden oluşan bir yapıdır. Bu yapının sağlıklı olması, bütün alt sistemlerin işlevlerini yerine getirmesiyle mümkün olmaktadır. Bu alt sistemlerden biri olan ebeveyn alt sisteminde hem ebeveynlerin çocuklarıyla kurdukları sağlıklı iletişim hem de çocukların ebeveynleri ile geliştirdikleri güvenli bağlanma çocukların ruh sağlığını olumlu yönde etkiler. Buna karşın aile içinde yaşanan tartışma, bu tartışmaya bağlı oluşan gerginlik; ebeveynler ve çocuklar için stres oluşturmakta ve sistemi zorlamaktadır.

oyunlara tepki vermediği görülmüştür. Psikolojik danışman, oyun videosunu izledikten sonra duygusal teması daha da arttırmalarını istemiştir. Kucaklama ve dokunma zamanlarının fazlaştırılması ve olumlu duygu ifade edilmesi ile Mehmet ve ebeveynleri arasında duygusal sıcaklığın başladığı görülmüştür. Diğer oturumda daha sakin oyun oynadıkları, ailenin Mehmet ile oynarken endişelerinin azaldığı, daha içten yaklaştığı görülmüştür. Sekizinci oturumdan itibaren grupta ailelerin ebeveynlik endişeleri konuşulmuştur. Mehmet'i evlat edinen ailenin endişelerinin azaldığı görülmüştür. Daha sağlıklı ebeveynlik becerileri konusunda bilgi paylaşımı yapıldı. Ebeveynlerin duygu paylaşımları, evlat edinme konusundaki endişeleri ve gelecek dönemlerde kendilerini neler beklediği konusundaki aktarılanlarla ÇEİT oturumları sonlandırılmıştır.

Mehmet ve ailesinin sonraki dönemlerde altı ayda bir yapılan bireysel psikolojik danışma süreçlerinde birbirlerine uyum sağladıkları görülmüştür. Anne ve babanın olumlu etkileşim kurdukları, oyun oynama sanatlarını geliştirdikleri ve bağlanma örüntülerini güvenli bir şekilde oluşturmaya çalıştıkları görülmüştür.

Özet

Hem okullarda hem de çocuk ve ergenlerle ilgili diğer kurumlarda görevli psikolojik danışmanlar, danışmanlık sürecinde çoğunlukla ailelerle birlikte çalışmaktadırlar. Ailelere yönelik psikolojik destek hizmeti sunan psikolojik danışmanlar açısından aile danışmanlığı alanındaki gelişmeler dikkat çekici olmalıdır. Günümüzde yapılan birçok çalışmada, çocuk ve ergenlerle çalışan psikolojik danışmanların ailelerle birlikte daha çok çalışması gerektiğine odaklanılmaktadır (Crespi, Gustafson ve Borges, 2006).

Günümüzde çocuk ve ergenlerin karşılaştığı birçok sorunun çözüm merkezi olarak psikolojik danışmanlar görülmektedir. Bu durum, psikolojik danışmanın özellikle akademik, eğitsel, kişisel ve sosyal danışmanlık sürecinde aile ortamını keşfetmesi çocuk ve ergene sunacağı hizmetin daha kaliteli olmasını sağlayacaktır. Psikolojik danışman hangi aile danışmanlığı yaklaşımı ve tekniğini kullanırsa kullansın amacı, çocuk ve ergeni daha iyi tanımak olmalıdır. Bu yüzden kurumun şartları, ailenin yapısı, çocuk ve ergenin farkındalık düzeyi gibi birçok etkeni önceden bilip aile danışmanlığı tekniklerini uygun şekilde kullanabilmelidir. Sonuç olarak psikolojik danışma alanının alt alanı olan okul psikolojik danışmanlığı ve aile psikolojik danışmanlığının birlikte etkin bir şekilde entegre edilerek kullanımı öğrenci ve ailelere yaklaşımı kolaylaştıracaktır.

Giriş

Dünya Sağlık Örgütü (DSÖ) tarafından sağlıklı olma tanımı, yalnızca fiziksel olarak sağlıklı ve hastalığa sahip olmama hâli değil bireyin fiziksel, sosyal ve ruhsal anlamda bir bütün olarak iyi olma hâli olarak tanımlanmaktadır (World Health Organization WHO, n.d.). Amerikan Psikolojik Danışma Derneğinin (American Counseling Association, 2020) psikolojik danışma alanı tanımı içerisinde bireylerin ruhsal sağlık alanında

ramlarının psikolojik, duygusal, davranışsal ve kişiler arası ilişkiler alanlarında olumlu yönde etkisi olduğu ve bu etkilerin bireylerin hayatında uzun vadede devam ettiği görülmektedir. (Bowen ve Neill, 2013).

Ülkemizde macera terapisi yeterli düzeyde tanınırlığa sahip olmamakla birlikte uygulamasına rastlanmamaktadır. Yurt dışında ise macera terapisi farklı terapi yöntemlerinin yanında veya tek başına bir terapi yöntemi olarak kullanılmaktadır. Bu alanda yapılan birçok araştırma uluslararası literatürde mevcuttur (Baştemur, 2019). Ülkemizin coğrafi, fiziki koşulları ve doğal güzellikleri göz önünde bulundurularak macera terapisi alanında uzmanlaşmış psikolojik danışmanların yetişmesinin çocuk ve ergenlere yönelik hem önleyici hem de müdahale edici çalışmalarda oldukça faydalı olacağı düşünülmektedir. Bu alanda uzmanlaşan psikolojik danışmanların özellikle okullarda çocuk ve ergenlere yönelik kapsayıcı, önleyici ve müdahale edici psikolojik destek verebileceği öngörülmektedir.

Özet

Amerikan Okul Psikolojik Danışmanları Derneğinin (American School Counselors Association, ASCA) oluşturduğu “Ulusal Model”e (ASCA, 2005) göre okul psikolojik danışmanlarının en önemli sorumluluklarından birisi, öğrencilerin uyumlu, üretken ve sağlıklı bireyler olarak yetişmeleri amacıyla kişisel/sosyal, eğitsel/akademik ve mesleki/kariyer şeklinde gruplara ayrılan üç gelişimsel alanda yardımcı olmaktır. Ülkemizde de okullardaki psikolojik danışma ve rehberlik hizmetlerine yönelik hedefler bu üç gelişimsel alan dikkate alınarak oluşturulmuştur (MEB, 2019). Gerek okullarda gerek bireysel psikolojik danışmanlık süreçlerinde çocuk ve ergenlerin psikolojik iyi oluşlarını artırmaya yönelik gelişimsel alanlarda destek verirken psikolojik danışma alanındaki yeniliklerin takip edilmesi, çağın gereklerine göre yöntem ve tekniklerin gözden geçirilerek güncellenmesi, her çocuk ve ergenin biricik olduğu düşünülerek bireye yönelik terapi yöntemlerinin uygulanması tedavi sürecinde büyük önem taşımaktadır. Psikolojik danışmanların çocuk ve ergenlere yönelik yeni yaklaşımlara açık olması, lisans ve yüksek lisans düzeyindeki ders müfredatlarının psikoloji ve psikolojik danışmanlık alanındaki yeniliklere göre düzenlenmesi, alanda yetişen öğrenci ve uzmanların yenilikleri takip ederek kendilerini geliştirmeleri tedavi sürecine sağlayacağı katkılar açısından önem arz etmektedir.

İKİNCİ BASKIYA ÖN SÖZ	V
SUNUŞ	vii
ÖN SÖZ.....	ix
ŞEKİLLER, TABLOLAR VE GRAFİKLER LİSTESİ.....	xv
KISALTMALAR LİSTESİ.....	xvii

1. BÖLÜM PARA KAVRAMI

1.1. Paranın Tanımı.....	1
1.2. Paranın Özellikleri.....	2
1.3. Paranın Fonksiyonları.....	3
1.3.1. Değişim Aracı Olmak	3
1.3.2. Değer Ölçüsü (Hesap Birimi) Olmak	3
1.3.3. Değer Saklama Aracı Olmak	4
1.4. Paranın Evrimi	4
1.4.1. Mal Para	4
1.4.2. Metal Para.....	4
1.4.2.1. Tek Metal Sistemi.....	5
1.4.2.2. Çift Metal Sistemi	5
1.4.2.3. Altın Madeni (Sikke) Para Sistemi	6
1.4.2.4. Altın Külçe Sistemi.....	6
1.4.2.5. Altın Kambiyo Sistemi (1944-1973).....	8

1.4.3. Kâğıt Para	11
1.4.3.1. Banknot ve Kâğıt Paranın Ortaya Çıkışı	12
1.4.3.2. Kâğıt Para Sistemi	13
1.4.3.2.1. Senyoraj	13
1.4.4. Kaydi Para	14
1.4.4.1. Kaydi Paranın Yaratılması.....	14
1.4.4.2. Para Arzı Tanımları	16
1.5. Dijital Varlık Taksonomisi	16

2. BÖLÜM

İKTİSAT DÜŞÜNÇESİNDE PARA

2.1. Merkantilist Düşünceye Geçiş Sürecinde Para.....	21
2.2. Merkantilist Düşünce de Para	22
2.3. Fizyokrazi ve Para	24
2.4. Klasik Para Teorisi	25
2.5. Neoklasik Para Teorisi	27
2.6. Parasal ve Finansal Sistemin Evrimi	31
2.7. Küresel Finans Krizi ve Merkez Bankaları	35
2.8. Kriptografi ve Kripto Paranın Yakın Tarihi	38

3. BÖLÜM

BITCOIN

3.1. Bitcoin'e İlişkin Temel Konular	41
3.2. Bitcoin'le İlgili Önemli Konular	47
3.2.1. Bitcoin ve Arzı	47
3.2.2. Bitcoin ve Fiyat Volatilitesi	49
3.2.3. Bitcoin ve Piyasa Balonu	51
3.2.4. Bitcoin ve Yeraltı Ekonomisi.....	58
3.2.5. Bitcoin ve Siber Hırsızlık	59
3.2.6. Bitcoin ve Ponzi Finansman	61
3.2.7. İçsel Değer, Paranın Fonksiyonları ve Bitcoin	63
3.3. Bitcoin'e İlişkin Riskler	65

4. BÖLÜM BLOKZİNCİRİ

4.1. Blokzincirine İlişkin Temel Konular	67
4.1.1. Blokzincirinin Temel Özellikleri	67
4.1.2. Blokzincirinin İşleyişi	69
4.1.3. Bitcoin Blokzincirinin Yapısı.....	72
4.1.4. Madencilik (Mining)	77
4.1.5. Oyun Teorisi	82
4.1.5.1. İşbirliği Olan ve Olmayan Oyunlar	84
4.1.6. Düğüm (Node).....	87
4.1.7. Mutabakat Algoritmaları.....	90
4.1.8. İş İspatı (Proof of Work)	91
4.1.9. Pay İspatı (Proof of Stake).....	92
4.1.10. Blokzinciri Çeşitleri	93
4.1.11. Blokzinciri ve Akıllı Sözleşmeler (Smart Contracts)	95
4.1.12. Akıllı Sözleşmelerin İşleyişi	97
4.1.13. Blokzinciri ve Kullanım Alanları	99
4.1.13.1. Merkez Bankası Dijital Para Birimi.....	100
4.1.13.2. Dijital Kimlik.....	100
4.1.13.3. İhracatın Finansmanı	102
4.1.13.4. Bireysel Bankacılık	103
4.1.13.5. Sendikasyon Kredileri	104
4.1.13.6. Mikrofinans	105
4.1.13.7. ICO, IEO, IDO ve STO'lar	105
4.1.13.8. Muhasebe.....	110
4.1.13.9. Denetim.....	111
4.2. Blokzinciri ve Kullanımı	112

5. BÖLÜM KRİPTO PARALAR

5.1. Kripto paralar.....	115
5.1.1. Bitcoin (BTC).....	116
5.1.2. Ethereum (ETH).....	119
5.1.3. Tether (USDT).....	124
5.1.4. BNB.....	126

5.1.5. USD Coin (USDC)	127
5.2. Sabit Coin'ler (Stablecoins).....	128
5.2.1. Örnek Olay 1 (Beanstalk Atağı)	131
5.2.2. Örnek Olay 2 (TerraUSD'nin Çöküşü)	132
5.2.3. Örnek Olay 3 (FTX Krizi).....	138

6. BÖLÜM

DİJİTAL EKONOMİ VE FİNANSAL SİSTEM

6.1. Özel para, İtibari Para, Sabit Coin ve	
Merkez Bankası Dijital Para Birimi	141
6.2. Merkeziyetsiz Finans (DeFi) ve Yönetişim	145
6.3. Uluslararası Ödemeler Bankası (BIS), Merkez Bankası	
Dijital Para Birimi'ne (Central Bank Digital Money, CBDC)	
Yönelik Çalışmalar.....	146

7. BÖLÜM

ÜLKELERİN KRİPTO PARA VE BLOKZİNCİRİ TEKNOLOJİSİNE YÖNELİK YAKLAŞIMLARI

7. Ülkelerin Kripto para ve Blokzinciri Teknolojisine Yönelik	
Yaklaşımları	155
7.1. Mali Eylem Görev Gücü (Financial Action Task Force, FATF)	158
7.1. Amerika Birleşik Devletleri	159
7.2. Çin	160
7.3. Japonya	162
7.4. İsviçre	163
7.5. Avrupa Birliği	163
7.6. Türkiye	164

İÇİNDEKİLER

Bölüm 1 ÖLÇÜ VE CİHAZ PRENSİPLERİ

1. GİRİŞ	1
2. TEMEL VE TÜRETİLMİŞ BİRİMLER.....	1
3. SAYILARIN DEĞERLENDİRİLMESİ	3
3.1. Rakamların Yuvarlaklaştırılması.....	4
3.2. Dolaylı Ölçmeler ve Hataların Değerlendirilmesi.....	6
4. STANDARTLAR.....	8
4.1. Giriş.....	8
4.2. Standardizasyon	9
4.2.1. Standardizasyonun Üreticiye Faydaları.....	9
4.2.2. Standardizasyonun Ekonomiye Faydaları	10
4.2.3. Standardizasyonun Tüketiciye Faydaları	10
4.3. Standart Tanımı	10
4.4. Standartların Sınıflandırılması	11
4.5. Standartların Hazırlanışı.....	11
4.6. Ölçme ve Kalibrasyonun Standartlardaki Yeri.....	11
4.7. Dünyada Metrolojinin Tarihi Gelişimi	12
4.8. Ülkemizde Metrolojinin Tarihi Gelişimi.....	13
4.9. Ölçme ve Kalibrasyonun Önemi	14
4.10. Bazı Metrolojik Terimlerin Tanımı.....	16

4.11. Standart ve Çeşitleri	16
4.11.1. Uluslararası Standartlar	17
4.11.2. Primer veya Birincil Standartlar	17
4.11.3. Sekonder veya İkincil Standartlar	17
4.11.4. Referans Standartlar	17
4.11.5. Çalışma Standartları	17
4.11.6. Transfer Standartları	17
4.12. Kalibrasyon Sisteminin Kurulması	18
4.13. Kalibrasyon Şartları	18
4.14. Kalibrasyon Periyotlarının Tesbiti ve Denetlenmesi	18
4.15. Bir Ölçme İşleminde Dikkat Edilmesi Gereken Hususlar	19
4.16. Ölçü Raporunda Bulunması Gereken Bilgiler	19
4.17. Kalibrasyon Sertifikasında Bulunması Gereken Bilgiler	19
4.18. Kalibrasyon Etiketinde Bulunması Gereken Bilgiler	20
4.19. Önemli Temel ve Elektriksel Standartların Tanımı	20
5. HATALAR	25
5.1. Sistem veya Cihaz İçeri Hatalar	25
5.2. Sistem veya Cihaz Dışı Hatalar	26
5.3. Rastlantı Hataları	26
6. STATİK KARAKTERİSTİKLER	27
6.1. Doğruluk	27
6.2. Hassasiyet	28
6.3. Duyarlılık	30
6.4. Lineerlik	30
6.5. Lineersizlik	31
7. DİNAMİK KARAKTERİSTİKLER	32
7.1. Transfer Fonksiyonu	33
7.2. Sıfırıncı Mertebeli Cihaz	34
7.3. Birinci Mertebeli Cihaz	34
7.4. İkinci Mertebeli Cihaz	35
7.5. Gecikme Zamanı	37
7.6. Dinamik Lineersizlik	37

8. ÖLÇÜ HATALARININ İSTATİSTİK ANALİZİ	38
8.1. Ortalama, Sapma ve Standart Sapma	38
8.2. Gauss Dağılımı.....	40
8.3. Veri Dağılımı	42
8.3.1. En Küçük Kareler Tahmini Doğrusu	42
8.3.2. Korelasyon (İlişki) Katsayısı.....	43
9. ÖLÇÜ SİSTEMİNİN ELEMANLARI.....	46
10. CİHAZ TASARIM KRİTERLERİ.....	47
11. CİHAZIN ETİKET ÖZELLİKLERİ	48
11.1. Giriş ve Transdüser Özellikler	48
11.2. İşaret İşleme Özellikleri	49
11.3. Çıkış Özellikleri	50
11.4. Hata ve Güvenirlilik.....	50
11.5. Fiziksel ve Diğer Özellikler	51
12. ÖLÇÜ ALETLERİNİN KARAKTERİSTİK SEMBOLLERİ	52
PROBLEM VE SORULAR.....	54

Bölüm 2

TOPRAKLAMA, EKLANLAMA VE GÜRÜLTÜ

1. GİRİŞ	59
2. ELEKTRİKSEL GÜRÜLTÜ	59
2.1. Termal Gürültü.....	60
2.2. Shot Gürültü.....	62
2.3. Titrek ve Burst Gürültü	63
2.4. İşaret - Gürültü Oranı	63
2.5. Gürültü Figürü.....	63
2.6. Reaktansın Gürültü Etkisi	65
2.7. Kaskad Bağlı Amplifikatörlerdeki Gürültü	65
2.8. Eşdeğer Gürültü Sıcaklığı	67
2.9. Eşdeğer Gürültü Direnci	67
2.10. SINAD Oranı	67

2.11. Gürültü Ölçümü	68
2.12. Diyotlu Gürültü Üretici.....	68
2.13. Tanjantlı Gürültü Ölçme Tekniği.....	69
2.14. Gürültü Ölçü Devresi.....	70
3. GİRİŞİM.....	71
3.1. Elektriksel Kuplajlı Girişim	71
3.2. Manyetik Kuplajlı Girişim	72
3.3. Elektromanyetik Girişim (EMI).....	73
4. TOPRAK VE TOPRAKLAMA.....	73
4.1. AC Güç Hatları	73
4.2. Toprak Arızası.....	74
4.3. Cihaz Topraklaması	77
4.4. Toprak Çevrimleri.....	78
5. DİAFONİ	82
6. EKLANLAMA VE FİLTRELEME.....	82
6.1. Elektrik Alanı ve Düzlemsel Dalga Ekranlaması.....	83
6.2. Manyetik Ekranlama	84
6.3. Filtreleme	85
7. ELEKTRİĞİN FİZYOLOJİK ETKİLERİ.....	86
PROBLEMLER	87

Bölüm 3

DOĞRU AKIM ÖLÇMELERİ

1. GİRİŞ	89
2. DÖNER BOBİNLİ GALVANOMETRE.....	89
3. DC AMPERMETRE.....	92
3.1. Tek Kademeli Ampermetre.....	92
3.2. Çok Kademeli Ampermetre	94
3.3. Ampermetrenin Yükleme Etkisi.....	95
3.4. DC Ampermetre Kullanılırken.....	97

4. DC VOLTMETRE	97
4.1. Voltmetrenin Yükleme Etkisi ve Duyarlılığı	99
4.2. DC Voltmetre Kullanılırken.....	102
5. DİRENÇ ÖLÇMELERİ VE OHMMETRELER.....	102
5.1. Ampermetre - Voltmetre Metodu.....	103
5.2. Ölçü Aleti İç Direncinin Ölçülmesi.....	105
5.2.1. Yarım Skala Metodu	105
5.2.2. Gerilim - Akım Metodu	105
5.3. Seri Ohmmetre	106
5.4. Paralel Ohmmetre.....	109
5.5. Çapraz Bobinli Ölçü Aleti.....	110
5.6. Oranmetreli Ohmmetre	112
5.6.1. Hareketli Bobinli Oranmetreli Ohmmetre.....	112
5.6.2. Çapraz Bobinli Oranmetreli Ohmmetre	112
5.7. Meger	113
5.8. Wheatstone Köprüsü ile Direnç Ölçümü.....	114
5.8.1. Wheatstone Köprüsünün Duyarlılığı.....	117
5.8.2. Dengesiz Wheatstone Köprüsü	117
5.9. Küçük Değerli Direnç Ölçümü	119
5.9.1. Kelvin Köprüsü ile Direnç Ölçümü	119
5.10. Büyük Değerli Direnç Ölçümü	121
5.10.1. Büyük Direnç Ölçümünün Zorlukları	121
5.10.2. Korunmalı Metot ve Kablo İzolasyon Direncinin Ölçümü	122
5.10.3. Hacimsel ve Yüzeysel Direncin Ölçümü	123
5.10.4. Yük Kaybı Metodu ile İzolasyon Direncinin Ölçümü	124
5.10.5. Megaohm Köprü Metodu ile İzolasyon Direncinin Ölçümü.....	126
5.11. Toprak Direncinin Ölçümü	127
5.11.1. Gerilim Düşümü Metodu ile Toprak Direncinin Ölçümü	128
5.11.2. Toprak Test Cihazı ile Toprak Direncinin Ölçümü.....	129
5.12. Kablo Arıza Yerinin Ölçülmesi.....	130
6. MÜLTİMETRELER	133
7. POTANSİYOMETRE DEVRELERİ.....	137

7.1.	Potansiyometrenin Gerekliği.....	137
7.2.	Sürgülü Potansiyometre	137
7.3.	Otomatik Potansiyometre.....	139
8.	GERİLİM REFERANSLARI.....	140
8.1.	Yarıiletken Referans Kaynaklar	140
9.	ÖLÇÜ CİHAZLARININ KALİBRASYONU	142
9.1.	Potansiyometrik Metot.....	142
9.2.	Karşılaştırma Metodu.....	145
10.	UYGULAMALAR.....	146
10.1.	DC Ampermetre ve Voltmetre Uygulamaları	146
10.2.	DC Köprü Uygulamaları	148
10.2.1.	Sıcaklık Kontrol Devresi.....	148
10.2.2.	Yüksek Sıcaklık Ölçümü.....	149
	PROBLEM VE SORULAR.....	150

Bölüm 4

ALTERNATİF AKIM ÖLÇMELERİ

1.	GİRİŞ	157
2.	SİNÜZOİDAL İŞARET.....	158
3.	AC ÖLÇÜMÜNDE FREKANSIN ETKİSİ.....	159
4.	ELEKTRODİNAMİK ÖLÇÜ ALETİ.....	161
4.1.	Elektrodinamik Ölçü Aletlerinin Temel Özellikleri.....	164
5.	DÖNER DEMİR PLAKALI ÖLÇÜ ALETİ.....	165
6.	DÖNER MIKNATISLI ÖLÇÜ ALETİ.....	166
7.	ISIL ÖLÇÜ ALETLERİ.....	166
7.1.	Sıcak Telli Ölçü Aleti.....	166
7.2.	Isılçift Ölçü Aleti	167
7.3.	Isıl Ölçü Aletlerinin Üstünlük ve Eksiklikleri.....	170
8.	TEPE DEĞER VOLTMETRESİ	172

9. ELEKTROSTATİK VOLTMETRE.....	173
9.1. Dairesel Hareketli Elektrostatik Voltmetre	173
9.2. Doğrusal Hareketli Elektrostatik Voltmetre	174
10. AC İŞARETLERİN DOĞRULTULARAK ÖLÇÜLMESİ	174
10.1. Yarım Dalga Doğrultuculu Bir AC Voltmetre	174
10.1.1. Yarım Dalga Doğrultuculu AC Voltmetrenin Eksiklikleri.....	179
10.2. Tam Dalga Doğrultuculu AC Voltmetre	179
11. 1 V'TAN KÜÇÜK AC GERİLİMLERİN ÖLÇÜLMESİ	183
12. DEĞİŞİK DALGA ŞEKİLLERİNİN ÖLÇÜMÜ.....	185
13. ÖLÇÜ TRANSFORMATÖRLERİ	186
13.1. Gerilim Transformatörleri	187
13.2. Akım Transformatörleri	188
14. AC ÖLÇÜ ALETLERİNİN ÖZELLİKLERİ	190
PROBLEM VE SORULAR.....	192

Bölüm 5 **GÜÇ ÖLÇMELERİ**

1. GİRİŞ	195
2. AC GÜÇ.....	196
3. GÜÇ FAKTÖRÜNÜN DÜZELTİLMESİ	198
4. TEK FAZLI ELEKTRODİNAMİK WATTMETRE	200
5. ÜÇ FAZLI DEVRELERDE GÜÇ VE ÖLÇÜLMESİ.....	202
5.1. Üç Wattmetre Metodu	204
5.2. İki Wattmetre Metodu	205
6. WATTMETRE SABİTİ	207
7. REAKTİF GÜÇ ÖLÇÜMÜ VE VARMETRE	209
8. ÜÇ FAZLI WATTMETRE	210
9. HALL-ETKİLİ WATTMETRE	210
10. GÜÇ FAKTÖRÜ METRESİ.....	212

11. ENERJİ SAYACI.....	213
12. YÜKSEK FREKANSLARDA GÜÇ ÖLÇÜLMESİ.....	216
12.1. Ses Frekanslarında Güç Ölçümü.....	216
12.2. Radyo Frekanslarında Güç Ölçümü.....	218
12.2.1. Kalorimetrik Güç Ölçü Aleti.....	219
12.2.2. Bolometre.....	220
PROBLEM VE SORULAR.....	221

Bölüm 6

DEVRE ELEMANLARININ ÖLÇÜMÜ

1. GİRİŞ.....	225
2. DİRENÇLER.....	225
2.1. Dirençteki Güç Kaybı.....	226
2.2. Direnç Stabilesi.....	226
2.3. Direnç Toleransları.....	226
2.4. Direnç Serileri.....	226
2.5. Renk Kodları.....	227
2.6. Direnç Çeşitleri.....	228
2.7. Direnç Malzemeleri.....	230
3. KONDANSATÖRLER.....	231
3.1. Kondansatörün Çalışma Gerilimi.....	231
3.2. Kondansatördeki Kaçak Direnç.....	231
3.3. Kondansatörün İzolasyon Direnci.....	232
3.4. Kondansatörün Güç Faktörü.....	232
3.5. Kondansatör Çeşitleri.....	232
4. EMPEDANS TANIMI.....	234
5. ALÇAK FREKANSLARDA DİRENÇ ÖLÇÜMÜ.....	236
6. ALÇAK FREKANSLARDA EMPEDANS ÖLÇÜMÜ.....	239
7. ALÇAK FREKANSLARDA KAPASİTE ÖLÇÜMÜ.....	239
7.1. Kapasite Kaçak Direncinin Ölçülmesi.....	240

7.2. AC Köprüsü ile Alçak Frekanslarda Kapasite Ölçümü.....	240
7.3. Paralel Direnç - Kondansatör Karşılaştırma Köprüsü	243
8. ALÇAK FREKANSLARDA SELF ÖLÇÜMÜ	244
9. EMPEDANS KÖPRÜLERİ	248
10. DEVRE ELEMANLARININ YÜKSEK FREKANSLARDAKİ ÖLÇÜMÜ	248
10.1. Yüksek Frekanslarda Self Ölçümü.....	250
10.2. Yüksek Frekanslarda Kapasite Ölçümü	251
10.3. Yüksek Frekanslarda Direnç Ölçümü	252
PROBLEM VE SORULAR.....	253

Bölüm 7

TRANSDÜSERLER

1. GİRİŞ	257
2. GERGİ TRANSDÜSERİ	260
2.1 Gergi Transdüserinin Genel Özellikleri	260
2.2. Yarıiletken Gergi Ölçer.....	263
3. SICAKLIK TRANSDÜSERLERİ	266
3.1. Rezistif Sıcaklık Detektörü (RTD).....	266
3.2. Isılçift	269
3.2.1. Isılçift Çıkışının Ölçümü.....	272
3.2.2. Kompanzasyon Devreleri.....	272
3.3. Termistörler.....	273
3.3.1. Termistörlerin Uygulama Alanları	275
3.3.2. Termistör ile Sıcaklık Ölçümü.....	275
3.3.3. Termistör ile Sıcaklık Kontrolü	276
3.3.4. Termistörlü Devrelerde Sıcaklık Kompanzasyonu	276
3.4. Entegre Devre Sıcaklık Transdüserleri.....	278
3.4.1. LM335 Serisi	279
3.4.2. LM34 Serisi	281
3.4.3. AD592 Serisi.....	282
4. FOTOELEKTRİK TRANSDÜSERLER	283

4.1.	Fotoemiyon Transdüserler.....	283
4.1.1.	Işık Kuvvetlendirici Tüp.....	283
4.2.	Fotoiletken Transdüserler.....	284
4.2.1.	Fotodiyot.....	287
4.2.2.	Fototransistörler.....	289
4.3.	Fotovoltaj Piller.....	291
5.	YER DEĞİŞTİRME TRANSDÜSERLERİ.....	292
5.1.	Kapasitif Transdüserler.....	292
5.1.1.	Diferansiyel Kapasitif Transdüser.....	294
5.1.2.	Dielektrik Sabitine Bağlı Olarak Yer Değişiminin Ölçümü.....	296
5.1.3.	Kapasitif Transdüserlerin Üstünlükleri.....	296
5.1.4.	Kapasitif Transdüserlerin Eksiklikleri.....	297
5.1.5.	Kapasitif Transdüserlerin Kullanım Alanları.....	297
5.2.	Endüktif Transdüserler.....	297
5.2.1.	Self Endüktans Yöntemine Göre Çalışan Transdüserler.....	298
5.2.2.	Karşılıklı Endüktans Değişimi Prensibine Göre Çalışan Transdüserler.....	300
5.2.3.	Eddy Kaybı Oluşturma Prensibine Göre Çalışan Transdüserler.....	300
5.2.4.	Endüktif Transdüser ile Doğrusal ve Dairesel Yer Değişiminin Ölçümü.....	301
5.2.5.	Manyetik Sıvı Akış Transdüseri.....	302
5.2.6.	Lineer Değişimli Diferansiyel Transformator.....	303
5.2.7.	Dairesel Değişimli Diferansiyel Transformator.....	307
5.2.8.	Manyetik Metot ile Açıl Hız Ölçümü.....	308
5.2.9.	Hall Etkili Transdüser.....	310
5.2.10.	Magneto-rezistör.....	312
5.2.11.	Magneto-Elastik Transdüserler.....	312
5.2.12.	Magneto-Striktif Transdüserler.....	313
5.3.	Piezo-elektrik Transdüserler.....	313
5.3.1.	Piezo-elektrik Malzeme ve Transdüserlerden Beklenenler.....	314
6.	İŞARET İŞLEYİCİLERİ.....	317
7.	SES ÖLÇEN TRANSDÜSERLER.....	318

PROBLEM VE SORULAR.....	318
-------------------------	-----

Bölüm 8

OSİLOSKOP

1. OSİLOSKOP NEDİR?	323
2. OSİLOSKOBUN BLOK DİYAGRAMI.....	324
3. KATOD IŞINLI TÜP	325
3.1. Katod Işınli Tüpün Yapısı	325
3.2. Katod Işınli Tüpün Ekran Malzemeleri.....	327
3.3. Katod Işınli Tüpün Ekranı.....	328
3.4. Elektrostatik Hızlandırma	329
3.5. Elektrostatik Saptırma	330
3.6. Düşey İşaretin Görüntülenmesi	333
4. DÜŞEY SAPTIRMA SİSTEMİ.....	336
4.1. Düşey Amplifikatör.....	336
4.2. Zayıflatıcılar.....	337
5. YATAY SAPTIRMA SİSTEMİ	342
5.1. Yatay Amplifikatör	342
6. TARAMA OSİLATÖRÜ VE SENKRONİZASYON DEVRESİ.....	342
6.1 Tarama Osilatörü.....	342
6.2. Senkronizasyon veya Tetikleme Devresi	345

ERKEN ÇOCUKLUKTA STEM EĞİTİMİ

Dr. Öğr. Üyesi Tuğba Abanoz, Ankara Üniversitesi

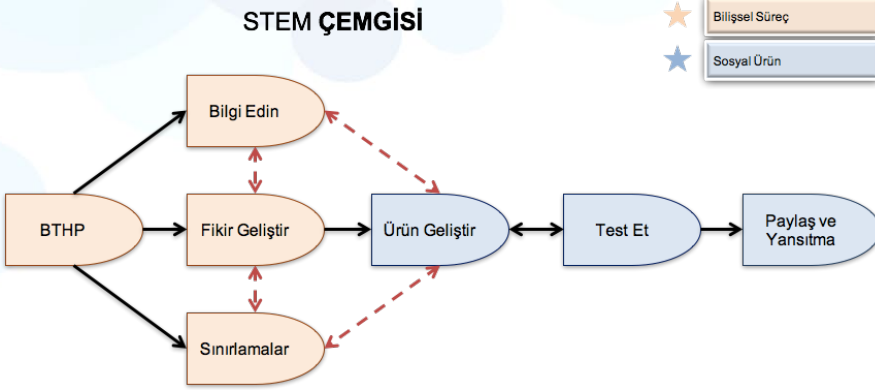

Dr. Öğr. Üyesi Defne Yabaş, Bahçeşehir Üniversitesi

GİRİŞ

Okul öncesi eğitim, küçük çocukların ilköğretim sınıflarında kazanacakları daha ileri içerik bilgisini oluşturmak için gereken pek çok beceriyi kazandıkları, gelişimlerinde önemli rol oynayan bir dönemdir. Bu dönemde çocuklar, bilime karşı sevgi ve ileriki yıllarda öğrenmelerine aracılık edecek yetenekleri için yeterli duygusu geliştirebilirler (Moomaw, 2103). Çocukların doğuştan bilim insanı ve bir mühendis oldukları göz önüne alındığında, erken çocukluk döneminde STEM eğitime yönelik çalışmalara çok az yer verilmesi bir talihsizlik olarak değerlendirilmektedir (Tippett & Milford, 2017). Erken çocukluk ortamları genel olarak sosyokültürel, yapılandırmacı bir modele göre oluşturulur. Merak, ilgi, inisiyatif, kalıcılık, dikkat ve yaratıcılık içeren öğrenme yaklaşımları, STEM/STEAM eğitim girişiminin önemli özellikleridir ve küçük çocukların bilgiyi nasıl öğrendikleri ve inşa ettikleri ile doğrudan ilgilidir (Katz, 2010).

Erken Çocuklukta STEM Eğitimi Neden Önemlidir?

Araştırma temelli matematik ve fen öğrenme fırsatları sağlanan çocukların geçirdiği yaşantıların sonraki eğitim basamaklarını etkilediği bilinmektedir. Bu sebeple fen ve matematik eğitiminin desteklenmesi eğitimcilerin çok önemseydiği bir konu olarak karşımıza çıkmaktadır. Erken çocukluk döneminde çocukların en doğal ilgilerinden biri çevreyi gözlemlemek, araştırma yapmak ve keşfetmek olduğundan, fen eğitiminin içeriği çocuklar için ilgi çekicidir (Brenneman, Stevenson Boyd & Frede, 2009). Bu keşifler yoluyla küçük çocuklar STEM eğitimini oluşturan fen, teknoloji, mühendislik ve matematik disiplinlerine ait pek çok kavramı kazanmaya başlarlar.

Şekil 2. STEM Çemgisi (Corlu, 2017)

STEM çemgisi; bilgi temelli hayat probleminin ilgili sınırlamalar, meslek, görev ve sorumluluklar ile birlikte sunumuyla başlamaktadır. Model bilişsel süreç ve sosyal ürün olmak üzere iki bölümü kapsamaktadır. Bilimsel süreçte yer alan bilgi edinme ve fikir geliştirme aşamaları öğretmen ve öğrencilerin problemi anlamak ve çözüm önerileri geliştirmek için gerekli olan hazırlık sürecine dair etkinlikleri kapsamaktadır. Bilgi edinme ve fikir geliştirme basamaklarında öğretmen ve öğrencilere açık uçlu araştırma soruları bağlamında problemi incelemeleri, alternatif çözüm önerileri üzerinde çalışmalarını ve yaratıcı fikirler üretmeleri önerilmektedir. Bilgi edinme ve fikir geliştirme basamaklarında gerçekleştirilen bilişsel hazırlık sürecinden sonra öğrenci ve öğretmenler, iş birliği içerisinde sosyal ürün oluşturma sürecine başlarlar. Ürün geliştirme basamağında temaya göre farklılaştırılmış ürünler üzerinde çalışılır. Test etme basamağında ise bir test düzeneği oluşturulur ve BTHP ile sınırlamalar göz önünde bulundurularak ürün test edilir (Yabaş & Corlu, 2021). Ürünler; “Makineler Dünyası” teması için çalışan bir prototip, “Yeşil Dünyamız” teması için bir deney tasarımı, “Bilişim Dünyası” için bir program ya da algoritma ve “Hayal Dünyamız” için örüntü ya da matematiksel model olarak farklılaştırılabilmektedir (Aşık vd., 2017).

STEM yaklaşımının erken çocukluk eğitimine entegrasyonu, çocuklara sadece bilim, matematiksel düşünme ve mühendislikte öğrenmeyi teşvik eden anlamlı deneyimler ve içerik sağlamayı içermez, ayrıca çocukların öğrenme deneyimleri, süreçte edinilenleri yansıtmaya (paylaşma), konuşma, sunum yapma ve dokümantasyon süreçlerini de içermelidir (Van Meeteren & Zan, 2010).

İÇİNDEKİLER

BİRİNCİ KISIM FİNANSAL TABLOLAR

1. BÖLÜM

FİNANSAL TABLOLARA İLİŞKİN GENEL BİLGİLER	4
FİNANSAL TABLOLARIN NİTELİKLERİ	4
FAYDALI FİNANSAL BİLGİNİN ÖZELLİKLERİ.....	6
FİNANSAL TABLOLARIN KULLANICILARINA SUNDUĞU BİLGİLER.....	7
FİNANSAL TABLOLARIN SINIRLARI	7
FİNANSAL TABLOLARDA YER VERİLMESİ GEREKEN BİLGİLER.....	8
DÜZENLENECEK FİNANSAL TABLOLAR	8
TEK DÜZEN MUHASEBE SİSTEMİ'NE (TDMS) GÖRE FİNANSAL TABLOLAR.....	8
TÜRKİYE MUHASEBE STANDARTLARI / TÜRKİYE FİNANSAL RAPORLAMA STANDARTLARI'NA (TMS/TFRS) GÖRE FİNANSAL TABLOLAR.....	11
TMS'NİN FİNANSAL TABLOLARA ETKİSİ	13
BİÇİMSEL YAPI (SINIFLANDIRMA) BAKIMINDAN FARKLILIKLAR	14
KAPSAM BAKIMINDAN FARKLILIKLAR	15
DEĞERLEME BAKIMINDAN FARKLILIKLAR	16
GENEL AMAÇLI FİNANSAL TABLOLAR	17
FİNANSAL DURUM TABLOSU (BİLANÇO).....	17
Finansal Durum Tablosu Düzenleme Biçimleri	18
KAPSAMLI GELİR TABLOSU.....	19
Kapsamlı Gelir Tablosu Düzenleme Biçimleri	19
Rapor Tipi Kapsamlı Gelir Tablosunun Gösterimi	19
NAKİT AKIŞ TABLOSU	20
ÖZ KAYNAK DEĞİŞİM TABLOSU.....	22
DİPNOTLAR	22
ÖZEL AMAÇLI FİNANSAL TABLOLAR	23
KÂR DAĞITIM TABLOSU	23
FON AKIM TABLOSU	24
SATIŞLARIN MALİYETİ TABLOSU	25
KONSOLİDASYON VE KONSOLİDE FİNANSAL TABLO KAVRAMI	26

2. BÖLÜM

FİNANSAL DURUM TABLOSU (BİLANÇO).....	34
BİÇİM BAKIMINDAN FİNANSAL DURUM TABLOSU.....	35
Hesap Tipi Finansal Durum Tablosu.....	35
Rapor Tipi Finansal Durum Tablosu.....	35
KAPSAM BAKIMINDAN FİNANSAL DURUM TABLOSU.....	36
Özet Finansal Durum Tablosu.....	36
Ayrıntılı Finansal Durum Tablosu	37
TMS/TFRS'YE GÖRE DETAYLI RAPOR TİPİ FİNANSAL DURUM TABLOSU (BİLANÇO) ÖRNEĞİ	38
FİNANSAL DURUM TABLOSUNDA (BİLANÇODA) YER ALACAK BİLGİLER.....	41
FİNANSAL DURUM TABLOSUNUN GENEL YAPISI VE SINIFLANDIRILMASI.....	42
VARLIKLARIN (AKTİFLERİN) BÖLÜMLENDİRİLMESİ	43
I. DÖNEN VARLIKLAR.....	44
Nakit ve Nakit Benzeri Varlıklar (Hazır Değerler)	46
Finansal Yatırımlar (Menkul Kıymetler).....	47
Ticari Alacaklar.....	47
Diğer Alacaklar	48
Stoklar	49
Peşin Ödenmiş Giderler	49
Cari Dönem Vergisiyle İlgili Varlıklar.....	49
Diğer Dönen Varlıklar.....	50
Satış Amaçlı Sınıflandırılan Duran Varlıklar.....	50
II. DURAN VARLIKLAR	50
Ticari Alacaklar.....	51
Diğer Alacaklar	51
Finansal Yatırımlar (Menkul Kıymetler).....	52
Öz Kaynak Yöntemiyle Değerlenen Yatırımlar	52
Yatırım Amaçlı Gayrimenkuller	53
Maddi Duran Varlıklar	54
Maddi Olmayan Duran Varlıklar	54
Peşin Ödenmiş Giderler	55
Ertelenmiş Vergi Varlığı	55
Diğer Duran Varlıklar	55
KAYNAKLARIN (PASIFLERİN) BÖLÜMLENDİRİLMESİ	55
I. KISA VADELİ YABANCI KAYNAKLAR	56
Kısa Vadeli Borçlanmalar	57
Uzun Vadeli Borçlanmaların Kısa Vadeli Kısımları	58
Diğer Finansal Yükümlülükler.....	58
Ticari Borçlar	58
Finans Sektörü Faaliyetlerinden Borçlar.....	58
Çalışanlara Sağlanan Faydalar Kapsamında Borçlar.....	59
Diğer Borçlar.....	59

II. UZUN VADELİ YABANCI KAYNAKLAR	59
III. ÖZ KAYNAKLAR.....	61
Ödenmiş Sermaye	62
Geri Alınmış Hisse Senetleri (-).....	62
Karşılıklı İştirak Sermaye Düzeltmesi (-).....	62
Hisse Senetlerine İlişkin Primler.....	63
Kâr veya Zararda Yeniden Sınıflandırılmayacak Birikmiş Diğer Kapsamlı Gelirler veya Giderler.....	63
Kâr veya Zararda Yeniden Sınıflandırılacak Birikmiş Diğer Kapsamlı Gelirler veya Giderler.....	64
Kârdan Ayrılan Kısıtlanmış Yedekler	64
Geçmiş Yıllar Kârları/Zararları	64
Dönem Net Kârı/Zararı	65

3. BÖLÜM

KAPSAMLI GELİR TABLOSU	68
TEK TABLO YAKLAŞIMINA ÖRNEK	69
İKİ TABLO YAKLAŞIMINA ÖRNEK.....	71
Dönem Kârı/Zararı Bölümünde Raporlanması Zorunlu Kalemler	75
Dönem Kârı/Zararını Oluşturan Bölümler	75
Sürdürülen Faaliyetler Bölümü	75
Durdurulan Faaliyetler Bölümü.....	77
Gelir Tablosu ile Nakit Akış Tablosu Arasındaki İlişki	78
DİĞER KAPSAMLI GELİR/GİDER BÖLÜMÜ	79
TMS/TFRS'LERİN GELİR TABLOSUNA ETKİLERİ.....	80

4. BÖLÜM

NAKİT AKIŞ TABLOSU	84
NAKİT AKIŞ TABLOSUNUN DÜZENLENMESİ VE KULLANICILARA SUNDUĞU BİLGİLER	85
NAKİT AKIŞLARI İLE NET KÂR KAVRAMLARI.....	86
NAKİT AKIŞLARININ SINIFLANDIRILMASI	87
İşletme Faaliyetlerinden Kaynaklanan Nakit Akışları.....	88
Yatırım Faaliyetlerinden Kaynaklanan Nakit Akışları	89
Finansman Faaliyetlerinden Kaynaklanan Nakit Akışları.....	90
NAKİT AKIŞ TABLOSU DÜZENLEME YÖNTEMLERİ.....	90
Brüt (Direkt - Dolaysız) Yöntem.....	92
Net (Endirekt - Dolaylı) Yöntem.....	95

5. BÖLÜM

ÖZ KAYNAK DEĞİŞİM TABLOSU	100
ÖZ KAYNAK DEĞİŞİM TABLOSUNDA SUNULACAK BİLGİLER	101
Öz Kaynakları Artıran İşlemler	101
Öz Kaynakları Azaltan İşlemler	102
ÖZ KAYNAK DEĞİŞİM TABLOSUNUN DÜZENLENMESİ	103

6. BÖLÜM

ÖZEL AMAÇLI FİNANSAL TABLOLAR	108
KÂR DAĞITIM TABLOSU	108
FON AKIM TABLOSU	111
SATIŞLARIN MALİYETİ TABLOSU	114

İKİNCİ KISIM FİNANSAL ANALİZ

7. BÖLÜM

FİNANSAL ANALİZLERE İLİŞKİN GENEL BİLGİLER	117
FİNANSAL ANALİZ.....	120
FİNANSAL ANALİZ SONUÇLARINDAN YARARLANAN GRUPLAR	121
FİNANSAL ANALİZ KRİTERLERİ	122
FİNANSAL ANALİZ TÜRLERİ.....	123
KAPSAM BAKIMINDAN FİNANSAL ANALİZ TÜRLERİ	124
Statik Analiz.....	124
Dinamik Analiz	124
YAPAN KİŞİ BAKIMINDAN FİNANSAL ANALİZ TÜRLERİ	125
İç Analiz	125
Dış Analiz.....	125
YAPILMA AMACI BAKIMINDAN FİNANSAL ANALİZ TÜRLERİ.....	125
Yönetim Analizleri	126
Kredi Analizleri.....	126
Yatırım Analizleri	127
FİNANSAL ANALİZ TEKNİKLERİ	127
Dikey Analiz (Yüzde Yöntemiyle Analiz)	128
Yatay Analiz (Karşılaştırmalı Tablolar Analizi)	128
Eğilim (Trend) Analizi	129
Oran Analizi	129

8. BÖLÜM

DİKEY ANALİZ (YÜZDE YÖNTEMİ İLE ANALİZ).....	131
DİKEY ANALİZ.....	132
GELİR TABLOSUNUN DİKEY ANALİZİ.....	133
FİNANSAL DURUM TABLOSUNUN DİKEY ANALİZİ.....	137
Genel Toplam Yöntemi.....	138
Grup Toplamı Yöntemi.....	138
DİKEY YÜZDELERE GÖRE DÜZENLENMİŞ KAPSAMLI GELİR TABLOSUNUN YORUMU (FORD AŞ).....	146
DİKEY YÜZDELERE GÖRE DÜZENLENMİŞ FİNANSAL DURUM TABLOSUNUN YORUMU (FORD AŞ).....	149
DİKEY YÜZDELERE GÖRE DÜZENLENMİŞ KAPSAMLI GELİR TABLOSUNUN YORUMU (TOFAŞ AŞ).....	153
DİKEY YÜZDELERE GÖRE DÜZENLENMİŞ FİNANSAL DURUM TABLOSUNUN YORUMU (TOFAŞ AŞ).....	156

9. BÖLÜM

YATAY ANALİZ (KARŞILAŞTIRMALI TABLOLAR ANALİZİ).....	157
YATAY ANALİZ.....	158
FİNANSAL TABLOLARIN YATAY ANALİZİ.....	159
İki Dönemli Yatay Analiz.....	159
İkiden Fazla Dönemli Yatay Analiz.....	161
Sabit Baz Yöntemi.....	162
Hareketli Baz Yöntemi.....	162

10. BÖLÜM

EĞİLİM (TREND) ANALİZİ.....	180
FİNANSAL TABLOLARIN EĞİLİM ANALİZİ.....	181
Eğilim Analizinde Dikkat Edilmesi Gereken Faktörler.....	183
EĞİLİM ANALİZİNE İLİŞKİN ÖRNEK UYGULAMA.....	184
EĞİLİM ANALİZİ YÖNTEMİYLE DÜZENLENMİŞ FORD AŞ'YE AİT FİNANSAL DURUM VE KAPSAMLI GELİR TABLOLARININ YORUMU.....	193
A) Dönen Varlıklar ile Kısa Vadeli Borçlardaki Değişimler.....	193
B) Duran Varlıklar ile Devamlı Sermayedeki Değişimler.....	193
C) Dönen Varlıklar ile Duran Varlıklardaki Değişimler.....	194
D) Yabancı Kaynaklar ile Öz Kaynaklardaki Değişimler.....	195
E) Stoklar ile Satışlardaki Değişimler.....	196
F) Ticari Alacaklar ile Satışlardaki Değişimler.....	196
G) Satışlar ile Satışların Maliyetindeki Değişimler.....	197
H) Brüt Kâr, Faaliyet Kârı ve Dönem Kârındaki Değişimler.....	198

11. BÖLÜM

ORAN ANALİZİ: LİKİDİTE VE KALDIRAÇ ORANLARI	199
ORAN ANALİZİ.....	200
ANALİZLERDE KULLANILAN ORANLAR.....	201
LİKİDİTE ORANLARI.....	201
1. CARİ ORAN	203
2. ASİT TEST (LİKİDİTE) ORANI	204
3. STOK BAĞIMLILIK ORANI	206
4. NAKİT ORANI.....	206
KALDIRAÇ ORANLARI	207
1. BORÇLARIN AKTİF TOPLAMINA ORANI (FİNANSAL KALDIRAÇ ORANI, TOPLAM BORÇ ORANI)	209
2. ÖZ KAYNAKLARIN AKTİF TOPLAMINA ORANI.....	209
3. ÖZ KAYNAKLARIN TOPLAM BORÇLARA ORANI (FİNANSMAN ORANI).....	210
4. KISA VADELİ BORÇLARIN TOPLAM BORÇLARA ORANI (BORÇLARIN VADE YAPISI ORANI)	211
5. DURAN VARLIKLARIN DEVAMLI SERMAYEYE ORANI.....	212
LİKİDİTE VE KALDIRAÇ ORANLARINA İLİŞKİN ÖRNEK UYGULAMA - I.....	213
LİKİDİTE VE KALDIRAÇ ORANLARINA İLİŞKİN ÖRNEK UYGULAMA – II	216
LİKİDİTE ORANLARININ HESAPLANMASI VE YORUMLANMASI.....	218
KALDIRAÇ ORANLARININ HESAPLANMASI VE YORUMLANMASI	220

12. BÖLÜM

ORAN ANALİZİ: FAALİYET, KÂRLILIK VE BÜYÜME ORANLARI	223
FAALİYET ORANLARI.....	224
1. STOKLARIN DEVİR HIZI	225
A) Ticaret İşletmelerinde Stokların Devir Hızı	226
B) Üretim İşletmelerinde Stokların Devir Hızı	226
Yarı Mamül Stokları Devir Hızı	227
Mamül Stokları Devir Hızı	228
Stok Tutma Süresi.....	228
2. TİCARİ ALACAKLARIN DEVİR HIZI	230
Ticari Alacakların Ortalama Tahsil Süresi	231
3. TİCARİ BORÇLARIN DEVİR HIZI.....	232
Ticari Borçların Ortalama Ödenme Süresi	233
Nakde Dönüşüm Süresi (Faaliyet Döngüsü, Net Etkinlik Süresi).....	234
4. VARLIKLARIN DEVİR HIZI.....	235
5. ÖZ KAYNAKLARIN (ÖZ SERMAYENİN) DEVİR HIZI	236
KÂRLILIK ORANLARI.....	237
1. KÂR MARJLARI.....	238

Brüt Kâr Marjı.....	239
Esas Faaliyet Kâr Marjı.....	239
Sürdürülen Faaliyetler Dönem Kâr Marjı.....	239
Dönem Kâr Marjı.....	239
Toplam Kapsamlı Gelir Marjı.....	240
2. VARLIKLARIN KÂRLILIK ORANI.....	240
3. ÖZ KAYNAKLARIN KÂRLILIK ORANI.....	242
4. HİSSE SENEDİ BAŞINA KÂR.....	243
BÜYÜME ORANLARI	244
1. SATIŞLARDAKİ BÜYÜME ORANI	245
2. DÖNEM KÂRINDAKİ BÜYÜME ORANI	245
3. TOPLAM VARLIKLARDAKİ BÜYÜME ORANI	246
4. ÖZ KAYNAKLARDAKİ BÜYÜME ORANI.....	247
FAALİYET, KÂRLILIK VE BÜYÜME ORANLARINA İLİŞKİN.....	248
ÖRNEK UYGULAMA - I	248
FAALİYET, KÂRLILIK VE BÜYÜME ORANLARINA İLİŞKİN ÖRNEK UYGULAMA - II.....	253
FAALİYET ORANLARININ HESAPLANMASI VE YORUMLANMASI	256
KÂRLILIK ORANLARININ HESAPLANMASI VE YORUMLANMASI.....	258
BÜYÜME ORANLARININ HESAPLANMASI VE YORUMLANMASI	261

13. BÖLÜM

ORAN ANALİZLERİ: FİNANSAL PERFORMANSIN ÖLÇÜMÜ.....	263
FİNANSAL PERFORMANSIN KÂR ODAKLI ÖLÇÜMÜ	264
FİNANSAL KALDIRAÇ VE ÖZ KAYNAKLARIN KÂRLILIĞI ARASINDAKİ İLİŞKİ	265
FİNANSAL PERFORMANSIN DEĞER ODAKLI ÖLÇÜMÜ: PİYASA KATMA DEĞER ve EKONOMİK KATMA DEĞER (MARKET VALUE ADDED and EKONOMİK VALUE ADDED - MEVA and EVA)	267
BİRLEŞTİRİLMİŞ ORANLAR: DUPONT ANALİZİ	268
ORAN ANALİZİ KULLANIMINDA DİKKAT EDİLECEK HUSUSLAR	272
FİNANSAL ANALİZLERDE SAYILARIN ÖTESİNE BAKMAK.....	273

ÜÇÜNCÜ KISIM İLERİ ANALİZLER

14. BÖLÜM

NAKİT AKIŞ ANALİZLERİ.....	277
NAKİT AKIŞ TABLOSUNUN ANALİZİ	278
NAKİT AKIŞ TABLOSU ANALİZLERİNE İLİŞKİN ÖRNEK UYGULAMA - I.....	279

NAKİT AKIŞ TABLOSU ANALİZLERİNE İLİŞKİN ÖRNEK UYGULAMA - II.....	280
NAKİT AKIŞ TABLOSUNUN ANALİZİNDE MODEL OLUŞTURMA	281
NAKİT AKIŞ MODELLERİNE İLİŞKİN ÖRNEK UYGULAMA - I.....	283
NAKİT AKIŞ MODELLERİNE İLİŞKİN ÖRNEK UYGULAMA - II.....	284
NAKİT AKIŞ ORANLARI	285
1. İşletme Faaliyetlerinden Nakit Akışları / Kısa Vadeli Borçlar.....	285
2. İşletme Faaliyetlerinden Nakit Akışları / Toplam Borçlar	286
3. İşletme Faaliyetlerinden Nakit Akışları / Toplam Varlıklar.....	286
4. Hisse Senedi Başına İşletme Faaliyetlerinden Nakit Akışı	287
5. İşletme Faaliyetlerinden Nakit Akışı / Ödenen Temettüler.....	287
NAKİT AKIŞ ORANLARINA İLİŞKİN ÖRNEK UYGULAMA - I	288
NAKİT AKIŞ ORANLARINA İLİŞKİN ÖRNEK UYGULAMA - II.....	291

15. BÖLÜM

KREDİ ANALİZLERİ	298
İŞLETMELERDE KREDİ TALEBİNİ DOĞURAN ETMENLER	299
KREDİNİN MALİYETİ.....	299
Kredi Analizlerinde 5K (5C) Kuralı.....	301
Kredi Değerliliği ve Kredilendirme Süreci	301
KREDİ DERECELENDİRME VE KREDİ DERECELENDİRME KURULUŞLARI	303
KREDİ DERECELENDİRME.....	303
DÜNYA'DA VE TÜRKİYE'DE KREDİ DERECELENDİRME KURULUŞLARI ..	304
Dünya'da Kredi Derecelendirme Kuruluşları	304
Türkiye'de Kredi Derecelendirme Kuruluşları.....	305
KREDİ DERECELENDİRME KURULUŞLARININ NOT SİSTEMLERİ.....	306
ŞİRKET DERECELENDİRME KRİTERLERİ.....	308
NİTELİKSEL ANALİZLER -KREDİ ORANLARI-.....	309
İŞLETMELERİN BORÇLARINI ÖDEYEMEMESİ DURUMUNUN TAHMİNİ –FİNANSAL BAŞARISIZLIK TAHMİNİ–	310
İŞLETMELERİN BORÇLARINI ÖDEYEMEMESİ DURUMUNUN TAHMİNİYLE İLGİLİ ÖRNEK UYGULAMA.....	313

16. BÖLÜM

YATIRIM ANALİZLERİ VE DEĞERLEME	321

GASTRONOMİ MÜHENDİSLİĞİNE GİRİŞ

Murat Doğan

Giriş

Bir şefin hazırladığı yemeğin tadı, lezzeti, görselliği gibi tüm özelliklerini bütüncül bir bakış açısıyla değerlendirmesi gerekmektedir. Bu bakış açısı da gastronomi alanının mühendislik bilgi, beceri ve deneyimlerine açılması ile mümkün olacaktır. Yemeğin mühendislikle ilişkisinin gözler önüne serilmesi ve bir şefin mühendislik becerilerini kullanarak yemek üretme süreçlerini yönetmesi en önemli kazanımların başında gelmektedir. Yemeğin kalitesi ve lezzeti üretim süreçlerine bağlıdır ve bu nedenle bir şef, mühendislik bilimini kullanarak üretim süreçlerini geliştirebilmelidir. Aslında yemek hazırlama süreci bir mühendislik sürecidir ve reçetelerin; süreç yönetimi, hazırlama işlemleri, pişirme işlemleri gibi bileşenlerin etkin bir şekilde yönetilmesi gerekmektedir. Bu süreçlerin doğru bir şekilde yönetilebilmesi için yiyeceğin fiziksel, kimyasal, biyolojik ve termodinamik özelliklerine dikkat edilmelidir. Tüm bu nedenlerden dolayı bir şefin gastronomi mühendisliği alanında kendini geliştirmesi kaçınılmazdır. Teknolojideki ilerlemeler pişirme süreçlerini değiştirmiş ve gıda tedarik zincirini küresel hâle getirmiştir. Sonuç olarak bu bölümde; gastronomi mühendisliğinin ne olduğu, gastronomi mühendislerinin ne iş yaptığı, yiyeceklerin mühendislik prensiplerine dayalı bir şekilde üretilmesi ve gastronomi mühendisliğinin bileşenleri konularına kısaca değinilmiştir.

Yemeğin Mühendisi Olur mu?

Şefler olarak misafirlerimize sunduğumuz yiyeceklerin iki temel özelliği mevcuttur. Bunlar maddi ve maddi olmayan özelliklerdir. Misafirlerimiz yemeğin tadını, lezzetini, dokusunu ve görselliğini değerlendirerek kalitesini fiziksel olarak değerlendirmiş olurlar. Bunlar maddi özelliklerdir. Aynı zamanda misafirlerimiz yemeğin servis edilme şekliyle tutun da işletmenin nezaketine kadar maddi olmayan yönlerden etkilenirler. İşletme ve yönetim bilimi, “değeri maksimize et” demektir. Bir şefin bu değeri maksimize edebilmesi adına yemeğin somut ve soyut yönlerini dikkate alarak yola çıkması önemlidir. Tüm bunlara ek olarak yemeğin kalitesi ve lezzeti üretim süreçlerine derinden bağlıdır.

gelebilmektedir. Mutfakta ölçme, tartma ve tarifleri ölçeklendirebilecek yeteneği sağlayan matematik ise yemek hazırlama sürecinde matematiksel işlemlerin yapılmasında etkilidir. Doğru ölçüm ve hesaplamalar bir yemek tarifinin başarısını etkilemektedir. Bu bağlamda matematik becerileri yiyecek-içecek sektöründe çalışan şefler için çok önemlidir. Yemeğe yolculuğu sağlayacak olan ürün ve proses tasarımının anahtarı temel mühendislik bilgisi ve yemeğin ve mutfağın termodinamiği yiyeceklerin hazırlanması sürecinde çok önemlidir. Bu olgu ısı işlemlerin yiyeceklerin fiziksel ve kimyasal nitelikleri üzerinde çeşitli etkilere sahip olduğu ifade etmektedir. Çiftlik ve çatal arasındaki yemeğin gıda güvenliğine sorunsuz yolcuğu tüketici güvenini sürdürmek ve ekonomik kalkınmayı desteklemek açısından önemlidir. Gıda güvenliğini etkileyen faktörler arasında hijyen kurallarına uyum, eğitilmiş personel, doğru mutfak uygulamaları ve uygun saklama sıcaklığı yer almaktadır.

2. BÖLÜM

YEMEĞİN YAPISI: GIDA FİZİĞİ

Nevruz Berna Tatlısu

Giriş

Fizik; enerji, zaman ve maddenin uzaydaki ilişkilerini gözlemleyen, deneysel, sınırsız teoriye dayanan bir bilim dalıdır. Gıda bilimi; mekanik, elektromanyetizma, termodinamik, katı hâl ve atom fiziği gibi pek çok fizik alt dalını doğrudan kullanır. Gıdaların, özellikle son yıllarda yapısal tasarım mühendisliğindeki popülerleşen önemi, gıdaların pek çok farklı bilim alanında kullanıldığı farkındalığı, gıda fiziğine yönelik bir ilgi alanı doğurmuştur. Gıdadan ürün yapılandırmasında tasarım ilkelerinin anlaşılabilirliğini, teknolojinin ve ilgili tekniklerin kullanımını sağlayan gıda fiziği, gıda mühendislerinin ve gıda teknolojisi uzmanlarının gıdanın yapısal değişikliklerini incelemelerine, süreç parametrelerini manipüle etmelerine ve gıda matrisine yüklenecek optimum içerik madde miktarını belirlemelerine yardımcı olabilmektedir ^[1].

Sistem tarafından işlenirken gıdada meydana gelen değişikliklerin anlaşılması, gıda malzemelerine yönelik sistemlerin etkin yürütülmesini sağlamaktadır. Ham gıdalar, doğası gereği biyolojiklerdir ve bu nedenle onları diğer üretilmiş ürünlerden ayıran sürece bağlı belirlenebilir ve benzersiz özelliklere sahiptirler. Gıda malzemeleri esas olarak biyolojik kökenli olduğundan doğal olarak oluşan ham maddelerde yaygın olarak bulunan düzensiz şekillere, normal olmayan frekans dağılımına, çeşitliliğe, besinsel içeriğe, olgunluğa ve alternatif faktörlere göre değişen özelliklere sahiptir ve çevresel faktörlerden, kimyasal, mikrobiyolojik reaksiyonlardan ve dahası enzimatik aktivitelerden etkilenirler. Bu nedenle bir gıdanın gözlemciden bağımsız, ölçülebilir, nicelleştirilebilir ve bileşenlerinin durumunu tanımlayan özellikleri fiziksel özellikleri olarak kabul edilir. Bir gıdanın mekaniksel, termal, elektriksel, optik, ses ve elektromanyetik işlemlerle süreçlerinin incelenmesi neticesinde belirlenen parametreler, o gıdanın fiziksel özelliklerini oluşturur ^[2].

Gıdaların fiziksel özelliklerini karakterize etmek için kullanılan bazı tanımlayıcı terimler arasında tokluğa karşı açlık, sertliğe karşı yumuşaklık, kuruluğa karşı nemlilik, gevrekliğe karşı elastiklik, pürüzlülüğe karşı pürüzsüzlük, gevrekliğe karşı ıslaklık ve ayrıca sıkılık, yapışkanlık, çiğnenebilirlik, olgunluk, yumuşaklık, pulluluk, kumluluk vb.

güvenliği sağlamak, yeni ve iyileştirilmiş gıda ürünleri geliştirmek üzere işleme operasyonları tasarlayabilmek ve bu operasyonları kontrol edebilmek için gıda üretimlerinin yürütüldüğü şirketlerde başucu kaynağı olarak kullanılması hedeflenmiştir.

3. BÖLÜM

YEMEĞİN MİKRO YAPILARI VE ETKİLEŞİMİ: GIDA KİMYASI

Kübra Sağlam

Giriş

Gıda kimyası; gıda maddelerinin mikroyapılarını, bitkisel veya hayvansal kaynaklı gıdaların oluşumundan, üretiminden, pişirilmesinden, işlenmesinden, doğrudan tüketimine veya ambalajlanmasına, depolanmasına kadar gıda üretim zinciri sürecindeki kimyasal reaksiyonları ve bu reaksiyonların oluşturduğu yapıları inceleyen bir bilim dalıdır. Gıda kimyasının temel bileşenleri arasında karbonhidratlar, yağlar, proteinler, vitaminler, mineraller ve su yer alır. İnsan beslenmesinde bu bileşenlerin çeşitli gıdalarla birlikte alınması önemlidir. Gıda kimyasının bilinmesi, gıdaların üretimi, hazırlanması, analizi ve muhafazası için kullanılan yöntemlerde besin değerlerinin korunması ve halk sağlığının en uygun yöntemlerle desteklenmesi için hayati öneme sahiptir. Bu bölümde, gıda maddelerinin yapılarını, dokularını ve lezzetlerini belirleyen bileşenlerin üretiminden tüketimine kadar olan süreçteki kimyasal reaksiyonları ve bu reaksiyonların oluşturduğu yapılar incelenmiştir.

Gıda Kimyası

İnsanlığın günlük işleyişi kadar yeme-içme konusunda da büyük bir öneme sahiptir. Bu, gastronominin temel taşıdır. Yeme-içme, insanların sağlıklı ve dengeli bir yaşam sürdürmesi için gereklidir ve vücudun ihtiyaç duyduğu besinleri karşılamaya yöneliktir. Aynı zamanda yeme-içme deneyimi sırasında, gıdaların kimyasal bileşimi ve reaksiyonları; lezzet, aroma, renk ve dokuyu belirleyerek tat alma duygularını da etkileyerek insanların yaşam kalitesini artırır. Bu nedenle yeme-içme konusu, insan yaşamının vazgeçilmez bir parçasıdır ve insanların fiziksel ve psikolojik sağlığını etkileyen önemli bir faktördür ^[24].

Gıda kimyası; yemeklerin tadı, görünümü ve kokusu gibi birçok yönüyle ilgilidir ^[5]. Bu bileşenlerin özellikleri, yemeklerin yapılarını, dokularını ve lezzetlerini belirler. Örneğin, proteinler ısıya maruz kaldıklarında koagüle olabilir ve bu da yemeğin dokusunu değiştirir ^[6]. Tatlar, lezzetler ve aroma maddeleri, yemeklerin tadını ve kokusunu belirleyen önemli faktörlerdir. Tatlar genellikle tatlı, tuzlu, ekşi ve acıdır. Aroma

girerek kahverengi pigmentlerin oluşmasını ve etin içindeki proteinlerin denatüre olması ve yağların okside olması sonucu etin dokusu ve lezzeti değişerek karakteristik koku ve lezzet özelliklerinin ortaya çıkmasını sağlar ^[81]. Böylece etin lezzetini ve aromasını artırır. Bu nedenle biftek gibi etlerde pişirme yöntemi ve sıcaklık seçimi, etin lezzeti ve dokusu üzerinde önemli bir etkiye sahiptir ^[6].

Asit-Baz Reaksiyonları

Pişirme sürecinde asit-baz reaksiyonları yemeğin pH seviyesi üzerinde belirgin bir etkiye sahiptir. Bazı yemeklerin pişirilmesi sırasında asit-baz dengesi değişebilir ve pH seviyesinde değişiklikler meydana gelebilir. Bu değişiklikler; gıdanın tadını, dokusunu ve rengini etkileyebilir. Örneğin, limon suyu gibi asidik bir bileşenin pişirme sırasında kullanılması, yemeğin pH seviyesini düşürerek asidik özelliklerini artırır. Bununla birlikte aşırı ısıtma ve oksidasyon gibi faktörler, yağların sağlık açısından zararlı hâle gelmesine yol açabilir ve aroma ile lezzet oluşumuna olumsuz etki edebilir ^[36].

Pişirme sürecinde pH ve sıcaklık gibi faktörlerin kontrolü büyük önem taşır. Kimyasal reaksiyonlar belirli bir pH aralığında gerçekleşir, bu nedenle yemeğin pH değeri ayarlanmalıdır. Aynı şekilde farklı sıcaklık seviyeleri; farklı kimyasal reaksiyonları tetikleyebilir, bu yüzden pişirme sırasında sıcaklık kontrolü önemlidir ^[73].

Mayalama süreci sırasında ekşi mayalı ekmek yapımında ise laktik asit bakterilerinin sentezlediği asitler, ekmeğin pH seviyesinin düşmesine neden olur. Bu asitler, ekmek hamurunun küflenmesini önler ve ekmeğin raf ömrünü uzatır ^[34]. Bu durumda asit-baz reaksiyonları ekşi mayalı ekmek yapımındaki önemli bir faktördür.

Sonuç

Gıdalarda gerçekleşen kimyasal reaksiyonlar, pişirme işlemi sırasında gerçekleşir ve yemeğin lezzeti, kokusu, rengi ve besin değeri üzerinde etkili olmaktadır. Pişirme sırasında bu reaksiyonların kontrol altında tutulması, yemeğin kimyasının bilinmesi daha lezzetli, sağlıklı ve besleyici yemeklerin hazırlanmasına yardımcı olabilir. Gıda kimyası, pişirme sırasında meydana gelen bu kimyasal reaksiyonları anlamak ve kontrol etmek için önemlidir. Bu; daha lezzetli, besleyici ve sağlıklı yemeklerin hazırlanmasına yardımcı olabilir. Bu örnekler, gıda kimyasının gastronomi alanında ne kadar önemli olduğunu ve yemeklerin yapısını, dokusunu, lezzetini ve besin değerini nasıl etkilediğini göstermektedir. Gıda kimyası, yemeklerin pişirilmesi sırasında oluşan kimyasal reaksiyonları anlamak ve kontrol etmek için önemlidir.

4. BÖLÜM

YEMEĞİN HÜCRELERİ VE MİKROPLARI: GIDALARIN BİYOLOJİSİ

Furkan Demirgöl

Giriş

Tüm canlılarda olduğu gibi insanların da yaşamsal fonksiyonlarını devam ettirebilmeleri için mutlaka beslenmeye ihtiyaçları vardır. İnsanların temel besin kaynaklarını, sindirilebilir özellikteki bitki, hayvan ve makro-mantarlar oluşturmaktadır. Bu kaynaklar aynı zamanda başka canlılar için de oldukça besleyici ve elverişli ortamlar olabilmektedir. Tıpkı insanlar gibi mikroorganizmalar da canlılıklarını sürdürebilmek ve nesillerini devam ettirebilmek için su, karbon ve azot ile çeşitli vitamin ve mineraller ihtiyacı duyar. Dolayısıyla tüm bu makro ve mikro elementleri içeren insan gıdaları, aynı zamanda bazı mikroorganizmaların da sevdikleri gıdalardır. Çok az sayıdaki gıda (yüksek sıcaklıklarda ısı işlem görmüş gıdalar gibi) hariç tüm gıdalar, belirli miktar ve çeşitlilikte farklı mikroorganizmaları içerirler ^[1]. Mikroorganizmalar, özelliklerine ve şartların uygunluğuna bağlı olarak gıdalarda sayılarını hızla artırabilir ve kısa süreler içinde inanılmaz miktarlara ulaşabilir. Bu açıdan insanların günlük diyetlerinin önemli bir parçasını, bilinçli ya da bilinçsiz şekilde tükettikleri mikroorganizma hücrelerinin oluşturduğu söylenebilir. 2014 yılında ABD’de yapılan bir çalışmaya ^[2] göre ABD Tarım Bakanlığının (USDA) önerisine göre (taze meyve-sebze, tam tahıllar, süt ürünleri ve yağsız etten oluşan) beslenenlerin her gün yaklaşık olarak 1,3 milyar kob (koloni oluşturan birim), vegan beslenenlerin her gün yaklaşık 6 milyon kob ve ortalama bir ABD’li gibi beslenenlerin (et ve süt ürünleri ile hazır gıdaları içeren) her gün yaklaşık olarak 1,4 milyon kob canlı mikroorganizma tükettikleri bildirilmiştir. Her gün diyetle, canlı mikroorganizma hücresi kadar, hatta çok daha fazla miktarda ölü mikroorganizma hücresinin tüketildiği düşünüldüğünde gıdalar sadece makro-mantar, bitki ve hayvan hücrelerinden değil, azımsanmayacak miktarlarda mikroorganizma hücrelerinden oluşmaktadır. Bu kapsamda gıdalar, mikroorganizmaların insanlara taşınması için önemli araçlardır. Ancak burada gıdaların mikroorganizmaların insanlara taşınmasında sadece araç olarak görev almadıkları, aynı zamanda doğrudan mikroorganizmaların hedefleri olabildikleri ve mikroorganizmaların gıdalarda gerçekleştirdikleri çeşitli metabolik faaliyetler sonucu gıdaların özelliklerinde belirli değişiklikler meydana geldiği göz ardı

gelişmeye devam etmeleri ve burada ürettikleri toksinler aracılığıyla ortaya çıkmaktadır [56]. Gıda kaynaklı toksikoenfeksiyon tipi hastalığa en sık neden olan bakteriler; *Aeromonas hydrophila*, *Bacillus cereus* (ishal tipi), *Clostridium perfringens*, enteropatojenik *E. coli* (EPEC), enterotoksijenik *E. coli* (ETEC) ve *Vibrio cholerae*'dir [57].

Sonuç

İnsanlar, hayatta kalabilmek için tüketmek zorunda oldukları gıdalarla birlikte her gün önemli miktarlarda mikroorganizma hücresi de tüketmektedirler. Sanılanın aksine mikroorganizmaların büyük çoğunluğu insanlar için zararsızdır. Bilinen yaklaşık 1400 insan patojeni mikroorganizma türü vardır ancak bu patojenler gezegendeki toplam mikrobiyal tür sayısının %1'inden çok daha azını oluşturmaktadırlar [58]. Hatta pek çok mikroorganizma türü insanlara çeşitli şekillerde fayda sağlamaktadır. Bununla birlikte bazı mikroorganizmaların veya mikroorganizmalar tarafından üretilen çeşitli metabolitlerin gıdalarla birlikte tüketilmesi ishalden kansere ve hatta ölüme kadar çok ciddi sağlık sorunlarının ortaya çıkmasına neden olabilmektedir. Gıda-mikroorganizma ilişkisinin iyi bilinmesi, gıda kaynaklı sağlık sorunlarının önüne geçilmesini sağlayacağı gibi faydalı mikroorganizmalar aracılığıyla gıdaların hem çeşit olarak hem de besinsel olarak zenginleştirilmesini sağlayacaktır.

5. BÖLÜM

BİR TUTAM MATEMATİK: GASTRONOMİ MATEMATİĞİ

Gizem Hulağa Kaderoğlu

Giriş

Malzemelerin ölçülmesi, bileşenlerin orantılarının hesaplanması, tariflerin dönüştürülmesi, bir tarifin birkaç porsiyon için yeniden boyutlandırılması, öğün başına maliyetin belirlenmesi ve porsiyonlara ayrılması, toplama, çıkarma, çarpma ve bölme gibi temel matematik işlemlerini içerir. Malzemelerin yanlış ölçülmesi, bir tarifin başarılı veya başarısız olmasının en önemli nedenlerinden biridir. Ayrıca kesin olmayan ölçümler ve dönüşüm hesaplamaları, gıda maliyetlerini artırır. Yanlış porsiyonlama, tüketici memnuniyetsizliğine neden olur. Bu nedenle tüm şeflerin temel matematik işlemlerini anlamaları önemlidir.

Yemek servis operasyonlarını başarılı bir şekilde yürüten kişiler, bir tabak maliyetine doğru bir şekilde ulaşmak ve bir menüyü fiyatlandırmak için temel matematiğin gerekli olduğunu bilirler. Yemek servisinde diğer alanlara göre matematik kullanımı basittir. Burada kullanılan toplama, çıkarma, çarpma ve bölme, anlaşılması gereken temel matematiksel fonksiyonlardır. Bir hesap makinesi, matematiğin arkasındaki nedeni anladığımız sürece hesaplamaların doğruluğuna yardımcı olabilir. Aynı şekilde basit bir bilgisayar tablosu veya daha karmaşık bir envanter ve satın alma yazılım paketi de kullanılabilir ancak bilgisayar programlarının hesapladığı bilgileri anlamak için temeldeki matematiğin bilinmesi yine de gereklidir.

Ticari yemek hizmeti operasyonları kâr amaçlı işletmelerdir ve halka açıktır. Birçok ticari yemek servis işletmesi, açılışlarının ilk beş yılında işsizlikle karşı karşıya kalmaktadır. Bu noktaya gelmelerinin yaygın sebeplerinden biri, yanlış reçete maliyeti veya yanlış porsiyon kontrolleriyle ilgili nakit akışı sorunlarıdır. Yıkıcı olan bu hatalar genellikle temel matematikteki basit hatalardan kaynaklanmaktadır. Mutfakta doğru matematiğin uygulanması, nasıl yemek pişirildiğini ve yapılacak iş için ne kadar süre harcanacağını etkileyecektir. Bir işletmenin mutfağında rastlanılan yanlış ölçüm yapılması gibi bir yanlış matematik nedeniyle beklenenden daha düşük verimde sonuç alınması veya yiyecek maliyetlerinin artırılması gibi durumlarla karşılaşabilen işletme, sektördeki yerini

Sonuç

Matematik bilimi, her alanla olduğu gibi gastronomi alanıyla da multidisipliner bir yaklaşım içindedir. Gastronomi sektöründe mutfak malzemelerinin satın alınışı, menü hazırlığı, porsiyonlama, tariflerdeki ölçeklendirmelerin uygulanışı, işletmelerin maliyet hesaplamaları, zaman yönetimi gibi pek çok konuda matematiğin kullanımı karşımıza çıkmaktadır. Sektörde sıklıkla karşılaşılabileceği için matematiğin anlaşılması ve doğru kullanılması da bu nedenle çok önemlidir. Kullanım alanlarında matematiğe gerekli önemi gösteren işletmeler müşteri memnuniyetini kazanacak ve rakipleri arasında fark yaratacaktır.

Bir yiyecek içecek işletmesindeki satın alma, depolama, reçetelendirme, porsiyonlama ve servis etme gibi aşamalarda doğru matematik kullanımı, işletmenin eksiksiz servis yapabilmesini, gıda israfının önüne geçilebilmesini, gelir gider dengesini koruyabilmesini ve hatta kâr elde edebilmesini sağlayacaktır. Bu nedenle bu kitap bölümünde temel matematik işlemlerinden başlanarak gastronomi alanında matematikle karşılaşılabilecek alanlar tek tek başlıklar altında ele alınmıştır. Özellikle mutfakta kullanılan ölçü çeşitleri ve birimlerinin öğrenilmesi hem ulusal hem de uluslararası düzeyde bir hizmet sunabilmeyi sağlayacaktır. Maliyet, menü, envanter vb. hesaplamalar da iyi anlaşıldığı takdirde işletmelerde tekdüzeliği sağlayarak başarıyı işletmelere getirecektir. Mutfakta sağlanacak tekdüzelik ile herhangi bir problem çıktığında sorunun nerede olduğu kolaylıkla anlaşılabilir ve çözülecektir. Aynı zamanda bu tekdüzelik müşterilerin geliş sayısını artıracak ve her seferinde memnun ayrılmalarını sağlayarak işletmenin imajını rekabet piyasasında üst sıralara çıkaracaktır. Bu gibi sağladığı faydalar nedeniyle matematiğin gastronomide kullanımına gereken önem verilmelidir.

YEMEĞE YOLCULUK: ÜRÜN VE PROSES TASARIMI

Murat Ay

Giriş

Gastronomi, yerel yemek çeşitlerini ve mutfakları daha iyi anlamamıza yardımcı olan eşsiz bir bilim dalıdır. Günümüzde yemek yeme alışkanlığının evden dışarıda yemek yemeye doğru değiştiği görülmektedir. Bu durum da yiyeceklerin kalitesi, maliyeti, tadı ve sağlıklı olmasının yanı sıra çeşitliliği ve üretim yönteminin önem kazanmasını sağlamaktadır. Gıdaların endüstriyel işlenmesi proses mühendisliği kavramını ön plana çıkarmaktadır. Bu kavram; mutfak, yemek pişirme, gastronomi ve mühendislik bilgilerini içine almaktadır. Özellikle gıda malzemeleri biliminin, deneysel gastronomik formülasyonlara ve pişirme tekniklerine ışık tutabileceği, bunların tencere ve fırınlarda meydana gelen olaylara da uyarlanabileceği ve sonuçların aşılara basit terimlerle sunulabileceği düşünülmektedir. Bununla birlikte proses mühendisliğinin gastronominin güvenlik, sürdürülebilirlik, beslenme ve daha iyi gıda kullanımı ile ilgili boyutunda önemli katkılar sağladığı muhakkaktır. Bu bölümde, yemek pişirmede kullanılan proses mühendisliği konuları hakkında bilgi verilmesi amaçlanmıştır.

Yemeğe Yolculuk

Günümüzden yaklaşık 2 milyon yıl önce ateşin keşfedilmesi, zamanla yemeğin pişirilerek tüketilmesine yol açmıştır. Bu durum da gıdaların işlenmesinin başlangıcı olarak kabul edilmektedir^[1]. MÖ 10.000’li yıllarda tarımın başlamasıyla, hasattan sonra güneşte kurutma ve doğal fermantasyon yoluyla mevsimlik gıdaların korunması ihtiyacı ortaya çıkmıştır. Coğrafi keşiflerin hız kazandığı 16. yüzyıla gelindiğinde ise Avrupa yemekleri Doğu ve Yeni Dünya’dan gelen yiyeceklerle zenginleşmiştir. Bu süreçte yöresel mutfaklar ve geleneksel gıda teknolojileri sağlam ve destekleyici bir bilimsel alt yapı olmadan gelişmiştir. Bilim ve gastronomi, tarihsel olarak açıkça izole edilmiş iki disiplindir. Buna iyi bir örnek, Nicholas Kurti’nin 1969’da söylediği ünlü cümledir: “Venüs’ün atmosferindeki sıcaklığı ölçebildiğimiz hâlde, suflelerimizin içinde neler olup bittiğini bilmememiz, uygarlığımızın üzücü bir yansımasıdır”^[2].

alanlarına bağlantılı olmamalıdır.^[30] Aynı şekilde mutfak yöneticileri için ofisler planlanmalı, şef ofisi camekânlı ve bütün üretim alanına hâkim bir yere konumlandırılmalıdır^[32].

Sonuç

Günümüzden milyonlarca yıl önce ateşin bulunması insanların beslenmesinde de köklü bir değişimin temellerinin atılmasına neden olmuştur. Günümüze gelen süreçte yemek yemek sadece fizyolojik bir ihtiyaç olmaktan çıkmış, haz ve esenlik ile ilişkili bütünsel yansımaları içeren gastronomi kavramını ortaya çıkarmıştır. Ancak gastronominin bir bilim dalı olarak kabul edilmesi ve gastronominin temelini oluşturan mutfaklarda bilimin kullanılmaya başlanması son zamanlarda mümkün olmuştur. Oysaki tüketicilerin “lezzetli ve hijyenik yemek” beklentilerini karşılayabilmek ancak bilimin uygulandığı mutfaklarda gerçekleştirilebilir. Ürünlerin işlenmesi sırasında malzemelerde meydana gelen değişimlerin modellenmesi, yeni ürünlerin geliştirilmesi, teknolojilerin mutfaklara uygulanması ve hepsinden önemlisi üretimin hijyen kurallarına ve standartlara uygun bir mutfakta gerçekleştirilmesi “proses mühendisleri” ile mümkündür.

MUTFAKTA ISI VAR: BESLENME VE MUTFAK TERMODİNAMIĞI

Abdullah Baycar

Giriş

Canlılığın ortak ihtiyaçlarından biri olan beslenme, günümüzde insanlar için gereksinimden öte anlamlar ifade etmeye başlamıştır. Lezzet, sağlık, estetik ve maliyet gibi faktörler bu anlamlardan bazılarıdır. Belli dönemlerde yaşanan değişim ve dönüşümler bu faktörlerin gelişmesinde önemli rol oynamıştır. Ateşin keşfi, bu dönüşümün kritik noktalarından biri olarak kabul edilmektedir. Taşların birbirine vurulması veya ahşap çubukların sürtünmesiyle oluşturulan ateş; besin güvenliği, saklama süresi ve lezzet tatmini gibi farklı amaçlarla kullanılmıştır. Baca ve şömine gibi kısımlarda kontrolsüz açık ateş 18. yüzyılda sobaların icadıyla daha kullanışlı hâle bürünmüştür. Zamanla ısı gereksinimi ateş dışı kaynaklarla kontrollü, güvenli, etkili ve pratik bir şekilde mutfakta kullanılma imkânına ulaşmış oldu. Tandır, saç, pileki, fırın, ocak, evaporatör, pastörizatör, ekstrüder gibi birçok konveksiyonel ve/veya modern gereç tarih boyunca ateşin mutfakta kullanım vasıtalarından sadece bazılarıdır ^[1, 3].

Mutfaklarda ısı verme prensibine dayalı teknikler gibi ısı alma prensibine dayalı tekniklerin de yiyeceklerde kullanımı geçmişten bugüne sürekli var olmuştur. Önceki dönemlerde yiyeceklerin sarnıç gibi daha soğuk yerlerde raf ömürlerinin uzatılması amacıyla bekletilmesi bu duruma örnek olarak gösterilebilir. Aynı şekilde yüksek kesimlerden getirilen kar ve buz kütlelerinin şerbet soğutulmasında kullanımı eski dönemlerde ısı alma prensibinin de yiyeceklerde farklı yöntemlerle kullanıldığına örnek başka bir örnektir. Son zamanlarda soğutucu ve dondurucu dolapların pratik yapıya ulaşmasıyla kullanımları daha fazla yaygınlık kazanmıştır. Bu tür dolaplar, küçük ve büyük hacimli bütün mutfaklarda ana gereç hâline gelmiştir ^[4, 5].

Bilim ve teknolojinin mutfakta daha farklı varyasyonlarda moleküler gastronomi ile yer almaya başlamamıştır. Bu vasıtayla ısı; yiyeceklerde bilim, sanat ve mühendislik gösterisine dönüşmüştür. Sıvı azot ve karbondioksitin mutfaklar da kriyojenik dondurucu olarak kullanılmasıyla yemeklerde işlevselliğin farklı bir boyuta evrilmiş olması bu durumun çarpıcı örneği olarak gösterilebilir. Nitekim bu yöntemlerle ağız ve burundan

çiğ formda tüketilemeyip ancak haşlama gibi ısı işlemlerle yumuşatılması buna örnek gösterilebilir. Aynı şekilde makro yapılu birçok bileşiğin ısı işlemler sonucunda daha basit yapılara parçalanarak sindirim ve emilimi artmaktadır. Buna karşın ısı işlemler besin öğelerinde azalmaya da sebep olmaktadır.

Mutfakta ısı yönetiminin önemli hususlarından biri de ısı veren ve ısı alan makina ve teçhizatın enerji tasarrufu ve ergonomi açısından dizaynıdır. Soğutucu ve ısıtıcı makinaların birbirine mesafeli bir şekilde tasarlanması enerjinin daha verimli kullanılmasını sağlamaktadır. Ayrıca mutfak sıcaklığı; çalışan refahı ve huzuru açısından da önem teşkil etmektedir. Yüksek sıcaklık, mutfakta hamur gibi yarı mamullerin hazırlanmasını zorlaştırırken düşük sıcaklık, fermantasyon gibi mutfak işlemlerini yavaşlatmaktadır. Her ürün ve yemek için ideal sıcaklıklar belirlenmiş, mutfak kısımları sıcaklıkları ve bu kısımlar arası gerekli izolasyon önerileri geliştirilmiştir.

Sonuç olarak çalışan ergonomisi, besin güvenliği, yiyecek hijyeni, raf ömrü, tat-aroma, biyoerişilebilirlik vb. birçok faktörü etkileyen sıcaklık, mutfakta kontrollü ısının transferiyle sağlanmaktadır. Bu bağlamda ısının yönetimi mutfakta çoklu etmeni birden dikkate almayı gerektiren yüksek düzeyde mühendislik kabiliyet gerektirmektedir.

8. BÖLÜM

VÜCÜDUMUZDAKİ MOLEKÜLLER VE BESİNLER: BESLENME

Ayşe Seray Çetin

Giriş

İnsanlığın var olmasından bu yana hayatın devamlılığı için beslenme temel şarttır. Yemek yeme, Maslow'un ihtiyaçlar hiyerarşisi teorisinde ilk basamakta yer alan fizyolojik ihtiyaçların içindedir ^[1]. Ama fizyolojik bir ihtiyaçtan daha fazlasını ifade eden yemek, sadece beslenme olarak düşünülemez. Çünkü yemek, kültürel bir olgu olarak da karşımıza çıkmaktadır. Hayatın devamlılığı için gerek duyulan besinleri tüketime hazır hâle getirmek yemeği sadece fizyolojik bir ihtiyaç olmaktan çıkararak kültürle de ilişkili bir olguya dönüştürmüştür. Her kültürde belli başlı olarak hangi gıdaların yenilip yenilmeyeceği veya nasıl tüketileceği kurallarla belirlenmiştir. Ayrıca yemek; sadece fiziksel olarak değil, ruhsal olarak da doygunluk sağlamaktadır ^[2, 3].

Şekil 1. Maslow'un İhtiyaçlar Piramidi ^[4,5]

Gıda alerjisi ile baş edebilmek için tüketicilerin menü ile ilgili sorularını yanıtlayabilecek ve yemeklerin içeriklerine hâkim, çapraz temas ve kontaminasyonlar hakkında bilgi sahibi olan ve bunlardan kaçınmak için izlenecek yolları bilen, bu konularda eğitim almış çalışanların işletmelerde bulunması gerekmektedir [67].

Tüm bunlar dışında ambalajlı ürünler de alerji bakımından büyük tehlike taşımaktadır. Bu sebeple 29960 sayılı Gıda Etiketleme ve Tüketicileri Bilgilendirme Yönetmeliği'ne uyularak ambalajlı ürünlerin etiketlenmesi hususuna dikkat edilmelidir.

Bir ürünün ambalajının üzerinde yer alan bilgilere etiket adı verilmektedir [68]. Etiketler, gıda alerjisi veya intoleransına sahip bireylerin alerjenlerden korunması ve olası alerjik reaksiyonların önüne geçilmesi için önemlidir. Bu noktada her tüketicinin etiket okumayı bilmesi ve etiket okuma alışkanlığı kazanması gerekmektedir. Alerji ve intoleranslardan kaçınmak için yapılacak olan gıda etiketi okuma eylemi sadece enerji ve besin öğelerine bakmakla sınırlı kalmamalıdır. Etiket üzerinde yönetmeliğe uygun olarak gerekli bildirimlerin yapılmış olmasına ve bunları doğru yorumlamaya dikkat etmek önemlidir. Bazen gıda üreticileri ürünlerin içindeki bileşenleri değiştirse bile ambalajı değiştirmezler. Dolayısıyla bir ürün ne kadar sık tüketilip alınan bir ürün olsa bile etiketi her defasında okumak gerekmektedir [69].

9. BÖLÜM

ÇİFTLİK VE ÇATAL ARASINDAKİ YEMEK: GIDA GÜVENLİĞİ

Esra Doğu Baykut

Giriş

Gıda güvenliği, insanların var olduğu her dönemde önemli olan küresel bir sorundur. Dünya Sağlık Örgütü'nün (WHO) tahminlerine göre her yıl kontamine gıda tüketimi sebebiyle 420 bin ölüm meydana gelmektedir ^[1]. Halk sağlığını koruyabilmek için hem gelişmekte olan ülkeler hem de gelişmiş ülkeler gıda güvenliğini sağlamaya çaba göstermektedir. Gıda kaynaklı hastalıklar sadece insanların sağlığını etkilemekle kalmaz, aynı zamanda işletmeler ve ülkeler için ekonomik sonuçlar da doğurur. Etkili gıda güvenliği sistemleri, tüketicinin gıda sistemine olan güvenini sürdürmekte ve ekonomik kalkınmayı desteklemekte hayati öneme sahiptir.

Tüketiciler, satın aldıkları gıdayı tedarik edenlerin kendilerine zarar vermeyecek ürünleri üretmek için her türlü özeni göstermelerini bekleme hakkına sahiptir. Dünyadaki tüm ülkeler, hiçbir tüketicinin gıda tüketimini takiben herhangi bir enfeksiyon veya hastalık yaşamaması için çaba göstermektedir ve hemen hemen her ülkenin gıda güvenliği ile ilgili standartları bulunmaktadır. Gıdaların tehlikelerinden arınmış olmasını sağlamak, tüm gıda işletmeleri için ekonomik boyutunun yanı sıra yasal ve ahlaki bir görevdir.

Gıda güvenliği programları, gıda kaynaklı tehlikeleri azaltmanın etkili bir yolu olarak çiftlikten sofraya yaklaşımına giderek daha fazla odaklanmaktadır. Bu yaklaşıma göre gıda güvenliği geniş alandır ve tam olarak ele almak için tohum veya hayvancılığı kapsayan birinci üretim dâhil olmak üzere tüketiciye ulaşan son ürüne kadarki süreçteki tüm gıda zincirinin takibi ve izlenebilirliği sağlanmalıdır.

Son yıllarda ev dışı yemek tüketimi sürekli artmaktadır. Restoranlar, catering işletmeleri, yiyecek içecek hizmeti veren oteller ve hastane, okul gibi diğer kurumlarda gıda güvenliğinin sağlanması önem arz etmektedir. Gıda üretiminin tüm aşamalarında hijyen ve sanitasyon kurallarına uyulması, çalışanlara gerekli eğitimlerin verilerek standartlara uygun mutfaklarda doğru şekilde üretimin yapılması gerekmektedir. Yemeklerin uygun olmayan sıcaklıklarda saklanması, kötü kişisel hijyen, kontamine

Gıda endüstrisinde gıda güvenlik yönetim sistemlerinin uygulanması hem sanayicilere hem distribütörlere hem de müşterilere gıda güvenliğini garanti eder. Tüketicilerin uluslararası standartlara uygun, kaliteli, güvenilir ve sağlık açısından risk oluşturmayan ürün ve hizmet almalarını sağlar. Gıda ticaretinin artan küreselleşmesi, uluslararası gıda güvenliği kontrol önlemlerini uyumlu hâle getirme ihtiyacına da yol açmıştır. Standartların, spesifikasyonların ve düzenlemelerin uyumlaştırılması uluslararası ticaret için kritik öneme sahiptir. Uyumlaştırmanın amacı, ticaretin önündeki engelleri azaltmak ve böylece gıda ürünlerinin ülkeler arasında daha serbest dolaşımını artırmaktır.

Gıda kaynaklı tehlikeler, gıda zincirinin herhangi bir basamağında ortaya çıkabilir ve gıda güvenliğini tehlikeye sokabilir. Bu nedenle çiftlikten çatala yaklaşımının benimsenmesi ve gıda tedarik zinciri boyunca etkin bir kontrolün gerçekleştirilmesi önemlidir. Gıda güvenliğinin sağlanabilmesi için birincil üretimden tüketiciye kadar gıda tedarik zincirinin tüm aşamalarındaki birimlerin sorumluluklarını yerine getirmesi ile sağlanabilir.

10. BÖLÜM

BEYİN VE HÜCRE ARASINDA: NÖROGASTRONOMİ VE BESLENME FİZYOLOJİSİ

Umay Sevgi Vardar

Gizem Hılağa Kaderoğlu

Giriş

Yemek yemek neden insanlar için bu kadar önemli bir duyuşal deneyimdir? Diđer canlılardan farklı olarak insanların yemek yerken yüzlerinde farklı ifadeler oluşur. Biz insanların yemek yerken zevk aldığımızın çıkarımını yüzlerinden rahatlıkla yapabiliriz. Hatta bundan duyulan zevk, iyi yemek yemeyi bir meslek olarak karşımıza çıkarmış ve gastronomi sektörünün önünü açmıştır.

Ateş keşfetmenin ve yemek pişirmenin yanı sıra, insanlar lezzetleri algılamak için benzersiz bir şekilde uyarlanmıştır. Lezzet, tat almaktan çok daha fazlası olarak ifade edilmektedir. Hazırladığımız ve yediğimiz yiyecekler aromalı moleküller içerse de aslında aromanın kendisi anatomimiz, fizyolojimiz, sinir sistemimiz arasındaki ilişki tarafından oluşturulmakta ve beyinde yorumlanmaktadır. Bu ilişki gastronomi alanında bir trend hâline gelen nörogastromoni kavramı ile anlaşılmaya çalışılmaktadır. Bu kavram temelde, bize lezzeti nasıl algıladığımızı göstermekte; bu sayede damak tadı gibi insana özgü özellikler ya da dünya genelinde yerel ve bölgesel mutfakların ortaya çıkışı gibi noktaların arka planları hakkında bilgi sahibi olunabilmektedir ^[1].

Nörogastromoni kavramı, disiplinlerarası çalışmaların yürütülmesi ile insan beyinde yemek yeme deneyimi esnasında gerçekleşen durumları ortaya koymaktadır. İnsanların yemek yeme tercihlerini değiştirmek için kullanılabilmesi gibi beslenme alışkanlıklarını sağlıklı hâle yönlendirebilme, hastalıklarda kullanılabilme, yeme deneyimini iyileştirme gibi durumlarda da etkili rol almaktadır. Kavramın daha iyi anlaşılabilmesi için bölümde nörogastromoni kavramının tanımına ve gelişim sürecine, kavramla ilgili diđer temel tanımlara, beyinde oluşan mekanizmalara, ilgili etken parametrelere, hastalıklarda ve sağlıklı beslenme durumlarında kullanılma olanaklarına yer verilmiştir.

anlaşmıştır. Nörogastronomi aracılığıyla sağlıklı beslenme, obezite, uyuşturucu vb. bağımlılıklar, şeker hastalığı veya Alzheimer gibi nörodejeneratif hastalıklar üzerine olumlu gelişmeler sağlanabilmektedir. Sağlıklı beslenme ya da hastalıklar dışında sevilmeyen gıdaların insanlara farkında olmadan yedirilebilmesi noktasında ya da tat duyusunu kaybetmiş bir bireye yeniden tat alabilmesi işlevsellikleri de bulunmaktadır. Ayrıca farklı duyu kombinasyonlarının kullanımı ile yemek yeme esnasındaki deneyimleri unutulmaz hâle getirebilmekte; yemekten alınan lezzeti çok yüksek noktalara çıkarabilmektedir.

Genel anlamda nörogastronomi, insanların gıda ile olan ilişkisinin fiziksel ve psikolojik yönlerinin anlaşılmasını ve nasıl yediğinden öte neden yediği sorusunun cevabını arayan, obezite vb. yeme bozukluklarından kaynaklanan hastalıkların önüne geçilmesi için alternatif çalışmalar yürütülen bir alan/kavramdır. Kavramın iyi anlaşılması ve beyindeki lezzet mekanizmasının çözülerek tüketim esnasında kullanılması ile bireylere farklı yeme deneyimleri sunulabilecektir. Nörogastronomi üzerine çalışanların diğer bilim insanları ile bir araya gelerek farklı duylardan ve farklı bilim dallarından ya da unsurlardan faydalanarak yürütecekleri çalışmalar ya da gerçekleştirecekleri menüler insanların yeme kalitesini artıracak bir etkiye sahiptir. Bu nedenle kavram üzerine gerçekleştirilecek çalışmalar ile gelecekte lezzet algısındaki hoşnutsuzlukların, beslenme şekli kaynaklı hastalıkların, tat kayıplarının, vb. durumların yaşanmasının önüne geçileceği; hedonik zevklere yönelik işletmelerde duyu unsurlarının daha fazla kullanımının olacağı düşünülmektedir.

11. BÖLÜM

YEMEĞİN TADI TUZU NASIL? YEMEĞİN TASARIMI VE DUYUSAL DEĞERLENDİRME

Emel Çirişođlu

Ayşe Seray Çetin

Giriş

Gıdaların hazırlanışında alternatifler üretebilmek için temel tatların tanınması gereklidir. Besinler, burunda, ağızda, boğazda ve midede sinir hücrelerini uyaran küçük moleküller (reseptörler) barındırmaktadır. Bu hücreler aracılığıyla beyne, alınan tatlarla ilişkin mesajlar iletilmekte ve bunun sonucunda ise tatlı, ekşi, acı, tuzlu, umami olmak üzere tatların hissedilmesini sağlamaktadır ^[1].

Gıdaların lezzeti, içerdığı aromatik maddelere bađlı olarak deđişkenlik gösterir. Gıdaların lezzetinin büyük bir kısmı (%80'i) koku maddelerinden gelmektedir. Gıdaların lezzet tasarımlarının yapılması, aynı ve benzer bileşenlerin eşleştirilmesi, benzer aromatik maddeleri içeren gıdaların bir araya getirilmesi ile yapılmaktadır ^[2]. Böylelikle lezzetin yoğunluğu artırılmaktadır. Lezzet, yiyeceklerle ilişkili duyuşsal algıların toplamını ifade etmektedir ^[3]. Brillat-Savarin, lezzetlerin sayısının sonsuz olduğunu ve her çözünür cismin hiçbir şeye benzemeyen özel bir tadı olduğunu belirtmektedir. Bu yüzden tüm lezzetlerin deđerlendirilmesi ve sınıflandırılmasının zor olduğunu ve lezzetlerin eşleştirilerek sonsuz lezzet dizilerinin ortaya çıkabileceđini ifade eder. Bu sebeple lezzetlerin etkilerini tanımlarken acı, tatlı, ekşi, şekerli, asitli, kekremsi gibi genel ifade kalıpları kullanılmış, lezzetlerin tatsal nitelikleri yaklaşık olarak ifade edilmiştir ^[4].

Bu bölümde tat ve lezzet kavramları detaylı olarak ele alınmıştır. Gıdalardaki tat, koku ve aroma maddeleri, lezzetli bileşenler, duyuşsal algı ve tüketici tercihleri, tüketici istekleri, duyuşsal algılama süreci, duyuşsal kararı etkileyen tercihler, gıda-lezzet tasarımları ve gıda eşleştirmeleri ele alınmıştır.

deneyimleri farklı kanallardan başka tüketicilere aktarma gibi değişkenlere evrildiği göz önünde bulundurulmalıdır. Böylelikle gıda-lezzet tasarımlarının tüketici beklentilerini karşılaması yönünde kolaylık sağlanacaktır.

Son dönemlerde gastronomi uzmanları, mutfak şeflerinin inovasyon ve yaratıcılık üzerine daha çok yoğunlaştığı göz önünde bulundurulduğunda Türk gastronomisinin çeşitliliği sayesinde lezzet ağının genişletilmesi, mutfak kültüründe sıklıkla yer alan lezzetlere dair aroma bileşenlerin ortaya koyulması, bu bileşenlerin ve gıdalarda yer alan aroma moleküllerinin araştırılması ve eşleştirilmesi ile Türk gastronomisinin gelişimine katkı sağlanabilir. Aynı zamanda tüketicilerin yeni arayışlarına hitap eden ve şeflerin yaratıcılığını da ortaya koyan çok yönlü bir faaliyet alanı oluşturulmasına olanak sağlar. Yapılacak eşleştirmeler sayesinde mutfak kültürüne özgü yeni lezzet ağları oluşturulabilir.

YEMEĞİN TARİHİ, KÜLTÜRÜ VE GELENEKLERİ

Oğuzhan Köklü

Giriş

Gıda, insanlık tarihindeki en belirleyici ve yönlendirici faktörler arasında gelmektedir. Tüm faaliyetleri için enerjiye ihtiyaç duyan insanoğlunun bu enerjiyi temin ettiği birinci unsur tükettiği besinlerdir. Dolayısıyla, geçmişe baktığımızda toplu ya da bireysel fark etmeksizin insan davranışlarını biçimlendiren en temel şeyin gıda olduğunu görmekteyiz.

Gıdaya erişim ihtiyacı insanları devamlı hareket hâlinde tutmuş ve büyük atılımların önünü açmıştır. İnsanlık tarihindeki kritik olay ve dönemlere bakıldığında gıdanın etkisine mutlaka rastlanılmaktadır.

Hâl böyleyken gıdanın insan hayatında kültürel bir zemine yerleşmesi şaşırtıcı olmayacaktır. Açıkça görülmektedir ki dünyanın neresinden olursa olsun tüm insan toplulukları özel gün ve olayları yemek eşliğinde ölümsüzleştirme âdeti edinmiştir. Bu sayede her toplum yemek üzerinden köklü bir gelenek ve kültür meydana getirmiştir. Bu kültür, toplumların yemek vasıtasıyla kendilerine has kimlikler geliştirmesinin önünü açarak beslenmeye dair elementler üzerinden insan gruplarının birbirinden ayrışmasını da sağlamıştır. Bu bölümde gastronomi mühendisliğinin sosyal bileşenlerinden yemek tarihi, kültürü ve gelenekleri hakkında detaylı bilgi verilmiştir.

Tarihsel Süreç

İnsanlık, varoluşundan bu yana gıdaya erişmek için farklı metotlara başvurmuştur. Bu metotlar, dönemin kolektif zekâsına ve olanaklarına bağlı olarak kendini göstermiştir. İlk olarak milyonlarca yıl boyunca insanlığın temel gıda üretim yöntemi avcılık ve toplayıcılık olmuştur. Küçük kümeler hâlinde örgütlenen insanlar, doğadan hazır olarak elde ettikleri besinler ya da kendi öldürdükleri hayvanlar üzerinden beslenmelerini sağlamışlardır ^[1].

Mantıksal açıdan bakacak olursak toplayıcılığın avcılıktan daha kadim bir alışkanlık olduğu düşünülebilir. Şüphesiz ki avcılık faaliyeti daha yoğun bir zekâ, koordinasyon, öğrenme süreci ve fiziksel kabiliyet gerektirir. Bunların oluşabilmesi için de belli bir süre

yerleşmiştir ki toplu hâlde helva yiyen yahut büyük miktarda helva kavrulduğunu gören her bir Türk insanı, ilk olarak birinin öldüğü düşüncesine kapılır.

Benzer şekilde Türk kahvesi de varlığının ötesinde anlamlar kazanmış bir içecektir. “Bir kahvenin 40 yıl hatırı vardır.” sözüyle Türk toplumunda kahvenin muhabbeti, ahbablığı, iyi ilişkileri ifade ettiği vurgulanmaktadır. Bunun dışında, kız isteme törenlerinin ayrılmaz bir ögesi de yine kahvedir. Kahvenin taşıdığı bu kavramsal zenginlik onu Türk toplumu içinde özel bir konuma yerleştirmektedir.

Bu gibi örnekleri çoğaltmak mümkündür. Ekmek, nar, tuz, şerbet, rakı, güllaç, ramazan pidesi, simit gibi sayısız gıda ürünü salt birer yiyecek olmanın ötesinde anlamlar barındırmakta ve toplumsal ölçekte kültürel boyutlar taşımaktadır. Elbette burada örnek olarak gösterilen gıdalar Türk toplumu için geçerli olup farklı toplumlarda bambaşka manalar yüklenebilmektedir. Bu manaların deşifre edilmesiyle, farklı insan topluluklarının zihinsel kodlarının deşifre edilmesi mümkün hâle gelecektir.

13. BÖLÜM

MÜHENDİSLİK İÇEREN BİR MENÜ

Tolgahan Tabak

Mehmet Taş

Hayrettin Mutlu

Giriş

Son 50 yıllık araştırmaların geneli incelendiğinde gıda endüstrisindeki gelişmeler ve gıda geliştirme konularının hızlı bir yükselişte olduğu ortaya çıkmaktadır. Endüstriyel gıdaların üretimleri maliyet ve gıda güvenliği sebebi ile gıda mühendisliğinin gelişmesine sebep olmuştur. Modern tüketicinin dışarıda yemek yeme eğilimlerinin artması ve bu eksene dâhil olması lezzet, görsellik, sağlık ve haz duygularının da ön plana çıkmasını sağlamıştır. Bu pragmatik değişiklikler, gıdaların daha nano boyutlarda ele alınmasına sebep olarak birçok bilim dalı için yemek biliminin daha derinlemesine incelenmesini sağlamıştır ^[1, 2].

Kaliteli ve zevk odaklı yemek yeme eğilimi gıda mühendisleri tarafından anlaşılacakla birlikte yeni arayışları ortaya çıkarmıştır. Yemeği bir zevk alınan malzeme odağı hâline getirebilen şeflerin yaratıcılığı ve lezzet karışımları birçok bilim alanı tarafından incelemeye alınmıştır. Alanında birçok bilim altyapısı barındıran yemek hazırlama proses süreci; ısı aktarımı, uygun iletkenlik, sosların emülsiyonları, kütle transfer ekstraksiyonları, boyutlarını küçültmek ve dondurarak kurutma gibi birçok yöntemi ortak kullanır. Gıda mühendisliği ve gastronominin ortak altyapı ile çalışması gastronomi mühendisliğinin (GM) ortaya çıkmasını sağlamıştır. Hızlı gıda üretim prosesleri ve şeflerin yaratıcılık- yeteneklerinin bilimsel olarak incelenmesi geleceğin birçok yeni mesleğinin ve yemeklerinin doğuşunun mesajını vermektedir ^[3].

Aşçılar ve bilim arasındaki bu ilişki moleküler ve fizik tabanlı mutfak anlayışıyla daha ön plana çıkmış ve birçok kantitatif çalışmanın mutfakta yer almasını sağlamıştır. Aynı zamanda bilim ile ortak iş birliği içerisinde bulunan şefler yeni teknikleri geliştirmiş ve gıdalarda alınan haz duygularını arttırmışlardır. Bazı deneyler eşsiz dokular ve şaşırtıcı tatların ortaya çıkmasını sağlamıştır ^[4, 5]. Bu bölümde mühendislik bilgi ve deneyimleri ışığında menü tasarlama ve yiyecek üretme süreçleri örnekleri ile birlikte detaylı olarak açıklanmıştır.

belirleyebilmek ve bilimi gündelik hayata mal edebilmek için başarısızlıklar güvenli kaydedilmesi gereken analizlerdir. Bilim insanları gıdaları neden, niçin, nasıl tüketilmesi üzerine yaptığı sayısız analizler, gelecekte mutfaklarda bilime daha çok ihtiyacımız olduğunun en belirgin kanıtı olduğunu inkâr edemeyiz.

Mutfaklar da değişen koşullara uyum sağlamalı ve bunun için gerekli tedbirleri almalıdır. Bu ise ancak bilimsel yaklaşım ile mümkün olabilir. Gelecek için yönltilmesi gerekli soru aslında; yiyecek ve içeceklerin sunumu, yenilikleri içermesi ve de geçmişin anlaşılabilmesi bakımından gastronomi mühendisliğinin hayata geçirdiği bilimsel yaklaşım nasıl yaygınlaştırılabilir? Çünkü mutfakta yaratıcılık, yeni içerik ve tekniklerden daha çok, mevcut malzemelerin ve bileşiklerin nasıl birlikte kullanılacağı ile alakalıdır. Gıdaların yapıları daha iyi anlaşıldığında ve yeni yapılar oluşturabilme yeteneklerimiz arttığında, gıdaları daha sağlıklı ve zevk için tasarlamaya yaklaşacağız.

İÇİNDEKİLER

ÖN SÖZ	Vii
GİRİŞ	ix
I. BÖLÜM GENÇLİK DÖNEMİ GELİŞİM ÖZELLİKLERİ	1
1. Çocukluktan Ergenliğe Geçiş	2
2. Ergenliğin Doğası ve Gelişim	5
3. Biyolojik Gelişim Özellikleri	12
4. Bilişsel Gelişim Özellikleri	23
5. Psikososyal Gelişim Özellikleri	31
6. Ahlaki Gelişim Özellikleri	47
II. BÖLÜM GENÇLİK DÖNEMİ DİNÎ VE MANEVÎ GELİŞİMİ	55
1. Din ve Maneviyata Genel Bakış	56
2. Dinî Gelişim Araştırmaları	62
3. Gençlik, Din ve Maneviyat	66
4. Dinî ve Manevi Gelişim Özellikleri	72
4.1. Olgun Dindarlık Arayışı	76
4.2. Anlama Arayışı	78
4.3. Bireysel Dinî Yönelim	80
4.4. Soyut Dinî Düşünce Yönelimi	83
4.5. Evrensel İnanç Yönelimi	90
6. Dinî ve Manevi Gelişim ile İlgili Bazı Konular	94
6.1. Dinî Şüphe	94
6.1.1. Şüphenin Çeşitleri	97
6.1.2. Şüphenin Sebepleri	99
6.2. Ruh Sağlığı	106
6.3. Bağlanma	110
6.4. Cinsellik	114

6.5. Bağımlılık.....	123
6.6. Dinî İstismar ve Aşırılıklar.....	130

III. BÖLÜM GENÇLİK DÖNEMİ DİNİ TASAVVUR VE

TECRÜBE GELİŞİMİ.....137

1. Dinî Tasavvur Gelişimi 137

1.1. Allah Tasavvuru.....	137
1.1.1. Kur'an'da Allah Tasavvuru.....	138
1.1.2. Ergenlerde Allah Tasavvuru.....	139
1.1.3. Allah Tasavvurunun Gelişimi	141
1.1.4. İnanç Eğitimi	154
1.2. Kader Tasavvuru	158
1.2.1. İslam'da Kader.....	159
1.2.2. Kader Eğitimi	163

2. Dinî Tecrübe Gelişimi..... 169

2.1. Dua.....	169
2.1.1. İslam'da Dua	169
2.1.2. Gelişimsel Açıdan Dua	172
2.1.3. Dua Eğitimi	177
2.2. İbadet.....	180
2.2.1. İslam'da İbadet.....	181
2.2.2. Gelişimsel Açıdan İbadet	185
2.2.3. İbadet Eğitimi	190
2.3. Ölüm	194
2.3.1. İslam'da Ölüm.....	195
2.3.2. Ölümle İlgili Bazı Güncel Problemler	197
2.3.3. Gelişimsel Açıdan Ölüm.....	200
2.3.4. Ölüm Eğitimi	207

IV. BÖLÜM GENÇLİK DÖNEMİ DİN EĞİTİMİ:

MODEL VE İLKELER.....217

1. Din Eğitimi Modelleri 220

1.1. Dostluk Modeli.....	220
1.2. Özgürlükçü Model.....	222
1.3. Hermenötik Model	224
1.4. Manevi Farkındalık Modeli	226

2. Din Eğitimi İlkeleri 229

2.1. Öğrenme Alanlarını Bütünleştirmek	229
2.2. Gençlerle Teoloji Geliştirmek.....	232

2.3. Kutsal ile Anlam Kazanmak.....	234
2.4. Hizmet Temelli Öğrenmeyi Teşvik Etmek	236
2.5. Manevi Gelişimi Desteklemek	238
SONUÇ	243
KAYNAKÇA	247
ÖZ GEÇMİŞLER	259
Prof. Dr. Mustafa Köylü.....	259
Prof. Dr. Cemil Oruç	260

2.1.3. Gelecek Zaman Durumu	68
2.1.4. Emir Durumu	68
2.2. Pi'el Çatısının Düzensiz Fiilleri	69
2.2.1. İlk veya İkinci Ünsüzü Yud Olan Fiiller.....	69
2.3. Pi'el Çatısının Fiil Kökünde Boğaz Ünsüzü Olan Fiilleri.....	73
2.3.1. İkinci Kök Ünsüzü Reş (ר) Olan Fiiller	74

2.3.2. İkinci Kök Ünsüzü Alef, Hey, Khet ve Ayn ה,א (ו,ח,) Olan Fiiller.....	76
2.3.3. Üçüncü Kök Ünsüzü Patakh Gnuva (ו,ח) Olan Fiiller	84
2.3.4. Üçüncü Kök Ünsüzü Alef (א) Olan Fiiller	89
2.3.5. Üçüncü Kök Ünsüzü Hey (ה) Olan Fiiller	93
2.3.6. Üçüncü Kök Ünsüzü Aynı Olan (ו"ו Fiiller)/İkinci Fiil Kökü Ünsüzü Vav Olan (ו) Fiiller	98
3. Hif'il Çatısı.....	102
3.1. Hif'il Çatısının Düzenli Fiilleri.....	105
3.1.1. Geçmiş Zaman Durumu	105
3.1.2. Şimdiki Zaman Durumu	106
3.1.3. Gelecek Zaman Durumu	107
3.1.4. Emir Durumu	107
3.2. Hif'il Çatısının Düzensiz Fiilleri	110
3.2.1. İlk Kök Ünsüzü Alef (א) Olan Fiiller.....	110
3.2.2. İlk Kök Ünsüzü Ayn (א) Olan Fiiller	114
3.2.3. İlk Kök Ünsüzü Khet (ח) Olan Fiiller	117
3.2.4. İlk Kök Ünsüzü Nun (נ) Olan Fiiller	122
3.2.5. İlk Kök Ünsüzü Yud (י) Olan Fiiller	124
3.2.6. İlk Kök Ünsüzü Vav (ו) Olan Fiiller	126
3.2.7. İkinci Kök Ünsüzü Vav (ו) ve Yud (י) Olan Fiiller (ו"ו-ו"י)	129
3.2.8. İkinci Kök Ünsüzü ile Üçüncü Kök Ünsüzü Aynı Olan Fiiller/ו"ו Fiiller	135
3.2.9. Üçüncü Kök Ünsüzü Khet (ח) ve Ayn (א) Olan Fiiller.....	137
3.2.10. Üçüncü Kök Ünsüzü Hey (ה) Olan Fiiller/ ה"ו veya ו"ה Fiilleri	142
4. Nif'al Çatısı.....	144
4.1. Nif'al Çatısının Düzenli Fiilleri	145
4.1.1. Geçmiş Zaman Durumu	145
4.1.2. Şimdiki Zaman Durumu	146
4.1.3. Gelecek Zaman Durumu	147
4.1.4. Emir Durumu	148
4.2. Nif'al Çatısının Düzensiz Fiilleri	150
4.2.1. İlk Ünsüzü Boğaz Olan Fiilleri	150
4.2.2. İlk Ünsüzü Yud/Vav (י/ו) olan Fiiller.....	160
4.2.3. İkinci Ünsüzü Alef, Hey, Khet, Ayn (א,ח,ה,א) Olan Fiiller.....	162
4.2.4. İkinci Ünsüzü Yud/Vav (י/ו) olan Fiiller/ו"ו-ו"י	164
4.2.5. İkinci ve Üçüncü Kök Ünsüzü Aynı Olan Fiiller/ו"ו Fiiller	166
4.2.6. Üçüncü Kök Ünsüzü Alef (א) Olan Fiilleri	168
4.2.7. Üçüncü Kök Ünsüzü Patakh Gnuva (א,ח) Olan Fiiller	170
4.2.8. Lamed Hey ve Lamed Yud (ה"ל/ו"ל) Fiillerinin Çekimi.....	174
5. Hitpa'el Çatısı.....	177
5.1. Hitpa'el Çatısının Düzenli Fiilleri	179
5.1.1. Geçmiş Zaman Durumu	179
5.1.2. Şimdiki Zaman Durumu	180
5.1.3. Gelecek Zaman Durumu	181
5.1.4. Emir Durumu	181

5.2. Hitpa'el Çatısının Düzensiz Fiilleri	186
5.2.1. İlk Fiil Kökü Ünsüzü Zayn, Samekh, Şin, Sin ve Tsadi (ץ ,ש ,שׁ ס ,ט) Olan Fiiller	186
5.2.2. İlk Kök Ünsüzü Dalet, Tet ve Tav (ת ,ט ,ד) Olan Fiiller.....	194
5.2.3. İkinci ve Üçüncü Kök Ünsüzü Aynı Olan Fiiller	203
5.2.4. İkinci Ünsüzü Alef, Hey, Khet, Ayn (א ,ה ,ח) Olan Fiiller	208
5.2.5. Üçüncü Kök Ünsüzü Patakh Gnuva (נ/ע) Olan Fiiller	217
5.2.6. Dört Kök Ünsüzlü Fiillerin Çekimi.....	221
6. İbranice Pasif/Edilgen Fiil Kategorisi	228
6.1. Pasif/Edilgen Fiil Çatılarının Tanımı.....	228
7. Nif'al Çatısının Edilgen Çatı Olarak Tanımı.....	228
8. Pu'al Çatısı	231
8.1. Pu'al Çatısının Düzenli Fiilleri	232
8.1.1. Geçmiş Zaman Durumu	232
8.1.2. Şimdiki Zaman Durumu	233
8.1.3. Gelecek Zaman Durumu	233
8.2. Pu'al Çatısının Düzensiz Fiilleri.....	234
8.2.1. İkinci Kök Ünsüzü Alef Hey, Ayn (א ,ה ,ע) Olan Fiiller	234
8.2.2. İkinci ve Üçüncü Kök Ünsüzü Hey (ה) Olan Fiiller	239
8.2.3. İkinci ve Üçüncü Kök Ünsüzü Aynı Olan Fiiller/ע"ו-ע"י	241
8.2.4. Üçüncü Kök Ünsüzü Patakh Gnuva (ע ,ח) Olan Fiiller	243
8.2.5. Üçüncü Fiil Ünsüzü Alef (א) Olan Fiiller.....	245
8.2.6. Fiil Kökü Dört Ünsüzden İbaret Olan Fiiller.....	247
9. Huf'al Çatısı.....	250
9.1. Huf'al Çatısının Düzenli fiilleri	250
9.1.1. Geçmiş Zaman Durumu	251
9.1.2. Şimdiki Zaman Durumu	251
9.1.3. Gelecek Zaman Durumu	252
9.2. Huf'al Çatısının Düzensiz Fiilleri	254
9.2.1. İkinci Kök Ünsüzü Alef, Hey, Khet ve Ayn (ע ,ה ,ח ,א) Olan Fiiller	254
9.2.2. İkinci ve Üçüncü Kök Ünsüzü Anı Olan Fiiller/ע"ע Filleri.....	258
9.2.3. Üçüncü Kök Ünsüzü Patakh Gnuva (ע ,ח) Olan Fiiller	260
9.2.4. Üçüncü Kök Ünsüzü Hey (ה) Olan Filler	264
10. Fiil+Fiil Kullanımı	265
10.1. Yardımcı Fiiller	267
10.1.1. "İstemek, Arzulamak"/לְצוֹת Fiili	267
10.1.2. Geçmiş Zaman Durumu	267
10.1.3. Şimdiki Zaman Durumu	268
10.1.4. Gelecek Zaman Durumu	268

KARİYER PSİKOLOJİK DANIŞMASINA GİRİŞ: TEMEL KAVRAMLAR VE KONULAR

Nurten Karacan Özdemir

Hazırlık Soruları

1. Meslek, uzmanlık alanı, iş, kariyer, çalışma ve uğraşı gibi kavramlar arasındaki farklar neler olabilir?
2. İçinde bulunduğumuz çağdaki değişim ve gelişimlerin iş yaşamına yansımaları nasıl olabilir?
3. Küresel ve yerel krizler (COVID-19 pandemisi, iklim krizi, ekonomik krizler, doğal afetler vb.) sonrasında, kariyer gelişiminde öne çıkan konular neler olabilir?

İnsan, bütüncül bir varlıktır. Pek çok alandaki gelişimi, birbiri ile etkileşim hâlinindedir. Fiziksel, duygusal, sosyal, akademik, kariyer gelişimi bir arada ilerler. Bir alandaki gelişiminde bir güçlük yaşıyorsa, bunun diğer gelişim alanlarına da yansımaları kaçınılmazdır. Örneğin, bir öğrencinin akademik gelişimi iyiyken, sosyal gelişiminde güçlükler yaşıyorsa, ya da tam tersi yaşıyorsa, bu durumda bu öğrencinin bir bütün olarak iyilik hâlinin yüksek, denge ve uyum içinde olacağını söylemek güç olacaktır. Bu nedenle, bireyi bir bütün olarak desteklemek esastır. Bu gelişim alanlarından biri de yukarıda belirtildiği üzere kariyer gelişimidir. Kariyer gelişimi, artık yaygın olarak bilinen şekliyle, doğumdan yaşamın sonuna kadar süren gelişimsel bir süreçtir (Super, 1990). Bireyin doğduğu çevre, sosyoekonomik durumu gibi çevresel değişkenlerin yanı sıra aldığı eğitimler, katıldığı kurslar, gittiği okul, yetenekleri, ilgileri, değerleri, kişilik özellikleri gibi bireysel değişkenlerin karşılıklı etkileşimi sonucu şekillenir ve gelişimi sürer. Bireyin kariyer gelişimini desteklemede, öncelikle bu alana yönelik temel kavramları bilmek ve yardım sürecinin doğasına dair bilgi ve beceri sahibi olmak önemlidir.

Bu bölümde, öncelikle, kariyer gelişim sürecinin daha iyi anlaşılabilmesine katkı sağlamak amacıyla kariyer, meslek, iş, çalışma gibi bazı temel kavramlar ele alınacaktır. Kariyer psikolojik danışması sürecinin doğasının anlaşılabilmesi için kariyer rehberliği, kariyer psikolojik danışması, mesleki rehberlik, meslek danışmanlığı gibi yardım sürecine yönelik kavramlar arasındaki farka değinilecektir. Son olarak, kariyer psikolojik danışması

lere iş piyasasında yerlerini koruyabilmek için küresel olarak rekabet edebilme ve gelişmeleri yakalama gibi bir zorunluluğu getirirken, iş görenlere ise bu iş piyasasında bir yer bulabilmek için gelişmeleri yakalayacak şekilde sürekli olarak kendini güncelleme ve becerilerini yükseltme gereğini getirmiştir. Öte yandan, hem işveren hem de iş gören açısından öne çıkan bu gereklilikler kariyer psikolojik danışması hizmetlerinde de sürekli bir yenilenme ve gelişmeyi gerekli kılmaktadır. Bu bağlam içinde kariyer psikolojik danışmanlarına değişen paradigmlar doğrultusunda iş dünyasındaki değişikliklerin farkında olma ve güncel durumu takip edebilme, iş gücünün bu koşullar içinde deneyimleyebileceği olası zorluklara dair farkındalığını artırma ve bu yeni çağın getirebileceği potansiyel etik kırılmalara karşı yetkinliğini artırma konularında önemli görevler düşmektedir.

Değerlendirme Soruları

1. 21. yüzyılın çalışma yaşamında getirdiği değişiklikler ne gibi kavram ve tanımları ön plana getirmiştir?
2. Kariyer gelişimini desteklemeye yönelik hizmet türleri nelerdir? Bunlar arasındaki farkları sıralayın.
3. Kariyer psikolojik danışması hizmetlerinin etkili bir şekilde sunulabilmesinde, kariyer psikolojik danışmanları ne gibi yeterliklere sahip olmalıdır?
4. Kariyer psikolojik danışmasında temel etik ilke ve standartları listeleyin.
5. Kariyer psikolojik danışmasında etik ikilem durumlarına örnekler verin. Bu örneklerden birini seçerek etik karar verme sürecini örnek üzerinde uygulayın.

Bölüm 2

PARSONS'UN ÖZELLİK ETMEN KURAMI

Ahmet Ayaz

Hazırlık Soruları

1. Kendinizi ne kadar iyi tanıyorsunuz, güçlü yönlerinizin, geliştirilebilir yönlerinizin, ilgi ve yetenekleriniz ne kadar farkındasınız?
2. Seçtiğiniz meslek içerisinde çalışabileceğiniz alanları belirlerken hangi kaynaklardan ne tarz araştırmalar yapıyorsunuz?

Kuramla İlgili Genel Bilgiler

Parsons'un Özellik Etmen Kuramı, kariyer psikolojik danışmanlığı hizmetleri kapsamında birçok açıdan öncü bir yaklaşımdır. Kariyer rehberliğinin öncüsü olarak kabul edilen Frank Parsons, meslek seçim sürecini bilimsel bir yöntem eşliğinde bir uzman tarafından profesyonel bir hizmet alanı olarak tanımlayan ve uygulayan ilk isimdir (Taylor, 1994). Parsons (1909), meslek seçiminin kişinin yaşamındaki en önemli karar verme süreçlerinden biri olduğunu ve bu seçimin kişinin tüm yaşamını etkilediğini belirtmektedir. Kariyer yaşamı boyunca çeşitli sektörlerde çalışan Parsons, hem kendi bilgi birikiminin hem de dönemin iş piyasasında ortaya çıkan ihtiyaçların etkisiyle kişilerin meslek seçim süreçlerini yapılandıran ve doğru meslek seçim süreci olarak belirttiği modelini hayata geçirmiştir.

Parsons ABD iş piyasasının köklü değişimler geçirdiği bir dönemde yaşamıştır (Spokane ve Glickman, 1994). 1900'lü yıllara kadar ABD'de tarımda insan gücü yoğun olarak kullanılmıştır. Ancak teknolojinin tarımda kullanılmaya başlamasıyla birlikte iş gücüne olan ihtiyaç azalmaya başlamıştır. Şehirler çiftliklerden göç eden işsiz çiftçi ailelerle kalabalıklaşmaya başlamıştır. Bununla birlikte gelişen teknolojiyle birlikte farklı sektörlerde iş gücü ihtiyacı da artış göstermiştir. Teknolojideki bu hızlı değişim süreciyle ABD'nin iş gücü piyasasının doğası da köklü değişim içerisine girmiştir (Lerner, 1987). Ülkede bir yandan işsiz kalan insanların sayısı artmış, diğer yandan da yeni çalışanlar arayan işverenlerin sayısı çoğalmıştır. Önceden aile üyeleri arasında yaşanan mesleki aktarım zamanla

geçirse de kariyer psikolojik danışmanlığı sürecinde merkezî ve hayati bir rol oynamaya devam etmektedir.

Değerlendirme Soruları

1. Üniversite tercih sürecinde hangi bölümü seçeceğine karar vermekte zorlanan bir öğrenciye Özellik Etmen Kuramı kapsamında nasıl yardım edersiniz?
2. Özellik Etmen Kuramı'nı günümüz koşulları kapsamında değerlendirdiğinizde kurama yönelik sizin eleştirileriniz neler olurdu?
3. Özellik Etmen Kuramı'nın güncel kariyer kuramlarına ne gibi etkileri olmuştur?

Bölüm 3

HOLLAND'IN TİPOLOJİ KURAMI

Melda Meliha Erbaş

Hazırlık Soruları

1. Sizi tanımlayan yetenek ve kişilik özellikleri nelerdir?
2. Zamanınızı neler yaparak geçirmekten hoşlanırsınız?
3. Bu özelliklerinizi göz önünde bulundurduğunuzda ne tür mesleklerin size daha uygun olduğunu düşünüyorsunuz?

Giriş

John L. Holland, Tipoloji Kuramı'nın temellerini, İkinci Dünya Savaşı sırasında ABD ordusunda asker seçimi ve sınıflandırma ile ilgili bir görevde çalıştığı esnada atmıştır. Holland, bu süreçte, askerlerin mesleki geçmişlerinin bazı benzerlik ve farklılıklar taşıdığını, askerler arasında buna göre birtakım sınıflandırmalar yapılabileceğini fark etmiştir. Buradan hareketle bireyleri kişilik tipleri ve sahip oldukları ilgi alanlarına göre sınıflandırmaya yönelik çalışmalara başlamıştır (Niles ve Haris-Bowlsbey, 2009). Holland, bu çalışmalarını sistematik bir kuram hâline getirerek ilk olarak 1959 yılında *Journal of Counseling Psychology* dergisinde yayınlamıştır. 1966 yılında kuramın revize edilmiş hâlini içeren *The Psychology of Vocational Choice: A Theory of Personality Types and Model Environments* (Meslek Seçiminin Psikolojisi: Kişilik Tipleri Teorisi ve Çevre Modelleri) adlı kitap yayınlamıştır. 1973 yılında ise altıgen model geliştirilerek kuram daha sistematik bir hâle getirilmiş ve *Making Vocational Choices: A Theory of Careers* (Meslek Seçimi Yapmak: Bir Kariyer Teorisi) isimli kitap yayımlanmıştır. 1970'lerde mesleki kimlik kavramı da kurama eklenmiş, 1985 yılında yapılan bir revizyondan sonra 1997 yılında kuram iş çevrelerinin tanımlarına yönelik açıklamaların da geliştirilmesi ile son hâlini almıştır (Gottfredson, 1999).

Holland'ın Tipoloji Kuramı, bireyleri var olan özelliklerine uyumlu olan bir mesleki çevre ile eşleştirmeyi amaçlaması nedeniyle özellik-faktör kuramları arasında sınıflandırılmaktadır. Özellik Faktör Kuramı, genel olarak her bireyin birbirinden farklı birtakım

Amerika Birleşik Devletleri'nde yaşayan Amerikalılar üzerinde yapılmış olması nedeniyle farklı kültürlerde kuramın nasıl bir geçerliliğe sahip olduğu hâlâ tartışmaya açıktır.

Değerlendirme Soruları

1. Holland'ın Tipoloji Kuramı'nda üzerinde durduğu altı kişilik tipi ve bu kişilik tiplerinin özellikleri nelerdir?
2. Tipoloji Kuramı'na dayalı bir kariyer psikolojik danışmanlığı süreci nasıl ilerler? Bu süreçte hangi ölçme araçları ve etkinliklere yer verilebilir?
3. Kuramın güçlü ve sınırlı yanları nelerdir?

Bölüm 4

KARİYER PSİKOLOJİK DANIŞMASINDA PSİKODİNAMİK KURAMLAR

Hakan Büyükçolpan

Nurten Karacan Özdemir

Giriş

Bu bölümde psikodinamik yaklaşıma dayalı olarak oluşturulan Anne Roe'nun İhtiyaçlar Yaklaşımı ve Myers-Briggs Tip Teorisi (MBTT) ele alınmıştır. Bu kuramlar, kariyer gelişimine psikodinamik açıdan açıklamalar sunmaktadırlar. Bu bağlamda, Anne Roe'nun kuramı temelleri çocukluk döneminde atılan, ebeveyn-çocuk arasındaki iletişimin biçiminin ve bu doğrultuda gelişen psikolojik ihtiyaçların kariyer yönelimleri üzerindeki olası etkilerini ele almaktadır. Bir başka deyişle, erken çocukluk deneyimlerinin kariyer gelişimi üzerindeki, özellikle de meslek seçimi üzerindeki önemi vurgulanmaktadır. MBTT ise Jung'un kişilik tiplerine dayalı bir yaklaşımdır. Bireylerin meslek seçimleri ve yönelimlerinde kullanılabilecek ya da bu süreci anlamlandırmaya katkı sağlayabilecek bir ölçme aracı içermetedir. Bu açıdan bakıldığında MBTT doğrudan bir kuram olmasa da psikodinamik kuramlardan Jung'un doğuştan getirilen kişilik tiplerine dayalı olarak geliştirildiği için daha önceki sınıflandırmalarda da olduğu gibi (Bk. Yerin-Güneri, 2020) psikodinamik kuramlar başlığı altında ele alınmıştır.

Roe'nun Kişilik Gelişimi Teorisi

Hazırlık Soruları

1. Çocukların meslek seçiminde ebeveynlerin (veya diğer bakım verenlerin) etkisi olduğunu düşünüyor musunuz? Eğer düşünüyorsanız ebeveynlerin çocukların meslek seçimi üzerinde nasıl bir etkisi olabilir?
2. Ailenin çocukla olan ilişkisinin çocuğun meslek seçimi ve kariyer kararı verme biçimi üzerinde ne gibi etkileri olabilir?
3. Kişinin temel psikolojik ihtiyaçlarının meslek seçimi ve kariyer kararı verme sürecinde ne gibi etkileri olabilir?

özellikleri ve kişilik kodlarını eşleştirme sistemine dayanan bir kariyer danışma süreci kullanmaktadır. Eşleştirme sistemine dayandığı için kariyer psikolojik danışmanlığı sürecinde bireyin; ilgileri, yetenekleri, değerleri, çevresel ve sosyoekonomik faktörler vs. gibi bireyin kariyer gelişimini etkileyen pek çok etmeni göz ardı ettiği söylenebilir. Bu sebeple, geçerli ve güvenilir bir ölçme aracının olması, farklı kişilik tipleri ve kişilik tiplerine uygun mesleklerin yer alması gibi pek çok avantajının yanında kariyer psikolojik danışmanlığı sürecinde tek başına kullanılmaması ve bireyin kariyer gelişimini etkileyen diğer faktörlerin de göz önünde bulundurulması gerektiği söylenebilir.

MBTI’da bulunan kişilik tiplerini düşündüğünüzde, kişilik özelliklerinizin hangi tipe daha uygun olduğunu düşünüyorsunuz? Seçtiğiniz bölüm veya yaptığınız mesleğin MBTI’ya göre kişilik tipinize göre uygun olup olmadığını tartışın.

Değerlendirme Soruları

1. Size göre, MBTI’nın farklı avantaj ve dezavantajları nelerdir?
2. MBTI’yi kariyer psikolojik danışmasında kullanacak olsanız nelere dikkat edersiniz?

Bölüm 5

KARİYER GELİŞİM KURAMLARI

Selen Demirtaş Zorbaz

“Çocuklar ıslak beton gibidir, üzerlerine ne düşse iz bırakır.”

Haim Ginott

Hazırlık Soruları

1. Şu an kariyerinizde hangi noktadasınız? Seçtiğiniz bu meslek kariyer yolculuğunuzda ulaştığınız bir yer mi yoksa yolculuktaki duraklardan sadece bir tanesi mi?
2. Sizce erken yaşam dönem deneyimleriniz, şu an yürüdüğünüz kariyer yolunuzu nasıl etkilemiş olabilir?
3. Şu an meslek/iş değiştirmeye karar vermiş olduğunuzu varsayın, sizce üniversite okurken yanlış kariyer tercihi yapmış olduğunuzu fark etmeniz kariyer gelişiminiz hakkında ne söylemektedir?

Kuramla İlgili Temel Bilgiler, Konular

Gelişim teorilerinin ana varsayımlarından biri, bireylerin gelişim evreleri sırasında değişiklikler yaşadığı ve değişen yaşam rollerine uyum sağladıklarıdır (Zunker, 2006). Söz konusu varsayım; sosyal, duygusal, fiziksel vb. gelişim alanlarında olduğu gibi kariyer gelişim alanına da uyarlanabilmektedir. Dolayısıyla kariyer gelişim kuramları bireyler büyüdükçe ve olgunlaştıkça farklı kariyer gelişim evrelerinden geçtiklerini ve her evrede tamamlaması gereken çeşitli görevler olduğunu varsaymaktadırlar. Gelişim kuramları denildiğinde akla gelen ilk isimler Ginzberg ve Super olmakla beraber onların kuramları çeşitli kaynaklarda kariyere psikososyolojik bakış açısı altında da toplanmaktadır (Chen, 2003). Bu bölümde gelişimsel kuramların temelini atan Ginzberg ve diğerlerinin görüşlerinden bahsedilmiş, daha sonra Ginzberg ve diğerlerinin görüşlerini eleştirerek ve daha da geliştirerek yaklaşımını oluşturan Super’ın kuramına değinilmiştir.

sahip olan ülkelerdeki bireylerle çalışırken kültürel duyarlılığı hesaba katmaktır. Dolayısıyla kariyer psikolojik danışmanları danışanlarıyla gelişimsel yaklaşıma dayalı psikolojik danışma yaparken gelişimsel dönemlerin ve yaşların ve o dönemdeki başarılması gereken görevlerin çalıştıkları kültürde değişebileceğini göz önünde bulundurmalı ve kuramın varsayımlarını kesinlik olarak ele almamalıdır.

Gelişimsel yaklaşımlara bakıldığında dikkat çeken şeylerden biri de şüphesiz kavramların parça parça olması ve bir bütünlük içerisinde sunulmamasıdır. Nitekim Super, hiçbir zaman bir kuram yarattığını ifade etmediğini tam tersine kendisinin yayınlarda daha çok *kuramsal yaklaşım* ifadesini kullanmaya çalıştığını verdiği bir röportajda da ifade etmiştir (Pappas, 1990). Super ve onu takip eden diğer kuramcılar kariyer gelişimi araştırmaları ve uygulamalarına etki etmeye devam edeceklerdir (Brown, 2002). Dolayısıyla gelişimsel yaklaşımların daha çok araştırılmaya ve geliştirilerek bütünleştirilmeye ihtiyacı bulunmaktadır.

Bunları biliyor muydunuz?

2013 yılında kariyer gelişim kuramları ile ilgili yayınlanan makaleler tarandığında (Sampson vd., 2014); 357 makale içerisinde sosyal bilişsel kariyer kuramları 35 kez, kariyer yapılandırma kuramı 19 kez, Holland'ın RIASEC kuramı 17 kez, büyük beşli faktör kuramı 11 kez, meslek talepleri-kaynakları modeli 8 kez, yaşam boyu-yaşam alanı kuramı 8 kez, benlik adanmışlığı kuramı 8 kez, daraltma ve uzlaşma kuramı 8 kez, çalışmanın ilişkisel kuramı 5 kez, bilişsel bilgi yapılandırma kuramı 4 kez, pozitif psikoloji 4 kez, sosyal değişim kuramı 4 kez tanımlanmış ve vurgulanmıştır. Diğer bir ifade ile Super'ın yaşam boyu-yaşam alanı kuramı eski bir kuram olsa da hâlâ kariyer kuramları içerisinde kendine bir yer bulmakta ve Super'ın kendisinin de belirttiği gibi gelecek kuramcılar onun kuramını daha da ileriye götürmektedirler.

Değerlendirme Soruları

1. Lise 11. sınıfta bir danışanınızın geldiğini ve sınava az bir süre kaldığı hâlde hâlâ okumak istediği bölüme karar veremediği için yaşadığı sıkıntıyı anlattığını düşünün. Bu danışanla gelişimsel kuramlar ışığında çalışmak isteseyiz nasıl bir değerlendirme yaparsınız? Kariyer psikolojik danışması sürecinde özellikle nelere dikkat edersiniz?
2. Ginzberg ve diğerlerinin ve Super'ın gelişimsel dönemlerine baktığımızda sizce hangi dönemler Türkiye'deki bireyler için daha gerçekçi bir bakış açısı sağlamaktadır? Neden?

GOTTFREDSON'IN DARALTMA VE UZLAŞMA KURAMI

Özlem Haskan Avcı

Giriş

1970'lerde sosyoloji alanında yüksek lisans öğrencisiyken, kariyer alanının insani yönlerden uzak biçimde insana yaklaşımı beni şaşırtmıştı: Bu yaklaşımda bizler aslında insan değiliz, aynı amaçları (statü ve güç) arayan takas edilebilir varlıklarız. Öyle olmasaydı başkalarının yolumuza koyduğu engellere karşılık hepimiz eşit olarak “ileriye giderdik”... Kariyer psikolojik danışması alanı neden artık birey-iş eşleşmesindeki ikiz sütunlardan birine pek fazla dikkat göstermiyordu? Ayrıca yetenekler ve uygulamadaki rolü hakkında ne olup da bu kadar sınırlı şey söylüyordu? Aslında, ne olup da yeteneklerin ölçülmesi konusuna bu kadar uzak kalınmıştı? Bunun nedeni elbette yeteneklerin önemsiz olması değildi. Gerçekten de okul psikolojik danışmanları bana yeteneği nasıl ele alacakları meselesinin en büyük endişeleri olduğunu söylüyorlardı.

Yeni doğan ve henüz beşikte olan bin kadar bebeği hayal edin. Ne dış dünya hakkında ne de kendileri hakkında neredeyse hiçbir şey bilmiyorlar. On yıl sonra hepsi, bu ikisi hakkında çok şey öğrenmiş olacak. Yirmi yıl içinde hepsi, çoğunlukla farkında olmadan yaşamlarını şekillendiren birçok karar vermiş olacak. Otuz yıl sonra, bu bin kişi çok çeşitli mesleklere ve sosyal alanlara yayılmış olacak. Şans kimin nerede olacağı konusunda bir rol oynayacak ancak sonuçlar rastgele ya da sürpriz olmayacak. Bin yenidoğan, tıpkı yetişkinler gibi, meslekleri öncelikle erillik-dişillik ve prestij düzeyi olmak üzere iki boyutta ele alacaklar.

Bunların yanı sıra muhasebeciden mühendise, sanatçıdan öğretmene farklı alanlardan bireylerin kişilikleri hakkında ortak kalıp yargı paylaşacaklar. Benzer algılarına rağmen, ebeveynlerinin sınıf ve cinsiyet farklılıklarına dair kalıp yargın çoğunu yeniden üretecekler: Kızlar çoğunlukla “kadın” işini, oğlanlar “erkek” işini ve alt sınıftaki gençler üst sınıftan akrabalarına kıyasla daha düşük prestijli işleri isteyeceklerdir. Bazıları ilgilerine uygun olmayan işlere zorlanacak ancak birçoğu bunu zaten kendi tercihiyle yapacak. Peki yetişkinliğin eşiğindeki bu kafa karıştırıcı durumu ne açıklar? Daraltma ve uzlaştırma kuramı, bu konuyu anlayabilmede dört gelişim sürecinin anahtar olduğunu ileri sürüyor

(Gottfredson, 2003, s.1, 2).

Bölüm 7

KARİYER KARARI VERMEDE SOSYAL ÖĞRENME VE PLANLANMIŞ ŞANS KURAMI

Semra Uçar

Hazırlık Soruları

1. Kariyer psikolojik danışmanlığında Sosyal Öğrenme Kuramı nasıl kullanılabilir?
2. Planlanmış Şans Kuramı ve Sosyal Öğrenme Kuramı arasında nasıl bir fark var?
3. Planlanmış Şans Kuramı, şans faktörüne kariyer psikolojik danışmanlığında nasıl yer vermektedir?

Kariyer Kararı Vermede Sosyal Öğrenme Kuramı

Sosyal Öğrenme Kuramı'nın Krumboltz tarafından kariyer psikolojik danışmanlığı alanına taşınması ile birlikte bu süreç kariyer gelişiminden söz ederken öğrenmelerin de süreç için önemli ve kolaylaştırıcı bir faktör hâline dönüşmesini sağlamıştır. Krumboltz'un çalışmalarına sonrasında eşlik eden önemli isimlerden biri de Kathleen E. Mitchell'dir. Mitchell ve Krumboltz, kariyer psikolojik danışmanlığı alanına Sosyal Öğrenme Kuramı'nı entegre ederken bireylerin daha aktif olmalarını ve kariyer gelişimi süreçlerini kontrol eden yetkin bireyler hâline gelmelerini vurgularlar. Öte yandan, bireylerde söz konusu olan bu potansiyellerin zaten yer aldığını savunmaktadırlar. Kariyer psikolojik danışmanlığı sürecinde de sosyal öğrenmeler merkezdedir. Çünkü söz konusu öğrenmeler bireyi ilgilendiren birçok faktörü etkilemektedir. Bunlar arasında tutumları, inançları, kişilik özellikleri gibi faktörler yer almaktadır (Mitchell ve Krumboltz, 1996).

Kariyer kararı vermede sosyal öğrenme kuramı, kariyer kararı verme sürecinde rol oynayan dört faktörden söz etmektedir. Bunlar genetik donanım ve özel yetenekler, çevresel koşullar ve olaylar, araçsal ve ilişkisel öğrenme deneyimleri ve görev yaklaşımı becerileridir. Bunlar, kariyer seçimlerinin altında yatan nedenleri açıklamada yardımcı faktörler olarak rol oynamaktadırlar. Aynı zamanda, bu faktörlerin her birinin bir diğeri ile etkileşimi de kariyer kararı verme süreçlerini etkilemektedir (Krumboltz, 1979). Kariyer kararı vermede etkili dört faktör aşağıda açıklanmıştır (Krumboltz vd., 1976; Sharf, 2013).

daha işlevsel olarak kullanılabilmesine de imkân sağlayabilir. Planlanmış Şans Kuramı, kariyer yönünü netleştiremeyen danışanlar için de değişen dünyada kendilerine kariyer bağlamında yer edinmelerine duyarlı bir yaklaşımdır. Bireyi merkeze alarak bireyin yaşam koşulları ile güncel ihtiyaçları dikkate almakta, dezavantaj perspektifine odaklanmak yerine fırsat perspektifine odaklanmaktadır. Bu yönleriyle de aynı zamanda öğrenmeleri öne çıkaran bir yaklaşımdır.

Değerlendirme Soruları

1. Planlanmış Şans Kuramı ile kariyer psikolojik danışmanlığı sürecini yapılandırmanız hâlinde nelere dikkat edersiniz?
2. Krumboltz'un kariyer psikolojik danışmanlığına entegre ettiği Sosyal Öğrenme Kuramı'nın hangi yönleri bu yaklaşımda öne çıkmaktadır?

Hazırlık Soruları

1. Sizce insanlar, sahip olduğu özellikler yoluyla kariyer gelişimlerine yön verebilme gücüne sahip midir? Yoksa kariyer gelişimi, birtakım dışsal faktörler tarafından yönetilen bir süreç midir?
2. Kariyer gelişimi üzerinde hangi faktörler etkili olmaktadır?
3. Kariyer gelişiminde ortaya çıkan engeller ve sahip olunan destek sistemi, bireylerin kariyer seçimlerini nasıl etkileyebilir?
4. Benzer becerilere sahip olan insanların sergilediği performanslar niçin birbirinden farklılık göstermektedir? Bu tür durumlarda bireylerin performans başarılarını farklılaştıran özellikler neler olabilir?

Giriş

Son yıllarda kariyer gelişiminde bilişsel süreçlere ve bilişsel değişkenlerin rolüne odaklanmaya yönelik artan bir ilgi söz konusudur. Bilişsel devrim olarak adlandırılan bu durum, bireyleri kariyer gelişimlerine aktif bir biçimde yön veren özneler olarak görme eğilimini ortaya çıkarmıştır. Böylece üzerinde kontrol sahibi olamadıkları birtakım özelliklerin (intrapşik özellikler, mizaç, çevresel faktörler gibi) kurbanı olarak görmek yerine bireylerin kendi kariyer gelişimlerinde aktif roller üstlenebilecekleri kabul edilmeye başlanmıştır (Lent vd., 2002). Bu görüşü paylaşan kuramlardan birisi de Sosyal Bilişsel Kariyer Kuramı'dır.

Sosyal Bilişsel Kariyer Kuramı (SBKK), bireylerin sahip olduğu özelliklerin ve içinde buldukları çevrenin karşılıklı olarak birbirini etkilediğini vurgulayan Bandura'nın (1977) Sosyal Bilişsel Kuramı'na dayanmaktadır (Lent vd., 1994). Bu kuram, bireylerin kontrol edebildikleri özellikleri (inançlar, beklentiler vs.) yoluyla içinde buldukları çevreyi değiştirme gücüne sahip olduklarını öne sürmektedir. Aynı zamanda içinde bulunulan

Değerlendirme Soruları

1. Danışanların kariyer gelişimlerine destek olmada SBKK'den nasıl faydalanırsınız?
2. Sizce SBKK'nin güçlü ve zayıf yönleri nelerdir?
3. Bireyler, sahip oldukları hangi özellikler yoluyla kariyer gelişimlerine yön verebilirler?
4. Gerçekçi olmayan inanç ve beklentiler, kariyer gelişimi üzerinde ne tür etkiler yaratabilir?

Hazırlık Soruları

1. Sizce kariyer gelişiminiz ile hikâye anlatımı arasında nasıl bir ilişki olabilir? Hikâyeler kariyer gelişiminizi nasıl etkileyebilir?
2. Yaşamınızdaki anılarınızı hikâyeleştirerek bir kâğıda yazınız. Bu anıları incelediğinizde tekrar eden nasıl örüntüler görüyorsunuz?
3. Kariyer hikâyenizi değiştirmek isteseydiniz nasıl değiştirirdiniz?

21. yüzyıl geniş çaplı değişiklikleri içeren bir yüzyıl olarak karakterize edilmektedir. Dördüncü Sanayi Devrimi, COVID-19 pandemi süreci, internetin hızı ve insanların dünyanın her yerine erişimi çok hızlı bir şekilde telefon gibi araçlar ile yapabilmeleri gibi bireylerin kariyer gelişimlerini de etkilemektedir. Özellikle bu yüzyıldaki tüm değişimleri bazı kuramcılar akışkan modernlik olarak (Bauman, 2005); bazı araştırmacılar ise bu yüzyılın değişkenliğini, belirsizliğini, karmaşıklığını ve muğlaklığını ifade eden VUCA dünyası (değişkenlik-volatility, belirsizlik-uncertainty, karmaşıklık-complexity, muğlaklık-ambiguity; U.S. Army Heritage and Education Center, 2019) olarak karakterize etmektedirler. Her ne kadar farklı isimler ile karakterize edilse de küreselleşme ve teknolojiye eğrisel değişimlerin sonuçları olarak bu yüzyılın çalışma dünyasının 20. yüzyıldan oldukça farklı olduğu bilinmektedir. 20. yüzyılda daha istikrarlı bir kariyer gelişim süreci söz konusuken ve kariyer gelişimi “merdiveni tırmanmak” olarak karakterize ediliyorken; 21. yüzyılda istikrarlı kariyer günlerinin sona ermeye başladığı söylenebilir. Birçok işin doğasının ve gerektirdiği becerilerin de değişmesi ile belirsiz ve esnek çalışma ortamlarına doğru bir dönüşümün olduğu ve kariyer geçişlerinde artışın söz konusu olduğu görülmektedir (Amundson, 2005; Schwab, 2015). Bu anlamda bu yüzyıl için kariyer psikolojik danışmanlığı çatısı altında önceki yıllarda sunulan hizmetlerden daha farklı hizmetlere ihtiyaç duyulduğu söylenebilir.

Kariyer psikolojik danışmanlığı alanının ilk ortaya çıktığı dönemlerden itibaren gelişimi incelendiğinde, kariyer psikolojik danışmanlığında birinci dalga olarak ifade edilen

Değerlendirme Soruları

1. Kendi kariyer gelişiminizi düşündüğünüzde, nasıl hikâyeler ortaya çıkıyor? Bu hikâyeleri Kariyer Yapılandırma Kuramı açısından inceleyiniz.
2. Kariyer uyum yeteneklerini açısından kendinizi değerlendirdiğinizde, ne görüyorsunuz? Sizce hangi kariyer uyum yetenekleriniz daha zayıf ya da güçlü? Neden?
3. Kariyer gelişiminizi Kariyer Yapılandırma Kuramı'nın Uyum Modeli açısından değerlendirdiğinizde ne fark ettiniz? Uyum sonuçları açısından ne tarz yaşantılarınız var?
4. Uyum sonuçlarınızı hangi nitelikleriniz etkilediğini Kariyer Yapılandırma Kuramı'nın Uyum Modeli boyutları açısından tartışınız.
5. Kariyer Yapılandırma Kuramı'nı dezavantajlı gruplar ile kullanırken nelere dikkat etmelisiniz?

Hazırlık Soruları

1. Sahip olduğunuz bireysel özelliklerinizin kariyer kararlarınızı nasıl etkilediğini düşünürsünüz?
2. Bugüne kadar kariyerinizle ilgili aldığımız tüm kararları düşündüğünüzde; bu kararlarınızda belirleyici rol oynayan kişiler ve/veya durumlar nelerdir? Bu etmenler kariyer kararlarınızda nasıl bir rol oynadı?
3. İçinde yaşadığımız kültür, kariyer kararlarınızı nasıl etkilemektedir?

Giriş

Bireyin kariyer gelişimini inceleme, betimleme ve açıklama girişimleri Parsons'un Mesleki Büroyu 1909 yılında kurmasıyla birlikte başlayıp günümüze kadar devam etmiştir. Yaklaşık son yüz yılı kapsayan bu süreç içerisinde pek çok kariyer gelişimi kuramı geliştirilmiş, bu kuramların varsayımlarını test etmeye yönelik araştırmalar yapılmış, kariyer gelişim müdahaleleri uygulanmış ve bu müdahalelerin etkililiği değerlendirilmiştir. Yapılan araştırmaların sonuçları, uygulamalar ve geliştirilen müdahaleler zaman içerisinde kariyer gelişim kuramlarının değişime uğramasına ve bu kuramların temelinde yatan yaklaşımların değişmesine neden olmuştur. McMahon ve Patton (2018), söz konusu değişimlerin öncelikli olarak kariyer gelişim süreciyle ilgili yapılan çalışmalarda gerçekleştiğini vurgulamaktadır. Tarihsel olarak kariyer psikolojik danışması alanında yapılan çalışmalar gözden geçirildiğinde; önceki araştırmaların ve kariyer gelişim müdahalelerinin ilgi, kişilik ve değer gibi bireysel özelliklere ve bu özelliklerin kariyer gelişimi üzerindeki etkisine odaklanma eğiliminde olduğunu söylemek mümkündür. Farklı disiplinlerin kariyer psikolojik danışması alanına yansımalarıyla birlikte geleneksel olarak ihmal edilen coğrafi konum, sosyoekonomik koşullar ve eğitim ortamları gibi bağlamsal faktörlerin kariyer gelişimi üzerindeki etkileri keşfedilmeye başlanmıştır (Savickas, 2015). Araştırmalarla zenginleşen kariyer psikolojik danışması alanında zaman geçtikçe sosyal adaleti sağlamaya

farklılıklarına ve ihtiyaçlarına göre değerlendirme aracını kolaylıkla seçme özgürlüğünü tanımaktadır. Öte yandan nitel değerlendirme araçları uygulanması sonrasında puanların ortaya çıkmaması, diğer bireylerin sonuçlarıyla karşılaştırma imkânı sunmaması ve yorumların öznel olması nedeniyle eleştirilmektedir. Sistemler Kuramı Yaklaşımı'nda nicel değerlendirme araçları olmadığı için kariyer psikolojik danışmanları kendi yetkinlik ve bakış açılarına göre sonuçları yorumlamakta ve bu nedenle nitel-nicel değerlendirme sonuçlarını birlikte yorumlama imkânı bulamamaktadır.

Değerlendirme Soruları

1. Hangi etmenler bireylerin kariyer gelişim sürecinde rol oynamaktadır? Bu etmenler, bireylerin kariyer geçiş ve kariyer planlama sürecini nasıl etkilemektedir?
2. İçerik ve süreç etmenleri arasındaki benzerlik ve farklılıklar nelerdir?
3. Dezavantajlı gruplarda yer alan bir danışanla çalışırken Sistemler Kuramı Yaklaşımı'nı benimsemeyeniz durumunda nelere dikkat edersiniz?

Bölüm 11

ÇALIŞMA PSİKOLOJİSİ KURAMI

Ayşenur Büyükgöze-Kavas

Furkan Kirazcı

Hazırlık Soruları

1. Sizce insana yakışır bir işin hangi özelliklere sahip olması gerekir?
2. Sizce bir bireyin yaşadığı ötekileştirilme deneyimleri onun iş hayatını nasıl etkiler?

Kuramın Tarihsel Gelişimi ve Ortaya Çıkışı

21. yüzyılın gelişi ve bu yüzyılda meydana gelen olaylar dünya çapındaki ekonomik, sosyal ve kültürel birçok kurumun doğasında oldukça derin ve hızlı bir değişimi tetiklemiştir. Teknolojinin baş döndürücü bir hızla gelişimi ve buna bağlı olarak ani bir şekilde küreselleşen dünyaya ayak uydurmak ise gittikçe zorlaşmaya başlamıştır. Dünya genelindeki bu hızlı değişimin ise en çok hissedildiği alanlardan birisinin kuşkusuz ekonomik piyasalar olduğu söylenebilir. Ekonomik piyasalardaki bu değişim ise küreselleşmeye bağlı olarak artan rekabet ile daha çok tetiklenmiştir. Buna göre bazı ülkelerdeki rekabetçi küresel piyasa güçleri, yüksek vasıflı ve üretken iş gücü için artan bir talep yaratmışlardır. Yüksek vasıflı çalışanlara yönelik artan talep ise eğitimde mükemmellik ve daha yüksek standartlara yönelik istekleri küresel çalışma hayatının temel taşları hâline getirmiştir (Coutinho vd., 2008). Buna bağlı olarak şirketler ve kurumlar, çalışanların; çeşitli yabancı dilleri bilmelerini, saygın üniversitelerden mezun olmalarını, teknolojiyi etkin bir şekilde kullanmalarını, analitik düşüncelerini, psikolojik esneklik ve problem çözme yeteneğine sahip olmalarını beklemektedirler (Blustein, 2006). Peki bütün bu aranan yeterliliklere sahip olmak için toplumun her kesiminden insanın ulaşabileceği kaynaklar eşit midir? Diğer bir deyişle herkes iyi bir eğitim alma ve iş gücü piyasasındaki rekabete ayak uydurabilmek için kendini geliştirme konusunda eşit fırsatlara sahip midir? İşte problem tam da bu kısımda başlamaktadır. İnsanların çoğu eğitim imkânlarının dağılımı ve iş fırsatlarının mevcudiyetindeki büyük değişimlerle boğuşmak zorunda kalırken, geleneksel kariyer gelişimi ve kariyer psikolojik danışmanlığı kuramlarının temel varsayımları toplumdaki bu

Değerlendirme ve Sonuç

İlk olarak Blustein'in (2006) çalışma psikolojisi çerçevesi olarak ortaya koyduğu çalışmalar daha sonra 2016 yılında Duffy ve diğerleri tarafından geliştirilerek Çalışma Psikolojisi kuramı olarak yayımlanmıştır. Kuram özellikle orta sınıf beyazların ve kariyer seçimlerinde tamamen özgür olduğu varsayılan bireylerin kariyer gelişimini açıklamaya çalışan klasik kuramlara karşı çıkmakta ve onların ötekileştirilmiş, sosyoekonomik düzeyi düşük, işsiz ve geçici işlerde çalışmak zorunda kalanlar ve benzeri grupların kariyer gelişimini açıklamakta yetersiz kaldığını belirtmektedir. Kuram odağına insana yakışır işi almış, ilk aşamada insana yakışır işin yordayıcılarını sonrasında da insana yakışır işin sonuçlarını açıklamaya çalışmıştır. Kuramın klasik kuramlardan en büyük farkı, farklı nedenlerle ötekileştirilmiş bireyleri de dikkate almasıdır. Kuram çerçevesinde önerilen modelin sınanabilmesi için birçok ölçme aracı da geliştirilmiştir. Bu yönüyle yani önermelerinin sınanabilir olması kuramın güçlü yanlarından biri olarak değerlendirilebilir. Ancak kurama ilişkin deneysel çalışmaların ve uygulamaların oldukça az olması da geliştirmeye açık bir yön olarak karşımıza çıkmaktadır.

Değerlendirme Soruları

1. Sizce bireyin sahip olduğu hangi özellikler onun insana yakışır bir iş elde etmesini kolaylaştırıcı olabilir?
2. Sizce insana yakışır bir işe sahip olmanın sonuçları neler olabilir?

Bölüm 12

KABUL VE KARARLILIK TERAPİSİ VE BİLİNÇLİ FARKINDALIK UYGULAMALARI

Gökçen Aydın

Hazırlık Soruları

1. Üçüncü dalga bilişsel davranışçı yaklaşımların kariyer psikolojik danışmanlığına yönelik bakış açısı nasıldır?
2. İş yaşamında psikolojik esneklik nedir?
3. Kariyer psikolojik danışmanlığında bilinçli farkındalık uygulamaları nelerdir?

Kabul ve Kararlılık Terapisi

(Acceptance and Commitment Therapy; ACT)

Bilişsel davranışçı yaklaşımın üçüncü dalgası olarak kabul edilen Kabul ve Kararlılık Terapisi (Acceptance and Commitment Therapy; ACT), bireylerin acı, keder, üzüntü gibi olumsuz deneyimlerini değiştirmek yerine farkındalıkla kabul etme ve değerleri doğrultusunda kararlı adım atması yönünde bir yaklaşım benimser (Hayes vd., 1999). Kuramın İngilizce yazılışının baş harflerinden oluşan ACT, tek tek harflerin telaffuz edilmesiyle değil, bütün olarak İngilizce telaffuzuyla (/ækt/) okunur. Bu nedenle bölüm boyunca Kabul ve Kararlılık Terapisi'ni temsil edecek şekilde ACT kullanılmıştır.

1980'li yılların başında Steven C. Hayes tarafından ortaya atılan ve geçtiğimiz 20 yıl boyunca gerek teorik gerekse uygulamada oldukça ilerleme kaydeden ACT, post-modern dünyada kabul edilen kanıt temelli psikoterapi yaklaşımları arasında yerini almıştır (Hayes vd., 2006). ACT'e göre, insan yaşamı yalnızca olumlu (mutluluk, sevinç, coşku gibi) duygu ve deneyimlerden değil, olumsuz ve acı veren (kaygı, hüznün, endişe gibi) deneyimlerden oluşur ve bireyler bu olumsuz duygu ve düşünceleri yaşamın kaçınılmaz bir parçası olarak ele almalıdır (Hayes ve Lillis, 2012). Bireylerin enerjisini problemlerle savaşarak onları değiştirmek ya da bastırmaya çalışmak yerine değerleri doğrultusunda bir yaşam sürmeye yönelttiğimizde, daha anlamlı bir hayat yaşayacaklarına inanılır. Bu nedenle ACT

neklığın artırılmasını amaçlayan ACT uygulamaları yaşantısal deneyimler, metaforlar ve egzersizler aracılığı ile kazandırılabilir. Dolayısıyla uygulamalı eğitimlere katılarak, ACT'in kariyer psikolojik danışmanlığında kullanılması alanında uzmanlaşmak önemlidir.

Değerlendirme Soruları

1. Kabul ve Kararlılık Terapisi'nin (ACT) kariyer psikolojik danışmanlığına yönelik bakış açısı nasıldır?
2. İş yaşamında psikolojik esneklik nasıl sağlanır?
3. Kabul ve Kararlılık Terapisi ve bilinçli farkındalık uygulamalarının ortak özelliği nedir?
4. Kariyer psikolojik danışmanlığında bilinçli farkındalık uygulamaları hangi problem alanlarında kullanılabilir?

Bölüm 13

KARİYER PSİKOLOJİK DANIŞMASINDA YAPILANDIRMACI YAKLAŞIMA DAYALI DİĞER KURAM VE MODELLER

Habibe Bilgili

Hazırlık Soruları

1. Umut, bireyin gelecekte olumlu sonuçlar elde edeceğine dair inancını temsil ederken; eylem, davranışı, işi veya harekete geçmeyi ifade etmektedir. Buna göre bu kavramlar, bireyin kariyer gelişiminde nasıl bir rol oynuyor olabilir?
2. Gelecekte ne gibi işler yapabilirsiniz veya hangi iş alanlarında çalışabilirsiniz? Bunlar üzerine düşünün. Peki, kariyer seçeneklerinizi belirlerken bu süreçte hangi unsurlar daha çok etkili oldu?
3. Bir yelkenli, rüzgâr gücünden yararlanarak yol alan bir çeşit teknedir. Yelkenli, su da hem rüzgâr enerjisiyle hareket eder hem de rüzgâra karşı yol alır. Bu durumda kariyer yelkenlisi modelinde, yelken, rüzgâr ve su, kariyer sürecindeki bazı unsurları ifade ediyor olsaydı bunlar neler olurdu?

Bu bölümde son zamanlarda kariyer psikolojik danışmanlığında yapılandırmacı yaklaşımın bakış açısına dayalı olarak geliştirilen, Umut Eylem Kuramı (Niles vd., 2011; Niles vd., 2021), Kariyer Teker Modeli (Amundson, 1989; Amundson vd., 2005) ve Kariyer Yelkenlisi Modeli (Korkut-Owen vd., 2015b) tanıtılmıştır. Yapılandırmacı yaklaşım, bireylerin çevresel olaylara yüklediği anlamlar üzerinde durur ve birey ile çevre arasındaki etkileşimi vurgular. Kariyer psikolojik danışmanlığında, yapılandırmacı yaklaşım, geleneksel bakış açısından uzaklaşılması, yaşam boyu kariyer gelişiminin ön plana çıkması ve bireylerin kendi kariyerini yönetmeye başlamalarıyla önem kazanmıştır. Yapılandırmacı yaklaşıma dayalı kariyer psikolojik danışmanlığında, danışana aktif rol verildiği, danışanla iş birliği içinde çalışıldığı, yaşam boyu kariyer gelişimine bütüncül bakıldığı, danışanın yaşam-kariyer ilişkileri üzerinde düşünmesi için teşvik edildiği ve bu ilişkileri değiştirmesi ve uyarlaması için cesaretlendirildiği görülmektedir (Patton ve McMahon, 2006a). Bu bakış açısıyla geliştirilen ve bu bölümde sunulan Umut Eylem Kuramı, Kariyer Teker Modeli ve Kariyer Yelkenlisi Modeli, danışanın kariyer psikolojik danışmanlığında aktif bir şekilde rol almasına ve kendini keşfetme sorumluluğunu almasına dayanır. Bu kuram ve modellerin ortak özelliklerinden bir

TEKNOLOJİK DEVAMLILIK FETİŞİZMİ: META İNSAN VE YENİ SANAL YAŞAM

Serdar Kuzey Yıldız

GİRİŞ

İnsan, yeryüzünde kendine atfedilmiş büyük varoluş misyonunu yerine getirmeye çalışan bir iz bırakıcı olarak tarihin her döneminde bir üst basamağa tırmanmanın yolunun teknolojiyi geliştirmekten geçtiğinin her zaman farkındadır. Erken dönemlerde gündelik yaşayışı köklü değişimlere uğratarak heyecanı ve korkuyu aynı anda yaşatabilen inovatif icatlar dikkat çeker. Bu teknolojilerin kullanımı eşit değildir. Ancak her yeni teknoloji icat edildiği topraklar içerisinde yaygınlık kazandıktan sonra yavaş yavaş sınırları aşmaya başlar ve kullanım alanı görece küresel bir hâl alır. Üstelik her bir inovasyon onlarca yıllık deneyimin ve deneylerin ürünüdür; eklektik bir anlayışla birbirlerinin üzerine bina edilirler. Tarihte genellikle askerî kapasitenin artırılması, güvenliğin sağlanması, düşmana gözdağı verme gibi kaygılar sonucunda ortaya çıkan ve gelişen haberleşme sistemleri, telekomünikasyon altyapısı ve nihayetinde internet teknolojisi bu duruma en iyi örneklerdir. Bu teknolojilerin sivilleşmesi uzun yıllar almışsa da bugün her birinin modern bireyin dünyasındaki yeri bilinçsiz birer sahiplikten ibarettir. Teknolojinin neredeyse haftalık güncellemelerle kabuk değiştirdiği günümüzde çağın ruhunun tüketmek olduğu da göz önüne alındığında insanı şaşırtabilecek yeni bir teknolojik ürünü ortaya koymanın zorluk derecesi daha iyi idrak edilebilir.

Medeniyetler için maddi refahın sağlanması, yaşam kalıplarının ve toplumsal davranışın dizayn edilmesinin koşulu her çağda teknoloji olmuştur. Üstelik tarih öncesinden modern çağa kadar uzanan insanın yaşama direnme ve tarihte iz bırakma içgüdüünün dayanağı da teknolojidir. Teknolojinin temeldeki iddiası insanın iyileştirilmesi, bir önceki nesilden daha iyi olmasıdır. Birincil

sındadır. İnsan deneyimlemekte olduğu bu evrimi yanlış yorumlarsa ve tarihteki hatalarından ders almazsa Stephenson'ın Snow Crash romanında tasvir ettiği distopik metaverse gerçek olabilir. Ancak metaverse doğru inşa edildiği takdirde fırsatlarla ve zenginliklerle dolu bir dünya bizi beklemektedir. Tıpkı her yeni teknolojik ilerlemede olduğu gibi.

Bölüm 2

SANAL EVRENDE “YAŞAMAK” ÜZERİNE

Gülsün Bozkurt

GİRİŞ

İnsanı diğer canlılardan ayıran en önemli özelliklerden biri içinde yaşadığı dünyayı ihtiyaçları doğrultusunda sürekli dönüştürebilme yetisidir. Başlangıçta doğada hayatta kalma ve doğaya uyma dürtüsü etrafında şekillenen yapıp etmeler zamanla doğayı kontrol edebilme noktasına evrilmiştir. Ürettiği teknolojiyle bugünkü dünyayı hayatta kalmanın ötesindeki anlam arayışlarıyla donatan insanın bir sonraki yolculuğu ise merak konusudur.

Kant'ın yetkinleşmenin ön koşulu olarak ileri sürdüğü aklını kullanma cesareti (Kant, 1784) insanın aydınlanmasına dayanak oluşturan en önemli adımlardandır. Bu cesaret insanın düşünmesine, sorgulamasına, eleştirmesine ve her daim kendini ve çevresini dönüştürebilmesine olanak tanımaktadır. Bu farkındalıkla yol alan insan kendi yaşama deneyimini inşa eder. Başkasının kılavuzluğunda belirlenmiş bir hayat kişiyi kendi dünya atıflarının dışında bir yerde konumlandırır. Yaşama sanatı iyi veya kötü, doğru ya da yanlış her bireyin kendini nasıl gerçekleştirmek istediğinin ve günün sonunda nasıl gerçekleştiğinin somutlaştırılmasıdır.

Düşünce tarihinde insanın neden ve nasıl yaşadığı, yaşamayı nasıl anlamlandırdığı üzerine yapılmış pek çok çalışma mevcuttur. Hem disiplinler nezdinde hem de bireysel olarak ele alınan bu türden sorgulamalara mutlak cevaplar verilememesi bu arayışı ve sorgulamayı anlamsız hâle getirmez. Bilakis yaşamın devingenliği insana ait bu sorgulamalara sürekli bir cevap arama çabasıyla anlam kazanır.

İnsanın hem yaşama hem de yaşamına dair belli bir farkındalık geliştirebilmesi için öncelikle yaşamayı bir mesele hâline getirmesi gerekmektedir.

eğitim, boş zaman kavramı, hobiler ve daha pek çok şey yalnızca yaşamayı değil yaşamayı geliştiren düşüncenin biçimlendirilmesini de hedeflemektedir.

Etrafımızı kuşatan akıllı nesnelere, yalnızlığın üstesinden gelmeye çalıştığımız platformlar, online pratiklerimiz ve daha birçok dijital aktivite bir anlamda bizi çağı yönlendiren bir aracın gölgesinde yaşamaya mecbur bırakmaktadır. Büyük anlamlar yüklenen metaverse evren de insanın nasıl düşünmesi ve konumlanması gerektiği konusunda ileri sürülen potansiyel bir gelecek vaadidir ve bu varsayımların bugüne kadar geliştirilen diğer pratiklerden farkı tam anlamıyla muğlaktır. Bugün için gerçekleşmesi uzak bir ihtimal olan bu geleceğin insanın kendini mutlu hissetmesine ne kadar hizmet edip edemeyeceği ise herkesin gelecek hakkında kendi düşüncesini ortaya koymasından daha fazlası değildir. Nihayetinde bizi daha iyi hissettiren her yeniyi kucaklama refleksimiz metaverse evren varsayımını çalışabilecek popüler bir alan hâline getirirse de tepeden inme bu yeni evren dayatması pek çok açıdan şüphe uyandırmaktadır. Büyük anlamlar yüklenen metaverse de insanın nasıl düşünmesi ve konumlanması gerektiği konusunda ileri sürülen potansiyel bir gelecek vaadidir. Bugün için gerçekleşmezi uzak olan bu geleceğin insanın kendini gerçekleştirmesine ne kadar hizmet edip edemeyeceği ise herkesin kendi anlamlandırabileceği varoluşsal yolculuğunu yorumlamasından başka bir şey değildir.

Bölüm 3

SANAL DÜZLEMDE GÖRSEL KÜLTÜRÜN VE İMGENİN TEMSİLİ

“İnsanların yok oluşundan bahsederken bunu soyut bir metafor olarak kullanmıyorum. Kastettiğim şey şu: Hemen hemen iki bin yıldır alfabe ile şekillenen Avrupalı ve Batılılara özgü zihinsel uzamın yerini, bilgisayarın şekil verdiği yeni bir algısal uzam alıyor. Başka bir deyişle baskın bir metafor olan alfabetik metin diğer bir metafora; bilgisayar ekranına toslamış durumda.”

Barry Sanders, (1999: 136)

Fatma Nazlı Köksal

GİRİŞ

Dijital dönüşüm olarak adlandırılan süreç, giderek artan bir şekilde insanların gündelik yaşam pratiklerine entegre olmakta ve kültürel yapıyı etkilemektedir. Özellikle yeni imgesel formların ortaya çıkması ve insanların imgelere yönelik algı ve anlamlandırma biçimlerinin çeşitlenmesi, görsel kültüre yönelik yansımalarla daha da görünür hâle gelmiştir (Burnett, 2004). Gitgide küresel bir görünüm kazanan kültürel yapı ve bu yapıyı genişleten dil ve iletişim, tüm lisanslarda konuşulabilen “dijital görüntü” üzerinden şekillenmektedir (Hall ve Evans, 1999). Söz konusu şekillenme, görsellik üzerinden yaratılan bir kültüre de zemin oluştururken, teknolojinin kültüre yansıması, görsel imgelerin önemli birer kültürel kod hâlini almasına ve dijitalleşen imgelerin giderek yaygınlaşmasına neden olmaktadır. Rubinstein ve Sluis, teknolojiyle birlikte günümüz iletişim ortamlarını etkileşimli imgeler sunan dijital görüntüler mekânı olarak tanımlar ve dijital görüntülerin “çoğulculuk ve çokluğun ürünü olarak ne görünür ne de görünmez olarak şüphesiz paradoksal bir nesne” olduğunu belirterek dijitalleşen görüntülerin doğruluğundan ziyade olgusallığına dikkat çeker (Rubinstein ve Sluis, 2013: 24-37).

kontrol altına alan sanal bir ortamın yeni adıdır ve bu nedenle hakikat'i değil sanı'yı güçlendiren sentetik bir aklın ürünüdür.

Bölüm 4

GOFFMAN'IN BENLİK SUNUMU KURAMI BAĞLAMINDA METAVERSE OYUNLARINDA KİMLİK İNŞASI

Hakan Sağlam

GİRİŞ

Teknoloji şirketlerinin son yıllarda önemli ölçüde yatırım yaptığı üç boyutlu sanal bir evreni ifade eden metaverse, “Meta” adını alan ünlü sosyal medya platformu Facebook’un güncel açıklamaları sayesinde geniş bir kitlenin ilgisini çekmeye başlamıştır. Toplumsal ilişkilerin yapısını önemli ölçüde etkileyecek olan metaverse’ün; ticaret hayatından eğitim sektörüne, sosyal-kültürel faaliyetlerden hukuki sisteme kadar uzanan geniş bir alanda önemli değişikliklere kapı açacağı öngörülmektedir. Teknolojinin yeni bir toplumsal düzen oluşturması anlamında ikinci bir evren olarak da görülebilecek metaverse, önünde durulamayacak “dijital bir patlama”ya işaret etmekte ve sağladığı büyük avantajların yanında evrimi kestirilemeyen çok sayıda belirsiz nokta içermektedir.

Teknolojinin şekillendirdiği metaverse evreninde sosyal yaşamın önemli bir parçası olarak boş zaman ve eğlence alışkanlıkları da önemli değişimler geçirmekte, fiziksel katılım olmadan bir avatarla kurgusal evrende varoluş deneyimi bambaşka bir sürecin başladığını göstermektedir. Metaverse’ün gelişim gösterdiği ilk alanlardan olan dijital oyunlarda, oyuncular avatarları yoluyla diğer oyuncularla tanışarak etkileşim kurmakta ve sanal kimlikleriyle oyunun haz verici evreninde bir akış yaşamaktadır. Bireylere kendilerine benzer ya da hayal ettikleri, sahip olmak istedikleri özellikleri bünyesinde bulunduran avatarları vasıtasıyla sanal kimlikler inşa edebilme olanağı sağlayan metaverse, bu özelliğiyle oyuncular için bir benlik sunumu alanı olarak da değerlendirilebilir.

Gadamer’e göre oyunlar bireyin saf kendiliği ifade edişidir. Oyunun doğasındaki süreklilik ve amaçsızlık sabit şekilde kendini yenilemektedir. Böylece

Metaverse oyunlarındaki sanal kimlik inşasında kişi ilk olarak gerçek hayattaki kimliğini çevrim içi temsiliyle birleştirmektedir. Kişinin benliği ile avatar benliği zamanla birbirlerini yansıtır hâle gelmekte ve kişi için avatari onun basit bir temsilden öteye geçerek kendini gördüğü paralel gerçekliğini ifade etmektedir. Kişinin gerçek hayatındaki kimliği ile avatar kimliği arasındaki farkın mümkün olan en az seviyede olması, hatta (düşük bir ihtimal de olsa) kaybolması, sağlıklı bir psikolojik sürece işaret eder. Avatari ile sanal ortamda gerçek hayattakine göre daha fazla vakit geçiren bireyin avatar kimliğinin gerçek hayattaki kimliğine hükmetmeye başladığı durumlarda bunun sadece gerçek hayattaki kimliği üzerine değil, avatar kimliği üzerinde de etkileri olacaktır. Bu durum kişilerin benlik sunumlarını da belirli ölçüde etkileyecektir. Bunun sebebi, kişinin gerçek hayattaki kimliği ile avatar kimliği arasında karşılıklı olarak birbirlerini etkileyen diyalektik bir sürecin kaçınılmaz hâle gelmesidir. Kişinin avatar kimliğinin gerçek hayattaki kimliğine bağlı gelişebileceği gerçeğinden hareketle, gerçek hayattaki kimliğinden (aslından) koparak farklı bir doğrultuda gelişmeye başlayan bir avatar kimliğin yol açtığı çelişkiler bireyi gerçeklik algısından uzaklaştıracak bir aşamaya ulaştığında psikolojik sorunlara zemin hazırlayacaktır. Bu psikolojik sorunların neler olabileceği ve hangi boyutlara ulaşabileceği gerçek ve sanal kimliklerin birbirleri üzerindeki etkilerini ele alacak siber psikolojinin klinik araştırmaları neticesinde kapsamlı olarak aydınlatılabilir.

Bireylerin sosyalleşme süreçlerinin sağlıklı gelişmesini etkileyen çok sayıda faktör olmakla birlikte basit bir boş zaman geçirme ve eğlence etkinliği olarak değerlendirilemeyecek oyunlar, bireyin sadece kendine yönelik (içsel) eğilimleri değil, sosyal ilişkilerinin niteliğine yönelik de (dışsal) önemli ipuçları sağlamaktadır. Bu nedenle özellikle oyun bağımlılığı noktasına gelmiş kullanıcıların davranışsal problemlerini içeren psikopatolojilerden korunmak için dijital okuryazarlık becerilerinin geliştirilmesi büyük önem arz etmektedir. Sağlıklı bir toplumsal yapının ancak sağlıklı psikolojiye sahip bireyler sayesinde oluşabileceği gerçeğinden hareketle, ilkökul seviyesinde başlayan, dijital okuryazarlığı da içeren medya okuryazarlığı eğitimi sayesinde bireylerin teknolojinin faydaları kadar zararları konusunda da eğitilerek bilinçlenmeleri sağlanmalıdır.

METAVERSE EVRENİNDE SANATIN MORFOLOJİSİNİN GERÇEKLIK ALGISINA ETKİLERİ

Selin Kiraz Demir

GİRİŞ

Bundan yaklaşık otuz bin yıl geriye gittiğimizde sanatın insan hayatındaki sarsılmaz yerinin izlerine rahatlıkla rastlayabiliriz. Kişinin kendini ifade aracı olmasının yanı sıra inanç ve ritüellerin sembolik bir formu olarak da düşünülen sanatın ilk örneklerini, Batı geleneğindeki estetik felsefesinin merkezine yerleşen bir üslup takip etmiştir. Rotamızı Orta Çağ'a çevirdiğimizde ise sanatın neredeyse hiç okuryazar olmayan toplumları eğitmeye hizmet eden bir işleve sahip olduğunu görürüz. Klasik rasyonellik ve güzellik değerlerinin sanatsal ifade biçimlerini dönüştürdüğü bir döneme denk gelen Avrupa Rönesansı'na baktığımızda sanatçılara artık zanaatkâr değil, gerçek bir entelektüel gözüyle bakıldığını ve toplumdaki görece düşük statülerinin yerini bir saygınlık aldığını söyleyebiliriz. Tüm bu gelişmeler yaşanırken sanatsal üslupta benimsenen dönüşümler çoğu kez toplumsal değişimlerin bir sonucu olarak yansıtılır.

İlk sanatın neden yapıldığını tam olarak bilmek olanaksızdır ama kuşkusuz olan şudur ki insanlar gördükleri bazı şeyleri kalıcı hâle getirmek istemişlerdir. Dolayısıyla sanatın ilk örnekleri, üretenin doğada gördüklerini -yapabildiği kadar- gerçeğe en yakın hâlde yansıtmasıyla değerlendirilir. Zamanla sanatın gerçeğe olan bağının sarsıldığı, onun yerine kişisel duygu ve düşüncelerin dışavurumu için etkili bir alan olarak ifade bulduğu söylenebilir. Böyle bir durumda ise çeşitli ikonlar, sembeler ve semboller sanatın ayrılmaz bir parçası hâline gelmiştir. Doğada bireyin psikolojisini etkileyen her varlık, nesne, form ya da renk, sanata bir ifade biçimi olarak yansır ve ona bir anlamda ruh kazandırır. Nedeni ne olursa olsun sanat yüzyıllardır bireyin hayatının vazgeçilmez

bir ortam ve bir aradalık bu yeni dünya düzeninin en önemli bileşenleri gibi görünüyor. Böyle bir atmosferde yeni teknolojilerin bireyleri görece özgür bir platformla buluşturması da oldukça değerli bir gelişme olarak görülebilir.

Yüzyıllardır hayatı anlamlandırmamızı sağlayan ve yaşamı daha değerli kılan, kişinin kendini ifade aracı olarak ortaya çıkan sanat ve sanata dâhil olan her alan da çağın tüm pratikleri gibi teknoloji ile evrilerek sarsılmaz varlığını sürdürmüştür. Bireyin imkânları ve kullandığı araçlar geliştikçe ürettiği sanat eserinin ulaşılabilirliğinin arttığı ve zaman/mekân sınırının ortadan kalktığı rahatlıkla söylenebilir. Yalnızca bu bile sanat ve teknoloji ilişkisine mesafeli bakmanın bir haksızlık olacağını göstermektedir. Fakat yine de teknolojinin herkese aynı anda ve aynı şekilde ulaşmıyor olması, sanatın üretimi ve sunulmasında da eşit olmayan süreçleri beraberinde getirebilmektedir.

Bugün geldiğimiz noktada teknolojinin sanata olan etkisindeki en tartışmalı noktalardan biri, bu araçlara ulaşılma imkânının sınırlı olmasıdır. Bu durum, mevcut gerçekliğin sınırlarını aşabilmenin maddi koşullara bağlanmasına sebep olabilmektedir; bu da sanatın özüne vurulabilecek darbelerden biridir. Çünkü herkesin sanata ihtiyacı vardır ve sanat hem üretimi hem de tüketimi bakımından toplumdaki herkesin ulaşabileceği bir yerde konumlanmalıdır. Şu da bir gerçektir ki insanlık tarihinde mağara duvarlarına çizilen ilk resimler için farklı materyallere ihtiyaç duyulmamıştır. Sanatın sanat olabilmesi ve kendi gerçekliğini inşa edebilmesi için yalnızca teknolojiye gereksinim duyulmaz, ama teknolojiyle de gelişebilir ve dönüşebilir. Dönüşmelidir de.

Çalışma kapsamında ele alınan farklı sanat alanlarındaki yeni deneyimler ve gelecekte yapılması planlanan etkinlikler bize sanatın metaverse'ün bir parçası olmaya, onu beslemeye ve ondan beslenmeye niyetli olduğunu göstermektedir. Hiç şüphesiz yeni tanımlar, kavramlar, türler ve araçların sanata dâhil olmasıyla birlikte sanatın özü ve değeri korunarak yeni gelişmeler yaşanmaya; hem üretime hem de tüketicisine katkı sağlamaya devam edecektir.

Bölüm 6

TEKNOLOJİK YENİLİĞİN MESİHVARİ SUNUMU: METAVERSE VİZYONU ÖRNEĞİ

Umur Bedir

GİRİŞ

Facebook'un, yeni adıyla Meta, CEO'su Mark Zuckerberg, 28 Ekim 2021 tarihinde yaptığı ve bir saatten uzun süren video sunumunda metaverse vizyonunu tüm kamuoyuna ve tabii ki potansiyel ortaklarına takdim etti. İncelikli bir halkla ilişkiler çalışmasının ve gerek multimedya özellikleri gerekse içeriği açısından güçlü bir prodüksiyonun ürünü olduğu daha ilk bakışta anlaşılan bu sunum, gelecekte kurulması planlanan metaverse evreninde bütün bir yaşamın (sosyal ilişkiler, eğlence, oyun, spor, iş, eğitim, ticaret) nasıl şekilleneceğini ele almaktaydı. İnsanın bedensel ve coğrafi sınırlılıklarından özgürleştiği, maddi eşitsizliklerinin ortadan kalktığı, bildiğimiz dünyanın ve internetin toksik ilişkilerinden ve kaotik yapısından arınmış (veya en azından öyle olacağı idealize edilen) bu yeni metaverse evrenini tüm ayrıntılarıyla betimlerken, Zuckerberg'ün de inananlarına cennette sonsuz haz, mutluluk ve uyumlu bir yaşamı vadeden bir peygamber kisvesine büründüğünü söylemek hiç de abartılı bir yorum olmaz. Dinî mitoslarda "insanlığın kurtuluşu" motifi bir peygamber veya misyoner üzerinden cisimleşen manevi gücün önderliğine bağlanırken, çağdaş mitlerde bunun yerini teknolojik yeniliğin ve yüksek teknoloji endüstrisinin gücü almıştır.

Bu araştırmada teknolojik yeniliğin mesihvari (*messianic*), belirli ölçülerde abartılmış ve mistifiye edilmiş sunumu metaverse örneği üzerinden ele alınacaktır. Konunun bu tekil örneğin de ötesine geçen bir öneme haiz olmasının nedeni, söz konusu sunum biçiminin yüksek teknoloji endüstrisinin genelinde ve onun diğer popüler ikonları tarafından da sıklıkla kullanılıyor olmasıdır. Araştırmanın ilk bölümünde mesihvari sunumu yüksek teknoloji endüstrisinin ayrılmaz bir parçası ve hatta doğal koşulu hâline getiren dinamikler irdelenme-

tehdit eden yanlış bilgilerin yayılması, otoriter rejimlerin palazlanması, çocuk ve ergenlere yönelik duygusal zararlar gibi pek çok soruna gözlerini yuman bir şirkete bu konuda nasıl güvenebiliriz?

GİRİŞ

Teknolojik gelişmelerin üstün bilgi ve ekonomi ile iç içe geçtiği günümüz küresel dünyasında yeni nesil anlayış metaverse etrafında şekillenmeye başlamıştır. Sosyal medya platformlarıyla iletişime ve dolayısıyla tüketime aracılık eden büyük markalar, sanal bir yaşam evreni sunan metaverse içinde yer almaya; ürün ve hizmetlerinin alıcısıyla bu yeni dünyada buluşmaya hazırlanıyor.

İlk kez 1992 yılında Neal Stephenson'ın “Snow Crash” romanında kullanılan “metaverse” sözcüğü, “meta: öte” ve “verse: evren” anlamlarını taşımaktadır. “Evren ötesi” şeklinde tercüme edilebilen bu kavramsal ile kitlesel tanışıklık ise Facebook sosyal medya sitesi sahibi Zuckerberg'ün platformunun adını “Meta”ya dönüştürmesi ile ortaya çıkmıştır. Zuckerberg ekonomik anlamda metaverse projesi ile ilgili gelecek tahminlerinde önde gelen isimlerden biri olarak görülüyor. Proje, sosyal medya kullanıcıları tarafından hâlâ çözülmeyi bekleyen bir bulmaca misali karışık ve analitik hesaplarla tanımlanacak kadar da matematiksel sanal bir dünya olarak değerlendirilmektedir.

Ekonomik hedeflerin örtüştüğü yeni nesil bilişim ve teknolojik imkânlar doğası gereği tüketime özgü ve renkli bir sanal seyahati öngören yapısıyla kâr maksimizasyonu bağlamında iyi bir pazar olarak görülmeye başlanmıştır. Bunda tüketim toplumunun payı büyük olmakla birlikte dijital yetkinlikler, pazarda yoğunlaşan üreticinin sahip olduğu sermaye yapısı ile ilişkili görülmektedir.

İlgili çalışmanın amacı metaverse ekonomisini açıklamaktır. Bu bağlamda öncelikle metaverse ekonomisinin çerçevesi belirlenecek, daha sonra ise yapılan güncel araştırmalarda sunulan ekonomik öngörülere değinilecektir. Kaynak tara-

öngörüler, bu yeni sanal ortamların paydaşlarının da yer aldığı bir inovasyon buluşmasında ortaya konulmuştur. Bu etkinlik ile ortaya konulan öngörüler ise 2035 yılını ve ileri tarihleri yansıtmaktadır. Çalışmaların hızlı bir şekilde başladığının açıklandığı toplantıda metaverse'ün, sosyalleşme, ticaret, eğitim ve sanat gibi pek çok noktada sağlayacağı imkânlardan söz edilmiştir. Kurulan Dijital Ofis bünyesinde çalışmalara devam edilmektedir. Tüm bu tahminler metaverse'e yapılan yatırımlar için büyük önem taşımaktadır.

SOSYAL MEDYA VE METAVERSE BAĞLAMINDA DİJİTAL PAZARLAMA ÜZERİNE BİR DEĞERLENDİRME

Ceren Bilgici

GİRİŞ

Ağlar çağı olarak da adlandırılan günümüzde yeni iletişim teknolojilerinin toplumsal yaşantının her alanında belirleyici olduğu söylenebilmektedir. Bu bağlamda; internet, akıllı telefonlar ve sosyal medya platformları bireylerin hayatında vazgeçilmez bir konuma gelmiştir. Jan van Dijk, artık bireylerin gündelik hayatlarını sürdürebilmek için elektronik iletişim ağlarına ihtiyaç duyduklarını ve hatta büyük çoğunluğun bu ortamlar ve cihazların olmadığı bir dünyayı hayal bile edemediğini belirtmektedir (van Dijk, 2016: 11-12).

İnternetin gündelik hayatta kullanılmaya başlamasını takip eden süreçte Web 2.0 teknolojilerinin yaygınlaşması sosyal medya platformlarının gelişiminin önünü açmıştır. Bu çerçevede, giderek hızlanan mobil internet altyapıları ile gelişen akıllı telefonların sunduğu imkânlar bireylerin kesintisiz olarak ağa bağlı olmalarına olanak sağlamıştır. Zaman içerisinde üretici konumuna geçen kullanıcılar sahip oldukları akıllı telefonların kameralarını kullanarak gerçekleştirdikleri üretimleri ile sosyal medya platformlarında yoğun olarak yer almaya başlamıştır. Daha fazla kullanıcının hem tüketici hem üretici olarak kesintisiz şekilde sosyal medya platformlarına bağlı olması ve günlerinin büyük çoğunluğunu bu platformlar üzerinde geçirmeye başlaması sosyal medya platformlarının ticarileşme süreciyle paralellik göstermektedir. Web 3.0 ile birlikte ise yapay zekâ teknolojilerinin dijital ortamlarda giderek artan etkileri ve algoritmalarının gelişimi ile sosyal medya endüstrisi her geçen gün daha fazla kullanıcının daha fazla zamanını sosyal medya üzerinde geçirdiği bir yapının oluşumunun önünü açmıştır. Ekim 2021’de Facebook şirketinin “Meta” adını alarak yeniden markalama yapması ve metaverse yatırımlarını duyurmasıyla birlikte (Meta,

ve şirketlerin, markaların üzerinde bu alanda giderek artan baskı ve beklentilerin oluşacağı da kaçınılmaz olarak tahmin edilmektedir.

Sonuç olarak henüz gelişmekte olan bir deneyim alanı olarak tanımlanabilen metaverse ekosistemi pazarlama alanına pek çok olası fırsat sunarken bazı tehditleri beraberinde getirmektedir. Gelecek araştırmalarda metaverse ve pazarlama ilişkisi ile ilgili tüketici öngörülerini üzerinden değerlendirmeler yapılması bu yeni alanla ilişkili tüketici beklentilerini ve değerlendirmelerini ortaya çıkarmak açısından faydalı olacaktır.

Bölüm 9

METAVERSE VE DİJİTAL REKLAMCILIK EKSENİNDE HİPER KİŞİSELLEŞTİRİLMİŞ REKLAMLARIN YÜKSELİŞİ

Özge Özkök Şişman

GİRİŞ

Bilişim ve iletişim teknolojilerinin gelişmesiyle yaşanan toplumsal dönüşümlerin bir sonucu olarak reklam endüstrisinde dijital temelli yeni araçlara ve yöntemlere yönelik bir ihtiyaç ortaya çıkmıştır. İnternet teknolojisine erişimin kolaylaşması, sosyal medya platformlarının kullanım ağının genişlemesi ve mobil cihazların kullanımının yaygınlaşmasıyla birlikte reklamcılık pratikleri de dijital temelli bir sistem üzerinde yeniden tanımlanmaktadır. Dijital reklamcılığın değişen dinamikleri çerçevesinde markalar ve hedef kitle arasındaki sınırlar zayıflamış, kullanıcının bilgiye erişim kolaylığı ekseninde tüketici merkezli bir yapı ortaya çıkmıştır (Tran 2017: 231). Tüketicinin sosyal medya ve dijital ekranlar aracılığıyla gündelik yaşamında 360 derece reklam iletisine maruz kaldığı günümüzde, bireylerin karşılaştıkları her reklamı algılaması zorlaşırken markaların tüketicilerin dikkatini çekebilmek, akılda kalabilmek ve pazardaki güçlü rekabet ortamında varlığını devam ettirebilmek adına tüketicisine doğru zamanda, doğru mesajı, doğru platform üzerinden iletmesi gerekliliği doğmuştur (Tsang vd., 2004).

Dijitalleşen reklamcılık, geleneksel reklamcılık anlayışından farklı olarak kitlesel reklam pratiklerinden kişiselleştirilmiş reklamlara doğru bir devinim yaşamıştır. Kişiselleştirilmiş reklamlar, internet ortamında kullanıcı olan bireylerin ilgi alanları ve internet geçmişleri aracılığıyla ihtiyaçları, tüketim rutinlerinin tespit edilmesini ve bireylere kişisel olarak sunulan reklam içeriklerini ifade eden bir kavramdır (Tucker 2014: 547). Alanyazında “çevrim içi davranışsal reklamcılık” olarak da adlandırılan (Li ve Huang 2016; Boerman vd.,

derin öğrenme, makine öğrenimi, büyük veri ve küçük veri unsurlarıyla biçimlenen metaverse reklamcılığı, hiper kişiselleşmiş reklamcılık anlayışıyla dijital pazarlama iletişimi yaklaşımına yeni bir açılım getirmiştir. Günümüzde büyük veri ve küçük veri uygulamalarının yetersiz kalmasının bir sonucu olarak ortaya çıkan hiper kişiselleştirilmiş reklamlar her bir kullanıcıyı kişisel olarak analiz etmekte ve her bir kullanıcının kişisel deneyimleri, dijital ayak izleri çerçevesinde oluşturulan reklam içeriklerini ifade etmektedir. Bu doğrultuda markaların sayıca artış gösterdiği günümüzde sorgulayan, araştıran ve gücünün farkında olan yeni tüketici profili, hiper kişiselleştirilmiş reklamlar aracılığıyla markalarla doğrusal bir ilişki geliştirebilmektedir. Marka sadakatinin sorgulanması, dijitalleşme ve hız kavramlarının da önemini ortaya çıkarmıştır. Bu bağlamda metaverse ekosisteminde dijital reklamcılık pratikleri hiper kişiselleştirilmiş bir bağlamda doğrudan kullanıcıyı hedeflemektedir. Tamamen sanal bir dünyayı ifade eden metaverse, hiper kişiselleştirilmiş reklamlar aracılığıyla kullanıcının kişisel özellikleri, istekleri, ihtiyaçları ile paralel olarak biçimlenmektedir.

Bölüm 10

METAVERSE DERGİCİLİĞE YENİ BİR SOLUK GETİREBİLİR Mİ?

Aslı Yapar Gönenç, Tuğçe Ayçin

GİRİŞ

Günümüzde dijitalleşmenin ulaştığı doruk noktalardan biri metaverse dünyası olarak karşımıza çıkmaktadır. İnsanların avatarları aracılığıyla sanal gerçeklik âleminde yaşamlarını sürdürecekleri iddiası toplumsal yaşamın her alanında olduğu gibi habercilik alanında da yeni uygulamaların ortaya çıkmasına yol açmaktadır.

Yapılan araştırmalar insanların sanal dünyada giderek daha fazla vakit geçirdiklerini göstermektedir. Özellikle gençlerin sanal dünyada harcadıkları zaman neredeyse tüm günlerini kapsamaktadır. We Are Social 2021 verilerine göre Türkiye’de günlük internet ortamında geçirilen süre 7 saat 57 dakika, yani neredeyse 8 saate yakındır. Bu durum dünya genelinde de benzer şekilde 7 saattir. Ayrıca Radyo Televizyon Üst Kurulu (RTÜK) tarafından 2022 yılında yapılan “Gençlerin Medya Kullanımı ve Dijital Okuryazarlık Araştırması”, Türkiye’de yaşayan 15-21 yaş arası gençlerin %71’inin habere sosyal medya üzerinden ulaştığını göstermektedir. Bu oran televizyon için %70, internet haber siteleri için %46, yazılı basın için %18 ve radyo için %10 şeklinde tespit edilmiştir (RTÜK, 2022).

İletişim teknolojilerinin hızla gelişmesiyle yeni nesil için yeni haber teknolojilerinin ve etkileşim ortamlarının gelişmesi doğaldır. Gerçekte, metaverse sözcüğü yeni bir sözcük değildir. Terim ilk olarak 1992 yılında Neal Stephenson’ın bilim kurgu romanı “Snow Crash”de (Parazit) “meta” ve “universe” kelimelerinin, yani “meta” ve “evren” sözcüklerinin bir bileşimi olarak kullanılmıştır. İnsanların özellikle de gençlerin sanal gerçeklik âleminde daha çok

Tüm kitle iletişim araçlarında olduğu gibi metaverse'ün de bir ticari yatırım alanı olduğunu unutmamakta yarar bulunmaktadır. Metaverse, dergicilik ve habercilik alanına yeni özellikler getirirse de tüketim toplumunun yeni oyuncuğu olarak değerlendirilebilir. Fakat her şeye rağmen alana yeni bir soluk getireceği bir gerçektir. Gelişmelerin ne doğrultuda olacağı, ülkemizde bu alana yönelik yatırımların ne düzeyde olacağı gibi soruların yanıtları da zaman içerisinde uygulamaların gelişmesiyle ortaya çıkacaktır. Türkiye açısından bakıldığında dergicilik alanında öncelikle hızlı bir biçimde dijitalleşmenin tamamlanması ve metaverse ortamına giriş yapmak için uygun altyapının oluşturulması gerekmektedir.

Bölüm 11

METAVERSE TERAPİ ODALARI: SANAL GERÇEKLİKTE SEANS GERÇEKLEŞTİRMEK*

Nur İnci Namlı

GİRİŞ

Spike Jonze’un senaristlik ve yönetmenlik görevinde yer aldığı 2013 yapımı “Her” filmi, yoğun bir depresif dönemden geçen Theodore’un bir yapay zekâ ile “tanıştıktan” sonraki sürecini anlatmaktadır. Film, aslında yakın bir gelecekte geçer; gerek kullanılan teknoloji gerek filmin geçtiği dünya aslında günümüzden sadece birkaç yıl sonrasına işaret etmektedir. Bununla birlikte filmdeki en önemli detay, yalnızlığı ve kararsızlığı derinden yaşayan ana karakterin bir yapay zekâ programını bilgisayarına yükledikten sonra yaşadıklarıdır. Artık onunla günü bitirip başlatmak bir rutin hâline dönüşmüştür. Film boyunca yapay zekâ programında yarattığı karakter olan Samantha’nın, Theodore’un kararlarındaki boşlukları doldurmasını izleriz. Ancak tabii ki bir süre sonra bu durum çığırından çıkar ve Samantha ile diğer tüm işletim sistemleri fiziksel dünyadan ayrılır. Ayrılmadan önce Theodore, Samantha’ya nereye gittiğini sorar. Aldığı cevap hayranlık vericidir:

Anlatması zor. Ama günün birinde oraya gelirsen gel ve beni bul. Bizi hiçbir şey ayıramaz. Hiç kimseyi seni sevdiğim gibi sevmedim.

Buradan çıkarılacak soru şudur: Bir işletim sistemi (örneğin Siri) size gerçekten hissettiği duygularla mı cevap verir; yoksa büyük veriden o duygu setine uygun olanı seçip saniyeler içerisinde mi size sunar? Bir adım ötesini daha düşünelim. Samantha bir psikolog olsaydı ve Theodore’la psikolog-danışan ilişkisi kursaydı her şey nasıl olurdu? Theodore ile “başka bir evrende” seanslar gerçekleştirselerdi hangi problemler veya çözüm yolları ortaya çıkabilirdi?

* Bu bölümde bahsi geçen tüm vakalar için danışanlardan ve ailelerden gerekli sözlü izinler alınmıştır.

kenara bırakılarak tanılar üstü yaklaşımla terapi sürecinin ilerlemesi yapay zekâların biz insan psikoterapistleri yönlendirmesiyle sağlanacaktır. Zihin insana özgü olabilir, ancak zihnin yönlendireceği yapay zekâ ile aralanacak kapının ardında belki de çok farklı senaryolara şahit olacağız.

A. KLİNİK MİKROBİYOTA

Bölüm A1

İNSAN MİKROBİYOM PROJESİ, MİKROBİYOTANIN GELECEĞİ VE KİŞİYE ÖZEL TIP UYGULAMALARI

Ferhat Gürkan Aslan

Mustafa Altındış

Giriş

Mikroorganizmalar doğada her yerde bulunur, akla gelebilecek her ortamda yaşarlar ve insan yaşamında önemli bir rol oynarlar. Bitki büyümesi, toprak besin döngüsü ve deniz biyojeokimyasal döngüsü gibi temel ekosistem süreçlerini modüle ederek ekosistem işleyişinde önemli bir rol oynarlar. İnsan vücudunu kolonize eden sayısız mikroorganizma (sinbiyotik, patojenik ve kommensal), topluca insan mikrobiyotasını oluşturur. Mikrobiyal topluluklar, farklı konakçılar ve fiziksel ortamlar içinde belirli bir yapı üstlenirler. İşleyen bir mikrobiyom, önemli fizyolojik süreçlere katkıda bulunduğu için, konakçı organizmalar için zorunludur. Sonuç olarak, bir konakta yaşayan mikroorganizmaların tanımlanması ve karakterizasyonu, onların farklı konak fenotipleri ve mikroorganizmaların konaklarını etkilediği biyokimyasal yollar, konak-mikrobiyom araştırmalarının ana odak noktasıdır ⁽¹⁾.

‘Omic’ çağı, biyolojik araştırmaları tüm yönleriyle hızlandırmış olsa da, etkileri özellikle, mikrobiyal topluluklar ve insan mikrobiyomu çalışmalarında belirgin olmuştur. İlk insan genomunun yayınlanmasından bu yana geçen 18 yıl içinde, mikrobiyom çalışmaları, ağız boşluğu ve bağırsakların kültür temelli araştırmalarından, insan vücudundaki tüm ekolojik ortamlarda mikrobiyal biyokimyanın moleküler profillerine doğru büyümüştür. Epidemiyoloji ve model sistemler, mikrobiyomdaki değişiklikler ile otizmden kansere kadar değişen koşullar arasındaki ilişkileri belirlemek için kullanılmıştır. Örneğin, kalp hastalıklarını tedavi etmek için kullanılan ilaçların etkinliği veya greft-versus-host hastalığı sırasında hayatta kalmayı etkileyen mikrobiyal ve immünolojik mekanizmalar tanımlanmıştır. İnsan mikrobiyomu üzerine yapılan güncel çalışmalar, temel biyolojik ve beklenmeyen dönüşümlerin kaynağı olmanın yanında, bir dizi yeni bulgu ve açık soruları ortaya çıkarmıştır. Her insan, yaşamın erken dönemlerinde edinilen, ortam ve popülasyonlar arasında farklılık gösteren ve yıllarca devam edebilen veya nispeten hızlı değişimler geçirebilen, büyük ölçüde bireysel, kendi mikrobiyal suş takımını taşıyor gibi görünmektedir. Mikrobiyal çeşitlilik, vücudun farklı ekolojik boşluklarında farklı şekillerde kendini gösterir; örneğin, bağırsakta daha fazla çeşitlilik beklenir ancak, dışı üreme sisteminde disbiyotik durumlar ve advers olay riski ile ilişkilendirilebilir. Mikrobiyom, inflamatuvar bağırsak hastalığı (İBH) ve diyabet gibi durumlar için uyarıcı olabilir ancak, mikrobiyom bağlantılı çeşitli sağlık durumları ve bu bağlantıların temelleri henüz keşfedilmemiştir ⁽²⁾.

Mikrobiyomlar hakkındaki bilgimizi geliştirmek, son yirmi yılda sadece bilim camiasında değil, aynı zamanda halk arasında, özellikle yeni tıbbi tedaviler için büyük umut vaat eden bir alan olarak popüler bir konu hâline geldi. İnsan mikrobiyomu artık “son organımız” olarak kabul ediliyor. Sadece son 10 yılda 1,7 milyar Amerikan Dolarından fazla harcanan insan mikrobiyom araştırması, yeni başlanan bir tıbbi araştır-

lamalarını ve sonuçlarını daha iyi anladıkça mikrobiyal replasman tedavilerinin standart bir uygulama hâline gelmesi muhtemeldir.

Sentetik genomik alanının paralel gelişimi ve genişlemesi, insan sağlığını modüle etmek için kullanılabilir sentetik insan mikrobiyomları veya bunların sentetik ürünleri için yeni fırsatlar yaratmaktadır. Sentetik biyoloji, sıtma tedavilerine ve influenza aşısı üretimine yönelik uygulamalarda zaten başarılı olduğunu kanıtladı. Sentetik biyoloji yaklaşımları, insan vücuduna dâhil edilebilen ve izlenebilen değiştirilmiş türler geliştirmek için büyük bir fırsat oluşturmaktadır. Probiyotiklerin veya mühendislik uygulanmış suşların verimliliği, vitaminler gibi ikincil bileşiklerin üretiminin artırılmasını ya da biyoaktif yüklerin taşınmasını sağlayacak şekilde bazı yolakların değiştirilmesi yoluyla iyileştirilebilir. Bağırsak veya cilt gibi bir hastalık bölgesinde mayalar, küçük ökaryotlar ya da bakterilerin biyoaktif bileşikler üreteceği, taşıma sistemi gibi görev göreceği düşünülebilir. Ayrıca sentetik doğal-ürün ilaçları üretmek için kullanılabilirler⁽⁶²⁾. Sentetik fajlar insan sağlığını olumsuz yönde etkileyen bakteri popülasyonlarını modüle etme imkânını sunar⁽⁶³⁾. Canlı mikroorganizmalar üzerinde uygulanan mühendislik, mevcut ilaçlardan ve tedavi yaklaşımlarından farklı olan yeni fikri haklar ve ürünleri ortaya çıkarır. Yasal çerçeveden bakılınca, özellikle de değiştirilmiş türlerin sağlıklı insan mikrobiyomuna ve genel olarak doğal çevreye katılacağı düşünüldüğünde, sentetik biyoloji ve insan mikrobiyom araştırmaları alanlarının kaynaştırılmasında önemli zorluklarla karşılaşılacağı beklenebilir. Sağlığımıza daha fazla katkı sağlaması amacıyla doğal mikrobiyal floramızı kullanma yönünde keşiflerde bulunduğumuz, bu konu, üzerinde daha fazla tartışılmayı ve kamu farkındalığını gerektirmektedir⁽²³⁾.

Sonuç

Son dönemde, gastrointestinal sistem ve diğer vücut bölgelerindeki bakteri, arkeae, mantar, protist ve virüslerin varlığının insan sağlığının vazgeçilmez bir bileşeni olduğu anlaşılmıştır. Mikroorganizmaların bu iyi dengelenmiş topluluğu, konakçı metabolizmasına ayarlanmış olup insan mikrobiyomu olarak anılmaktadır. Araştırmacılar şu anda öncelikli olarak “insan vücudunun çeşitli bölgelerindeki mikrobik toplulukların kompozisyonları, zarar ve faydaları nelerdir?” konusuna odaklanmış durumdadır.

İMP, hastalık ve sağlıkta yerleşik insan mikrobiyomundaki değişimlerin rolü hakkında tıp bilimini daha iyi bilgilendirmek için veri, araç ve kaynaklar sağlayarak insan mikrobiyolojisinin sınırlarını anlamak üzere tasarlanmıştır. Gelecekteki çalışmalar için referans görevi görececek bir veri tabanı sağlayacaktır. İMP'nin başlatıldığı, teknolojik değişim döneminde; DNA dizileme maliyeti düşmekte ve üretim miktarı artmaktadır. Metagenomik çalışmalarda yeni nesil teknolojilerin kullanımı için standartlar belirlemek ve doğru, kalite kontrollü veri üretmek için İMP, gelecekteki insan mikrobiyomu araştırmalarında bir temel oluşturacaktır.

Son birkaç yılda Mikrobiotanın insanlardaki rolünü açıklayan anlamlı çalışmalar olmakla birlikte bugün ihtiyaç duyduğumuz şey, bu rolü yürüten molekülleri ve mekanizmaları doğru şekilde anlayabilmek ve bu bilgileri sağlığı iyileştirmek ve hastalıkları azaltmakta kullanmaktır. Bu konuda bilimsel, sosyal, kültürel, etik, yasal ve eğitimsel zorlukların şimdiden ele alınması, özellikle hastalık yükünün büyük olduğu ve insan bağırsak mikrobiyomu ile ilişkili keşiflerin uygulanmasının büyük etkiye sahip olacağı düşük gelirli ülkeler göz önünde bulundurulduğunda kritik öneme sahiptir.

İMMÜN SİSTEM VE BAĞIRSAK MİKROBİYOTASI

Şefik Şanal Alkan

Çevremizdeki tüm kalıtsal nesnenin belirlenmesi demek olan metagenomik (*çevrekalıt*) alanındaki yeni bulgular bizim dünya görüşümüzü değiştirmekle kalmadı. Artık kendi vücudumuzu, minicanlıları da içeren karışık hücresel bileşimi olarak görüyoruz. Ayrıca, bağışıklık sisteminin hem sağlıkta hem de hastalık durumlarındaki rolünü yeniden düşünmek zorundayız. Şimdi iyice anladık ki, yaşamımız, vücudumuzun çeşitli bölgelerine konuşlanmış ve adına mikrobiyota (*minicanlı örtüsü*) denilen mikrop topluluklarıyla olan karşılıklı iş birliğine, ortak yaşama (*simbiyoz*) bağlı. Biz, konak (ev sahibi) olarak, doğumdan önce ve sonra vücudumuz katılan ortakçı minicanlıları tanır, onlara yerlerini gösterir, sınırlarını belirtiriz. Vücudumuzdaki bakteri, fungus ve diğer tek hücreli mikrobiyotanın içerdiği tüm kalıtsal (genetik) madde demek olan mikrobiyom, bizim işlevlerimizi etkiler. Tüm hayvanlarda ve bitkilerde mikrobiyomun içeriği ve işlevi çok önemlidir. Bu yüzden bir canlının kendi hücreleriyle birlikte taşıdığı mikrobiyom, o çevre için benzersiz/biricik bir öge sayılır ki biz buna holobiyont (*yaşarkitle*) diyoruz. Holobiyont (konak ve konakçıları), kendi içinde iletişimi ve herkese yarar sağlayan iş birliğini sürdürebilmek için, milyonlarca yıllık birlikte evrilmenin şekillendirdiği /orya çıkardığı araçları kullanır. Normal koşullarda, mikrobiyota, hastalık yapıcı (*patojen*) minicanlıların vücuda yerleşmesini engeller. Ancak, her ilişkide olabileceği gibi yanlışlıklar olabilir, işler ters gidebilir. Ya konağın bağışıklık sistemindeki bir aksaklık, ya da minicanlının, kalıtımındaki sık görülen değişiklikler, konak-konakçılar (ortakçılar) arasındaki devingen/hareketli dengeyi bozabilir. Böyle bir dengesizlik (*dysbiosis*) durumunda mikrobiyotadaki birçok minicanlı hastalık yapıcı etkide bulunabilir ki bunun sonucunda, yangısal (*inflammatory*) hastalıklar, aşırı şişmanlık, ya da şeker hastalığı ortaya çıkabilir. Bir konağın bağırsak dışındaki mikrobiyotası da önemlidir ama biz bu kısa derlemede, göreceli öneminden ötürü, sağlıkta- hastalıkta, bağırsak mikrobiyotası ile bağışıklık dizgesi arasındaki ilişkiye odaklanacağız.

Giriş

Son birkaç yıldır, minicanlı bilimi (mikrobiyoloji) ve bağışıklık bilimi (immünoloji) alanında kendimizi köklü bir düşünce değişikliği içinde buluyoruz. Bu yüzden, minicanlılarla ilişkilerimize ve bağışıklığın görevine ilişkin bilinenlere çok değişik bir açıdan bakamamız gerekiyor. Onun için yazıya bu değişikliği başlatan Amerikalı cesur, evrimci, devrimci bir bayan bilimciyle, Lynn Margulis'la (1938-2011) başlamak uygun olur.

Evrim deyince nasıl ki aklımıza Charles Darwin geliyorsa, minicanlılarla ortak yaşam (symbiosis) denince akla Lynn Margulis gelir. Evrim bilimci Ernst Mayr'in deyişiyle, çekirdekli hücrelerin evrimini anlamak, "belki de tarihteki en önemli ve en çarpıcı olaydır" ve bunu büyük ölçüde Dr. Margulis'e borçluyuz. Peki, Margulis'un fark ettiği şey neydi? O, içiçe ortakyaşam (*endosymbiosis*) kuramını ortaya atarak, minicanlıların, tüm canlılar alemi sanıldığından çok daha derinden etkilediğini, bir yaşamın-başka yaşama aşırı derecede bağılılığını (codependence) gösterdi¹.

bulgularından kuşku duymuyoruz; sözünü ettiğimiz şey, gazetecilerin, para babalarının, halkın yanlış anlamalarla gereksiz ve aldatıcı reklamlarla boğulmasına karşı çıkmak.. Birçok şeyi bilmiyoruz: Örneğin, mikrobiyota-hastalık ilişkilerinde sadece bir “bağıntı” mı (*correlation*) yoksa neden-sonuç ilişkisi mi var? Ayrıca, bütün mikrobiyota çalışmaları 16SrRNA (nükleotid) dizini üzerinedir ve bu güvenilir fakat oldukça kaba bir karşılaştırmadır. Nükleotid dizin’inin ötesinde, işlevsel farklılıklara da bakmak gerekir. Ayrıca, bazı fare deneylerinin insan için anlamı nedir bilmiyoruz^{53,54}.

Öte yandan, birçok bilinmez varken, yapılmaya başlanan dışkı aktarım tedavisinin nerelere varacağını beklememiz gerekecek^{55,56}.

Son yıllarda özellikle Amerikada sağlıkçılar, ilaç firmaları, doktorlar ve hastalar arasında büyük bir savaş patlak verdi: ne üzerine dersiniz? İnsan dışkısı zerine. Çünkü, dışkıyla mikrobiyota aktarımı (DMA) özellikle *Clostridioides difficile*’in yol açtığı bağırsak hastalığını ortadan kaldırıyor. Aynı şey şeker hastalığında, kanserde olmayacak diye bir şey yok. Ancak, doğru yapılmayan DMA den sonra birkaç hasta ölünce işler karıştı. Aktarılan insan dışkısı ilaç değil, kan değil, organ değil... Bunun denetimi nasıl yapılacak? FDA’nın işi zor. Kim derdi ki insan dışkısı hem sağlıkçılar, hem de ilaç firmaları için “altın madeni” gibi kıymetlensin⁵⁷.

Bölüm A3

MİKROBİYOTA, BESLENME VE İMMÜN SİSTEM

Ishak Özel Tekin

“Gıdanız ilacınız olsun, ilacınız da gıda”

Hipokrat

Bedenimizi paylaşan kommensal, sinbiyotik ve patojenik mikroorganizmaların (bakteri, mantar, protozoa, virüs vb.) oluşturduğu ekolojik topluluk “mikrobiyota”, bu çevrede yaşayan mikroorganizmaların toplam genomu ise “mikrobiyom” olarak adlandırılmaktadır. Mikrobiyota gelişiminde, doğum şekli ve yenidoğan beslenmesinden, çevresel ve kültürel faktörlere, antibiyotik kullanımından, fiziksel aktiviteye kadar çok sayıda faktör rol almaktadır. Vücudumuz sahip olduğu memeli hücrelerinin yaklaşık on katı kadar yararlı bakteriye ev sahipliği yapmaktadır¹.

Bu bölüm özellikle vücudun paydaşları olan yararlı mikroorganizmalar, bunların çeşitliliği ve davranışlarında etkili olan beslenme ve her iki sistemle de etkileşim hâlindeki immün sistemin ilişkilerine ayrılmıştır.

Beslenme tüm vücut hücrelerinin ve buna bağlı olarak organizmanın hayatta kalması, büyümesi, gelişmesi, üremesi için elzemdir. Sağlıklı bir yaşam için gereken enerji ve yapıtaşlarının elde edilmesi dengeli ve düzenli bir beslenmeyle mümkün olabilmektedir. Bağışıklık sistemi ile beslenme arasında çok yakın bir ilişki bulunmakta ve yetersiz beslenme yalnızca, enerji ve protein eksikliği olarak düşünülmemesi gereken, çok daha fazlası olan bir olgu olarak karşımıza çıkmaktadır. Günümüzde bağışıklık sistemi penceresinden ele alındığında bireyin beslenmesindeki amaç enerji, protein, mineral ve benzeri gereksinimleri karşılamak yanında, kişinin hastalıklara karşı direncini arttırmak, bağışıklık yanıtlarını tam bir sağlık için düzenlemek olarak açıklanabilir².

Beslenme eyleminin girdisini oluşturan başlıca yapılar, su, karbonhidratlar, proteinler, yağlar, vitaminler ve mineraller olarak altı başlıkta toplanabilir. Bunlardan üçü (karbonhidratlar, proteinler ve yağlar) vücudun kullanacağı enerjinin başlıca kaynağını oluştururlar. Vitaminler bu üç yapı taşı gibi organik maddeler olup, onların enerji oluşturmalarına yardım ederler. Buna karşın mineraller ve su inorganik moleküllerdir³.

İnsanda yetersiz beslenme, özellikle protein-enerji malnütrisyonu tüm yaşamsal faaliyetleri etkilediği gibi başta enfeksiyon hastalıklarının morbidite ve mortalitesini artırmak üzere bağışıklık sisteminin gelişimi, işlevleri ve düzenlenmesini olumsuz yönde etkilemektedir. Bunun gibi aşırı beslenme ve eşlik eden metabolik bozukluklar da bağışıklık işlevlerini bozmakta, konak mikrobiyotasını olumsuz etkilemekte ve enfeksiyon hastalıklarına yatkınlığı artırmaktadır⁴. Ayrıca hem yetersiz beslenme hem de aşırı beslenme vücutta inflamasyonu artırmakta, edinsel (adaptif) immün yanıtları bozmaktadır⁵. Beslenmenin bağışıklık sistemindeki önemi tartışmasız olmasına rağmen bu ilişki oldukça karmaşıktır. Bu karmaşıklık üç ana tema üzerinden özetlenebilir:

Tablo 3. Bağırsak mikrobiyotasının bağırsaklar ve immün sistemdeki temel etkileri.**Bağırsak Mikrobiyotasının Bağırsaklar ve İmmün Sistemdeki Temel Etkileri**

- Bağırsak homeostazisinin önemli bir parçasıdır
- Epitel hücreleri arası sıkı bağlantıların oluşmasında etkilidir
- Musin katmanının kalınlaşmasında ve mukus salgısı üzerinde etkilidir
- Epitelin hasara yanıtını düzenler
- Bağırsaklarda lenfoid dokunun gelişimine katkıda bulunurlar
- Paneth hücrelerinden antimikrobiyal peptid üretimini artırır
- IgA salgılayan plazma hücreleri ve aktive T hücrelerinin mukozal alanlara gelmesine yardımcı olurlar
- GİS dışı sekonder lenfoid organ T ve B hücre bölgelerinin gelişimine katkı sunarlar
- Bağırsak epiteli ve immün hücrelerde TLR ve NOD ekspresyonunu değiştirirler

Tablo 3 ile gösterilen temel etkilerin çok daha fazlası gösterilmiştir. Fazla yer tutmaması nedeniyle kısaca özetlenen bu etkilerden de görülebileceği gibi mikrobiyotanın bu vazgeçilmez özellikleri probiyotikler ve ilişkili ürünlerin (prebiyotik, postbiyotik gibi) hastalıkta ve sağlıkta kullanımına bir alt yapı hazırlamıştır.

Yirmi yıldan daha uzun bir süre önce prebiyotikler tanımlanmıştır. O zamandan beri fruktan (fruktooligosakkaridler-FOS ve inulin) ve galaktanlar (galaktooligosakkaridler-GOS) başlıca prebiyotikler olarak kabul edilirken, artık polifenoller ve poliansature yağ asitleri de bu grubun içine girmiştir³² (Şekil 1). Bu da polifenollerin bağırsıklık sistemi üzerindeki yukarıda örneklenen doğrudan etkileri dışında mikrobiyota üzerinde de etki eden çok yönlü bağırsıklık düzenleyici özelliklerini desteklemektedir.

İmmün beslenmenin klinik uygulamalardaki yeri ve uygulama şekilleri konusunda yanıtlanması gereken çok sayıda soru vardır ve bu soruların yanıtları bilinmeden tedaviye başlanmamalıdır:

- Hastalığın fizyopatolojisini ne kadar biliyoruz?
- Etkilenen bağırsıklık sistemi elemanları hangileridir ve etkilenme düzeyi nasıldır?
- Hastanın beslenme durumunun tabloya etkisini biliyor muyuz?
- Hangi bileşenleri, nasıl bir kombinasyonla, hangi dozlarda ve ne süreyle uygulamalıyız?
- Bu bileşenlerin birbirleriyle olan etkileşimlerini biliyor muyuz?

ALLERJİK HASTALIKLAR VE HİSTAMİN İNTOLERANSINDA MİKROBİYOTA

Özlem Koyuncu Özyurt

Allerjik Hastalıklar ve Mikrobiyota

Son yıllarda, dünya çapında birçok gelişmiş ve hızlı büyüyen ülke, astım, atopik dermatit ve gıda allerjileri gibi alerjik hastalıkların prevalansında çarpıcı bir artış kaydetmiştir^{1,2}. Yapılan çalışmalarla alerjik hastalıkların artan prevalansında, insan mikrobiyotasının bozulmasının merkezi bir rolü olduğunu göstermektedir. İnsan bağırsağında ve diğer organlarda yerleşik mikrobiyal toplulukların hem doğuştan gelen hem de edinilmiş bağışıklık tepkilerini modüle ettiği gösterilmiştir³. Disbiyotik bir mikrobiyota, alerjik hastalıklar da dâhil olmak üzere, yaşamın ilerleyen dönemlerinde immün aracılı bozukluklara daha fazla duyarlılık ile ilişkilendirilmiştir.⁴

Daha ileri çalışmalar, yaşamlarının ilk yıllarını kırsal ortamlarda, hayvanlarla yakın temas hâlinde yaşamış ve pastörize edilmemiş süt tüketmiş çocukların alerji insidansının daha düşük olduğunu göstermiştir⁵. Bu çalışmalar, yaşamın ilk aylarında bağışıklık sisteminin gelişimini etkileyebilecek bazı yenidoğan ve maternal faktörleri tanımlamaya ve böylece alerjik hastalıkların gelişme potansiyelinde kilit bir rol belirlemeye izin veren bu hastalıklarda mikrobiyotanın bir rolünün varsayılmasına yol açmıştır⁶.

Mikrobiyota bileşiminin yaşamın ilk birkaç yılında dinamik olarak değiştiği ve doğum öncesi ve doğum sonrası çeşitli çevresel ve konakla ilgili faktörlerden etkilenebileceği iyi bilinmektedir⁷. Bu faktörler arasında, artan kanıtlar, doğum şekli, emzirme, erken antibiyotik kullanımı ve tamamlayıcı beslenmenin zamanlaması ve türü gibi bazı perinatal faktörlerin, farklı antijenlere karşı immün tolerans yanıtlarının geliştirilmesinde kilit bir belirleyici olarak ortaya çıkan bağırsak mikrobiyota bileşimini önemli ölçüde modüle edebileceğini göstermektedir⁸.

Günümüzde, alerjik hastalıklara karşı koruyucu bir mikrobiyotanın kurulmasına yol açtığı bilinen faktörler şunlardır: yaşamın ilk yıllarında antibiyotik tedavilerinin olmaması, ilk 4 ay boyunca emzirme, vajinal doğum, bebeklik döneminde veya hamilelik sırasında evde evcil hayvanların varlığı ve hamilelik sırasında maternal antibiyotik tedavilerinin yokluğu. Tüm bu faktörler, aslında, daha düşük çocukluk alerjisi oranlarıyla bağlantılıdır⁵.

Alerjik Hastalıkların Gelişiminde Mikrobiyotanın Rolü

Mikrobiyotanın, hücresel gelişimden organ ve doku oluşumuna kadar bağışıklık tepkisini modüle edebileceği iyi bilinmektedir ve etkilerini bağışıklık sisteminin hem doğuştan gelen, hem de edinilmiş dallarıyla çoklu etkileşimler yoluyla uygular^{9,10}.

HİT'li hastalarda dengesiz bir bağırsak florası ve bağırsak bakteri bileşiminde bir değişiklik olduğu gösterilmiştir⁹¹. Bu disbiyoz durumu, bağırsakta bir mukozal inflamasyonu teşvik edebilir. Histamini parçalayan DAO, olgun enterositler tarafından sentezlendiğinden ve mukozal epitel hücrelerinde depolandığından bu hücrelerin inflamasyonundan kaynaklı bir bozulma, DAO sentezinin azalmasına da katkıda bulunabilir⁹². Bu, histamin intoleransının tipik semptomlarına neden olan endojen histamin düzeylerinin artmasına neden olabilir. Bu hastalarda sızdıran bağırsak gelişimine neden olabilir ve sonuç olarak kronik ve inflamatuvar hastalıklar gelişebilir⁹¹.

Disbiyozisin görüldüğü, inflamatuvar bağırsak hastalığı ve astım gibi birçok inflamatuvar hastalıkta, bu hastaların bağırsaklarında histamin salgılayan bakterilerin arttığını göstermiştir^{93,94}. Bu nedenle, bu veriler bakteri kaynaklı histaminin, histamin aracılı patolojilere katkıda bulunduğunu göstermektedir⁸¹. Çalışmalar ayrıca mikroorganizmalar tarafından salgılanan histaminin, konakçı histamin reseptörü 2 aracılığıyla bağırsaktaki bağışıklık tepkilerini etkilediğini ve anti-inflamatuvar etkiler gösterebileceğini göstermiştir^{95,96}.

Çok çeşitli Gram pozitif ve Gram negatif bakterilerin histamin sentezinde görevli olan Histidin dekarboksilaz enzimini kodlayan genlere sahip olduğu ve histamin sentezlediği bulunmuştur⁹⁷. HDK içeren türler 6 filumda bulunmuştur: *Proteobacteria*, *Actinobacteria*, *Bacteroidota*, *Firmicutes*, *Fusobacteriota*, *Verrucomicrobiota*⁹⁸. *Proteobacteria* filumunda genişleme, inflamatuvar bağırsak hastalığı gibi proinflamatuvar hastalıkların bir özelliği olan bağırsak disbiyozunun potansiyel bir göstergesi olarak kabul edilir⁹⁹. Bu altı bakteri filumundan en sık histaminin salınımının görüldüğü cinsler, Enterobacteraleslerden bazı *Morganella*, *Enterobacter*, *Hafnia*, *Proteus* ve *Photobacterium* gibi bakteri suşları ve yanı sıra laktik asit bakterilerinden *Lactobacillus*, *Enterococcus* ve farklı *Pseudomonas* suşlarıdır¹⁰⁰. Histamini sentezleme kapasitelerinin yanı sıra daha yeni araştırmalar bazı bakterilerin histamini metabolize edebildiğini göstermiştir. Özellikle *Pseudomonas* türleri, muazzam bir metabolik çok yönlülük ile karakterize edilir ve de la Torre ve ark. *Pseudomonas putida* U suşunun tek karbon kaynağı olarak histamin içeren minimal bir ortamda aerobik olarak büyüebildiğini ortaya çıkardı¹⁰¹. Yine bir başka çalışmada, *Pseudomonas aeruginosa* PAO1 suşunun, tek bir karbon ve nitrojen kaynağı olarak histamin üzerinde büyüebildiği bulunmuştur, bu da fonksiyonel bir histamin katabolizma yolunu barındırdığını gösterir¹⁰².

Histamin salgılayan *Lactobacillus rhamnosus*'un uygulanmasının, çeşitli interlökinlerin salgılanmasında ve tümör nekroz faktöründe bir azalma ile kanıtlandığı gibi bir anti-enflamatuvar etkiye sahip olduğunu göstermiştir. Bu etki, histamin 2 reseptöründe eksik olan hayvanlarda kaybedilmiştir, bu da mikrobiyota kaynaklı histaminin immünomodülatör olabileceğini göstermiştir¹⁰³. Daha yeni çalışmalar, bağırsaktaki bakteriyel histamin salınımının sadece konakçı bağışıklık sisteminin lokal modülasyonuna neden olmadığını, aynı zamanda akciğerdeki gibi uzak mukozal bölgelerde immünolojik sonuçlar doğurabileceğini öne sürmüştür¹⁰⁴.

Bağırsak mikrobiyotasında bakteriyel histamin salgılanmasının sindirim bozuklukları ile ilişkili olduğuna dair kanıtlar vardır. Tipik olarak bağırsak mikrobiyotasında bulunan suşlar için histamin salınım kapasitesinin belirlenmesi ile, hastaların mikrobiyotasının bileşiminden histaminle ilgili bozuklukların teşhisini kolaylaştacaktır.

Bölüm A5

MİKROBIYOTA VE EPIGENETİK ETKİSİ

Emel Uzunoğlu

Giriş

İnsan Genom Projesi ile birlikte geliştirilen yüksek çıktılı teknolojiler insan mikrobiyomu, epigenomu ve mikrobiyotanın neden olduğu epigenetik modifikasyonlar hakkında pek çok veri elde edilmesini sağlamıştır. Bu bilgiler otoimmün hastalıklardan metabolik hastalıklara, kanserden kardiyovasküler hastalıklara kadar pek çok hastalık ile ilgili ışık tutmuştur.

Mikrobiyota kısaca belirli bir çevrede yaşayan canlı mikroorganizmalar olarak tanımlanır. Mikrobiyom tanımı ise bu çevrede yaşayan bakteri, virüs, mantar, parazit, archaea gibi canlılara ek olarak, bu canlıların genomlarını, metabolitlerini ve onları çevreleyen ekosistemi de kapsar.¹Bağırsak mikrobiyotası “ikinci genom” olarak adlandırılmaktadır.² Sahip olduğu 2.000.000 gen ile insanda kodlanan gen sayısından x100 kat daha fazla gen içermektedir.³

Mikrobiyom tanımından da anlaşılacağı üzere, mikrobiyotada yaşayan mikroorganizmalar içerisinde buldukları çevre ile iletişim hâlinindedirler. Salgıladıkları moleküller ile farklı mekanizmalar üzerinden konağın fizyolojisini değiştirebilirler. Son yıllarda gittikçe artan sayıda çalışma ile konağın epigenetik mekanizmaları üzerindeki etkileri araştırılmaktadır. Üç farklı mekanizma ile mikrobiyota ürünlerinin konakçı da epigenetik değişiklikler yarattığı düşünülmektedir: 1)DNA veya histon modifikasyonları için gerekli olan substratların sentezi 2) epigenetik modifiye edici enzimlerin ekspresyonu ve/veya aktivitelerinin regülasyonu 3) konak hücrelerine ait intrinsik yolların aktivasyonu.⁴

Epigenetik Tanımı ve Epigenetik Mekanizmalar

Epigenetik; DNA sekansında hiçbir değişiklik oluşturmadan genlerin ifadesini değiştirebilen ve kalımsal olarak aktarılabilen değişiklikleri inceleyen bilim dalıdır. “Epi-” Yunanca “üzerinde” anlamını taşır. “Epigenetik”; genetik kod dışında yer alan, genlerin ekspresyonunu artıran veya gen ifadesini durduran faktörlerle ilgilenir.⁵

Gen ekspresyonu, epigenetik modifikasyonlar üzerinden diyet ve çevrenin etkisi ile değiştirilebilir. Özellikle metabolik hastalıkların yönetiminde epigenetiğimizi etkileyen faktörler kritik bir öneme sahiptir.⁶ Konak tarafından sindirilen besinler bağırsak mikrobiyotası tarafından fermente edilip çeşitli metabolitler üretilir. Mikrobiyota aracılı metabolitler epigenetik modifikasyonda rol oynayan enzimlerin substratı olarak görev yaparlar, bu enzimlerinin aktivitesini regüle ederler, konak genlerinin ekspresyonunu değiştirirler, intestinal epitelyal hücrelerde inflamasyonu tetikleyerek çeşitli metabolik hastalıklara neden olurlar.⁷Günümüzde histon deasetilaz (HDAC) inhibitörleri, besin takviyeleri, probiyotik ve prebiyotikler ve fekal bakteri transplantasyonu gibi farklı epigenetik modülasyonlar hâlen araştırma aşamasındadır.^{8,9,10,11,12,13}

bize özellikle metabolik hastalıklarla ilgili canlı bakterilerin tedavide kullanılmasının yükselen bir trend olduğunu göstermektedir.

Ciddi kurallarla sınırlama getirilmiş olsa da fekal mikrobiyota transplantasyonu (FMT) tedavide güncelliğini korumaktadır. Yeni çalışmalar FMT'nun konak ve immün hücre epigenomu üzerine etkilerine yoğunlaşmaktadır. Allagraft transplantasyon olog transplantasyondan daha başarılı olmuştur. FMT sonrası artan *Prevotella* spp. nin direkt ilişkili olduğu AFAP1 metilasyonu insülin sensitivitesi üzerinden metabolik sendromun tedavi edilmesi ile ilgili yeni bir yaklaşım getirmiştir.⁶⁶

Mikrobiyom tedavilerinden biri olan faj terapisi bakteriyofajları kullanır. Genetik mühendislik yardımıyla elde edilmiş bakteriyofajlar antimikrobiyal ajan olarak kullanılarak patojenleri uzaklaştırabilmektedir. Fajlar disbiyozis, diyabet ve obezite için de yeni tedavi yaklaşımları olarak görülmektedir.⁶⁷ FMT sırasında da fajlar restorasyonda çok önemlidirler. Fekal virüs transplantasyonu (FVT) olarak bilinen, donör fecesinden aseptik filtrasyonla bakteriyel komponentlerin uzaklaştırılması bakteriler tarafından gelişen invaziv enfeksiyonları önlemektedir. Bu şekilde yapılan transplantasyonlarda obezite ve T2DM semptomlarını geriletmiştir.⁶⁸

Mikrobiyotadan elde edilen metabolitlerin özellikle KZYA epigenetik substratlar olarak kullanılması kromatin yapısını, gen ekspresyon düzeylerini, konağın transkriptomunun yeniden düzenlenmesini sağlayabilir. Ancak bu çalışmalar henüz çok yeni ve çeşitli kısıtlılıklara sahiptir. Mikrobiyota üzerinden sağlanacak epigenetik değişikliklere ilişkin daha fazla ve kapsamlı çalışmalara ihtiyaç vardır.

MİKROBİYOTA/MİKROBİYOM ÇALIŞMALARINDA ETİK

Selma Altındış

Merve Pilavcı Adıgül

Giriş

Genel olarak mikrobiyota, insanlarla birlikte yaşayan mikroorganizmaların tamamını, mikrobiyom ise insanlarla kommensal olarak yaşayan mikroorganizmaların taşıdıkları genleri ifade etmektedir⁽¹⁾. Literatürde mikrobiyotanın “*sanal bir organ*”^(2, 3), “*yeni bir organ*”⁽⁴⁻⁷⁾ ya da “*süper organ*”^(8, 9) şeklinde tanımlanmalarına rastlanmaktadır. Çünkü araştırmalar, vücudumuzu oluşturan hücrelerin %10’undan daha azının insan hücreleri olduğu, kalan %90’nın ise bakteri hücrelerinden(mikroplar) oluştuğunu belirtmektedir⁽¹⁰⁾. Başka bir deyişle insan vücudu, aslında vücut hücrelerimizden 10 kat daha fazla mikrobiyal hücreden oluşan bir süper organizmadır⁽¹¹⁾.

Gümümüzde insan mikrobiyomu çalışmalarının sayısı, sahip olduğumuz bilgiler ve kullandığımız teknolojiler nedeniyle kısıtlıdır. Ancak bu konudaki çalışmaların gelecekte sağlayacağı fırsatlar ve sunacağı terapötik imkânlar nedeniyle hızla artacağı ve yaygınlaşacağı düşünülmektedir. Farklı disiplinlerce yapılan mikrobiyom çalışmalarında etik ile yakından ilişkili kişisel kimlik, mahremiyet, mülkiyet, araştırma etiği, halk sağlığı ve biyobankalar gibi bazı kavramların öne çıktığı görülmektedir⁽¹²⁻²¹⁾. Bu çalışmalara eşlik eden bir dizi etik, yasal ve sosyal sonuçlar görülebilir⁽²¹⁾. Yapılan araştırmaların ortaya koyduğu sonuçların^(7, 21-25) yanı sıra etik açıdan mikrobiyota konusunu ele alan çalışmalar^(12-15, 18-21), bu konunun önemini vurgulamaktadır. Dolayısıyla bu bölümde mikrobiyota çalışmalarında karşılaşılabilecek potansiyel etik ve yasal sorunlar, öne çıkan bu kavramlar üzerinden ele alınmaktadır.

Kişisel Kimlik ve Etik

Kişisel kimlikle ilgili en bilindik soru, ben kimim ya da biz kimiz? sorusudur. Ayrıca insan mikrobiyom araştırmalarından elde edilen bilgilerle, hücrelerimizin yarısından fazlası insan hücreleri değilse, bireysel bir insan olmak ne demektir?⁽²⁰⁾

Kimlik “en geniş anlamıyla, bireyin tüm özelliklerini kapsar”⁽²⁶⁾. Kimlik, “hem kendisi ile diğerleri arasında bir farklılaşma içerir, hem de kendisiyle diğerleri arasındaki özdeşlemelerden hareketle inşa edilir”⁽²⁷⁾. Kişilik, farklı disiplinler tarafından ele alınmasına rağmen üzerinde görüş birliğine varılmış ortak bir tanıma sahip değildir^(28, 29, 30). Ortak bir tanımının olmamasının nedeni kavramın son derece geniş bir içeriğe sahip olmasıdır⁽³¹⁾. Kişiliğin sahip olduğu fiziksel, bilişsel ve toplumsal içerik⁽³⁰⁾ bireyin ilgileri, tutumları, yetenekleri, konuşma biçimi, dış görünüşü ve çevresine uyumuna ilişkin özelliklerini kapsar ve bireye özgüdür^(31, 32).

Kişilik genellikle temel ve ayırt edici özellikler olmak üzere iki ana kategoride tanımlanmaktadır. Bunlar; biri bireyin doğuştan sahip olduğu diğeri sonradan edindiği donanımlardır. “Birincisi, bireyin psiko-sosyal varlığının biyolojik içeriğine, ikincisi ise sosyal boyutuna vurgu yapmaktadır”^(31, 33).

me, depolama, izleme ve dağıtım ve gibi işlem prosedürlerinin dikkate alınması gereken diğer konulardandır⁽⁵⁹⁾.

Biyobankaların kullanımının artmasıyla birlikte, biyobanka ve örnek bankalarının kuralları ve yönetimi ile ilgili olarak alan yazında şu sorular gündeme gelmektedir^(12, 17, 20):

➤ Biyolojik numunelere kimler erişim sağlamalı? Örneğin Kamu güvenlik kurumlarının, benzersiz ve tanımlanabilir bağışçı bilgileri içerebilen insan mikrobik numunelerini toplayıp saklayan Biobankayı ziyaret etmesine izin vermeli miyiz?

➤ Hangi bilgiler paylaşılmalı?

➤ Bilgilerin paylaşımı ve örneklerin hangi projeleri destekleyeceği ile ilgili kararları kimler vermelidir?

➤ Araştırmacıların veya biyobankaların bir katılımcının tesadüfi bulgularını veya genetik araştırmanın yarattığı bireysel araştırma sonuçlarını rapor etme sorumluluğunun olup olmadığıdır?⁽¹⁷⁾

Ayrıca mikrobiyom çalışmalarına etik çerçevenin oluşturulmasında aşağıdaki soruların cevap bulması önemli katkı sağlayacaktır⁽⁵⁹⁾:

➤ Post-genomik çağın etik eğilimleri ve yasal çerçeveleri nelerdir?

➤ Teknik gelişmeler ve yeni çalışma tasarımlarıyla ilgili yeni konular var mı?

➤ Bu gelişmeler, klinisyenlerin tutumlarını ve hastalarla olan ilişkisini nasıl etkiliyor?

Sonuç olarak günümüzde insan mikrobiyomu ve bunun insan sağlığı ve hastalığı üzerindeki etkisi hakkındaki bilgilerimiz son birkaç yılda kayda değer bir şekilde iyileşmesine rağmen, aslında güçlü kanıtlar hâlâ sınırlıdır⁽²⁰⁾. Ancak bu konudaki çalışmaların gelecekte hızla artacağı düşünülmektedir. Dolayısıyla konuya ilişkin etik konuların tüm boyutlarıyla değerlendirilmesi, çalışmalarda karşılaşılabilecek etik ve yasal sorunlara şimdiden çözüm üretilmesi, doğurabileceği olumsuz sonuçlar nedeniyle önemlidir. Mikrobiyota ve mikrobiyom çalışmalarında gelişebilecek muhtemel sorunların çözümüne yönelik adımların atılması için ilgili kavramlara ilişkin etik konuların ivedilikle ele alınması önerilmektedir.

MİKROBİYOTA ÇALIŞMALARINDA ÖRNEK ALIMI VE DNA İZOLASYONU

Mehmet Köroğlu

İnsan vücudunun çeşitli bölgelerinde (ağız, boğaz, solunum sistemi, gastrointestinal sistem (GİS), deri ve ürogenital sistem gibi) hastalık yapmadan yaşayan mikroorganizmalar bulunmaktadır. Daha önceden normal flora olarak isimlendirilen bu durum şimdilerde mikrobiyota ve mikrobiyotanın sahip olduğu genetik materyale de mikrobiyom denilmektedir. Bu iki terim, çoğu kez aynı anlamda ve birbirinin yerine kullanılmaktadır. İnsan vücudunda başta bağırsaklar olmak üzere mikrobiyota değişikliklerinin birçok hastalıkla ilişkili olduğu saptanmıştır ⁽¹⁾. Nükleik asit dizi analizi teknolojilerinin de gelişmesi ile mikroorganizma çeşitliliği ve mikroorganizmaların miktarı ölçülebilmekte olup, bu konuda çok sayıda bilimsel çalışma yapılmaya başlanmıştır ⁽²⁻⁵⁾. Bu tip çalışmaların en önemli basamaklarından birisi hatta en önemlisi numunenin uygun şartlarda toplanması, transferi, saklanması ve yine uygun koşullarda dizileme işlemlerine hazır hâle getirilmesidir. Bu aşamalarda oluşabilecek hatalar ve eksiklikler çalışma sonucunu ciddi şekilde etkileyecektir ^(3,6,7).

Mikrobiyota çalışmaları; çalışma grupları oluşturulması ve vakaların seçimi, örneklerin toplanması (alınması, transportu, stabilizasyonu ve saklanması), nükleik asit izolasyonu, moleküler çalışmalar (amplifikasyon-sekans analizi), biyoinformatik-istatistiksel analizler, sonuçların analizi ve yorumu aşamalarından oluşmaktadır. Kontrol grubunda yer alacak bireyler, araştırmanın amacına göre özenle seçilmelidir. Ayrıca aşağıda belirtilen hususlar mutlaka dikkate alınmalı ve kaydedilmelidir ^(2-5,8,9).

- Yaş; insan vücut mikrobiyotası yaklaşık 2 yaşında erişkin mikrobiyotasına benzer bir hâl alır. Ancak bağırsak mikrobiyotasının, 3 yaşından sonra stabil hâle geldiği kabul edilmektedir. Bir kısım çalışmalarda 18-40 yaş aralığının çocukluk, ergenlik ve menopoz dönemindeki değişikliklerden en az etkilenen dönem olduğu vurgulanmıştır.
- Antibiyotik kullanımı çok önemlidir (birçok çalışmada raporlanmıştır). Özellikle yakın dönemde antibiyotik kullanımının ciddi etkileri vardır. Antibiyotiğin türüne ve dozuna göre bağırsak mikrobiyotasının normal hâline dönebilmesi için 6 ay hatta 4 yıldan daha fazla süre gerekebilmektedir.
- Diğer ilaçlar; metformin, proton pompa inhibitörleri, kortikosteroidler, sitokinler, immünosupresif ajanlar veya büyük doz probiyotikler takviye edici gıda kategorisinde yer alan birçok yardımcı beslenme maddesi (balık yağı, argan yağı gibi).
- Menapoz, puberte gibi hormonal durumları.
- Sigara-tütün ve alkol kullanım alışkanlıkları.
- Diyetleri, diyet takviyeleri kullanımı ve yakın zamandaki diyet değişiklikleri, katı diyet tipleri (ketojenik diyet, alkali tip diyet gibi).
- Malnütrisyon.

Bölüm A8

MİKROBİYOTA ÇALIŞMALARINDA MOLEKÜLER TANI YÖNTEMLERİ

Barış Otlu

Yusuf Yakupoğulları

Giriş

Doğduğumuz anda sadece kendi ökaryotik hücrelerimizden ibaret olan vücudumuzun özellikle cilt yüzeyi, ağız boşluğu ve bağırsak gibi bölgeleri hayatımızın ilk birkaç yılı içerisinde çok sayıda bakteri, arke, mantar ve virüsler ile kolonize olmaktadır. Bu hücrelerin tamamının oluşturduğu topluluk **insan mikrobiyomu** olarak adlandırılır ki neredeyse vücudumuzun geri kalanındaki hücrelerin 10 katı kadar hücre içermekte, insan genomundan çok daha fazla sayıda gene sahip olmakta ve vücut ağırlığının birkaç kilosunu oluşturmaktadır^{1,2}. Mikrobiyotanın insan sağlığı ve hastalıkları üzerindeki etkisi uzun süredir bilinmekle birlikte, kültür-bağımsız tekniklerin kullanılmaya başladığı 1990'lı yıllardan itibaren mikrobiyota-konak etkileşimi ve mikrobiyota-hastalık ilişkisi ile ilgili bilgilerimizde çok önemli artışlar olmuştur. Elde edilen bu yoğun bilgi sonrasında klasik yöntemlerin bu nişin sadece temsili bir 'enstanesini' verebildiği düşünölmeye başlanmıştır³. Mikrobiyota çalışmalarında kullanılan mikrobiyolojik yöntemlerin tarihsel gelişimine bakıldığında; genel olarak kültür-temelli yöntemler ve kültür-bağımsız yöntemler olarak iki grupta incelenebilir. Bu bölümde, insan mikrobiyom araştırmalarında kullanılan kültür temelli yöntemler üzerinde kısaca durulduktan sonra moleküler esaslı metotlar hakkında son yıllarda elde edilen verilerin özetlenmesi ve yöntemlerin sunduğu avantaj ve dezavantajlarının vurgulanması amaçlanmıştır.

Kültür Temelli Yöntemler

İlk bakteriyel kültür ortamı, ya infüzyon ile ya da çeşitli kaynaklardan elde edilen etin enzimatik sindirimi ile hazırlanan jelöz sıvı ortamlar olmuştur. Aslen Spallanzani tarafından 18. yüzyılda geliştirilmiş ve daha sonra 19. yüzyılda Pasteur tarafından saflaştırılmış olan bu maddeler, insanların hastalık gelişen bölgelerinden alınan klinik numuneler içindeki bakterilerin laboratuvar ortamında üretilmesine olanak vermiştir. Robert Koch, bakteriyel kolonilerin üreme ve morfolojik özelliklerine göre ayırımı sağlayacak katı kültür ortamlarına ihtiyaç olduğunu fark ederek patates dilimleri üzerinde ilk kez koloni oluşumunu tanımlamıştır. Koch aynı zamanda, patates dilimleri üzerinde sınırlı sayıda mikroorganizmanın üreyebildiğini belirtmiş ve büyük olasılıkla in-vitro ortamda kültüre edilemeyen organizma fenomeni ilk kez bu tarihte ortaya çıkmıştır⁴. Üretilen mikroorganizmaların tanımlanması için günümüze kadar izolatların in vitro üreme özelliklerinin temel alındığı fenotipik tanımlama tekniklerinde önemli gelişmeler yaşanmıştır. Ancak son yıllarda, "jel mikrodamla" ve "mikrobiyal kültür çipleri" (microPetri dishes) gibi geliştirilen kültür yöntemleri ve ko-kültür gibi yeni yaklaşımların da kullanıma girmesiyle kültür-temelli yöntemler daha da sofistike hâle gelmiştir^{5,6,7}. Yirminci yüzyılın başına kadar spesifik mikrobiyal türler; organizmanın seçilerek üretilmesini sağlayan birtakım özel kültür ortamlarına ekil-

Mikrobiyom Çalışmalarının Geleceği

İnsan mikrobiyomunun analizine yönelik metotlar hızla gelişmektedir. Hastalık gelişiminde mikrobiyomun rolüne dair dinamikler aydınlatıldıkça analitik teknolojilere yapılacak yatırımların daha da artacağı öngörülmektedir. Gelişmeler, sadece mikroorganizma kompozisyonunun saptanması yönünde sınırlı kalmayacak aynı zamanda mikrobiyom içi etkileşimleri ve mikrobiyom-konak ilişkilerini daha detaylı olarak ortaya koyacaktır. Ayrıca, mikrobiyom çalışmaları için minimum örneklem büyüklüğü hesaplamaları, istatistiksel analiz metotları ve modelleme çalışmalarında önemli aşamaların kaydedileceği beklenmektedir⁷¹.

Mikrobiyota, göreceli olarak devamlılık arz eden bir yapı olmakla beraber zaman içerisinde iç ve dış faktörler sonucunda sık değişikliğe uğrayan bileşenlere sahiptir. Bu değişkenliği doğru bir şekilde inceleyebilmek için daha iyi yapılandırılmış boylamsal çalışmalara ve buradan elde edilen verinin yorumlanması için yeni analiz yöntemlerine gereksinim duyulmaktadır. Böylelikle zaman içinde takson, konak ve çevre arasındaki karmaşık ilişkiler aydınlatılabilecektir. Son zamanlarda, boylamsal verileri görselleştirmek ve mikrobiyal ekolojiden uyarlanmış tahminler oluşturmak için geliştirilen yeni analiz metotları kullanıma sunulmuştur⁷¹⁻⁷⁴. Günümüzde shotgun metagenomik ve metatranskriptomik için evrensel ve kapsamlı analitik "pipeline" ihtiyacı hâlen bulunmaktadır. Bu ağın kurulması, veri paylaşımını ve analitik süreçler sonunda elde edilen bilginin yorumlanmasını kolaylaştıran ve standardizasyonu sağlamaya katkı sunan önemli bir sistemin altyapısını oluşturacaktır. Günümüzde mikrobiyom analizleri hâlen çok pahalı olup üst düzey teknoloji, laboratuvar ve deneyime olan gereksinim gibi bazı sınırlılıkları hâlen giderilememiştir.

Sonuç

Mikrobiyota çalışmalarının farklı uygulamaları için geliştirilmiş kantitatif, kalitatif veya her ikisinin bulunduğu sonuçlar verebilme potansiyelinde çok sayıda moleküler teknik bulunmaktadır. Bir mikrobiyota çalışması planlanacağı zaman, hangi tekniğin kullanılacağına karar verirken maliyetin ve ihtiyaç duyulan analiz derinliğinin göz önüne alınması gerekmektedir. Son zamanlarda geliştirilen yüksek-çıkıtlı teknikler, mikrobiyota üyelerinin filogenetik karakterizasyonu ve mevcut organizmaların kantitasyonlarını sağlamaları açısından avantajlıdır. Diğer yöntemlere kıyasla pahalı olmakla birlikte, tekniklerin maliyetleri geçmişe kıyasla düşmektedir. İnsan mikrobiyotası ile ilgili mevcut moleküler çalışmaların çoğu, klinik ölçümlerle belirli OTU'ları veya organizmaları ilişkilendirmeye çalışan hipotezler üretmek üzere yapılmaktadır. Bunlar hastalıkların biyolojik belirteçleri olarak yararlı bilgiler vermektedir. Ancak 16S rRNA dizilemesi, tüm genom dizileme ve metagenomik çalışmalar ile metabolomik, metaproteomik ve metatranskriptomik gibi mikrobiyal topluluğun aktivitesinin ölçülmesine yönelik çalışmaların kombine edilmesi ve böylece mikrobiyota-konak etkileşiminin gerçek anlamda ortaya konulması daha yararlı olacaktır. Bu sayede hastalık önleme ve yönetimi için yeni stratejiler geliştirilebilecektir.

YENİ NESİL SEKANS SİSTEMLERİNDE GÜNCELLEME VE MİKROBİYOTA ANALİZİ

İbrahim Halil Miraloğlu

Gamze Gürsoy

Yağmur Yeşilyurt

Giriş

DNA dizileme, bir DNA ipliğindeki Adenin, Timin, Guanin ve Sitozin bazlarının tam olarak hangi düzende dizili olduklarını ortaya çıkarmak amacıyla yapılan bir analizdir. İlk DNA izolasyonundan ve DNA'nın yapısının keşfinden sonra, bilim insanları DNA'yı dizilemek amacıyla birçok girişimde bulunmuştur. Yürütülen çalışmaların sonucunda, 1965 yılında Robert Holley ilk tRNA'yı dizileyerek 1986 yılında Nobel Ödülü'nü kazanmıştır ^[1]. 1972 yılında ise Walter Fiers bakteriyofaj MS2'nin kaplama proteinini kodlayan genin DNA'sını dizileyerek tam bir geni dizileyen ilk kişi olmuştur ^[2, 3]. Fiers'ın başarısının ardından, Fredrick Sanger alternatif bir DNA dizileme yöntemi üzerinde çalışmaya devam ederek, 1977'de bir "zincir sonlandırma yöntemi" olan ve günümüzde "Sanger Dideoksi Dizileme Yöntemi" olarak bilinen radyoaktif işaretlenmiş ve kısmen sindirilmiş parçalar ile ilk DNA dizileme yöntemini geliştirmiştir ^[4]. Ayrıca 1980'de Allan Maxam ve Walter Gilbert, DNA'nın kimyasal modifikasyonuna dayanan ve günümüzde "Maxam-Gilbert Kimyasal Kırılma Yöntemi" olarak anılan DNA dizileme yöntemini bilim camiasına tanıtmıştır. Bu yöntem ise, DNA dizisini spesifik bazlardan kıran kimyasalların kullanılmasını içermektedir ^[5]. Nükleik asit dizileme alanı, Sanger zincir sonlandırma ve Maxam-Gilbert dizileme yöntemlerinden sonra, 2005 yılında ortaya çıkan Yeni Nesil Dizileme (YND) yöntemleri ile hızlı bir ivme kazanmıştır. 2009 yılı ise "üçüncü nesil dizileme" teknolojilerinden bahsedilmeye başlandığı yıl olmuştur. Yeni Nesil Dizileme yöntemleriyle elde edilen kısa okumaların dezavantajlarından sonra, daha uzun okumaların hızlı ve verimli şekilde dizilenmesi isteği önem kazanarak Oxford Nanopor ve PacBio uzun okuma teknolojilerinin oluşumuna önayak olmuştur. Üçüncü Nesil Dizileme teknolojilerinin artan kullanımı mikrobiyota araştırmalarının da önünü açmıştır.

Birinci Nesil Dizileme

Kısa okumaya dayalı birinci nesil dizileme yöntemleri, nükleik asit moleküllerinin büyük ölçülerde okunmasını gerektirir ve son teknolojilere kıyasla oldukça düşük verim üretirler. Tercih edilen yöntemlere göre değişiklikler olsa da genellikle her deney, jel şeridi başına yaklaşık olarak 1000 nükleotid bazına kadar yalnızca birkaç okuma üretir ve oldukça kısa nükleik asit dizilerini dizilemek için kullanılırlar. Birinci nesil dizilemenin ana yöntemlerinden biri aşağıda açıklanmıştır.

Sanger Zincir Sonlandırma Yöntemi

1977 yılında Sanger ve ekibi, güvenilirliği sebebiyle uzun yıllar boyunca yaygın olarak tercih edilecek bir enzimatik dizileme yöntemi geliştirmiştir ^[6]. Zincir sonlandırma yöntemi olarak anılan bu

rinin tespiti bu bölgeler dizilenecek yapılmaktadır. Ancak YND teknolojileri ile kısa okumalar elde edilmesinden dolayı 16s rRNA sekanslama ile bakteri taksonomik seviye tespiti bu 9 bölgenin yalnızca birkaçını (özellikle de V3-V4 bölgelerini) hedefleyerek yapılmaktadır^[20]. Bu durum, bakterilerin taksonomik sınıflandırmalarının en fazla cinse kadar ayırt edilebilmesine sebep olmaktadır. Ancak aynı cinse sahip bakterilerin, farklı türlerinin insan sağlığına etkilerinin değişkenlik gösterdiği bilinmektedir.

Kısa okumaların dezavantajlarından sonra geliştirilen ve uzun okuma sağlayan üçüncü nesil dizileme teknolojileri, laboratuvar aşamasında oldukça hızlı sonuçlar alınmasını sağlarken aynı zamanda da 16s rRNA geninin tamamının primerler ile çoğaltılmasını sağlamıştır. Bu sayede bölgenin tamamının kapsanmasıyla elde edilecek sonuçlar çok daha güvenilir olmaktadır.^[21]

Genom boyunca dağılmış homopolimer bölgelerin ortaya çıkarılması, dizileme sonucunda genomların başarılı ve düzgün bir biçimde elde edilmesindeki en önemli noktalardan biridir. İkinci nesil dizileme yöntemleri ile homopolimer bölgelerdeki kısa okumaları birleştirerek uzun bölgeleri yeniden oluşturmak bir sorundur. Üçüncü nesil yöntemler ile gelen uzun okumalar sayesinde tekrar eden bölgelerden daha uzun okumalar elde edilmesi bu soruna bir çözüm sunmuştur. Bu sayede kısa okumaya dayalı teknolojilerle yapılan çalışmalara kıyasla üçüncü nesil ile gelen uzun okuma yöntemleri ile bakterilerin taksonomik sınıflandırmalarında daha düzgün tanımlamalar sağlanabilmektedir. Doğru taksonomik bilgi sayesinde ise hastalık-bakteri ilişkisi odaklı yürütülen araştırmalar başta olmak üzere, sonraki analizlerden ve çalışmalardan elde edilen sonuçların güvenilirliğinin de artmasına katkıda bulunulmuştur.

Mikrobiyota Analizlerinde İleriye Dönük Hedefler

Günümüzde biyoteknolojinin önem ve hız kazanması ile DNA dizileme teknolojisinde köklü değişiklikler meydana gelmiştir. Birinci nesil ile ortaya çıkan dizileme yöntemlerinin verim ve okuma sayısı ikinci nesil ile oldukça arttırılmıştır. Son teknolojilerin sayesinde ise uzun okuma yapan üçüncü nesil dizileme yöntemleri, tek DNA moleküllerinin doğrudan dizilenmesine olanak sağlamıştır. Yürütülen mikrobiyota çalışmaları, uzun okumalar sayesinde 16s rRNA bölgesinin tamamının kapsanmasıyla artan taksonomik sınıflandırma doğruluğu ile önem kazanmıştır. Hızla gelişen teknoloji ve yürütülen çalışmalar ile 16s rRNA korunmuş bölgesine ek olarak 5s rRNA ve 23s rRNA korunmuş bölgeleri için de uzun okumalar ile tam kapsama elde etmek mikrobiyota analizlerinde bakteri taksonomik sınıflandırmalarının daha doğru tespit edilmesini sağlayabilecektir. Bu doğrultuda dizileme sonucunda bakterilerin tür ve hatta alttür seviyesine kadar doğru tespit edilebilmesi hedefler arasında yer alacaktır. Hastalık tespiti için biyobelirteç görevi görebilecek bakterilerin alt tür seviyesine kadar doğru tespit edilmesi, bu hastalıkların teşhis ve tedavisi için önemli olacaktır.

Bölüm A10

MİKROBİYOM VERİSİNİN BİYİNFORMATİK ANALİZİ

Aycan Gündoğdu

Özkan Ufuk Nalbantoğlu

Mevcut biyoteknoloji, günümüzde mikrobiyom verisinin büyük oranda yeni nesil DNA dizileme teknolojileri kullanılarak üretilmesini sağlamaktadır. Her ne kadar düşük çıktılı konvansiyonel teknolojiler (örn. Gerçek zamanlı-kantatif PZR, Western blot analizleri, Sanger dizileme vb.) belli bir hedefe yönelik analiz imkânı sağlamakta ve mikrobiyota çalışmalarında kısıtlı bir kullanım alanı bulsa da, omik teknolojilerin yaygınlaşması ile metagenom yaklaşımları bu alanın en yaygın teknolojisi hâline gelmiştir. Öte yandan, bahsi geçen düşük çıktılı teknolojiler için konvansiyonel istatistikî yöntemler kullanılarak veri analizi yapmak mümkün olsa da, metagenom gibi yüksek miktardaki karmaşık veriler için ayrıntılı biyoinformatik analiz süreçlerine ihtiyaç duyulmaktadır. Bu kısımda, mikrobiyom analizi için ihtiyaç duyulan biyoinformatik süreçler ve bu amaçla ortaya konulmuş belli başlı çözümler sunulmaktadır.

Metagenom teknolojileri, çevresel bir örnekteki türlere ait genetik materyalin herhangi bir izolasyon veya kültürleme aşaması olmadan doğrudan incelenmesi yaklaşımına dayanmaktadır. Habitatlarında genellikle karmaşık simbiyotik ilişkiler içerisinde bulunan mikrobiyal türlerin ortamından izole edilerek kültürlenmesi günümüzde ancak bilinen türlerle sınırlıdır. Dolayısıyla her ne kadar çevresel örneklerin doğrudan analizi fikri basit ve akılcı olsa da, teknolojik olarak uygulanabilir hâle gelmesi ancak 21. yüzyıl başından itibaren mümkün olabilmektedir. Çünkü, çevresel örneklerde bulunan binler seviyesindeki tür sayısı ve dolayısıyla milyonlar seviyesindeki genin hep birlikte dizilenebilmesi için yeni nesil dizileme teknolojileri gibi yüksek çıktı sağlayabilen sistemler henüz kısa bir süre önce bilim dünyasına sunulabilmektedir.

Bu doğrultuda, günümüz mikrobiyom çalışmaları yoğunlukla iki temel DNA dizileme tekniği üzerinde şekillenmiştir. Bunlar, yalnızca seçilmiş marker dizilerin biyoçeşitliliğini ortaya koyacak şekilde 16S/18S rRNA genleri ve ITS (Internal Transcribed Spacer *bölgesi*) parçalarının dizildiği *amplikon dizileme* ve çevresel örnekteki tüm DNA materyalinin dizildiği *metagenom dizilemedir*.

Amplikon dizileme, düşük maliyetli ıslak laboratuvar gereksinimi ve biyoinformatik analiz için yaygın ve yüksek hesaplama gücü gerektirmeyen iş akışlarına sahip olduğundan yaygın kullanılmaktadır. Amplikon dizilemenin amacı, mikrobiyal türlerde evrensel olarak bulunan ve filogenetik sinyaller taşıyan DNA parçalarının hedefli olarak dizilenmesidir. Bu sayede, bir mikrobiyom içerisindeki tüm mikrobiyal taksonlar duyarlılığı yüksek bir şekilde genetik olarak örneklenmekte, dahası dizilenen ampliconların taşıdığı filogenetik sinyallerden faydalanılarak örnekteki türlerin varlığının ve örneğin biyoçeşitliliği ortaya çıkarılması mümkün olmaktadır. 16S ribozomal kısa alt ünite geni, bakterilerde korunmuş olarak bulunan ve prokaryot sistematiğinde altın standart olarak kullanılan marker dizi olduğundan genellikle bakteri çeşitliliğinin hedeflendiği mikrobiyota çalışmalarında kullanılmaktadır. 18S

Mikrobiyom biyoinformatiği oldukça dinamik ve yeni olgunlaşmakta olan bir bilim dalıdır. Bu bölümde bahsi geçen standartlaşmış temel analizlerin ötesinde, bilimsel çalışmalar için gereksinim duyulan ileri analizler, kapsamlı veri bilimi yöntemleri göz önünde bulundurularak her çalışma için ayrı ayrı ve bir deney tasarımı sistematigi içerisinde tasarlanmak zorundadır.

VİRAL MİKROBİGENOM / VİROM / VİRAL BİOİNFORMATİK

Semra Öz

Mustafa Altındış

Sağlıklı insan vücudu her zaman çok sayıda yabancı hücre ve virüs içermektedir. İnsan mikrobiyomunun viral bileşeni **virom** olarak adlandırılır. Akut, kalıcı veya latent enfeksiyona neden olan virüsler ve insan genomuna entegre edilmiş endojen retrovirüsler gibi virüsler de dâhil olmak üzere insanlarda bulunan tüm virüslerin toplanmasıdır.

Virüslerin sıklıkla klinik olarak sessiz oldukları ve konağın kendilerine karşı koymasını önleyecek, viral kalıcılığa ve aktarıma katkıda bulunacak ideal bir denge buldukları varsayılmıştır. Bulunan yeni virüslerin bazısında ise ana konakçılara avantaj sağladıkları ortaya çıkmıştır. Çoğu virüs sürekli patojen değildir ve daima zararsızdır fakat konağın sağlık ve immünolojik durumlarına bağlı olarak farklı sonuçlara neden olabilir.

İnsan viromu hakkındaki bilgilerimiz bu konudaki çalışmalar arttıkça genişlemektedir. Yeni nesil tanı yöntemleri kullanarak hasta örneklerinden viromunu birkaç saat hatta birkaç dakika içinde analiz etme hastalıkların daha hızlı tanı, tedavi ve kontrolünü sağlayacaktır. Virüsler ve insan viromu çok karmaşık yapıya sahip olup bu konuda yapılacak geniş çaplı çalışmalara ihtiyaç duyulmaktadır. Bu bölümde; insan viromu tipleri, vücutta bulunabileceği yerler ve insan sağlığına etkileri tartışılacaktır.

Giriş

Yakın geçmişe kadar klinik olarak anlamlı bir bulaşma olmadıkça insan organizması virüsler açısından steril kabul ediliyordu. Oysa sağlıklı insan vücudu her zaman çok sayıda yabancı hücre ve virüs içermektedir ⁽¹⁾. İnsan vücudunda, ökaryotik (insan) hücelere göre on kat daha fazla sayıda mikrobik hücre ve viral parçacık vardır ve çoğu insan konaklarıyla karmaşık kommensal veya mutualizm ilişkisi hâlindeyler ⁽²⁾. Bu yüzden insan mikrobiyotasını oluşturan bu türler yalnızca invaziv hastalık vektörleri olarak görülmemeli ve insan organizmasının ayrılmaz bir parçası olduğu kabul edilmelidir ⁽³⁾.

İnsan mikrobiyomunun viral bileşeni **virom** olarak adlandırılır. Virom, akut, kalıcı veya latent enfeksiyona neden olan virüsler ve insan genomuna entegre edilmiş endojen retrovirüsler gibi virüsler de dâhil olmak üzere insanlarda veya insanlar üzerinde bulunan tüm virüslerin toplanmasıdır ⁽⁴⁾.

Son zamanlarda, DNA dizilerinin geliştirilmesi ve yeni yüksek verimli DNA sekans teknikleri patojenlerin hızlı, tarafsız ve hassas şekilde keşfedilmesi ve karakterize edilmesinin yolunu açmıştır ⁽⁵⁾. Sekans teknolojisindeki gelişmelere rağmen, mikrobiyomun bakteriyel olmayan bileşenlerini ele alan az sayıda çalışma vardır. Bakterilerin aksine virüsler için ortak belirteç eksikliği, virom elementlerinin heterojenliği, düşük biyokütle örnekleri ile çalışma zorluğu, konak DNA arka planı ile karıştırılma, viromanın analizi için yetersiz biyoenformatik araçlar çalışmalarının azlığının birkaç nedenidir ⁽⁶⁾.

Mikrobiyotanın virüs enfeksiyonları üzerindeki etkileri konakçı için koruyucu veya zararlı olabilir. Mikrobiyota, influenzaya karşı adaptif immün yanıtları pozitif olarak düzenlerken, Mouse Mammary Tumor Viruse (MMTV) karşı antivirüs adaptif yanıtlarını baskılar ve hedef hücrelere virüs bağlantısını artırarak poliovirüs ve reovirüsün replikasyonunu kolaylaştırır. Dolayısıyla, mikrobiyota virüs-konakçı etkileşimlerinde ikili bir rol oynamaktadır. Şu anda mikrobiyota ile ilgili araştırmaları yönlendiren açık bir soru, mikrobiyotanın nasıl manipüle edilebileceğidir. Böylece konak, zararlı enfeksiyonlardan korunabilecektir. Mikrobiyotadan yararlanan patojenler söz konusu olduğunda, bu etkileşimleri azaltmak için bir yol bulunmalı, böylece patojen yayılımını / yayılmasını önleyebilmeliyiz. Bu, mikrobiyotanın bileşimini manipüle ederek (bir virüs tarafından istismar edilen belirli bir mikropun azaltılması) veya viral patojen ile patojene fayda sağlayan spesifik bakteriyel bileşikler arasındaki etkileşimleri bloke ederek yapılabilir. Mikrobiyota-patojen etkileşimleri alanındaki gelecekteki keşifler şüphesiz bulaşıcı hastalıklarda terapötik müdahaleler için yeni fırsatlar ortaya çıkaracaktır⁽³⁴⁾.

Sonuç

İnsan viromu bu konudaki bilgilerimiz arttıkça genişlemektedir. Yeni nesil tanı yöntemleri kullanarak hasta örneklerinden viromunu birkaç saat hatta birkaç dakika içinde analiz etme hastalıkların daha hızlı tanı, tedavi ve kontrolünü sağlayacaktır ve gelecekte tanıda standart bir uygulama hâline gelebilir. Gereksiz antibiyotik kullanımı ve antibakteriyel direnç azaltılabilir. Genomik yaklaşımlar, moleküler epidemiyolojik çalışmaların, hangi virüslerin hangi coğrafi bölgelerdeki hastalıklarla ilişkili olduğunu anlamada yardımcı olabilir. İnsan virüslerinin mutasyon yoluyla veya hayvan virüsleriyle rekombinasyon yoluyla daha patojen hâle gelmesi de mümkündür. Virüsler ve insan viromu çok karmaşık yapıya sahip olup bu konuda yapılacak geniş çaplı çalışmalara ihtiyaç duyulmaktadır.

Bölüm A12

FUNGAL MİKROBİYOM; MİKOBİYOM

Sema Aşkın Keçeli

Mustafa Altındış

Mikrobiyom terimi, tüm mikrobiyomun mantar bileşenini tanımlamak için kullanılır. Her insanda genel mikrobiyotanın bir parçası olarak mantarlar, bakteriyel mikrobiyota topluluğundan oldukça küçüktür. Bununla birlikte, fungal mikrobiyomun insanların sağlıkları üzerine etkisi; özellikle konağın immün yetmezlik gibi tehlikeye girmesi hâllerinde patojen mikroorganizmaların çoğalmasına rezervuar olması, enflamatuvar hastalıklar ve metabolik bozukluklarda potansiyel bir kofaktör gibi davranması önemlidir.

Şekil 1. Sağlık ve hastalıkta mikrobiyoma genel bakış (Kaynak 1'den uyarlanmıştır).

COPD(KOAH): Kronik Obstrüktif Akciğer Hastalığı; **HIV:** İnsan İmmün Yetmezlik Virüsü; **IBD:** İnflamatuvar bağırsak hastalığı; **IBS:** Irritabl bağırsak sendromu.

(ITS4ng) kullanıldığında daha kapsamlı bir fungi tanımlanması elde edildiği ve daha az taksonomik sapmaların olduğu bildirilmiştir.⁴⁹

ITS bölgelerinin sekanslama sonuçları elde edildikten sonra, sonuçların analizi biyoinformatik çalışmalar ile gerçekleştirilir. Kalite kontrollü referans veritabanlarının eksikliğinden dolayı yeni fungal tür tanımlanması veya sıklıkla karşılaşılan fungal türlerin eşeyli veya eşeysiz formlarına farklı isimler ile tanımlanması gibi sorunlar ile karşılaşmaktadır.⁵⁰ Gen bankasına eklenen ITS sekanslarının çoğunda “tanımlanamayan fungus” veya “tanımlanamayan OTU” şeklindedir. ITS bölgesini referans olarak kullanılan veritabanları INSDC, UNITE and Warcup’tır. En sık kullanılan ve fungal sekansların arındırılmış olduğu gelişmiş veri tabanı ise “UNITE” veritabanıdır. Fungal metagenomik analizindeki zorlukların giderilmesine yönelik “FindFungi” olarak adlandırılan biyoinformatik bir yöntem geliştirilmiş ve yalancı pozitifliklerin tespit edilmesinin mümkün olduğu ileri sürülmüştür.⁵¹

Sekans işlemi sonlandıktan sonra fungi tanımlanması ve sayısı belirlenmiş olur. Veritabanı hizalamaları, en iyi eşleşmeyi bulmaya yarayan iyi bir yöntemdir, fakat bu eşleşmenin ne derece doğru olduğunu araştırmak gerekmektedir. Fungal tür sekans çalışmalarına göre, ITS sekansları klinik açıdan önemli iki tür olan *Candida* ve *Aspergillus* türlerinin tanımlanmasında oldukça yararlıdır, fakat *Cladosporium* türleri arasındaki ITS varyasyonu çok yetersizdir.⁵¹ Fungal mikrobiyom analizinde yapılan sekans çalışmaları problemler gibi gözükse de internal kontrollerin olduğu daha birçok çalışma ile bu problemlerin çözülmesi muhtemeldir.

PARAZİT ENFEKSİYONLARI VE İNSAN MİKROBİYOTA İLİŞKİSİ

İpek Mumcuoğlu

Fatma Cevahir

Parazit enfeksiyonları, az gelişmiş ülkeler başta olmak üzere tüm dünyada milyarlarca insanın sağlığını tehdit etmektedir. Bu enfeksiyonlar, asemptomatik enfeksiyondan kronik hastalığa kadar değişen klinik tablolar oluşturabilmektedir. Son dönemde insan mikrobiyomu üzerine yapılan çalışmalar, özellikle bağırsak mikrobiyotasının hastalık ifadesindeki farklılıkları açıklamaya yardımcı olabileceğini ileri sürmektedir. Bu çalışmalarla, mikrobiyotanın parazit kolonizasyonuna ve konakta kalıcılığına etki ettiği gibi parazit enfeksiyonu varlığının da mikrobiyotayı değiştirebileceğini bildirilmiştir. Mikrobiyota bileşiminin değişmesi (disbiyoz), birçok enfeksiyon ve inflamatuvar hastalığın patogenezi ile ilişkilendirilmiştir. Mikrobiyota, insan parazitleri ve konakçı bağışıklık sistemi arasındaki etkileşimleri anlamak, paraziter enfeksiyonları ile tedavi ve mücadelede yeni ufuklar açabilir. Bu derlemenin amacı, bu alandaki son bilgileri özetlemektir.

Giriş

İnsanlar bağırsak, mukoza ve derisi çeşitli bakteri, mantar, virüs ve ökaryotik parazitler tarafından kolonize edilir. Mikrobiyota terimi, insan vücudunda yaşayan ortak mikropların ekolojik bir topluluğunu temsil eder. Mikrobiyom terimi ise, mikrobiyotanın toplam genomunu temsil etmektedir⁽¹⁾. Bağırsak mikrobiyotamız, yaklaşık 10^{12} organizma/g ve en az 1000 farklı bakteri türü içerir⁽¹⁾. Mikrobiyota bileşimleri bir kişiden diğerine değişebilir⁽²⁾. İnsan mikrobiyota çalışmaları, yüksek mikrobiyal çeşitlilik ile sağlıklı veya asemptomatik enfeksiyonların ilişkili olduğunu ve hastalık durumlarının genellikle azalmış bakteri çeşitliliği ile bağlantılı olduğunu ileri sürmüştür⁽³⁾. Mikrobiyotanın, bağışıklık sisteminin gelişmesi ve eğitiminde rolü olduğu bilinmektedir. Mikroorganizmalar, sadece bağışıklık savunmasını modüle etmekle kalmaz, aynı zamanda patojenlerin kolonizasyonunu ve istilasını çeşitli metabolik ürünleriyle sağlar.

Küresel olarak, ishal çocuklarda ikinci önde gelen ölüm nedenidir ve vakaların büyük bir kısmına parazitik protozoonlar ve helmintler neden olmaktadır⁽⁴⁾. *Entamoeba*, *Cryptosporidium* ve *Giardia*, 357 milyon vakaya neden olmuş ve yılda yaklaşık 34.000 ölümle sonuçlanmıştır⁽⁵⁾. Sıtma yılda yaklaşık 660.000 insanı öldürür ve bunların çoğu beş yaşın altındaki küçük çocuklardır⁽⁶⁾. Son tahminler, gelişmekte olan ülkelerde şu anda yaklaşık iki milyar insanın bağırsak helmintleri ile enfeksiyondan muzdarip olduğunu göstermektedir⁽⁷⁾. Parazitlerin neden olduğu önemli sağlık yüküne rağmen, enfeksiyonlar asemptomatik olabilir veya özellikle protozoon parazitlerde klinik sunum geniş varyasyonlar gösterebilir⁽⁸⁾. Hastalık şiddetini etkileyen faktörler hâlâ tam olarak anlaşılamamıştır⁽⁸⁾. Artan sayıda çalışma, bağırsak mikrobiyotasının hastalık progresyonu üzerinde önemli bir etkisi olabileceğini göstermektedir^(8,9).

rilmesi ve hastalıkları tedavi etmek için helmintlerin kullanılması tedavi maliyetini düşürmenin olası bir yolu olabilir ⁽⁴⁶⁾. Ancak, helmintlerin immünmodülatör potansiyelinin, tedaviyi sağlayan helmintler yoluyla mikrobiyotadaki değişiklikleri içerip içermediği hâlâ belirsizdir.

Sağlıklı bir donörden hastalıklı insanlara fekal transplantasyon, inflamatuvar bağırsak hastalığı ve *Clostridium difficile* ile ilişkili diyare için bir tedavi olarak başarıyla kullanılmıştır ⁽⁴⁷⁾. Bağırsak bakterisi topluluklarında helmint kaynaklı değişikliklerin, insanlarda bağışıklık ve metabolik hastalıkların şiddetinde değişikliklere neden olması beklenmektedir. *Trichuris suis* veya *Necator americanus* ile enfeksiyon da dâhil olmak üzere helmint bazlı terapötikler, alerji ve inflamatuvar bağırsak hastalığında kullanılmıştır ⁽⁴⁸⁾. *N. americanus* çölyak hastalığının tedavisinde de kullanılmış fakat semptomlarda herhangi bir farklılık gözlenmemiştir ⁽⁴⁹⁾.

Birkaç çalışma, helmint enfeksiyonunun, midenin bakteri kolonizasyonunu önleyerek *Helicobacter* kaynaklı mide adenokarsinomlarına karşı koruma sağlayabileceğini bildirmiştir ⁽⁵⁰⁾. Makak maymunlarında *T. trichiura*'nın deneysel enfeksiyonunun, idiyopatik kronik ishalden muzdarip maymunlarda klinik semptomları iyileştirdiği bildirilmiştir ⁽⁴⁶⁾. Fare modelleri ve insan çalışmaları, kronik helmint enfeksiyonunun konakçının immün yanıtını düzenlediğini ve insanlarda alerjik, otoimmün ve inflamatuvar bozukluklar üzerinde faydalı bir etki sağladığını göstermiştir ⁽⁹⁾.

Sonuç

Mikrobiyota ve parazitler birbirleriyle farklı şekillerde etkileşebilir; mikrobiyota parazit virulansını değiştirebilir, parazitler disbiyozise neden olabilir ve hem parazitler hem de mikrobiyota konak bağışıklığını modüle edebilir. Son çalışmalar, bağırsak mikrobiyotasının paraziter enfeksiyonlarda klinik varyasyonu etkilediğini göstermiştir. Öte yandan, hem insan hem de hayvan çalışmaları, hem protozoon hem de helmint enfeksiyonlarının bağırsak mikrobiyotasını etkileyebileceğini göstermektedir. Konak bağışıklığının mikrobiyota modülasyonunun altında yatan kesin mekanizmalar henüz tam olarak anlaşılmamıştır; ancak, mikrobiyota bileşenlerinin hem doğuştan gelen hem de adaptif immün hücre popülasyonlarını değiştirebileceği giderek daha belirgin hâle gelmektedir. Mikrobiyota ve konakçı bağışıklık sistemi ile parazit etkileşimlerinin incelenmesi, insan immünolojisinin temel mekanizmalarını daha iyi anlamamıza yardımcı olacaktır. Bağırsak mikrobiyotası ve parazitler arasındaki etkileşimlerin araştırılması, parazit enfeksiyonlarının teşhisine, tedavisine ve önlenmesine yardımcı olacak ek bilgiler sağlayacaktır. Ayrıca inflamatuvar ve otoimmün hastalıkların tedavisinde de yardımcı olabilir.

DOĞUM ŞEKLİ VE MİKROBİYOTA İLİŞKİSİ

Adeviye Elçi Atılğan

Mikrobiyota, insanın anne rahmine düştüğü andan ölümüne kadar tüm yaşamı boyunca fizyolojik ve biyolojik açıdan gelişiminde önemli rol oynayan, çok sayıda ve çeşitte mikroorganizma tarafından oluşturulan kompleks ve dinamik bir ekosistemdir. Öyle ki kaynaklarda insan vücudundaki kendi total hücre sayısından 10 kat daha fazla mikroorganizmanın bu sistemde yer aldığından bahsedilir¹. Bu kadar mikroorganizmanın insan genomundan 360 kat daha fazla genoma sahip olduğu belirtilmektedir¹. Sürekli değişen ve gelişen, insan hayatının her anında önemli rol oynayan kompleks bir ekosistem olduğu, spermin yumurtayı döllemesinden doğumla devam eden süreçlere tek tek baktığımız zaman daha iyi anlaşılacaktır.

Spermiler, milyarlarca mikroorganizmadan oluşan vajen biyotasından geçerek yumurtayı dölemek için vajinadan uterin kaviteye doğru hızla hareket ederler. Bu noktada vajen biyotasındaki bozulma, sperm hareketini olumsuz yönde etkileyen önemli bir faktördür². Barbonetti ve ark'nın çalışmasında, vajinanın doğal florasında baskın olan Laktobasillerin, insan spermelerini, Bakteriel Vajinozis(BV) varlığında ortaya çıkan inflamatuvar sitokinler ve radikal oksijen türevlerinin sperm hareketi üzerine olan yavaşlatıcı etkisinden koruduğunu, böylece kadının fertilizasyon potansiyelini arttırdığı gösterilmiştir². Ovulasyonla atılan ovum, fallop tüpleri tarafından yakalanarak tubanın ampulla kısmında spermle buluşur ve döllenmiş ovum-zigot, uterus içerisine doğru tubanın peristaltik hareketleriyle gönderilir. Fallop tüpleri ve intraabdominal çevrenin mikrobiotasında bozulma (Pelvik inflamatuvar hastalık, salpenjit, ooforit vs) fallop tüplerinin ovumu yakalayamamasına ve zigotun tubadan uterusu transferinin bozulmasına neden olmaktadır³. Zigot uterin kaviteye geldikten sonra Intrauterin mikrobiota embriyonun büyümesine ve gelişmesine olanak sağlar. Bundan sonra embriyo, amnion sıvısı içerisindeki mikrobiyota ile yaşamını sürdürür.

Plasentada Bifidobakterium ve Lactobasillerin varlığının gösterilmesi, mekonyumda bakterilerin gösterilmesi, İnokule edilen hayvanların fetuslarının mekonyumunda işaretli bakterilerin saptanması, intrauterin ortamın, plasentanın da, amnion sıvısının da steril bir ortam olmadığını açıkça göstermiştir^{4,5}. Anneden plasenta aracılığıyla hemotojen yolla ve vajinadan assendan yolla hergün amnion sıvısına ve büyümekte olan fetüse milyonlarca mikrobiota transferi olur⁵. Gebelik haftası miada gelince bu ekosistem doğum için artık hazırdır. Doğum eylemiyle vajinal kanaldan geçip ilk nefesini alan bebeğin mikrobiyotası sıvı ortamından hava ortamına adaptasyonunu kolaylaştırmak için değişir ve çeşitlenir. Yolculuk, annenin bebeğe ten tene teması ile devam eder. Memebaşı cildinin florası ve klostrum ile bebeğin oral yolundan enterik sistemine milyarlarca mikroorganizma kolonizasyonu olur^{6,7}. 2 ayrı hastane, 4 ameliyathane odası ve 11 farklı bölgeden örnek alınarak yapılan bir çalışmada, her örnekte farklı mikroorganizmaların saptandığı görülmüştür⁷.

Gebelik seyrince vajinal mikrobiyotanın içeriği, gestasyon haftasının ilerlemesi ile Lactobacillus spp.'nin hâkimiyetine girer⁸. Doğum şeklinin erken neonatal intestinal mikrobiyota üzerine belirgin

ritis gibi sistemik hastalıklara karşı koruyucu olabileceği düşünülerek yola çıkılmıştır ancak öneri için veriler yetersiz bulunmuştur. Amerikan Jinekoloji ve Obstetri Derneği(ACOG) 2017 yılında Vajinal Seeding ile ilgili son olarak bir guideline yayınlarken şu şekilde uyarılarda bulunmuştur²⁷:

1. Sezeryan sonrası Vajinal Seeding işleminde, Grup B Streptokok, HIV, Clamidya, HSV, Gonore, HIV gibi ajanların bebeğe bulaşarak ciddi enfeksiyon yapma riski vardır.Bu nedenle Sezer-yan ile doğum sonrası vajinal tohumlama henüz eldeki verilerle önerilmemektedir. Sağlık çalışanları ve aileler bu yönde cesaretlendirilmemelidir.
2. Bu işlem sadece etik kurul onayı olan klinik çalışmalarda yapılabilir.
3. Aile ısrarcı ise işlem kaynaklı neonatal enfeksiyon riskleri aileye tek tek anlatılmalıdır.
4. Aileye anne sütü ile 6 ay beslenmenin bebeğin enterik florası için, vajinal seeding e göre daha yararlı olacağı anlatılmalıdır.
5. Vajinal Seeding için annenin HSV, Grup B Streptokok, HIV, Clamidya, HSV, Gonore ve HIV taramaları temiz olmalıdır.
6. Tüm işlemler onaylı ve kayıt altında olmalıdır.
7. Pediatri hekimi muhtemel neonatal enfeksiyonlar açısından bilgilendirilmiş olmalıdır.

HAYATIN ERKEN DÖNEMİNDE MİKROBİYOTANIN ŞEKİLLENMESİ

Elif Özözen Şahin

Mustafa Altındış

Giriş

İnsan vücudunun birçok bölgesinde (ağız, boğaz, solunum sistemi, gastrointestinal sistem-GİS, deri ve ürogenital sistem gibi) hastalık gelişmesine sebep olmadan yaşayan mikroorganizmalar bulunmaktadır. Önceleri bu bölgelerde yaşayan mikroorganizmaları “flora”, “mikroflora” olarak isimlendirirken günümüzde **mikrobiyota** olarak tanımlanmaktadır. Mikrobiyotanın sahip olduğu genetik materyale de **mikrobiyom** denmektedir ⁽¹⁾. Mikrobiyota gelişiminde, beslenme, fizyolojik ve hastalık durumu, çevresel ve kültürel faktörler, antibiyotik kullanımı, hijyen koşulları gibi birtakım faktörler rol oynamaktadır. Rakamlara bakacak olursak vücudumuzda yaklaşık 100 trilyon hücre bulunmakta, yararlı bakteri sayısı da bunun 10 kat fazlasını oluşturmaktadır. 70 kg’lık bir insanın yaklaşık 1-2 kg’ı bakterilerden oluşmaktadır. Bu bakterilerin yaklaşık %90’ı bağırsaklarda yerleşmiş durumdadır. Yine insan vücudundaki canlı hücre sayısı açısından bakıldığında, bu hücrelerin sadece %10’u insan hücresi, diğerleri bakteri hücreleridir. Genom sayısı bakımından da bakterilerin genomu insan genom sayısından kat kat fazladır. Tüm bu rakamlar göz önüne alındığında, aslında mikrobiyota sanal bir organdır ve işlevleri, genetik yapısı, metabolizması birçok organdan daha büyüktür. Diğer bir konu ise bağırsaklarımızın içerdiği nöronlara bakıldığında, beynimizdeki kadar nöron içerdiği görülmektedir, hatta bu nedenle bağırsaklarımıza ikinci beyin denilmektedir ⁽²⁻⁴⁾.

Çocukluk çağında antibiyotik kullanımı dünyanın birçok yerinde yaygındır ve antibiyotiklerin mikrobiyotanın olgunlaşması dolayısı ile insan sağlığı üzerindeki etkileri zayıf bir şekilde tanımlanabilmiştir. Ortalama bir Amerikalı çocuk, 2 yaşına kadar yaklaşık en az üç kür antibiyotik alır ve 10 yaşına kadar da en az 10 kür antibiyotik kullanılır. Başka ülkelerde bu oran daha da az değildir. Antibiyotikler bağırsak mikrobiyotasını doğrudan bozar, bu da çocuklarda ve yetişkinlerde değişen kompozisyon durumlarına yol açar, ancak bu değişikliklerin konakçı fizyolojisi üzerindeki sonuçları bütün yönleri ile iyi anlaşılmamıştır. Çocuklarda antibiyotik maruziyeti artan obezite riski, diyabet, inflamatuvar bağırsak hastalığı, astım ve alerji ile ilişkilendirilmiştir. Daha önce, antibiyotik maruziyetinin farelerde artan adipoziteye yol açtığı, erken yaşlarda yoğun AB maruziyetinin konak metabolizması üzerinde uzun süreli olumsuzluklara yol açtığını ve bozulmuş bağırsak mikrobiyotasının konakçıda olumsuz etkilere aracılık ettiği de birçok çalışmada gösterilmiştir ⁽⁵⁾.

Doğum şekli ve bebek diyeti gibi diğer değişkenlerde erken yaşamda bağırsak mikrobiyotasını etkiler ve yaşamın ilerleyen dönemlerinde yağlanma ve diğer klinik etkilerle ilişkilidir. Sezaryen doğum (C/S), muhtemelen doğum sırasında maternal mikroplara daha az maruz kalması nedeniyle astım, alerji, tip 1 diyabet ve obezite ile ilişkilendirilmiştir. Formül besleme benzer şekilde bağırsak mikrobiyotasını bozar, bağırsıklık gelişimini ve normal metabolizmayı da olumsuz etkileyebilir. Yetişkinlerde antibiyotik

Sonuçta İlk 1000 Gün...

Mikroplar ve insan son birkaç yüz bin yılda birlikte gelişmiştir ve mikroplar insan sağlığı ile güçlü bir şekilde ilişkilidir. Gebe kalmadan önce, erkek ve dişi üreme sistemi mikroorganizmaları doğurganlıkta önemli bir rol oynar ve gebe kalma sırasında bir etkisi olabilir. Maternal mikroplardaki değişiklikler, fizyolojik ve hormonal değişikliklere paralel olarak hamilelik sırasında da görülür ve hamilelikte immün toleransın artmasında katkıları olacaktır. Mikroplar uterus, endometriyum, fallop tüpleri ve sperm gibi bilinen steril alanlarda ve ayrıca plasenta ve amniyotik sıvı gibi maternal fetal interfazda ve meme dokusunda / anne sütünde belirlenmiştir. Tüm bu veriler, erken kontaminasyon ve gebelik sırasında erken mikrobiyal temasın önemli etkisini göstermektedir.

Ayrıca, anne-bebek vertikal geçişi bebeklerin bağışıklığı, dolayısı ile sağlıklı olma ile ilgilidir. Kona-mikrop etkileşiminin bağışıklık sistemi tarafından kontrol edildiği göz önüne alındığında, gebe kalmadan yaşamın ilk yıllarına kadar olan süre boyunca bağışıklık sistemi ve mikrobiyota arasındaki temel ilişki ve bununla ilgili faktörler daha iyi anlaşılacaktır. Bu süre, herhangi bir olayın insan sağlığını etkileyen metabolik, immünolojik ve mikrobiyolojik programlama üzerinde önemli bir etkiye sahip olabileceği bir 'fırsat penceresi' olarak bilinir.

Diyet ve beslenme katkısı yanı sıra besin takviyesinin de, yaşamın ilk 1000 günü boyunca mikrobiyota üzerinde etkisi olduğu gösterilmiştir. Bununla birlikte, perinatal dönemde hangi gıdaların, gıda bileşenlerinin ve diğer diyet örüntülerinin mikrobiyotayı nasıl etkilediğinin belirlenmesinde daha pek çok çalışmaya gereksinim vardır. Son gözlemler 'yeterli bir mikrobiyotayı' sağlamak ve anne/yenidoğan sağlığı üzerinde olumlu bir etkiye sahip olmak için gebelik ve gebelik öncesi/sonrasında probiyotikler, prebiyotikler, sinbiyotik ve postbiyotiklerin kullanımı konularında artan bir araştırma eğilimi olduğunu göstermektedir⁽⁴²⁻⁴⁵⁾.

Konağın bağışıklık sistemi ile mikrobiyota etkileşimlerinin, yaşamın erken dönemlerinde oldukça kritik olduğu bir görülmektedir. Bu dönemdeki etkileşimin yaşamın sonraki dönemlerinde bağışıklık sistemi dengesi ve inflamatuvar hastalıklara karşı duyarlılığa katkıda bulunan immünolojik mekanizmalar üzerinde uzun süreli etkileri olabileceği görüşü her geçen gün daha fazla kabul edilmektedir. Bununla birlikte, bu etkileşimlerin mekanizmaları hâlâ net olarak ortaya konulamamıştır. Yenidoğan dönemindeki disbiyozis daha belirsiz bir durumdur ve saptanması zordur. Yenidoğan dönemindeki disbiyozisin erişkin dönemdeki immunité ve immünolojik hastalık riski üzerindeki uzun vadeli etkileri konusunda daha çok çalışma yapılmasına ihtiyaç vardır. Bu tür modülatör etkilere ilişkin daha ayrıntılı bilgiler, bağışıklıkla ilgili bozuklukların anlaşılması, önlenmesi ve tedavisi üzerinde etkili olabilir.

BAĞIRSAK MİKROBİYOTASI VE BESLENME DÜZENİ ARASINDAKİ İLİŞKİ: FETAL YAŞAM, ERKEN ÇOCUKLUK ÇAĞI VE YAŞAMIN İLERLEYEN DÖNEMLERİ

Nergis Ekmen

Murat Kekilli

Giriş

İnsan bağırsak mikrobiyotası, son on yılda geniş çapta tartışılan bir konu hâline gelmiştir. Bağırsak mikrobiyotası, konak organizmanın normal fonksiyon göstermesinde önemli bir rol oynar. Mikroorganizmalar ve insan vücudu arasındaki etkileşimin mekanizmaları hakkında daha fazla bilgi elde edilmesini sağlayan ve sayıları giderek artan çalışmalar da bu durumu onaylamaktadır. Konak da yaşam tarzını değiştirerek bağırsak mikrobiyotasını etkileyebilir ve doğal beslenme bu noktada son derece önemli bir faktördür. Konuyla ilgili bir çalışma, kalori alımının günlük 2400 kcal'den 3400 kcal'ye artması hâlinde (%24 protein, %16 yağ ve %60 karbonhidrat içeren benzer besin ögesi profiliyle) 3 gün içinde Firmicutes miktarının arttığını ve Bacteroidetes miktarının azaldığını göstermiştir.¹ Kalori alımı azaldığında ise bağırsak mikrobiyotasında bunun tersi bir durum görülmektedir.² Enerji alımının etkilerinin incelenmesi kolay değildir. Normal kalori alımı kişiden kişiye değişir ve yaş, alışkanlıklar, metabolizma gibi faktörlere bağlıdır. Bu nedenle, bu derlemede özellikle farklı besin ögesi bileşikleri üzerinde durulmuştur.

Beslenme alışkanlıkları, vücuttaki bakterilerin ne tüketebileceğini, yani mikrobiyotanın "beslenme" şeklini belirler. Bakterilerin metabolik aktivitesi daha çok bakteriyel genom ve epigenom ile tanımlanır. Sakkarolitik bakteriler karbonhidratları metabolize edebilir; bu bakteri grubunda *Bacteroides*, *Bifidobacterium*, *Lactobacillus*, *Eubacterium*, *Propionibacterium*, *Escherichia*, *Enterococcus*, *Peptostreptococcus*, *Fusobacteria* ve diğerleri yer alır. Proteolitik bakteriler protein fermantasyonundan enerji elde eder ve bu grubu *Streptococcus*, *Staphylococcus*, *Proteus*, *Escherichia* ile bazı *Clostridium*, *Fusobacteria*, *Bacillus*, *Propionibacterium* türleri ve diğer bakteriler temsil eder. Bu grubun bazı üyeleri katı şekilde proteolitik özellikler sergilerken, bazıları ise hafif sakkarolitik aktivite gösterir veya aktif olarak karbonhidrat fermantasyonuna katılır. Dolayısıyla, hem proteinleri hem de karbonhidratları metabolize edebilen pek çok bakteri vardır. Bu bölümde yayınlanmış çalışmalar ışığında bağırsak mikrobiyotası ve beslenme ile ilgili bazı sorulara kısmen de olsa cevap verilmesi ve daha fazla araştırma yapılmasını gerektiren bilgi boşluklarının belirlenmesi amaçlanmıştır.

Bağırsak Mikrobiyotasının Oluşumu ve Beslenme Düzeni

Antenatal dönem ve doğum

Bağırsak mikrobiyotası kolonizasyonu antenatal dönemde başlar.^{3,4} Yakın zamanda yapılan çalışmalar amniyotik sıvı, plasenta, göbek kordonu kanı ve mekonyumda bakteri bulunduğunu kanıtlamıştır.^{3,5} Annenin hamilelikten önce ve hamilelik dönemindeki beslenme şekli, çocuğun bağırsak mikrobi-

(GLP)-1, insülin gen ekspresyonunu ve insülin salgılanmasını etkiler⁹⁶ bazı yazarlar bunun mikrobiyota bileşimine de bağlı olduğu kanaatindedir (Şekil 4).^{97,98}

Şekil 4. Mikrobiyota ve iştah.

Sonuç

Karaciğer hastalığı, obezite, tip 2 diyabet, ateroskleroz ve irritabl bağırsak sendromu gibi birçok hastalıkta bağırsak mikrobiyotasında değişiklik olduğu gözlenmiştir. Bağırsak mikrobiyotasının bileşimi ile beyin,⁹⁹ depresyon¹⁰⁰ ve bazı diğer bozukluklar¹⁰¹ arasındaki bağlantılara ilişkin son derece etkileyici araştırma bulguları elde edilmiştir. Beslenme düzeni, bağırsak mikrobiyotası bileşimini belirleyen başlıca faktörlerden biridir. Pişirme yöntemleri, besin katkı maddeleri, probiyotik ve prebiyotik tüketimi ile beslenme düzeni değişiklikleri, her yaştan insanda önemli olan bağırsak mikrobiyotası bileşiminin etkilenmesi bakımından iyi araçlar olarak değerlendirilebilir.

Bölüm A17

ANNE SÜTÜ VE MİKROBIYOTA GELİŞİMİ

Rabiye Güney

Nursan Çınar

Giriş

Mikroorganizmaların hastalıkların gelişmesinde nedensel bir rolünün olduğunun anlaşılması hem tıp tarihi hem de insanlık tarihi için bir dönüm noktası niteliği taşımaktadır. Ancak bu durum araştırmacılar tarafından mikroorganizmaların hastalıklardan korunmada etkisinin incelenmesini uzun süre arka planda bırakmıştır. Mikroorganizmaların hastalıkların önlenmesindeki etkisi uzun yıllar önce bazı yazarlar tarafından gündeme getirilmiş olmasına rağmen, bu konu özellikle son yirmi beş yılda daha fazla ilgi görmeye başlamıştır. Bu dönemde yapılan araştırmalar insan vücudunda daha önce steril olduğu düşünülen pek çok sıvı ve alan da dâhil olmak üzere yoğun bir non-patojen mikroorganizma varlığının bulunduğunu göstermiştir. Non-patojen mikroorganizmalar vücut hücreleri ile kommensal ve mutualist bir ilişki içerisinde yaşamını sürdürmekte ve yerine getirdikleri görevler ile adeta bir organ görevini üstlenmektedir.

Mikrobiyota kavramı; “Belirgin bir ekolojik yer veya çevre içerisinde bulunan mikroorganizmalar topluluğu” olarak tanımlanmaktadır. İnsan mikrobiyotasını bireylerin vücudunda yaşayan kommensal, simbiyotik ve patojenik mikroorganizmalar oluşturmaktadır. Sıklıkla mikrobiyota kelimesi yerine kullanılmakta olan mikrobiom kelimesi ise; “Belirli bir yerde yaşayan mikrobiyotanın genetik havuzunu ve bunların çevre ile ilişkisini” kapsamaktadır^{1,2}. Son yıllarda vücuttaki mikrobiyota ve mikrobiyomların tespit edilmesi özellikle kültürden bağımsız moleküler yöntemler sayesinde oldukça kolaylaşmıştır³. Yapılan araştırmalar sonucunda, insan vücudunda insanın kendi hücre sayısının en az on katı kadar, yani yaklaşık 10^{14} mikroorganizma olduğu, bunların yüzde yetmişinden fazlasının kolonda bulunduğu ve gastrointestinal sistemde 35.000’den fazla bakteri türünün yaşadığı tahmin edilmektedir^{4,5,6}.

Yetişkinlerde kişiye özel ancak sabit bir intestinal mikrobiyota bulunmaktadır. Çoğunlukla *Bacteroides* ve *Firmicutes*’ların yer aldığı anaerob bakterilerden oluşan intestinal mikrobiyota, beslenme süreci başta olmak üzere vücuttaki fizyolojik, metabolik, immünolojik ve nöral işlevlerde görev almaktadır^{1,7}. Mikrobiyota içeriğindeki değişiklikler ise insan sağlığını ciddi ölçüde etkilemektedir. Günümüzde nekrotizan enterokolit, infantil kolik, obezite, tip 2 diyabet, astım, alerji ve atopik hastalıklar, enflamatuvar bağırsak hastalığı, metabolik sendrom ve ateroskleroz gibi pek çok bulaşıcı olmayan hastalığın intestinal mikrobiyota ile yakın ilişkisi olduğu ortaya konulmuştur^{1,3,4,6,8,9,10,11}. Özellikle bebeklik dönemi mikrobiyotası gastrointestinal sistem mukozasının gelişimine ve olgunlaşmasına büyük bir katkı sağlamaktadır¹². Ayrıca, anne sütüne atfedilen pek çok yararın özellikle *Bifidobakteriler* başta olmak üzere, anne sütü mikrobiyotasından kaynaklandığı anlaşılmıştır¹³. Süt oryante mikrobiyom adı verilen *Bifidobakteriler*, bebeklik döneminde enfeksiyonlardan, yetişkinlikte ise çeşitli kronik hastalıklardan korunmada önemli bir rol oynar. Tuzun ve ark.¹⁴ anne sütü mikrobiyotasında bulunan *Bifidobakterilerin*

Sonuç

Anne sütü non-patojen mikroorganizmaları içeren ve yaşamın ilk yıllarında bebeğin mikrobiyota gelişimine katkı sağlayan önemli bir besindir. Erken yaşlardaki mikrobiyota gelişimi gelecek yıllardaki sağlık durumu için belirleyici niteliktedir. Bu nedenle, TNSA 2018'e⁵⁹ göre ilk altı ayda sadece anne sütü ile beslenme oranı yüzde 41 olan ülkemizde emzirmeyi teşvik programlarına titiz bir şekilde devam edilmesi gerekmektedir. Bunun yanında ebeveynlere ve topluma mikrobiyota gelişimini olumsuz etkileyecek gereksiz antibiyotik kullanımı, sezaryen doğum konularında ve anne sütü ile beslemenin bağırsak mikrobiyotasının oluşumundaki etkisine ilişkin eğitimler yapılmalıdır⁶⁰. Yenidoğan kliniklerinde de mümkün olduğunca bebeğin kendi annesinin sütünden yararlanılmalıdır.

Özellikle yenidoğan hemşirelerinin klinik uygulamaları açısından, yenidoğan ünitelerinde soğutucuda saklanarak depolanan anne sütündeki non-patojen mikroorganizmaların nasıl etkilendiğine yönelik olarak daha fazla çalışmaya gereksinim duyulmaktadır. Ayrıca anne sütü ve bağırsak mikrobiyotasının tespitine yönelik örnek toplama, transfer ve saklama sürecinde, sonuçların doğru alınabilmesi için dikkat edilecek konular bilinmeli ve kliniklerde buna yönelik standartlar oluşturulmalıdır⁶¹.

Anne sütündeki mikroorganizmaların kaynağına ilişkin tartışmalar ise hâlen devam etmektedir. Bakterilerin annenin bağırsak mikrobiyotasından, süt mikrobiyotasına taşınmasına ilişkin mekanizma tam olarak açıklanamamıştır ve yeni araştırmalara gereksinim bulunmaktadır. Son olarak, anne sütü mikrobiyotasının geliştirilmesi için gebelik ve laktasyon döneminde anneye uygulanan probiyotik ve prebiyotik takviyesinin anne sütü mikrobiyotasını etkilediği bilinmektedir. Ancak bu girişimin bebek mikrobiyotasının gelişimi ve sağlığı üzerindeki etkisini inceleyen daha fazla araştırmaya ihtiyaç duyulmaktadır.

ÇEVRESEL FAKTÖRLER VE MİKROBİYOTA

Gülfem Terek Ece

Tanı yöntemlerindeki gelişmeler ve yeni nesil sekanslama yöntemleri, her geçen gün yeni çalışmalar yapılmasına ve birçok hastalık/hastalık grupları ile ilişkilendirilmesine sebep olmuştur. Bu ilişkilendirmelerle birlikte mikrobiyotayı etkileyen faktörler de en çok çalışılan konular arasında yerini almıştır.

2007 yılında 300 gönüllü ile başlatılan İnsan Mikrobiyom Projesi ile insan vücudundaki tüm mikroorganizmaları belirlemek, insan mikrobiyom değişikliklerinin hastalıklarla ilişkilendirilip ilişkilendirilemeyeceğini araştırmak hedeflenmiştir. Bu proje deri, gastrointestinal yolak, oral kavite, solunum mukozaları, ürogenital sistem gibi geniş yüzeylere yerleşmiş en az 5000 filogenetik bakteri çeşidinin tanımlanmasına imkân sağlamıştır. ⁽¹⁾

Kabaca insan vücudundaki hücrelerin 10 katı kadar bakteri bulunduğu bilinmektedir. ⁽²⁾ Mikrobiyotanın büyük kısmı başta sindirim sistemi olmak üzere deri, genitoüriner sistem ve solunum sisteminde kolonize olmuştur. Bakterilerin başlıca bulunduğu yer bağırsak olması nedeniyle intestinal mikrobiyota üzerinde daha fazla araştırma yapılmaktadır. ⁽³⁻⁴⁾

Bağırsak mikrobiyotası son derece dinamik yapıdadır. Doğumdan sonra farklılaşmaya başlayarak yaklaşık 2.5 yaş civarında erişkin benzeri çeşitliliğe sahip olur. Yapılan çalışmalar farklı coğrafik bölgelerde yaşayan toplumların yanında yaşam stilinden antibiyotiklere maruziyete; doğum şeklinden çevresel faktörlere kadar birçok faktörün bu dinamik yapıya etki ettiğini göstermektedir.

Günümüzde teknolojinin yaşamın her alanına girmesi, yaşam biçimi ve beslenme tarzındaki değişikliklerle birlikte özellikle sanayi toplumlarının birçok çevresel etkene maruziyeti mikrobiyotayı doğrudan ya da dolaylı yoldan etkilemektedir. Bu bölümde mikrobiyotayı etkileyen çevresel faktörler incelenecektir.

Beslenme

Beslenme tüm toplumların sağlığı üzerine doğrudan ya da dolaylı etkileri olan faktörlerin başında gelmektedir. Beslenmenin mikrobiyota üzerine etkilerini değerlendirmek amacıyla birçok çalışma yapılmaktadır.

Coğrafi değişikliklerin mikrobiyotaya etkilerinin araştırıldığı çalışmalarda posa ve bitkisel protein ağırlıklı beslenen Afrikalı çocukların bağırsak mikrobiyotasının içeriği hayvansal kaynaklı protein ve yağ ağırlıklı beslenen İtalyan çocuklarından daha zengin bulunmuştur. Çalışma sonuçlarına göre İtalya'da yaşayan çocukların mikrobiyotalarında *Firmicutes* ve *Proteobacteria* oranları Afrika'da yaşayan çocukların ise *Prevotella*, *Xylanibacter* ve *Treponema* oranları daha yüksektir. ⁽⁵⁾

Yapılan çalışmalar beslenmenin mikrobiyal çeşitliliği, mikrobiyal taksonomiye, genetik bilgiye, gen ekspresyonlarını ve enzim aktivitelerini etkileyerek hem bağırsak mikrobiyota kompozisyonunu hem de

Ayrıca sigara içen bireylerin bağırsak mikrobiyom çeşitliliğinde azalma *Proteobacteria*, *Bacteroides* phyla, *Clostridium* ve *Prevotella* türlerinde artış saptanırken, *Actinobacteria*, *Firmicutes*, *Bifidobacterium* ve *Lactococcus*'ta azalma tespit edilmiştir. ⁽⁴⁶⁾ Sigaranın intestinal mikrobiyom üzerine etkisini oksidatif stresi arttırması, intestinal tight junction değişimi, bağırsak müsin içeriğinin farklılaşması ve asit-baz dengesindeki değişimlerdir. Sigaranın oksidatif stresi arttırdığına yönelik çok sayıda çalışma bulunmaktadır. Sigara aynı zamanda intestinal müsin içeriğinde ve tight junctionlarda bozulmaya yol açabilir. Yapılan çalışmalar sigara içimine bağlı olarak değişen intestinal mikrobiyotanın inflamatuvar bağırsak hastalıkları ve obeziteyle ilişkili olabileceğini göstermektedir. ⁽⁴⁴⁾

Alkol

Alkol alımı ile oral mikrobiyom etkilenmektedir. Oral bakteriler ve funguslar; alkol ve diet ile alınan şekerleri metabolize ederek karsinojenik asetaldehite çevirir. ⁽⁴⁷⁾ Bunun yanı sıra sigara içimi ile de kondense olarak karsinojenik nitrozaminlere dönüşerek oral karsinogenez sürecine yol açmaktadır ⁽⁴⁴⁾. Alkol; bakteriler üzerine direkt sitotoksik etki gösterebilmektedir. Hayvan çalışmalarında %20 oranında alkol alındığında *Streptococcus mutans* kolonizasyonunu arttırmaktadır ve ratların oral biofilmlerindeki saptanabilir bakteri sayısını azaltmaktadır. ⁽⁴⁸⁾

Alkol ve bağırsak mikrobiyomu arasındaki süreç özellikle alkol bağımlılarında değerlendirilmiştir. Bu durumun intestinal bariyer fonksiyonunu bozarak sızdıran bağırsağa, proinflamatuvar patojenik mikrobiyal ürünlerinin oluşmasına ve karaciğer metabolik yollarını bozulmasına neden olmaktadır. ⁽⁴⁹⁾

Hava Kirliliği

Hava kirliliği dünya çapında bir çevre kirliliği sorunudur. Hava kirliliği bağırsak mikrobiyota kompozisyonunu bozduğu özellikle *Firmicute* 'lerin türlerinde azalmaya yol açtığını gösteren çalışmalar bulunmaktadır. Bu durum ayrıca inflamatuvar hastalıklarla da ilişkilendirilmektedir. ⁽⁵⁰⁾ Hayvan çalışmalarında özellikle *Bacteroidetes*, *Firmicutes* ve *Verrucomicrobia* içeriğini değiştirmektedir. Bu durum butirat konsantrasyonunu azaltmakta ve intestinal bariyerin bozulmasına yol açmaktadır. ⁽⁵¹⁾

D Vitamini

Vitamin D cathelicidin and DEFB4 (defensin, beta 4) transkripsiyonunu etkileyerek bağırsak mikrobiyomunu etkileyebilir. Vitamin D eksikliğinin bağırsak mikrobiyom disbiyosizine ve ciddi kolite yol açtığını gösteren çalışmalar bulunmaktadır. ⁽⁵²⁾

Stres

Stres bağırsak bakterileri üzerinden sağlığımızı etkilemektedir. Stres özellikle bağırsak geçirgenliğini arttırmakta ve disbiyozise yol açmaktadır. Stres ayrıca inflamatuvar süreç gelişime yol açmaktadır. Özellikle askeri birliklerde yapılan çalışmalarda bağırsak kompozisyonunun eğitim koşulları ile değiştiği bildirilmiştir. ⁽⁵³⁾

Bölüm A19

ANTİBİYOTİK KULLANIMI VE MİKROBİYOTA

Serap Süzük Yıldız

Giriş

Son yıllarda bireysel farklılıkların var olmasına rağmen sağlıklı olma durumu ile mikrobiyota arasındaki ilişkiyi ortaya koymaya yönelik metagenomik çalışmaların sayısı gün geçtikçe artmaktadır. En çok çalışılan konulardan biri de antibiyotik kullanımı ile mikrobiyota arasındaki ilişkileri ortaya koymaya yönelik çalışmalardır. Bağırsak mikrobiyotasının, sağlığın korunmasından iyileştirilmesine kadar önemli bir rol oynadığı artık bilinmektedir. Bağırsak mikrobiyotasının gelişimine etki eden en önemli faktörler Şekil 1’de özetlenmiştir. Kritik hastalıkların ve bu hastalıklarda kişiye uygulanan bazı zorunlu müdahalelerin mikrobiyom üzerinde zararlı kabul edilebilecek etkileri vardır. Antibiyotikler enfeksiyon hastalıklarının tedavisinde kullanılan hayat kurtarıcı ilaçlardır. Ancak bu ilaçlar hedefteki patojen mikroorganizmalardan başka, mikrobiyotamızdaki pek çok mikroorganizmanın da zarar görmesine neden olabilmektedir. Antibiyotiklerin profilaktik kullanımındaki klinik ihtiyaç ile zarar arasındaki dengeyi belirlemek bazen zor olabilir. Uzun süreli antibiyotik tedavisi gerektiren enfeksiyonlarda, antibiyotiklerin uzun süreli kullanım potansiyelleri göz önüne alındığında, bağırsak mikrobiyomu üzerinde antibiyotiklerin etkileri hızlı ve uzun süreli olabilmektedir.

Şekil 1. Bağırsak mikrobiyotası üzerine etki eden faktörler.

Antibiyotik kullanımına bağlı mikrobiyotanın bozulabilmesi göz önüne alındığında, tedavi sonunda, aslında tam bir iyileşmeden bahsetmek de mümkün olmayabilir. Ayrıca, antibiyotik kullanımına bağlı fırsatçı patojenlerin artması ve bu patojenlerin tedavilerinin gittikçe zorlaşan enfeksiyonlara yol

yonu girer, böylece nitrat (NO₃⁻) oluşur. Zorunlu aerobik bakterilerin aksine, Enterobacteriales üyeleri, son elektron alıcısı olarak nitrat, S-oksit ve N-oksit kullanarak anaerobik solunum yapabilirler. *E. coli* ve aerobik bakteriler sağlıklı bağırsak ekosisteminde daha az sayıda bulunur, streptomisin ile tedavi edilmiş farelerde değişen ekosistem şartlarında önemli ölçüde artma eğilimindedirler. *Salmonella* türleri ise, nütrofiller tarafından üretilen reaktif oksijen ürünlerini kullanarak anaerob solunum yapabilirler^{64,65}. Bu yolla mikrobiyotada oluşan disbiyozise bağlı olarak patojen bakteriler alternatif elektron alıcılarını kullanarak mikrobiyotada daha baskın hâle gelebilirler⁶⁶.

Bir diğer önemli nokta ise bağırsak ekosistemindeki dengeyi sağlayan bakteriosinlerdir. Bakterilerin bağırsak epitelinde kolonizasyonları salgıladıkları biyosinler aracılığı ile olmakta ve istenmeyen bakterilerin bağırsak mikrobiyotası içinde kolonizasyonunu önlemektedir. Antibiyotiklerin kullanımında yararlı bakterilerin kaybına bağlı olarak bakteriosin üretimi de düşeceğinden, patojen bakterilerin kolonizasyonunun daha hızlı ve kalıcı olması muhtemeldir. Bu durumun antibiyotiğe bağlı disbiyozisde önemli bir faktör olacağı varsayılmaktadır⁶⁷.

Sonuç

Günümüzde iklim değişimleri, küreselleşme, insan seyahatleri ya da göç gibi zorunlu hareketleri, sağlık sunumundaki yetersizlikler, hijyen ve sanitasyonun azalması gibi birçok faktör insanları enfeksiyona açık hâle getirmektedir. Enfeksiyon tedavilerinde ise antibiyotik kullanımı kaçınılmazdır. Hatta bugün tedavi için uygulanan işlemlerin birçoğu hastaların daha fazla antibiyotik tüketimine neden olabilmektedir. Tedavide kar zarar hesabı yapmanın mümkün olmadığı durumlar söz konusu olabilir. Ancak tedavinin oluşturacağı disbiyozisin boyutları hekimler tarafından bilinmelidir. Ayrıca hem hastanelerde hem de yaşamda enfeksiyon kontrol ve önleme stratejilerinin uygulanması antibiyotik kullanımı için kısıtlayıcı bir faktör olabilir. Bu yönde geliştirilecek politikaların uygulanması, yaygınlaştırılması ve içselleştirilmesi gerekmektedir.

Kısa Süreli Etkiler

Kommensal bakterilerin kolonizasyonunda azalma
Mikrobiyota yapısında değişimler
Metabolizma ve besin maddelerinin emiliminde bozukluklar
Maya (*S. cerevisiae*) ve / veya *C. difficile*'nin miktarında artma
Enfeksiyonlara karşı yatkınlıkta artma

Uzun Süreli Etkiler

Bağırsak mikrobiyotasında antibiyotik direnç genlerinin kalıcılığı
Tekrarlayan *C. difficile* enfeksiyonları
Mikrobiyal çeşitlilikte azalma ve bazı taksonların kaybı

SAĞLIK VE HASTALIKTA ORAL KAVİTE MİKROBİYOTASI

Doğukan Yılmaz

Vücudun dış dünyaya açılan kapısı olan oral kavite, yaklaşık 215 cm²'lik bir yüzey alanına sahiptir. Bu alan; bakteri, fungus ve virüslerin bulunduğu, içerik olarak insan vücudunun en zengin mikrobiyal yaşam alanlarından birini oluşturur ^[1]. Bakteriler, oral mikrobiyotadaki en yoğun taksonomik gruptur ve kolonizasyonları postpartum periyotta başlar. Oral kavitede bulunan bakterilerin yarısından azının aerobik mikrobiyolojik metotlarla kültüre edilebildiği ve yaklaşık 500 ila 700 türün bulunduğu tahmin edilmektedir ^[2]. Doğumla beraber Firmicutes, Proteobacteria, Actinobacteria, Bacteroidetes, Fusobacteria, Spirochaetes grupları baskın olarak izole edilir. Daimi dişlenmeyle beraber gram (-) anaerobik bakteri türlerinin sayısında artış gözlenir ^[3]. Oral mikrobiyota, kişiden kişiye hatta aynı bireyde, ağız içerisindeki farklı bölgelerde değişiklikler gösterir. Bu farklılık ve dinamik ilişkiyi anlamak açısından oral kavite morfolojik ve fizyolojik olarak farklı ekosistemlerde incelenebilir ^[4]. Gelişim devam ettikçe oral kavitede farklı habitatlar gelişmeye başlar. Değişik anatomik, fizyolojik yapılar, oksijen miktarı, besin içeriği, ısı ve konak bağışıklık yanıtının etkisine göre bu habitatlarda bazı mikroorganizma grupları daha baskın gözlenir ^[5]. Oral mikrobiyotanın bir habitatı tercih etmesindeki en önemli özellik, belirli bir alanın yüzeysel dokusunun; oral mukoza gibi yumuşak dokular veya diş minesi gibi sert dokulardan oluşup oluşmadığıdır ^[6]. Oral mikrobiyotanın gelişimi, süt dişlerinin sürme döneminin sonunda gerekli olgunluğa ulaşır ^[7]. Mantar ve virüs gibi oral mikrobiyotanın diğer elemanlarının ise, ağız içinde daha geç yaşlarda izole edildiği gösterilmiştir. Bu organizmaların daha çok oral kavite ile ilişkili burun boşluğu, sinüs, yutak gibi bölgelerden oral kaviteye ulaşım yaptığı düşünülmektedir ^[8]. Ağız içi, devamlı olarak kıvamlı bir sıvı olan salya ve diş eti oluşu sıvısı adı verilen sıvıların etkisi altındadır. Oral mikrobiyotayı oluşturan toplulukları etkileyen bir başka özellik de yüzey anatomisinden bağımsız olarak bölgenin tükürük bezlerine yakınlığı ve ilişkisidir ^[9]. Salyanın yapısı, akış hızı ve pH gibi biyokimyasal özellikleri mikrobiyal kolonizasyonu direkt etkileyebilmektedir ^[10]. Salyanın her mililitresinde yaklaşık 1.4x10⁸ CFU bakteri bulunmaktadır ^[9]. Çoğunluk olarak Actinobacteria, Bacteroides, Firmicutes, Fusobacteria, Proteobacteria, Spirochaetes ve TM7 filumları bulunmaktadır ^[11]. Zengin mikrobiyal içeriği ile salya mikrobiyotası; çürük, periodontitis, oral skuamöz hücreli karsinom, pankreas kanseri gibi ağız içi ve dışı sistemik hastalık ve durumların teşhisinde önemli bir materyal olarak kullanılabilir ^[11]. Oral anatomik bölgelere göre en çok izole edilen bakteri grupları Şekil 1'de kısaca özetlenmiştir.

çalışmalarla, zorunlu misafirlerimiz olan bu organizmaları lehimize kullanarak daha uzun ve sağlıklı bir yaşam şansı elde edebiliriz.

Bölüm A21

KARDİYOVASKÜLER HASTALIKLAR VE MİKROBİYOTA

Perihan Varım

Mehmet Bülent Vatan

Ceyhun Varım

Giriş

Kardiyovasküler Hastalıklar (KVH) dünya genelinde ölümlerin en sık nedenidir. Her yıl yaklaşık olarak 17.5 milyon insan KVH'dan ölmektedir. Bu dünyadaki tüm ölümlerin %31'i demektir. KVH'dan ölümlerin 2030 yılında 23 milyona ulaşması öngörülmektedir.¹ KVH için sigara kullanımı, sağlıksız beslenme, obezite, fiziksel inaktivite, yüksek kan basıncı (hipertansiyon), yüksek kan yağları ve di-yabet gibi risk faktörleri mevcuttur. Son yıllarda yapılan çalışmalar özellikle modifiye edilebilen risk faktörleri üzerinde yoğunlaşmıştır. Bağırsak Mikrobiyotası ile son dönemde yapılan çalışmalarda Mikrobiyota ile hem metabolik hem de kardiyovasküler hastalıklar arasında ilişki olduğu gösterilmiştir.²

İnsan vücudunda 100 trilyon hücre bulunduğu tahmin edilmektedir. Bunun 10 misli fazlası kadar da yararlı bakterilerimiz mevcuttur. Vücudun deri, ağız, vajina, bağırsaklar gibi çeşitli bölgelerinde yerleşmiş bu bakterilere o bölgenin “florası”, yeni adıyla “mikrobiyota” denmektedir. Mikroorganizmaların genomuna ise “mikrobiyom” adı verilmektedir. İnsan vücudu %10 kendi hücresi ve %90'ı mevcut konağa yerleşmiş mikrobiya hücrelerden oluşmaktadır.³ Bağırsaktaki mikrobiyota ise 2 kilo ağırlığında ve hem işlevi hem de ağırlığı nedeniyle artık bir organ olarak kabul edilmektedir.⁴

Sağlıklı bireylerde mikrobiyota çok sayıda ve çeşitli mikroorganizmaları içmektedir. Doğumdan hemen sonra oluşmaya başlayan Mikrobiyota beslenme, genetik, yaş ve yaşanan coğrafi bölgeye göre değişiklik gösterir. Enfeksiyonlar, antibiyotik kullanımı gibi tedavi uygulamaları sonrası bağırsak mikrobiyotası değişebilir.⁵

Sağlıklı bireylerde bağırsak florasında 6 bakteriyel küme vardır:

1. **Firmicutes** (*Clostridium*, *Eubacterium*, *Ruminococcus*, *Butyri vibrio*, *Anaerostipes*, *Roseburia*, *Faecalibacterium* vb. Gram pozitif cinsleri kapsamakta)
2. **Bacteroidetes** (*Bacteroides*, *Porphyromonas*, *Prevotella* vb. Gram negatif cinsleri kapsamakta)
3. **Proteobacteria** (Enterobacteriaceae gibi Gram negatif cinsleri kapsamakta)
4. **Actinobacteria** (Gram pozitif *Bifidobacterium* cinsini kapsamakta)
5. **Fusobacteria**
6. **Verrucomicrobia** (*Akkermansia* vb. cinsleri kapsamakta)

Prebiyotikler, mikrobiyota kompozisyonunu değiştirir, mikrobiyota fermantasyonunu iyileştirir, açlık hissini azaltır ve postprandiyal glukoz cevabını düzeltir. Bu etkiler esnasında plazma GLP-1 ve Peptit YY'nin arttığı saptanmıştır.⁴⁰

Simbiyotikler ise probiyotik ve prebiyotiklerin kombinasyonudur.

Fekal transplantasyon, sağlıklı bireylerden alınan gaitanın süspansiyon hâline getirilerek enema, nazoduodenal/nazojejunal sonda veya endoskopik yöntem ile hasta bireyin intestinal lümenine verilmesidir. İntestinal mikrobiyota ilk kez Eiseman ve arkadaşları tarafından 1958 yılında tedavide kullanılmıştır.⁴¹ Psödömembranöz enterokolit 4 olguda enema ile fekal transplantasyon yaparak aldığı başarılı sonuçlar almıştır.

Bütirat üreten intestinal Mikrobiyota miktarının artması ile insülin duyarlılığında artış olduğunun saptanması diyabetik hastaların tedavisinde mikrobiyota modifikasyonunun kullanımı fikri ortaya çıkmıştır.¹⁶ Bunun yanında yapılan bir çalışmada bütirat üretimi zengin Mikrobiyota olumunun enterohepatik dolaşım üzerine olumlu etkiler oluşturarak plazma serbest safra asit miktarını artırdığı, intestinal lipid emilimini azalttığı; böylece plazma kolestrol seviyesinde azalma sağladığı gösterilmiştir. Yine Firmicutes/Bacteroidetes oranlarında değişim saplanarak obezitede azalma olduğu tespit edilmiştir.⁴²

Sonuç

Mikrobiyota güncel araştırmalar doğrultusunda artık yeni bir organ olarak değerlendirilmeye başlanmıştır. Kardiyovasküler hastalıklar ve risk faktörleri üzerine olan etkileri de araştırılmaktadır. Özellikle insanlar üzerinde geniş katımlı çok merkezli çalışmalar yapılarak mikrobiyotanın kardiyovasküler hastalıkların patofizyolojisindeki yeri ve tedavideki etkinliği daha iyi anlaşılacaktır.

Yusuf Aydemir

Uzun yıllardır, kültür temelli araştırmaların sonuçlarına dayanılarak, akciğerlerin steril olduğuna inanılıyordu. Hatta bu yüzden akciğerler, İnsan Mikrobiyom Projesi'ne dâhil edilmedi. Bununla birlikte, son zamanlarda geliştirilen kültürden bağımsız yöntemler ile sağlıklı insanların akciğerlerinde, sayı bakımından az, ancak çeşitliliği fazla bakteri türlerinin yaşadığı gösterilmiştir. Ancak, günümüzde devam eden araştırmalarda önemli metodolojik ve teknik engeller bulunmaktadır. Akciğer mikrobiyomundaki nicel ve/veya nitel değişiklikler hastalık oluşumu, ilerlemesi ve alevlenmelere katkıda bulunabilir. Akciğer mikrobiyomunun bileşimi ve immünolojik etkileri hakkında bilgi, özellikle kistik fibroz, bronşektazi, astım ve kronik obstrüktif akciğer hastalığı gibi hastalıklarda önemli patojenik kazanımlar sağlayacaktır. Gelecekte büyük kohortları içine alan, çok merkezli çalışmaların akciğer mikrobiyomu hakkındaki bilgimize ve anlayışımıza katkıda bulunacağını düşünüyoruz.

Giriş

İnsan vücudunda kommensal olarak yaşayan mikroorganizmaların varlığı çok uzun zamandır bilinmektedir. Bu mikroorganizmaların çok büyük kısmı, geniş yüzey alanı ve zengin beslenme ortamı nedeniyle intestinal sistemde bulunur¹. Tarihsel olarak kültüre bağımlı araştırmalar, insanla birlikte yaşayan bu binlerce türün ortaya çıkarılmasını kısıtlamıştır. Hâlen, mikrobik türlerin çoğu kültüre edilememektedir. Son yıllarda bu durum değişmiş, teknolojik ilerlemelere paralel olarak geliştirilen moleküler teknikler ile kültürden bağımsız olarak, mikroorganizmalardaki DNA fragmanlarının tesbitine dayalı yöntemler geliştirilmiş ve bu sayede "İnsan Mikrobiyom Projesi" başlatılmıştır^{2,3}.

Tanım olarak mikrobiyota; belirli bir bölgede veya yaşama ortamında bulunan tüm mikroorganizmaları tanımlar. Teknik nedenlerle bu alanda yapılan çalışmaların çoğu bakterilerle yapılmış olsa da, mikrobiyota, bakteri virüs ve mantar dâhil insan vücudundaki tüm mikropları kapsar. İnsan vücudunda yaşayan mikroorganizma sayısının, insan hücre sayısından 10 kat fazla olduğu hesaplanmıştır. Bu durum mikrobiyotanın genel sağlık/iyilik hâlinin sürdürülmesinde ve hastalıklarda önemli rollere sahip olduğu anlayışını kuvvetlendirmektedir⁴.

Solunum Sistemi ve Mikrobiyota

Akciğerler, insan vücudunun tamamen dışarıya açık en büyük organı olmasına rağmen, uzun yıllar boyunca, mukus katmanı ile silli silindirik epitelden oluşan mekanik bariyer ve gelişmiş makrofaj fago-sitoz gücü sayesinde, steril olarak kabul edildi. Bu kabulde vücut yüzeyindeki bakteri türlerinin %70'inden fazlasının standart kültür teknikleri ile üretilmemesi rol oynuyordu ve geleneksel kültür temelli araştırmalar bronş ağacını sağlıklı bireylerde steril olarak tanımlamıştı⁵. Sağlıklı kişilerde kültür teknikleri ile elde edilen bakteriler üst solunum yolları florasına aitti ve bunların dışında alt solunum

Probiyotikler canlı mikroplar olup yeterli miktarda verildiğinde olumlu etkileri gözlenmiştir. En yaygın olarak incelenen probiyotikler, *Lactobacillus* ve *Bifidobacterium*'dur. Birkaç çalışmada, alerjik pulmoner inflamasyonun modüle edilmesinde *Lactobacillus* suşlarının etkisi incelenmiş, *Lactobacillus casei* alerjik hava yolu inflamasyonunu arttırırken, *Lactobacillus reuteri* ve *Lactobacillus plantarum*'un alerjik reaksiyonun azalttığı bildirilmiştir^{40,41}.

Oral olarak verilen mikrobik ürünlerin, deneysel modellerde alerjik hava yolu hastalığı üzerine etkisi gösterilmiştir. Örneğin bir çalışmada, her yerde bulunan saprofitik mikobakteri olan *Mycobacterium vaccae*'nin, ısı ile öldürüldükten sonra subkutan ya da intragastrik uygulandığında alerjik hava yolu hastalığının gelişimini önleyebildiği gösterilmiştir⁴².

Havayolu mikrobiyotasının çeşitliliğindeki azalmalar KOAH ve KF'da olduğu gibi hastalık alevlenmesine yol açan bakterilerin artışı ile ilişkili olduğundan, bir biyobelirteç olarak kullanılabilir.

Her şeye rağmen fekal transplantasyon gibi seçeneklere sahip intestinal mikrobiyotaya müdahalelerine göre, solunum sistemi olarak oldukça geride olduğumuz açıktır.

Sonuç

Akciğerlerin "steril" olduğu anlayışının geç ve zor da olsa yıkılması, havayolu mikrobiyotaya çalışmalarını hızlandırmıştır. Teknik zorluklara rağmen sağlıklı havayolu mikrobiyotasının belirlenmesi, gelecekte; hem akciğer sağlığının sürdürülmesinde, hem de KOAH, Astım, Kistik fibrozis, Bronşiektazi gibi hastalıklarda alevlenmelerin azaltılarak, hastalığın progresyonunun ve fonksiyon kaybının yavaşlatılmasında yarar sağlayabilir.

Bölüm A23

MİKROBİYOTA VE KANSER

Ahmed Cihad Genç

İlhan Hacıbekiroğlu

Kanser, bir dizi genetik bozukluk sonucu oluşan kompleks bir hastalıktır. Tüm dünyada, kalp hastalıklarından sonra en sık rastlanan ölüm nedeni olması nedeniyle çok önemli bir halk sağlığı sorunudur¹. Kanser oluşumuna neden olan faktörlerin nitel ve nicel artışının yanı sıra tanı olanaklarının gelişmesi ile paralel bir artış gösteren olgu sayıları, gerek ülkemiz ve gerek ise küresel anlamda, birçok kurum ve kuruluşun, kanserle daha fazla ilgilenmesi sonucuna yol açmıştır. Günümüzde, kanserogenezde rol oynayan birçok faktörün net olarak tanımlanmış olmasına, moleküler mekanizmaların ortaya çıkarılarak bunların terapötik hedef olarak kullanımına rağmen, sağkalım artışları elde edilse de, kanserin küratif bir hastalık hâline getirilememesi nedeniyle, kanser etiopatogenezinde sorumlu potansiyel aktörlerin aranmasına devam edilmektedir. Bu sayede kanser kaynaklı kişisel, toplumsal ve ekonomik kayıplar önlenebilecek ve belki de kanser uzun yıllar sonrasında, kürabl hastalıklar arasında yerini alabilecektir.

Mikrobiyota, vücudumuzun epitelyal bariyer yüzeylerinde yaşayan bakteri ve diğer organizmaları (fungus, protozoa, virüs vs.) ya da birlikte yaşadığımız özel türlerin tamamını tanımlamaktadır². Mikrobiyota, hematopoez, inflamasyon ve immünite başta olmak üzere birçok fizyolojik fonksiyon üzerinde etkisi bulunmaktadır³. Mikrobiyotanın insan sağlığı ve kanser dâhil pek çok hastalıkla ilişkisinin gösterilmesi ile bu alanda çalışmalar hız kazanmış ve mikrobiyotanın artık, yeni bir organ olarak değerlendirilmesi gerektiği görüşü ortaya çıkmıştır⁴. Yaş, coğrafi farklılıklar, diyet alışkanlıkları, antibiyotikler, probiyotikler gibi faktörler intestinal motilite, pH, redoks durumu, mikronutrientler, sekresyonlar (asit, safra, mukus, enzimler) gibi tanımlanmış birçok etiyolojik faktör, mikrobiyotanın kompozisyonunun farklılık göstermesine yol açabilmekte ve bu değişiklikler diabetes mellitus, kardiyovasküler hastalıklar ve kanser dâhil birçok kronik hastalık ile ilişkili bulunmuştur⁵⁻⁷.

Tüm kanserlerin yaklaşık 15'inde patojenik mikroorganizmalar etken olarak tanımlanmıştır⁸. Karaciğer, serviks, mide, nazofarenks ve kaposi sarkomunun ağırlıklı olarak enfeksiyon ajanları nedeniyle oluştuğu ve bu tümörlerin oluşmasında Hepatit B ve C, HPV, *Helicobacter pylori* ve Epstein Barr virüsü gibi patojenlerin uzun süreli varlığı gerekmektedir. Bu ajanlar, tümör supresyonunun bozulması, konakçı DNA'sında virüsün onkogenik etkileşimi, lokal immün yanıtı bozması gibi farklı biyolojik yöntemlerle tümör oluşumuna neden olmakta idiler. Ancak, vücudumuzdaki simbiyotik ve kommensal organizmaların karsinogenezdeki rolü açık değildi. Günümüzde insan mikrobiyota projesi kapsamındaki araştırmalar sonucunda, vücudumuzda doğumdan itibaren var olan, vücut homeostazisinde aktif rol oynayan mikroorganizmaların rolleri daha iyi anlaşılmasına başlanması, onkoloji alanında da heyecan verici gelişmelere yol açmıştır⁹. Son zamanlarda yapılan çalışmalarda, Mikrobiyotanın, özellikle bağırsak Mikrobiyotasının kanserin inisiasyonu, progresyonu ve vücuttaki yaygınlığı ile yakın bir ilişki içinde bulunduğu, yani karsinogenezin her aşamasında anahtar bir rol oynayabileceği, ek olarak da, anti

lıklar gözlenmiştir⁷². Bu bulgular ışığında yapılan çalışmalarda, Mikrobiyota ilişkili testlerin kanser tarama stratejilerinde kullanımı gündeme gelmiştir. Gaitada gizli kan testlerine ilave olarak bazı *Fusobacterium* türlerinin kullanıldığı metagenomik testlerde, sensitivitede %45 artış saptanmıştır⁷³.

Sonuç olarak;

Kanser de dâhil olmak üzere birçok hastalığın oluşumu ve tedavi aşamalarında anahtar rollere sahip olan mikrobiyota, güncel araştırmalar ışığında, artık yeni bir organ olarak değerlendirilmeye başlanmıştır. Son zamanlarda yapılan çalışmalarda, kompleks karsinogenez aşamaları ve antikanser tedavilere yanıt ve toksisite de dâhil olmak üzere kanserin her aşamasında çok önemli roller oynayan Mikrobiyota, onkoloji alanındaki potansiyel terapötik hedef olarak değerlendirilmektedir. Gelecekte, mikrobiyotanın karsinogenezdeki rolünün daha iyi anlaşılması ile kanser tanı, tarama ve tedavisindeki yerinin artacağı öngörülmektedir.

Bölüm A24

MİKROBİYOM VE DERMATOLOJİ

Bahar Sevimli Dikicier

Mikrobiyom, mikropları, genomlarını ve ait oldukları çevreyi tanımlayan bir terimdir. İnsan mikrobiyomunun insan genomuna göre çok daha çeşitlilik içermesi nedeniyle anlaşılması için büyük çalışmalar yapılmaktadır. İnsan mikrobiyom projesi nazal, oral, deri, gastrointestinal ve ürogenital bölgelerin mikrobiyomunu çalışmayı amaçlamaktadır. Referans mikrobiyomların tanımlanmasıyla hastalık durumlarına neden olan potansiyel nedenler ve birliklilikler karşılaştırılabilecektir. Bu amaçla ‘İnsan Genom Projesi’ne paralel 2008’de ‘Uluslararası İnsan Mikrobiyom Konsorsiyumu’ kurulmuş ve Avrupa İnsan Bağırsak Kanalı Metagenomu (MetaHIT) insan mikrobiyomuna yönelik araştırmaları teşvik etmek ve daha geniş bilimsel kitlelere kaynak sağlamak amacıyla başlatılmıştır^(1,2).

Deri Mikrobiyomu

Deri, insan vücudunun en büyük organı olarak seboreik, nemli ve kuru olmak üzere mikroçevreler içerir. 16SrRNA dizileme çalışmalarına göre mikrobiyotanın %90’ını Actinobacteria, Firmicutes ve Proteobacteria oluşturur. Gastrointestinal kanaldakinin tersine deri mikrobiyomunda kişiler arası ve aynı kişide bölgeler arası farklılıklar vardır⁽³⁻⁶⁾. Deri mikrobiyotasını kalıcı-uzun süreli üyelerle geçici-kısa süreli üyeler oluşturur⁽⁷⁾. Stafilokoklar, Propionibakteriler, Mikrokoklar, Korinebakteriler, Brevibakteriler ve Acinetobakterler kalıcı mikrobiyota üyeleridir. *S. epidermidis* ve *P. aknenin* iki temel kommensal türü olduğu düşünülmektedir. Her iki tür de kültürde üretilmiş ve genomlarının tümü dizilenmiştir. *S. epidermidis*’in *S. aureus* gibi diğer patojenlerin kolonizasyonunu önlediği düşünülmektedir, fakat bir yandan da intravenöz kateter enfeksiyonlarının önemli bir nedenidir, ayrıca biyofilm oluşturabilmektedir. *P. aknenin* ise izole edilmiş yüzlerce zinciri olmasına rağmen sadece bir zincir tamamen dizilenmiştir⁽⁸⁾.

Sağlıklı Derinin Mikrobiyomu

Deri, yağlı/yağsız, kıllı/kılsız, nemli/kuru, katlantılı/pürüzsüz bölgeler gibi fizyolojik ve topografik olarak farklı koşullarda yaşayan mikrobiyal toplulukları içeren bir ekosistemdir^(9,10). Kıl folikülleri, sebace bezler, ektrin ve apokrin bezler kendi mikrobiyotasına sahip mikroçevreler oluştururlar.

İnsan genom projesinde deri, geniş bir sağlıklı birey gurubunda çalışılmak için seçilen bölgelerdendir. Derinin bakteriyel toplulukları doğum şekline göre değişir: vajinal yolla doğan bebeklerde derideki 16SrRNA bulguları vajinal bakterilere benzerken (*Lactobacillus* ve *Prevotella* yoğunluktadır) sezaryenle doğanlarda deri bakterilerine benzerdir (*Acinetobacter*, *Bacillales*, *Micrococcineae* ve *Staphylococcus*)^(11,12). Hayatın ilk yılında derideki bakteriyel topluluklar bireyler arası yüksek değişiklik gösterir. Bu değişiklikler hem bakteri popülasyonu içeriği hem de bu popülasyonun edinilme zamanı için geçerlidir⁽¹³⁾. Küçük çocuklarda *Streptococcus*, Betaproteobacteria, Gammaproteobacteria baskın iken

Kronik yaralar

Diğer bir sürmekte olan çalışma alanı diyabetik yaralardır. Ülser derinliği arttıkça anaerob bakteri birlikteliği artarken stafilokok yoğunluğu azalmış saptanmış, ülser süresi uzadıkça bakteriyel çeşitlilikte artma, proteobakteri yoğunluğunda görece artış saptanırken yine stafilokok yoğunluğunda azalma izlenmiştir. Glisemik kontrolün en kötü olduğu olgularda stafilokok ve sterptokoktan zengin ülserler oluştuğu bildirilmiştir ^(61, 62).

Kozmetik ürünler

Şirketler, deri bariyeri bütünlüğünü ve deri kalitesini iyileştirmek için “doğal cilt mikrobiyomunu” oluşturma ve sürdürme konusunda vaatlerde bulunan teknolojilerinin faydalarını tanıtmak için yarışıyor. Bu iddiaları destekleyecek bilimsel kanıtları yetersiz olsa da, probiyotiklerin UV hasarını azaltmada ve deri hidrasyonunu ve dermisi yenileyen antioksidan özelliklere sahip olduğu kabul edilmektedir. Gelecekte Kore gıda ürünlerinden izole edilen bir probiyotik olan *Bacillus licheniformis*'in tüketiminin nematod *Caenorhabditis elegans*'ın (*C. elegans*) ömrünü uzatabileceği gösterilmiştir. Probiyotiklerin yaşlanma karşıtı faydalarını gösteren ilk modellerden biri olan bu çalışmanın bulgularının insanlarda uygulanabilirliği henüz gösterilmemiştir ⁽¹⁶⁾.

Deride Bakteri Dışındakiler

Şimdiye kadarki çalışmaların çoğu bakteriler üzerine yoğunlaşmışsa da deri, mantar ve virüsler gibi başka mikroplara da konaklık eder. Mantarlar için ribozomal RNA geninin ‘internal transcribed spacer region’ (ITS) olarak tanımlanan kısmı dizilenmiştir. ITS1 bölgesi bakteri ve virüslerde olmayan fungal DNA’yı hedefler. ITS1 dizilemesi ile ayak dışında çoğu deri bölgesinde çarpıcı bir *Malassezia* baskınlığı tanımlanmıştır ⁽⁶²⁾. Ayağın topuk, baş parmak ve başparmak tırnağını içeren bölgelerinde en yüksek mantar çeşitliliği izlenmiştir. Metagenomik dizileme ribozomal genlerin spesifik bölgelerinin dizilenmesi yerine bir örnekte mevcut tüm DNA’yı dizileyen bir yöntem olarak bir örnekteki bakteri, virüs ve mantarları ayırabilme imkânı sağlamaktadır ^(63, 64).

Virüsler hastalık etkeni olmalarının yanında gen transferi için vektör işlevi görerek bakterilerde genetik varyasyonların oluşmasını sağlamaktadır ⁽¹⁵⁾. İnsan viromu hakkında henüz yeterli bilgiye sahip değiliz. Buna neden olan fakörler; virüslerin hücre kültürlerinde çoğaltılmasının zorluğu, metagenomik analizlerin teknik olarak çok küçük genom yapılarını belirleyememesi, yöntemlerin genellikle total DNA’nın dizilenmesi esasına dayanması nedeniyle RNA virüslerinin saptanamaması, virüslerin hızlı değişiklik geçirmeleri nedeniyle viral genom veri bankalarının oluşturulamamasıdır ⁽⁶²⁻⁶⁵⁾.

Deri mikrobiyomunda artopodlardan ise en önemlisi demodeks akarı olup lipofiliktir. *D. folliculorum* kıl follüküllerinde, *D. brevis* sebace bezler ve göz kapağı kenarındaki meibomial bezlerde bulunur ⁽⁶⁶⁾.

İNFLAMATUAR ROMATİZMAL HASTALIKLAR VE MİKROBİYOTA

İbrahim Tekeoğlu

Emre Uzun

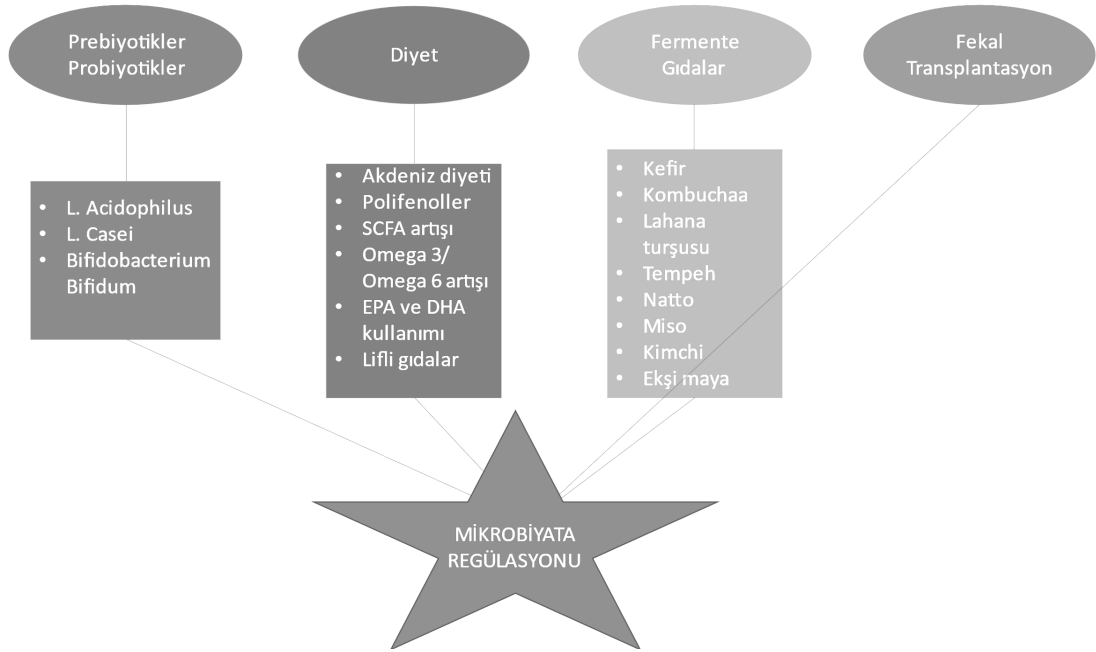

Mikrobiyal DNA dizilişinin (DNA sequencing) ve mukozal bağışıklığın daha iyi anlaşılmasına paralel olarak, mikrobiyal etkenler ile vücudumuz arasındaki etkileşim hakkındaki bilgilerimiz katlanarak artmıştır. Daha önceleri sadece hastalığa etken olan spesifik ajanlar üzerinde durulurken, son yıllarda yapılan çalışmalar sayesinde romatizmal otoimmün hastalıkların etyopatogenezi de rol oynayabilecek bakteri ve virüslerin araştırılmasına karşı merak ortaya çıkmıştır. Human Microbiome'un bir disiplin olarak gelişmesiyle, insan mikrobiyotasının romatizmal hastalığın patogeneziindeki potansiyel katılımını gösteren önemli kanıtlar ortaya çıkmıştır. Bu derin, çift yönlü etkileşim ve bunun hastalıklardaki sonuçları yepyeni bir araştırma alanına yol açmıştır.

Burada en çok romatoid artrit (RA), sedef hastalığı (PsO), inflamatuvar bağırsak hastalığı (IBH) ve ilgili spondiloartrit (SpA), ankilozan spondilit (AS), reaktif artrit (ReA) ve SpA'daki bağırsak mikrobiyomunun rolüne odaklanan hayvan ve insan çalışmalarından elde edilen verileri eleştirel olarak gözden geçireceğiz. Bu makaleyi terapötik amaçlı sindirim sistemine mikrobik manipülasyon uygulamasının inflamatuvar hastalıklara etkisini açıklayarak sonuçlandıracağız.

Mikrobiyota, Mikrobiyom ve Disbiyozis Nedir?

Mikrobiyota insanlarla birlikte yaşayan özel mikrobiyal türlerinin tamamını, mikrobiyom ise insanlarla kommensal olarak yaşayan mikroorganizmaların genlerini ifade etmektedir. Mikrobiyotanın dengesinin bozulması patojenlerin artmasına ve organizmaya zarar vermesine disbiyozis denir^[1]. Vücudumuzda yaşayan 100 trilyonun üzerinde hücrenin doğasında prokaryotik olduğunun artık farkındayız. Aslında bağırsak mikrobiyal markerlar diyetten kompleks polisakkaritleri indirgemek ve gerekli vitaminleri ve amino asidi çıkarmak için gereklidir.

Mikrobiyomlar bireyler arasında değişmekle birlikte, temsil edilen bakteri türlerinde ailesel ve işlevsel benzerlikler bulunmaktadır^[2]. Sağlıklı insan popülasyonlarında bağırsak mikrobiyolojisi analizinde yaklaşık 1150 bakteri türü ortaya çıkmıştır. Çoğunluk (%50-75) Firmicutesler, onu takiben de bacteroidetes (%10-50) ve actinobacteria (%1-10) ile daha az %1'i proteobakterilerden oluşmaktadır. Her organın mikrobiyotaya bileşimi organın pH'sına ve hücresel mekanizmalarına göre değişiklik arz etmektedir (Şekil 1)^[3]. Farklı coğrafyalarda bağırsak mikrobiyomunun bileşimi, özellikle beslenme alışkanlıkları ile ilişkili olarak değişiklik göstermektedir^[4].

Şekil 2. Mikrobiyota düzenlenmesi ile ilgili yaklaşımlar.

Mikrobiyotanın yapısının ve ona yönelik manuplasyonların eninde sonunda RA, PsA veya SpA'nın tedavisi için adapte edilip edilemeyeceğini anlamak için iyi tasarlanmış klinik araştırmalara ihtiyaç duyulmaktadır.

Sonuç

Yapılan çalışmalar ile intestinal mikrobiyotanın önemi daha iyi anlaşılmış, bu karmaşık sistemin aydınlatılması ile çok ciddi sonuçlar ortaya çıkmıştır. Disbiyozis tablosunun eşlik ettiği hastalıkların araştırılması ve intestinal mikrobiyota kompozisyonundaki değişikliklerle ilişkilendirilmesi, patogenezi tam olarak açıklanamamış birçok hastalığın tedavisi için de umut vericidir. İntestinal mikrobiyotanın etkileri ve önemi anlaşıldıkça, mikrobiyota manipülasyonunun ve özellikle de FMT'nin bir tedavi modeli olarak kullanılabilirliği gün geçtikçe kabul görmektedir.

**MİKROBİYOTANIN VİRAL HEPATİTLER VE
DİĞER KARACİĞER HASTALIKLARI İLE İLİŞKİSİ***Tuba Dal**Ferzan Arslan*

Bağırsak mikrobiyotası (BM), birbiriyle ve insan vücudu ile simbiyotik ilişkide bulunan bakteri, protozoa, archaea, mantar ve virüslerden oluşan bir ekosistem olup yeni bir metabolik organ olarak tanımlanır. Bağırsak mikrobiyotası, sindirim sistemi dışında böbrekler, beyin, kardiyovasküler sistem, kemik ve eklem sistemi gibi ekstraintestinal organ ve sistemlerle de ilişkilidir. Son yıllarda yapılan çalışmalarda, bağırsak-karaciğer aksının insan yaşamı için hayati bir önem taşıdığı savunulmaktadır. Bağırsak disbiyozisinin ve mikrobiyota kompozisyonunun viral hepatitler, alkolik karaciğer hastalığı (AKH), non-alkolik yağlı karaciğer hastalığı (NAYKH), non alkolik steatohepatit (NASH), karaciğer sirozu ve hepatoselüler karsinom (HSK) gibi karaciğer hastalıklarının etiopatogenezinde ve seyirinde rol alabileceğine dair çalışmalar mevcuttur. Bu bölümde mikrobiyotanın viral hepatitler ve karaciğer hastalıkları ile ilişkisi literatür eşliğinde değerlendirilmiştir.

Giriş

Bağırsak mikrobiyotası insan sağlığının fizyolojisi ve insana ait patolojik durumlar, sindirim, B vitamini sentezi, immünomodülasyon, anjiyogenez ve sinir fonksiyonu üzerinde etkilidir. Bağırsak mikrobiyotasının gastrointestinal, hepatik, kardiyovasküler, endokrin sistem ve solunum sisteminde gelişen birçok hastalığın patogenezi üzerinde bir etkisi olduğu günümüzde kabul görmektedir. Bağırsak mikroorganizmalarının çoğunun standart teknikler ile kültürünün yapılması zordur. Ancak günümüzde filogenetik belirteçler olan 16S/18S ribozomal RNA dizilimine dayalı yeni nesil dizileme sistemlerinin gelişimi ile birlikte mikrobiyota çalışmalarında büyük yol katedilmiş; BM'nin 100 trilyondan fazla bakteriden oluştuğu ve insan genomundan 150 kat daha fazla gen içerdiği belirlenmiştir⁽¹⁾. Firmicutes filumu (%79,4) (*Ruminococcus*, *Clostridium* ve *Eubacteria*), Bacteroidetes (%16,9) (*Porphyromonas*, *Prevotella*), Actinobacteria (%2,5) (*Bifidobacterium*), Proteobacteria (%2,5) ve Verrumicrobia (%0,1) baskın olan bakteri grubunu oluşturmaktadır^(2,3). Lactobacilli, Streptococci ve *Escherichia coli* bağırsakta az sayıda bulunur. Bağırsak mikrobiyotasının kompozisyonu genetik ve çevresel faktörlere bağlı olarak değişiklik göstermektedir. Örneğin, normal doğumla doğan çocuklar, annenin bağırsak florasının yaklaşık %40'ını miras alırken, sezeryan ile doğan bebeklerde mikrobiyota annenin cilt florasından, hastane ortamından ve diğer çevresel faktörlerden etkilenebilir. Yaşamın ilk iki yılında BM'nı belirleyen en belirgin faktör diyetdir. Sonraki yıllarda ise çekirdek olarak kabul edilen mikroorganizma türlerinde çok fazla değişiklik olmamakla birlikte, yaşa, diyete, ilaçlara ve çevreye bağlı olarak insanlar arasında mikrobiyota farklılık gösterir. Son on yılda yayınlanan çalışmalar, BM'nin kanser ve otizm, depresyon, *Clostridium difficile* enfeksiyonu, enfamatuvar bağırsak hastalığı, irritabl bağırsak sendromu, kolorektal karsinom, enfeksiyöz ve enfeksiyöz olmayan kronik karaciğer hastalıkları, obezite, diabetes mellitus tip 2, ateroskleroz ve kronik böbrek hastalıkları gibi çeşitli hastalıkların patogenezinde rol oynadığı doğrulanmıştır⁽²⁻⁷⁾.

lerin ekspresyonunu da düzenler. Baicalin kaspaz-3, kaspaz-9 ve B-hücreli lenfoma 2 gibi apoptotik proteinlerin üretimini azaltır. Düşük çözünürlüğü ve zayıf biyoyararlanımı nedeniyle, yaygın terapötik uygulamalar için çalışmalara ihtiyaç duyulmaktadır⁽⁷⁴⁾.

Sonuç olarak, bağırsak-karaciğer aksı insan sağlığı ile yakından ilişkilidir. Bağırsak mikrobiyotasının kronik karaciğer hastalıklarının patogeneğinde önemli bir role sahip olduğu aşikârdır. Kronik karaciğer hastalıklarında, probiyotiklerin ve fekal mikrobiyota transferinin terapötik potansiyeli doğrulan- sa da, bu tedavi seçeneklerinin güvenilirliği ile ilgili veriler ve mikrobiyota-konak etkileşimleri üzerindeki etkileri ile ilgili çalışmalar yetersizdir. Mikrobiyotaya dayalı tedavilerin endikasyonlarının, kontren- dikasyonlarının, tedavi sürelerinin ve dozlarının belirlenmesi için geniş spektrumlu prospektif kontrollü çalışmalara ihtiyaç duyulmaktadır.

**NONALKOLİK YAĞLI KARACİĞER HASTALIĞI (NAFLD-NASH) VE
MİKROBİYOTA***Bilal Toka**Ahmet Tarık Eminler***Giriş**

Nonalkolik yağlı karaciğer hastalığı (NAFLD), alkol kullanımı gibi başka bir neden yokken ortaya çıkan karaciğer yağlanması ile karakterize bir hastalıktır ⁽¹⁾. Eşlik eden inflamasyon veya fibrozis olmaksızın hepatositlerde basit yağ birikiminden inflamasyon, nekroz ve fibrozisle seyredabilen steatohepatite kadar değişen bir histolojik spektrumu kapsar ^(2,3). Belirgin inflamasyon olmayan karaciğer yağlanması nonalkolik yağlı karaciğer (NAFL), alkolik steatohepatitten histolojik olarak ayırt edilemeyen bir hepatik inflamasyon ile karakterize hâli ise nonalkolik yağlı karaciğer hastalığı (NASH) olarak adlandırılır. NASH hastalarının karaciğerinde meydana gelen inflamasyon hastaların yaklaşık %20'sinde fibrozis ve siroza ilerler, dolayısıyla kriptojenik sirozun en önemli nedenlerinden biri olarak gösterilmektedir ⁽⁴⁾. Sedanter yaşam tarzının da etkisi ile metabolik sendrom, obezite ve diyabetin hızla arttığı günümüz toplumunda NASH ve buna bağlı gelişen karaciğer sirozunun gittikçe daha önemli bir sağlık problemi hâline geldiği görülmektedir.

Günümüzde NAFLD karaciğerin en sık hastalıklarından olup endüstriyel açıdan gelişmiş batı ülkelerinde daha yaygın görülmektedir. Dünya genelinde prevalansı %10 ile 45 arasında değişmektedir ⁽⁵⁾. ABD'de yapılan çalışmalarda karaciğer biyopsilerinde NASH saptanma oranı %3 ile %5 arasında gösterilmiştir ^(6,7). Tip 2 diyabet, obezite, hipertansiyon, dislipidemi ve polikistik over sendromu olan bireyler gibi bazı hasta gruplarında NASH prevalansı daha yüksektir ^(5,8,9). Yaşla birlikte sıklığı artmakta olup çoğu hasta 40 ve 50'li yaşlarda tanı alır ⁽⁷⁾. Cinsiyet ile ilişkisi ise tartışmalıdır, bazı çalışmalar kadınlarda ⁽¹⁰⁾, diğer bazı çalışmalar ise erkeklerde ⁽¹¹⁾ daha sık görüldüğünü raporlamaktadır.

NAFLD patogenezi henüz tam olarak aydınlatılabilmemiş değildir. Genetik faktörler, çevresel faktörler, insülin direnci ve bağırsak mikrobiyotasındaki değişikliklerin etiyolojisinde rol alan başlıca faktörler olduğu düşünülmektedir ⁽¹²⁾. Bu faktörler arasındaki etkileşim, bozulmuş lipid metabolizması ve hepatositlerde aşırı lipid birikimi ile NAFLD gelişimine yol açar ⁽¹³⁾. İnsülin direnci, hepatik yağlanma ve steatohepatit gelişiminde anahtar role sahiptir ^(14,15). Ayrıca steatohepatitin inflamatuvar bileşeninin ortaya çıkmasında hepatositlerde oksidatif hasarın da etkili olduğu öne sürülmektedir ⁽¹⁶⁾.

Bağırsak mikrobiyotası vücutta pro-inflamatuvar ve anti-inflamatuvar sitokinler arasındaki dengenin sağlanmasında rol oynar. Kişinin mikrobiyota özellikleri ve bu mikrobiyotada meydana gelen değişimler potansiyel bir oksidatif stres kaynağı olarak NASH patogenezinde önem taşır. Yapılan çalışmalar NASH hastalarında sağlıklı popülasyona göre intestinal bakteriyel aşırı çoğalmanın (SIBO) daha sık olduğunu ve buna bağlı bağırsak geçirgenliğinin arttığını ortaya koymaktadır ^(17,18). Ayrıca bazı bakteri

te simbiyotik verilmesinin tek başına yaşam tarzı değişikliklerine göre NAFLD tedavisinde daha üstün olduğunu gözlemlemişlerdir⁽⁸⁴⁾. Hayvan deneyleri ve klinik çalışmalardan elde edilen veriler, hem prebiyotikler hem de simbiyotiklerin NASH tedavisinde etkin olabileceğini göstermektedir. Ancak bu alandaki araştırmalar ve bilgiler henüz yetersiz olup etki mekanizmaları net olarak ortaya konulmamıştır.

Fekal Mikrobiyota Transplantasyonu (FMT): FMT bağırsak mikrobiyotasının sağlıklı vericiden hasta alıcıya aktarıldığı nisbeten yeni bir tedavi yaklaşımıdır. Böylece disbiyozis düzeltilerek daha sağlıklı bir mikrobiyota oluşturulmaktadır. Çalışmalar sağlıklı bireylerden alınan FMT ile, metabolik sendromlu hastalarda insülin duyarlılığında, bağırsak mikrobiyota çeşitliliğinde ve kısa zincirli yağ asidi üretiminde artış sağlayarak yararlı etkileri olduğunu göstermiştir⁽⁹⁶⁾. NASH tedavisinde FMT konusunda yapılan çok az çalışma vardır. Yakın zamanda yapılan bir çalışma bu alanda oldukça umut verici bulunmuştur⁽⁹⁷⁾. Bu çalışmada yüksek yağlı diyetle indüklenen NASH'li farelerde FMT'nun, serum transaminazlarının yanı sıra vücut ağırlığını ve yağ miktarını azalttığı saptanmıştır. Ayrıca bağırsak mikrobiyotasında Bacteroides miktarında bir artış, Acinetobacteria ve Firmucites miktarında bir azalma ile birlikte endotokseminin düzeldiği görülmüştür. Karaciğer biyopsilerinde ise NASH skorunun azaldığı izlenmiştir. FMT'nun etkinlik ve güvenliğini değerlendirecek yeni çalışmalara ihtiyaç bulunmaktadır.

Sonuç

NASH, sıklığı tüm dünyada gittikçe artan, siroz ve hepatosellüler karsinoma yol açabilen oldukça yaygın ve ciddi bir hastalıktır. Yapılan çalışmalar bağırsak mikrobiyotasının NASH patogenezinde rolünün oldukça önemli olduğunu göstermektedir. Dolayısıyla NASH tedavisinde en önemli potansiyel hedeflerden birinin de bağırsak mikrobiyotası olduğu düşünülmektedir. Günümüzde gittikçe artan sayıda klinik çalışma mikrobiyota odaklı tedavilerin NASH'te etkinliğini göstermektedir. Ancak bu konuda geliştirilen terapötik ajanlar henüz prelinik aşamadadır. Mikrobiyota hedefli tedavilerde uygun formülasyonların geliştirilmesi ve etkinliğinin gösterilmesi için geniş kapsamlı randomize kontrollü çalışmalara ihtiyaç vardır.

Bölüm A28

ALKOL, KARACİĞER HASTALIĞI VE BAĞIRSAK MİKROBİYOTASI

Mustafa Altındış

Bilal Toka

Kerem Yılmaz

Alkol bağımlılığı, bireylerde ve ailelerde yaşam kalitesini ve süresini olumsuz etkileyen multisistemik bir durumdur. Dünya çapında oldukça yaygındır ve Amerika Birleşik Devletleri'ndeki yetişkinler arasında tahmini yaşam boyu yaygınlık oranı yüzde 18'dir. Diğer birçok organ sistemi gibi karaciğeri de etkiler ve bazı hastalarda alkolik karaciğer hastalığı gelişimine yol açar. Alkolik karaciğer hastalığı basit steatozla seyredebileceği gibi karaciğerde ortaya çıkan inflamasyon sonucu alkolik hepatit ve siroza ilerleyebilir. Dünya çapında morbidite ve mortalitenin önde gelen nedenlerindedir.

Alkol alımı, henüz karaciğer hastalığı olmayanlarda da bağırsak mikrobiyotasında değişikliklere yol açabilir. Bu değişiklikler karaciğer hastalığının gelişimi ve ilerlemesi ile daha da belirginleşir ve hatta hastalığın ilerlemesinde rol alır. Hepatik safra asidi üretimi ve bakteriyel biyotransformasyon gibi fonksiyonel mikrobiyal özellikler karaciğer hastalığının evrelerine paralel olarak değişir ve aktif alkol alımına devam eden sirozlu hastalar ile siroz olmayanlar arasında da farklılıklar gösterir. Bu değişiklikler alkolik karaciğer hastalığı olmayan hastalarda alkolün kesilmesinden sonra düzelebilir. Alkol alımı devam etmesi hâlinde ise alkolik karaciğer hastalığı gelişir.

Alkolik karaciğer hastalığının tedavisinde probiyotikler, fekal mikrobiyal transplantasyonu ve antibiyotikler ile bağırsak mikrobiyotasında oluşturulan değişikliklerin etkili olabileceğini gösteren kanıtlar mevcuttur. Bağırsak mikrobiyota değişiklikleri santral sinir sistemi fonksiyonlarını da değiştirebilir ve bağırsak-beyin eksenini alkolü bırakanlarda tekrar başlama riskini azaltmak için potansiyel bir hedef olabilir.

Alkolik karaciğer hastalığının tedavisinde alkolün bırakılması dışında tedavi seçenekleri sınırlıdır. Bu hastaların birçoğu alkolü bırakamamakta ve aktif alkol kullanımını nedeniyle hastalık siroza ilerlediğinde karaciğer transplantasyonu için aday olamamaktadır. Tedavi seçeneklerini sınırlayan bu durum göz önüne alındığında bağırsak-karaciğer ekseninin araştırılması ve yeni tedavi stratejilerinin geliştirilmesi büyük önem taşımaktadır. Bu multisistemik hastalığın tedavisinde hem alkolün kesilmesini hem de mikrobiyota değişimini ele alan yeni stratejilere ihtiyaç vardır.

Bu bölümde, alkolün ve alkolik karaciğer hastalığının bağırsak mikrobiyotası ile olan ilişkisi incelenmiştir.

Alkol Kullanımı

Dünya genelinde yaklaşık iki milyar kişinin hergün alkol kullandığı ve 70 milyondan fazla kişinin alkol kullanım bozukluğu tanısı aldığı tahmin edilmektedir ⁽¹⁾. Kronik alkol tüketimi, alkolik karaciğer hastalığı, kanser gelişme riski, bağışıklık sistemi anormal fonksiyonu, doku hasarı ve organ işlev bozukluğu ile bağlantılıdır. Ayrıca akut ve kronik enfeksiyonlar, pankreatit, kalp hastalığı riskini de artırır.

fazla, Actinobacteria miktarının ise daha az olduğu, glutatyon metabolizmasının artmış ve biyotin metabolizmasının azalmış olduğu gözlenmiştir⁽²⁶⁾. Ayrıca alkol kullananlarda Fusobakterilerin mikrobiyotada daha fazla olduğu, Bacteroideslerin ise tersine daha az olduğu gözlenmiştir. Endotoksemi de şiddetli alkolik hepatitli hastalarda hafif olanlara göre daha fazla saptanmıştır⁽³²⁾. Ayrıca farelerde yapılan bir çalışmada AKH'da alkol alımının bakteriler dışında, fungal aşırıçoğalmaya yol açtığı ve bunda artan karaciğer hasarı ile ilişkili olduğu gösterilmiştir⁽³³⁾. Ayrıca alkolik hepatite bağlı siroz hastalarında fungal enfeksiyonların mortalitesi daha fazla olmaktadır⁽³³⁾. Bu veriler alkolik hepatitli hastalarda bağırsak mikrobiyal kompozisyonu ve fonksiyonunda önemli değişiklikler olduğunu ve alkolik hepatit seyrinde mikrobiyotanın önemli rolü olabileceğini göstermektedir.

Alkolik Karaciğer Hastalığı Tedavisinde Mikrobiyota

Alkole bağlı karaciğer sirozu gelişen birçok hasta alkolü bırakmakta zorluklar yaşamakta ve karaciğer transplantasyonu için aday olamamaktadır. Dolayısıyla bu hastaların tedavisinde transplantasyon dışındaki yaklaşımlar daha çok ön plana çıkmaktadır. Bağırsak mikrobiyotasının AKH gelişimindeki rolü göz önüne alındığında tedavide de önemli rol alabileceği düşünülebilir. Hayvan deneylerinde *A. muciniphila* ve *L. Rhamnosus*'un alkole bağlı intestinal bariyer bozuklukları ve sistemik enflamasyonda düzelmeye sağlayabileceği gösterilmiştir^(19,25). AKH hastalarında bağırsak mikrobiyota modifikasyonunun etkisini araştıran çalışmalar az sayıda, düşük hasta sayısı içermekle birlikte sonuçları umut vericidir. Kirpich ve arkadaşları *Bifidobacterium bifidum* ve *Lactobacillus plantarum* verilen hastalarda standart tedavilere göre serum ALT AST seviyelerinde düşüş saptandığını göstermişlerdir⁽³⁴⁾. Han ve arkadaşları ise *Bacillus subtilis* ve *Streptococcus faecium* verilen hastalarda plaseboya göre karaciğer fonksiyonları, sistemik inflamasyon ve endotoksemide iyileşme saptamışlardır⁽³⁵⁾. Ayrıca fekal mikrobiyota transplantasyonu yapılan hastalarda mikrobiyotadaki patojenik türlerin azaldığı, karaciğer fonksiyonları ile sağkalımda iyileşme olduğu gösterilmiştir⁽³⁶⁾. Mikrobiyotanın AKH tedavisindeki rolünü araştıran randomize kontrollü çalışmalar AKH tedavisinde yeni bir pencere açarak önemli katkı sağlayabilecektir.

Sonuç

Yapılan çalışmalar kronik alkol tüketimi disbiyozise neden olduğunu göstermektedir. Oluşan disbiyozis, karaciğer hastalıklarının oluşumuna neden olabilmektedir. Alkol ve AKH gibi alkolizmle ilişkilendirilmiş hastalıkların tanı ve tedavisinde bağırsak mikrobiyotası gelecekte önemli bir parametre olarak kullanılacaktır. Aynı zamanda disbiyozis ile ilişkilendirilen birçok hastalıkta kullanım alanı bulan prebiyotikler, probiyotikler, sinbiyotikler ve polifenoller AKH gibi alkol ile ilişkilendirilen durumların tedavisinde de kullanılabilir. Daha fazla çalışma ile alkolün bağırsak mikrobiyotası üzerine etkileri çok daha iyi anlaşılabilir ve mikrobiyal kompozisyon replasmanları tedavide daha etkili kullanım alanı bulacaktır.

Giriş

Çölyak hastalığı, genetik olarak yatkınlığı bulunan bireylerde gluten ve ilişkili prolamınler tarafından tetiklenen ve glutene bağlı klinik manifestoların varlığı ile karakterize immün-aracılı sistemik bir bozukluktur¹. Çölyak hastaları anemi, osteopeni, nöropatiler, gibi ekstraintestinal semptomlar ile tiroid hastalıkları, otoimmün hepatit ve Tip 1 diyabet gibi otoimmün hastalıkların artmış riski altındadır^{2,3}. Gerek tanının konulmasında, gerek tedavinin etkin bir şekilde uygulanmasında karşılaşılan güçlükler hastaların yaşam kalitesini olumsuz yönde etkiler^{4,5}.

Ülkeden ülkeye değişiklik gösterse de epidemiyolojik veriler çölyak hastalığının her 100 bireyden ortalama birini etkilediğini göstermektedir^{6,7}. Hastalığın prevalansı her geçen gün artmaktadır ve bu artışta tanı yöntemlerindeki gelişmelerin yanı sıra çevresel faktörlerdeki değişikliklerin de payının göz ardı edilmemesi gerektiğine vurgu yapılmaktadır⁸. Zira genetik yatkınlığa sahip her bireyde çölyak hastalığının görülmemesi hastalığın patogeneğinde çevresel faktörlerin rolüne işaret etmektedir⁹ ve gün geçtikçe genetik, immünolojik ve çevresel etmenlerin birlikte rol oynadığı bu hastalığın oluşumuna katkı veren fizyolojik süreçlere yönelik çalışmalar derinleşmektedir. Bu noktada intestinal mikrobiyotada oluşan disbiyozis ve konakçı mikrobiyom ilişkileri çölyakın gelişiminde çevresel bir risk faktörü olarak ele alınmaktadır¹⁰. Yapılan çalışmalarda yeni çölyak tanısı alan ve tedavi altındaki çocukların mikrobiyotalarında farklı takson düzeylerinde ayrışmalar olduğu ortaya konmuş ve hastalığın aktif döneminde potansiyel patojen mikroorganizmalarda artış, potansiyel yararlı türlerde ise azalmalar saptanmıştır¹¹⁻¹³.

Hayat boyu sıkı bir şekilde uygulanması gereken glutensiz diyet tedavisi çölyak hastalığında etkinliği kanıtlanmış tek tedavi şeklidir. Diyetten glutenin çıkarılması hızlı bir şekilde semptomların gerilemesini sağlar¹⁴. Ancak, glutensiz diyetler iyi planlanmadığı takdirde besin ögesi dağılımında dengesizlikler ve yetersizlikler görülebilmektedir¹⁵. Bu durum intestinal mikrobiyotayı etkileyebilmektedir¹⁶. Dolayısıyla ince bağırsaktaki mikrobiyota değişimlerine hastanın diyetindeki değişimlerin kendisi de katkı verebilmektedir. Böylece tedavi süresince gözlemlenen mikrobiyota değişimlerinin hastalığın gerilemesi nedeniyle mi yoksa glutensiz diyet içeriğinin etkisiyle mi gerçekleştiğinin ayırımı yapmak güçleşmektedir^{9,10}.

Son yıllarda, bağırsak mikrobiyotasının hem potansiyel non-invaziv tanı hem de tedavi yöntemi olarak kullanılabilir ipuçları vermesi açısından çölyak hastalığının patofizyolojisindeki yeri belirlenmeye çalışılmaktadır⁹. Bu konuda umut vaat eden çalışmalar konakçı ve mikrobiyom çapraz etkile-

**İNFLAMATUVAR BAĞIRSAK HASTALIĞI VE BAĞIRSAK
MİKROBİYOTASI**

Alpaslan Tanoğlu

Taner Akyol

İnflamatuvar bağırsak hastalıkları (İBH); genetik zemini olan, kronik inflamasyonun hâkim olduğu, aktivasyon ve remisyon dönemleriyle karakterize bir hastalık grubudur. Crohn hastalığı (CH) ve ülseratif kolit (ÜK) olmak üzere iki ana klinik formu ile daha nadir olarak rastlanılan ‘indetermine kolit’ten oluşmaktadır. Batılı ülkelerde daha sık rastlanmakla birlikte, hastalık insidansı tüm dünyada artmaktadır. İBH etiyojisi üzerine odaklanan bilimsel çalışmalar; konağın genetik özellikleri ve immün cevaplar, mikrobiyota ve çevresel etmenler üzerine yoğunlaşmaktadır⁽¹⁻³⁾.

Bağırsak mikrobiyotası içerdiği bakteri, fungus, virüs ve diğer mikroorganizma çeşitleri ile konakçı için ikincil bir organ sistemi gibi davranmakta ve çeşitli kritik roller üstlenmektedir. Son dönemlerde elde edilen bilimsel veriler, bağırsak mikrobiyotasındaki ‘disbiyoz’ olarak adlandırılan bozuklukların İBH ile ilişkili olduğunu ortaya koymuştur⁽⁴⁻⁶⁾. Yeni nesil dizileme tekniklerinin kullanıma girmesiyle birlikte, mikrobiyotadaki değişimlerin daha hassas belirlenebilmesi bu ilişkiyi destekler verilerin alınmasını kolaylaştırmıştır.

Bağırsak Mikrobiyotası ile İnflamatuvar Bağırsak Hastalığı İlişkisi**Bakteriyel Mikrobiyota**

Bağırsak mikrobiyotasında baskın olan komponent bakterilerdir. Bağırsaklarda yaklaşık 1000 çeşit bakteri türü olduğu ve bu türlerin sahip oldukları genlerin, insan genomuna göre 100 kat fazla olduğu, tahmin edilmektedir⁽⁷⁻⁸⁾. Bu kadar çeşitlilik gösteren ve geniş bir genom yapısına sahip olan bu bakteriyel içerik, sindirim faaliyetlerine katılmak ve zararlı mikroorganizmaların baskılanması gibi faaliyetlerde rol almanın yanı sıra bağırsakta immün sistem ile de etkileşime girmektedir⁽⁹⁻¹⁰⁾. Firmicutes, Bacteroidetes, Actinobacteria ve Verrucomicrobia türleri sağlıklı bağırsak mikrobiyotasında baskın olan bakteri türleri olmakla birlikte, hangi türlerin bağırsaklardaki düzeylerinin değişmesine bağlı inflamatuvar bağırsak hastalığı geliştiği net olarak cevaplanmayı bekleyen önemli bir soru olarak karşımızda durmaktadır^(11,12).

Bağırsak mikrobiyotası; proksimal ya da distal bağırsaklardaki yerleşimine göre ve mukozal-lüminal içerik etkileşimlerine bağlı olarak bireylerarası değişim gösterebilen bir yapıdır^(13,14). Doğumla birlikte gelişmeye başlayan bağırsak biyotası, yaşamın ilk yıllarında çeşitli besin ürünlerinin diyetle girmesiyle birlikte daha karmaşık bir hâle gelmektedir. Ancak ilerleyen yaşlarla birlikte; diğer çevresel etmenler, beslenme alışkanlıkları, antibiyotik kullanımı ve pre-probiyotik tüketimine göre mikrobiyota daha kararlı bir hâl almakta ve aynı zamanda kişisel özelliklere bürünmektedir^(15,16). Bu etmenlere ilave

İRRİTABL BAĞIRSAK SENDROMU VE MİKROBİYOTA

Hakan Alagözlü

Tanı

Huzursuz Bağırsak Sendromu veya İrritabl Bağırsak Sendromu (İBS), organik bir hastalığın dışlandığı durumlarda semptomlara dayalı olarak tanısı konulan fonksiyonel bir hastalıktır. İBS yapısal veya biyokimyasal anomalilik içermez. Tanı koydurucu bulguları semptomlarıdır. İBS tanı kriterleri 1978'de Manning kriterlerinin yayımlanması ile gelişmeye başlamıştır. Manning kriterleri tanı koymada yetersiz olduğunda; 1989'da Rome kriterleri, 1999'da Rome II kriterleri, 2006'da Rome III kriterleri, 2016'da Rome IV kriterleri konulmuştur. Rome IV kriterlerine göre; son 3 ay içerisinde, haftada en az 1 gün olan karın ağrısına 3 bulgudan en az 2'sinin eşlik etmesi (semptomların defekasyonla hafiflemesi, dışkılama sıklığında değişmesi, dışkının şekil ve görünümünde değişme olması) ile İBS tanısı konulmaktadır. Semptomların hasta başvurmadan en az 6 ay önce başlamış olması gerekmektedir. ROME-II'de destekleyici bulgular olarak gösterilen acil defekasyon, ıkmama, yetersiz boşalma, mukuslu dışkılama ve şişkinlik, karında gerginlik hissi destekleyici bulguların sorgulanması İBS tanısı için yardımcı olabilir ⁽¹⁾.

Etiyoloji

Visseral hipersensitivite: Genellikle hastalar, karında şişkinlik hissinin çok fazla gaz oluşmasına bağlı olduğunu düşünür. Aslında çoğunlukla gaz miktarı normaldir, ancak İBS'li hastalar çok gaz varmış gibi algılar. Çünkü gaza karşı hipersensitivite mevcuttur ⁽²⁾. Visseral hipersensitivite, kendini alodini (ağrılı olmayan uyarıyı ağrılıymış gibi algılamak) veya hiperaleji (ağrılı uyarıyı olması gereken çok daha abartılı algılamak) şeklinde gösterebilir. İBS'li olgularda rektal balonla distansiyonda, İBS'li olguların ağrı eşiklerinin kontrol grubundan daha düşük olduğu tespit edilmiştir ⁽³⁾.

Gıda intoleransı: Hastalar, bazı gıda ürünleri ile semptomlarının arttığını, hatta atak geçirdiklerini ifade etmektedirler. Bunlar arasında yağlı gıdalar, gaz üreten gıdalar, bakliyatlar, alkol, kafein, gazlı içecekler, laktoz, fruktoz ve bazen çözünmeyen fiber sayılabilir. Gıda eliminasyon diyeti yapanlarda, dışkılama sıklığı, ağrı ve yaşam kalitesinde düzelme olduğu tespit edilmiştir ⁽⁴⁾. Gıdalar tüm İBS semptomlarından sorumlu değildir. Ancak farklı diyet uygulamaları İBS hastalarında düzelme sağlayabilmektedir.

Psikososyal faktörler: İBS'de, gastrointestinal semptomların, psikososyal süreçlerle beynin bağırsak aksını etkilemesi sonucu oluştuğu düşünülmektedir ⁽⁵⁾.

Post-Enfeksiyöz İBS

Enfeksiyöz gastroenteritli hastaların %4-36'sında Post-Enfeksiyöz İBS (PE-İBS) görüldüğü rapor edilmiştir ⁽⁶⁾. Akut bir gastroenterit atağını takiben oluşan süreklilik gösteren karın ağrısı ve diyare ola-

gerekse diyare dominant-İBS hastalarının fekal mikrobiyota sonuçları primer sonuçlarla tutarlı olduğu gösterilmiştir. Yalnız sadece Çin çalışmalarında İBS hastalarında sağlıklı kontrollere göre sadece fekal *Bacteriodes* sonuçlarında anlamlı artış bulunmuştur ($p < 0.01$)⁽¹⁸⁾.

İBS'de SİBO'da gördüğümüz metan üreten bakterilerin daha çok kabızlık yaptığı, bağırsak transit zamanını arttırdığını görmekte iken hidrojen üreten bakterilerin daha çok ishal tipi İBS yaptığını görmekteyiz⁽¹⁹⁾. İBS'nin ishal dominant tipinde bakterilerin, kontrol grubuna göre kolonositlerin enerji kaynağı olan butiratı ise daha az ürettiği görülmüştür⁽²⁰⁾. Başka bir çalışmada ise *Faecalibacterium prausnitzii* seviyelerinin ise anlamlı olarak düşük olduğu saptanmıştır⁽²¹⁾.

Sonuç olarak İBS bağırsak mikrobiyota disbiyozisi ile karakterize bir hastalıktır. Prospektif daha geniş skala içeren çalışmalar İBS'de görülen disbiyozise daha da ışık tutacaktır.

GIDA KATKI MADDELERİNİN MİKROBİYOTA VE METABOLİZMA ÜZERİNE ETKİLERİ

Fatih Gültekin

Giriş

Gıda katkı maddeleri gıdaların üretim süreci içerisinde gıdaların renk, tat, koku, besin değeri ve raf ömrü gibi özelliklerini iyileştirmek amacıyla gıdalara katılan maddelerdir. Bu maddeler gıda paketleri üzerindeki etiketlerin “içindekiler” kısmında belirtilmektedir. Gıda katkı maddelerinin kullanılmasına izin verilmeden önce birçok toksikolojik araştırma yapılmaktadır. Bu araştırmalar sonucunda öncelikle hayvanlar için güvenli miktarlar belirlenir, daha sonra emniyet katsayısı olan 100'e bölünerek insanlar için güvenli olan ADI (günlük alınmasına izin verilen) düzeyler belirlenir. Bu düzey üzerinden gıdalarda hangi miktarlarda kullanılacağı hesaplanır. Gıdalarda kullanılmaya başlandıktan sonra herhangi bir olumsuz etkiye yol açıp açmadığı takip edilir. Yapılan araştırmalar belirli periyotlarda değerlendirilerek olumsuz etkiye yol açan dozlar dikkate alınarak ADI değerleri düşürülebilir veya ciddi bir yan etki söz konusu ise kullanımı yasaklanır. Dolayısıyla kullanılmasına izin verilen katkı maddeleri orta düzeyde güvenli kabul edilir.

Yeni teknikler ve araştırma konuları ortaya çıktıkça katkı maddelerinin yan etkilerine ilişkin yeni bulgular ortaya koyulabilmektedir. Mikrobiyota konusu da son yıllarda üzerinde daha yoğun çalışılmaya başlanılan bir konudur. Mikrobiyota ve gıda katkı maddeleri ilişkisi yeni araştırmalara konu olmaktadır.

İnsan, %10 insan ve %90 mikrobiyal hücrelerin birleşiminden oluşan bir süperorganizmadır⁽¹⁾. İnsan ve mikrobiyal genomlar (hologenom) zaman içerisinde beraber gelişmiş, metabolizmaları ve varlıklarını sürdürebilme özellikleri ayrılmaz şekilde birbirlerine karışmıştır. Bakteriler, virüsler ve bazı tek hücreli ökaryotların oluşturduğu mikroorganizmaların bir arada toplanması ile mikrobiyota meydana gelir.

Bağırsak mikrobiyota genomu 3,3 milyondan fazla geni kodlamaktadır. Bu miktar yaklaşık olarak insan genomunun 150 katına tekabül etmektedir. Bağırsak mikrobiyomunda Firmicutes, Bacteroidetes, Actinobacteria, Proteobacteria, Fusobacteria ve Verrucomicrobia olmak üzere 6 bakteri şubesine (filumuna) ait binlerce tür bulunmaktadır. Bağırsak mikrobiyotası genotiplere, yaşanılan coğrafyaya, yaşam stiline ve yaşa bağlı olarak oldukça dinamik ve değişken bir yapıya sahiptir. Mikrobiyomik değişim doğumla birlikte başlar. İlk yılda dramatik olarak değişen mikrobiyom 2,5 yaşında erişkindekilere benzer şekilde ulaşır ve yaşlılık dönemine kadar göreceli olarak değişmeden kalır⁽²⁾.

Bağırsak mikrobiyotası birey sağlığı için oldukça önemlidir. Birçok fizyolojik olayın düzenlenmesinde görev alırlar. Bağırsaklardaki mukus tabakasında yerleşir ve şekillenmesinde yer alırlar. Lif gibi gıdaların sindirimine yardımcı olurlar; bazı vitamin ve amino asitleri sentezlerler, enerji metabolizması

Sonuç

Günümüze kadar çok az sayıdaki katkı maddesinin mikrobiyotaya üzerine etkileri araştırılmıştır. Bu çalışmalarda katkı maddelerinin çoğunluğu olumsuz, az bir kısmının ise olumlu gibi görünen etkiler göstermişlerdir. Çalışılanların büyük çoğunluğunu tatlandırıcılar oluşturmaktadır. Bu yüzden tatlandırıcılarla ilgili nisbeten bazı çıkarımlar yapılabilmektedir.

Sentetik tatlandırıcılar mikrobiyotayı etkilemekte ve mikrobiyotada oluşan değişiklik glikoz intoleransına ve muhtemel kilo artışına yol açmaktadır. Kalori değeri olmayan sentetik tatlandırıcıların yol açtığı bu sonuçlar aslında beklenen tersi yöndedir. Bununla beraber kilo vermek amacıyla sentetik tatlandırıcı kullanmanın faydasız olduğunu gösteren birçok çalışmanın da bir anlamda izahı yapılmış olmaktadır. Tatlandırıcılardan şeker alkollerini ise sentetik tatlandırıcıların aksine büyük oranda mikrobiyotayı olumlu yöne etkilemekte ve bir prebiyotik gibi davranmaktadır. Eritritol gibi istisnaları bir kenara koyarsak mikrobiyotaya açısından bu katkıların kullanılması olumlu bir etki yapmaktadır. Bunun yanında fazla kullanılması bağırsaklarda gaz oluşumunu artıracak ve özellikle spastik kolon gibi hastalığı olanlarda rahatsızlık oluşturabilecektir.

Tatlandırıcılar dışındaki katkı maddelerinin çokluğu, yapılan araştırma sayısının azlığı ve deney hayvanlarının ve modellerinin farklılığı nedeniyle net bir sonuç çıkarılamamaktadır. Bu yüzden gıda katkı maddelerinin birçoğu kullanılarak insanlar üzerinde yapılacak çok sayıda çalışmaya ihtiyaç vardır.

**BAĞIRSAK MİKROBİYOTASININ OBEZİTE,
İNSÜLİN DİRENCİ VE DİYETTEKİ ROLÜ***Mendane Saka*

Obezite ve Tip 2 diabetes mellitus (T2DM), uzun süreli sağlık sorunlarıyla ilişkili yaygın, küresel düzeyde önemli kronik metabolik bozukluklardır. Bağırsak mikrobiyotasının, konak homeostazının korunmasında, obezite ve T2DM etiyojisinde ve ilerlemesinde temel patofizyolojik rollerde yoğun bir şekilde yer aldığı açık hâle gelmiştir ⁽¹⁾. Zayıf bireyler obezler ile karşılaştırıldığında obezlerde bağırsak mikrobiyotasının değişmiş ve daha az mikrobiyal çeşitlilik ile karakterize olduğu, obezlerden steril farelere mikrobiyota transferinin ise obez fenotip transferi ile sonuçlandığı belirlenmiştir ⁽²⁾.

Gastrointestinal sistemde (GİS), tüm vücutta bulunan hücrelerin yaklaşık 10 katı kadar mikroorganizma bulunmakta ve insan genomundan 150 kat daha fazla gen çeşitliliğine sahip olduğu düşünülmektedir. Vücudumuzda 2000 bakteri ailesi, 15.000-35.000 türün üzerinde bakteri bulunmaktadır ve bunların çok büyük bir kısmı bağırsaklarda yerleşmiştir ⁽³⁾. İnsan Mikrobiyom Projesinde bağırsak mikrobiyotasının binlerce tür içerdiği ve bu türlerin kişiye bağlı olarak değişiklik gösterdiği bulunmuştur (Tablo 1) ^(6,7,8). Mikrobiyota bireye göre farklılık gösterse de temel tür genlerinin birçok bireyde benzer olduğu görülmektedir ⁽⁶⁾. Bireyler yaşamı boyunca bağırsak mikrobiyotasını etkileyecek birçok evreden geçmektedir. Yaşamın bebeklik, yetişkinlik ve yaşlılık dönemi ile beraber ergenlik, gebelik ve emzicilik gibi farklı yaşam evrelerinde de bağırsak mikrobiyotasında farklılıklar gözlenmekte, aynı zamanda bireyin yaşam tarzı ve hastalıklara bağlı olarak da mikrobiyota değişmektedir.

Tablo 1. İnsan mikrobiyotasında baskın bakteriler.**Firmicutes (60-80%)***Ruminococcus**Clostridium**Lactobacillus***Bacteroidetes (20-30%)***Bacteroides**Prevotella**Xylanibacter***Actinobacteria (< 10%)***Bifidobacterium***Proteobacteria (< 1%)***Escherichia**Enterobacteria*

te, insulin direnci ve glukoz metabolizmasında düzelmeye sağlayabilir. Diyetin enerji ve makrobesin ögeleri açısından yeterli ve dengeli olması, günlük önerilerin üzerinde yağ ve protein tüketilmemesi, bitkisel protein kaynakları ve bitkisel yağların tercih edilmesi, besin çeşitliliğinin sağlanması, doğal prebiyotik kaynakları olan posa bileşenlerini içeren bitkisel kaynaklı besinler ile doğal probiyotik kaynakları olan fermente besinler ile zenginleştirilmesi önemlidir.

BAĞIRSAK MİKROBİYOTASI VE DİYABETES MELLİTUS

Gülsüm Kaya

Aysun Kaya

'Tüm hastalıklar bağırsakta başlar'

Hipokrat, MÖ 400¹.

Diyabetes mellitus (DM) insidansı dünya çapında artmaktadır. 2019'da 463 milyon kişinin DM'li olduğu ve bu sayının 2030'a kadar 578 milyona ve 2045'e kadar 700 milyona ulaşacağı tahmin edilmektedir. Zaman içinde insan ve mikrobiyal genomlar birlikte gelişmiş, metabolizmaları ve varlıklarını sürdürebilme özellikleri ayrılamaz şekilde birbirlerine karışmıştır. Bağırsak mikrobiyotası, bakteriler, virüsler ve bazı tek hücreli ökaryotların oluşturduğu mikroorganizmaların bir arada toplanmasıyla meydana gelir. Bağırsak mikrobiyotası ile birçok hastalık arasında mekanistik bağlantı sağlayan hayvan ve insan çalışmaları bilinmekteydi. Fakat son yıllarda toplanan kanıtlar göstermiştir ki bağırsak mikrobiyotasında bulunan bakteriler çeşitli hastalıkların oluşumunda ve tedavisinde rol oynamaktadır. Faydalı bakterilerin azalması ve zararlı bakterilerin artması olarak tanımlanan mikrobiyal disbiyozis ile DM'nin ilişkili olduğunu gösteren çalışmalar mevcuttur. Mikrobiyal disbiyoziste karbonhidrat ve proteinlerin fermentasyonu yoluyla zararlı metabolitler artmakta ve safra asitlerinin bileşiminde değişiklikler oluşmaktadır. Bağırsak mikrobiyotasının vücut ağırlığı, safra asidi metabolizması, proenflamatuar aktivite ve insülin direnci ve bağırsak hormonlarının modülasyonu üzerindeki etkisi yoluyla konağı etkilediğine dair açık kanıtlar vardır. Bununla birlikte bağırsak mikrobiyotasının probiyotikler, prebiyotikler, antibiyotikler ve fekal mikrobiyota transplantasyonu kullanılarak modüle edilmesi, konakçıda glikoz metabolizmasında ve insülin direncinde iyileşme için faydalara sahip olabilir. Son yıllarda bağırsak mikrobiyotasının hastalık ve sağlık üzerine etkileri büyük ilgi görmüştür. Bağırsak mikrobiyotası ve DM arasındaki etkileşimin anlaşılması, hastalığın önlenmesi ve tedavisine önemli katkılar sağlayacaktır.

Bağırsak Mikrobiyotası

Zaman içerisinde insan ve mikrobiyal genomlar birlikte gelişmiş, metabolizmaları ve varlıklarını sürdürebilme özellikleri ayrılamaz şekilde birbirlerine karışmıştır. Bağırsak mikrobiyotası, bakteriler, virüsler ve bazı tek hücreli ökaryotların oluşturduğu mikroorganizmaların bir arada toplanmasıyla meydana gelir. Mikrobiyota, insanlarda bulunan mikroorganizmaların tamamı; mikrobiyom ise mikroorganizmaların genomudur². İnsan, %10 insan ve %90 mikrobiyal hücrelerin birleşmesiyle oluşan bir süperorganizmadır^{1,3}. İnsandaki gen sayısı 35.000 iken bakteriyel genom sayısı 2 milyondan fazladır. Bir başka deyişle vücudumuzdaki bakteri genomu, insan genomundan 150 kat daha fazladır. İnsan ve mikrobiyal genomunun birlikteliği hologenom olarak adlandırılmaktadır⁴. İnsan bağırsağında yerleşmiş bakterilerin yüzey alanı 400 m², bakteri ağırlığı ise yaklaşık 1.5-2 kg'dır^{2,5,6}. Bağırsak mikrobiyotası bakteriler, virüsler ve bazı tek hücreli ökaryotları içeren 100 trilyon (10¹⁴) hücreden oluşmaktadır⁷.

antidiyabetik etkisinde rol oynayabilir. Bununla birlikte, insanlarda uzun süreli antibiyotik kullanımı kilo almı ve obezite ile ilişkilendirilmiştir. Enfektif endokardit için 6 hafta boyunca vankomisin ve gentamisin tedavisi alan hastalarda önemli kilo artışı gözlenmiştir⁴⁷. Hernández ve arkadaşları, 14 gün boyunca intravenöz β -laktam tedavisinin, insan gastrointestinal sisteminde glikozidaz aktivitesini arttırdığını, beden kitle indeksi ve glikoz seviyesiyle ilişkili olduğunu gözlemlemişlerdir³¹. Farklı antibiyotiklerin ve uygulama yollarının metabolizma ve T2DM üzerindeki etkilerini araştırmak için ileri çalışmalar yapılmalıdır.

Fekal mikrobiyota transplantasyonu

FT, sağlıklı vericiden alınan gaitanın süspanse hâle getirilerek tedavi amacıyla alıcının sindirim sistemine nakledilmesi işlemidir⁴⁸. FT'de alıcının gastrointestinal sistemine yerleştirilen insan bağırsak mikrobiyotasının bir doku olarak düşünülmesi gereklidir⁴⁹. FT ilk kez tedavi amacıyla 1958'de Eiseman ve arkadaşları tarafından uygulanmış ve sağlıklı bireylerden alınan FM dört kritik psödomembranöz enterokolitli hastaya transplante edilmiştir⁴.

Son zamanlarda, FT dikkati çekici, etkili ve kabul edilebilir bir tedavi yaklaşımıdır. Yapılan bir çalışmada tekrarlayan *C. difficile* enfeksiyonu olan 19 hastaya kolonoskop aracılığı ile donör dışkısı infüze edilmiş ve 6 ay ile 5 yıl arasındaki hasta takiplerinde *C. difficile* enfeksiyonu olan tüm hastaların tedavisinde başarı sağlandığı raporlanmıştır⁵⁰. Bu sonuç aynı zamanda fekal transplantasyonun metabolik sendrom ve T2DM'deki terapötik etkisine olan ilgiyi de artmıştır. 6 hafta boyunca allojenik yağsız donörlerden ince bağırsak dışkı mikrobiyotası infüzyonları alan metabolik sendromlu hastalar, butirat üreten bağırsak mikrobiyotasındaki artışla birlikte periferik ve hepatik insülin hassasiyetinde bir iyileşme gösterdiği bildirilmiştir⁴⁶.

Sonuç olarak, 21. yüzyılın en hızlı büyüyen küresel sağlık acillerinden biri DM'dir. Bağırsak mikrobiyotası ile DM ve obezitenin ilişkili olduğunu gösteren çalışmalar dikkatleri bu konunun üzerine çekmiştir. Son zamanlarda yapılan çalışmalar ile bağırsak mikrobiyotasının önemi daha iyi anlaşılmış, DM'nin patogenezinde bu karmaşık sistemin aydınlatılması ile mikrobiyotanın hangi mekanizmalar ile konağın enerji metabolizmasına etki ettiği ortaya çıkarılmıştır. Mikrobiyotanın patogenezi ve önemi açığa kavuşturulmuş, gelecekte mikrobiyota bir belirteç olarak tanı ve tedavide kullanılacaktır. Bağırsak mikrobiyotasının probiyotikler, prebiyotikler, antibiyotikler ve FT kullanılarak modüle edilmesi, konakçıda glikoz metabolizmasını ve insülin direncini iyileştirmede faydalara sahip olabilir. DM'nin bağırsak mikrobiyotası değişimi üzerindeki etkilerini daha iyi anlamak ve DM'de yeni tedavilerin geliştirilmesini sağlamak için daha fazla ve uzun süreli çalışmalara ihtiyaç vardır.

ENFEKSİYON HASTALIKLARININ PATOGENEZİNDE MİKROBİYOTANIN ROLÜ

Mustafa Altındış

Ayşe Betül Şahin

Hande Toptan

İnsan üzerinde ve vücut boşluklarında; insan ile birlikte yaşayan kommensal, simbiyotik, parazitik ve patojenik mikroorganizmaların tümü insan mikrobiyomu olarak adlandırılır. Uzun yıllar hastalıklar ile ya da sağlıklı olma ile ilişkisi bilim insanları için ilgi çekici bir araştırma konusu olmuştur. Konakçının genetik özellikleri, beslenme alışkanlıkları, çevresel faktörler mikrobiyomun oluşmasına neden olduğu gibi her bireyde farklı özelliklerde olmasına yol açmaktadır. İnsan mikrobiyomunun içeriği, fonksiyonları, metabolik yollardaki etkileşimleri, çeşitli hastalıklarla ilişkileri, immün sistem üzerine etkileri ve hatta sağlıklı bireylerdeki yapısı; gelişen laboratuvar tekniklerinin ve ileri sekanslama tekniklerinin yardımı ile incelenmeye başlanmıştır. Özellikle İnsan Mikrobiyom Projesi (Human Microbiome Project-HMP) ve İnsan İntestinal Sisteminin Metagenomiği Projeleri (Metagenomics of the Human Intestinal Tract (MetaHIT) insan mikrobiyomu oluşturan genlerin ve genom raporlarının incelenmesinde en kapsamlı çalışmalardır.

Doğumdan itibaren gelişen insan mikrobiyomu, bağışıklık sisteminin gelişmesinde enfeksiyon hastalıklarını önlemede önemli rol oynamaktadır. Doğum ile birlikte bağırsak ilişkili lenfoid dokunun gelişmesi, efektör T hücreleri ve regülatör T hücreleri gibi T hücre alt gruplarının oluşmasında kommensal mikrobiyom rol alır. Diğer bir anlatımla, intestinal epitel ve mikrobiyomun hayat boyu sürececek sürekli bir etkileşim içinde olması doğal ve adaptif bağışıklık üzerinden intestinal bağışıklığın dengede kalmasını sağlar. Bu dengenin bozulmasının, birçok metabolik ve sendromik bozuklukların, sistemik ve enfeksiyon hastalıklarının ortaya çıkışı ile ilişkili olabileceği düşünülmektedir.

Miktar ve tür olarak tüm mikroorganizmaların tanımlanması, bu mikroorganizmaların birbirleri ve konakçı organizma ile ilişkileri, bu ilişkideki metabolik yollar, bu etkileşimin sonucu organizmanın bağışıklık cevapları daha farklı birçok değişkene ait karanlıkta kalan veriler ortaya çıkarıldıkça, öncelikle sağlıklı bireyin bu durumunun korunması ve daha sonra hastalıkların tedavisinde yeni umutların ortaya çıkması kaçınılmaz olacaktır.

Bir enfeksiyonun oluşması 3 yolla gerçekleşebilir:

1. Konağın enfeksiyona duyarlılığı (konağın immünitesi, alta yatan hastalık, yaş vb.),
2. Bakterinin virulansı,
3. Konakçı-bakteri arasındaki etkileşim için uygun ortamın olması.

Enfeksiyona neden olan fırsatçı patojenler (*E. coli*, *Candida* gibi) normal flora, steril vücut bölgelerinde bulunabilir. Eşlik eden hastalıklar, immünsüpresyon ve yanık vb durumlar bu bakteriler için

Biyofilm ile ilişkili hastalıklar;

Kateter protez enfeksiyonları, Endokardit kistik fibrozis osteomyelit, Vajinal tamponlara bağlı toksik sok sendromu (TSS), Prostatit, Yara yeri enfeksiyonları, Nekrotizan fasiit, Safra yolu enfeksiyonları, Kronik otitis media, Kronik sinüzit dental plaklar greft enfeksiyonu, Sütür enfeksiyonlarını biyofilm ile ilişkilendiren çalışmalar mevcuttur.

Mikrobiyota Kistik Fibrozis İlişkisi

Florada bulunan *S.pyogenes*, *H.influenzae*, *S.pneumoniae*, *N.meningitidis* ve *S.aureus* gibi patojenler, akciğer bariyeri hasarlanırsa lümeninden steril alana girerek ciddi enfeksiyonlar yapabilirler.

Bu nedenle akciğer mikrobiyotasında simbiyont ve patobiyontların sağlıklı oranlarda bulunması, böylece mukozanın gereksiz yangısal reaksiyonlara girmemesi önemlidir.

Kistik fibroz (kalın bir mukus, Mukosiliyer aktivite bozulmuş), KOAH ve astımda mikrobiyota değişmiş olduğundan hasta enfeksiyonlara açıktır.

Bağırsaktaki mikrobiyotanın kısa-zincirli-yağ asidi üreten hâle değişmesi durumunda akciğer mikrobiyotasının kompozisyonu değişerek alerji de gelişir. Sonuç olarak; hastalıklar ile mücadelede tek tek mikroorganizmaları değil biyofilm mimarisini ve bu yapı içinde quorum sensing sistemlerini hedef almak daha doğru bir yaklaşım olabilir.

Sonuç

Mikrobiyota/enfeksiyon ilişkisi; fekal mikrobiyota transferi ve probiyotiklerin kanıtlanmış terapötik rolleri ile mikrobiyomun bulaşıcı hastalıklarla ilişkisinin gözden geçirilmesidir. Mikrobiyota transplantasyonu ve mikrobiyom bileşimi ile bulaşıcı hastalık riski arasında güçlü bir ilişki gelecek konularıdır. Mikroorganizmalar ve enfeksiyonla mücadelede yeni yaklaşımlara gereksinim olduğu açıktır. Bu yeni yaklaşımların odağında da mikrobiyota ve detayları olacaktır. Akılcı ilaç kullanımı insan sağlığının her alanında olduğu gibi mikrobiyotanın da korunmasında göz ardı edilmemelidir.

Giriş

Pek çok organizmanın zamana bağlı olarak dış dünyada tekrar eden etkenlere karşı döngüsel olarak biyokimyasal, fiziksel ve davranışsal olarak gösterdikleri değişikliklere biyolojik ritim adı verilmektedir. Biyolojik ritimler döngü sürelerine göre sirkadiyen, infradiyen, ultradiyen gibi alt gruplara ayrılmaktadır¹. Latince “*circa diem*” olarak ifade edilen sirkadiyen, kelime anlamı olarak yaklaşık bir gün olarak tanımlanmaktadır. Sirkadiyen ritim ise, dünyanın kendi eksenini etrafında yaklaşık 24 saat süren dönüşünün canlılar üzerinde oluşturduğu ritimlerin bir gün içinde tekrar edilmesidir. Sirkadiyen ritimler bakteriler, mantarlar, bitkiler ve hayvanlar dâhil birçok organizmada bulunan 24 saatlik ritim kalıplarıdır ve organizma içerisinde endojen olarak üretilirler². Sirkadiyen saatler hücrelerin, organların, sistemlerin ve davranışların 24 saatlik fonksiyonlarını düzenler. Organizmanın 24 saatlik yaşam periyodu, aktif olunan zamanlar, dinlenme zamanları, açlık-tokluk döngüleri, gastrointestinal fonksiyon, metabolik süreçler ve hücrel transkripsiyonlar ile transkripsiyonlar gibi çok çeşitli hücrel adaptasyonları kapsar³. Bireyin genel sağlık ve fizyolojik homeostazini belirlemede önemli role sahip olan sirkadiyen ritmin ana zamanlayıcısı anterior hipotalamusta bulunan suprakiazmatik çekirdektir. Ana merkez olan suprakiazmatik çekirdeğin (SCN) otonom sinir sistemi yolu ile periferel dokularda yer alan saatleri de senkronize ettiği, karaciğer, böbrek, pankreas ve bağırsaklar gibi periferel dokularda meydana gelen metabolik olaylarla birlikte karanlık-aydınlık ve uyku-uyanıklık döngülerinin koordinasyonunda rol aldığı bildirilmektedir⁵. Sirkadiyen ritimin, periferel saatlerden birisi olan gastrointestinal sistem saat fonksiyonları üzerinde geniş etkisi olduğu, bağırsak mikrobiyotasının da günlük ritimsel varyasyonlar gösterdiği ve vardiyalı çalışma, jet lag gibi sirkadiyen ritim bozukluklarına neden olan etmenlerin disbiyozise yol açtığı belirtilmektedir. Diğer taraftan bağırsak mikrobiyotasının da sirkadiyen ritmi etkilediği belirtilmektedir. Özellikle besin alımı zamanları bağırsak mikrobiyotasındaki günlük salınımları belirlemede ve beslenme gastrointestinal periferel saati için potansiyel bir zamanlayıcı olarak değerlendirilmektedir^{5,6}.

Sirkadiyen Ritimin Moleküler Mekanizması

Hücrel düzeyde sirkadiyen ritim, pozitif ve negatif geri bildirimler içeren moleküler bir ağ tarafından kontrol edilir (Şekil 1). Bu ağın pozitif geri bildirim döngüsündeki moleküler genler CLOCK ve BMAL1 isimli transkripsiyon faktörü kodlayan genlerdir. CLOCK (circadian locomotor output cycles kaput) bir histon asetil transferaz olup BMAL 1 (brain and muscle arnt like protein 1) ile heterodimerize olduğunda aktive olur. Heterodimer formunda aktifleşen CLOCK ve BMAL1 proteinleri, Period (Per 1, Per 2, Per 3) ve Cryptochrome (Cry 1, Cry 2) gibi sirkadiyen ritim genlerinin transkripsiyonunu düzenler. Sirkadiyen ritim genlerinin sentezini kontrol eden BMAL1 transkripsiyon faktörü de kontrole tabidir.

mekte, bağırsak mikrobiyotasının konakçı ile iletişim kurduğu bir feedback mekanizması aracılığı ile beyindeki ve karaciğerdeki sirkadiyen metabolik saatini düzenleme özelliği göstermektedir¹¹.

Sirkadiyen ritimlerin aydınlık/karanlık döngüleri ve yüksek yağlı diyet tüketimi gibi çevresel faktörlere bağlı bozulmalarının yanı sıra bağırsak mikrobiyotasındaki disbiyozise ve/veya bağırsak mikrobiyotasındaki sirkadiyen ritmin bozulması da sirkadiyen ritmi etkiler. Yaşam tarzı değişikliklerine bağlı beslenme ve yeme davranışlarındaki değişimler, modern yaşamın gereği sosyal jet lag, vardiyalı çalışma, uyku-uyanıklık döngüsündeki bozulmalar sirkadiyen ritimleri etkilemekte bu durum bağırsak mikrobiyotasında da değişimlere neden olmaktadır. Sirkadiyen ritimlerin aydınlık/karanlık döngüleri ve yüksek yağlı diyet tüketimi gibi çevresel faktörlere bağlı bozulmalarının yanı sıra moleküler sirkadiyen saatteki genetik mutasyonlar da bağırsak mikrobiyotasındaki disbiyozise ve/veya bağırsak mikrobiyotasındaki sirkadiyen ritmin bozulmasına neden olabilmektedir. Clock^{A19} mutasyonunun disbiyozis ile anlamlı derecede ilişkili olduğu ve proinflatuvar bakterilerin artışına sebep olduğu bildirilmektedir¹¹.

Hipofiz-adrenal ekseninin endokrin kontrolü altında olan bağırsak epitel hücrelerinin sirkadiyen saati döngüsel olarak glukokortikoid üretiminden sorumludur. Mikrobiyotanın disbiyozisi sonucu kortikosteroid düzeylerinde değişim meydana gelmekte ve bu durum metabolik bozukluklara yol açmaktadır²⁵. Bağırsak epitelyal hücrelerinin bütünlüğünün bozulması bağırsak geçirgenliğini arttırmakta, artan bağırsak geçirgenliği obezite, obezite ile ilişkili insülin direnci ve tip 2 diyabet gibi düşük dereceli inflamasyonla ilişkili hastalıkların gelişimine neden olmaktadır^{59,60}. Bağırsak bütünlüğünün bozulmasına yol açan etkenler konakta önemli proinflatuvar değişikliklere yol açmaktadır. Mikrobiyotada görülen değişimler genellikle proinflatuvar bakterilerin bolluğunun artmasıyla ve antiinflatuvar sayılan bütirat üreten bakterilerin bolluğunun azalmasıyla karakterizedir^{61,62}. Mikrobiyota kompozisyonu ve fonksiyonu sirkadiyen mukozal bağışıklık ritimleriyle de yakından ilişkilidir. Bağırsaktaki disbiyozis ve bağırsak geçirgenliğinin artması bağırsakta proinflatuvar sonuçlara neden olduğundan bağışıklık fonksiyonunu da değiştirir. Normal koşullar altında, bağışıklık sistemi sirkadiyen ritim ile düzenlenmektedir. Sirkadiyen ritim bozuklukları, bağırsak üzerinde direkt olarak olumsuz sonuçlara sebep olur^{63,64}.

Sonuç olarak, sirkadiyen ritimler 24 saatlik döngüde davranışları, organları ve yaşayan organizmadaki hücreleri düzenler. Bu ritimler, fonksiyonları ve sağlığı optimize etmek için biyolojik fonksiyonları düzenli ve öngörülebilir çevresel uyaranlara uyumlu hâle getirir. Bu ritimlerin bozulması, metabolik sendrom, kanser ve kardiyovasküler hastalıklar gibi metabolik bozukluklara neden olabilir. Bağırsak mikrobiyomu intrinsik sirkadiyen saatler ve konakçı organizma yoluyla sirkadiyen ritimler tarafından düzenlenmektedir. Mikrobiyota ritimleri, hem mikrobiyal topluluk yapısını hem de konakçı bağışıklık ve metabolik fonksiyonu önemli ölçüde etkileyebilen metabolik aktiviteyi değiştirebilen diyet ve beslenme zamanı ile düzenlenir. Bağırsak saatimizin doğru çalışması günlük osilasyon gösteren sağlıklı mikrobiyotaya, mikrobiyotaya da bireye özgü planlanan doğru zamanda ve içerikteki diyet planlamasına ihtiyaç duyar.

MİKROBİYOTA VE NÖRODENERASYON

Aybala Neslihan Alagöz

İnsan bağırsağı; bakteriler, mantarlar, parazitler ve virüsler gibi çeşitli mikroorganizmaları içerir ve mikrobiyota; insanlarla birlikte yaşayan özel türlerin tamamını ifade eder. Pek çok iç ve dış etken sonucu gelişebilen sağlıklı mikrobiyota için, “disbiyozis” terimi kullanılmaktadır. Beyin ve bağırsak; enterik sinir sistemi (ESS), vagus siniri, immün sistem veya bağırsak mikroorganizmalarının metabolik süreçleri de dâhil olmak üzere çeşitli yollarla bağlanabilir. Disbiyozis durumunda, bu yollarda gelişen değişiklikler; nörodejenerasyonun, Alzheimer hastalığı (AH), Parkinson hastalığı (PH) ve Multipl Sklerozis (MS) gibi birçok nörolojik hastalığın gelişimine katkıda bulunabilir. Bağırsak-beyin aksı ve nörodejenerasyon arasındaki ilişkinin açıklığa kavuşması; prebiyotikler, probiyotikler ve diyet müdahaleleri, fekal transplantasyon gibi tedavi stratejilerinin geliştirilmesi açısından önem arz etmektedir.

Giriş

İnsan bağırsağı; bakteriler, mantarlar, parazitler ve virüsler gibi çeşitli mikroorganizmaları içerir ve vücudumuzdaki ökaryotik hücrelerin sayısının 10-100 katı kadar olan, 100 milyondan fazla bakteri, insan gastrointestinal kanalında bulunur. İnsan vücudu; yıllar süren ortak gelişimden sonra, bağırsak bakterileri ile karşılıklı yarar sağlayan simbiyotik bir hâle gelmiştir. Bağırsak bakterileri esas olarak; Firmikutes, Bacteroidetes, Proteobacteria, Actinomycetes, Verrucomicrobia ve Fusobacteria olarak altı ana filum içerir; Bacteroidetes ve Firmicutes baskın olan floralaradır^{1,2}.

Son yıllarda mikrobiyom ve mikrobiyota terimleri sıklıkla kullanılmaktadır. Mikrobiyota; insanlarla birlikte yaşayan özel türlerin tamamını, mikrobiyom ise insanlarla kommensal olarak yaşayan mikroorganizmaların taşıdıkları genleri ifade etmektedir^{3,4}.

İnsan vücuduyla simbiyotik olan mikrobiyota organizmaları, karmaşık bir mikro-ekolojik sistemi oluşturur ve bağırsak mikroorganizması popülasyonunun miktarı ve kalitesindeki bir değişiklik, bağırsak bariyer işlevini etkileyebilir, toksik maddelerin salgılanmasını arttırıp insan vücuduna faydalı maddelerin salgılanması azaltabilir; enteral ve diğer hastalıklara yol açabilir¹.

Özellikle yaş ve beslenme, bağırsak mikrobiyolojisi üzerinde önemli bir etkiye sahip olabilir ve sayısız insan ve hayvan çalışması, farklı diyetlerin mikrobiyotada önemli bir değişikliğe neden olabileceğini göstermiştir. Enfeksiyon ve hastalık, aynı zamanda, konağın normal bağırsak florası üzerinde olumsuz bir etkiye neden olabilir, dolayısıyla konak üzerinde sağlığa zararlı etkilere neden olur^{5,6,7}.

Mikrobiyota dengesinde bozulma olduğunda bağırsak geçirgenliğinde artma, kısa zincirli yağ asiti üretiminde değişme, kolon rezistansında azalma gibi değişiklikler olduğu gösterilmiştir (Şekil.1). Enflamatuvar bağırsak hastalığı, ateroskleroz, diyabetes mellitus, alkolik olmayan yağlı karaciğer hastalığı, metabolik sendrom, immün yetmezlik, otizm gibi birçok hastalıkta intestinal mikrobiyota içeriğinde

Parabacterioides distatonis ile kolonize edilmiş farelerde, daha yüksek seviyelerde Treg lenfositlerin gözlenmesi ve koruyucu rolü olduğu hipotezini ortaya çıkarmıştır⁵⁸.

Hem sağlık hemde hastalık sürecinde, bağırsak mikrobiyotasının konak üzerindeki etkileri son zamanlarda üzerinde çokça çalışılan konulardandır. Bağırsak mikroorganizmalarının bileşimindeki ve miktarındaki bozukluklar, hem ESS'ni hemde MSS'ni etkileyebilir. Bağırsak-beyin arasındaki bu iki yönlü iletişim; AH, PH ve MS gibi pek çok nörolojik hastalıkta rol oynamaktadır. Geçmiş yıllarda yapılan geniş kapsamlı araştırmalara rağmen, nörodejeneratif hastalıkların patolojik süreci ve progresyonlarını önleyici etkin tedaviler, büyük oranda bilinmemektedir. Bağırsak-beyin aksı ve nörodejenerasyon arasındaki ilişkinin açıklığa kavuşması; prebiyotikler, probiyotikler ve diyet müdahaleleri, fekal transplantasyon gibi tedavi stratejilerinin geliştirilmesi açısından önem arz etmektedir⁵⁹.

NÖROMÜSKÜLER KAVŞAK HASTALIKLARI VE MİKROBİYOTA

Dilara Carı Güngör

Nöromüsküler Kavşak Bozuklukları

Nöromüsküler kavşak, motor sinir terminalinden kas lifine elektriksel sinyali taşıyan kimyasal bir sinaptır. Presinaptik terminalin depolarizasyonundan sonra, presinaptik terminalden asetilkolin molekülleri sinaptik aralığa dökülür ve postsinaptik membranda asetilkolin reseptörlerine bağlanarak lokal bir son plak potansiyeli oluşturur. Eğer bu son plak potansiyeli eşiği geçerse, membran boyunca yayılan bir aksiyon potansiyeli ve böylece kas kontraksiyonu oluşur.

Normalde kas membranında, güvenlik faktörü olarak, eşikten daha fazla bir depolarizasyon oluşur. Nöromüsküler bileşke bozukluklarının hepsinde temel sorun, değişik nedenlerle bu güvenlik faktörünün azalmış olmasıdır.

Nöromüsküler kavşağın presinaptik, sinaptik ve postsinaptik bölümlerini etkileyen bozukluklar, edinsel otoimmün veya toksik süreçlerin yanı sıra bir grup genetik mutasyonlar sonucu da oluşabilir. Nöromüsküler kavşakta geçiş bozukluğuna yol açan edinsel bozuklukların çoğu otoimmün doğadadır.

Nöromüsküler kavşak bozukluğu olan hastaların büyük çoğunluğunda ya Miyastenia Gravis (MG) ya da Lambert-Eaton Miyastenik Sendromu vardır. Bu iki hastalık da nöromüsküler kavşakta kritik rolü olan iyon kanallarına karşı otoantikörlerin oluşumu ile karakterizedir.

Bu bölümde, nöromüsküler kavşak hastalıklarında mikrobiyota ilişkisi incelenecektir. Şu ana kadar literatürde nöromüsküler kavşak bozuklukları ile ilgili mikrobiyota çalışmaları henüz MG ile sınırlı bulunmaktadır.

Miyastenia Gravis

Nöromüsküler bozukluklarının en büyük grubunu MG temsil eder ve prevalansı yaklaşık 10.000'de 1'dir, kadınlar erkeklerden yaklaşık iki kat daha sık etkilenirler ⁽¹⁾. MG, hareketle artan kas güçsüzlüğü (bitkinliği) ile karakterize, öncelikle okülobulber kasları tutan, postsinaptik yerleşimli nikotinik asetilkolin reseptörlerinin (AChR) hedef alındığı otoimmün kökenli bir hastalıktır. Normal bir nöromüsküler iletim, presinaptik sinir terminalinden salınan asetilkolinin postsinaptik yerleşimli asetilkolin reseptörü ile birleşmesi sonucu sağlanır. Antikörler, bu iletimin gerçekleşmesini engelleyerek hastalığa neden olurlar.

MG'nin patogenezinde katkıda bulunan dört faktör vardır. Birincisi anti-AChR antikörlerinin (Abs) efektör mekanizmasıdır. İkincisi, MG'de CD4+ T hücrelerinin rolüdür. Anti-AChR antikoru sentezinde B hücreleri ile etkileşime girmek ve onları uyarmak için aktive CD4+ T hücrelerine ihtiyaç vardır. Üçüncüsü, MG'de CD4+ T hücre alt tipleri ve sitokinlerin rolüdür. Th1 ve Th2, CD4+ T hücrelerinin

Hatta jeneralize MG’de, okuler MG’ye göre mikrobiyota değişikliklerinin daha fazla olduğu, bazılarında da hastalık şiddeti ile mikrobiyal bozuklukların arttığı rapor edilmektedir.

Elbette MG’nin nedeni tek başına mikrobiyota değişiklikleri değildir. Ancak disbiyozis, otoimmün bir hastalığı tetikleyen çevresel faktörlerden birisi olabilir. Çünkü bağırsak mikrobiyomunun bağışıklık sistemi homeostazını korumada önemli bir rolü bulunmaktadır.

Bu yöndeki kanıtlar arttıkça, probiyotikler, prebiyotikler, sinbiyotikler ve fekal mikrobiyota transplantasyonu gibi mikrobiyotayı restore etmesi ve düzeltmesi beklenen modalitelerin, belki de diğer tedavilere sinerjistik etki bakımından eklenmesi gündeme gelebilir.

Bölüm A39

EPİLEPSİ VE MİKROBİYOTA

Arife Derda Yücel Şen

Kürşat Bora Çarman

Epilepsi Nedir?

Epilepsi tüm dünyada yaygın olarak görülen, kronik nörolojik bir hastalıktır. Epilepsi insidansı 20-70/100.000 arasında değişmektedir. Türkiye’de yapılan bir çalışmada 0-16 yaş arası çocuklarda yapılan bir çalışmada epilepsi prevalansı %0.8 olarak tespit edilmiştir.

Epilepsi esas olarak serebral korteksi etkileyen, tekrarlayan ve provoke edilmemiş epileptik nöbetlere yol açan, hücrel ve moleküler değişikliklerin neden olduğu çeşitli nöbet bozuklukları grubunu kapsar. Altta yatan nedene bakılmaksızın, bir epileptik nöbet eksitator ve inhibitör nörotransmitter olan glutamat ve gamma aminobütirik asit (GABA) arasındaki dengesizlik sonucu oluşur (Şekil 1).

Serebral malformasyon, enfeksiyon, travma, inme ve genetik mutasyonlar epilepside bireysel yatkınlığa katkıda bulunur, ancak çoğu epilepsi vakasının kesin nedenleri belirsizliğini korumaktadır.

Şekil 1. Nöbet oluşumunu artıran eksitasyon (E) ve/veya azalmış inhibisyon (I) sonucu meydana geldiğini gösteren basitleştirilmiş şekil.

Epilepsi Etiyopatogenezi ve Mikrobiyota

Her bireyin mikrobiyotasının bir parçası olarak bağırsaklarında yaşayan trilyonlarca bakteriye sahip olduğu tahmin edilmektedir. Gastrointestinal sistemin kalın bağırsağı, mikroorganizmaların büyük çoğunluğuna barınak sağlar. Her insanın tamamen benzersiz bir mikrobiyomu vardır ve stres, diyet, antibiyotik kullanımı, uzun süreli tedaviler, kronik hastalık süreçleri, fizyolojik değişiklikler ve coğrafi konum gibi çeşitli faktörlere bağlı olarak değişkenlik gösterir.

keton düzeyi artar. Bu keton cisimleri beyinde alternatif enerji kaynağı olarak kullanılır. Randomize kontrollü olarak gerçekleştirilen iki klinik çalışmada dirençli epilepside KD tedavisinin etkinliği %38 ve %50 olarak saptanmıştır. Son zamanlarda KD tedavisinin intestinal mikrobiyotayı değiştirdiği gösterilmiştir.

Olson CA ve ark ketojenik diyet uygulanan hayvanlarda intestinal mikrobiyotayı inceledikleri çalışmalarında *Akkermansia muciniphila*'da artış saptanmış. Antibiyotik tedavisi verilen hayvanların *Akkermansia muciniphila* verilmesi sonrası KD tedavisinin anti-epileptik etkinliğinin yeniden başladığı gözlenmiş. Yirmi dirençli epilepsi hastasına 6 ay boyunca KD tedavisi uygulandığı bir çalışmada tüm hastalarda α -diverty azalmış, tedaviye yanıtı, epileptik nöbetleri kontrol altına alınan 10 hastada KD sonrası *Firmicutes*'in azalmış, *Bacteroidetes*'in artmış olduğu, tedaviye yanıt vermeyen hastalarda ise Clostridiales, Ruminococcaceae, Rikinellaceae ve *Alistipes*'in fazla olduğu saptanmıştır.

Miljanovic ve ark SCN1A mutasyonlu fareler ile kontrol grubu üzerinde ketojenik diyet uygulayarak intestinal mikrobiyotayı incelemiş ve fareler arasında bağırsak mikrobiyotasında belirgin değişiklikler olduğunu ortaya çıkarmıştır. Firmicutes ve Bacteroidetes *phyla* arasındaki oran, Dravet genotipine sahip farelerde yüksek oranda tespit edildi, bu durum bir mikrobiyal disbiyoz anlamına geliyordu. Ketojenik diyet uygulaması sonrası, Dravet farelerinde çeşitli bakteri filumları ve cinslerinin oranlarının değiştiği gösterilmiştir.

Probiyotiklerin epilepsi tedavisinde kullanılması konusunda veriler oldukça kısıtlıdır.

Gómez-Eguílaz M ve arkadaşlarının 43 dirençli epilepsi hastasına karma probiyotik (*Lactobacillus acidophilus* DSM32241, *Lactobacillus plantarum* DSM32244, *Lactobacillus casei* DSM32243, *Lactobacillus helveticus* DSM32242, *Lactobacillus brevis* DSM11988, *Bifidobacterium lactis* DSM32246, *B. lactis* DSM32247 ve *Sterptococcus salivarius subs tthermophilus* DSM32245) verdikleri çalışmada tedavi süresince hastaların serum GABA seviyelerinin hızla arttığı, hastaların %28'inde nöbet sayısının %50'den daha fazla oranda azaldığı, tüm hastaların yaşam kalite ölçek puanlarının yükseldiği belirlenmiştir.

Mu ve ark hedefli probiyotik uygulamasının nöbet sıklığını azalttığını, bir kemirgen infantil spazm modelinde lökomotor aktiviteyi geliştirdiğini ve pediatrik epileptik ensefalopatiler için potansiyel bir terapötik yol olarak mikrobiyota manipülasyonu hakkında bilgi sağladığını göstermiştir.

Sonuç olarak son yıllarda mikrobiyota ile ilgili çalışmalar tıbbın tüm alanlarında olduğu gibi epilepsi ile ilgilide artmaktadır. Elde edilen veriler mikrobiyotanın epilepsi etiyopatogenesinde rolü olabileceğini göstermektedir.

MİKROBİYOTA VE OTİZM SPEKTRUM BOZUKLUKLARI (OSB)

Muhammed Ayaz

Otizm spektrum bozuklukları (OSB), sosyal iletişim, sosyal etkileşim sorunları, tekrarlayan, sınırlı ilgi alanları ve davranışlarla kendini gösteren nörogelişimsel bir bozukluktur¹. Tüm dünyadaki prevalansının yaklaşık olarak %1,5 civarında olduğu tahmin edilmektedir² ve bilinmeyen nedenlerle görülme sıklığının zamanla arttığı düşünülmektedir³. Erkeklerde kızlara göre 4 kat daha fazla görülmektedir⁴. OSB etiolojisinde çevresel ve genetik birçok faktörün etkili olduğu düşünülmeye karşın, temel nedenler henüz yeterince anlaşılammıştır⁵. OSB semptomları üzerinde yeterince etkinliği kanıtlanmış bir tedavi de bulunmamaktadır. Semptomları hedef alan davranışsal ve eğitimsel yöntemler tedavinin temelini oluşturmaktadır. Eşlik eden sorunlara yönelik ilaç tedavilerinin ise kullanım alanları sınırlıdır⁶.

Mikrobiyotanın insan fizyolojisini etkilediği uzun süredir düşünülmekteydi. Son yıllarda gelişen teknoloji ve tetkik yöntemleri ile birlikte bu ilişkinin değerlendirilmesi mümkün hâle gelmiştir. Bu alanda elde edilen sonuçlarla mikrobiyota; konağın metabolizması, bağışıklık sistemi ve davranışında önemli etkileri olan bir faktör olarak kabul edilmektedir⁷.

Otizm Spektrum Bozuklukları'nın multifaktöryel bir etiolojisinin olduğu bildirilmektedir. Son yıllarda ortaya çıkan kanıtlar çevresel faktörlerin OSB etiolojisinde tahmin edilenden çok daha fazla etkili olduğunu göstermektedir⁸. Perinatal enfeksiyonlar, hastane yatışı ve erken antibiyotik maruziyeti gibi OSB'de potansiyel risk faktörleri mikrobiyota ile ilişkilendirilmiştir⁹. OSB tanısı alan çocuklarda gastrointestinal semptomların çok fazla olması ve bu semptomların hastalık semptomları ile korelasyon göstermesi de dikkatin bu alana yoğunlaşmasına neden olmuştur¹⁰. Bunun OSB ile birlikte görülen bir durum mu olduğu ya da bir neden mi olduğu henüz bilinmemektedir. Mikrobiyotadaki değişikliklerin OSB'de davranışsal sorunların gelişmesinde önemli bir rolü olduğu ileri sürülmektedir. Ancak bunun hangi mekanizmalarla gerçekleştiği, hangi moleküllerin anne karnında ve doğumdan sonra beyin gelişimini olumsuz etkilediği yeterince bilinmemektedir¹¹.

Gelişimsel Süreçte Mikrobiyota

Gebelik döneminde fetüsün büyük oranda steril bir ortamda olduğu ve doğumla birlikte mikrobiyotanın kolonize olmaya başladığı kabul edilmektedir. Ancak mikrobiyotanın insan yavrusu üzerine ilk etkileri prenatal dönemde başlar. Çünkü hamilelik sürecinde fetüs annenin mikrobiyotasındaki mikrobiyal ürünlere ve metabolitlere maruz kalmaktadır⁷. Annenin mikrobiyota özelliklerinin özellikle yavruların bağışıklık sistemini şekillendirdiği ve doğum öncesinde santral sinir sisteminin yerleşik bağışıklık hücreleri olan mikrogliaların işlevlerini düzenlediği gösterilmiştir¹².

Mikrobiyotada deęişim saęlayan tedavilerle hayvan alıřmalarında ümit verici sonuçlar elde edilmesine karřın insan alıřmalarında henüz aynı etkiden bahsetmek için yeterli düzeyde bilimsel kanıt bulunmamaktadır. alıřmalarda kullanılan ajanların içerikleri ve kullanım süreleri ile ilgili bir standart bulunmamaktadır. Ayrıca uygulanan ajanların yan etkileri de yeterince deęerlendirilmemiřtir. Bu alanda yapılan alıřmaların büyük çoęunluęu çok küçük örneklemlerde yapılmıřtır. alıřmaların çoęunluęunda düzelmeler ebeveyn geri bildirimlerine dayanmaktadır ve ebeveyn ölçeklerine dayanan sonuçların güvenilirlięi tartışmalıdır. Bu ajanların OSB’de net faydalarından bahsedebilmek için semptomlardaki deęişimlerin klinisyenler tarafından deęerlendirildięi daha büyük örneklemlerde yapılmıř alıřmalara ihtiyaç duyulmaktadır.

Sonuç

Otizm Spektrum Bozuklukları; etiolojisinde genetik ve çevresel birçok faktörün neden olduęu düřünülen, ancak temel nedenleri henüz net olarak bilinmeyen nörogeliřimsel bir bozukluktur. Aynı zamanda temel semptomları üzerinde belirgin olarak etkili bir tedavi de bulunmamaktadır. Son zamanlarda baęırsak mikrobiyotasının beyin geliřimi ve iřleyiři üzerindeki etkilerinin saptanmasıyla, OSB etiolojisinde de önemli bir faktör olabileceęi gündeme gelmiřtir. Bu eksende yapılan alıřmalar OSB’nin tedavisi ve prenatal dönemde beyin geliřiminin annenin mikrobiyotasından muhtemel etkileneşmesi nedeniyle de önlenmesi açısından umut vericidir. Mikrobiyota-beyin iliřkisinde mekanizmaların çözülmesi OSB’de sık görülen gastrointestinal semptomlar gibi dięer sistemler üzerindeki etkileri için de açıklayıcı olabilir.

Elimizdeki alıřma sonuçlarıyla OSB-mikrobiyota iliřkisini tamamen açıklamak mümkün deęildir. OSB çok geniř yelpazede semptomlarla ortaya ıkan heterojen bir bozukluktur. Belirgin fenotipik farklılıkların olması OSB’de mikrobiyota bileřiminde ortak özellikler bulmayı zorlařtırmaktadır. alıřma sonuçlarının birbiriyle eliřmesi mikrobiyota içerięinin hem konakla hem de birbirleriyle karmařık bir iliřki içinde olmalarından kaynaklanabilir. Ayrıca bu alanda yapılan alıřmaların birbirinden farklı metodlarla, farklı popülasyonlar ve fenotipik özelliklerde yapılması sonuçları genelleřtirmeyi zorlařtırmaktadır. OSB’li kiřişlerde sık görülen mikrobiyota farklılıkları, baęırsak geirgenlięi sorunları ve immün sistem sorunlarının hangisinin neden hangisinin sonuç olduęu da henüz bilinmemektedir.

Mikrobiyotada deęişim saęlamayı hedefleyen tedavilerle yapılan ilk alıřma sonuçları OSB’de sık görülen gastrointestinal semptomlar ve davranıřsal sorunlar üzerine faydalarının olabileceęini düřündürmüřtür. Bu alanda yapılmıř tedavi alıřmalarının çoęunluęunun çok küçük örneklemlerde yapılması, kullanılan tedavilerin içerięi ve süresi ile ilgili standartlarının olmaması, alıřmalarda tedavilerin uzun dönem etkilerinin ve yan etkilerinin deęerlendirilmemesi gibi çok önemli kısıtlılıkları bulunmaktadır. Mevcut alıřma bulgularıyla bu tedavilerin OSB temel semptomları üzerinde olumlu etkilerinin olduęunu söylemek ya da bir tedavi seeneęi olarak sunmak mümkün deęildir.
