İçindekiler

Bölüm Yazarları	iii
Kısaltmalar	ix
Semboller	xi

1.

AŞIRI PLASTİK DEFORMASYON (APD) NEDİR? MALZEME ÖZELLİKLERİNİ NASIL DEĞİŞTİRİR?	1
1.1. APD'de Mikro Yapı Değişimi	2
1.2. Ultra İnce Tanelerin (UİT) Oluşum Mekanizması	2
1.3. Tane İnceltme Doygunluğu	5
1.4. Doğrusal ve Düzlemsel Kafes Kusurları	7
1.5. Boşluklar	9
1.6. Tane Sınırı Ayrımı	11
1.7. Doku	12

2.

EŞİT KANAL AÇISAL PRESLEME (EKAP) İŞLEM PARAMETRELERİ	15
2.1. Kalıp Açılıları	15
2.2. İşlem Rotasyonları ve Çevrim Sayıları	18
2.3. Presleme Hızı	19
2.4. Presleme Sıcaklığı	20
2.5. Geri Presleme	21
2.6. Malzemenin Geometrik Kesiti	22

3.

GELENEKSEL APD YÖNTEMLERİ	25
3.1. Eşit Kanal Açısal Presleme - EKAP	25
3.1.1. Eşit Kanal Açısal Presleme Tarihiçesi	27
3.1.2. Eşit Kanal Açısal Presleme Metodu ve İşlemi	28
3.2. Yüksek Basınç Burulma (YBB)	30
3.2.1. Metodun Uygulanması	30

3.2.2. Bulgular.....	32
3.3. Birikimli Hadde Yapıştırması (BHY)	35
3.3.1. BHY Çalışma Prensibi	35
3.3.2. Bulgular.....	40
3.4. Bükümlü Ekstrüzyon (BE).....	44
3.4.1. Metodun Uygulanması.....	46
3.4.2. Bulgular.....	47
3.4.2.1. OM İncelemeleri.....	47
3.4.2.2. Tensile Test	48

4.

MODİFİYE APD YÖNTEMLERİ.....	51
4.1. Genişlemeli Eş Kanallı Açısal Ekstrüzyon (GEN-EKAP)	51
4.1.1. Metodun Uygulanması.....	52
4.1.2. Bulgular.....	54
4.1.2.1. OM Görüntüleri ve Ortalama Tane Boyutları.....	54
4.1.2.2. SEM Görüntüleri	59
4.1.2.3. TEM Görüntüleri	62
4.1.2.4. XRD Grafikleri.....	65
4.1.2.5. Çekme Test Sonuçları	69
4.1.2.6. Sertlik Test Sonuçları.....	73
4.2. İnce Cidarlı Açık Kanallı Açısal Presleme (İCA-KAP)	77
4.2.1. Uygulanması.....	77
4.2.2. Bulgular.....	80
4.2.2.1. Sertlik Test Sonuçları.....	80
4.2.2.2. Çekme Test Sonuçları	81
4.2.2.3. OM Görüntüleri	85
4.2.2.4. SEM Görüntüleri	89
4.2.2.5. TEM Görüntüleri	96
4.3. Tekrarlayan Oluklama ve Doğrultma (TOD).....	101
4.3.1. Metodun Uygulanması.....	101
4.3.1.1. Sürekli bir TOD makinesinin tasarımı ve deneysel prosedürler.....	102
4.3.2. Bulgular.....	104
4.3.2.1. Sertlik Test Sonuçları.....	106
4.3.2.2. Çekme Test Sonuçları	107
4.3.2.3. Yorulma Test Sonuçları	109
4.3.2.4. OM Görüntüleri	109
4.3.2.5. SEM Görüntüleri	111

4.3.2.6. TEM Görüntüleri	111
4.4. Tüp Kanal Açışal Presleme (TKAP)	112
4.4.1. Metodun Uygulanması	113
4.4.2. Bulgular	115
4.4.2.1. Sertlik Test Sonuçları	115
4.4.2.2. Çekme-Basma Test Sonuçları	117
4.4.2.3. SEM Görüntüleri	119
4.5. Değişken Bükümlü Kanallı Açışal Presleme (DB-KAP)	120
4.5.1. Metodun Uygulanması	121
4.5.2. Bulgular	124
4.5.2.1. Sertlik Test Sonuçları	124
4.5.2.2. Çekme Test Sonuçları	125
4.5.2.3. Yorulma Test Sonuçları	127
4.5.2.4. OM Görüntü Analizleri	129
4.5.2.5. SEM Görüntü Analizleri	130
4.5.2.6. TEM Görüntü Analizleri	133
4.6. Vortex Ekstrüzyon (VE)	134
4.6.1. Metodun Uygulanması	136
4.6.2. Bulgular	139

5.

APD UYGULAMA ESASLARI	143
5.1. Kalıp Tasarımı	143
5.2. Malzeme Seçimi	148
5.3. Yağlayıcılar	149
5.4. Kalıp Isıtma Seçenekleri	149
5.5. Hidrolik Pres ve Fikstür	150

6.

APD ANALİZLERİ	153
6.1. Analitik Denklemler	153
6.1.1. EKAP Analitik Gerinim Denklemi	153
6.1.2. YBB Analitik Gerinim Denklemi	154
6.1.3. BHY Analitik Gerinim Denklemi	155
6.2. Sonlu Elemanlar Analizi (SEA)	156
6.3. Mekanik Özellik Analizleri	157
6.3.1. Sertlik	157
6.3.1.1. Rockwell Sertlik Testi	158

6.3.1.2. Brinell Sertlik Testi.....	159
6.3.1.3. Vickers Sertlik Testi.....	159
6.3.2. Çekme-Basma.....	162
6.3.3. Yorulma	165
6.3.3.1. Yorulma Deneyi Türleri	166
6.3.3.2. Yorulma Deneyi Standartları.....	168
6.3.3.3. Yorulma Deneyinde Dikkat Edilmesi Gereken Önemli Hususlar.....	168
6.3.4. Aşınma.....	169
6.4. Metalografi ve Mikro Yapı Analizleri.....	170
6.4.1. Hassas Kesme İşlemi	170
6.4.2. Bakalite Alma İşlemi	171
6.4.3. Zımparalama ve Parlatma İşlemi	172
6.4.4. Optik Mikroskop İncelemeleri.....	173
6.4.5. Tarama Elektron Mikroskop (SEM) İncelemeleri.....	175
6.4.6. Geçirimli Elektron Mikroskop (TEM) İncelemeleri	176
6.4.7. APD Uygulamaları Kapsamında Kullanılan Dağlayıcılar	178
6.4.8. Enerji Dağılımlı X Işını Spektroskopisi (EDX / EDS).....	180
6.4.9. XRD.....	182
6.4.10. Elektron Geri Saçılım Kırınımı (EBSD).....	183

7.

APD KULLANIM ALANLARI VE SANAYİLEŞME ADIMLARI.....	185
7.1. Kompozitler Metallerle Karşı	185
7.2. Yüksek Entropili Alaşımlar.....	188
7.3. Camlar.....	190
7.4. İletkenler	191
7.5. Seramik	193
7.6. Polimerler.....	195
7.7. Biyomedikal Uygulamalar.....	196
7.8. Aşırı Plastik Deformasyonun Ticarileştirilmesi.....	198

İÇİNDEKİLER

ÖN SÖZ	iii
--------------	-----

BÖLÜM 1

Bitki Doku Kültürü Tanımı ve Tarihçesi

Betül Bürün, Ergun Kaya

1.1. Giriş	1
1.1.1. Bitki Doku Kültürü Teknolojisindeki Gelişmeler	4
1.1.2. Bitki Doku Kültürlerinin Türkiye'deki Durumu	13
1.2. Sonuç	13
Kaynaklar	14

BÖLÜM 2

Bitki Doku Kültürü Laboratuvarı için Temel Tasarım ve Gereksinimler

Meltem Bayraktar, Aynur Gürel

2.1. Giriş	17
2.2. Bitki Doku Kültürü Laboratuvarı Kurulumunda Dikkat Edilmesi Gereken Hususlar	17
2.2.1. Amaç ve Hedeflerin Belirlenmesi	17
2.2.2. Laboratuvar Büyüklüğü ve Yerine Karar Verilmesi	18
2.2.3. Laboratuvarın Dizayn Edilmesi	19
2.3. Bitki Doku Kültürü Laboratuvarını Oluşturan Alanlar	20
2.3.1. Hazırlık Odası	21
2.3.2. Transfer Odası	23
2.3.3. Kültür Odası/Bitki Büyüme Odası/İklim Odası	26
2.3.4. Soğuk Depolama	29
2.3.5. Genel Depolama Alanı	29
2.3.6. Personel Odası	29
2.3.7. Ofis	30
2.3.8. Cihaz Odası	30
2.3.9. Seralar	30
2.4. Bitki Doku Kültürü Laboratuvarında Kullanılan Cihazlar	32
2.4.1. Laminar Hava Akışlı Kabin	32
2.4.2. Otoklav	35
2.4.3. Teraziler	39

2.4.4.	Saf Su Cihazları	40
2.4.5.	Etüv	42
2.4.6.	Soğutucular	43
2.4.7.	Çalkalayıcılar	44
2.4.8.	Isıtıcılı Manyetik Karıştırıcı	45
2.4.9.	pH Metre	45
2.4.10.	Aseptik Transfer İşlemleri Sırasında İhtiyaç Duyulan Aletlerin Sterilizasyonunda Kullanılan Cihazlar	47
2.4.11.	Mikroskoplar	47
2.4.12.	İnkübatör ve İklimlendirme Kabini	48
2.5.	Bitki Doku Kültürü Laboratuvarında Kullanılan Kültür Kapları	49
2.6.	Bitki Doku Kültürü Laboratuvarında Kullanılan Diğer Malzemeler	55
2.7.	Sonuç	57
	Kaynaklar	57

BÖLÜM 3

Bitki Doku Kültürü Besin Ortamları

Sultan Köşkeroğlu, Atilla Levent Tuna

3.1.	Giriş	59
3.2.	<i>In Vitro</i> Kültür Ortamlarının Bileşenleri	60
3.2.1.	Bitki Besin Elementleri	61
3.2.2.	Karbon ve Enerji Kaynakları	67
3.2.3.	Vitaminler	69
3.2.4.	Amino Asitler	70
3.2.5.	Bitki Büyüme Düzenleyicileri (Sentetik veya Doğal)	71
3.2.6.	Tanımlanmamış Organik Takviyeler	77
3.2.7.	Jelleştirici (Katılaştırıcı) Ajanlar	80
3.2.8.	Biyostimülanlar	81
3.3.	<i>In Vitro</i> Kültür Ortamının Hazırlanması ve Stok Solüsyonlar	82
3.3.1.	İnorganik Tuzlar ve Stok Solüsyonları	82
3.3.2.	Bitki Büyüme Düzenleyiciler ve Stok Solüsyonları	85
3.3.3.	Vitaminler ve Stok Solüsyonları	86
3.3.4.	<i>In Vitro</i> Kültür Ortamı Hazırlama Protokolü	87
3.4.	Yaygın Olarak Kullanılan <i>In Vitro</i> Kültür Ortamları	87
3.5.	Kültür Ortamı Bileşenlerine Alternatifler	91
3.5.1.	Besin Elementi Alternatifleri	91
3.5.2.	Karbon ve Enerji Kaynağı Alternatifleri	91
3.5.3.	Jelleştirici Ajan Alternatifleri	92
3.5.4.	Bitki Büyüme Düzenleyicileri İçin Alternatifler	93
3.5.5.	Besin Ortamı Alternatifi	94
3.6.	Sonuç	94
	Kaynaklar	94

BÖLÜM 4

Sterilizasyon ve Kültür Başlatılması

Emel Yılmaz Gökdoğan, Aysu Besler, Mert Metin

4.1.	Giriş	103
4.2.	<i>In Vitro</i> Kültürlerde Sterilantların Kullanılması	104
4.3.	Dezenfektan-Sterilant Çeşitleri ve Etki Mekanizmaları	106
4.4.	Sterilizasyon Teknikleri	110
4.4.1.	Sıcaklık	110
4.4.2.	Filtrasyon (Süzme ile Sterilizasyon).....	113
4.4.3.	Işın (Radyasyon) ile Sterilizasyon	114
4.4.4.	Kimyasal Maddelerle Sterilizasyon (Yüzey Sterilizasyonu)	114
4.4.5.	Geleneksel Yöntemle Sterilizasyon	115
4.5.	<i>In Vitro</i> Kültür Materyallerinin, Alet-Ekipman ve Besin Ortamının Sterilizasyonu	115
4.5.1.	Besin Ortamı	116
4.5.2.	Cam ve Plastik Malzemeler	116
4.5.3.	Ekipmanlar	117
4.5.4.	Eksplant	117
4.5.5.	Transfer Ortamı	119
4.6.	Bitkisel Materyalin Sterilizasyonu Konusunda Örnekler	120
4.7.	Sonuç	126
	Kaynaklar	126

BÖLÜM 5

Bitki Doku Kültürü Uygulamaları

Yonca Surgun Acar

5.1.	Giriş	131
5.2.	Hücre, Doku ve Organ Kültürünün Temel İlkeleri	132
5.3.	Bitki Doku Kültürü Teknolojisi Uygulama Alanları.....	132
5.3.1.	Bitki Doku Kültürünün Temel Araştırmalarda Kullanımı ve Potansiyeli	132
5.3.2.	Kallus Kültürü	133
5.3.3.	Mikroçoğaltım	134
5.3.4.	Somatik Embriyogenez ve Organogenez	135
5.3.5.	Protoplast Füzyonu	135
5.3.6.	Haploid Bitki Üretimi	136
5.3.7.	Triploid Bitki Üretimi	137
5.3.8.	Embriyo Kültürü ve/veya Embriyo Kurtarma	137
5.3.9.	Hastaliksız Bitki Üretimi	137
5.3.10.	Bitki Doku Kültürlerinde Somaklonal Varyasyon ve Epigenetik	138
5.3.11.	Genetik Transformasyon	139
5.3.12.	Omik Bilimler ve Bitki Doku Kültürü	140

5.3.13. Bitki Germplazmalarının Korunması	140
5.3.14. Sekonder Metabolitlerin Üretimi	141
5.3.15. Sentetik Tohum Teknolojisi	141
5.4. Sonuç	142
Kaynaklar	142

BÖLÜM 6

Mikroçoğaltım

Bengi Erdağ

6.1. Giriş	147
6.2. Mikroçoğaltım Aşamaları	149
6.3. Mikroçoğaltım Metotları	152
6.3.1. Aksillar Tomurcuklardan Sürgünlerin Mikroçoğaltımı	152
6.3.2. Adventif Sürgün Oluşumu ile Mikroçoğaltım	155
6.3.3. Somatik Embriyogenez Yolu ile Mikroçoğaltım	159
6.4. Mikroçoğaltımda Başarıyı Etkileyen Faktörler	160
6.4.1. Bitkisel Materyalin Seçimi, Hazırlanması ve Sterilizasyonu	161
6.4.2. Kültür Ortamı Bileşenlerinin Belirlenmesi	163
6.4.3. Kültür Odası ve Kültür Kaplarındaki Fiziksel Çevre Koşullarının Optimizasyonu	167
6.5. Mikroçoğaltım Süreçlerinde Karşılaşılan Problemler ve Çözümleri	171
6.5.1. Kontaminasyon	172
6.5.2. Sürgün Ucu Nekrozu	173
6.5.3. Fenolik Oksidasyon	173
6.5.4. Hiperhidrisite (Aşırı Sulu Olma Durumu)	174
6.5.5. Köklenme ve Aklimatizasyon	175
6.5.6. Mikroçoğaltım Tekniği ile Elde Edilen Bireylerdeki Varyasyonlar	177
6.6. Mikroçoğaltım Çalışmalarında Maliyeti Belirleyen Unsurlar ve Maliyeti Azaltma Önerileri	177
6.7. Sonuç	180
Kaynaklar	182

BÖLÜM 7

Somatik Embriyogenez ve Sentetik Tohum Üretimi

Emel Yılmaz Gökdoğan

7.1. Somatik Embriyogenez	195
7.1.1. Giriş	195
7.1.2. Somatik Embriyogenezin Genel Özellikleri	196
7.1.3. Embriyonik Kültür Aşamaları	200
7.1.4. Somatik Embriyogenez (SE) İndüksiyonunu Etkileyen Faktörler	201

7.1.5.	Somatik Embriyogenez Sürecinde Gen İfadesi ve Gerçekleşen Moleküler Değişimler	204
7.2.	Sentetik (Yapay) Tohum Üretimi	206
7.2.1.	Giriş	206
7.2.2.	Sentetik Tohum Üretiminin Nedeni	206
7.2.3.	Sentetik Tohum Üretiminin Amacı	207
7.2.4.	Sentetik Tohum Üretiminde Kullanılan Alternatif Bitki Parçaları	208
7.2.5.	Sentetik Tohum Çeşitleri	211
7.2.6.	Sentetik Tohum Üretiminin Aşamaları	213
7.2.7.	Sentetik Tohumların Genetik Benzerliği	215
7.2.8.	Sentetik Tohumun Yararları ve Uygulama Alanları	216
7.2.9.	Tarımsal Üretimi Yapılan Çeşitli Bitkilerde Sentetik Tohum Uygulamaları	217
7.2.10.	Sentetik Tohum Teknolojisinin Sınırlamaları	220
7.3.	Sonuç	221
	Kaynaklar	221

BÖLÜM 8

Meristem Kültürü

Ergun Kaya, Selin Galatalı

8.1.	Giriş	227
8.2.	Meristem Kültürü	233
8.2.1.	Apikal Sürgün Ucu Meristem Kültürü	234
8.2.2.	Kök Ucu (Apikal) Meristem Kültürü	238
8.2.3.	Nodal (Aksillar) Meristem Kültürü	239
8.3.	Virüs Eliminasyonu	240
8.3.1.	Meristem Kültürü Yöntemiyle Virüs Eliminasyonu	240
8.3.2.	Termoterapi	240
8.3.3.	Kriyoterapi	241
8.3.4.	Kemoterapi	241
8.4.	Sonuç	242
	Kaynaklar	243

BÖLÜM 9

Embriyo Kültürü

Nazan Dağüstü

9.1.	Giriş	251
9.2.	Embriyo Gelişimi	252
9.2.1.	Embriyo Gelişim Aşamaları ve Bitki Rejenerasyonu	253

BÖLÜM 1

Bitki Doku Kültürü Tanımı ve Tarihçesi

Betül Bürün, Ergun Kaya

1.1. Giriş

Bitki biyoteknolojisi alanındaki uygulamalardan biri olan bitki doku kültürlerinde 20. yüzyılın ikinci yarısından itibaren gerçekleştirilen çalışmaların sonucu olarak kaydedilen ilerlemeler bitki üretim sistemlerinde önemli gelişmelere yol açmıştır. Bitki doku kültürü teknolojisi, bitkilerin çoğaltılması, ıslahı, orta ve uzun süreli korunması konusunda karşılaşılan sorunları çözmek üzere yararlanılan tekniklerdir. Kısaca **bitki doku kültürü**, hücrelerin, dokuların, organların kontrollü koşullar altında (besin maddeleri ve çevre koşulları) aseptik kültürü olarak tanımlanabilir (Thorpe, 2007).

Doku kültürünün geçmişine bakıldığında ilk raporlar, 20. yüzyılın başlarında Alman Botanikçi Gottlieb Haberlandt'ın (1902) *Lamium purpureum* L. yapraklarından, *Eichhornia crassipes* (Mart.) Solms-Laub. yaprak saplarından, *Pulmonaria mollissima* A. Kern. salgı tüylerinden ve *Tradescantia* spp. stamen tüylerinden izole ettiği tek bitki hücrelerinin yine Alman Kimyacı Knop tarafından 1861 yılında geliştirilen yapay besin ortamında kültürü üzerine olan denemeleri ile “**bitki hücrelerinin totipotent özelliğini**” ispatsız doğru kabul etmesine dayanmaktadır. Böylece **bitki doku kültürünün teorik temelleri atılmış** ve bunu, konu ile ilgili çalışmalarda sürekli gelişmeler izlemiştir. Klonal çoğaltım, ıslah programlarına doku kültürü tekniklerinin uygulanması, genetik biyoçeşitliliğin korunması ve biyolojik kökenli ilaçların üretilmesi ile ilgili olarak doku kültürü teknolojisinden yararlanmaya ilişkin pek çok çalışma yapılmıştır (Thorpe, 2007; Vasil, 2008; García-González ve ark., 2010). Doku kültüründeki gelişmeler bitki hücrelerinin iki özelliğine dayanmaktadır. Bunlar: Totipotensi ve plastisitedir. **Totipotensi**, tüm canlı hücrelerin genetik olarak aynı (identik) bir hücreden kaynaklanması ve hücre bölünmeleri ve farklılaşma süreçlerinden sonra doku, organ, sistem ve tam bir bireyin meydana gelmesi için hücrenin sahip olduğu ve genetik olarak da korunan bir yeteneğidir (García-González ve ark., 2010). **Plastisite** ise bir doku

1.1.2. Bitki Doku Kültürlerinin Türkiye'deki Durumu

Türkiye'de bitki doku kültürü çalışmaları 1970'li yıllarda başlamış ve öncelikle üniversitelerde ve araştırma merkezlerinde olmak üzere hızla genişlemiştir. İlk uygulamalar Ege Üniversitesi, Ankara Üniversitesi, Menemen Ziraî Araştırma Enstitüsü ve Bornova Ziraî Araştırma Enstitüsü tarafından hayata geçirilmiş olup günümüzde pek çok kamu ve vakıf üniversiteleri ile TÜBİTAK, T.C. Tarım ve Orman Bakanlığı bünyesinde araştırmalar yürüten laboratuvarlarda ve ticari amaçlı faaliyet gösteren özel sektör laboratuvarlarında farklı alanlarda bitki doku kültürü çalışmaları yürütülmektedir. Üniversitelerimizde kurulan bitki doku kültürü laboratuvarlarında genellikle araştırma ve lisansüstü öğrenci yetiştirme amacı doğrultusunda çalışmalar yapılmaktadır. Dünyada doku kültürü tekniklerini ticari amaçlı kullanan uluslararası firmaların 1980'li yıllarda kurulmaya başlamış olmasına karşın ülkemizde ise doku kültürü tekniklerini kullanarak çeşitli bitkilerde (patates, muz, çeşitli meyve anaç ve fidanları ile süs bitkileri) ticari üretim yapan ulusal firmaların faaliyetleri 2000'li yıllardadır (Gözükırmızı ve Demir, 1995; Onay ve ark., 2012).

Öktem (2006), İstanbul, Sabancı, Boğaziçi, Yıldız Teknik, Uludağ, Ege, Akdeniz, Çukurova, Ankara, Ortadoğu Teknik Üniversiteleri ile İzmir Yüksek Teknoloji Enstitüsü, TÜBİTAK, Tarım ve Köyişleri Bakanlığı Antalya ve Eskişehir Araştırma Enstitüleri ve Ankara Tarla Bitkileri Araştırma Enstitüsünün doku kültürü temelli faaliyetlerini çizelge olarak vermiştir. Bu faaliyetler çeşitli bitkilerde mikroçoğaltım, biyoreaktör uygulamaları, anter kültürü, tıbbi bitkilerde sekonder metabolitlerin üretimi, çeşitli bitkilerde moleküler markör (RAPD, SSR ve AFLP) uygulamaları ile polimorfizmin değerlendirilmesi, çeşitli bitkilerde genetik transformasyonlar ve GDO'ların tespit edilmesi, ozmotik stres ve nematodlara karşı genetik manipülasyonlar, buğdayda kuraklığa tolerans ve absisik asit üretiminden sorumlu genlerin belirlenmesi, biberde tütün mozaik virüsü (TMV), patates Y virüsü (PVY) ve hıyar mozaik virüsü (CMV) gibi virüslere direnç kazandıran genlerin tanımlanması konularındaki projelerdir (Öktem, 2006). Bugün için ülkemizdeki hemen hemen tüm üniversitelerde, araştırma enstitüleri ve araştırma laboratuvarlarında çeşitli bitkilerde doku kültürü sistemlerinin kurulması ve karşılaşılan sorunların giderilmesi üzerine mikroçoğaltımdan, anter kültürü, embriyo kültürü, protoplast kültürü, meristem kültürü, kallus kültürü, sekonder metabolit üretimi, sentetik tohum üretimi ve kriyoprezervasyona kadar doku kültürlerinin tüm uygulama alanlarında *in vitro* kültür çalışmaları yapılmaktadır. Gerek üniversite gerekse kurumların araştırma laboratuvarlarında yürütülmüş olan pek çok başarılı çalışma ulusal ve uluslararası dergilerde yayımlanmış ve/veya kongrelerde sunulmuştur.

1.2. Sonuç

Doku kültürü teknolojisi ile mevsimden bağımsız olarak yıl boyunca üretim yapılabilmekte, bitkilerin hastaliksız ve kaliteli olarak hızlı klonal çoğaltılması mümkün

olabilmekte ve ayrıca biyoreaktörler ile kitlesel çoğaltım yapılabilmektedir. Tüm bunlar ticari üretim için büyük önem taşımaktadır. Ayrıca bitki doku kültürlerinin hastaliksız bitki üretiminden gen kaynaklarının korunmasına kadar tarımsal üretimdeki uygulamaları ve bitki ıslahındaki avantajları ile bugün tarımsal biyoteknoloji bilim dalından söz edilmektedir. Bitki biyoteknolojisi çalışmalarında öncelikle elverişli bir *in vitro* bitki rejenerasyon sistemini ortaya koymak gerekli olduğuna göre bitki doku kültürü tekniklerinin önemi açıkça görülmektedir.

BÖLÜM 2

Bitki Doku Kültürü Laboratuvarı için Temel Tasarım ve Gereksinimler

Meltem Bayraktar, Aynur Gürel

2.1. Giriş

Bitki doku kültürü laboratuvarları, diğer laboratuvar tiplerine göre farklılık gösteren kendine özgü tasarımlara sahiptirler. Tüm bitki doku kültürü tekniklerini kapsayan prosedürleri gerçekleştirmek amacıyla bu laboratuvarlar belirli temel kısımları içermelidir. Laboratuvarların genel tasarımında, aseptik koşulların sağlanmasına ve muhafaza edilmesine odaklanılmaktadır (Gamborg ve Phillips, 1995).

2.2. Bitki Doku Kültürü Laboratuvarı Kurulumunda Dikkat Edilmesi Gereken Hususlar

2.2.1. Amaç ve Hedeflerin Belirlenmesi

Bir bitki doku kültürü laboratuvarının kurulmasından önce, üretim amaçları veya hedefleri, gerçekleştirilmek istenen üretim miktarı ve kültürü yapılacak bitkiler planlanmalıdır. İnşa edilecek laboratuvarın ne ölçüde detaylandırılacağı ve yeterli finansal kaynağa sahip olunma durumu iyi belirlenmelidir. Yerel pazara veya yurt dışına ürünlerini sunmak isteyen büyük bir laboratuvarın kurulmasında, potansiyel pazar payı ve laboratuvarın potansiyel müşterilere uzaklığı dikkate alınmalıdır. Potansiyel pazarlar hususunda ön değerlendirmelerin yapılması, oldukça önemli olan bir erken adımdır. Ürünlerin kimler tarafından hangi fiyatlarla alınacağını önceden belirlenmesi de uygun bir adımdır (Kyte ve ark., 2013).

Bir doku kültürü laboratuvarının kurulması ve sonrasındaki faaliyetler nispeten maliyetli olduğundan, dikkatli planlama yapmak çok önemlidir. İşlevsel bir laboratu-

2.7. Sonuç

Uygulamalı biyoteknolojinin önemli bir bölümünü oluşturan bitki doku kültürü teknolojisi, bitki bilimi açısından gerek temel gerekse de uygulamalı araştırmalar için vazgeçilmez bir konumdadır. Yakın gelecekte, altyapıya yönelik yeni gelişmelerin gerçekleşmesi, kullanılmakta olan cihaz ve aletlerin yerine ihtiyaçlara göre tasarlanmış ve kolaylık sağlayıcı yenilerinin geliştirilmesi, yeni doku kültürü metodlarının keşfi, geniş çapta kitlesel üretimi sağlayan yeni biyoreaktör tasarımlarının yapılması, yapay zekâya dayalı otomasyon sistemlerinin özellikle seralarda devreye girmesi, uygun maliyetli yeni malzeme tiplerinin elde edilmesi gibi teknolojiye dayalı yeniliklerin sağlanması ile elbette emek yoğun olan bu alandaki tüm aşamalar daha kolaylaşacak ve daha hızlı ilerlemeler kaydedilecektir.

BÖLÜM 3

Bitki Doku Kültürü Besin Ortamları

Sultan Köşkerođlu, Atilla Levent Tuna

3.1. Giriş

Bitki doku kültürü teknolojileri, araştırma ve geliřtirmede çok çeřitli temel ve uygulamalı problemlerin çözümü için hayati derecede önemli hâle gelmesinin yanı sıra bitki çođaltım yöntemi olarak da giderek yaygınlaşmaktadır. Teknikler, belirli amaçlar için kullanılan çeřitli prosedürleri kapsar.

Bitki doku kültürü sistemleri, laboratuvarında kontrollü aseptik koşullar altında bütün bitki, organ, doku veya hücrelerin yetiřtirilmesine olanak sağlar (Phillips ve Garda, 2019). Bitki dokuları ve organları, büyüme için gerekli besinleri sağlayan yapay ortamlarda *in vitro* olarak büyütülür (George ve ark., 2008). Doku kültürü sistemi, temel besin ortamı yoluyla bitki veya eksplant büyümesi için gerekli tüm besinleri, enerjiyi ve suyu sağlar. Ek olarak kontrollü inkübasyon koşulları, büyümeyi desteklemek için optimize edilmiş ışık ve sıcaklık ayarları sağlar. Bitki gelişimi, daha sonra, belirli büyüme veya olgunlaşma aşamalarında bitki büyüme düzenleyicilerinin (dođal fitohormonlar veya sentetik versiyonlar) eklenmesiyle manipüle edilebilir (Phillips ve Garda, 2019).

Bitki çođaltma yöntemi olarak bitki doku kültürünün başarısı, kullanılan kültür ortamının dođasından büyük ölçüde etkilenir (George ve ark., 2008). Dokuların optimal büyümesi ve morfogenezi, beslenme gereksinimlerine göre farklı bitkiler için deđiřebilir. Ayrıca, bitkilerin farklı kısımlarından alınan dokular da yeterli büyüme için farklı gereksinimlere sahip olabilir (Murashige ve Skoog, 1962).

Bitki doku kültüründe bir bitki hücresinin, dokusunun veya organının kültür başarısı derecesi bazı önemli faktörlere bađlıdır. Bu önemli faktörler; besin bileşenleri ve büyüme düzenleyicilerinin seçimidir. Bir bitki doku kültürü ortamı, kullanılan bitki türü ve çeřidi veya eksplant tipine göre deđiřen ve her bir özel durum için deneysel

kesitlerinden 2-3 haftalık kültür sonrası %60'tan fazla adventif sürgün oluşumu verdiği bildirilmiştir (Plana ve ark., 2006). Yine diğer bir çalışmada, bürülce bitkisinin embriyo kültüründe hormon takviyesi olarak domates suyunun etkileri incelenmiştir. *In vitro* kültür ortamında %15 domates suyunun kullanılmasının, kök uzunluğu, sürgün sayısı, kök sayısı ve yaprak sayısı açısından en etkin bileşen olduğu, fakat kontrol (MS ortamı) uygulaması ile karşılaştırıldığında, bitki boyunda ve sürgün uzunluğunda bir azalmaya yol açtığı sonucuna varılmıştır (Naik ve ark., 2020).

3.5.5. Besin Ortamı Alternatifi

Stimufol, en yaygın kullanılan MS ortamına alternatif olarak 0, 0,5, 1, 1,5 ve 2 g l⁻¹ seviyelerinde kullanılmıştır. Ayrıca, ortamı 3,5 mg l⁻¹ de kendi kendine sterilize eden bir ürün olan Assiutmix, ortama ilave edilmiştir. İstatistiksel analiz hem MS'nin hem de Stimufol'un sarımsak büyümesi üzerinde aynı etkiye sahip olduğunu göstermiş ve temel MS ortamına iyi ve ucuz bir alternatif olarak kullanılabileceği önerilmiştir (Abdalaziz ve ark., 2016).

3.6. Sonuç

Bitki doku kültürü teknolojileri, koruma, seri üretim, genetik manipülasyon, biyoaktif bileşik üretimi ve bitki gelişimi için önemli olan bitki biyolojisinin temel taşıdır. Bu noktada bitki doku kültür ortamı doku kültürü çalışmalarında başarıyı belirleyen en önemli faktör olarak karşımıza çıkmaktadır. Besin ortamının içeriğinde yer alan bileşenlerin karşılıklı etkileşimleri, bitki türü ve genotipi kültür ortamı seçilimini zorlaştıran faktörlerdir. Bu nedenle her ne kadar doku kültürü çalışmaları için uzun yıllardır kullanılan temel besin ortamları bulunsa da gerek bilimsel ve gerekse ticari üretim amaçlı yapılan çalışmalarda bu ortamların modifiye edilmesi gerekmektedir.

Doku kültür ortamının temel bileşenlerinin yanı sıra, bu bileşenlere düşük maliyetli alternatifler de dikkat çekmektedir. Bu alternatifler seçilirken dikkat edilmesi gereken en önemli noktalar ise kontaminasyonun engellenmesi ve kaliteli bitki üretimini sağlamak olmalıdır. Yeni çalışmalar yapıldıkça kültür ortamının temel bileşenlerine alternatifler, temel besin ortamlarına ilave çeşitli maddeler eklenmiş ve eklenmeye devam etmektedir. Bu sayede istenilen niteliğe sahip bitkinin üretimini gerçekleştirmek ve süreç boyunca karşılaşılabilecek problemlerin önüne geçmek mümkün olacaktır.

BÖLÜM 4

Sterilizasyon ve Kültür Başlatılması

Emel Yılmaz Gökdoğan, Aysu Besler, Mert Metin

4.1. Giriş

Doku kültürü teknolojisi, eksplant olarak isimlendirilen çeşitli bitki kısımlarının steril şartlar altında yapay besin ortamında kültüre alınması ile yeni bitkiciklerin ve çeşitli ürünlerin elde edilmesini amaçlamaktadır. Bu amaçlar doğrultusunda bitki doku kültürlerinde kullanılan besin ortamları organik bileşikler, mineraller, bitki büyüme düzenleyicileri, vitamin ve karbon kaynağı olan çeşitli şekerleri içerdiğinden kültürde, bakteri ve mantarlar hızla üremektedirler. Mikroorganizmalar kültür ortamına bir kez girdiğinde, hem besin ortamı bileşenlerini kullanarak hem de toksinlerini üreterek kısa sürede hızla gelişim göstermektedirler ve kültüre alınan bitkisel dokularda nekroz oluşumuna neden olarak kök-sürgün gelişimini engellemektedirler (Misra ve Misra, 2012). Steril olan bir ortamda, canlı doku veya materyalde mikroorganizmaların üreyerek meydana getirdikleri enfeksiyona **kontaminasyon** denir (Tırnaksız, 2009). *Agrobacterium*, *Bacillus*, *Lactobacillus*, *Pseudomonas*, *Staphylococcus*, *Enterobacter*, *Xanthomonas*, *in vitro* kültürlerde yaygın enfeksiyon oluşturan bakteri cinsleridir (Babaoğlu ve ark., 2001). *In vitro* kültürlerde gözlenen olası kontaminasyonlar, kültür kabı, besiyeri, eksplant, transfer alanının çevresi, aktarım için kullanılan alet ve ekipmanlar, kültür odası ve tüm bu işlemleri gerçekleştiren kişilerden kaynaklı olabilmektedir (Bhojwani ve Razdan, 1996; Sivanesan ve ark., 2021). Canlılar-cansız yüzey, ortam ve materyal üzerinde veya içinde bulunan tüm mikroorganizmaların vejetatif ve spor formlarının yok edilmesi işlemi **sterilizasyon** olarak adlandırılmaktadır. Sterilizasyon işlemi uygulanmış malzeme, ortam ve canlı yüzeyi **steril** olarak adlandırılmaktadır (Tırnaksız, 2009). Canlı organizmalar ve tüm cansız yüzeylerin üzerinde veya içinde bulunan zararlı ve zararsız mikroorganizmaların tüm hayat formlarının yok edilmesi amacı ile kullanılan kimyasallara **sterilant** adı verilmektedir. *In vitro* kültür uygulamalarının başarısında, kültür sistemlerinin hazırlanması, başlatılması ve sürdür-

4.7. Sonuç

Bitki doku kültürü çalışmalarında steril koşulların sağlanması çok önemlidir. *In vitro* kültürlerde enfeksiyona neden olabilecek mikroorganizmalar, kullanılan bitkisel materyal, besin ortamı, kullanılan alet ve ekipmanlar, kültür koşulları ve çalışan personelden kaynaklı olabilmektedir. Farklı amaçlara yönelik olarak yapılan çalışmalarda, *in vitro* kültürlerden gelen bitkiciklerin farklı eksplantları başlangıç materyali olarak kullanılabilmesi gibi dış ortamlardan alınan çeşitli bitkisel dokulardan da yararlanılmaktadır. Özellikle dış ortamlardan sağlanan başlangıç materyallerinde mikroorganizmalar bitkisel dokuların dış yüzeylerinde veya iç dokularında da bulunabileceğinden, *in vitro* kültürlerin başarısında, farklı dezenfektanların kullanıldığı etkili sterilizasyon protokollerinin uygulanması çok önemlidir. Geliştirilen sterilizasyon protokollerinde, bitki türü hatta genotipi, kullanılacak dezenfektanların tipi, kombinasyonları, konsantrasyonları ve uygulama süresinin etkin belirlenmesi gerekmektedir.

BÖLÜM 5

Bitki Doku Kültürü Uygulamaları

Yonca Surgun Acar

5.1. Giriş

Bitki doku kültürü, bir bitkinin herhangi bir kısmının (hücre, doku veya organ) yapay ortamda, steril koşullarda ve kontrollü şartlarda kültürünü ifade eden geniş ve kapsamlı bir terimdir (Loyola-Vargas ve Ochoa-Alejo, 2018). Sürekli gelişmekte olan bitki doku kültürü teknolojisi hem tarım hem de endüstride önemli etkilere sahiptir (Hussain ve ark., 2012). Bitki biyoteknolojisi bitki büyüme ve gelişiminin kontrolü, sürekli artan abiyotik ve biyotik stres tehditlerine karşı bitkileri koruma, dayanıklı çeşitler geliştirme ve özel farmasötik ürünlerin üretimi gibi birçok alanda yeni ufuklar açmaktadır (Altman, 1999).

In vitro ortamda bitki hücrelerini kültüre almayı ilk deneyen Alman botanikçi Gottlieb Haberlandt olmuştur. Haberlandt'ın (1902) izole ettiği yaprak hücreleri uzun süre canlı kalmasına rağmen besin ortamı gerekli bitki büyüme düzenleyicilerinden yoksun olduğu için bölünme göstermemiştir. Bitki hücre kültüründe ilk başarılı deney aseptik koşullar altında domates köklerini kültüre alan White (1934) tarafından gerçekleştirilmiştir. Bitki doku kültürü, her canlı hücrenin uygun koşullar altında tam bir organizma hâline gelmek için gerekli tüm bileşenlere sahip olduğunu varsayan totipotensi teorisinin geliştirilmesiyle gerçek bir destek elde etmiştir (Vasil ve Vasil, 1972). Bitki ıslah programları için önemli olan izogenik hatların daha hızlı elde edilmesine olanak veren haploid üretimi; bitki türleri arasındaki seksüel uyumsuzluğun (eşeyssel uyumsuzluk) üstesinden gelmek amacıyla hibrid embriyoların kurtarılması; bitki hücre duvarlarının enzimatik olarak parçalanarak protoplastların elde edilmesi ve bu protoplastların füzyonu ile intraspesifik (türüçi) veya interspesifik (türlerarası) somatik melezlerin elde edilmesi, hücre veya organ kültürlerini kullanarak sekonder (ikincil) bileşiklerin üretilmesinin yanı sıra genetik transformasyon sistemlerinin kurulumu ve geliştirilmesi bitki doku kültüründe önemli gelişmeler olarak sıralanabilir (Loyola-

5.4. Sonuç

Bitki doku kültürü teknolojileri, mikroçoğaltım başta olmak üzere çeşitli amaçlar için ticari düzeyde uygulama alanına sahiptir ve bugün modern tarımda vazgeçilmez bir araç olmuştur. *In vitro* kültürlerde özellikle de kallus dokusunda meydana gelen genetik ve epigenetik değişimler tarımsal veya endüstriyel özellikler bakımından istenen değişiklikler olması durumunda genetik ve bitki ıslahı programları için önemli bir avantajdır. Kontrollü koşullarda hücre süspansiyonuna farklı stres uygulamaları sonucu dayanıklı hücrelerden bitki rejenerasyonu ile dayanıklı bitkilerin elde edilmesi mümkün olmaktadır. Bu şekilde abiyotik faktörlere (kuraklık, tuzluluk, soğuk vb.) toleranslı bitkiler üretmek özellikle de kuraklığa dayanıklı bitkilerin elde edilmesi küresel ısınmanın olumsuz etkilerini azaltmaktadır. Genetik transformasyonlar ile insektisit veya herbisitlere toleranslı bitkilerin elde edilmesi verim artışı ile birlikte toksik olan insektisit ve herbisitlerin daha az kullanılmasını sağlamak çevre kirliliği bakımından avantaj olmaktadır.

Hibrid tohumları elde etmede ebeveyn hatlar olarak kullanılan homozigot hatlar ıslah programları için önemli materyallerdir ve geleneksel ıslah yöntemlerinde 5-10 jenerasyon kendileme ile elde edilebilen homozigot hatlar anter ve izole polen kültürleri ile bir yıl gibi çok daha kısa sürede elde edilmektedir.

Seksüel olarak üretilmeyen hibrid bitkilere embriyo kültürü ile embriyo kurtarma tekniği ile ulaşılmaktadır.

Eşeyssel uyumsuzluk olan bitki türlerinde türlerarası veya türüçü hibrid bitkiler, farklı bitki protoplastlarının kaynaşması ile (somatik melezleme) ile elde edilmektedir (somatik melezler).

Hücre kültürleri, endüstriyel ve farmasötik olarak önemli olan sekonder metabolitlerin üretimi için giderek daha önemli hâle gelmektedir.

Doku kültürü teknolojisinde genom düzenleme gibi yeni teknolojiler genetik manipülasyon için umut verici alternatiflerdir. Genomik, transkriptomik ve proteomik gibi yaklaşımlarla bitki doku kültüründe organogenez ve embriyogenez gibi süreçlerin yanı sıra *in vitro* koşullarda indüklenen genetik değişikliklerin anlaşılması da kolaylaşmaktadır.

BÖLÜM 6

Mikroçoğaltım

Bengi Erdağ

6.1. Giriş

Dünya nüfusunun 2019 yılında 7,7 milyar insandan oluştuğu tahmin edilmektedir. 1950'den bu yana herhangi bir zamandan daha yavaş olsa da artmaya devam eden nüfusun 2030'da 8,5 milyar, 2050'de 9,7 milyar ve 2100 yılında 10,9 milyara çıkabileceği öngörülmektedir (United Nations, 2019). Artan dünya nüfusuna karşılık çevre kirliliği, kullanılabilir içme suyu ve fosil yakıtları da içeren doğal kaynaklar, bitki biyokütlesi, gıda ve yem yetersizliği önümüzdeki yıllarda daha da ciddi bir biçimde kendini gösterecektir. Gıda, enerji, bitki biyokütlesi ve çevre kirliliği ile ilgili sorunları çözenin zorluğu; bu sorunların geniş ve uzun vadeli bakış açılarından oluşturulan ortak ve yenilikçi bir kavram ve metodolojiye dayalı, aynı zamanda eş zamanlı olarak çözülmek istenmesi, sonuçta yeni bir endüstri geliştirme gereksinimidir (Kozai ve ark., 2000a, b). Sadece gıda, yem ve çevre koruma için değil, aynı zamanda biyoenerji, biyobozunur plastik ve diğer pek çok endüstriyel ürünü üretmek için her yıl milyarlarca bitkinin elde edileceği teknikleri geliştirmek gerekmektedir (Kozai ve ark., 2005).

Hücre, doku, organ veya bunların bileşenlerinin *in vitro* olarak tanımlanan fiziksel ve kimyasal koşullar altında gerçekleşen aseptik kültürü **bitki doku kültürü teknikleri** olarak tanımlanmaktadır ve bu teknikler temel ve uygulamalı çalışmalar ile çok sayıda bitkiyi üretmeye olanak sağlamaktadır.

Bitki doku kültürü teknikleri bitki hücrelerinin tam bir bitkiye dönüşebilme yeteneği olan totipotensi fenomenine dayanır. 1902 yılında Gottlieb Haberlandt tarafından sunulan totipotensi hipotezine göre her bir hücre tam bir bitki üretebilmek için gereken tüm genetik bilgiye sahiptir (Haberlandt, 1902). Totipotensi fenomeninde hücreler tüm gelişimsel kapasitelerini korur ve uygun koşullar altında çoğalarak yeni bir organizmayı oluşturan tüm hücre tiplerini ortaya çıkarabilir (Grafı ve ark., 2011). Bazı farklılaşmış hücre tipleri hariç (trakeal elemanlar, kalburlu borular, olgun lif ve sklereidler

BÖLÜM 7

Somatik Embriyogenez ve Sentetik Tohum Üretimi

Emel Yılmaz Gökdoğan

7.1. Somatik Embriyogenez

7.1.1. Giriş

Bitki genetiği ve biyoteknolojisi alanlarındaki gelişmelerde, *in vitro* kültürlerin kullanımına dayalı etkin bitki rejenerasyon sistemlerinin kurulması büyük önem arz etmektedir. Uygulanan çeşitli *in vitro* sistemler arasında **somatik embriyogenez (SE)** ilk sıralarda yer almaktadır (Gaj, 2004). SE, farklılaşmamış somatik hücrelerin somatik embriyolara dönüşmesi sürecidir (von Arnold ve ark., 2002). *In vitro* kültür koşullarında, SE sürecinin indüklenmesi ile bir bitkinin somatik hücre, doku veya organlarından elde edilen, bağımsız vasküler sistemi olan, kök ile sürgün aksini içeren iki kutuplu embriyolara **somatik embriyo** denmektedir (Temiz ve Özgüven, 2010). İlk kez Steward ve ark. (1958), havuç kallus kültürlerinde somatik embriyo elde etmeyi başarmışlardır ve bu gelişme hem bitki embriyogenezi olarak adlandırılan morfogenez olayların gerçekleştiği bir model hem de hücre kültürü sistemlerinden bitki rejenerasyonu için önemli bir yolak olarak kabul edilmiştir (Zimmerman, 1993). SE, klonal çoğaltım, transformasyonla genetik olarak modifiye edilmiş bitkilerin rejenerasyonu, somatik melezleme, *in vitro* mutant indüksiyonu ve seleksiyonda kullanılmakta olup bitki morfogenezin deneysel oluşumu ve totipotensi üzerine yapılan temel araştırmalar için yararlı bir araçtır (Gaj, 2004). Geleneksel ıslah, moleküler ve hücre biyolojisi teknikleri birleştirildiğinde, SE ticari öneme sahip türlerin genetik olarak geliştirilmesi ve bitki hücrelerinde totipotensi ifadesi için iyi bir mekanizma olmaktadır (Rai ve ark., 2010). SE, biyoreaktörler kullanılarak hücre kültürlerinden kısa sürede büyük ölçekte çoğaltım, odunsu bitki türlerinde yaşam döngüsünü kısaltarak melez embriyoların çimlenmesi, biyotik ve abiyotik stres faktörlerine karşı transgeniklerin kullanılması, somatik embriyo indüksiyonu ve olgunlaşması sırasında meydana gelen biyokimyasal

7.3. Sonuç

Son yıllarda bitki biyoteknolojisi ve bitki moleküler genetiği alanlarında önemli gelişmeler kaydedilmiştir. Özellikle *in vitro* kültürlerin kullanımına dayalı etkin bitki rejenerasyon sistemlerinin kurulması mikroçoğaltım, sekonder metabolit üretimi, transgenik bitkilerin elde edilmesi, tehlike altındaki türlerin korunması, üreme problemi olan türlerin bitki doku kültürü teknolojisi ile çoğaltımında büyük önem arz etmektedir. Söz edilen amaçlara yönelik olarak uygulanan *in vitro* sistemler arasında somatik embriyogenez ilk sıralarda yer almaktadır. Somatik embriyogenez, çeşitli vejetatif bitki eksplantlarından başlatılan gelişimsel bir program sonucunda eşeyli üreme ve döllenme olmaksızın gerçekleşmektedir ve SE başarısını, bitki türü, genotipi, eksplant tipi, besin ortamı kompozisyonu, BBD çeşidi, kombinasyon ve konsantrasyonu, ABA'nın indüklediği çeşitli abiyotik stres faktörleri etkilemektedir. SE sürecinde pek çok moleküler değişim gözlenmekte olup organize olmamış kallus hücrelerinden somatik embriyo oluşumuna geçişte, aktif RNA sentezi oluşmakta ve transkripsiyonel düzeyde yeniden programlanmış bir gen ifadesi gerçekleşmektedir. Histon modifikasyonları, DNA'nın yeniden şekillenmesi ve DNA metilasyonu gözlenen diğer moleküler değişimler arasındadır. SE'yi düzenleyen önemli genler veya gen aileleri olarak *LEA*, *BABYBOOMI (BBMI)*, *LEAFY COTYLEDON1 (LEC1)* ve *LEC2*, *WUSCHEL*, *WUS*, *CLAVATA (CLV)*, *SERK* bilinmektedir.

Direkt veya indirekt SE süreci sonucunda oluşan somatik embriyoların yanı sıra bitkinin meristem, nod, sürgün ucu, tomurcuk, kallus gibi embriyonik olmayan bitki parçalarının hidrojel bir madde ile kaplanması sonucu da sentetik tohumlar üretilmektedir. Sentetik tohum teknolojisinin ışığında bitkinin tohum oluşumundan generatif aksamı bitki gelişimine kadar devam eden gelişimsel süreçlerin aydınlatılması, embriyonik anomali ve nedenlerinin araştırılması, nesli tükenmekte olan veya tehdit altındaki bitkilerin mikroçoğaltımı, yavaş büyümeye dayalı kısa süreli muhafaza veya kriyoprezervasyon ile uzun süreli olarak korunması mümkün olabilmektedir. Sentetik tohum, steril (kısır) bitkilerin, hibrid süs bitkilerinin, elit poliploid türlerin, *in vitro* kültürlerle cevap vermeyen bitki germplazmaların muhafazası ve değişiminde de rol oynamaktadır. Ayrıca, hastaliksız özellikle virüssüz bitki üretimi, somaklonal varyasyonun moleküler tekniklerle saptanması ve hibrid varyetelerin ıslahında başarı ile uygulanmaktadır. Günümüzdeki sınırlamalarına rağmen avantajlarını göz önünde bulundurarak yapılan çalışmalardan elde edilecek sonuçlardan yararlanarak geliştirilecek yeni tekniklerle sentetik tohum teknolojisi daha da ileriye gidecektir.

BÖLÜM 8

Meristem Kültürü

Ergun Kaya, Selin Galatalı

8.1. Giriş

Meristemler sürekli ve hızlı bölünme yeteneğine sahip olan hücrelerdir ve bu hücreler arasında vasküler doku farklılaşması gerçekleşmemiştir. Enfekte olan bitki dokularında virüslerin hareketi vasküler elementler yoluyla gerçekleşebildiği ve bitkinin uç/meristem bölgelerinde vasküler elementler henüz oluşmadığı için virüsler bu bölgelere ulaşamazlar. Diğer taraftan meristem hücrelerinin metabolizma hızlarının virüslerin bu hücrelerde çoğalmasını baskılayacak kadar yüksek olması ve virüs gelişimini baskıladığı kabul edilen oksin bitki büyüme düzenleyicilerinin meristematik bölgelerde konsantrasyonlarının fazla olması meristematik bölgelerin virüsten ari veya bu bölgelerdeki virüs yoğunluğunun düşük olmasının temel sebepleridir. Sürgün uçlarındaki virüsten ari veya virüs dağılımının düşük olduğu bilgisi, enfekte bitkilerden meristematik bu bölgelerin kesilip yapay besin ortamına transferiyle virüsten ari bitkilerin elde edildiği meristem kültürü tekniğinin gelişmesini sağlamıştır. Bu *in vitro* teknik, kısa süre sonra virüsle enfekte olmuş bir bitkiden kısa sürede virüsten ari bitki elde edebilmeyi sağlayan en popüler teknik hâline gelmiş ve bu amaç için yaygın olarak kullanılan tekniklerden biri olmuştur (Raychaudhuri, 1967).

Bitki sürgün uçlarından meristem çıkartılması ve bu meristemlerin *in vitro* rejenerasyonu yoluyla patojenden ari bitki üretimi etkili bir yöntem olarak uygulanmaktadır. Doğal ortamlarda ya da klonal olarak çoğaltılan bitkiler mikrofungus, bakteri ve/veya virüsler (Şekil 8.1a) tarafından enfekte edildiğinde, patojen anaç bitkiden klon bitkiye geçmektedir ve belirli bir klonal çeşidin tüm popülasyonu aynı patojen ile enfekte olabilmektedir (Şekil 8.1b). Verim azalması veya bitki kalitesinin düşmesine sebep olan latent virüslerde, semptomların tespit edilmesi ve bu tür enfeksiyonların ortadan kaldırılması zor olabilmektedir (Panattoni ve ark., 2013).

laştırır. Tekniğin ileri uygulamaları, değerli ve nadir türlerin germplazmını korumaya yönelik meristem ve sürgün uçlarının *in vitro* depolanması, eşeyli ve eşeysiz olarak üretilmiş kültür ve yabancı türlerin orta ve uzun süreli depolanması için, geleneksel yöntemlere uygun ve çekici bir alternatif olarak ortaya çıkmaktadır. Bununla birlikte, yöntemin başarıyla uygulanması için, kültürün devamlılığı, patojen indekisleme ve *in vitro* aktif gen bankalarında muhafaza edilen bitkilerinin genetik kararlılıklarının izlenmesi için verimli prosedürlerin geliştirilmesine de ihtiyaç vardır. Ayrıca, uzun süreli koruma aracı olarak meristem ve sürgün uçları için, uygun kriyoprezervasyon tekniklerinin geliştirilmesine de gereksinim duyulmaktadır. Diğer taraftan *Agrobacterium* aracılı genetik transformasyon için meristem ve sürgün ucu kültürü tekniğinin kullanılması cesaret vericidir ve türlerinin genetik modifikasyonu için faydalı olabilir.

BÖLÜM 9

Embriyo Kültürü

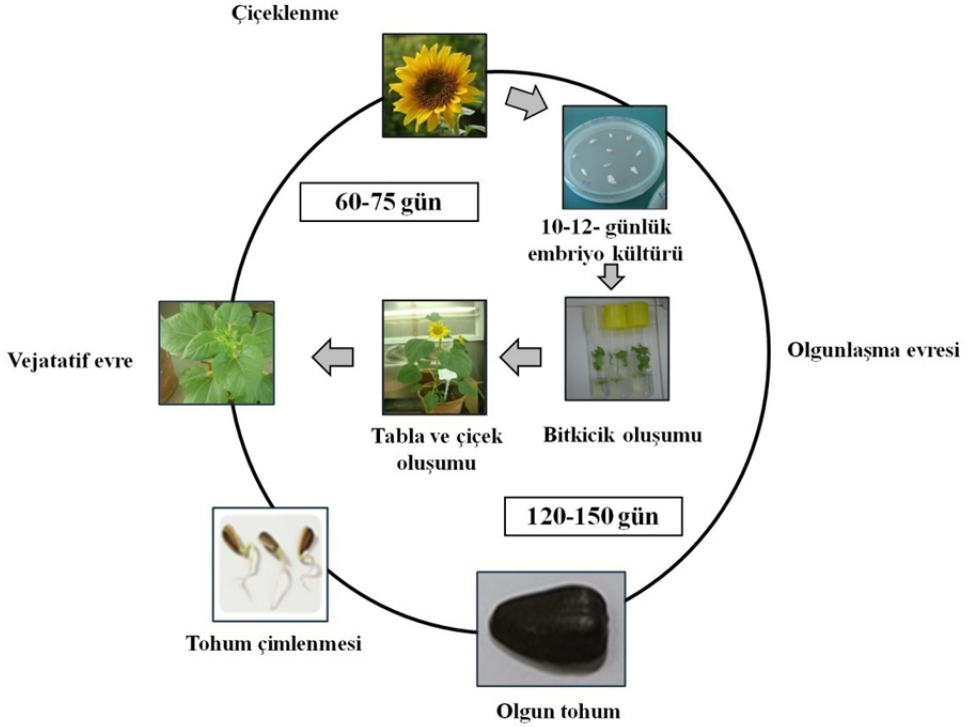

Nazan Dağüstü

9.1. Giriş

Embriyo kurtarma tekniği olarak da bilinen embriyo kültürü olgunlaşmamış veya olgun zigotik embriyoların tohum ve tohum taslaklarından steril koşullarda izolasyonu ve optimum koşullar altında gelişmeleri için endosperm koşullarının sağlandığı yapay besin ortamlarında kültüre alınması ve tam bitki elde edilmesini kapsayan bir yetiştirme tekniğidir (Bridgen, 1994; Pierik, 1997; Bürün ve Gürel, 2001). Geleneksel anlamda embriyo kültürü seksüel olarak üretilen zigotik embriyo kültürünü ifade eder. Bu tekniğin temel dayanağı, embriyo kültürünün, doğal koşullarda meydana gelen melezlerde, erken embriyo gelişim aşamasında seksüel üretimde başarıyı engelleyen problemlerin çözümünde kullanılan en önemli yöntemlerden birisi olmasıdır. Bu koşullarda tozlanma ve döllenme gerçekleşir fakat zigot sadece birkaç hücreli embriyo oluşturmak üzere bölünür, büyüme yeteneğini kaybeder ve daha ileri gelişme gösteremez veya ölür. Endosperm embriyonun gelişimini destekleyecek yapıda değildir ve embriyo gelişmesinde küçük kalır ve olgunlaşamaz (George ve Sherrington, 1984; Bajaj 1990).

In vitro izole edilen embriyolar genellikle erken çimlenme göstermektedirler (Jensen, 1976). Bunun iki nedeni vardır birincisi tohum kabuğu uzaklaştırıldığında çimlenmeye olumsuz etki yapan inhibitörlerinde (engelleyiciler) uzaklaştırılmış olması, diğeri ise *in vivo* negatif ozmotik potansiyelin (su potansiyeli üzerinde etki yapan ve çözünmüş madde miktarının yüksek olması) *in vitro* olandan daha yüksek bir değere sahip olabilmesidir.

Embriyo kültürü yöntemi ile tam bitki elde edilmesi ya doğrudan yani direkt olarak embriyodan (Örn. ayçiçeği bitkisi Şekil 9.1A) ya da indirekt olarak yani önce kalus oluşumu ve bunu takiben sürgün ve kök oluşumu ile gerçekleşir (örn. buğday bitkisi Şekil 9.1B).

Şekil 9.10. Ayçiçeği (*H. annuus* L.) bitkisinde olgunlaşmamış embriyo kültürü ile 1 yılda 4-5 jenerasyon alınarak yaşam çemberinin kısaltılması

9.6. Sonuç

Sonuç olarak embriyo kültürü sayesinde ıslah çalışmalarında klasik metotlarla başarı sağlanamadığı türler ve cinslerarası melezlemelerde ve farklı poliploidi düzeyindeki bitkilerin melezlenmesinde uyumsuzluk nedeni ile embriyoların gelişemediği veya embriyonun yetersiz gelişmesi durumlarında normal embriyo gelişmesini sağlamak amacıyla embriyo kültürü yöntemi ile daha kısa sürede daha etkin sonuçlar alınabilmektedir. Embriyo kültürü tekniği ile ayçiçeği, fasulye, keten, pamuk, domates, çeltik ve arpada türlerarası melez bitkiler elde edilebilmiştir. Bitki ıslah çalışmalarında klasik ıslah yöntemlerinin embriyo kültürü tekniği ile kombine edilmesi sonucu bugün olduğu gibi gelecekte de alternatif yeni çalışmaların yapılabilmesi kaçınılmazdır.

BÖLÜM 10

Endosperm Kültürü

Betül Bürün

10.1. Giriş

Angiospermelerde (kapalı tohumlu bitkiler) çift döllenme ile embriyo ve endosperm meydana gelir. Yani endosperm bir döllenme ürünüdür ve embriyonun gelişmesi için besin kaynağıdır. Farklı taksonomik gruplarda, endospermin gelişme sürecinde ve olgun tohumlardaki durumunda farklılıklar bulunmaktadır.

10.1.1. Çift Döllenme ve Endosperm Oluşumu

Çift döllenme; bir polen tüpü ile embriyo kesesine ulaşan haploid iki sperm çekirdeğinden birinin yumurta hücresi ile, diğerinin kutup çekirdekleri ile birleşmesidir. İlk defa 1898'de Navashin tarafından *Lilium martagon*'da keşfedilmiş olan çift döllenmenin, daha sonra farklı evrim soylarını temsil eden hemen hemen bütün angiosperm türlerinde bulunduğu ortaya koyulması, çiçekli bitkiler için çift döllenme olayının hem evrensel ve hem de eşsiz olduğunu göstermiştir (Kordyum ve Mosyakin, 2020).

Döllenmede, polen tüpü ile embriyo kesesine ulaşan haploid iki sperm çekirdeği (polen tüpü sitoplazması ile birlikte) öncelikle sinergitlerden birine boşalır ve bu sinergit dejenere olur, ölür. Embriyo kesesine salınan bu iki sperm çekirdeğinden biri (n , ♂ gamet), yumurta hücresi (n , ♀ gamet) ile birleşir ve yumurtanın döllenmesi ile **diploid zigot ($2n$)**; diğer sperm çekirdeği (n , ♂ gamet) de iki kutup çekirdeği ile kaynaşarak (üçlü kaynaşma), **endospermi** yapacak olan **triploid primer endosperm ($3n$) hücresi** meydana gelir. Ancak, üç haploid çekirdek her zaman aynı anda kaynaşmaktadır. En çok görülen, generatif çekirdekle birleşmeden önce kutup çekirdeklerinin birleşerek merkezî (sentral) hücrede **sekonder çekirdek ($2n$)** durumuna gelmesidir. İzole ettikleri sperm ve sentral hücrenin *in vitro* koşullarda kaynaşmalarını sağlayan

Endosperm kültüründe eksplant olarak olgun veya olgunlaşmamış endospermiler kullanılmaktadır. Olgun endosperm kültürlerinde sürgün tomurcuğu farklılaşması endospermden direkt olarak meydana gelebilir (örn. *Passiflora* türleri) veya kallus şekillenmesinden sonra (örn. kivi, kroton) meydana gelebilir. Bununla beraber olgunlaşmamış endosperm kültürlerinde ise önce kallus şekillenmesi kallustan embriyogenez (örn. ceviz, portakal, akasya) veya organogenez (örn. dut, nim ağacı) ile bitkicikler meydana gelmektedir.

Kültürde karşılaşılan bazı sorunlar (ploidi varyasyonlarının görülmesi vb.) nedeniyle endosperm kültürü ile triploidleri elde etmek kolay olmamakla beraber tarımsal olarak önemli olan ve bitki ıslahında yararlanılan triploidlerin elde edilmesinde uygun yöntemlerden biri yine de endosperm kültürüdür. Özellikle son yıllardaki başarılı çalışmalar ile triploidlerin yüksek oranda elde edildiği başlıca türler *Citrus sinensis* (portakal), *Morus alba* (dut), *Azadirachta indica* (nim ağacı), *Carica papaya* (papaya), *Sapium sebiferum* (Çin'de yetişen dekoratif bir ağaç), *Phlox drummondii* (alev çiçeği), *Melia azedarach* (tespik ağacı) ve *Passiflora edulis*, *P. cincinnata*, *P. foetida*'dır (çarkıfelek).

Endosperm kültürleri şimdilik ticari olarak kullanılmıyor olsa da triploidinin avantajlı olduğu bitkilerde (çekirdeksiz olma, istilacı türlerin yayılmasını azaltma, hızlı büyüme ve biyokütle artışı vb.) endosperm dokudan sürgün gelişiminin artırılması ve bitkiye göre başarılı protokollerin oluşturulması (bitkiye göre protokolleri optimize etme çalışmaları) yaygın olarak kullanımı sağlayacaktır. Son yıllardaki başarılı çalışmalar, melezlemeye gerek kalmadan kısa sürede triploidlerin elde edilmesinde endosperm kültür tekniğinin kullanılabileceğini ve ıslah programlarında geleneksel yöntemler ile birlikte kullanılmasının önemli avantajlarını ortaya koymaktadır.

BÖLÜM 11

Anter ve Mikrospor Kültürleri

Ülkü Emirođlu

11.1. Giriş

Anter kültürü, mikrosporlardan haploid ve katlanmış haploidlerin elde edilmesi amacıyla uygulanan bir *in vitro* kültür tekniđidir. Mikrosporlar farklı prosedürlerle anterden çıkarılarak *in vitro* kültüre alındığında **izole mikrospor kültürü** ya da **polen kültürü** olarak adlandırılır.

Anter içinde oluşan **mikrospor ana hücreleri** ve yumurtalıkta tohum taslakları içinde oluşan **megaspor ana hücreleri**, somatik hücreler gibi, o tür için karakteristik kromozom sayısı kadar kromozoma sahiptir. Bu ana hücrelerden mayoz bölünme ile meydana gelen mikrosporlar ve megasporlar ile bunlardan mitoz bölünmelerle oluşan erkek gametler ve yumurta hücreleri haploiddir. Bitkinin diploid olması durumunda ($2n=2x$, AA), haploidlerde bir kromozom takımı vardır (spor ve gametler $n=x$, A; haploid bitkiler $2n=x$, A).

Resesif mutasyonların aynı jenerasyonda fenotipe yansması; heterozigot yapıdaki bir bitkinin haploidlerinde istenen rekombinantların seçilebilmesi; kromozom katlanması ile bir jenerasyonda tam homozigot katlanmış haploidlerin (DH) elde edilebilmesi vb. avantajlarıdır. O nedenle, **haploidi**, moleküler arařtırmalar, genetik çalışmalar ve **ankonvansiyonel** ıslahta önemli bir yere sahiptir.

Normal döllenmeden sapmalar sonucu doğada spontan olarak oluşan haploidlerin oranı çok düşük olduğundan, bunu artırmak için arařtırmacılar, uzak akraba türlerle veya çekirdeđi inaktive edilmiş mentor polenlerle tozlama yapmak vb. farklı uygulamalara yönelmişlerdir. Yumurta kökenli haploidler, **ginogenik haploid** (ginogenetik haploid); kökeni mikrospor olanlar ise **androjenik haploid** (androjenetik haploid) olarak tanımlanır.

Androenez (androjenik gelişme), melez jenerasyonda yalnız tozlayıcı ebeveynin özelliklerini taşıyan bir bitkinin/bitkilerin çıkması ile tahminlenebilir, sitolojik

11.11. Sonuç

Sağladığı avantajları ile haploidi, moleküler araştırmalar, genetik çalışmalar ve ıslahta önemli bir yere sahiptir. Bitki ıslahı için haploidi ve DH'ler, daha az iş gücü ile daha kısa sürede sonuca ulaşmayı sağlaması bakımından büyük bir potansiyeldir. Günümüzde androgenik haploidler birçok bitki türünde elde edilmiş ve haploid üretimi için anter/izole polen kültür tekniği, bitki ıslahı programlarının ayrılmaz bir parçası olmuştur. Bununla beraber, tarımsal olarak önemli bazı türler (baklagiller ve kabakgiller gibi) androgeneze rekalsitranıdır. Ancak, baklagillerden nohutta haploid bitkilerin elde edilmiş olması, rekalsitransın nedenini araştıran bazı çalışmaların bulunması, diğer rekalsitran genotipler adına umut vericidir. Tahıllarda ise androgenezin düşük oranda gerçekleşmesi ve rejenerantlar arasında albinizmin yüksek frekanslarda görülmesi bu teknolojinin kullanımını sınırlamaktadır. Ayrıca kültürde haploidler yanında farklı ploidi düzeyinde ve anöploid bitkilerin elde edilmesi de istenmeyen bir olgudur.

DH bitkilerin elde edilmesi amacıyla haploid eksplant orijinli kallus rejenerantları arasından DH seçimi, ve farklı gelişme dönemlerindeki haploidlere antimitotik uygulamaları yerine, diploid mikrospor orijinli bitkiciklerin moleküler testlerle tanımlanması, mikrosporda spontan kromozom katlanmalarını tetikleyebilen soğuk ön uygulamalarından yararlanması daha avantajlıdır.

Mikrospor embriyogenezini daha iyi anlamak ve kontrol edebilmek için moleküler çalışmalar yapılmaktadır ve bu çalışmalarla androgenez ile ilgili birçok genin belirlenmesinin ve mikrosporum yeniden programlanmasının mümkün olabileceği ümit edilmektedir. Böylece tarımsal olarak önemli pek çok bitkide anter kültürü ve izole polen kültürü teknikleri çok daha yaygın kullanılacaktır.

BÖLÜM 12

Protoplast Kültürü

Hatice Çölgeçen

12.1. Giriş

Bitkilerde dokuları oluşturan hücreler orta lamel aracılığı ile bir arada bulunurlar. Maserasyon veya mekanik yollarla, enzimatik yollarla dokuları oluşturan bitki hücreleri birbirinden ayrılabilirler. Primer hücre çeperi farklı uygulamalarla uzaklaştırıldığında ise hücre zarı ve protoplazmadan oluşan bitki hücresine **protoplast** denir. Protoplastlar uygun fiziksel koşullarda canlılığını koruyabilir. Örneğin izotonik ortamlarda yeniden hücre duvarı oluşturabilirler. Mitozla bölünebilirler. Hatta yeniden bitki hücresi yığınları oluştururlar. İşte bu hücrelerden farklı uygulamalara gidilebilir. Elde edilen bu hücresel materyal bitkilerde önemli bir hücresel kaynak olarak kullanılabilir.

Bu hücresel kaynaktan hangi konularda fayda sağlanabilir? Tek bir protoplasttan bir bitki elde etmek yani tek hücre kaynaklı bitki rejenerasyonu en önemli kazanımların başında gelir. Diploid veya farklı poliploidi seviyesine sahip tek bir hücreden bitki klonları üretilebilir. Aynı zamanda elde edilen protoplastlardan füzyon yani hücre birleşimi (somatik melezleme) işlemleriyle bitki ıslahının modern bir yaklaşımı kullanılarak farklı bitki hatları, melezleri üretilebilir ve bunlar klonlanarak çoğaltılabilir. Protoplasttan klonlama yapmak için, bitki rejenerasyonu yöntemlerinin çözümlenerek uygulanabilir hâle gelmiş olması gerekir. Bu protoplastlardan somatik embriyo üretimi, hücre kültürleri ve hücre hatları, sekonder metabolit üretimi, moleküler tarım gibi çok farklı biyoteknolojik ve genetik mühendisliği uygulamalarına geçilebilir. Bitki moleküler çalışmaları açısından en önemli konular içinde sayılan gen aktarımı, genetik transformasyon, mutant izolasyonu çalışmalarına geniş bir kolaylık sağlar. Bitki fizyolojisi ve sitolojisi alanlarında gazlardan besin maddelerine kadar farklı moleküllerin hücre zarından girişi ve taşınması, hücre organellerinin (nukleusdan vakuole kadar) izolasyonu, hücre döngüsü ve farklılaşması gibi çalışmalarda kullanılabilirler.

Protoplast terimi ilk kez 1880'de Hanstein tarafından kullanılmıştır. Protoplastların ilk izolasyonu von Klercker (1892) tarafından mekanik bir yöntem kullanılarak

linden türetilmiş protoplastları ile elektrofüzyonunu takiben elde edilen türlerarası somatik hibridlerin genom bileşimi ve stabilitesi, çeşitli moleküler belirteçler ve flow sitometri kullanılarak karakterize edilmiştir. AFLP ve ISSR analizleri, 21 hibrid bitkinin ve 3 hibrid kallus hattının hepsinin *G. kurroo*'dan ziyade *G. cruciata*'ya genetik olarak daha yakın olduğunu göstermiştir. CAPS markörlerinin kullanımı ile kloroplast DNA analizinin sonuçlarına göre, tüm somatik hibridler, kloroplastları “mezofil” füzyon partneri *G. cruciata*'dan miras almıştır. Flow sitometri, poliploidleşmenin meydana geldiğini ve muhtemelen füzyon sonrası kültürün erken aşamasında gerçekleştiğini ortaya çıkarmıştır. Sonuç olarak sonraki 4 yıllık *in vitro* kültür izlemi sonucunda hibrid bitki ve kalluslarda yüksek genetik kararsızlık gözlemlenmiştir (Tomiczak ve ark., 2017). Başka bir örnekte kerevizde hibrid tohum üretimi karmaşık sorunlar taşıdığından protoplast füzyonunda farklı uygulama yolları denenmiştir. Asimetrik protoplast füzyonu ve hibrid tarama yöntemi ile kereviz süspansiyon hücreleri protoplastların alıcısı olarak kullanılmıştır. Havuç, kişniş ve beyaz kereviz mezofil protoplastları ise protoplast füzyon deneyleri için donör olarak seçilmiştir. Alıcı sitoplazmik kalıtım, iyodoasetamid tedavisi ile inhibe edilmiş ve donör nükleer genom kalıtımı UV maruziyeti ile önlenmiştir. Her iki grup protoplastlar elektroporasyon ve polietilen glikol kullanılarak kaynaştırılmış, hibrid sürgünler elde edilmiştir. Füzyon olaylarından sonra elde edilen 600'den fazla bitkiyi karakterize etmek için bir kloroplast ve alıcı ve verici organelleri ayırt edebilen üç mitokondriyal markör kullanılmıştır (herhangi bir sibirid tanımlamadan). Kereviz ve havuç arasında füzyonun gerçekleştiği gösterilmiş olup bu da çok düşük bir frekansta da olsa canlı melezlerin elde edilmesinin mümkün olduğunu kanıtlamıştır (Bruznican ve ark., 2021).

12.5. Sonuç

Son yıllarda yapılan çalışmalar bitki tür ve çeşitleri arasında üretim problemleri bulunsa bile protoplast füzyonu çalışmalarının alternatif çözümler sunduğunu göstermektedir.

BÖLÜM 13

Kallus Kültürü

Filiz Altan

13.1. Giriş

Bitki doku kültürü, temel bilimler ve ticari uygulamalarda yaygın olarak kullanılan önemli bir tekniktir. Bitki doku kültürleri, 20. yüzyılın başında ilk kallus veya embriyo kültürlerini kuran Gottlieb Haberlandt'a (1854-1945) kadar dayanır (Efferth, 2019). 1940'larda ve 1960'larda, teknolojik gelişmeler, sitoloji, beslenme, metabolizma, morfogenez, embriyogenez ve patoloji dâhil olmak üzere hücre davranışını, patojen içermeyen bitkilerin oluşumunu ve germplazmanın depolanması ve klonal çoğaltım koşullarını araştırmak için bitki doku kültürü tekniklerinin daha da geliştirilmesine olanak sağlamıştır. 1960'lardan günümüze kadar, sekonder metabolitlerin biyosentezi merak konusu olmuştur. Gen bazlı teknolojik yöntemlerin ortaya çıkmasıyla, kallus kültürleri ve diğer bitki doku kültürü teknolojileri için yeni uygulamalar geliştirilmiştir. Bitki hücre kültürleri, antikanser ilaçları gibi terapötik olarak değerlendirilebilecek ilgili sekonder metabolitlerin biyoreaktörler kullanılarak büyük ölçekli üretimin sağlanmasında etkili bir yolu temsil etmektedir (Efferth, 2019).

Kallus; farklılaşmamış ve organize olmamış hücreler yığıdır. Kallus kültürü, *in vitro* koşullarda bitkilerden alınan organ veya doku eksplantlarının karbon kaynağı ve bitki büyüme düzenleyicileri ilaveli çoğunlukla yarı-katı besin ortamlarında kültüre alınan ve organize olmamış hücre yığınlarının oluşturulduğu bir tekniktir (Gürel ve ark., 2016). Karasal bitkilerin tüm büyük aileleri, farklılaşmamış (non-differentiated) kallus hücreleri tarafından geri kazanılmaktadır. Bu kallus hücreleri biyoteknolojik uygulamalar için son derece önemlidir ve *in vitro* olarak sürekliliği sağlanabilir. Bitkinin bölünebilme özelliğine sahip hücrelerin bulunduğu herhangi bir kısmı (endosperm, polen, embriyo, yaprak sapı, kök kısımları, internodlar vs.) kallus kültürleri üretmek için eksplant kaynağı olarak kullanılabilir (Dağüstü, 2018). Kallus kültürlerinde hücreler düzenli olarak altkültüre alma ile *in vitro* şartlarda süresiz olarak muhafaza edilebilir. Besin ortamının azalması, kuruması, sıvı forma dönüşmesi, kahverenge dönüşmesi,

için ilgi uyandıran bir yoldur. Tüm dünyada olduğu gibi ülkemizde de tıbbi bitkiler ile yapılan çalışmalarda kallus kültürlerinden yararlanılmaktadır. Bu alanda biyomühendislik ve gen tabanlı tekniklerin gelişimini daha da artıracak olan, arzu edilen doğal ürünlerin biyosentetik yolları hakkında giderek daha fazla bilgi toplanması gerekliliğidir. Aynı şey, tarla ve bahçecilikte genetik olarak değiştirilmiş bitkilerin üretimi için de geçerlidir. Böylece kallus kültürü temelli ürünlerin geliştirilmesi ve pazarlanması yönünde de ticari anlamda girişimlerinde önü açılmış olacaktır.

Hücre Süspansiyon Kültürleri

Yonca Surgun Acar

14.1. Giriş

Hücre süspansiyon kültürleri, farklı tipte steril eksplantların bitki büyüme düzenleyicileri içeren besin ortamına aktarımı ile başlamakta, kültür ortamı üzerinde farklılaşmamış hücre kümelerinin oluşumu (kallus) ve ardından sürekli çalkalanan sıvı kültür ortamında hücrelerin gelişimi ile meydana gelmektedir (Neumann ve ark., 2020). Hücre süspansiyon kültürünün başlatılması ve büyütülmesi için gereken süre, bitki türüne ve büyüme ortamına bağlı olarak değişmektedir. Hücre süspansiyon kültürlerine kıyasla daha yavaş büyüyen kallus kültürleri, bitki hücre hatlarının uzun süreli muhafazasına izin vermekte ve hücre süspansiyon kültürlerinin kontaminasyonu durumunda araştırmacılara materyal kaynağı sağlamaktadır (Evans ve ark., 2003).

Bitki hücre kültürleri, memeli hücre kültürlerine göre önemli farklılıklar sergilemektedir. Bunlardan ilki kültüre alınan bitki hücreleri *in vitro* olarak sınırsız çoğalırken, memeli hücre kültürleri genellikle sınırlı sayıda hücre bölünmesi geçirmektedir. İki farklı hücre kültürü arasında ayrıca sıcaklık, organik karbon kaynağı, pH ve ışık gereksinimi gibi farklılıklar da bulunmaktadır (Hall, 2000).

Popülasyonunun homojenliği, materyalin farklı alanlarda kullanılabilirliği, yüksek oranda hücre büyümesi ve koşulların tekrarlanabilirliği hücre süspansiyon kültürlerini, hücresel ve moleküler çalışmalar için basitleştirilmiş bir model sistem hâline getirmektedir (Neumann ve ark., 2020). Bitki hücre kültürlerinin son yıllarda uygulama alanları, temel araştırmaların yanı sıra sekonder metabolitlerin büyük ölçekli üretimine yönelik olmuştur (Raj ve Saudagar, 2019). Bu bölümde kallus kültürü, hücre süspansiyon kültürünün aşamaları, büyüme ölçümleri ve kriyoprezervasyonunun yanı sıra tek hücre kültürleri ve hücre süspansiyon kültürlerinin kullanım alanları hakkında araştırmalar derlenmiştir.

Tütün hücre kültüründe ilk kompleks rekombinant proteinin (insan serum albümini) ekspresyonundan sonra (Sijmons ve ark., 1990) bitki hücrelerinde çoğunluğunun biyolojik aktivitesi olan çeşitli farmasötik proteinler üretilmiştir.

Biyoaktif ekstraktlar: Kallus ve hücre süspansiyon kültürleri aracılığıyla biyoaktif bileşiklerin üretimine ilişkin çok sayıda araştırmaya ek olarak bu kültürlerden hazırlanan özütlerin farmakolojik olarak da önemli aktiviteler gerçekleştirdiği belirlenmiştir. Örneğin, pirinç kallus süspansiyon kültüründen elde edilen ekstraktın, akciğer, göğüs ve kolon tümörlerinden türetilen dört kanser hücre hattına karşı da aktif olduğu bildirilmiştir (Deshpande ve ark., 2012; Rahman ve ark., 2016).

Renkli pigmentlerin üretimi: Antosiyaninler, birçok meyveye ve çiçeğe kırmızı, mor veya mavi renklerini veren, yaygın olarak dağılmış, suda çözünür bitki pigmentleridir. Antosiyaninlerin diyet bağlamındaki yararlı etkilerinin yanı sıra gıda ve kozmetik endüstrilerinde doğal renklendiriciler olarak kullanımı giderek artmaktadır. Bununla birlikte, ticari olarak sınırlı bulunurluğu ve çeşitliliği, bu doğal renklendiricilerin alternatif kaynakları için araştırmaları başlatmıştır. Bitkilerde, antosiyaninler gibi sekonder metabolitlerin yüksek düzeyde üretimi, regülatör genlerin yanı sıra biyosentetik enzimleri kodlayan genlerin modifikasyonu ile sağlanabilmektedir. Tütün hücre süspansiyon kültürleri kullanılarak yüksek seviyelerde birçok farklı antosiyanin elde edilmiş ve hücre kültürlerinin antosiyaninlerin endüstriyel ve tıbbi uygulamalarında kullanımı için önemli bir potansiyele sahip olduğu belirtilmiştir (Appelhaugen ve ark., 2018).

14.9. Sonuç

Hücre süspansiyon kültürleri, hücresel ve moleküler çalışmalar için uygun bir model sistemdir. Bitki ıslahında özellikle mutasyon ıslahı çalışmalarında, kozmetik, farmasötik ve tarımsal açıdan değerli sekonder metabolitlerin üretiminde bir takım avantajları da olan alternatif bir yöntemdir. Ayrıca hücre kültürleri, protoplast kültürleri için iyi bir başlangıç materyali olduğu gibi gen aktarımında da kullanılmakta olup transgenik bitki hücre kültürleri ile de büyük ölçekte sekonder metabolit üretme potansiyeline sahip tıbbi bitkilerin hızlı klonal çoğaltılması da mümkün olmaktadır.

BÖLÜM 15

Biyoreaktörler ile Bitki Sekonder Metabolitlerinin Üretimi

Hatice Çölgeçen

15.1. Giriş

Bitki metabolitleri tüm canlılardaki gibi temel olarak primer ve sekonder metabolitler olmak üzere ikiye ayrılmaktadır. Primer metabolitler yaşamsal faaliyetlerin sürdürülmesi için temel organik bileşikleridir. Tüm canlılarda hemen hemen ortaktır. Büyüme, gelişme ve üreme için karbonhidratlar, proteinler, yağlar ve nükleik asitler gerekli primer metabolitlerdir. Sekonder metabolitlerin temel yaşamsal faaliyetlerle ilgili görevleri bulunmaz. Fakat bitkilerin büyüme, gelişme ve üremesini kolaylaştıran, işlevleri artıran etkileri vardır. Bitkilerin yaşadıkları ortama uyumlarını sağlama, tozlaşma (polinizasyon) gibi üreme sürecindeki olaylara yardımcı olma, fungus, bakteri ve virüs gibi patojenlere karşı savunmada önemli görevleri olan moleküllerdir. Aslında sekonder metabolitlerin bitki metabolizmasında sentezlenmemesi, eksikliği gibi durumlarda bitki yaşamının kötü yönde etkilenmesi söz konusudur. Hatta yaşamlarının sona ermesi görülebilir bir sonuçtur. Sekonder metabolitler dediğimiz bu organik moleküllerin sentez yolları itibarıyla yapıları primer metabolitlere göre daha karmaşıktır (Bartwal ve ark., 2012; Alvarez, 2014).

Biyoloji biliminde sekonder metabolit terimi ilk kez Kossel (1891) tarafından literatürde kullanılmıştır. İnsanlık tarihinin başlangıcından bugüne aslında, insanlar tarafından iyileştirici etkileri bilinen bitkilerden yazılı kaynaklarda bahsedilmiştir. Tarihte bilinen en eski tıbbi bitki haşhaştır. Sümer (MÖ 4000) tabletlerinde haşhaşın ağrı kesici etkisi yanında dinsel ritüellerde kullanıldığı görülmektedir Modern bilimin gelişmesi sürecinde sekonder metabolitler hep artık ürünler olarak görülsede 20. yüzyılın ortalarından itibaren etkin bir şekilde insan sağlığı ve uygarlığının korunması ve ilerlemesi için kullanılmışlardır.

gıda, farmakoloji ve tıp alanında kullanılan bitkilerin ekonomik anlamda verimli ve sürdürülebilir üretimi biyoteknolojinin biyoreaktör gibi uygulamalarıyla genişleyecek ve yayılacaktır. Biyokütle ve bitki sekonder metabolitlerinin, moleküler tarım ürünlerinin üretiminde büyük değişimler ve ilerlemeler bugüne kadar yaşanmış ve bundan sonra da yaşanacaktır. Bunların endüstriyel ölçekte uygulanabilir üretimlerinin artırılması küresel ölçekte gıda ve ilaç sorunlarının çözümü olarak görülmektedir.

BÖLÜM 16

Bitkilerde *In Vitro* Seleksiyon

Meltem Bayraktar, Pervin Güntürkün, Aynur Gürel

16.1. Giriş

Bitkilerin yaşamlarını sürdürdükleri alanlarda, metabolizmalarını, büyüme ve gelişmelerini ve metabolizmalarını etkileyen ya da engelleyen çeşitli uygun olmayan herhangi bir durum veya maddeye stres adı verilmektedir (Gürel ve Avcıoğlu, 2001; Yılmaz ve ark., 2011). Bir çevrede devamlı olarak ya da arada sırada meydana gelen çok sayıdaki olumsuz, fakat hemen öldürücü olmayan koşullar stres olarak ifade edilir (Gürel ve Avcıoğlu, 2001). Stres faktörleri, orijinlerine göre abiyotik ve biyotik stres olarak iki gruba ayrılmaktadır. Abiyotik stres faktörleri; soğuk, sıcak, kuraklık, tuzluluk, su fazlalığı, radyasyon, çeşitli kimyasallar, oksidatif stres, rüzgâr ve toprakta besin yetersizliği gibi çevresel faktörleri içerirler. Biyotik stres faktörleri ise virüs, bakteri ve fungusları içeren patojenler, böcekler ve herbivorlardır (Yılmaz ve ark., 2011).

Tarım için büyük bir tehdit oluşturan biyotik ve abiyotik stresler, çeşitli tarım ürünlerinin tam genetik potansiyellerine ulaşmalarını engelleyerek ve onların üretimleri ile verimliliklerini sınırlandırarak olumsuz etkilere yol açarlar. Bu durum, dünya çapında oldukça büyük ekonomik kayıplara neden olmaktadır (Mahajan ve Tuteja, 2005). Bu açıdan, strese dayanıklı bitki geliştirme çabaları, ürün verimliliğini artırmak için büyük önem taşımaktadır. Geleneksel ıslah programları, ürün iyileştirilmesinde hayati bir rol oynamaya devam etmektedir ve stres toleransını indüklemek amacıyla cinsler ve türlerarası çaprazlamalarla uygun genleri istenilen bitkiye entegre etmek için kullanılırlar. Bununla birlikte, geleneksel ıslah yöntemleri ile çok az başarı elde edilmekte ve arzu edilen sonuçlara ulaşmada bu yöntemler yetersiz kalabilmektedir. Ayrıca, geleneksel ıslah yöntemlerinde prosedürler uzundur ve yüksek maliyetler gerektirmektedir. Bu nedenle, sürdürülebilir tarım için ürün iyileştirilmesinde/ıslahında karşılaşılan kritik sorunlara odaklanılarak çözmek üzere biyoteknolojik araçlara ihtiyaç duyulmaktadır (Rai ve ark., 2011; Rao ve Sandhya, 2019).

16.3. Sonuç

Biyotik ve abiyotik stresler, tarım ürünlerinin verimliliğini azaltmakta ve dünya çapında oldukça büyük ekonomik kayıplara neden olmaktadır. Bu nedenle, strese dayanıklı bitki üretimi her geçen gün daha önemli hâle gelmektedir. Geleneksel ıslah yöntemleri ile strese dayanıklı bitki üretim programları devam etse de bu yöntemler ile başarı son derece yoğun emek ve çaba sonucu kazanılabilmekte, prosedürler oldukça uzun ve yüksek maliyetli olmaktadır. Bu açıdan, alternatif olarak biyoteknolojik araçlar ön plana çıkmaktadır. Bitki doku kültürü teknolojisi hem biyotik hem de abiyotik streslere dayanıklı bitkiler geliştirmede pratik bir bitki ıslah aracı olarak görülmektedir. Doku kültürü temelli *in vitro* seleksiyon yöntemi kullanılarak strese toleranslı bitkiler elde edilebilmektedir. Bu yöntem ile seleksiyon ajanları içeren besin ortamlarında kültüre alınan bitkisel eksplantlardan istenilen özelliklere sahip *in vitro* bitkiler rejenere olabilmektedir. Şimdiye kadar *in vitro* seleksiyon tekniği kullanılarak birçok bitki türünde biyotik ve abiyotik streslere dayanıklı bitkilerin elde edildiği rapor edilmiştir. Bu durum, *in vitro* seleksiyonu strese dayanıklı bitkisel materyalin geliştirilmesinde ve üretiminde ümit var alternatif bir teknik hâline getirmiştir.

Somaklonal Varyasyon: Mekanizması ve Bitki Islahında Uygulama Alanları

Nazan Dağüstü

17.1. Giriş

Rekombinant DNA tekniklerinin gelişmesi, doku kültürleri yolu ile bitki rejenerasyonu ve bu iki tekniğin birlikte kullanılması yani genetik mühendisliği çalışmaları üretimi yapılan önemli bitki türlerinde dikkate değer ilerlemelerin kaydedilmesine neden olmuştur. Bununla beraber bu teknolojinin ilerlemesinde karşılaşılan mevcut problemler arasında kontrol edilemeyen stabilite veya *in vitro* kültürler sırasında ortaya çıkan somaklonal varyasyonlar gelmektedir. Bitki hücrelerinin *in vitro* büyümesi ve aseksüel olarak tam bir bitkiye dönüşmesi için geçirdiği evreler sadece hücrenin mitotik bölünmesini içeren aseksüel bir gelişmedir ve teorik olarak herhangi bir varyasyonun olmaması gerekmektedir. İdeal anlamda genetik olarak üniform bitkilerin klonal çoğaltımı beklenmektedir (Larkin, 1998). Ancak modern teknolojilerin kullanılması ile birlikte beklenmeyen ve kontrol edilemeyen varyasyonlar da ortaya çıkabilmektedir.

Fakat son yıllarda çeşitli mikroçoğaltım yöntemlerinin kullanılması ile birlikte indirekt rejenerasyonun (kallus oluşumundan sonra meydana gelen rejenerasyon) gerçekleştiği durumlarda önemli derece farklılaşma ve yeni varyantların ortaya çıkması söz konusu olmuştur. Bu durumda somaklonal varyasyon adventif olarak meydana gelen meristem oluşumunu da içine alan protoplast, organ vb gibi eksplantların *in vitro* kültüre alınmasıyla bu dokulardan rejenere edilen tüm bitkilerde görülebilir. Farklı mikroçoğaltım yöntemlerinin uygulanması sonucu meydana gelen kallus yapısı önemli derecede orijinal materyalden farklı varyantların açığa çıktığını göstermiş olup somaklonal varyasyonun daha yakından incelenmesi ve detaylı araştırmaların yapılması gerektiğini ortaya çıkarmıştır (Mgbeze ve Iserhienrhien, 2014).

BÖLÜM 18

Bitki Doku Kültürlerindeki Problemler

Filiz Altan

18.1. Giriş

Daha fazla gıda ürünü elde edilmesi, bitki bazlı ilaç üretiminin gerçekleştirilmesi, tarım alanındaki talebin karşılanması, tarımsal ve ekonomik açıdan önemli, nadir bulunan, nesli tükenmekte olan bitkilerin korunması oldukça önemlidir. Bu alanda yapılacak düzenlemelerin tıbbi ve ekolojik açıdan etkileri yüksektir ve geleneksel yöntemlerde başarı kaydedilmediğinde biyoteknolojik yollarla üretimin gerçekleştirilmesi sağlanabilir. Bitki doku kültürleri, modern biyoteknolojide, bitki gelişim süreçleri (Firm ve ark., 1994), gen işleyişi (Deng ve ark., 2010), mikroçoğaltım (Kumar ve Redd 2011) ve spesifik endüstriyel ve agronomik özelliklere (Loyola-Vargas ve Ochoa-Alejo 2018; Bednarek ve Orłowska 2020) sahip transgenik bitkilerin üretilmesi çalışmalarında yaygın olarak kullanılmaktadır. Bu nedenle, bitki doku kültürü teknolojisi, sağlıklı bitki materyali için virüslerin eliminasyonunu (Perotto ve ark., 2009; Taşkın ve ark., 2013), vejetatif olarak çoğaltılan bitki germplazmasının korunması (Rajasekharan ve Sahijram 2015) ve tehlike altındaki veya nesli tükenmekte olan bitki türlerinin kurtarılmasını amaçlamaktadır (Sarasan ve ark., 2006; Tazeb, 2017; Bednarek ve Orłowska 2020). Ayrıca, ticari olarak önem arz eden sekonder metabolitlerin üretimi için de ilgi çekicidir (Loyola-Vargas ve Ochoa-Alejo 2018). Hücre totipotensisi ve hücresel plastisite, bitki doku kültürünün arkasındaki ana fizyolojik prensiptir. Hücre plastisitesi kültür hücrelerinin bölünme ve farklılaşma kapasitesinden etkilenir (Garcia- Gonzales ve ark., 2010). Tek bir hücre ana bitki gibi bütün bir bitkiye dönüşebilir (Bhoite ve Palsikar 2014). Çoğaltma işleminin kontrollü ortamda olması nedeniyle mevsimsel problemler ile karşılaşılmaz. Bitkiler büyük ölçekte yetiştirilmesine rağmen genetik olarak değişmeyecektir, türüne uygun olacaktır (Abass, 2013). Bitki doku kültüründe, bitkiler besin ortamlarında yetiştirilir, burada bitkiler için gerekli besin maddeleri mevcuttur ve ayrıca zengin besinlere sahip olduklarından mikroorganizma-

lemesi ve gelişmesi gerekmektedir. Bütün insanların gerekli nitelikteki ve kalitedeki ürüne ihtiyacı tarımdan karşılanmaktadır, fakat günümüzde tarımın karşılaştığı bazı sınırlamalar söz konusudur. Mikroçoğaltım yoluyla geleneksel bazı vejetatif üretimle elde edilecek üründen daha çok ve kaliteli ürün alınarak tarımın bazı sorunları ortadan kaldırılabilecektir. Bunun için:

- Eğitimli personelin artırılması sağlanmalı,
- Standart mikroçoğaltım prosedürlerinin oluşturulması için gerekli olan araştırma geliştirme çalışmalarının sayısı artırılmalı,
- Bu konuda daha ileri durumda olan ülkelerle teknoloji ve bilgi alışverişi yapılmalı,
- *In vitro* üretim tekniğinde var olan kontaminasyon, yüksek maliyet vs. sorunların ortadan kaldırılması için gerekli çalışmalar yapılmalıdır.

18.5. Sonuç

In vitro bitki kültürü, bitki bilimi araştırmalarındaki ilerlemelerin ayrılmaz bir parçası hâline gelmiştir. Bitki doku kültürü teknikleri, bitki büyümesi ve gelişiminin yakından izlenmesine ve hassas bir şekilde manipüle edilmesine, spesifik varyasyon kaynağını/kaynaklarını analiz etmek için *in vitro* olarak kontrollü bir ortamın varlığına ve hücre, doku ve organ seviyelerinde büyümeye imkân tanır. Bitki doku kültürü, bitki bilimi araştırmalarının ilerlemesindeki rolüne ek olarak gıda üretimi, mahsulün iyileştirilmesi, sekonder metabolitlerin üretimi ve nesli tükenmekte olan türlerin korunmasında da büyük katkılar sağlamaktadır. Doku kültürü protokollerinin geliştirilmesi, büyümenin çeşitli kimyasal, fiziksel ve çevresel faktörlerinin optimize edilmesini içeren titiz bir prosedürdür. Bitkilerin *in vitro* olarak büyütülmesi konusundaki titiz çabalara ve bitki doku kültüründe kaydedilen ilerlemelere rağmen, bu tekniğin uygulanması hâlâ çeşitli fizyolojik ve gelişimsel problemlerden etkilenmektedir. Sorunlar anormal büyümeden artan genetik değişkenlik/kararsızlığa kadar değişmektedir. Bu bölümde doku kültüründeki fizyolojik ve gelişimsel sorunların ciddiyeti vurgulanmış ve karşılaşılan problemler dikkate alınarak çözüm önerileri sunulmaya çalışılmıştır.

BÖLÜM 19

Bitki Doku Kültürü Araştırmalarında Planlama, Verilerin Toplanması ve Değerlendirilmesi

Ülkü Emirođlu, Aynur Gürel, Betül Bürün

19.1. Giriş

“Yaşayan organizmaları, bu organizmaların ürünlerini, biyolojik malzemeyi ve sistemi kullanarak insana ya da çevreye yararlı bir ürün üretmek, bir problemi çözmek için yapılan sanayi ölçeğinde üretim yöntemleri ve bilgisi” olarak tanımlanan biyoteknoloji, temel biyoloji bilimleri, mühendislik ve bilişim teknolojilerinin iç içe geçtiği ve bir arada kullanıldığı geniş bir disiplindir (Anonim, 2020a,b). Çeşitli alanlarda, özellikle de ilaç, tohum, gıda ve petrol endüstrilerindeki biyoproseslerin incelenmesinde gerekli ilerlemeleri sağlayan biyoteknoloji, son zamanlarda genetik sekanslamanın zorluklarını gidermek, genler ve proteinler arasındaki ilişkileri tanımlamak için kullanılabilir güçlü bir matematiksel temelli yazılım geliştirmek üzere bilgisayar mühendisliğini kullanan biyoinformatik bilim dalına dayandırılmaya başlanmıştır. Ayrıca matematik, özellikle de istatistik, her bilimsel süreçte yer alarak araştırma sonuçlarının güvenilirliğini artırmaktadır (Pereira ve ark., 2018).

Genetik mühendisliği ile birlikte, bitki biyoteknolojisine önemli katkılar sunan doku kültürlerinde; bazı biyolojik ve biyokimyasal olayların aydınlatılmasını amaçlayan, *in vitro* kültüre dayalı temel araştırma niteliğindeki çalışmalar yanında, rejenerasyonun olmaması ya da düşük oranda gerçekleşmesi gibi kültür sırasında karşılaşılan sorunların çözümüne yönelik araştırmalar da yapılmaktadır. Ayrıca mikroüretimde olduğu gibi çoğaltma hızını, dolayısı ile üretimi artırarak maliyeti düşürmeyi; hücre ve saçaklı kök kültürlerinde sekonder metabolit üretimini sağlamayı ya da artırmayı hedefleyen; ışık yoğunluğu, sıcaklık, ortamdaki CO₂ oranı gibi dış koşulların *in vitro* kültürdeki bitkisel materyalin gelişmesine etkilerini ortaya koyan araştırmalar da düzenlenmektedir.

dirilmesinde, farklılıkların önemi için istatistiksel yazılım programlarının farklı versiyonları kullanılmakta, tek ya da iki yönlü varyans analizine tabi tutulmaktadır.

Biyoteknoloji alanında araştırma verilerinin istatistik analizleri için, bilgisayar yazılımlarından yararlanılmakta, ve bu programların kullanımının gittikçe yaygınlaştığı gözlenmektedir. Ayrıca, son zamanlarda bunlara bir alternatif olarak “yapay sinir ağları teknolojisi (YSA)” de kullanılmaya başlanmıştır. Bu teknoloji, karmaşık ilişkilerin anlaşılmasını sağlamak için geleneksel istatistiksel tekniklere kıyasla üstün tahmin gücü sunmaktadır, ve biyolojik süreçlerin güvenilir ve amaca yönelik değerlendirilmesinde etkilidir. İstatistiksel analizlerin bir alternatifi olmakla birlikte bazı özellikleriyle YSA teknolojisinin üstünlükleri vardır. YSA teknolojisi kullanıcı dostudur ve istatistik bakımından son derece uzmanlaşmış bir bilgi (lojistik regresyon, Poisson regresyonu ve ANOVA) gerektirmemektedir. İkinci olarak YSA'lar, sınırlı sayıda deneme ve düşük maliyetle modellemeye izin veren güçlü bir teknoloji oluştururlar. Ek olarak IN-Form yazılımı, aynı zamanda bir doku kültürü sürecini optimize edebilir ve en iyi koşulları çıkarabilir. Gelecekte YSA teknolojisinin bitki doku kültürü araştırmalarında yaygın olarak kullanılması olasıdır.

BÖLÜM 20

Bitki Biyoçeşitliliğinin Korunması

Ergun Kaya, Selin Galatalı, Damla Ekin Özkaya, Onur Çelik

20.1. Giriş

Dünya zengin çeşitlilikte yaşam formları ile donatılmıştır ve bu canlı organizmaların milyonlarcası doğa kanunları tarafından iyi bir şekilde birbirine bağlanmıştır. Tek hücreli birincil üreticilerden yüksek bitki ve hayvanlara kadar çeşitli yaşam formlarının karşılıklı ilişkileri, bu yeşil gezegenin benzersiz bir özelliğini ortaya koymaktadır. Dünyadaki yaşamın çeşitliliği genellikle biyolojik çeşitlilik diğer bir deyişle biyoçeşitlilik olarak adlandırılır. Dünya üzerinde dağlar, çöller, ormanlar, göller, okyanuslar gibi çok farklı ekosistemler üzerinde canlılığını sürdüren bitki, hayvan, mantar ve mikroorganizma türlerinin sayısı, bu türlerdeki muazzam gen çeşitliliği biyoçeşitliliğin parçalarını teşkil eder. Etkin koruma ve sürdürülebilir kalkınma stratejileri, bu biyoçeşitliliği korumaya yönelik yaklaşımlar ileri sürer. Hemen hemen tüm kültür çeşitlerinin orijinleri bir şekilde biyolojik çeşitliliğe dayanmaktadır ve biyoçeşitlilik, ne kadar küçük olursa olsun her türün oynayacağı önemli bir role sahip olduğu ekosistem üretkenliğini artırmaktadır. Örneğin, daha fazla sayıda bitki türü, daha fazla ürün çeşidi anlamına gelirken daha fazla tür çeşitliliği, tüm yaşam formları için doğal sürdürülebilirlik sağlar. Diğer taraftan, sağlıklı ekosistemler, pek çok afete dayanabilecek güce sahiptir ve zarar görmeden korunabilmektedir. Bu nedendir ki insan olarak her ne kadar gezegende baskın türler olsak da doğal yaşamdaki biyoçeşitliliği her zaman korumak zorundayız (Cardinale ve ark., 2012; Kaya ve ark., 2018).

Biyoçeşitlilik kelimesi 1986 yılında Walter G. Rosen tarafından literatüre girmiş olup son zamanlarda oldukça popüler hâle gelmiştir. Biyoçeşitlilik, bütün yaşam formlarının karşılığı olarak tanımlandığında, artık sürdürülebilir geçim ve gıda güvenliğinin temeli olarak kabul edilmiştir. Bilim insanları, omurgasızlar ve mikroorganizmalar da dâhil olmak üzere 50 milyondan fazla bitki ve hayvan türünün Dünya’da mevcut olduğunu ve günümüze kadar yapılan sistematik çalışmalarla bunun neredeyse iki milyo-

yum folyolardan kesilen 5×15 mm boyutlarında şeritler üzerine steril mikropipet yardımıyla damlacıklar şeklinde damlatılır ve soğuğa alıştırma ve sukroz önkültürden gelen bitkisel materyalden izole edilen eksplantlar her bir damla içerisine bir eksplant olacak şekilde yerleştirilerek diğer vitrifikasyon prosedürlerindeki aşamalar uygulanır. İlk olarak patates sürgün uçlarının kriyoprezervasyonunda (kriyokoruyucu olarak DMSO uygulanmıştır) uygulanan yöntem (Schafer-Menhur ve ark., 1997), daha sonra, kriyokoruyucu çözeltili olarak PVS2 ozmoaktif çözeltili kullanılarak muz (*Musaceae*) ve *Colocasia esculenta* var. *esculenta* bitkilerinin kriyoprezervasyonunda başarılı bir şekilde uygulanmıştır (Panis ve ark., 2005; Sant ve ark., 2008). Geniş bir genotip aralığındaki bitkilere başarılı bir şekilde uygulanabilen yöntemin bir diğer farkı ise çözme aşaması oda sıcaklığında 1-1,2 M sukroz içeren sıvı besin ortamında doğrudan gerçekleştirilmesidir (Sakai ve Engelmann, 2007; Sakaive ark., 2008). Yöntem, günümüzde en çok kullanılan kriyoprezervasyon tekniklerinden birisidir.

20.3. Sonuç

Son yirmi yılda biyoteknolojide önemli gelişmeler yaşanmıştır ve şu anda tehdit altındaki bitki germplazmını korumak için yeni yöntemler mevcuttur. Yeni geliştirilen teknikler yeni seçenekler sunmakta ve tohum, polen, embriyo ve *in vitro* kültürler şeklinde korumayı kolaylaştırmaktadır. *In vitro* teknikler ve saklama yöntemleri, minimum alan kullanarak kapsamlı koleksiyonun oluşturulmasını sağlar ve *in vitro* bitki stoklarının oluşturulması, yabancı popülasyonlar üzerindeki toplanma baskısını azaltarak anında fayda sağlamaktadır. Bu koleksiyonlar, yabancı popülasyonun geri kazanılması, moleküler araştırmalar, ekolojik çalışmalar veya ekonomik kullanımlar için sürekli olarak değerli materyal tedarikine izin vermektedir.

4. BÖLÜM

ÖRNEKLEME YÖNTEMLERİ, YANLILIK, RANDOMİZASYON VE KÖRLEME	113
4.1. Örneklem (Sampling) Nedir?	114
4.2. Örneklem Yöntemleri (Sampling Methods)	115
4.2.1. Olasılıklı Örneklem Yöntemleri (Probabilistic Sampling Methods)	115
4.2.1.1. Basit Tesadüfi Örneklem (Simple Random Sampling)	115
4.2.1.2. Tabakalı Örneklem (Stratified Sampling)	115
4.2.1.3. Sistemik Örneklem (Systematic Sampling)	116
4.2.1.4. Küme Örneklem (Cluster Sampling)	116
4.2.2. Olasılıklı Olmayan Örneklem Yöntemleri (Non-Probabilistic Sampling Methods)	117
4.3. Örneklem Yaparken Karşılaşılabilecek Hatalar	117

4.4. Örneklem Büyüklüğünün Hesaplanması	118
4.5. Araştırmalarda Yanlılık (Bias), Randomizasyon (Randomization) ve Körleme (Blinding)	120
4.5.1. Yanlılık (Bias)	120
4.5.2. Randomizasyon/Rastgeleleştirme	121
4.5.2.1. Randomizasyon Türleri	122
4.5.3. Körleme (Blinding)	125
4. BÖLÜM: KAZANIMLARIN ÖLÇÜLMESİ-ÇOKTAN SEÇMELİ TEST SORULARI	127
4. BÖLÜM SORULARI CEVAP ANAHTARI	133

5. BÖLÜM

TANIMLAYICI İSTATİSTİKLER (MERKEZİ EĞİLİM ÖLÇÜLERİ VE DAĞILIM ÖLÇÜLERİ)	135
5.1. Merkezi Eğilim Ölçüleri (Central Tendency Measures)	136
5.1.1. Analitik Ortalamalar (Analytical Means)	137
5.1.1.1. Aritmetik Ortalama (Arithmetic Mean)	137
5.1.1.2. Ağırlıklı/Tartılı Ortalama (Weighted Mean)	139
5.1.1.3. Geometrik Ortalama (Geometric Mean)	141
5.1.1.4. Harmonik Ortalama (Harmonic Mean)	143
5.1.1.5. Kareli Ortalama (Squared Mean)	145
5.1.2. Analitik Olmayan Ortalamalar (Non-Analytical Means)	146
5.1.2.1. Mod/Tepe Değeri (Mode)	146
5.1.2.2. Medyan/Ortanca (Median)	147
5.1.2.3. Kartiller/Çeyrekler (Quartiles)	148
5.1.2.4. Desiller/Ondabirlikler (Deciles)	149
5.1.2.5. Pörsentiller/Yüzdebirlikler (Percentiles)	149
5.2. Dağılım/Dağılım Ölçüleri (Dispersion Measures)	150
5.2.1. Değişim Genişliği/Değişim Aralığı/Ranj (Range)	153
5.2.2. Ortalama Mutlak Sapma (Mean Absolute Deviation)	154
5.2.3. Varyans (Variance)	155
5.2.4. Standart Sapma (Standard Deviation)	160
5.2.5. Standart Hata/Ortalamanın Standart Hatası (Standard Error of Mean: SEM)	161
5.2.6. Değişim Katsayısı/Varyasyon Katsayısı (DK/VK) (Coefficient of Variation: CV)	162
5.3. Uç/Aykırı (Outlier) Değerlerin Belirlenmesi	164
5.4. Çarpıklık/Asimetri (Skewness)	167

5.4.1. Pearson Çarpıklık (Skewness) Katsayısı	168
5.4.2. Bowley'in Çarpıklık (Skewness) Katsayısı	168
5.5. Moment Çarpıklık (Skewness) ve Basıklık (Kurtosis) Katsayıları	169
5.6. Frekans Tabloları Oluşturma ve Bazı Tanımlayıcı İstatistiklerin Hesaplanması	173
5. BÖLÜM: KAZANIMLARIN ÖLÇÜLMESİ-ÇOKTAN SEÇMELİ TEST SORULARI	181
5. BÖLÜM SORULARI CEVAP ANAHTARI	188

6. BÖLÜM

OLASILIK, TEMEL KAVRAMLAR VE ÖZELLİKLERİ	189
6.1. Olasılığa (Probability) Giriş	190
6.2. Olasılıkla İlgili Temel Kavram ve Tanımlar	192
6.3. Olasılığın Tarihsel Gelişimi	196
6.4. Toplam Olay Sayısını Bulmada Kullanılan Sayma Kuralları	200
6.5. Örnek Uzayındaki Toplam Olay Sayısının Bulunması	201
6.5.1. Basit Olaylarda Toplam Olay Sayısının Bulunması	201
6.5.2. Karmaşık Olaylarda Toplam Olay Sayısının Bulunması	201
6.5.2.1. Permütasyon	201
6.5.2.2. Kombinasyon	206
6.5.2.3. Ağaç Diyagramları İle Toplam Olay Sayısının Bulunması	209
6.6. Koşullu/Şartlı Olasılık (Conditional Probability)	210
6.7. Bayes Teoremi	212
6.8. Çebişev Teoremi (Chebyshev's Theorem)	214
6.9. Bağımsız ve Bağımlı Olaylar	215
6.9.1. Bağımsız Olaylar	215
6.9.2. Bağımlı Olaylar	216
6.10. Kesikli ve Sürekli Şans Değişkenleri İçin Olasılık Dağılımları (Beklenen Değer, Varyans ve Olasılıkların Hesaplamaları)	216
6.10.1. Kesikli Şans Değişkenlerinin Olasılık Fonksiyonları	217
6.10.2. Sürekli Şans Değişkenlerinin Olasılık Fonksiyonları	219
6. BÖLÜM: KAZANIMLARIN ÖLÇÜLMESİ-ÇOKTAN SEÇMELİ TEST SORULARI	221
6. BÖLÜM SORULARI CEVAP ANAHTARI	224

7. BÖLÜM

BAZI TEORİK OLASILIK DAĞILIMLARI	225
7.1. Sürekli Olasılık Dağılımları (Continous Probability Distributions)	226
7.1.1. Normal Dağılım	226

7.1.1.1. Normal Dağılımın Özellikleri	226
7.2. Kesikli Olasılık Dağılımları (Discrete Probability Distributions)	235
7.2.1. Binom Dağılımı	235
7.2.1.1. Binom Dağılımının Özellikleri	236
7.2.2. Poisson Dağılımı	239
7.2.2.1. Poisson Dağılımın Özellikleri	239
7. BÖLÜM: KAZANIMLARIN ÖLÇÜLMESİ-ÇOKTAN SEÇMELİ TEST SORULARI	242
7. BÖLÜM SORULARI CEVAP ANAHTARI	246

8. BÖLÜM

HİPOTEZ TESTLERİ VE NORMALLİK TESTLERİ	247
8.1. Hipotez Testlerine Giriş	248
8.1.1. Hipotez Testinin Aşamaları	249
8.2. Normallik Testleri	257
8.2.1. Shapiro-Wilk Testi	260
8.2.2. Kolmogorov-Smirnov Testi	262
8. BÖLÜM: KAZANIMLARIN ÖLÇÜLMESİ-ÇOKTAN SEÇMELİ TEST SORULARI	265
8. BÖLÜM SORULARI CEVAP ANAHTARI	268

9. BÖLÜM

BAZI PARAMETRİK TESTLER VE PARAMETRE TAHMİNİ	269
9.1. Parametrik Testler ve Özellikleri	270
9.1.1. Z-testi	270
9.1.1.1. Tek Örneklem Ortalaması İçin Z-testi	270
9.1.1.2. Bağımsız İki Örneklem Ortalamasının Karşılaştırılması İçin Z-testi	272
9.1.1.3. Tek Örneklem Oranı İçin Z-testi	274
9.1.1.4. Bağımsız İki Örneklem Oranının Karşılaştırılması İçin Z-testi	275
9.1.2. Student t -testi.....	277
9.1.2.1. Tek Örneklem Ortalaması İçin t -testi	278
9.1.2.2. Bağımsız İki Örneklem Ortalamasının Karşılaştırılması İçin t -testi	279
9.1.2.3. İlişkili İki Örneklem Ortalamasının Karşılaştırılması İçin t -testi	282
9.1.3. Tek Yönlü Varyans Analizi (F -testi, One-way ANOVA)	284
9.1.3.1. Çoklu Karşılaştırma Testleri (Multiple Comparison Tests)	287

9.1.3.2. Varyansların Homojenliğinin Testi (Levene Test)	293
9.1.4. Tekrarlanan Ölçümler Varyans Analizi (Repeated Measures ANOVA)	295
9.2. Parametre Tahminleri	296
9.2.1. Nokta Tahmini ve Özellikleri	296
9.2.2. Güven Aralığı Tahmini	297
9. BÖLÜM: KAZANIMLARIN ÖLÇÜLMESİ-ÇOKTAN SEÇMELİ TEST SORULARI	299
9. BÖLÜM SORULARI CEVAP ANAHTARI	304

10. BÖLÜM

PARAMETRİK OLMAYAN TESTLER	305
10.1. Parametrik Olmayan (Non-Parametric) Testlere Giriş	306
10.1.1. Tek Örneklem İşaret (Sign) Testi	307
10.1.2. Medyan (Mood's Median) Testi	311
10.1.3. Mann-Whitney U Testi	314
10.1.4. Wilcoxon İşaretleli Sıra (Wilcoxon Signed Rank)	Testi 318
10.1.5. Kruskal-Wallis H Testi	320
10.1.6. Friedman Testi	324
10. BÖLÜM: KAZANIMLARIN ÖLÇÜLMESİ-ÇOKTAN SEÇMELİ TEST SORULARI	327
10. BÖLÜM SORULARI CEVAP ANAHTARI	330

11. BÖLÜM

KATEGORİK VERİLERİN ANALİZİ	331
11.1. Kategorik Verilerin Analizi	332
11.1.1. Ki-kare (Chi-square) Testi	332
11.1.1.1. Ki-kare Testinin Varsayımları	335
11.1.1.2. Örnek Soru Çözümleri	336
11.1.2. McNemar Testi	344
11.1.2.1. McNemar Testinin Varsayımları	344
11.1.2.2. Örnek Soru Çözümleri	344
11.1.3. Cochran Q Testi	346
11.1.3.1. Cochran Q Testinin Varsayımları	346
11.1.3.2. Örnek Soru Çözümü	347
11. BÖLÜM: KAZANIMLARIN ÖLÇÜLMESİ-ÇOKTAN SEÇMELİ TEST SORULARI	348
11. BÖLÜM SORULARI CEVAP ANAHTARI	354

12. BÖLÜM

KORELASYON VE REGRESYON ANALİZİ	355
12.1. Korelasyon ve Regresyon Analizlerine Giriş	356
12.1.1. Korelasyon Analizi (Correlation Analysis)	358
12.1.1.1. Pearson Korelasyon Katsayısı (r)	364
12.1.1.2. Spearman Sıra Korelasyon (Rho) Katsayısı (r_s)	367
12.1.1.3. Kısmi Korelasyon Katsayısı (Partial Correlation Coefficient)	369
12.1.1.4. Diğer Bazı Korelasyon Katsayıları	370
12.2. Regresyon Analizi (Regression Analysis)	372
12.2.1. Basit Doğrusal Regresyon Analizi (Simple Linear Regression Analysis)	372
12.2.2. Çoklu Doğrusal Regresyon Analiz (Multiple Linear Regression Analysis)	376
12. BÖLÜM: KAZANIMLARIN ÖLÇÜLMESİ-ÇOKTAN SEÇMELİ TEST SORULARI	378
12. BÖLÜM SORULARI CEVAP ANAHTARI	384

13. BÖLÜM

SAĞLIK ALANINA ÖZEL BAZI İSTATİSTİK YÖNTEMLER	385
13.1. Sağlık Alanına Özel Bazı İstatistik Yöntemler Giriş	386
13.1.1. Sağlıkım/Yaşam/Survi Analizi (Survival Analysis)	386
13.1.1.1. Kaplan-Meier Yöntemi	388
13.1.1.2. Yaşam Tabloları (Life Tables/Actuarial) Yöntemi	391
13.1.1.3. Sağlıkım Eğrilerinin Karşılaştırılması	396
13.1.2. Tanı Testi Ölçütleri ve ROC Analizi	404
13.1.2.1. Tanı Testleri ve Ölçütleri	404
13.1.2.2. ROC (Alıcı İşlem Karakteristikleri: Receiver Operator Characteristics) Analizi	407

15. BÖLÜM

İSTATİSTİK ANALİZLER İÇİN VERİ DOSYASI OLUŞTURMA VE SPSS

UYGULAMALARI	433
15.1. MS-Excel'de Veri (Data) Dosyası Oluşturma	433
15.2. MS-Excel'de Oluşturulmuş Veri Dosyasının SPSS Programına Aktarılması ...	438
15.3. SPSS'te Veri (Data) Dosyası Oluşturma	441
15.3.1. SPSS'te Değişken Tanımlama (Variable View) Sekmesi ve Özellikleri	442
15.3.2. SPSS'te Veri Girişi ve Görüntüleme (Data View) Sekmesi	446
15.4. SPSS'te Örneklem Oluşturma	450
15.4.1. Basit Tesadüfi Örneklem Yöntemiyle Örneklem Oluşturma	450
15.4.2. Sistematik Örneklem Yöntemiyle Örneklem Oluşturma	458
15.5. SPSS'de Kategorik Değişkenin Kategorilerine Göre Sayısal/Nümerik Değişkenlerin Tanımlayıcı İstatistiklerin Bulunması	460
15.5.1. SPSS'te Oluşturulan Tablolardan Grafik Oluşturmak	464
15.6. SPSS'te Değişkenler İçin Frekans Tablosu Oluşturma	465
15.7. Anketlerde Çok Cevaplı Sorularının SPSS'e Girişi ve Frekanslarının Analizi ..	470
15.8. SPSS'te Sayısal Değişkenler İçin Genel Tanımlayıcı İstatistiklerin Hesaplanması	474
15.9. SPSS'te Kategorik Değişkenlere Göre Sayısal/Nümerik Değişkenlerin Tanımlayıcı İstatistikleri ile Uç/Aykırı (Outlier) Değerlerin Bulunması ve Normallik Testleri	476
15.10. SPSS'te Çaprazlık/Kontenjans Tablosu Oluşturma ve Ki-Kare Analizi	486
15.10.1. SPSS'te Kategorik Değişkenlerin Doğrudan Frekansları Üzerinden Ki-Kare Analizi	490
15.10.1.1. Bir Kategorik Değişkenin Kategorilerindeki Frekansların Homojenliğinin Ki-Kare Testi	490
15.10.1.2. İki Kategorik Değişkenin Doğrudan Frekansları Üzerinden Ki-Kare Bağımsızlık Analizi	494
15.11. SPSS'te Odds Oranı ve Rölatif Risk Hesaplama	496
15.12. SPSS'te Kategorik Değişkenlere Göre Sayısal Değişkenlerin Tanımlayıcı İstatistiklerinin Bulunması ve Ortalamaların Karşılaştırılması	499
15.13. SPSS'te Tek Örneklem <i>t</i> -Testi	502
15.14. SPSS'te Bağımsız İki Örneklem Ortalamasının <i>t</i> -Testi	504
15.15. SPSS'te İlişkili İki Örneklem <i>t</i> -Testi	506

15.16.	SPSS’te Tek Yönlü Varyans Analizi (One-way ANOVA) ve Çoklu Karşılaştırma Testleri (Post Hoc Multiple Comparison Tests)	509
15.16.1.	Tek Yönlü Varyans Analizi (One-way ANOVA)	509
15.16.2.	Genelleştirilmiş Doğrusal Model Altında Tek Değişkenli Varyans Analizi (General Linear Model-Univariate Analysis of Variance) ...	513
15.17.	SPSS’te Tekrarlanan Ölçümler (Repeated Measures ANOVA) Varyans Analizi	520
15.18.	SPSS’te Tek Örneklem İşaret (Sign) Testi	529
15.19.	SPSS’te Bağımsız İki Örneklem İçin Mann-Whitney <i>U</i> Testi	531
15.20.	SPSS’te Kruskal-Wallis <i>H</i> Testi	533
15.21.	SPSS’te ilişkili İki Örneklem Wilcoxon İşaretli Sıra Testi	536
15.22.	SPSS’te Korelasyon Analizi (Correlation Analysis)	538
15.22.1.	SPSS’te Kısmi Korelasyon Analizi (Partial Correlation Analysis)	540
15.23.	SPSS’te Basit Doğrusal Regresyon Analizi (Simple Linear Regression Analysis)	543
15.24.	SPSS’te Sağkalım/Yaşam Analizi (Survival Analysis)	548
15.24.1.	SPSS’te Sağkalım Analizi-Yaşam Tabloları (Life Tables)	548
15.24.2.	SPSS’te Sağkalım Analizi-Kaplan-Meier Yöntemi (Kaplan-Meier Method)	552
15.25.	SPSS’te Tanı Testleri İçin ROC Analizi	560
15.26.	SPSS’te İkili Logistik Regresyon Analizi (Binary Logistic Regression Analysis)	563

İÇİNDEKİLER

ÖN SÖZ	iii
1. BİYOKÜTLE.....	1
1.1. Biyokütlenin Fizikokimyasal Yapısı.....	4
1.2. Katı Yakıtların Genel Sınıflandırılmasında Biyokütlenin Yeri.....	7
1.2.1. Atomik oran	7
1.2.2. Lignoselülozik bileşenlerinin bağıl oranları	9
1.2.3. Üçlü (Ternary) diyagram.....	11
1.3. Biyokütlenin Fiziksel ve Kimyasal Özelliklerinin Yakıt Özelliklerine Etkisi	12
1.4. Biyokütlenin Yoğunluğu	13
1.4.1. Gerçek yoğunluk	13
1.4.2. Görünür yoğunluk	14
1.4.3. Yığın yoğunluğu.....	14
1.5. Biyokütlenin Karakterizasyonu	16
1.5.1. Kısa (proximate) analizler	16
1.5.2. Nihai (elementel, ultimate) analizler	20
1.5.3. Biyokütlenin ısı değeri	21
1.6. Biyokütle Bileşimini İfade Etmenin Esasları.....	23
1.7. Biyokütlenin Ekserjisi	24
1.8. Biyokütle Enerjisi Dönüştürme Yöntemleri	25
Kaynaklar	28
2. FİZİKSEL İŞLEMLER.....	31
2.1. Mekanik Öğütme ve Parçalama	31
2.2. Biyokütlenin Kurutulması	35
2.3. Biyokütlenin Yoğunlaştırılması (Pelet ve Briket).....	36
2.3.1. Peletleme sistemleri.....	37
2.3.2. Briketleme sistemleri.....	38
2.3.3. Vidalı ekstrüderler.....	40
2.3.4. Farklı biyokütlelerin yoğunlaştırılmasında özgül enerji tüketimleri	41
Kaynaklar	42
3. BİYOKÜTLENİN DOĞRUDAN YAKILMASI.....	45
3.1. Yanma Olayı.....	45
3.2. Stokiyometrik Hava Oranı	51

3.3. Doğrudan Yakmanın Çevresel Etkileri.....	53
3.4. Doğrudan Yakmada Kullanılan Biyokütle Ürünleri.....	54
3.5. Biyokütle Yakma Sistemleri.....	56
3.5.1. Sabit yataklı yakma sistemleri.....	56
3.5.2. Akışkan yataklı yakma sistemleri.....	68
3.5.3. Pülverizasyonlu (süspansiyonlu) yakma sistemleri.....	71
Kaynaklar.....	72
4. TORREFAKSİYON.....	75
4.1. Torrefaksiyon Mekanizması.....	76
4.2. Torrefaksiyon Ürünleri ve Özellikleri.....	79
4.3. Torrefaksiyon Derecesi.....	79
4.3. Torrefaksiyon Ürününün Enerji Kalitesi.....	80
4.4.1. Kütle verimi.....	80
4.4.2. Enerji yoğunluğu.....	82
4.4.3. Isıl değer geliştirme faktörü.....	82
4.4.4. Enerji verimliliği.....	83
4.5. Torrefaksiyon Yöntemleri.....	83
4.5.1. Kuru torrefaksiyon.....	84
4.5.1.1. Non-oksidatif torrefaksiyon.....	84
4.5.1.2. Oksidatif torrefaksiyon.....	85
4.5.2. Yaş torrefaksiyon.....	86
4.6. Torrefaksiyon İşlemi Görmüş Biyokütlenin Kullanım Alanları.....	87
Kaynaklar.....	89
5. PİROLİZ.....	93
5.1. Piroliz Ürünleri.....	94
5.1.1. Sıvılar.....	95
5.1.2. Katılar.....	96
5.1.3. Gazlar.....	97
5.2. Biyokütle Pirolizini Etkileyen Faktörler.....	98
5.2.1. Biyokütle bileşimi ve parçacık boyutu.....	98
5.2.2. Piroliz sıcaklığı.....	99
5.2.3. Piroliz ortam basıncı.....	100
5.2.4. Piroliz ortamı.....	101
5.2.5. Katalizör kullanımı.....	101
5.3. Piroliz Mekanizması.....	102
5.3.1. Selülozun pirolizi.....	103
5.3.1.1. Sıcaklığın selüloz pirolizine etkisi.....	103
5.3.1.2. Reaktörde kalma süresinin selüloz pirolizine etkisi.....	105
5.3.1.3. Ön işlem olarak asit uygulamasının selüloz pirolizine etkisi.....	106

5.3.1.4. Diğer reaksiyon faktörlerinin selüloz pirolizine etkisi.....	106
5.3.2. Hemiselülozun pirolizi	107
5.3.3. Ligninin pirolizi	108
5.4. Piroliz Yöntemleri	109
5.4.1. Yavaş piroliz yöntemi	109
5.4.2. Hızlı piroliz yöntemi	113
5.4.2.1. Kabarcıklı akışkan yataklı hızlı piroliz sistemi.....	115
5.4.2.2. Sirkülasyonlu akışkan yataklı hızlı piroliz sistemi.....	116
5.4.2.3. Döner konik reaktörlü hızlı piroliz sistemi	116
5.4.2.4. Ablatif diskli hızlı piroliz sistemi	118
5.4.2.5. Çift vidalı reaktör.....	118
5.5. Piroliz İşlemi İçin Biyokütle Seçim Kriterleri	119
Kaynaklar	123
6. HİDROTERMAL DÖNÜŞÜM TEKNOLOJİLERİ	127
6.1. Hidrotermal Dönüşüm Yönteminin Temelleri.....	128
6.2. Hidrotermal Dönüşüm Teknolojileri.....	132
6.2.1. Hidrotermal karbonizasyon (HTC).....	134
6.2.1.1. Sıcaklık	135
6.2.1.2. Reaksiyon süresi	136
6.2.1.3. Besleme suyunun pH değeri	137
6.2.1.4. Ham madde konsantrasyonu	137
6.2.1.5. Isıtma oranı	138
6.2.1.6. Hidrotermal karbonizasyon (HTC) işlem süreçleri.....	138
6.2.2. Hidrotermal sıvılaştırma (HTL)	139
6.2.3. Hidrotermal gazlaştırma (HTG)	142
Kaynaklar	144
7. BİYOKÜTLENİN GAZLAŞTIRILMASI	147
7.1. Gazlaştırma Ortamı.....	147
7.2. Gazlaştırma Aşamaları.....	148
7.2.1. Kuruma aşaması	148
7.2.2. Piroliz aşaması	150
7.2.3. Gazlaşma aşaması	150
7.2.3.1. Kısmi oksidasyon aşaması	151
7.2.3.2. İndirgeme aşaması	152
7.3. Gazlaştırma Reaktörleri	152
7.3.1. Sabit yataklı gazlaştırıcılar	153
7.3.2. Akışkan yataklı gazlaştırıcılar	157
7.3.3. Sürüklenmiş (zorlamalı) akışlı gazlaştırıcılar	161
7.3.4. Diğer gazlaştırma reaktörü tipleri.....	161

7.3.4.1. Hidrotermal gazlaştırıcı	161
7.3.4.2. Plazma gazlaştırıcı	162
7.4. Gazlaştırma Performansını Değerlendirmek İçin Kullanılan Kriterler	164
7.4.1. Sentez gazın özellikleri	164
7.4.2. Biyokütle tüketim oranı	165
7.4.3. Gaz üretim oranı	166
7.4.4. Özgül gaz üretimi	166
7.4.5. Karbon dönüşüm oranı	166
7.4.6. Gazlaştırma ortamı besleme oranı	167
7.4.7. Eş değerlik oranı (ER)	167
7.4.8. Gazlaştırma sisteminin verimi	168
7.4.9. Buhar biyokütle oranı	168
7.4.10. Yüzeysel hız ve reaktörde kalma süresi	169
7.4.11. Sıcaklık	169
7.5. Gazın Temizlenmesi ve Kullanımı	170
Kaynaklar	175
8. BİYOGAZ	179
8.1. Biyogaz Üretiminde Kullanılan Biyokütle Kaynakları	181
8.2. Anaerobik Sindirimin Aşamaları	184
8.2.1. Hidroliz aşaması	185
8.2.2. Asidojenik aşama	186
8.2.3. Asetojenik aşama	186
8.2.4. Metanojenik aşama	187
8.3. Biyogaz Üretiminde Önemli Tanımlamalar ve Kavramlar	188
8.3.1. Substrat (Ham madde)	188
8.3.2. İnokulum	188
8.3.3. Hidrolik bekleme süresi (HRT)	188
8.3.4. Yaş ağırlık (WW), toplam katı (TS) ya da kuru madde (DM) miktarı	189
8.3.5. Uçucu katı madde miktarı (VS)	190
8.3.6. Kimyasal oksijen gereksinimi (COD)	190
8.3.7. Organik yük (OL)	190
8.3.8. Organik yükleme oranı (OLR)	190
8.3.9. Biyokimyasal metan potansiyeli (BMP)	191
8.3.10. Teorik (maksimum) metan verimi	191
8.4. Biyogaz Üretimini Etkileyen Faktörler	191
8.4.1. Katı madde içeriği	192
8.4.2. C/N oranı	192
8.4.3. Sıcaklık	193
8.4.4. Sindirim ortamının pH değeri	194
8.4.5. Amonyak	194

8.4.6. Serbest yağ asitleri	195
8.4.7. Mikroorganizma konsantrasyonu	195
8.4.8. Materyalin özgül yüzey alanı	196
8.4.9. Kısmi hidrojen basıncı	196
8.4.10. Toksisite	197
8.4.11. Karıştırma/çalkalama	197
8.5. Biyogaz Tesisinin Temel Bileşenleri	197
8.5.1. Sindirim ünitesi	197
8.5.1.1. Besleme sistemleri	198
8.5.1.2. Sindirici reaktörler	201
8.5.1.4. Karıştırma/Çalkalama sistemleri	206
8.5.1.5. Gaz depolama üniteleri	209
8.5.1.6. Borular, pompalar ve vanalar	210
8.6. Biyogaz Kullanım Alternatifleri	211
8.6.1. Bölgesel kullanım	211
8.6.2. Elektrik üretim amaçlı kullanımı	212
8.6.2.1. İçten yanmalı motorlar	212
8.6.2.2. Gaz türbinleri	213
8.6.3. Boru hattına verilmesi	213
8.7. Sindirim Atıklarının Değerlendirilmesi	214
8.7.1. Sindirim atıklarının katı-sıvı ayrımı	215
8.7.1.1. Vidalı presler	216
8.7.1.2. Dekanter santrifüj	216
8.7.1.3. Bant filtreler	217
8.7.1.4. Kesikli santrifüj ayırma sistemi	218
8.7.2. Katı fraksiyonların işlenmesi	218
8.7.2.1. Kompostlama	219
8.7.2.2. Kurutma	219
8.7.3. Sıvı fraksiyonun işlenmesi	220
8.7.3.1. Amonyak giderme	220
8.7.3.2. Membran filtreleme	221
8.7.3.3. Buharlaştırma	222
8.7.4. Sindirim atıklarının kullanımı	222
Kaynaklar	224

9. BİYOETANOL..... 227

9.1. Biyoetanol Üretiminde Ham Madde Olarak Kullanılan Biyokütle Kaynakları ...	228
9.1.1. Birinci nesil biyokütle kaynakları	228
9.1.1.1. Şeker bazlı bitkiler ve biyoetanol üretimi	229
9.1.1.2. Nişasta bazlı bitkiler ve biyoetanol üretimi	230
9.1.2. İkinci nesil (Lignoselülozik) biyokütle kaynakları	233

9.1.2.1. Şeker platformu.....	235
9.1.2.2. Sentez gaz platformu.....	236
9.1.3. Üçüncü nesil biyokütle kaynakları	239
Kaynaklar	240
10. BİYODİZEL	243
10.1. Biyodizel Üretiminde Kullanılan Biyokütle Kaynakları	245
10.2. Transesterifikasyon İşlemi.....	246
Kaynaklar	250
11. ÖN İŞLEMLER.....	253
11.1. Lignoselülozun Yapısal Özellikleri ve Bileşenleri	256
11.2. Ön İşlem Yöntemleri	259
11.2.1. Fiziksel ön işlemler.....	259
11.2.1.1. Yüksek enerjili radyasyon ön işlemleri	259
11.2.1.2. Piroliz ön işlemi.....	262
11.2.2. Kimyasal ön işlemler	262
11.2.2.1 Seyreltik asit ve konsantre asit ön işlemi	262
11.2.2.2 Alkali ön işlemi	264
11.2.2.3 Ozonoliz ön işlemi	264
11.2.2.4. Organosolv	265
11.2.2.5. İyonik sıvılar	267
11.2.2.6. Derin ötektik çözücüler	268
11.2.3. Fizikokimyasal ön işlemler.....	269
11.2.3.1. Buhar patlaması.....	269
11.2.3.2. Sıvı sıcak su.....	272
11.2.3.3. Sülfite (SPORL).....	273

BİYOKÜTLE

Biyokütle, yaşamakta olan ya da yakın zamanda yaşamış olan canlı organizmalardan elde edilen, henüz fosilleşmemiş organik kökenli tüm biyolojik malzemelere verilen genel bir addır. Botanik biyokütle, atmosferdeki karbondioksitin (CO_2) klorofil ve su varlığında güneş enerjisiyle karbonhidrata dönüştürülmesiyle oluşur. Diğer biyolojik türler (hayvanlar, insanlar vb.), botanik veya diğer biyolojik türleri tüketerek büyürler.

Bitkiler, fotosentez adı verilen bir işlemle güneş enerjisini emerler. Belirli dalga boylarına sahip güneş ışığının varlığında, yeşil bitkiler elektron ve proton elde etmek için suyu parçalayarak CO_2 'yi glikoza dönüştürmek için kullanır ve oksijeni (O_2) atmosfere salarlar. Bu işlem aşağıdaki kimyasal tepkimeyle ifade edilmektedir:

Yukarıdaki fotosentez reaksiyonunda oluşan $\{CH_mO_n\}$ organik bitki materyalidir ve glikoz ($C_6H_{12}O_6$) oluşumu için temel biçim olarak kabul edilmektedir [1].

Bitkilerde depolanan kimyasal enerji daha sonra bunları besin olarak kullanan insanlara ve hayvanlara aktarılmaktadır. Hayvan ve insan atıkları da biyokütlenin oluşumuna katkıda bulunmaktadır. Hayvanlar ve insanlar, aldıkları besin elementlerini O_2 kullanarak enerji ve biyokütleyle dönüştürürken CO_2 'i atmosfere salmaktadırlar. Böylece biyokütlenin oluşumu, yaşam döngüsü içerisinde sürekli kendini yenileyerek gerçekleşmektedir (Şekil 1.1).

Çizelge 1.11: Biyokütle dönüştürme teknolojilerinin uygunluğunu etkileyen ham madde özellikleri [30]

Özellik	Dönüşüm Teknolojileri

FİZİKSEL İŞLEMLER

Fiziksel işlemler, biyokütlenin enerji dönüşümleri için kullanılabilir hâle getirilmesi amacıyla boyut küçültme, kurutma ve enerji yoğunluğunu arttırmak için yapılan peletleme-briketleme gibi işlemlerdir. Fiziksel işlemler sonucunda biyokütle doğrudan ısı enerjisi elde etmek için kullanılabilirdiği gibi, gazlaştırma, piroliz, torrefaksiyon gibi termokimyasal dönüştürme işlemlerinde de kullanılmaktadır.

2.1. Mekanik Öğütme ve Parçalama

Mekanik parçalama işlemi, biyokütlenin yüzey alanını arttırmak, polimerizasyon derecesi ve selüloz kristalliğini azaltmak için yapılmaktadır [1]. Kaba boyut küçültme, ıslak veya kuru kırma, ufalama, parçalama, öğütme ve sıkıştırma gibi işlemleri kapsamaktadır. Bu amaçla; çekiçli, bilyeli, titreşimli, valsli ve çalkalama taneli değirmenler kullanılmaktadır. Boyut küçültmenin bir diğer amacı da ısı ve kütle transferi sınırlamalarını azaltmaktır. Mekanik parçalama ve öğütmenin başarısı öğütme tipi ve süresi ile biyokütle cinsine bağlı olarak değişmektedir.

Biyokütlenin boyutlarının küçültülmesinin bir diğer amacı da transferinin kolaylaştırılmasıdır. Ayrıca bantlı, vidalı ve pnömatik konveyörlerde iletimi de boyut küçültme ile daha kolay olmaktadır.

Mekanik parçalama ve öğütme işlemi daha sonraki süreçlerin daha kolay ve daha etkili hâle getirilmesi için Bölüm 11’de ayrıntılı olarak açıklanmış olan diğer ön işlemlerden önce de yaygın olarak kullanılmaktadır [2]. Öğütme işlemi; biyoe-tanol, biyogaz ve biyohidrojen verimini artırmaktadır ve kimyasal ön işlemden önce veya sonra yapılabilmektedir. Kimyasal ön işlemden sonra öğütme işleminin yapılması; öğütme için gereken enerji gereksinimini düşürmesi, fermantasyon inhibitörlerinin oluşmasına sebep olmaması ve ön işlem görmüş biyokütle parçala-

BİYOKÜTLENİN DOĞRUDAN YAKILMASI

3.1. Yanma Olayı

Biyokütlenin termokimyasal dönüştürme yöntemlerinden biri olan yanma, nispeten yüksek bir sıcaklıkta meydana gelen ekzotermik bir oksidasyon işlemi olarak tanımlanabilir. Biyokütle yakma işlemi bir dizi yüksek karmaşıklığa sahip fiziksel ve kimyasal işlemi içermektedir. Genel biyokütle yakma süreci temel olarak ısıtma-kurutma, uçucu-katı ayrılması (devolatilizasyon), uçucu maddelerin alev yanması ve kömürün yakılması olmak üzere dört temel aşamayı içermektedir [1]. Yanma işleminin doğası yakıtın ve yanma işleminin özelliklerine bağlıdır. Biyokütlenin doğrudan yakılmasındaki aşamalar Şekil 3.1’de verilmiştir.

Şekil 3.1: Biyokütlenin yanma aşamaları [2]

Şekil 3.23: Yardımcı pilot alevi olan bir pülverizasyonlu (süspansiyon) yakma sisteminin çalışma prensibi

4.

TORREFAKSİYON

Bilindiği gibi biyokütle, doğrudan yakılıp ya da gazlaştırma vb. teknolojik işlemlerle farklı enerji türlerine dönüştürülerek ısı ve güç elde etmek için kullanılmaktadır. Ancak biyokütlenin yüksek nem içeriği, diğer yakıtlara göre düşük ısı değeri, kolay nem alması, hacminin fazla olması gibi olumsuz yanları da bulunmaktadır. Bu olumsuz yanları gidermek için birçok ön hazırlık işlemi bulunmaktadır. Karbonizasyondan farklı bir termokimyasal işlem olan torrefaksiyon, oksijen olmadan 230 ila 300 °C sıcaklık aralığında gerçekleştirilen hafif bir piroliz işlemidir. Biyokütlenin başka teknolojilerle enerjiye dönüştürülmesini kolaylaştırmak için uygulanan bir termokimyasal ön hazırlık işlemi olmakla beraber, tek başına da uygulanan bir yöntemdir ve kahve kavurma işlemine çok benzemektedir [1, 2]. Torrefaksiyon işlemi sonucunda biyokütleden H_2O ve CO_2 uzaklaştırılmaktadır. Böylece biyokütlenin enerji yoğunluğu artmakta, atomik O/C ve H/C oranı düşmekte ve higroskopik yapısı iyileşmektedir. Şekil 3.1’de torrefaksiyon işlemine tabi tutulan odun parçalarının yapısal değişimleri görülmektedir [2].

Şekil 4.1: Orijinal odun parçası (solda), 260 °C’de 8 dakika (ortada) ve 285 °C’de 16,5 dakika torrefaksiyon işlemi görmüş odun parçası (sağda)

Çizelge 4.2: Birlikte yakmada (co-firing) kullanılan torrefaksiyon peletinin ve diğer biyokütle yakıtların özellikleri [25]

Özellik	Odun peleti	Torrefaksiyon peleti	Mangal kömürü	Kömür
Nem içeriği (%y.b.)	7-10	1-5	1-5	10-15
Alt ısı değer (MJ/kg)	15-18	20-24	30-32	23-28
Uçucu madde (%k.b.)	70-75	55-65	10-12	15-30
Sabit karbon (%k.b.)	20-25	28-35	85-87	50-55
Yığın yoğunluğu (kg/l)	0,55-0,75	0,75-0,85	~ 0,20	0,8-0,85
Enerji yoğunluğu (GJ/m ³)	7,5-10,4	15,0-18,7	6-6,4	18,4-23,8
Toz	Sınırlı	Sınırlı	Yüksek	Sınırlı
Higroskopik özellikler	Hidrofilik	Hidrofobik	Hidrofobik	Hidrofobik
Biyolojik bozunurluk	Evet	Hayır	Hayır	Hayır
Öğütülebilirlik	Zayıf	İyi	İyi	İyi
Taşıma	Özel	İyi	İyi	İyi
Kalite değişkenliği	Sınırlı	Sınırlı	Sınırlı	Sınırlı

Torrefaksiyon işlemi görmüş biyokütlenin kullanıldığı uygulamalara; genel olarak pülverize kömür ile yakmanın yapıldığı (co-firing) enerji santralleri ve çimento fırınları, küçük ölçekli pelet brülörleri ve normalde pülverize kömür ile çalıştırılan sürüklemeli akışlı gazlaştırıcılar örnek olarak verilebilir. Güç üretimine yönelik olarak özellikle kömürle birlikte yakma uygulamalarına ilaveten torrefaksiyon ürünlerinin tek olarak kullanıldığı ısıtma amaçlı endüstriyel ve merkezî uygulamalar içinde bu ürünlerin pazar potansiyeli yüksektir.

PIROLİZ

Piroliz işlemi, oksitleyicilerin hiç olmadığı ya da tam olarak gazlaşmayı engelleyecek miktarlarda oldukları ortamlarda, biyokütlenin belirli sıcaklık aralıklarında ve sürede tutularak termokimyasal olarak bir dizi faydalı ürüne ayrıştırılmasıdır [1]. Piroliz sırasında, biyokütlenin büyük karmaşık hidrokarbon molekülleri nispeten daha küçük ve daha basit gaz, sıvı ve kömür moleküllerine ayrılmaktadır. Elde edilen ürünlerin özellikleri, piroliz sıcaklığı ve ısıtma hızı gibi çeşitli faktörlere bağlı olarak değişmektedir. Piroliz için uygun olan lignoselülozik biyokütller orman artıkları, bitkisel artıklar, kâğıt, karton, belediye atıkları ve kanalizasyon çamurlarıdır [2]. Piroliz işleminde birincil ayrışma reaksiyonları ve katranın ayrıştığı gaz fazındaki ikincil reaksiyonlar söz konusudur. Pirolizin birincil ürünleri biyokömür ve yoğunlaşabilir gazdır. Yoğunlaşabilir gaz ikincil aşamada yoğunlaşmayan gazlara (H_2 , CO_2 , H_2O , CO , CH_4), sıvıya ve kömüre dönüşmektedir (Şekil 5.1). İkincil aşamadaki ayrışma kısmen gaz fazında homojen reaksiyonlar yoluyla ve kısmen de gaz-katı faz heterojen termal reaksiyonlar yoluyla oluşmaktadır.

Şekil 5.1: Biyokütle parçacığının pirolizi [1]

HİDROTERMAL DÖNÜŞÜM TEKNOLOJİLERİ

Hidrotermal işlem biyokütleden değerli enerji ürünleri elde etmek için kullanılan önemli bir termokimyasal dönüşüm yöntemidir. Yakma (kömürle birlikte yakma dâhil), gazlaştırma ve piroliz gibi gelişmiş termokimyasal teknolojilerde ham madde olarak genellikle %20 nem içeriğinden daha az nem içeriğine sahip kuru biyokütler kullanılmaktadır. Yüksek nem içerikli biyokütle yakıtlarını işleme ihtiyacı, hidrotermal işleme teknolojilerinin gelişmesine yol açmıştır. Teknik olarak, “hidrotermal” terimi, sıcak basınçlı sıvı veya sıcak basınçlı su olarak ifade edilmektedir [1]. Hidrotermal terimi 0,1 MPa basıncın üzerindeki bir basınçta ve 100 °C'nin üzerindeki bir sıcaklıkta sıvı suyu tanımlamakla beraber, hidrotermal dönüşüm yöntemi genel olarak, daha yüksek sıcaklıkta (200 °C-800 °C) ve basınçta (5-30 MPa) kritik altı veya süper kritik su ortamını kullanan bir teknoloji olarak tarif edilmektedir [2]. Biyokütlenin hidrotermal dönüşüm işlemi için karıştırmalı veya karıştırmaz olan kesikli reaktörler, boru şeklinde sürekli akışlı sabit yataklı reaktörler, sürekli karıştırılan tank reaktörler gibi yüksek basınç ve sıcaklığa dayanıklı malzemelerden imal edilmiş reaktörler kullanılmaktadır.

Hidrotermal dönüşüm yönteminin, diğer biyokütle işleme teknolojilerine göre avantajları aşağıdaki gibi özetlenebilir [1, 3-5]:

- Nem içeriği yüksek olan biyokütlerin yanı sıra ve farklı tip biyokütlerden oluşan karışık biyokütlenin de bu yöntemle dönüştürülmesi mümkündür. Nem içeriğinin yüksek olması, ham maddesi biyokütle olan sistemlerin yüksek enerji verimliliği için ana sınırlamalardan birisidir. Nem içeriği %50'den fazla olan yaş biyokütle (hayvan gübresi, yosun ve atık su gibi), çeşitli teknik ve teknik olmayan nedenlerden dolayı besleme materyali olarak genellikle istenmez. Yaş biyokütlenin kullanılmasıyla taşıma giderleri artacak ve biyokütlenin kurutulması ve tore-

pompalanmakta ve buradan da propan brülörün egzoz gazı ile ısıtılan ısıtıcıda yaklaşık reaksiyon sıcaklığına kadar ısıtılmaktadır. Reaktör, 110 mm iç çapa ve 35 L hacme sahip uzun, dikey bir silindirdir. Çöken tuzlar ve diğer maddeler tıkanmaları önlemek için reaktör altından boşaltılmaktadır. Reaktörden sonra, sıkıştırılmış olan ürün akışı önce ısı eşanjöründe ve ardından bir soğutucuda soğutulmakta ve iki aşamada gevşetilmektedir. CO₂ temizleyicide yaklaşık 10 MPa basınçlı su kullanılarak ürün gazındaki CO₂'nin büyük bir kısmı ayrılabilir. Böyle bir tesiste yaklaşık %95 hidrojen içeriğine sahip gaz ürün elde edilebilmektedir [2].

Şekil 6.5: Katalitik olmayan bir süreçle çalışan bir pilot tesisin şematik şekli [2]

7.

BİYOKÜTLENİN GAZLAŞTIRILMASI

Gazlaştırma, biyokütleden sınırlı oksijen kaynağıyla ya da CO_2 ve su buharı gibi uygun oksidantlar ile yanabilen sentez gaz elde edildiği termokimyasal bir dönüşüm teknolojisidir. Biyokütlenin gazlaştırılması genellikle yüksek sıcaklıklarda (~ 800 °C) gerçekleşmektedir. Elde edilen sentez gaz %12-20 H_2 (hidrojen), %17-22 CO (karbon monoksit), %2-3 CH_4 (metan), %9-15 CO_2 (karbondioksit), az miktarlarda H_2O (su buharı), N_2 (nitrojen) gazlarının yanı sıra katran buharı gibi kirletici maddelerin karışımından oluşmaktadır. Sentez gazdaki bileşenlerin oranları biyokütlenin cinsi, gazlaştırma ortamı, gazlaştırıcının tasarımı ve çalışma koşullarına bağlı olarak değişmektedir. Gazlaştırma ürünü olan sentez gaz doğrudan yakılarak ısı enerjisi elde edilebildiği gibi, gaz motorlarında elektrik enerjisi elde etmek amacıyla da kullanılmaktadır [1].

Gazlaştırma ürünü olan sentez gaz, katı yakıttan daha geniş bir uygulama aralığında kullanılabilir. Taşınması ve dağıtımı daha kolaydır. Bu nedenle sentez gazın veya ondan üretilen sıvı yakıtın taşınması, katı yakıtın taşınmasına göre daha ucuz olup daha az enerji gerektirmektedir. Güç ünitelerinde kullanıldığında katı yakıtlara göre baca gazlarında daha az CO_2 , SO_2 ve NO_x emisyonları oluşmaktadır. Özellikle kırsal alanlarda elektrik enerjisi üretimi için kullanıldığında katı ve sıvı yakıtlı güç sistemlerine göre daha uygun ve ekonomiktir. Sentez gaz ayrıca gübre, metanol ve benzin üretimi için bir ham madde olarak kullanılabilme potansiyeline sahiptir [2].

7.1. Gazlaştırma Ortamı

Gazlaştırma ortamı biyokütlerdeki katı karbon ve daha ağır hidrokarbonlarla reaksiyona girerek bunları CO ve H_2 gibi düşük moleküler ağırlıklı gazlara dönüştüren maddeleri içermektedir. Gazlaştırma için kullanılan başlıca gazlaştırıcı mad-

siklon filtreler, bariyer filtreler, sıcak gaz filtreleri, torba filtreler, elektrostatik filtreler gibi filtrelerin yanı sıra yüksek sıcaklıklarda seramik mum filtreler kullanılarak fiziksel olarak ayrılabilirler. Filtreleme verimliliği ve filtrenin çalışması ve boyutlandırılması, partikül kütle konsantrasyonu ve boyut dağılımının yanı sıra bu partiküller maddelerin bileşimine de bağlıdır [27].

Gaz içerisindeki diğer bir kirletici madde olan alkali metal tuzlarının yoğunlaşması da ciddi korozyon sorunlarına neden olabilmektedir ve uzaklaştırılmaları gerekmektedir. Bu maddeler ince katı parçacıklar üzerinde yoğunlaşacakları için gaz sıcaklığının 600 °C'nin altında olduğu durumda bir siklon, ıslak elektrostatik çöktürücüler veya filtreler tarafından tutulabilmektedirler [27].

BİYOĞAZ

Biyogaz, biyokütlenin anaerobik sindirimi ile elde edilen biyokimyasal dönüştürme ürünüdür. Organik maddeler (gıda, bitki artıkları, hayvan gübresi, kanalizasyon çamuru, evsel katı atıkların biyolojik olarak parçalanabilir kısımları vb.) serbest oksijen yokluğunda bozunmaya (anaerobik sindirim) uğradığında, normalde %40-70 metandan oluşan bir gaz üretmektedir. Biyogazın geri kalanı ise çoğunlukla diğer gazların da izlerini içeren karbondioksittir [1]. Biyogazın ısı değeri içerdiği metan miktarına bağlı olarak 6,0-6,5 kWh/Nm³ arasında değişmektedir. Yoğunluğu ise 1,2 kg/Nm³ dolayındadır [2].

Biyogazın kimyasal bileşimi kullanılan biyokütlenin özelliklerine bağlı olarak Çizelge 8.1’de verilen sınırlar içerisinde değişmektedir.

Çizelge 8.1: Biyogazın kimyasal bileşimi [3]

Bileşen	Kimyasal Formül	%
Metan	CH_4	50-75
Karbondioksit	CO_2	25-45
Su buharı	H_2O	2-7
Nitrojen	N_2	< 2
Hidrojen	H_2	< 1
Hidrojen sülfid	H_2S	< 1
Amonyak	NH_3	< 1
Oksijen	O_2	< 2

BİYOETANOL

Kimyasal olarak etanol ve biyoetanol aynı içeriğe sahiptir. Ancak üretim yöntemlerini belirtmek için bu iki terim ayrı ayrı kullanılmaktadır. Etanol petrokimyasal yolla, biyoetanol ise termokimyasal dönüşüm teknolojileri uygulanarak organik kaynakların fermantasyonu ile üretilmektedir. Etanol, kimyasal formülü C_2H_5OH olan, yüksek derecede yanıcı, su ve benzinle istenilen oranda rahatlıkla karışabilen sıvı yakıttır. Biyoetanol, geleneksel benzin için potansiyel bir ikame olarak kabul edilmekte ve doğrudan veya belli oranlarda içten yanmalı motorlarda benzinle karıştırılarak kullanılabilir. Böylece sera gazı emisyonlarını ve benzin tüketiminin azaltılmasına katkıda bulunmaktadır. Doğrudan uygulama için (E100) benzinli motorun zamanlaması (ve kullanılıyorsa elektronik kontrol sistemi) ayarlanmakta ve daha büyük benzin deposu kullanılmaktadır. Bununla birlikte, biyoetanolün %100 kullanımı, daha yüksek buharlaşma ısısı nedeniyle düşük sıcaklıkta veya soğuk havalarda motoru çalıştırmada zorluk yaratmaktadır. Biyoetanolün benzinle karıştırılarak kullanımı, motorun modifiye edilmesini gerektirmeyebilmekte ve ateşlemeyi veya motor performansını artırmaya yardımcı olmaktadır. En yaygın kullanılan karışımlar E85 ve E10'dur. Biyoetanolün avantajları, artan motor verimliliği ve performansı ile sonuçlanan yüksek oktan derecesi, düşük kaynama noktası, artan yanıcılık, daha yüksek sıkıştırma oranı ve buharlaşma ısısı, karşılaştırılabilir enerji içeriği, azaltılmış yanma süresi ve fakir karışimli yanma oluşumu şeklinde sıralanabilmektedir. Dezavantajları ise sırasıyla ham madde, enzim, detoksifikasyon ve etanol geri kazanımının yüksek maliyetinden kaynaklanan yüksek üretim maliyetidir. Biyoetanol, düşük hacimsel enerji yoğunluğuna sahiptir, yani geleneksel benzine kıyasla hacimsel olarak daha fazla biyoetanol/km (%50'ye kadar) tüketilmektedir. Biyoetanolün bazı elastomerleri parçalama ve metallerin aşınmasına neden olma kapasitesi olduğundan, motorlarda biyoetanol kullanımı motor parçalarının sık sık değiştirilmesini de gerektirebilmektedir. Bu dezavantajlarına rağmen organik kaynaklardan elde edilecek biyoetanol, yenilenebilir bir enerji kaynağı olarak büyük önem taşımaktadır.

10.

BİYODİZEL

Biyodizel kısaca bitkisel veya hayvansal yağların monoalkil esterleri olarak tanımlanmaktadır ve ağırlıklı olarak soya fasulyesi, kolza tohumu ve palmye yağlarından üretilmektedir. Üst ısıl değeri (39-41 MJ/kg), benzinden (46 MJ/kg), motordan (43 MJ/kg) ve petrolden (42 MJ/kg) biraz daha düşük ancak kömürden (32- 41 MJ/kg) daha yüksektir (32-37 MJ/kg) [1]. Bitkisel veya hayvansal yağların monoalkil esterlere veya biyodizel dönüştürülmesi, kimyasal bir süreç olan transesterifikasyon işlemi ile gerçekleşmektedir. Transesterifikasyon işlemi yaklaşık 130 yıl önce Rudolf Diesel tarafından dizel motorlarda kullanılmak üzere biyodizel üretmek amacıyla uygulanan oldukça eski bir yöntemdir. Biyodizelin teknik özellikleri ASTM D 6751 standartları ile belirlenmiştir (Çizelge 10.1).

Çizelge 10.1: Biyodizelin teknik özellikleri [2]

Özellik	Açıklama
Ticari adı	Biyodizel
Kimyasal adı	Yağ asidi metil ester
Kimyasal formülü	$C_{14} - C_{24}$ metil esterler ya da $C_{15-25}H_{28-48}O_2$
Setan sayısı	> 47
Metanol içeriği	< %0,2 w.t.
Kinematik vizkozite (mm^2/s ; $T=313$ K)	3,5-5,2
Yoğunluk (kg/m^3 ; $T=288$ K)	860-894
Kaynama noktası (K)	> 475
Parlama noktası (K)	430-455
Distilasyon (K)	470-600
Buhar basıncı (kPa; $T=295$ K)	< 0,67
Suda çözülebilirlik	Hayır
Biyoçözünürlük	Petrolden daha fazla

Şekil 10.4: Enzim bazlı katalizör kullanılarak yapılan transesterifikasyon işlemi [13]

11.

ÖN İŞLEMLER

Lignoselülozik biyoküteller, biyokütle rekalsitansı olarak da adlandırılan kimyasal ve biyolojik bozulmaya karşı dirençli bir yapıya sahiptirler. Selülozun kristal yapısı, odunlaşma derecesi ve hücre duvarı bileşenlerinin yapısal olarak heterojenliği ve karmaşıklığı gibi faktörler, lignoselülozik ham maddelerin kullanılabilir maddelere dönüştürülebilmesi için üstesinden gelinmesi gereken faktörlerdir. Bu bağlamda, lignoselülozik biyokütlelere ön işlem uygulanması, bunların işlenerek ısı, elektrik, yakıt, kimyasallar vb. gibi katma değeri yüksek ürünlerin üretiminin sağlandığı dönüşüm süreçlerinde (biyorafineri) önemli bir adımdır. Ön işlem süreci boyunca, lignoselülozun inatçı yapısının bozulması lignin kılıfının kırılmasına, hemiselülozun bozulmasına ve selülozun kristallik ve polimerizasyon derecesinde azalmaya neden olmaktadır. Bu amaçla çok sayıda ön işlem tekniği geliştirilmiştir. Bu teknikler Şekil 11.1’de gösterildiği gibi sınıflandırılabilir. Pek çok ön işlem arasında uygun olan ön işlemin tercihi, biyokütlenin bileşimini oluşturan selüloz, hemiselüloz ve lignin oranlarına bağlıdır [1-3]. Ön işlemler; fiziksel, kimyasal, fizikokimyasal ve biyolojik veya bunların kombinasyonu şeklinde uygulanabilmektedir ve bu yöntemler arasında güçlü etkileşimler bulunmaktadır (Şekil 11.1).

BÖLÜM 1

Dijital Teknolojilerin Duyum ve Algı Gelişimi Üzerindeki Etkileri ve Bu Etkilerin Gelişimsel Bozuklukların Rehabilitasyonunda Kullanımı

Bahtım Kütük, Ali Aytemür

Dünya hiç olmadığı kadar hızlı bir şekilde değişmekte ve bu değişime çocuklar yetişkinlerden daha fazla maruz kalmaktadır. Fakat bu hızlı değişime çocuklar yetişkinlerden daha kolay uyum sağlamaktadır denilebilir. Burada dikkat edilmesi gereken noktalardan biri normal şartlarda nesil farkı ebeveyn ve çocuklar arasındayken artık bu nesil farkı süresi kardeşler arasına kadar düşmüştür. Nesil farkı, bir nesil ile diğer nesil arasındaki, özellikle çocuklar ve ebeveynleri arasındaki değerler ve tutumlardaki farklılığı ifade etmektedir. Bu farklılıklar, deneyimler, hayata bakış açısı, alışkanlıklar ve davranışlardaki farklılıklar nedeniyle meydana gelir.

Hayatımızın artık merkezinde olan ve farkında olarak ya da olmayarak maruz kaldığımız, hatta olmadığına yokluğunu hissettiğimiz, dahası bazı kişilerin bağımlısı olduğu bir fenomenle karşı karşıyayız; teknoloji. Teknoloji kişisel ve toplumsal hayatımızda yeni normlar oluşmasına neden olmuştur. Örneğin tabletler, telefonlar, bilgisayarlar ve televizyonlar yeni çocuk bakıcıları görevi görmeye başlamıştır. Ebeveynler çocuklarını oyalamak için bu tür teknolojik aletleri oldukça sık kullanılmakta ve çocuklar da bu tür aletlere oldukça ilgi duymaktadır. Bazı çocuklar ise ilgisini çeken bir şeyler izlerken âdeta hipnoz olmuş gibi gözükmektedir. Beş yaş altı çocukların ekran süresinin araştırıldığı bir meta analizde 2009-2018 yıllarındaki yayınlanan araştırmalara göre orta gelirli ülkelerde %21 ila %98, yüksek gelirli ülkelerde ise %10 ila %93,7 arasında ekran süresi yükünün değiştiği görülmüştür (Kaur vd., 2019). Teknolojiyle bu kadar iç içe olduğumuz bir dönemde bu tür aygıtlara maruz kalan çocukların duyum ve algılarına nasıl bir etkisi

zengin veri analizi sağlayabilecek bilgi elde edilmesini sağlayabilmektedir. Ayrıca bilgisayar tabanlı uygulamalar belirli bir seviyeye kadar ekonomik giderlerin azaltılmasını da sağlayabilecek niteliktedir. Bu nedenlerle bilgisayar tabanlı değerlendirme uygulamalarının otizmi olan çocukların değerlendirilmesinde olan kullanımı artış trendindedir (Mazon vd., 2019). Bu anlamda görsel algı becerilerinin değerlendirilmesi amacıyla ortaya konulan bilgisayar tabanlı değerlendirme uygulamaları önem kazanmaktadır.

Son olarak, bilgisayar oyunu uygulamaları hızlı tanılamada kullanılmakla özel popülasyonlarda rehabilitasyona yönelik uygulamaların çeşitliliğini ve etkililiğini artırmakla kalmayıp bu popülasyonlarda uygulanabilecek araştırma görevlerinin katılımcılar tarafından yapılabilirliğini de artırmaktadır. Örneğin oldukça yoğun sözel ve sosyal beceri gerektiren diğerlerinin konuşmalarını anlamaya yönelik araştırma görevleri gibi görevler düşük fonksiyonel otizmi bulunan çocukların bu becerilerinin incelenmesinde kısıtlı kalmaktadır (Ploog vd., 2009). Bu gibi durumlarda bilgisayar oyunu tabanlı görevler geleneksel yöntemlerle normalde araştırmalarda değerlendirilemeyecek olan düşük işlevselliği olan bireylerin araştırmalarda incelenmesini sağlamaktadır. Bilgisayar destekli video oyunları üzerine inşa edilmiş olan araştırma görevleri bu tarz düşük fonksiyonelliği bulunan grupların hem dikkatini çekerek onların araştırmalara katılımını artırmaktadır hem de araştırma görevlerini tamamlayabilmelerini sağlamaktadır (Brooks ve Ploog, 2013).

BÖLÜM 2

Dijital Çağda Gelişen Yürütücü İşlevler

Mine İmren

Dört bir yanımızın teknolojik cihazlarla çevrili olduğu, dijital bir çağda yaşamaktayız. Dijitalleşme hem günlük işlemleri halletmek hem boş zamanları değerlendirmek hem de eğitim öğretim faaliyetleri için elzem hâle gelmiştir. Bu nedenle âdeta dijital bir çevre içerisinde yaşam sürmekteyiz. Bu dijital çevre aynı zamanda çocukların da doğal çevresel şartlarını betimlemektedir. Çocuklar gerek eğlence amaçlı gerekse de eğitim öğretim faaliyetleri (ödev yapma vs.) ile ilgili olarak dijital ekranlarla sıklıkla etkileşim hâlinde bulunmaktadır. Çocukların teknolojik cihazlarla bu kadar haşır neşir olması nedeniyle aileler, eğitimciler gelişim süreci içerisinde olan çocukların özellikle de bilişsel gelişimlerinin seyri hakkında endişe duymaktadır. Literatüre bakıldığında ise dijital teknolojilerin çocukların psikolojik (psikolojik iyi oluş, öfke davranışını ifade etme gibi), bilişsel (yürütücü işlevler, dikkat, bellek vs.) ve sosyal süreçlerine olası etkilerinin sıklıkla çalışıldığı görülmektedir.

Günümüzde eğitim, iş, boş zamanı değerlendirme ve eğlence gibi amaçlarla dijital ekranlarla sürekli etkileşim kurulmaktadır. Bu nedenle de ekranlara adaptasyon geliştirmek, çağa ayak uydurmak önem arz etmektedir (Lortie, 2022). Çocukların da dijital teknoloji ile donanmış bu çevrede sıklıkla teknolojiyle haşır neşir olduğu gözlenmektedir. Bu nedenle dijital teknolojilerin bilişsel düzeyde özellikle de gelişen beyinler açısından nasıl bir etkisi olduğu konusu hem aile ve bakım verenlerin hem de araştırmacıların oldukça ilgisini çekmektedir.

Çocukların Dijital Teknoloji ve Medya İle İlişkisi

Âdeta dijital bir fanus içerisinde büyüyen çocuklarımız teknolojik uyarımlarla doğal olarak iç içe zaman geçirmektedir. Çocuklar sadece çevrelerindeki dijital cihazlara maruz kalmamakta, dahası kendilerine ait dijital cihazlar edinebilmekte-

gerektiğini vurgulamaktadır. Okul çağında ise kısıtlı olmak şartıyla ekran saatinin uyku, yemek yeme, egzersiz yapma gibi gelişim için oldukça önemli olan temel gereksinimlerin aksatılmasına neden olmaması gerektiğinin altını önemle çizmektedir. Ayrıca taşınabilir olan teknolojik cihazları kullanmak için belirli zaman ve mekân belirlenmesi önerilmektedir (AAP Council On Communications and Media, 2016). Cihazların artık her yere götürülebilmesi, çocukların yemek, ders, uyku gibi temel gereksinim ve görevlerine odaklanmasını engelleyebilir. Araştırmacılar ayrıca bilişsel becerileri desteklemek adına farklı özellikler sağlayan eğitici içerikler üretilbileceği ve tercih edilebileceğine de işaret etmektedir (Kostyrka-Allchorne vd., 2019).

Sonuç olarak çocukları dijital cihazlardan tümüyle uzak tutmak, bulunduğumuz çağda çok da mümkün görünmemektedir. Yapılan çalışmalar, elastik yapıdaki gelişen beyinlerin teknolojinin aşırı kullanımıyla olumsuz yönde şekillenebilme olasılığını vurgulamaktadır. Ancak teknolojinin kontrollü ve özenle seçilmiş içeriklerle uzman önerileri de dikkate alınarak ve yaş sınırlarına dikkat edilerek kullanımını sağlamak, çocukları olası zararlı etkilerden korumayı sağlayabilmektedir (Chiu vd., 2022). Ayrıca teknoloji süresinin tek başına kısıtlanması yerine bu sürenin bilişsel açıdan besleyici faaliyetlerle geçirilmesini sağlamak önem arz etmektedir. Son olarak medya cihazlarının ebeveyn veya bakım verenlerle etkileşim içinde kullanılması ve yine aileler tarafından veya uygulamalar aracılığı ile sadece teknoloji süresinin değil içeriğinin de denetlenmesi uygun bulunmaktadır.

BÖLÜM 3

Dijital Dünyada Erken Çocukluk: Ekran Kullanımı ve Öz Düzenleme Becerileri Arasındaki İlişki

Berna A. Uzundağ, Dilara Keşşafoglu, Merve Nur Altundal

Duygu ve davranışları kontrol edebilme, yani öz düzenleme (self-regulation) yetisi, kişilerin tüm hayatı boyunca ihtiyaç duyduğu önemli becerilerden biridir (Karoly, 1993). Öz düzenleme becerilerinin gelişimi için ilk adım bebeklik yıllarında atılır ve bu beceriler erken çocukluk döneminde önemli bir gelişim gösterir (Diamond ve Lee, 2011; McClelland vd., 2015; Montroy vd., 2016). Erken dönemdeki öz düzenleme becerileri ilerleyen yıllardaki okula hazır olma, okul başarısı ve sosyal-duygusal yeterlilik gibi çeşitli çıktılarla yakından ilişkilidir (Blair ve Raver, 2015; Diamond, 2013; Eisenberg vd., 2004a, 2010; Eisenberg vd., 2010; Liew vd., 2004). Öz düzenleme becerilerinin çocukların gelişimi için taşıdığı önemli rol sebebiyle bu becerilerin gelişiminin hangi sosyal ve çevresel unsurlarla ilişkili olduğunun incelenmesi araştırmacıların ilgisini çekmiştir. Son yıllarda yayımlanan çalışmalar, günümüzde çocukların günlük yaşamının bir parçası hâline gelmiş olan ekranların nasıl ve ne kadar süreyle kullanıldığının çocukların öz düzenleme becerileriyle ilişkili olabileceğini önermektedir. Bu bölümdeki amacımız, bebeklik ve erken çocukluk döneminde öz düzenleme becerileri ile ekran kullanımı arasındaki ilişkiyi çalışma bulguları ışığında incelemektir.

Öz düzenleme becerileri, bilişsel ve sosyal-duygusal gelişim alanlarında çalışan araştırmacılar tarafından genellikle farklı şekillerde tanımlanır ve ölçülür. Bilişsel gelişim alanında davranışların kontrolüne ve planlama, organizasyon gibi daha üst düzey olarak görülen davranışlara olanak sağlayan *yürütücü işlevler* (executive functions) ön plana çıkarken sosyal-duygusal gelişim alanında davranışları bastırmaya ve duyguları düzenlemeye yarayan *çabalı kontrol* (effortful

ve mobil cihazların günlük yaşamın bir parçası olduğu düşünüldüğünde bu teknolojilerin nasıl *daha olumlu şekilde* kullanılabilceği konusunda da incelemelere ihtiyaç vardır. Örneğin çocukların ekranları hep tek başına kullanmaları yerine, bazı durumlarda kardeşleri veya ekrandaki olayları konuşabilecekleri bir büyükle birlikte izlemeleri/kullanmaları daha olumlu çıktılar sağlayabilir (Ewin vd., 2021; Padilla-Walker vd., 2020). Zorluk seviyesini çocuğun beceri seviyesine göre ayarlayan uygulamaların/oyunların da çocukların yeni bilgiler edinmesine ve sahip oldukları becerileri geliştirmesine destek olabileceği önerilebilir. Henüz hangi tür ve özelliklerde uygulamaların ve oyunların küçük çocukların öz düzenleme becerileri ile ilişkili olabileceğine dair yeterince bilgi bulunmamaktadır.

Özetle, pek çok araştırma küçük çocukların ekran kullanımı ve öz düzenleme becerileri arasında bir ilişki raporlamıştır ancak çelişkili bulguların varlığı ekran kullanımının ölçüm yöntemleri hakkında soru işaretleri uyandırmakta ve göz önüne alınması gereken diğer değişkenlerin (ör. öz düzenleme becerilerini destekleyen anne-baba davranışları, etkileşimli cihaz kullanımında tüketilen içerik gibi) önemini vurgulamaktadır. Ekran kullanımı ve öz düzenleme becerileri arasındaki ilişkiyi daha iyi anlamak için çocukların ekran kullanımını daha ayrıntılı ve incelikli bir şekilde irdelemek gerekmektedir.

BÖLÜM 4

Dijital Teknoloji Dünyasında Gelişen Bellek

Aylin Özdeş

Dijital teknoloji araçlarının modern toplumlarda günlük yaşantının bir parçası hâline gelmesi, bu araçların bilişsel süreçler üzerindeki etkileri ile ilgili tartışmaların ortaya çıkmasına sebep olmuştur. Uzun süredir yaygın olarak kullanılan televizyonun yanı sıra görece yeni olan akıllı telefon, tablet, kişisel bilgisayarlar, akıllı asistanlar (Ör. Siri, Alexa), sanal/artırılmış gerçeklik gözlükleri gibi cihazlar ve bu cihazlarda yer alan internet, video oyunları, sosyal medya, videolu konuşma gibi kullanımlar dijital teknolojinin en popüler örnekleri olarak sıralanabilir. Yetişkinlere yönelik çalışmalar dijital teknoloji kullanımının dikkat (Uncapher vd., 2016; Ward vd., 2017), kısa süreli/çalışan bellek (Ophir vd., 2009; Uncapher vd., 2016) ve uzun süreli bellek (Sparrow vd., 2011; Storm ve Stone, 2015) performansı üzerinde olumlu ve olumsuz olarak sınıflandırılabilir karmaşık etkilerinin olduğunu göstermektedir. Maruz kalınan uyaranların artması sebebiyle kısıtlı dikkat, kısa süreli ve çalışan bellek performansının düştüğü tekrarlanan bir biçimde bulunurken (Ophir vd., 2009; Uncapher ve Wagner, 2018) bilgilerin dijital ortamlara kaydının uzun süreli bellek performansını olumsuz etkilediğini gösteren çalışmaların sayısı hızla artmaktadır (Sparrow vd., 2011). Örneğin yakın zamanlı bir çalışmada yaşanan bir deneyimin fotoğrafının çekilerek sosyal medyada yayınlanmasının o deneyime ilişkin bellek performansını düşürdüğü gözlemlenmiştir (Tamir vd., 2018). Öte yandan hatırlama sorumluluğunun dijital cihazlara aktarılmasının diğer bilişsel süreçler için daha fazla kaynak kullanılmasına olanak sağladığı dolayısıyla bilişsel performansı artırabileceğine ilişkin görüşler de bulunmaktadır (Storm ve Stone, 2015). Yetişkinlere ilişkin bu bulgular, teknolojinin bellek süreçler üzerindeki karmaşık etkisini gösterirken (Bk. Özdeş ve Karaman, 2023), henüz bellek sistemi olgunlaşmamış olan çocuklar dijital teknolojinin etkilerine karşı daha hassas ve etkilenebilir görünmektedir.

üzerindeki etkilerinin anlaşılması kritik öneme sahiptir. Dijital teknoloji araçlarının bellek gelişimi için tümüyle zararlı olduğunu iddia etmek ve çocukların yaşamından tümüyle çıkarmak doğru olmayan bir yaklaşım olarak görünmektedir. Bütün çalışmalar tutarlı bir şekilde dijital teknolojinin uzun süreli ve pasif kullanımının tüm bellek türleri için zarar verici olduğunu göstermektedir. Ancak bu bulgular dijital teknolojinin bellek gelişimi için tümüyle zararlı olduğunu göstermekten uzaktır. Dijital teknoloji araçları bellek performanslarının ölçümü ve hatta geliştirilmesi için araştırmacılara ve eğitimcilere yeni fırsatlar sunmaktadır. Bu durumda dijital teknolojinin bellek üzerindeki olumsuz özelliklerinin azaltılması ve olumlu etkilerinin ön plana çıkarılması için kullanılabilir yeni yöntem ve uygulamalara ihtiyaç olduğu görülmektedir.

BÖLÜM 5

Dijital Dünyada Öğrenme

Nilgün Türkileri

Öğrenme insan bilişinin temelini oluşturan biyolojik, psikolojik ve sosyal boyutlu bir mekanizmadır. İnsanda öğrenme, öğretmenin bir sonucu değil kişinin çocukluktan itibaren kendi dünyasını dinamik bir biçimde şekillendirmesinin bir sonucudur. Bu açıdan insan öğrenmesi ve çocuk ve gençlerin eğitimi birbiriyle etkileşime giren birçok bileşenden oluşan *karmaşık sistemler* (complex systems) bağlamında incelenmelidir (Davis ve Sumara, 2008). Örneğin dünyanın küresel iklimi, organizmalar, insan beyni, iletişim sistemleri, yaşayan bir hücre ve nihayetinde evren tek ya da birkaç nedenle açıklanamayan, tersine küçüklü büyüklü pek çok sebebin bir araya gelip etkileşerek oluşturduğu karmaşık sistemlerdir (Bk., Gleick, 2014). Dolayısıyla bu bölümde sınırlı sayıda kelimeyle öğrenmeyi kapsayan sistemlerden yalnızca bir kısmı (davranış, biliş, sosyal çevre gibi) birbirleriyle ilişkilendirilmeye çalışılacaktır. Bununla birlikte insan öğrenmesini diğer canlıların öğrenmesine göre daha karmaşık kılan nokta diğer canlıların çoğunlukla doğuştan getirdikleri içgüdüleri ile hareket ederken insanın yaşamını devam ettirmek için sayısız beceri kazanmak zorunda olmasıdır. Örneğin bir kuş doğuştan yuva yapma içgüdüğü ile doğarken insan barınmak için binalar inşa etmek, para kazanmak için eğitim alıp bir işe girmek gibi karmaşık sosyal davranışlar gösterir. İnsan, bu üst düzey öğrenme kapasitesi sayesinde önce aletler, sonra makineler icat etmiştir. Hatta günümüzde kendi icat ettiği makinelerin kendisini yok edeceğine dair film senaryoları bile geliştirmektedir.

Tarihsel olarak makineleşme ve sanayileşme ile birlikte 19. yy. boyunca daha önce belirli bir zümreye ait olan eğitimin biçimi de değişmiştir (Carl, 2009). Şehirleşme ve demokratikleşme hareketleri ile birlikte tüm çocukların devlet denetimi altındaki kurumlarda eğitim almaları sağlanmıştır. Günümüzde ise artık Endüstri 4.0 olarak adlandırılan dijitalleşmenin öğrenme biçimlerini ve eğitim yöntemlerini

sanın bireysel ihtiyaçları ve fizyolojisinden sosyokültürel çevresine kadar pek çok düzeyde incelenebilir. Tarihsel olarak 1800'ler ve 1900'ler boyunca ortaya çıkan öğrenme kuramları insanı mekanik bir çerçevede değerlendirmiş ve ortaya çıkan eğitim sistemleri çocukları pasif öğrenenler olarak ele almıştır. Davranışçı psikolojinin temelini oluşturan bu neden-sonuç (uyarıcı-tepki) anlayışı, insan zihni ve davranışının karmaşıklığı idrak edildiğinde sorunlu hâle gelmektedir. Spesifik olarak öğrenmenin bir şekilde deneyimden "kaynaklandığı" veya deneyim "nedeniyle" olduğu şeklindeki davranışçı görüşe karşı öğrenen bireyin aktif biçimde çevresini şekillendirdiğine vurgu yapan yapısalcı ve hümanistik yaklaşımlar öne çıkmıştır. Ayrıca burada yapay zekâ öğrenmesi (machine learning) ile insan öğrenmesi arasındaki farkın da vurgulanması yerinde olacaktır. Günümüzde bilişsel psikoloji ve sinirbilim ile bilgisayar teknolojileri alanları karşılıklı olarak birbirlerinden beslenmektedir. İnsan zihnini bilgisayar modellemeleri kullanarak anlamaya çalışmak da oldukça faydalıdır. Ancak insanların bilgisayarlardan farklı olarak kişisel, sosyal ve eğitime dayalı ilgi ve merakları vardır ve karar verme süreçleri açısından bazen sezgisel bazen rasyonel yargılama eğilimindedirler. Bununla birlikte insan öğrenmesini belirli bölümlere ayırarak incelememize rağmen öğrenmenin karmaşıklık düşüncesi bağlamında ele alınması gerektiği de vurgulanmalıdır. Öğrenen kişiler olarak çocuk ve ergenler, aktif ve dinamik biçimde dünyada karşılaştıkları yeni ve çeşitli koşullara uyum sağlayabilen karmaşık birlikler olarak ele alınmalıdır. Öğrenmenin bu dinamik yapısı ve insan zihninin karmaşıklığının yanı sıra dijital teknolojilerin hayatımıza olan etkisi de karmaşık sistemler olarak karşımıza çıkmaktadır. Bölümün başında “Dijital teknolojiler sayesinde aklımızda pek çok şeyi tutmamıza gerek yoksa çocuklara ne öğretmeliyiz?” sorusunu sormuştuk. Gördük ki insan tıpkı barınmak için binalar inşa etmesi gerektiği gibi kendi çevresini ve kendisini de dinamik biçimde inşa etmektedir. Bilgi çağında bu inşa sürecine aktif biçimde dâhil olabilmek için birey, yaşam boyu öğrenme, bilgiyi arama, bilgiyi üretme ve bilgi ile yaşama becerilerini geliştirmek zorundadır. Sonuçta, hümanist bakış açısından dijital çağın getirdiği faydaları kullanabilmek ve özellikle çocuk ve ergenler açısından riskleri en aza indirebilmek için kazanılması gereken en önemli becerilerin uzun süreli amaçlara ulaşmak için hazzı erteleme ve öz disiplin ile bireysel, özgün ve rasyonel kararlar verebilmek için özerklik ve eleştirel düşünme olduğu söylenebilir.

BÖLÜM 6

Dijital Yerlilerde Dil Gelişimi: Teknolojinin Rolü ve Etkileri

Ferhat Karaman

Dil, hayatın ilk yıllarından itibaren edinilmesi gereken en karmaşık sistemlerden birisidir. Okuma, yazma veya matematik gibi diğer öğrenme problemlerinden farklı olarak dil ediniminin büyük bir bölümü hayatın ilk birkaç yılında gerçekleşmektedir. Bu durum bebeklerin beyinlerinin dillerin yapılarını öğrenmeye özellikle uygun olduğunu göstermektedir. Bebeklerin ana dillerindeki veya birden fazla dildeki sayısız karmaşıklığın etkileyici bir hızla farkına varması ve dilsel süreçleri verimli şekilde öğrenebilmesi tipik gelişimin en etkileyici yönlerindedir. Bu dilsel süreçler, ana dildeki fonemleri keşfetmekten (Eimas, Siqueland, Jusczyk, ve Vigorito, 1971; Kuhl vd., 2006; Polka ve Werker, 1994; Werker ve Tees, 1984), ses dizelerini akıcı bir konuşma içerisinden çıkarmaya (Jusczyk, Houston, ve Newsome, 1999; Saffran, Aslin, ve Newport, 1996; Shukla, White, ve Aslin, 2011; Thiessen, Hill, ve Saffran, 2005), hangi ses dizelerinin anlamlarla eşleştiğini ayırt etmeye (Bloom, 2000; Waxman ve Gelman, 2009), sözcükleri kategoriler hâlinde düzenlemeye ve bu kategorileri söz dizimsel yapılara göre sıralamaya kadar uzanmaktadır (Clark, 1973; Waxman ve Markov, 1995). Bebeklerin dilleri nasıl bu kadar hızlı bir şekilde öğrendiği sorusu uzun yıllardır birçok araştırmannın konusu olmuştur.

Birçok dil edinimi teorisi, dil girdisi ve çocuğun çevre ile etkileşiminin dil gelişimi açısından çok önemli olduğunu vurgulamaktadır (Hart ve Risley, 1995, 1999; Tomasello, 2003). Ancak akıllı telefon, tablet gibi teknolojik cihazlara erişimin gitgide artmasıyla günümüz çocukları, analog bir dünyada yetişen geçmiş yıllardaki çocuklardan farklı olarak dijital bir ekosistem içerisinde büyümeye başlamışlardır. Diğer nesillerden farklı olarak dijital teknolojilerle iç içe büyüyen

veynlerin ekran zamanı sınırlamaları, çocuklarıyla birlikte ekran zamanı geçirmeleri ve örnek davranışlarının çocukların ekran alışkanlıklarına etkisi daha iyi anlaşılabilir. Ayrıca çocukların sağlıklı ekran alışkanlıkları geliştirmelerine yardımcı olacak teknoloji kullanımı eğitimi aracılığıyla ebeveynler çocuklarına nasıl doğru ve etkili bir şekilde rehberlik edebilecekleri konusunda bilinçlendirilmelidir. Tüm bunlarla birlikte çocukların ekran zamanını azaltmalarına ve alternatif etkinliklere (ör. açık hava oyunları, kitap okuma, sanatsal etkinlikler) yönelmelerine yardımcı olacak olası stratejilerin daha iyi araştırılması gerekmektedir. Bu odak noktaları, gelecekteki araştırmaların, erken çocukluk döneminde ekran zamanının etkilerini daha derinlemesine anlamamıza ve çocukların sağlıklı bir şekilde büyümelerine yönelik daha etkili stratejiler geliştirmemize yardımcı olacaktır.

Ekran maruziyetinin bebeklerde dil gelişimi üzerindeki etkilerini inceleyen çalışmaların artması, en nihayetinde dil ile ilişkili gelişimsel bozukluklara dair anlayışımızın gelişmesine katkı sağlayacaktır. Bu araştırmalar, dil gelişimiyle ilgili risk faktörlerini ve koruyucu faktörleri belirlememize ve erken müdahale stratejileri geliştirmemize yardımcı olacaklardır. Ayrıca dil bozukluklarının erken teşhisi ve uygun müdahalelerin planlanması konusunda da önemli bilgiler sağlayabilirler. Bu nedenle dijital teknolojiler ile bebeklik ve erken çocuklukta dil gelişimi arasındaki ilişki üzerine odaklanan çalışmaların artması hem ebeveynlere hem de uzmanlara daha iyi bir anlayış ve rehberlik sunma potansiyeline sahiptir.

BÖLÜM 7

Dijital Teknolojilerin Çocuk İkinci Dil Edinimi Sürecindeki Rolü

İlmiye Seçer

Ana dilden veya ilk öğrenilen dilden başka ikinci bir dilin öğrenilmesine ikinci dil edinimi denilir ve her iki dili günlük hayatta düzenli kullanan bireyler ikidilli olarak adlandırılır (Grosjean ve Miller, 1994). Bireyler iş, eğitim, seyahat ve göç gibi birçok sebepten dolayı ikinci bir dil öğrenmektedir ve tahminlere göre günümüzde dünya nüfusunun yaklaşık yüzde 50'si ikinci bir dil edinmiştir (Grosjean, 2021). Birden fazla dil edinmenin motivasyonları arasında kariyer ile birlikte “Bir lisan bir insan, iki lisan iki insan” sözünden de anlaşılacağı gibi ikidilli olmanın sosyal getirilerinin olmasıdır. Bunun yanı sıra ikidilliliğin bilişsel faydalarının olup olmadığı ise güncel tartışmalar arasında (İnceleme için bk. Antoniou, 2019) ve demans ve Alzheimer hastalığının semptomlarını geciktirebileceği yaygın bulgular arasındadır (ör. Bialystok vd., 2007). İkinci bir dil edinmenin birden fazla olası faydası olduğu açıktır.

İkinci dil edinme sürecini kolaylaştıran ve etkileyen birçok faktör vardır. Bunlardan bazıları ikinci dile maruz kalma yaşı; çocukluk veya yetişkinlik dönemleri, öğrenilen bağlam; ev, okul veya ikinci dil ortamı, ikinci dili kullanma sıklığı, bilişsel beceriler ve motivasyon ve kaygı gibi bireysel farklılıklardır. Bu faktörlerin dil edinme süreçlerine olan etkileri oldukça araştırılmıştır. Örneğin bazı çalışmalar çocukluk döneminde öğrenilen ikinci dilin daha akıcı olduğunu bulurken diğer çalışmalar öğrenilen yaştan ziyade ikinci dil girdisinin kalitesinin ve ikinci dilde üretme fırsatının olmasının önemli olduğunu vurgulamaktadır (İnceleme için bk. Oliver ve Azkarai, 2017). Bu faktörlerin yanı sıra günümüzde dijital teknolojinin hayatımıza entegre olması ile birlikte internet, sosyal medya ve oyunlar sayesinde ikinci bir dile maruz kalmak farklı bir boyut kazanmıştır. Bu değişim ikinci

konu çok yeni bir ilgi alanıdır ve Yaşamımızda sanal gerçeklik gibi daha farklı biçimlerde yer aldıkça çocuk ikinci dil ediniminde dijital teknolojilerin etkileri ve sınıf ortamlarına nasıl uyarlanabileceği ile ilgili daha fazla çalışma gerekmektedir. Ayrıca dijital teknolojilerin olumlu yönlerinin yanı sıra cümle kurulum hataları gibi oluşabilecek olumsuzlukların da araştırılması söz konusudur. Dijital teknolojiler hayatımızın bir gerçeğidir. Ebeveynlerin internet güvenliği konusunda bilinçlenmesi ve çocuklarının güvenliğini sağlaması, çocuklarının ekran başında geçirdikleri süre, oyun türünün ve içeriğinin uygunluğundan emin olmaları önemlidir.

BÖLÜM 8

Okuma Yazma ve Matematik Gelişiminde Dijital Teknolojiler

Tuğba Bahçekapılı Özdemir

Günümüzde çocuklar dünyaya geldikleri andan itibaren birçok farklı dijital teknolojiye maruz kalmakta ve yaşamlarının ilk yıllardan itibaren çeşitli teknolojileri kullanmayı öğrendikleri dijital bir ortamda büyümektedirler (Kabali vd., 2015; Rideout, 2013; Spatariu vd., 2012). Yapılan araştırmalar, çocukların medya kullanımının son yıllarda önemli ölçüde arttığını göstermektedir. Common Sense Medya'nın Amerika Birleşik Devletleri'nde yürütmüş olduğu çalışmanın raporuna göre 0-8 yaş arası çocuklar günde ortalama iki buçuk saat dijital medya ortamlarında vakit geçirmektedirler (Rideout ve Robb, 2020). Bu kapsamda televizyon ve video izlemek, medyada geçirilen sürelerinin yaklaşık dörtte üçünü (%73) oluşturmaktadır. Ayrıca YouTube gibi sitelerde çevrim içi video izlemenin, günde ortalama 39 dakika ile toplam TV ve video izlemede en büyük paya sahip olduğu belirtilmektedir. Türkiye'de de 412 aileyle yürütülen bir çalışma; 0-6 yaş arası çocukların günde yaklaşık 1-2 saatlerini televizyon izleyerek ve yaklaşık 1 saati tablet/akıllı telefonda video izleyerek geçirilen ortaya koymuştur (Merdin, 2017). Konca'nın (2022) 3-6 yaş arası çocuğa sahip 537 aileyle ev ortamındaki dijital medya kullanımını inceleyen çalışması da çocukların günde ortalama 118,6 dakika televizyon seyrettiklerini, 63.1 dakika akıllı telefon ve 40.7 dakika tablet bilgisayar kullandıklarını göstermektedir. Araştırmada, çocukların teknolojiden zengin bir ortamda yaşadıkları ve evlerinde en yaygın kullanılan dijital cihazların sırasıyla televizyon, akıllı telefon ve tablet bilgisayarlar olduğu ifade edilmektedir. Türkiye'de 1214 ebeveynle yürütülen diğer bir çalışmada, çocukların yaşlarıyla birlikte ekran sürelerinin arttığı, bu bağlamda 2 yaşından küçük çocukların günlük ekran süresi ortalama 1 saat iken 2-4 yaş arası yaklaşık 2.5 saate, 5-6 yaş arası 3 saate çıktığı ortaya koyulmuştur (Uzundag vd., 2022). Ekran başında çocukların sırasıyla You-

nolojilerin okul öncesi dönemde öğrenme ve gelişmeyi desteklemede nasıl tasarlanıp kullanılabileceğine yönelik araştırma destekli bulgular paydaşlara yol gösterici olacaktır.

BÖLÜM 9

Çocuklarda Dijital Teknoloji Kullanımının Sosyal Beceriler ve Duygu Düzenlemeye Etkisi

Gizem Koç Arık

Dijital teknoloji, veri üreten, depolayan veya işleyen elektronik araçlar, sistemler, cihazlar ve kaynaklara karşılık gelmektedir. Akıllı telefonlar, tablet, bilgisayar gibi multimedya cihazlar ile sosyal medya uygulamaları ve çevrim içi oyunlar en sık kullanılan dijital teknoloji örnekleridir (Chaudron vd., 2015). Günümüzün çocukları daha önce eşi benzeri görülmemiş bir şekilde dijital teknolojilere erişebilmektedir ve bu açıdan önceki jenerasyonlardan farklılaşmaktadır (Bohnert ve Gracia, 2021). Bu çocuklar için dijital teknoloji kullanımı günlük hayatın bir parçası hâline gelmiştir. 2007 yılında ilk iPhone'un tanıtılmasından sonra doğan çocuklara dokunmatik ekran erişimine sahip oldukları için dijital çocuk anlamına gelen *digitods* denilmektedir (Holloway vd., 2013). Bir önceki kuşakla karşılaştırıldığında, bu çocukların birçoğu taşınabilir akıllı ekranlara daha çok erişim imkânına sahiptir (Brito vd., 2018). Daha önceki kuşaklar dijital teknolojileri bilgisayarda ders anlatımı gibi pasif bir şekilde ve eğitici amaçlar için kullanırken günümüz çocukları için dijital teknoloji kullanımı, çevrim içi benlikler, sosyal ağlar ve günlük deneyimlerle iç içe olmaya kaymıştır (Fomby vd., 2019).

Çocukların dijital teknolojiyi en çok kullandığı form, ekran kullanımı olarak karşımıza çıkmaktadır. Önceki kuşaklar için ekran kullanımı olarak TV izleme öne çıkmışken günümüzde teknolojilerin gelişmesiyle birlikte TV yerini dijital ekran kullanımına bırakmıştır (Bohnert ve Gracia, 2021). Ekran kullanımında ekran süresi çocukların gelişimini etkileyen en önemli göstergelerden biridir. Alan yazında ekran süresinin farklı tanımları bulunmaktadır. Bazı çalışmalarda *ekran süresi*; eğlence, öğrenme, etkileşim veya oyun için ekranda içerik sağlayan herhangi bir

mesine teşvik ettiği de görülmektedir. Alan yazındaki ilgili çalışmalar, ekran kullanımının çocuğun zor duygularında düzenleme becerileri geliştirmesindenense ekrana bakarak becerilerini geliştirme fırsatlarını azalttığını, ayrıca genel olarak ebeveynleriyle etkileşim sıklığını azalttığı için duygu düzenleme gelişimini olumsuz etkilediği gösterilmiştir.

Sonuç

Kitabın bu bölümünde çocukluk döneminde dijital teknoloji kullanımının duygu düzenleme becerilerini de içerecek biçimde çocukların sosyal beceri ile ilişkisinden bahsedilmiştir. Bu ilişkiden bahsedilirken öncelikle dijital teknolojilerin çocuklar arasında kullanım sıklığı, formu, farklı yaşlar için önerilen süreler ve kullanım sebepleri ile kullanımı etkileyen temel faktörlerden tanımlayıcı olarak bahsedilmiştir. Sonrasında sosyal becerilerin tanımı yapılarak dijital teknoloji kullanımıyla ilişkisi gelişimsel olarak anlatılmıştır. Benzer şekilde dijital teknolojilerin kullanımı ile duygu düzenleme ilişkisine değinilmiştir. Çalışmalar çoğunlukla dijital teknoloji kullanımının çocuğun duygu düzenlemesini ve sosyal becerilerini olumsuz etkilediğini göstermektedir. Ancak ebeveyn ile birlikte yaşına uygun bir içerikle ve aktif bir şekilde ekran kullanımının risklerinin ilgili gelişimsel çıktılar açısından daha düşük olduğu da tutarlı bir şekilde görülmüştür. Bu şekilde dijital teknoloji kullanımının yüksek SED’de yaşayan çocuklar için daha sık deneyimlendiği düşünüldüğünde özellikle düşük SED’deki çocuklar için dijital teknoloji kullanımının sosyal beceriler açısından bir risk faktörü olduğunu söyleyebiliriz.

Ebeveyn-Çocuk Etkileşiminde Dijital Teknolojinin Rolü

Tuğba Koçak Özel

Günümüzde pek çok insan televizyon, akıllı telefon, tablet ve bilgisayar gibi dijital teknolojileri kullanmaktadır. Ebeveynler ve çocuklar da çoğunlukla görünümlü görüşme, mesajlaşma, sosyal medya, oyun gibi amaçlarla çeşitli uygulamalar üzerinden dijital teknolojilerden faydalanmaktadır. Dijital teknolojilerin günlük yaşamın mutlak bir gerekliliği olması dijital teknoloji yönetimini önemli hâle getirmektedir (McDaniel ve Coyne, 2016b; Radesky vd., 2016). Dijital teknolojilerin kontrollü kullanıldığında sosyal destek sağlama (McDaniel, 2015; McDaniel, 2020; Radesky vd., 2016), aile ve arkadaşlarla iletişim kurma (Elsaesser vd., 2017), yaratıcılığı ve bilişsel becerileri geliştirme (Limone ve Toto, 2021), dijital hikâye okuma (Ong ve Aryadoust, 2023), etkili ebeveynliği destekleme (McDaniel, 2020) gibi bazı olumlu işlevleri olsa da hayatın her alanına yayılmasıyla kullanım sıklığı artmakta, bu da olası olumsuz etkileri konusunda bazı endişeleri beraberinde getirmektedir. Nitekim Çocuklarda Bilişim Teknolojileri Kullanım Araştırması'nda, 6-15 yaş grubu arasındaki çocukların internet kullanım oranının %82,7 olduğu, internet kullanan çocukların %90,1'inin hemen her gün internet kullandığı, yaklaşık ortalama 12 saat çevrim içi derse katılma, ödev yapma gibi okul ile ilgili gereksinimlerle ve yaklaşık ortalama 7 saat ise oyun oynama, video izleme gibi ders dışı nedenlerle internet kullandığı rapor edilmiştir (Türkiye İstatistik Kurumu, 2021). Yapılan bir araştırmada, küçük çocukların %80'inin dijital teknolojilere doygun bir ortamda büyümekte olduğunun, hatta pek çoğunun yatak odasında dahi televizyon, oyun konsolu gibi dijital teknoloji araçlarının bulunduğu altı çizilmektedir (Vandewater vd., 2007). Sözü edilen çalışmalar, çocukların dijital teknolojilere sıklıkla maruz kaldıklarına ve dijital teknolojilerin olumsuz etkilerine karşı savunmasız olduklarına işaret etmektedir. Diğer taraftan çocukların

tedbirlerin ve dijital teknolojilerin kullanımını azaltmayı hedefleyen politikalar geliştirmenin önemli olduğu sonucuna ulaşılabilir.

Dijital Teknoloji ve Benlik Gelişimi

Şükran Okur Ataş

Dijital teknoloji, hızla dijitalleşen dünyaya çocukların uyum sağlayabilmesi, çeşitli bilgi ve becerileri öğrenebilmesi açısından önemlidir (Stoilova vd., 2021). Çocuklar internet kullanımına en çok telefon ile ulaşmaktadır. Farklı dijital ortamlar, farklı amaçlar için kullanılabilir. Örneğin sosyal medya daha çok iletişim kurma ve sosyalleşme amacı ile kullanılmakta, çevrim içi oyunlar ise daha çok eğlence amaçlı kullanılmaktadır. Ancak internet üzerinde çocuklar için birçok risk bulunmaktadır. Bu riskler arasında, uygunsuz içeriklere maruz kalma (ör. madde kullanımı, şiddet içerikli video ve fotoğraflar, kendine fiziksel olarak zarar verme), zorbalık, ayrımcılık, şiddet içerikleri, cinsel içerikli mesajlar alma/gönderme ve cinsel istismar sayılabilir. Dijital medya, çocukların gelişimlerini birçok alanda etkilemektedir. Bu gelişim alanlarından biri de benlik gelişimidir. Bu bölümde, çeşitli dijital medya araçlarının çocukların ve ergenlerin benlik gelişimi üzerindeki etkilerini inceleyen çalışmalara yer verilmiştir.

Benlik

Benlik kavramı, kişinin kendisine dair duygu ve düşüncelerinin bütünü şeklinde tanımlanabilir (Rosenberg, 1979). Benlik kavramı genel ve sabit bir kavram olmaktan ziyade, aktif ve çok boyutlu bir kavram olarak tanımlanmaktadır (Markus ve Wurf, 1987). Kişilerin benlik temsilleri farklı kaynaklara dayanabilir. Bazı temsiller kişinin kendi duygu, biliş, motivasyon ve fizyolojik tepkilerinden yaptığı çıkarımlarına dayanırken bazıları başkalarının tutum ve tavırlarından yapılan çıkarımlara dayanabilir. Dolayısıyla kişiler benliklerine dair bilgileri başkalarından öğrenebilirler. Bu durum başkaları ile olan etkileşimler veya kişinin kendini başkaları ile kıyaslaması yoluyla ortaya çıkabilir.

zaman içinde azaldığı görülmüştür (Touloupis ve Athanasiades, 2022). Dolayısıyla siber zorbalığı azaltmaya yönelik çalışmalarda benlik saygısına yer verilmesi oldukça önemlidir.

Sonuç

Çocukların medyanın verdiği mesajlara karşı oldukça hassas olması nedeniyle çocuklara yönelik medyanın onların ihtiyaçlarına ve becerilerine karşılık gelmesi oldukça önemlidir (Lieberman vd., 2009). Çocuklar için uygun olmayan içerikler (ör. şiddet), çocukların benlik algılarını olumsuz yönde etkilemektedir. Özellikle sosyal medya ve dijital oyunlar benlik gelişiminde daha fazla araştırılan konulardır. Sosyal medyada başkaları ile yapılan etkileşimler, çocukların/ergenlerin benlik algılarını etkilemektedir. Şiddet içeren dijital oyunlar ise çocukların saldırgan bir benlik geliştirmesine neden olabilmektedir. Dolayısıyla dijital medya araçlarının çocuklara uygun şekilde seçilmesi ve denetlenmesi benlik gelişimi açısından oldukça önem taşımaktadır. Ebeveynlerin çocuklarının kullandığı dijital medya araçlarının farkında olması ve bu ortamları denetlemesi çocukların benlik gelişimindeki risklerin ortaya çıkarılması için önemlidir. Ayrıca uygulanacak müdahale programlarında benlik saygısının artırılmasına da yer verilmesi, özellikle siber zorbalık ile mücadelede oldukça etkili olacaktır.

BÖLÜM 12

Dijital Çağda Çocuk ve Oyun

Şıvganur Kirman Güngörer

Çocuk oyunları, insanlık tarihinin başından beri var olmuştur ve çağlar boyunca farklı kültürlerde farklı şekillerde görülmüştür. Geçmişten günümüze çocuk oyunları incelendiğinde, İlk Çağlarda müzik ve dansı içeren oyunların olduğu, beş taş, uçurtma ve ip oyunlarının en bilinenler arasında yer aldığı görülmektedir (Chalid, Kâmil ve Meliza, 2020). Ayrıca körebe, saklambaç, çember, suda taş kaydırmaca gibi oyunların da sıklıkla oynandığı düşünülmektedir (Chalid, Kâmil ve Meliza, 2020). Orta Çağ'da, çocukluğa atfedilen değer günümüzden farklı olduğu için çocukların yetişkinlere özgü oyunlar oynadığı gözlenmektedir. Bu dönemde kiraz çekirdeği ve fındık kullanılarak oynanan misketler, kumaşlardan yapılan kuklalar kullanılmış, dama, saklambaç, seksek ve taklit oyunları oynanmıştır (Özcan, 2017). Yeni Çağ'da, oyunun çocuk gelişimi ve öğrenmeyle ilişkisi fark edilmiştir ve derslerin daha ilgi çekici olması için oyunun kullanılması önerilmiştir (Özcan, 2017). Masaüstü oyunlarının ve sanal oyunların ortaya çıktığı yakın çağda ise oyunlar sadece nicel değil aynı zamanda niteliksel değişime uğramışlardır (Özcan, 2017). 20. yüzyıldan sonra teknolojinin hızlı gelişimi, çocukların oyun dünyasında köklü değişikliklere neden olmuştur. Bu değişim, çocukların oyun dünyasına yeni bir boyut kazandırmıştır ve oyunların türü, içeriği ve oynanış şekli üzerinde önemli bir etki yaratmıştır. Bu kitap bölümünde, teknolojinin gelişmesiyle birlikte çocuk oyunlarında yaşanan bu değişim ele alınacaktır. Ayrıca bu dönüşümün çocukların sosyal ve duygusal gelişimi üzerindeki etkileri de tartışılacaktır.

Geleneksel Oyun Tanım ve Sınıflandırması

Öncelikle oyun kavramına yakından bakarsak, bu kavramın anlamı konusunda genel bir fikir birliği bulunmadığı görülmektedir (Sherwood ve Reifel, 2010). Bjorklund (2007) tarafından oyun, çocukların yaptığı şey olarak tanımlanmaktadır.

dijital teknolojileri kendi uygulamalarına en faydalı şekilde nasıl yerleştirecekleri konusunda desteğe ihtiyacı olduğu açıktır. Dijital oyunları gereksiz görüp göz ardı etmek ya da potansiyel olarak zararlı olarak görüp yok saymak yerine akademisyenlerin ve eğitimcilerin görece yeni olan bu dünyanın olanaklarını ve neler sunabileceğini daha yakından incelemeleri gerekmektedir. Örneğin günümüzde teknoloji kullanılarak oluşturulan, kurgular ile gerçek ve hayalin birleştirilmesi olarak tanımlanan sanal gerçeklik teknolojileri çocuk oyun deneyimlerini daha da çeşitlendirmektedir. Ancak bu oyunların çocukların gelişimi üzerindeki etkileri ve gelişimlerini desteklemek için nasıl kullanılabilirliği konusunda çok sınırlı çalışma bulunmaktadır. Çocukların dijital oyunlarının kesin doğasına ilişkin bilgi ve anlayışı derinleştirmek için hem genel olarak hem de daha özel olarak bilgide belirlenen boşluklarla ilgili, devam eden araştırmalara ihtiyaç olduğu açıktır.

BÖLÜM 13

Çocuk ve Ergenlerde İnternet ve Sosyal Medya Kullanımı

İlknur Çoban

Teknolojinin hızla geliştiği günümüz dünyasında farklı birçok amaçlarla kullanılan internetin önemi gün geçtikçe artmaktadır (Arslan vd., 2014). Eğlence, iletişim, ev işleri, kişisel bakım, sağlık, seyahat ve benzeri birçok alanda yaygın olarak kullanılan internet, günümüz koşullarında bir tercih olmaktan çıkıp bir zorunluluk hâline gelmiştir (Aral ve Keskin, 2018). Elektronik medya çeşitliliğinin artması ve internetin yetişkinler tarafından oldukça sık kullanılması internetin çocuklar tarafından da yaygın olarak kullanılmasına yol açmıştır. Çocuklar ve ergenler bilgiye erişmek, iletişim kurmak, oyun oynamak ve daha da yaygın olarak sosyal medya platformlarını kullanmak amacıyla interneti sıkça kullanmaktadırlar (Topçu, 2018). Sosyal medya platformları da internetin hayatımıza getirdiği ve oldukça sık kullanılan yeniliklerden birisidir (Sarıçam ve Adam Karduz, 2018). Bu nedenle çocuk ve ergenlerin internet ve sosyal medya kullanım davranışları ve bu platformların çocuk ve ergenler üzerindeki etkileri sıkça araştırılan bir konu hâline gelmiştir. Bu bölümde çocuk ve ergenlerin internet ve sosyal medya kullanım davranışları, günümüzde yaygın olarak görülen problemlerden takıntılı internet kullanımı ve siber zorbalık üzerinde durulmuştur. Buna ek olarak ebeveynlerin sosyal medya kullanımına değinilmiş, ebeveynlere ve uzmanlara sağlıklı internet kullanımına yönelik öneriler sunulmuştur.

İnternet ve Sosyal Medya Kullanımı, Yaygınlığı, Kullanım Amaçları ve Etkileri

Herhangi bir yöntem ile başkaları ile iletişim kurmaya yardımcı olan araçların ve uygulamaların tümü sosyal medya olarak adlandırılmaktadır (Amerikan Pedi-

Değişen Dünyada Medya Okuryazarlığı: Eleştiren ve Üreten Çocuklar

Tolga Kargın

COVID-19 vakalarını tedavi eden Japon doktorlar tarafından MÜKEMMEL TAVSİYE:

Herkes ağzının ve boğazının nemli olmasını sağlamalı, asla KURU olmamalıdır. En az 15 dakikada birkaç yudum su için NEDEN? Virüs ağzınıza girse bile ... içme suyu veya diğer sıvılar onları yemek borunuzdan ve mideye yönlendirir. Karın içinde mide asidiniz tüm virüsü öldürecektir. Eğer düzenli olarak yeterince su içmezseniz virüs nefes borunuza ve oradan da AKCİĞERİNİZİN içine girebilir. Bu çok tehlikelidir. Lütfen bu mesajı aileniz, arkadaşlarınız ve bu konudan yararlanabilecek herkes ile paylaşın! İnsanların dünyanın her yerinde korona virüsünden kurtulmasına yardım edin³

Medya aracılığı ile karşılaştığımız iletileri ne kadar doğru yorumlayabiliyoruz? Her ne kadar iyi bir medya okuryazarı olmanın önemi yıllardır konuşulmuş ve tartışılmış olsa da kısa bir süre önce tecrübe ettiğimiz Koronavirüs pandemisi döneminde medyayı doğru okuyup anlamanın ve doğru kullanmanın önemi tüm toplum tarafından daha net olarak anlaşılmıştır. Bu süreçte insanlar bilgi edinmek ve bilgi paylaşmak amacıyla medyayı aktif olarak kullanmışlar ancak paylaşılan hatalı bilgiler ve sahte haberler birçok insanı böylesine önemli bir konuda yanlış yönlendirmiştir. Yalnızca Türkiye’de değil dünyanın birçok yerinde yukarıdakine benzer bilimsel gerçeklerden uzak sosyal medya iletileri paylaşılır olmuştur. Bazı haber kanallarında

³ Koronavirüs pandemisi sırasında viral olan bu medya iletişi 22.02.2023 tarihinde Euronews web sitesinden alınmıştır. Medya iletişinde yapılan yazım hataları kasıtlı olarak düzeltilmemiştir. İletişime ulaşmak için: <https://tr.euronews.com/2020/04/03/sosyal-medyada-koronavirus-paylasimlari-dogru-bilinen-10-yanlis-corona-virus-covid-19>

çocuklar, sorumsuzca hazırlanan ve çeşitli platformlarda servis edilen video içeriklerinin olumsuz etkilerini en aza indirmek için daha donanımlı hâle gelebilirler.

Öğrencilere medya okuryazarlığı eğitimi vermek ve sınıf içinde ve dışında örnek olmak öğretmenlerin sorumluluğunda olsa da bu eğitim tek başına yeterli olmayacaktır. Çocukların medya etkileşimi genellikle eve gittikten sonra başlar ve evde medyayı bilinçsizce kullanan aile üyeleriyle karşılaştıklarında okulda alınan medya okuryazarlığı eğitiminin pek bir anlamı kalmayacaktır (Coyne vd., 2017). Bu nedenle öğretmenlerin aileleri doğru medya kullanımı ve medya okuryazarlığı konusunda düzenli olarak bilgilendirmesi ve bu sürece dâhil etmesi önemlidir. Böylece ebeveynlerin çocuklarına medyayı sorumlu bir şekilde kullanma konusunda rehberlik etmeleri ve çocukların okulda öğrendikleri dersleri pekiştirmelerine destek olmaları sağlanabilir.

Ancak hem okulda medya okuryazarlığı eğitimini doğru verebilecek hem de ailelere bu konuda rehberlik edebilecek öğretmenlere sahip olmak için devlet eliyle atılması gereken adımlar vardır. Hem üniversitelerin eğitim fakültelerinde temel eğitim bölümü lisans ve lisansüstü programlarına medya okuryazarlığına yönelik dersler eklenerek öğretmen adayları bu konuda donanımlı olarak yetiştirilmeli hem de Millî Eğitim Bakanlığı ve Yükseköğretim Kurulu iş birliği ile medya okuryazarlığı alanında uzman akademisyenlerce hazırlanan eğitimlerle öğretmenler bu konuda bilinçlendirilmelidir. Öğretmen bu konuda donanımlı hâle getirildikten sonra öğretmenlerin medya okuryazarlığı dersinde kullanacakları materyal ve malzeme eksiklikleri de en kısa zamanda tedarik edilmelidir (Kargın ve Demir, 2023).

Özetle, medya okuryazarı çocuklar yetiştirmek konusunda en büyük sorumluluk ebeveynlere ve öğretmenlere düşmektedir. Bu bölümde, önce çocukların medya kullanım alışkanlıkları ele alınmış daha sonra medya okuryazarlığının ne olduğu ve hangi becerileri kapsadığı anlatılmıştır. Medya iletilerini anlamlandırma (Tablo 1) ve medya iletileri üretme (Tablo 2) aşamaları detaylı bir şekilde örnekler üzerinden açıklanmıştır. Sunulan içeriğin hem ebeveynlere hem de öğretmenlere medya okuryazarı çocuklar yetiştirmek konusunda rehberlik edeceği düşünülmektedir.

BÖLÜM 15

Erken Çocukluk Döneminde Artırılmış Gerçeklik Teknolojisi

Merve Coşgun Demirdağ, Sevda Küçük, Adnan Taşgın

Teknolojik ve küresel gelişmeler eş zamanlı olarak tüm dünya ülkelerine yayılmaktadır. Bu gelişmelerden tüm toplumlar, çocuklardan yetişkinlere kadar tüm insanlık etkilenmektedir. Sürekli olarak yeni teknolojiler ve dijital cihazların ortaya çıkışı, toplumların yaşamlarını da değiştirip dönüştürmüştür. Dijital cihazlar hızla evde, okulda ve toplumda kültürel araçlar hâline gelmiştir (Wartella vd., 2013). Amerika Birleşik Devletleri'nde 2000 yılında hanelerin sadece %41,5'i internet erişimine sahipken bu rakam 2014 yılında %76,7'ye (Ryan ve Bagley, 2015), 2019 yılında ise %89,4'e yükselmiştir (Taştan, 2019). Dijital teknolojilerin günlük hayatımızda yaygınlaşmasıyla birlikte dijital teknoloji kullanımına başlama yaşı da düşmüştür (Chaudron ve Beutel, 2015; Ofcom, 2019; Rideout ve Robb, 2020).

Özellikle küçük çocuklar çok aktiftir ve bir şeyler yapmaktan hoşlanırlar. Hareket ederken ve çevrelerindeki dünyayla etkileşime girerken önemli duyu-motor ve bilişsel beceriler geliştirirler (Radesky vd., 2015). Bir mobil cihazın ve teknolojinin entegre kullanımı hem aktif hem de kültürel olarak anlamlı öğretimi destekleyebilmektedir. Bu ortamda çocuklar, yalnızca tablet telefon vb. ekranlarla etkileşime girmeye değil aynı zamanda kullanılacak bir robotla hareket etmeye, konuşmaya, dokunmaya ve iletişim kurmaya teşvik edilebilmektedir. Böylece etkileşim düzeyi artarak kalıcı öğrenmeler gerçekleştirilebilmektedir.

Günümüz çocukları biz yetişkinlerden tamamen farklı bir çocukluk ve dijitalize bir hayat sürdürmektedir. Bizim çocukluk anılarımızda ağaçlara tırmanmak, top oynamak, bisiklet sürmek varken onlar ekranlara tıklayıp sürüklemektedirler (Goodwin vd., 2018). Dijital çağda teknoloji eğitici amaçlarla ve doğru kullanıldı-

Bunun yanında AG oyunları eğlenerek öğrenmeyi sağladığı gibi, çocukların motivasyon, dikkat, problem çözme sorumluluk ve yaratıcılık becerilerini de iyi yönde etkileyip geliştirmektedir. Tüm bu faydalara rağmen teknolojiyle iç içe olan erken çocukluk dönem çocuklarının teknoloji kullanımında ebeveyn denetimi ve öğretmen rehberliği önemlidir. Teknolojiye duyulan ilgi ve isteğin yüksek olduğu çocukluk döneminde bu durum fırsata çevrilmeli, AG teknolojisiyle zenginleştirilmiş öğrenme ortamlarıyla çocuklar eğlenerek öğrenmeye teşvik edilmelidir.

TEMEL BİLEŞENLER ANALİZİ

*Burcu Öngen Bilir
Serkan Kardeş*

1. GİRİŞ

Temel Bileşenler Analizi – TBA (*Principle Component Analysis - PCA*), denetimsiz bir öğrenme algoritması olup, makine öğrenmesinde verinin boyutunu azaltmak için kullanılan bir yöntemdir. TBA, veri öznitelikleri açısından büyük değişken kümesinden düşük boyutlu bir öznitelik kümesi olan bir boyut azaltma tekniğidir. Buradaki amaç, verideki en önemli bilgileri korurken girdi özniteliklerinin sayısını azaltmaktır. TBA, her bir özneliğin varyansını dikkate alarak çalışır. Bileşenlerin açıkladıkları varyans oranlarının yüksekliği, sınıflar arasındaki iyi ayrımı gösterir. Bu durum çok boyutluluğu azaltmaktadır (Vasan & Surendiran, 2016).

Boyut azaltma terimi, araştırmada kullanılan özniteliklerin veya değişkenlerin miktarını tanımlar. Çok sayıda değişken içeren yüksek boyutlu veri setleriyle uğraşırken değişkenler arasındaki ilişkileri görselleştirmek ve yorumlamak zor olmaktadır. Veri setindeki değişken sayısı azaltılırken, en önemli veriyi korumak için TBA gibi boyut azaltma yöntemleri kullanılır. Veri setinin azaltılmış boyutluluğu, çalışmada kaç temel bileşenin kullanıldığına bağlıdır. TBA, veri setinin boyutsallığını azaltarak veri analizini kolaylaştırmaya, görselleştirmeyi geliştirmeye ve trendleri ve faktörler arasındaki ilişkileri tespit etmeyi kolaylaştırmaya yardımcı olmaktadır (Lauro & Palumbo, 2000). TBA, diğer makine öğrenmesi algoritmalarını uygulamadan önce verinin boyutsallığını azaltmak için bir ön işleme adımı olarak kullanılabilir. TBA, özniteliklerin sayısını azaltarak aşırı öğrenmenin (*overfitting*) önlenmesine, algoritmaların hesaplama karmaşıklığının azaltılmasına ve öznitelik sayısına duyarlı algoritmaların performansının iyileştirilmesine yardımcı olabilir. Literatürdeki en belirgin öznitelik azaltma yöntemi olan TBA'nın denetimsiz bir yöntem olmasının sebebi, büyük veri setinden ilgili bilgileri çıkaran parametrik olmayan bir algoritma olmasıdır (Martinez & Kak 2001). Esas amacı, örneklemelerin en büyük varyans boyutlarının bazılarını bir veri alt uzayına yansıtmaktır. İzdüşüm, en büyük özdeğerlerle eşleşen

Değişkenler uygulamanın başında belirtildiği sıra ile otomatik bir şekilde tanımlanmıştır. Örneğin, *D1* cinsiyet, *D2* etnik köken, *D3* ebeveyn eğitim düzeyi, *D4* öğle yemeği, *D5* sınava hazırlık kursu, *D6* matematik puanı, *D7* okuma puanı, *D8* yazma puanı değişkenlerini temsil etmektedir. Tablo incelendiğinde ilk bileşene en çok etki eden değişkenlerin matematik, okuma ve yazma puanları olduğu, ikinci bileşene en çok etki eden değişkenin cinsiyet olduğu, üçüncü bileşene en çok etki eden değişkenlerin ebeveyn eğitim düzeyi ve sınava hazırlık kursu olduğu, dördüncü bileşene en çok etki eden değişkenlerin ebeveyn eğitim düzeyi, öğle yemeği ve sınava hazırlık kursu olduğu, beşinci bileşene en çok etki eden değişkenlerin etnik köken ve ebeveyn eğitim düzeyi olduğu görülmektedir.

BÖLÜM 2

TEKİL DEĞER AYRIŞIMI

*Ali Alsaç
Tuncay Özcan*

“TDA yöntemi kesinlikle lineer cebirin en yüksek noktasıdır.”- (Strang & Borre, 1997)

1. GİRİŞ

Yapay zekâ destekli sistemlerin etkinliğinin artmasıyla veri günümüzde en önemli kaynaklardan biri hâline gelmiştir. Soyut bir kavramdır ama sonuçlarıyla somutlaşan bir operasyonun, işlemin ana besleyicisidir. Dijital dönüşüm için yapılan çalışmaların hızlanmasıyla üretilen veri miktarının da arttığı görülmektedir. Toplum yaşantısının her alanında, insanın kayıt tuttuğu her noktada, bilgisayar destekli bütün sistemlerde yazılı, görsel, sesli ve diğer veri türlerinde çıktılar üretilmektedir. Özellikle nesne tanıma ve ses sinyali işleme için yüksek boyutlu veriyle çalışmak gerekmektedir.

Makine öğrenmesi destekli dijital sistemlerin ana besleyicisi veridir. Temel olarak makine öğrenmesi, veriyi deneyim olarak kullanan çeşitli teknikler yardımıyla sistemler geliştirmeyi amaçlamaktadır (Kartal vd., 2022).

Verinin işlenerek hedef sistemler içinde kullanılması artık zamanla yarışılan bir uğraş olmuştur. Verinin boyutu ile işleme süresi arasında doğrusal bir bağlantı vardır. Bu noktada verinin boyutu ile ilgili fikirler belirmektedir. Verinin boyutuna etki eden yöntemlerin geliştirilmesi ile zaman ve bellek konusunda ilerlemeler sağlanmıştır. Veri boyutunun azaltılması, yüksek boyutlu ham verinin daha düşük boyutlara indirgenmesi işleme, depolama ve taşıma maliyetlerini düşürmektedir (Çalışan & Talu, 2020).

Boyut indirgeme yöntemlerinden biri literatürde yaygın kullanılan ismiyle Tekil Değer Ayrışımı – TDA (*Singular Value Decomposition - SVD*) ve bu yönteme ait olan algoritmalarıdır. TDA yöntemi sayesinde verinin boyutu azaltılarak yöntemin kullanıldığı modellerde sonuçlara daha çabuk ulaşıldığı görülmektedir (Bakir, 2018).

Boyut indirgeme yöntemlerinin amacı boyut azaltılırken yaşanan kaybın en az olmasıdır. Veri içinde önemli olmayan parçaların ayıklanması ile boyut düşürülmektedir. Boyut indirgeme

Veri setlerinde boyutların artması veri analizlerinin, görüntü ve ses işleme gibi zorlu işlemlerin sürelerini arttırmaktadır. Boyut arttıkça işlemler samanlıkta iğne aramaya dönüşmektedir. TDA yöntemi işte tam bu noktada bilginin ayıklanması ve çözümün kolaylaştırılması için önemli bir katkı sağlayıcı yöntem olarak öne çıkmaktadır. Ayrıca veri setlerinde bazı öznelilikler arasında kurulan yüksek etkileşim, korelasyon nedeniyle aşırı öğrenme (*overfitting*) problemi görülmektedir. Boyut azaltma ihtiyacına neden olan durumlardan biri de bu durumdur.

TDA yönteminin makine öğrenmesi alanında kullanıldığı örneklerden biri de öneri ve tahmin sistemleridir. Tahmin sistemlerinin başarılarının artırılmasında TDA tabanlı algoritmaların kullanılması yaygınlaşmaktadır. Bir sınıflandırma ya da regresyon modelinin performansı Ortalama Karekök Sapması (RMSE) veya Doğruluk değeri ile ölçülerek, TDA öncesi ve sonrası olarak incelenebilir.

BÖLÜM 3

BİRLİKTELİK KURALLARI - APRIORI ALGORİTMASI

Gökçe Karahan Adalı

1. GİRİŞ

Denetimsiz makine öğrenmesi yöntemlerinden birliktelik kuralları, genel olarak, karar desteği için anlamı olan büyük miktarda veride sıklıkla birlikte tekrar eden öğeleri/olayları bulmaya yönelik bir teknik olarak tanımlanabilmektedir. İyi bilinen ve yaygın olarak kullanılan birliktelik kuralı yöntemlerinden biri Apriori algoritmasıdır. Bu algoritmada veri tabanlarında depolanan işlem verilerinden sık sık meydana gelen bir dizi öğe kümesini bulmak için öne çıkan bir algoritmadır (Santaso, 2021).

Bu bölümde birliktelik kurallarının temel yapısından bahsedilerek, Apriori algoritması ele alınmıştır. Bölümün akışında perakende satış verileri üzerinde Apriori algoritması uygulanarak birliktelik analiz modeli içeren bir uygulamaya yer verilmiştir. Uygulama aynı veri seti üzerinde Python ve R programlama dili kullanılarak gerçekleştirilmiştir. Bölüm içerisinde yer alana uygulamada **Veri Madenciliği için Çapraz Endüstri Standart Süreç Modeli** (*CRoss-Industry Standard Process for Data Mining - CRISP-DM*) adımları takip edilmiştir (Balaban ve Kartal, 2018; Shearer, 2000).

1.1. Birliktelik Kuralları

Birliktelik kuralları, eldeki verilerin analiz edilerek bu veriler içerisindeki hangi süreçlerin sıklıkla birlikte gerçekleştiğinin tespiti ile geleceğe yönelik iyileştirme çalışmaları yapılmasını destekleyen bir yaklaşımdır. Öğe kümeleri arasındaki ilişkilendirme kurallarını veya ilişkileri arama süreci, ilişkiyel bir veri tabanından elde edilmektedir (Yudanar vd., 2020). Birliktelik kuralları Agrawal ve Srikant tarafından 1993 yılında geliştirilmiştir.

Birliktelik kurallarının birçok farklı alanda uygulamasını görmek mümkündür. Finans, mühendislik, eğitim ve sağlık sektörlerinde uygulama sahası bulunmaktadır. Bu çalışmada da bahsi geçen perakende sektöründe ise birliktelik kuralı yöntemi daha çok alışveriş sepeti (market sepet) analizi olarak bilinmektedir. Bu analiz, bir alışveriş deneyimi sırasında müşteri

bağlılığını artırabilecek ve müşteri deneyimini iyileştirebilecek ve müşteri davranışlarını belirleyebilecektir.

BÖLÜM 4

OneR ALGORİTMASI

Toprak Enes Tütüncü

1. GİRİŞ

OneR algoritması, tek bir öznitelik değişkeninden bir dizi karar kuralı geliştiren basit bir sınıflandırma öğrenme algoritmasıdır. Algoritmanın adı, öznitelik değişken sayısı için “One” ve karar kuralları için “R (Rule)” kullanılarak oluşturulmuştur. Algoritma, belirli bir veri kümesinin bir özelliğine bakar ve sonucu tahmin etmek için bu özelliğe dayalı bir karar kuralı üreterek çalışır. OneR, denetimli makine öğrenmesi için kullanılan klasik bir algoritmadır ve bir karar kuralı anlamına gelmektedir (Raschka, 2023). Kural tabanlı sınıflandırıcılar, çeşitli IF-THEN kurallarını kullanarak sınıf kararını buna bağlı olarak veren bir sınıflandırıcı türüdür. Bu kurallar kolayca yorumlanabilir ve bu nedenle bu sınıflandırıcılar genellikle tanımlayıcı modeller oluşturmak için kullanılır (Virmani, 2023).

Karar kuralı bir koşul veya öncül ve bir tahminden oluşan basit bir IF-THEN ifadesidir. Örneğin; EĞER bugün yağmur yağıyorsa (koşul) ve EĞER aylardan Nisan (koşul) İSE yarın yağmur yağacak (tahmin) gibi. Tahmin yapmak için yalnız bir karar kuralı veya birkaç kuralın birleşimi kullanılabilir. Karar kuralları genel bir yapı izler, eğer koşullar sağlanıyorsa kesin bir tahminde bulunulabilir. Karar kuralları en iyi yorumlanabilir tahmin modellerinden biridir. Programlama dillerinde IF-THEN kurallarının yazılması oldukça doğaldır. Makine öğrenmesinin getirdiği yenilik ise, karar kurallarının bir algoritma aracılığıyla öğrenilmesidir. Örneğin, bir evin değerini (düşük, orta veya yüksek) tahmin etmeye yönelik bir karar kuralını öğrenmek için bir algoritma kullandığımızı varsayalım. Bu model tarafından öğrenilecek bir karar kuralı şöyle olabilir: Bir ev 100 m^2 'den büyükse ve evin bahçesi varsa, değeri yüksektir.

- Boyut > 100 IF kısmındaki birinci koşuldur.
- Bahçe = 1 IF kısmındaki ikinci koşuldur.
- İki koşul, yeni bir koşul oluşturmak için VE ile bağlanır. Kuralın uygulanabilmesi için her ikisinin de doğru olması gerekir.
- Tahmin edilen çıktı (THEN kısmı) değer = yüksek olmaktadır.

ortalamalarıyla elde edilen ve modelin genel performansı hakkında bilgi veren F1-skoruna göre terk olmayan aktif müşterilerin ve terk olan müşterilerin sınıflandırma başarısı sırasıyla %90 ve %25'tir.

Eğitim veri setiyle oluşturulan OneR model kurallarının tutarlılığının ölçülmesi için eğitim ve test veri setlerinin sınıflandırma performanslarında bir uyum olması beklenmektedir. Bu doğrultuda, eğitim veri seti ile elde edilen modelin doğru sınıflandırma skoru %81.95 iken test veri setinin doğru sınıflandırma skoru %82.05 olarak gözlemlenmiştir. Her iki veri setinin doğru sınıflandırma skorları arasında yüksek uyumun olduğu söylenebilir.

6. SONUÇ

Bu çalışmada Kaggle platformundaki bir bankanın müşteri ayrıntılarını içeren Churn veri seti kullanılarak Churn (müşteri kaybı) modeli One Rule (OneR) algoritmasıyla hem R hem de Python programlama dilleriyle oluşturulmuştur.

Eğitim veri setini üzerinden geliştirilen modelin özet bilgisi incelendiğinde, Ürün Numarası değişkeninin en iyi ayrımı sağladığı ve buna göre müşteri terk durumunun tahmin edildiği görülmüştür. Elde edilen kurallar ile modelin başarısı test veri setinin sonuçlarındaki performansı ile değerlendirilmiştir.

R ve Python ile elde edilen Churn modeli, müşteri Churn oranının analiz edilmesi ve işletmenin müşteri tabanını koruma veya müşteri kaybını en aza indirme stratejilerinin geliştirilmesinde kullanılabilir; ancak, modelin sadece bir tahmin aracı olduğu unutulmamalıdır. İşletme kararları alınırken, modelin tahminlerinin diğer faktörlerle birlikte değerlendirilmesi oldukça önemlidir.

BÖLÜM 5

k-MEDOIDS ALGORİTMASI

Sevda Gürsakar

1. GİRİŞ

Bölümlemeli (*partitioning*) kümeleme algoritmaları, tüm veri setini doğrudan bir dizi ayrık kümeye böler. Bu algoritmalar, tekrarlı bir prosedür yoluyla belirli bir amaç fonksiyonunu optimize eden sayıda küme belirlemeye çalışır. Veri setini k ayrı kümeye ayırmanın amacı, elemanları kendi aralarında yüksek derecede benzerlik gösteren ancak diğer küme elemanlarıyla benzerlik göstermeyen kümeleri bulmaktır (Kaufman & Rousseeuw, 1987; Kumar & Krishan Wasan, 2008).

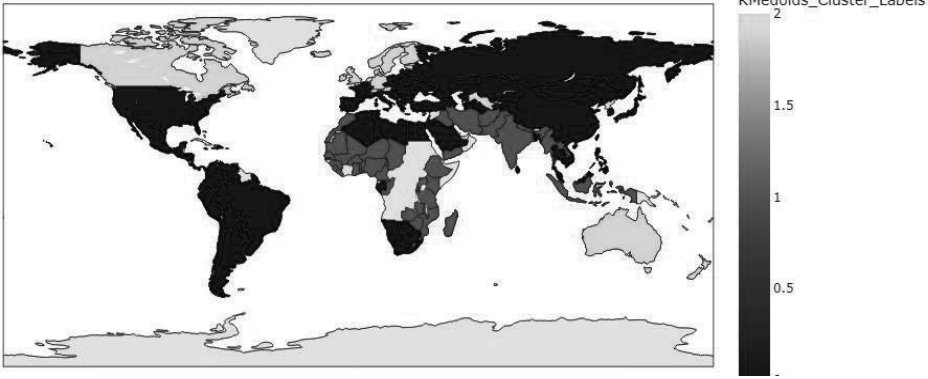

Bölümlemeli kümeleme algoritmaları arasında yer alan k-Medoids algoritması 1987 yılında Kaufman ve Rousseeuw tarafından geliştirilmiştir. Bu algoritma literatürde “medoid”ler etrafında bölümleme (*Partitioning Around Medoids-PAM*) algoritması olarak da bilinmektedir. Bu algoritmanın temeli, verinin çeşitli yapısal özelliklerini temsil eden k tane temsilci nesneyi bulmaktır. Burada temsilci nesne *medoid* olarak adlandırılmaktadır. Medoid, bir kümedeki tüm elemanlara olan uzaklıklarının ortalaması en küçük olan elemandır ve dolayısıyla da kümenin merkezine en yakın noktadır. Bir başka ifade ile medoid, diğer nesnelere olan ortalama uzaklığı en küçük yapan kümenin en merkezi nesnesidir. Bu nedenle bu algoritma her bir nesne ve onun referans noktası arasındaki benzerliklerin toplamını en küçük yapma mantığı esas alınarak uygulanır (Işık & Çamurcu, 2007).

k-Medoids algoritmasında küme merkezleri, kümedeki nesnelerin ortalama değerleri ile değil, küme merkezine en yakın nesne (*medoids*) bulunarak belirlenmektedir. Böylece gürültülü ve aykırı değerlere karşı k-Ortalamalar algoritmasına oranla daha az hassastır. k-Medoids algoritmasında küme sayısı kullanıcı tarafından belirlenmekte ve küçük veri setleri üzerinde iyi sonuçlar verdiği belirtilmektedir. Algoritmanın bu eksikliğini tamamlamak için 1990 yılında Kaufman ve Rousseeuw tarafından CLARA algoritması geliştirilmiştir (Akın, 2008; Kaufman & Rousseeuw, 2009). Bu bölümde yalnızca k-Medoids algoritması ele alınacaktır.

```
#Dünya Haritası verisini uygulama verisi ile birleştirme
km_worldmap = world.merge(küme_veri[['KMedoids_Cluster_Labels',
                                     'Country_name']],
                           left_on='name',
                           right_on='Country_name',
                           how='left')
```

Elde edilen veri setine **plotly** kütüphanesinin **choropleth()** fonksiyonu yardımı ile aşağıdaki interaktif grafiksel gösterim elde edilmiştir.

```
fig = px.choropleth(km_worldmap,
                    locations="iso_a3",
                    color="KMedoids_Cluster_Labels",
                    hover_name="name",)
fig.show()
```

6. SONUÇ

Kitabın bu bölümünde, bölümlenmeli kümeleme algoritmalarından k-Medoids algoritması R ve Python uygulamaları ile anlatılmıştır. Uygulamada Kaggle platformundaki *world_happiness_report_2021* veri seti kullanılarak 149 dünya ülkesi altı değişkene göre k-Medoids algoritması kullanılarak kümelendi. Uygulama sonucunda 149 ülke üç kümede toplanmıştır.

BÖLÜM 6

k-ORTALAMALAR ALGORİTMASI

Metin Bilgin
Murat Eser

1. GİRİŞ

Bu bölümde kümeleme problemlerinin çözümünde kullanılan denetimsiz makine öğrenme yöntemlerinden biri olan k-Ortalamlar algoritması üzerinde durulacaktır. Denetimsiz öğrenme (*Unsupervised Learning*) yöntemleri elimizdeki etiketsiz verinin yani sınıfı belli olmayan ya da bilinmeyen örneklerin birbirlerine olan yakınlıklarına ya da benzerlikleri göre kümelenmesi esasına dayanmaktadır. Denetimli öğrenmeden farklı olarak bir uzman/danışman süreçte etkin olarak rol almamaktadır fakat istenirse elde edilen sonuçlar bir uzman/danışman tarafından kontrol edilebilir ve böylelikle sonuçların güvenilirliğinin artırılması sağlanabilir.

Kümeleme kavramını açıklamak gerekirse; “veri içerisinde birbirine benzer özelliklere sahip örneklerin gruplandırılarak oluşturduğu şekle verilen isimdir” olarak ifade edilebilir. Kümelemedeki amaç, küme içinde maksimum benzerliği/yakınlığı ve kümeler arasında minimum benzemezliği/uzaklığı yakalayabilmektir. Kümeleme algoritmalarında verilerin hangi kümeye atanacağı benzerlik/yakınlık ölçütlerine göre gerçekleştirilmektedir. Kümelemedeki en büyük sorun kümeler arasındaki benzerliklerin/yakınlığın nasıl belirleneceği ve hesaplanacağı problemidir. Literatürde benzerlik/yakınlık hesabı için birçok metrik geliştirilmiştir. Bölümün ilerleyen kısımlarında sıklıkla kullanılan bu metriklerle ilgili kısa bilgiler sunulacaktır. Şekil 1’de örnek kümeleme gösterimi verilmiştir.

Kümeleme algoritmaları için literatüre bakıldığında beş farklı kümeleme tekniği olduğu görülmektedir. Bunlar; hiyerarşik yöntemler, bölümlenme yöntemleri, yoğunluğa dayalı yöntemler, grid bazlı yöntemler ve model bazlı yöntemler şeklindedir. Bu bölümde bölümlenmeli bir yöntem olan k-Ortalamlar algoritması ile ilgili bilgiler sunulmuştur.

6. SONUÇ

Bu bölümde danışmansız öğrenme yöntemlerinden olan k-Ortalamlar kümeleme algoritması hem teorik hem de uygulamalı örneklerle anlatılmaya çalışılmıştır. k-Ortalamlar algoritması birbirlerinden iyi ayrılabilen yoğun kümeleri etkin bir biçimde belirleyebilme yeteneğine sahiptir. Algoritma karmaşıklığı olarak NP-Zor yani polinomsal zamanda bir çözümün olduğunun ispat edilmesi zor problem sınıfına girmektedir. Bu açıdan elde edilen küme şekilleri genellikle konveks şeklidir.

k-Ortalamlar algoritması günümüzde birçok alanda (müşteri ve pazar gruplaması vb.) uygulaması olan bir algoritmadır. k-Ortalamlar algoritmasının olumsuz yanlarından birisi olarak genellikle yerel minimuma takılması sayılabilir. Algoritmanın doğru bir gruplandırma yapabilmesi için başlangıç parametresi olan k değerinin doğru seçilmesi son derece kritik bir adımdır. k-Ortalamlar algoritması sayılan artı ve eksilerine ilave olarak gürtülülü verilere ve aykırı değerlere duyarlı bir algoritmadır. Tüm bu özelliklerinin toplamında günümüzde kümeleme algoritmaları içerisinde en popüler olanı ve hızlı kodlanabilmesi sayesinde en çok tercih edilen algoritmadır.

BÖLÜM 7

BULANIK c-ORTALAMALAR ALGORİTMASI

*Fatma Önay Koçoğlu
Hasan Yiğit*

1. GİRİŞ

Binlerce yıllık süreçte insanoğlu yaşamı ile ilgili önemli gördüğü olayları ve izlenimlerini kayıt altına almak üzere mağara duvarlarını, kil tabletleri, papirüsü ve daha nice aracı kullanmıştır. Günümüzde geldiğimiz koşullarda bilgi ve iletişim teknolojilerinin sağladığı olanaklarla kayıtlar artık dijital ortam olan bilgisayarlarda tutulmaktadır. Bununla birlikte, dijitalleşme kavramı ön plana çıkmış, birçok kurum ve kuruluş bu doğrultuda tüm iş süreçlerini dijital ortama taşıma bir başka deyişle dijitalleşme sürecine girmiştir. Diğer taraftan, veri depolama ve işlem gücü yüksek bilgisayarlar ve bulut bilişim gibi olanaklar sayesinde ise hem daha büyük miktar ve boyuttaki veriyi saklamak hem de bu veriyi daha hızlı işlemek mümkün hâle gelmiştir. Yine bu dijitalleşme sürecinde veri toplama işlemleri sonucunda sıklıkla kullandığımız kavramlardan birisi de büyük veri olmuştur. Doğal olarak veriyi kayıt altına alarak büyük veri elde etme serüveninin bir amacı olduğu da açıktır. Hem kayıt altına alınan bu veriyi çeşitli matematiksel ve istatistiksel yöntemler ve de raporlama araçlarını kullanarak değerli bilgiler elde edebilmek, hem de edinilen bu bilgileri ileri nesillere taşımak dijital dönüşümün en temel amacı olarak ifade edilebilir. Tam bu noktada bilginin neden bu kadar önemli olduğu sorusu karşımıza çıkmaktadır. Bu sorunun cevabı için öncelikle karar verme süreci ve problemini ele almak gerekir.

Özellikle zorlu rekabet ortamında varlığını devam sürdürebilmek, rakipler karşısında üstünlük sağlamak, kaynakları verimli bir şekilde kullanmak ve müşteri/kullanıcı/çalışan memnuniyetini maksimum düzeyde tutmak gibi durumlar göz önünde bulundurulduğunda karar vericilerin tüm üretim ve iş süreçlerini en az hata en çok fayda ile etkin bir şekilde yönetmesi kritik önem taşımaktadır. Özellikle üretim veya hizmet sektöründe yer alan kurum ve kuruluşlarda yatırım projesi belirleme, satın alma, tedarikçi seçme, personel istihdamı, tesis yeri seçimi gibi idari ve mali açıdan önemli görülen birçok farklı problem söz konusudur. Bu gibi problemler için çözüm sağlamak, belirlenen hedeflere etkin bir yol ile

Tablolar dikkate alındığında ve kendi içlerinde karşılaştırıldığında, Küme 1 için *Unitprice* sütununda ortalama bir varyans; yüksek değer mevcuttur. *Pal.height* ve *Pal.grossweight* sütunlarında yüksek değerler görülmektedir. Diğer özneliklerde ortalama değerler bulunmaktadır. Bu durum, Küme 1'in genel olarak büyük boyutlu, ağır ve pahalı ürünlerden oluştuğunu göstermektedir. Ayrıca, ortalama olarak satılan ürün grubunu oluşturduğu söylenebilir. Küme 2 için ise, *Unitprice* niteliğinde düşük değer ve yüksek varyans gözlenirken, *Expire.date* en düşük değer; *Pal.height* ve *Pal.grossweight* düşük değerler ve *Units.per.pallet* niteliklerinde en yüksek değerler bulunmaktadır. Diğer sütunlarında ise değerler ortalama seviyededir. Bu küme genel olarak küçük boyutlarda ve düşük ağırlıktaki ürünleri içermektedir. Ayrıca, bu kümeyi oluşturan ürünlerin dayanıklılık süreleri düşük olarak yorumlanabilir. Küme 3 incelendiğinde, *Unitprice* niteliğinde ortalama değerler ve ortalama varyans değeri mevcuttur. *Expire.date*, *Outbound.number* ve *Total.outbound* sütunlarında yüksek seviyede değerler bulunurken, diğer sütunlarda ise ortalama değerler gözlenmektedir. Bu küme genellikle ortalama fiyatlı ve ortalama boyutlu ürünlerden, aynı zamanda da raf ömrü uzun olan ürünlerden oluşmaktadır. *Outbound.number* ve *Total.outbound* sütunlarında yüksek varyansın etkisiyle genellikle çok satan ürün grubu olduğu söylenebilir. Son olarak, Küme 4 incelendiğinde, *Unitprice* sütununda en düşük değer ve ortalama varyans görülmektedir. *Expire.date* sütununda yüksek değer bulunurken, en düşük *Pal.height* değerine sahiptir ve en düşük *Pal.height* varyansına sahiptir. Diğer niteliklerde ortalama değerler mevcuttur. Bu küme, en düşük fiyatlı, en düşük boyutlu raf ömrü uzun ürünleri içermektedir.

Özetle, yapılan segmentasyon analizine göre, farklı kümelerin farklı ürün gruplarını temsil ettiği görülmektedir. Ayrıca bu sonuçlara göre, BCO envanter yönetimi açısından farklı ürün grupları için farklı envanter stratejileri ve stok seviyeleri belirlemede kullanılabilir. Bu da işletmelere envanter maliyetlerini minimize etme, sipariş zamanlarını optimize etme ve iş sürekliliğini sağlama konusunda yardımcı olur. Böylece işletmeler, denetimsiz makine öğrenmesi modelleriyle envanterlerini daha etkin bir şekilde yönetebilir ve rekabet avantajı elde edebilirler.

BÖLÜM 8

DBSCAN ALGORİTMASI

*Onur Barca
Nuran Bayram Arlı*

1. GİRİŞ

Kümeleme analizi, yıllar boyunca birçok yaklaşımın ve algoritmanın önerildiği, temel ve yaygın olarak kullanılan bir bilgi keşfi yöntemi olarak bilinir (Blei & Lafferty, 2009). Kümeleme analizinde *yoğunluk (density)* ve *ızgara tabanlı (grid-based)* yöntemler, veri alanını yüksek ayrıntı düzeylerinde keşfetmeye çalışan, birbiriyle yakından ilişkili iki sınıftır. Bu yöntemlerin avantajı, rastgele şekillere sahip kümeleri belirlemek için kullanılabilmesidir. Gerçek hayattaki veri tabanlarının giderek artan boyutları, büyük veri tabanlarının kümelenebilmesi, gürültüyü (*noise*) tespit etme ve ortadan kaldırma becerisini gerektirir. Yoğunluğa dayalı kümeleme paradigması, tüm bu gereksinimleri karşılamak için önerilmiştir (Ester vd., 1996; Kriegel vd., 2011; Aggarwal & Reddy, 2016).

Yoğunluk tabanlı kümelemede veri noktaları yoğunluğa dayalı olarak kümelenebilir. Burada kümeler, yüksek yoğunluklu bölgelerin düşük yoğunluklu bölgelerden ayrılması ile belirlenir. Yoğunluğa dayalı bir kümeleme algoritmasının aşağıdaki temel tasarım sorularını cevaplaması gerekir (Aggarwal & Reddy, 2016; Tan vd., 2016).

- ✓ Yoğunluk nasıl tahmin edilir?
- ✓ Bağlantı nasıl tanımlanır?
- ✓ Algoritmanın verimli bir şekilde uygulanmasını hangi veri yapıları destekler?

Yoğunluk tabanlı kümeleme yöntemleri, girdi parametreleri olarak küme sayısı ve ilgili veri kümesinde var olabilecek yoğunluk veya kümeler içindeki varyansla ilgili varsayımlarda bulunmaz. Dolayısıyla yoğunluk tabanlı kümeleme, küme sayısı veya bunların dağılımı hakkında herhangi bir varsayımda bulunmadığı için parametrik olmayan bir yöntem olarak düşünülebilir (Aggarwal & Reddy, 2016; Kriegel vd., 2011).

DBSCAN kümeleme sonuçlarına göre ülkeler, az gelişmiş, gelişmekte olan ve gelişmiş olmak üzere üç kümeye ayrılmıştır. Ayrıca kümeleme sonuçlarının, Uluslararası Para Fonu⁹ (IMF) ve Birleşmiş Milletler¹⁰ (UN)'nin yapmış olduğu ülke sınıflandırması ile de uyumlu olduğu görülmektedir. Analiz sonuçlarına göre üçüncü kümeyi (az gelişmiş ülkeleri) ağırlıklı olarak Afrika ülkelerinin oluştururken, bu ülkelerin sağlık, finans ve ticaret bakımından diğer kümelerde yer alan ülkelere göre daha kötü bir durumda oldukları söylenebilir. Birinci küme (gelişmekte olan ülkeler) en çok ülkenin yer aldığı küme olarak görülmektedir. Analiz sonuçlarına göre, bu kümede yer alan ülkelerin sağlık, finans ve ticaret bakımından üçüncü kümedeki ülkelere göre daha iyi bir durumda olduklarını söyleyebiliriz. İkinci küme (gelişmiş ülkeler) ise hem sağlık hem finans hem de ticaret bakımından iyi durumda olan ülkelere oluşturmaktadır. Gürültü değerleri ise kümeleme dışında kalan ülkeleri göstermektedir.

BÖLÜM 9

OPTICS ALGORİTMASI

Ayşe Çınar

1. GİRİŞ

Denetimsiz öğrenme yöntemleri adı altında başvuru alan birçok kümeleme yöntemi nesnelere arasındaki uzaklığın hesaplanmasına dayanmaktadır. Ancak bölümsel kümeleme yöntemi olarak isimlendirilen bu yöntemler sadece küresel şekilli kümeleri belirlerken, rastgele şekilli kümelerin varlığının ortaya konmasında yetersiz kalmaktadırlar (Han vd., 2012). Bu sorunu gidermek amacıyla yoğunluğa dayalı kümeleme yöntemleri geliştirilmiştir. Yoğunluğa dayalı kümeleme yöntemleri, nesnelere arası uzaklığa dayalı küme seçimi yerine, verinin yoğunluğunu göz önüne alan bir kümeleme işlemi gerçekleştirmektedirler. Dolayısıyla, bu yöntemler ile ortaya çıkan her bir küme veri seti içinde yüksek yoğunluklu alanlar olarak ele alınmaktadır (Ester vd., 1996). Küme yoğunluklarının seyrek olduğu alanlarda ise ya gürültülü veri ya da küme sınırını oluşturan veri olduğu düşünülmektedir (Jiang vd., 2003). Söz konusu yöntemler için geliştirilen yoğunluğa dayalı kümeleme algoritmaları büyük veri tabanları ve gürültülü verisi çok olan yapılarda etkin bir şekilde kullanılabilirler (Ester vd., 1996).

Yoğunluğa dayalı kümeleme algoritmaları içinde en yaygın olanları DBSCAN, DENCLUE ve OPTICS algoritmalarıdır.

Bu bölüm kapsamında, OPTICS (*Ordering Points To Identify The Clustering Structure*) algoritması hakkında temel bilgiler verilerek, algoritmanın çalışma prensibi ve işlem aşamaları açıklanmış olup, R ve Python Dillerinde uygulamalar gerçekleştirilmiştir.

2. OPTICS ALGORİTMASI

DBSCAN Algoritmasını geliştiren araştırma grubu üyeleri Mihael Ankerst, Markus M. Breunig, Hans-Peter Kriegel ve Jörg Sander tarafından geliştirilen OPTICS Algoritması, kümeleme yapısını tanımlamak için noktaları sıralama yöntemi olarak adlandırılmaktadır

`plt.scatter()` fonksiyonuyla normal ve anormal veriyi gösteren saçılım grafiği elde edilmiştir.

6. SONUÇ

OPTICS algoritması tek başına bir kümeleme aracı değildir. Bu algoritma küme üyelikleri atamaz. Bunun yerine, veri tabanının yoğunluğa dayalı kümeleme yapısını temsil eden genişletilmiş bir sıralamasını oluşturur. Bu küme sıralaması, çok çeşitli parametre ayarlarına karşılık gelen yoğunluğa dayalı kümelemelere eşdeğer bilgiler içerir.

Söz konusu algoritma, sadece “geleneksel” kümeleme bilgilerini (örn. temsili noktalar, rastgele şekilli kümeler) değil, aynı zamanda içsel kümeleme yapısını da verimli bir şekilde ortaya çıkarmaktadır. Ayrıca, orta büyüklükteki veri kümeleri için küme sıralamasının grafiksel olarak gösterilebilmesinin yanı sıra, çok büyük veri kümeleri için de uygun bir görselleştirme tekniği sunmaktadır.

Bu bölümde OPTICS algoritması teorik olarak ele alınmış, algoritmanın çalışma aşamalarını açıklayan örnek bir çözüm sunulmuş ve ardından R ve Python dillerinde uygulama gerçekleştirilmiştir.

BIRCH ALGORİTMASI

Elif Kartal

1. GİRİŞ

Kümeleme en temel hâli ile n -boyutlu uzayda veri noktalarını -ya da gözlemleri-gruplamaktır. Kümeleme problemlerine, denetimsiz makine öğrenmesi algoritmaları ile çözüm aranmaktadır. Veri setinde herhangi bir hedef nitelik (*target attribute*) olmadan noktaların birbirine olan uzaklıklarından (benzemezliliklerinden) hareketle kümeleme işlemi gerçekleştirilir. Nihayetinde, aynı kümedeki veri noktalarının birbirine olabildiğince yakın, farklı kümeler arası uzaklıkların da olabildiğince fazla olması hedeflenir. Kümeleme işlemleri sırasında veri seti denetimli öğrenmede olduğu gibi eğitim ve test veri seti olarak ayrılmaz. Tüm veri seti algoritmaya sunulur ve sonuç alınır. Kümeleme ileriye yönelik bir tahmin ya da bir öngöründe bulunmak için değil daha çok veride yer alan gizli örüntü ve kalıpların keşfedilmesi, verinin mevcut durumunun açıklanması için kullanılmaktadır. Literatürde ve sektörde müşteri segmentasyonu, görüntü segmentasyonu gibi pek çok alanda kullanılmaktadır.

Kümeleme algoritmalarından biri olan BIRCH (*Balanced Iterative Reducing and Clustering Using Hierarchies*) algoritması, büyük veri setlerini küçük kümelere böler ve mümkün olan en fazla miktarda bilgiyi tutmaya çalışır (All, 2022). Daha sonra tüm veri setinin kümelenmesi yerine bu özet bilgi kümelenir (Benzer, 2022). Bu da BIRCH algoritmasının özellikle büyük veri setleri üzerinde çalışılırken tercih edilmesinin nedenlerindedir. BIRCH, bellek veya hesaplama kısıtları (daha yavaş CPU) sebebiyle k -Ortalamalar (*k-Means*) algoritması ile analiz edilemeyen büyük veri setlerini kümelemek için bellek açısından verimli bir alternatif algoritmadır (All, 2022; Benzer, 2022). BIRCH tipik olarak veri setinde tek bir tarama ile iyi bir kümeleme gerçekleştirebilir ve isteğe bağlı olarak birkaç ek taramayla kümeleme kalitesini daha da iyileştirebilir (Han & Kamber, 2006; Zhang vd., 1996).

Bileşenler Analizi tercih edilmiş ve kümeler iki temel bileşen yardımı ile görselleştirilmiştir. Kümeleme performansı ise Silhouette, Calinski-Harabasz ve Davies-Bouldin indeks değerlerinin hesaplanması ile elde edilmiştir. $k = 3$ için hesaplanan indeks değerlerinin birbirine benzerlik gösterdiği Tablo 3'ten görülebilir. $k = 2,3, \dots, 20$ için gerçekleştirilen analiz sonuçları da grafiklerle sunulmuştur. Hem uzman görüşü hem de hesaplanan indeks değerleri çerçevesinde kümeleme kalitesi değerlendirilerek nihai küme sayısına karar verilebilir. Ayrıca Python ve R uygulamalarında kullanılan BIRCH fonksiyonları birbirinden farklıdır, dolayısıyla her iki analiz sonucunun da birebir örtüşmesi beklenmemelidir.

Tablo 3: $k=3$ için Python ve R Kümeleme Performans Değerlerini Karşılaştırılması

İndeks Adı	Python	R
Silhouette	0.878	0.890
Calinski-Harabasz	880.699	867.817
Davies-Bouldin	0.803	0.778

CURE ALGORİTMASI

Mine Aydemir Dev
Muhammed Burak Görentaş

1. GİRİŞ

Kümeleme algoritmaları, denetimsiz öğrenmenin bir türüdür. Kümeleme, bir dizi veriyi, küme içi benzerliği en üst düzeye çıkaracak ve kümeler arası benzerliği en aza indirecek şekilde gruplandıran bir keşif işlemidir (Karypis vd., 1999). Kümeleme algoritmaları bölümlenmeli (*partitional*) ve hiyerarşik (*hierarchical*) olarak sınıflandırılabilir. Bölümlenmeli kümeleme algoritmaları, belirli bir kriter fonksiyonunu optimize eden k bölümü belirlemeye çalışır. Bu tip kümeleme, k kümeyi olabildiğince yoğun ve ayrı yapmaya çalışır ve kümeler birbirinden oldukça iyi ayrılmış yoğun bulutlar olduğunda iyi çalışmaktadır. Hiyerarşik kümelemede ise her bölümlenmenin (*partition*) bir sonraki bölüme yerleştirildiği, bir bölüm dizisi söz konusudur. Burada her girdi veri noktası ayrı bir kümeye yerleştirilen ayrık kümelerle başlamaktadır. Daha sonra küme çiftleri küme sayısı k olana kadar art arda birleştirilmektedir. Burada gerçekleştirilen birleştirmede birleştirilen küme çifti, aralarındaki mesafenin minimum olduğu kümelerdir. Kümeler arası mesafeler için kullanılan ölçüler, C_i incelenen kümeyi ve m_i incelenen kümenin ortalamasını göstermek üzere aşağıdaki gibidir.

$$d_{\text{ort}}(C_i, C_j) = \|m_i - m_j\| \quad 1$$

$$d_{\text{min}}(C_i, C_j) = \text{minimum}(\|P_i - P_j\|) \quad 2$$

Mesafe ölçüsü olarak **merkeze dayalı yaklaşım** (*centroid-based approach*) olan d_{ort} kullanıldığında her adımda ortalamaları en yakın olan küme çiftleri birleştirilmektedir. Bu yaklaşımda, bir kümenin temsilcisi olarak yalnızca küme merkezi yani tek bir nokta kabul edilmektedir. Mesafe ölçüsü **tüm noktalar yaklaşımı** (*all points approach*) olan d_{min} seçildiğinde ise birleştirilen kümeler en yakın nokta çiftini içeren kümeler olmaktadır. Bu yaklaşım bir küme içindeki tüm noktaları kümenin temsilcisi olarak kabul etmektedir. Bu mesafe ölçüleri ile elde edilen sonuçlar benzer olsa da kümelerin çok yakın olması ya da tek

örtüştüğü söylenebilir. Bu durumda gelişmemiş ülkelerin en mutsuz grupta ve bir kümede gösterildiği, gelişmekte olan ülkelerin orta mutlu seviyede farklı bir kümede gösterildiği, gelişmiş ülkelerin ise üçüncü bir kümede gösterildiği görülmektedir.

SOM algoritması hızlı çalışması ve veri görselleştirmedeki üstün meziyeti ile veri madenciliği alanında birçok kümeleme uygulamasında kullanılmaktadır. SOM algoritması ayrıca sınıflandırma problemlerinde de kullanılmaktadır.

BÖLÜM 13

GAUSS KARMA MODELLERİ

Murat Uçar
Emine Uçar

1. GİRİŞ

Denetimsiz makine öğrenmesi teknikleri arasında yer alan Gauss Karma Modeli (*Gauss Mixture Model - GMM*) çoğunlukla verileri kümelemek için kullanılmaktadır. Gauss karma modeli bir veri kümesindeki verilerin, bir veya daha fazla normal dağılımın birleşimi şeklinde modellenmesine olanak sağlayan bir yöntemdir (Bishop & Nasrabadi, 2006; Reynolds, 2009). Bu model, özellikle görüntü bölütleme, konuşma tanıma ve biyoinformatik dâhil olmak üzere çok çeşitli uygulamalarda kullanılır (Balafar, 2014; McNicholas & Murphy, 2010; Povey vd., 2011).

Bu bölüm kapsamında Gauss dağılımı hakkında kısa bir bilgi verildikten sonra Gauss karma modeli detaylı olarak açıklanmış, ardından R ve Python dilleri kullanılarak örnek uygulamalar geliştirilmiş ve elde edilen sonuçlar tartışılmıştır.

2. GAUSS KARMA MODELİ

Gauss dağılımı ilk olarak 1733 yılında Abraham de Moivre tarafından ortaya atılmış daha sonra Carl Friedrich Gauss tarafından geliştirilmiştir (Pontes, 2018). Gauss karma modeli ise daha yeni bir gelişmedir ve GMM formülasyonu, 1977 yılında Arthur Dempster, Nan Laird ve Donald Rubin tarafından önerilmiştir (Dempster vd., 1977). GMM, Gauss bileşen yoğunluklarının ağırlıklı toplamı olarak temsil edilen bir parametrik olasılık yoğunluk işlevidir (Reynolds, 2009).

Gauss dağılımı günümüzde veri kümelerini modellemede yaygın olarak kullanılmakta ve birçok veri kümesini modellemede yüksek başarılar elde etmektedir. Ancak veri kümelerini tek bir dağılımla modellemek her zaman iyi sonuçlar vermemektedir. Bu sorunun üstesinden gelmek için karma modeller önerilmiştir. Karma model, bir veri kümesinin modellenmesi için birden çok dağılımı belirli ağırlıklarla birlikte kullanarak olasılık yoğunluk fonksiyonunu meydana getirir. Şekil 1'de örnek bir veri setine ait dağılım verilmiştir. Burada x değişken

6. SONUÇ

Bu bölümde gerçekleştirilen uygulamada 167 ülke, 9 farklı nitelik kullanılarak iki farklı programlama dili ile kümelendi. Python programlama dili ile gerçekleştirilen uygulamada en uygun küme sayısı 2256,5812 BIC değeri ile 7 olarak belirlenmiştir. R dili ile gerçekleştirilen uygulamada ise 2389,8487 BIC değeri ile en uygun küme sayısı 3 olarak tespit edilmiştir. İki farklı programlama dili ile alınan sonuçlar karşılaştırıldığında Python programlama dilinin daha düşük bir BIC değerine erişerek daha ideal bir kümeleme gerçekleştirdiği anlaşılmaktadır.

SAKLI MARKOV MODELLERİ

*Melih Engin
Yasin Erduran*

1. GİRİŞ

Saklı Markov Modeli-SMM (*Hidden Markov Models-HMM*), ardışık verilerin modellemesi için kullanılan istatistiksel bir yöntemdir ve özellikle dil işleme, konuşma tanıma, biyoinformatik gibi alanlarda geniş bir uygulama yelpazesi sunmaktadır. SMM, Markov zinciri temelinde çalışır ve verinin gizli durumlarla ilişkilendirildiği bir yapıyı tanımlar. Gözlem verileri, bu gizli durumların altında yatan durumların dizisini oluşturur. SMM, durumların birbirine geçişi ve durumlarla gözlem verileri arasındaki ilişkileri birlikte modelleyerek, veri dizilerini etkili bir şekilde analiz etme yeteneği sağlar. Bu model, özellikle belirsizliğin ve gürültünün yüksek olduğu durumlarda başarılı sonuçlar verir. SMM'in çeşitli varyasyonları, modelin farklı uygulama alanlarına ve veri tiplerine uyum sağlamasını mümkün kılar.

Bu bölümde denetimsiz makine öğrenmesi algoritmalarından SMM ile kişinin duygusal durumunun tahminlenmesine yönelik bir uygulama gerçekleştirilmiştir. Kullanılan veri seti bir kişinin 96 gün içerisinde hareket durumu, yaktığı kalori miktarı, uyku süresi ve kişinin ağırlığı bilgilerini içermektedir. Bu niteliklere ek olarak veri setinde kategorik değişken olarak kişinin gün içindeki duygusal durumu ve aktif veya durgun hissetme verisi de bulunmaktadır. Veri setindeki bu iki kategorik değişkenden duygusal durum hedef değişkeni “mutlu”, “normal” ve “üzgün” şeklinde üç sınıftan birisine ait olacak şekilde etiketlenmiştir. Durgun ya da hareketli olarak etiketlenen hareketlilik durumu kategorik değişkenine ait veri bu çalışmada kullanılmamıştır.

Bölümde konu anlatımında öncelikle Markov Zincirlerinden ve SMM ile ilgili temel teorik bilgilere yer verilmiştir. Sonrasında duygusal durumu tahmini örnek olay uygulamasının R ve Python kodları yer almıştır. Python uygulaması (Python Software Foundation, 2022) PyCharm (2022) bütünlük geliştirme ortamının (*Integrated Development Environment* –

```
def hesaplaDogrulukOrani(gercek_degerler, tahmin_degerler):
    dogru_tahmin_sayisi = 0
    for i in range(len(tahmin_degerler)):

            dogru_tahmin_sayisi +=1

    return dogru_tahmin_sayisi/len(tahmin_degerler)
hesaplaDogrulukOrani(gercek_degerler, viterbi)
```

0.8571428571428571

6. SONUÇ

Bir zaman serisi üzerinde kişinin duygusal durumunun tahminlenmesi SMM ile hem R hem de Python dili ile gerçekleştirilmiştir. R dilinde Viterbi algoritması çözümü **HMM** kütüphanesi aracılığı ile çözülmüş Python dilinde ise Viterbi algoritmasının çözümü için **pandas** haricinde ek bir hazır kütüphane kullanılmamıştır. İki programlama dilinde farklılıklar olsa da kurulan model sonucunda elde edilen başarımlar aynı kalmıştır. Model kendisine verilen yedi günlük tahmin örneğinde 0.857'lik (%86) bir başarımlar elde etmiştir.

GENETİK ALGORİTMALAR

Burcu Avcı Öztürk

1. GİRİŞ

Genetik algoritmalar (GA), yapay zekânın gün geçtikçe genişleyen bir kolu olan evrimsel hesaplamaların bir parçasını oluşturmaktadır. GA, Darwin'in evrim teorisinden ilham alınarak geliştirilen sezgisel arama tabanlı bir algoritmadır ve makine öğrenmesinde optimizasyon problemlerinin çözümü için kullanılmaktadır. Çözüm için rassal arama tekniklerini kullanan ve parametre kodlama esasına dayanan GA, Darwin'in evrim teorisinin doğada olduğu gibi en iyi veya en güçlü olanın hayatta kalması/güçlününun zayıfı yenmesi kuralından esinlenerek oluşturulan, bir veri öbeğinden özel bir veriyi bulmak için kullanılan sezgisel bir yöntemdir. Geleneksel yöntemlerle çözümü zor veya imkânsız olan problemlerin çözümünde yoğun olarak kullanılmaktadır. Herhangi bir problemin GA ile çözümü, problemin sanal olarak evrimden geçirilmesiyle yapılmaktadır. GA, çözümü uzun süre alan karmaşık problemlerin çözümüne yardımcı olan önemli algoritmalarından biridir. GA, evrimsel algoritmalar içerisinde yer almakta ve problem çözümünde genetik ve doğal seçim altyapısını kullanmaktadır (Kazu & Özdemir, 2009; Bekdaş & Niğdeli, 2021; Muthee, 2021; Sayım, 2022; Java, 2023).

GA, montaj hattı dengeleme, çizelgeleme, tesis yerleştirme, atama, hücreyel üretim, sistem güvenilirliği, taşıma, gezgin satıcı ve araç rotalama problemlerinin çözümünde, finans, pazarlama, üretim sistemleri, yapay sinir ağları, veri madenciliği ve kümeleme, robotik ve sağlık bilimleri gibi pek çok alanda uygulanabilmektedir (Gökay Emel ve Taşkın, 2002; Chaudhary, 2023).

Bu bölümde GA'nın temel kavramları, işlemcileri ve parametreleri ayrıntılı şekilde açıkladıktan sonra, GA'nın optimizasyon problemlerinde nasıl uygulandığı bir sırt çantası problemi çözülerek aktarılacaktır.

2. GENETİK ALGORİTMALAR

GA, ile ilgili ilk çalışmayı Holland (1975), kromozom olarak adlandırdığı ikili kodlanmış gen (bit) dizelerinden oluşan bir popülasyon üzerinde uyum fonksiyonu ile seçme, çaprazlama ve mutasyon işlemcilerini kullanarak evrimsel ilkeleri taklit eden bir algoritma önererek

BÖLÜM 2

BUHAR ÜRETİMİ

Su katı, sıvı ve gaz fazında bulunan hayati bir madde olup gaz hâli **buhar** olarak adlandırılır. Su, ısıtıldığı ve belli bir sıcaklığa eriştiği zaman sıvı fazda olamayacağı bir duruma gelir. Buna **doyma noktası** denir ve suyun bir kısmı buharlaşarak kaynamaya başlar. Buharlaşma için önemli miktarda enerjiye ihtiyaç vardır ve doyumluk sıcaklığında enerji verildiği esnada su ve buhar aynı sıcaklıktadır. Eğer buharın, buharlaştırılması için verilen enerji geri alınırsa, buhar yoğunlaşır ve aynı sıcaklıkta suya dönüşür.

Buhar çeşitli amaçlarla çok yaygın olarak kullanılan bir akışkandır. Buhar, bazı kimyasal reaksiyonlarda **reaktif**; süreçlerin **ısıtılmasında** ve **termik santrallerde elektrik üretiminde** kullanılmaktadır. Sadece ısıtma amacıyla buhar kullanımı terk edilmiş ve buhar yerine kızgın yağ kullanımı tercih edilmiştir. Ancak bir çok kimyasal maddenin üretildiği komplekslerde ve organize sanayi tesislerinde yüksek basınçta üretilen buhar önce elektrik üretiminde kullanılmakta türbinden çıkan düşük basınçtaki buhar ve elde edilen sıcak su diğer fabrikalarda ısıtma amacı ile kullanılmaktadır.

Endüstride buhar kullanımında tercih nedenleri şöyle sıralanabilir.

1. *Yüksek akışkan sıcaklıklarına çıkmak mümkündür.*
2. *Isı geçiş yüzeylerinde sıcaklık sabittir. Buhardan ısı çekişi genellikle doymuş buharın yoğunlaşmasıyla gerçekleşir. Bu işlem sabit sıcaklıkta gerçekleştiğinden bütün ısıtma yüzeyi boyunca buhar tarafının sıcaklığı sabittir.*
3. *Sıcaklık kontrolünü hassas biçimde gerçekleştirmek mümkündür. Söz konusu sabit yoğunlaşma sıcaklığı buharın basıncına bağlıdır. Basınç kontrolü yoluyla proses sıcaklığını hassas olarak kontrol etmek mümkün olabilmektedir.*

Toplam ısı transfer alanı,

$$A_{total} = A_2 + A_3$$

$$A_{total} = 36.92 + 37.86$$

$$A_{total} = 74.78 \text{ m}^2$$

Kazan yapımında kullanılacak 3 metre uzunluğunda boruların sayısı,

$$A_{one\ tube} = \pi d_o L = (\pi) (0.05)(3)$$

$$= 0.47 \text{ m}^2$$

$$N_{tube} = A_{total} / A_{one\ tube}$$

$$= 74.78 / 0.47$$

$$= 158.68 = 159$$

Sonuç : Fabrika için gerekli olan alev borulu kazanın imalatında 5 cm çapında ve 3 metre uzunluğunda 159 adet çelik boru kullanılmalıdır.

BÖLÜM 3

SÜREÇ BESİ SUYU HAZIRLAMA (DEMİNERALİZASYON)

Süreç suyu, içme suyu kullanımı dışındaki değişik maddelerin üretimlerinde doğrudan, enerji santralleri ve endüstriyel faaliyetlerdeki soğutma, ısıtma amaçlı süreçlerde bağlantılı olarak kullanılan suyun ortak adıdır.

Endüstriyel su kullanımı, bir maddenin üretimi, yıkanması, seyreltilmesi soğutulması ya da taşınması olabilmektedir. Endüstride süreç suyu en çok kazan besleme suyu olarak kullanılmaktadır. Süreç suyun kalitesi kullanılacağı sürece göre değişiklik göstermekte ve kullanıldığı süreçte sorun yaratmaması istenmektedir. Örneğin buhar üretiminde kazan besli suyunda var olan alkalite (HCO_3^- , CO_3^{2-}) buhar içerisinde karbonik asit oluşmasına sebep olarak CO_2 üretir ve korozyona sebep olurken, kalsiyum ve magnezyum tuzları, yani suyun sertliği, kireçtaşının oluşumuna dolayısıyla buhar üretimin azalmasına hatta kazan patlamalarına neden olmaktadır.

Kazan suyu arıtımı, sorunsuz ve ekonomik kazan çalışma koşulları yanında buhar kalitesi içinde önemlidir. Kireç oluşumu, korozyon, sık sık boşaltma ve yüksek kimyasal madde tüketimi ile oluşan dezavantajlar sonucu mali kayıplar oluşmaktadır. Doğru kazan suyu arıtımı, kazan ömrünü uzatır ve korozyonu azaltır ve kimyasalların tüketimini azaltarak ekonomik bir çalışma sağlar.

Ürünlerde doğrudan su kullanmak, ürünlerin kalitesini, korunabilirliğini ve görünümünü sağlamak amacı ile genellikle arıtım işlemlerini gerektirir. Hatta en iyi içilebilir su doğrudan ürünlerde kullanılacağı zaman sorunlara neden olabilir. Kozmetik, ilaç, kimyasal üretimi, bira fabrikaları ve mandıralar ek veya alternatif su arıtma yöntemleri gerektiren işletmelerin iyi örnekleridir.

$$\frac{15.75}{3} = \frac{\exp\left(\frac{J}{8.48 \times 10^{-6}}\right)}{0.9873 + (1 - 0.9873) \exp\left(\frac{J}{8.48 \times 10^{-6}}\right)}$$

$$5.1833 = 0.933 \exp\left(\frac{J}{8.48 \times 10^{-6}}\right)$$

$$\exp\left(\frac{J}{8.48 \times 10^{-6}}\right) = 5.553$$

$$J = (8.48 \times 10^{-6}) \ln(5.553)$$

$$= 1.4536 \times 10^{-5} \text{ m}^3/\text{m}^2\text{s}$$

$$= 0.05233 \text{ m}^3/\text{m}^2\text{saat}$$

Aritma için gereken toplam membran yüzey alanı,

$$A_{Top} = V_F / J$$

$$= 1200 / 0.05233$$

BÖLÜM 4

SU SOĞUTMA KULESİ

Bir tesiste değişik süreçlerde (ısı değiştirici, yoğuşturucu vb.) soğutma amacı ile kullanılan ve süreçten ısınarak çıkan su, tekrar kullanılması için soğutulması gerekir. Bu amaç için ekonomik soğutma sistem olan **soğutma kuleleri** kullanılmaktadır. Soğutma kuleleri, sıcak olarak kuleye giren suyun ısı enerjisini kuleden geçen havaya aktararak atmosfere veren ve böylece suyun sıcaklığı düşürülen sistemdir. Bir kısım suyun buharlaşması, su soğutma kulesinin ana mekanizmasını oluşturur. Bu olay sırasında sıcak su, suyun buharlaşması için gereken buharlaşma ısısını kaybedeceğinden sıcaklığı düşer. Ortamdaki bulunan havanın nemi buharlaşmayı etkileyen itici güç olup, havanın bağıl nemi %100 oluncaya kadar buharlaşma devam eder. Buharlaşmanın yanında su ve havanın sıcaklık farkından dolayı gerçekleşen konvektif ısı transferi ile de soğutma olmaktadır.

Aşağıda su soğutma kulesinin şematik görünümü verilmiştir.

➤ *Dolgu Yüksekliği Z hesabı:*

$$Z = \frac{V'}{k_y a S} \int_{H_{v1}}^{H_{v2}} \frac{dH_v}{(H_i - H_v)}$$

H_v	17	34.6	52.3	69.9	87.6
H_i	31.72	45.62	61.72	79.43	98.62
$1/(H_i - H_v)$	0.0678	0.0911	0.106	0.1053	0.0906

$$\int_{H_{v1}}^{H_{v2}} \frac{dH_v}{(H_i - H_v)} = \frac{0.0678 + 0.0911}{2} * (34.6 - 17) + \dots + \frac{0.1053 + 0.0906}{2} * (87.6 - 69.9) = 6.737$$

$$Z = \frac{5.663}{6.59 * 2.573} * 6.737$$

$$= 2.25 \text{ m}$$

Kolon silindir seçilirse ve a değeri 0.0833 olarak alınırsa kule çapı,

$$D_c = \left(\frac{4V'}{\pi u_G (1 - a)} \right)^{0.5} = \left(\frac{4(5.663)}{\pi(1.826)(1.205)(1 - 0.0833)} \right)^{0.5}$$

$$= 1.89 \text{ m}$$

Kolon kesiti dörtgen seçilirse,

$$D = \left(\frac{V'}{u_G} \right)^{0.5} = \left(\frac{5.663}{(1.826)(1.205)} \right)^{0.5}$$

$$= 1.6 \text{ m}$$

BÖLÜM 5

SOĞUK SU ÜRETİM SİSTEMİ (CHILLER)

Endüstride soğuk su ihtiyacı özellikle, plastik üretim tesislerinde 10–12 °C su çıkışı olması gereken enjeksiyon kalıplarının ve işlem yapılmış malın soğutulmasında, kozmetik ve sabun üretim tesislerinde ve kimya endüstrisinde normal kaynama noktası 20°-35°C olan ve soğutma suyu kullanarak yoğunlaştırılması zor olan buharları yoğunlaştırmak amacı ile kullanılır.

Ayrıca, her türlü soğutma ve iklimlendirme sağlayan endüstriyel tip uygulamalarda, soğuk su hazırlama (chiller) sistemlerine ihtiyaç duyulur.

Plastik sanayinde kalıp şartlandırılması, özellikle ürün kalitesi açısından önemlidir. Malzemenin özelliklerine göre kalıpların belirli sıcaklık değerleri arasında tutulması gerekir. Bu ihtiyacı karşılamak amacıyla işletmelerde kullanılan su soğutma kuleleri sağlamada yetersiz kalmaktadır.

Plastik sektörü, soğutma ihtiyacı en fazla olan alanlardan biridir. Gerek kalıpların ve gerekse makine yağının soğutulması, işletme ve bakım maliyetlerinin yükselmesine sebep olmaktadır. Bu nedenle, kullanılacak yöntemin dikkatli seçilmesi gerekmektedir. Kalıpların yeteri kadar soğutulmaması, ürün kalitesini doğrudan etkilemektedir. Ayrıca, kalıptan elde edilecek birim ürün başına geçen sürenin artmasına neden olmakta ve üretim kapasitesini düşürmektedir. Bu nedenle makinelerdeki aşınmanın azaltılması ve verimli bir çalışma için yağın da iyi soğutulması önemli olmaktadır.

Chiller, buhar sıkıştırırmalı soğutma sistemi olup kompresör, kondenser genişleme vanası ve evaporatör (buharlaştırıcı) ana elemanlardan oluşmaktadır. Evaporatör, tesisten ısınarak dönen soğutma suyun (ya da glikol vb. diğer akışkanlar) tekrar soğutulduğu ekipmandır.

Evaporatör (buharlaştırıcı), genellikle boru-kovan tipidir ve kovan tarafından basıncı genişleme vanası tarafından düşürülmüş sıvı soğutucu akışkan (R22, R407C,

BÖLÜM 6

KIZGIN YAĞ SİSTEMİ

Bazı teknolojilerde yüksek sıcaklıklara dolayısıyla bunun temininde ısı transfer akışkanlarında yüksek sıcaklıklara ihtiyaç bulunmaktadır. Yüksek sıcaklık yüksek basınçlı kaynar su, doymuş buhar, kızgın buharla veya düşük basınçta çalışan kızgın yağ sistemi ile elde edilebilmektedir.

Doymuş buhar ve kaynar su için 250-300 °C'lık derece sıcaklık, 42 ila 90 barlık çok yüksek bir basınç gerektirmektedir. Çok kere ihtiyaç duyulan 170-180 °C derecelik sıcaklıklar için dahi 10-12 barlık basınca ihtiyaç olmaktadır.

Kızgın yağda ise 300 °C derece sıcaklığa kadar sadece tesisatın akışa gösterdiği direnci kadar bir basınca gereksinim olmakta ve bu direnç çoğu kez 3 barın altında olmaktadır.

Buhar tesisatlarında, özellikle kondens tanklarında ve zamanla bozulan kondens tutucularında büyük enerji kayıpları olmaktadır. Kızgın yağ sistemleri, eşdeğer buhar sistemlerine göre, enerjide ortalama %25-35 tasarruf sağlar.

Bunun yanı sıra kireçlenme ve korozyon dolayısı ile buhar kazanlarında borularda ve armatürlerde, telafisi büyük maliyetlere ulaşan yıpranma ve aşınmalar meydana gelmektedir. Buna karşılık uygun çalıştırılan kızgın yağ sisteminde koruyucu ortam dolayısı ile sistemde bir aşınma ve yıpranma olmamaktadır.

Buhar sistemleri ile kıyaslandığında kullanım alanına göre birçok avantajı vardır. Sıvının donma riski yoktur, genleşme tankı ile atmosfere açık çalışmakta, pahalı su yumuşatma sistemlerine ihtiyaç duymamakta, yoğunlaşma kayıpları da yoktur. Otomatik çalışır, hızlı ilk çalışma sağlar, taze su besleme sorunu yoktur.

Bununla birlikte yanlış kullanılması veya emniyet sistemlerinin çalışmaması hâlinde yangın riski mevcuttur ancak emniyet kurallarına uyulması ve doğru sistem tasarımı ile bu risk ortadan kaldırılmaktadır. Uygun brülör seçimi yapılmak

BÖLÜM 7

VAKUM SİSTEMİ

Vakum, atmosfer basıncının altındaki basınca verilen addır. Vakum sistemi oluşturmak için sistemdeki gaz moleküllerin boşaltılması gerekir. Sistemden ne kadar çok molekülün dışarıya transferi yapılırsa, sistemde o kadar düşük vakum elde edilir. Pompalama ile elde edilen vakum, kullanılan pompalama gücüne bağlı olarak farklı değerler alır. Ulaşılan vakum seviyesi düzeneğin mutlak basıncını ölçerek elde edilir. Oluşturulan yapay vakum seviyesini alçak, orta, yüksek, çok yüksek ve ileri yüksek olarak sınıflara ayırılarak ifade edilir.

<i>Vakum aralıkları</i>	<i>Pascal (Pa)</i>	<i>mbar</i>
Alçak vakum (LV)	$10^5 - 3.3 \times 10^3$	1013 - 1
Orta vakum (MV)	$3.3 \times 10^3 - 10^{-1}$	$1 - 10^{-3}$
Yüksek vakum (HV)	$10^{-1} - 10^{-4}$	$10^{-3} - 10^{-6}$
Çok yüksek vakum (VHV)	$10^{-4} - 10^{-7}$	$10^{-6} - 10^{-9}$
İleri yüksek vakum (UHV)	$10^{-7} - 10^{-10}$	$10^{-9} - 10^{-12}$
Aşırı yüksek vakum (XHV)	$<10^{-10}$	$<10^{-12}$

Vakumun bir çok uygulama alanı vardır. Örneğin safsızlığın önemli olduğu bazı yarı iletken malzemelerin üretimi sırasında ortamda istenmeyen atomların bulunması malzemenin safsızlığını dolayısıyla da elektronik özelliklerini olumsuz yönde etkilemektedir. Bu sebepten bu türden malzemelerin üretimlerinin yapıldığı ortam-

Dış basınç etkisindeki kapların detaylı tasarımlarında kabul görmüş yöntemler için, ASME BPV Yönerge Böl. VIII D.1 Kısım UG-28 e başvurmak gerekir. EN 13447 yönetmeliği, BS PD 5500 gibi aynı yöntemi kullanır.

BÖLÜM 8

ELEKTRİK SİSTEMİ, SÜREÇ KONTROL VE OTOMASYONU

Ulaşım, tıp, tarım, iletişim, sanayi ve daha birçok alanda kullandığımız elektrik, aynı zamanda çağdaşlaşmanın da önemli bir göstergesi olup hayatımızın vazgeçilmez bir parçasıdır. Elektrik makinelerinin verimlerin yüksek olması, kumandalarının kolaylığı ve yapılarının basit olması, diğer enerji makineleri yanında ön sırayı almalarına neden olmuştur.

Fabrikalarda kullanılacak olan cihazların, makinelerin elektrik ihtiyaçları yeterli bir şekilde sağlanmalı, evsel elektrik tesisatından daha farklı yapılara sahip olan fabrika elektrik tesisatı profesyonel kişiler tarafından kurulmalıdır. Bunun yanında fabrikalarda elektrik sürekli olarak kullandığı için sorun çıkarma olasılıkları da fazladır. Bu nedenle fabrika elektrik tamirati ve olabilecek kazaların önlenmesi büyük önem taşımaktadır.

Diğer taraftan fabrikada üretilen ürünlerin istenen kalite ve miktarda üretilebilmesi, tesisin güvenli çalışabilmesi için üretim esnasında süreçlerin kontrolleri ve otomasyonları da oldukça önemli olmaktadır.

8.1. Elektrik Sistemi

Elektrik enerjisi aktarımını gerçekleştiren ve çalışma koşulları belirli standartlara bağlı olan sistemlere *elektrik sistemleri* adı verilebilir. Bu sistemler mühendislik

BÖLÜM 9

ÇEVRE KORUMA SÜREÇLERİ

Çevre, canlı ve cansız tüm varlıkların iç içe bulunduğu kompleks bir yapıdır. Bu yapının bir kısmında meydana gelen çevresel değişiklik (sıcaklık, pH, oksijen miktarı vb.) orada var olan canlı varlıkların birbirleriyle ilişkisi olan ekosistemi de etkiler. Çevre birden fazla etmenin bir araya gelmesiyle oluşsa da tüm bu kirliliklerin başlıca sorumlusu insan faaliyetleridir. Büyüyen ve gelişen insan nüfusu, ihtiyaçlarını gidermek için zaman içinde yağmur ormanları, sulak ve otlak alanları ve diğer biyolojik açıdan zengin yerleri talan edip oradaki diğer türlerin habitatlarına müdahale etmiştir. Bunun sonucunda, insanlar yaptığı faaliyetler sonunda besin zincirine müdahale ederken aslında kendine de zarar vermiş ve gelecek insan neslinin de yaşamını tehlike altına almıştır.

Yaşamın sağlıklı sürdürülmesi ancak sağlıklı bir çevre ile mümkündür. Sağlıklı bir çevre içinde doğal dengenin yani ekosistemin korunması gerekmektedir. Canlılar hayatlarını sürdürebilmeleri için yaşadıkları ortamdaki birçok maddeyi almak ve vermek zorundadır. Maddelerin çevrimsel olarak kullanılması, yaşama döngüsünde en önemli etkidir. Bu nedenle **çevre koruma süreçleri** ile ekosistemde oldukça önemli olan *su karbon; azot döngülerin* korunmaları gerekmektedir.

İnsan faaliyetleri sonucunda alıcı ortamlara arıtılmadan atılan atık maddelerin olumsuz etkileri sonucunda ekolojik dengenin bozulması ve istenilmeyen sonuçların ortaya çıkması **çevre kirlenmesi** olarak adlandırılır.

Çevre kirliliği, doğal yaşam üzerinde önemli bir olumsuz etkiye sahip olmakla birlikte aynı zamanda insan sağlığı üzerinde de ölçülebilir bir etkiye sahiptir. Modern dünyada kirlilik türlerine bakıldığında aşağıda verilen gruplandırma karşımıza çıkmaktadır.

olmuş; son zamanlarda grafen yapıda grafitinde olumlu sonuçlar verdiği belirlenmiştir.

Sonuç olarak ileri oksidasyon süreçleri daha pahalı sistemler olmasına rağmen diğer atıksu arıtım süreçlerine göre aşağıda belirtilen üstünlüklere sahiptir.

1. *İleri oksidasyon süreçleri yüksek oksidasyon potansiyeline sahip hidroksil radikallerini üretmekte ve bu radikallerle ortamdaki organik bileşenler ile reaksiyonu sonucunda pek çok organik bileşenin, son ve kararlı ürünler olan su ve karbondioksit kadar oksidasyonu mümkün olabilmektedir. Bu nedenle arıtma verimi diğer süreçlere göre daha yüksek olmaktadır.*
2. *Klasik arıtma süreçlerinde karşılaşılan çamur oluşumu ve çamur bertarafının meydana getirdiği sorunlar ve ek maliyetler bu tip süreçlerde (Fenton süreci hariç) neredeyse yok denecek kadar azdır.*
3. *Hidroksil radikalleri ile organik bileşenler arasındaki reaksiyonun gerçekleşme süresi özellikle biyolojik arıtma süreçlerine göre daha düşüktür.*
4. *İleri oksidasyon süreçlerin diğer arıtma süreçlerine göre daha az yerleşim alanına kurulması, işletme içerisindeki alanların daha etkin kullanımına olanak sağlamaktadır.*
5. *Bu süreçlerde sağlanan yüksek orandaki arıtma verimiyle atıksudaki kirleticiler büyük bir oranda giderilmeleri, işletmeye iyi kalitede suyu geri kazandırabilmekte ve su kullanım maliyeti düşürmektedir.*

BAKIM – ONARIM VE KOROZYONLA MÜCADELE

Üretim tesisinde yer alan elektrik, enstrüman ve tüm donanımların üretimde sürekliliği sağlayacak bir şekilde kontrolü, tamiri, onarımı temizliği vb. eksiklik, aksaklık ve ihtiyaçlarının giderilmesine yönelik olarak yürütülen faaliyetler **bakım** faaliyetleri olarak tanımlanır. Bakım organizasyonunda bakım ve onarım birimi, direkt olarak işletme baş mühendisliğine bağlıdır. Bakım ve Atölye bünyesinde üç ana grupta toplanmaktadır.

- a) *Makine bakım atölyesi*
- b) *Elektrik ve instrümantasyon atölyesi*
- c) *Bakım ve yenileme atölyesi*

10.1. Bakım Türleri

1. *Plansız bakım*
2. *Planlı bakım*
3. *Periyodik bakım*
4. *Kestirimci bakım*

olarak sınıflandırılmaktadır. Plansız bakım, arıza oluştuğunda yapılan müdahaleleri kapsamaktadır. Aslında bu bakım yöntemini bakım kapsamı içinde almak biraz yanlış olmaktadır. Çünkü bu yöntemde ekipman tamamen bozulup üretim dışı kalana dek, verimsizlik başlamasına üretimin belli bir düzeye düşmesine kadar bir bakım yapılmamaktadır. Plansız bakımın dezavantajları,

- 1- *Arızanın ne zaman ortaya çıkacağı belli olmadığından hangi parçanın değiştirileceği, ne kadar iş gücü gerekeceği, hangi alet ve takımların kullanılacağı gibi planlama için gereken ön bilgilere sahip olmak güçtür.*

Dış akım kaynaklı katodik koruma sistemlerinin periyodik kontrollerinde yapılan ölçümler aşağıda sıralanmıştır.

- 1- *Dış akım kaynaklı sistemde polarite tayinin düzgün yapılması gerekir. Polarite bağlantısı ters yapılırsa korunması gereken metal yapı anot, yardımcı anotlar ise katot durumuna geleceğinden metal yapı hızla korozyona uğrayacaktır. Polarite kontrolü yapılırken avometrenin (+) ucu referans elektroda, (-) ucu ölçü kutusundaki pirinç vidaya temas ettirilir. Bu durumda avometrenin ekranından negatif bir değer okunmuyorsa redresör çıkış bağlantıları doğru yapılmıştır. Ekranda negatif bir değer okunuyorsa redresör çıkış bağlantı uçları değiştirilmelidir.*
- 2- *Dış akım kaynaklı katodik koruma sisteminde en sık görülen arızalar T/R ünitesinde meydana gelir. Bu arızaların başında köprü diyot arızaları ilk sırada yer alır. Söz konusu diyotların arızalı olup olmadığını avometrenin Ohm soketini kullanarak tespit etmek mümkündür.*
- 3- *T/R ünitesinden normalden daha fazla akım çekilmesine rağmen potansiyel değeri normal ise bu duruma izole flaşlardan birinin görevini yapmadığı, çevredeki diğer metal yapıların kaçak akım etkilerini olduğu, metal yapıya ilave yapılmış olması ve metal yapının kaplamasının zarar görmüş olması gibi sorunlar neden olabilir.*
- 4- *T/R ünitesinin potansiyeli normal iken akımın normalden daha az olması durumu anot yatağındaki bazı anotların devre dışı kalması ya da anot yatağının kuruması gibi sorunlardan kaynaklanabilir.*

İŞ GÜVENLİĞİ, SAĞLIĞI VE YANGINLA MÜCADELE

İş kazalarını önlemek amacı ile güvenli çalışma ortamını oluşturmak için alınması gereken tedbirler dizisine *İş Güvenliği* denir. İşçi sağlığı bilimi; tüm mesleklerde çalışanların sağlıklarını sosyal, psikolojik ve fiziksel olarak en üst seviyede tutmak, çalışma şartlarını ve üretim araçlarını sağlığa uygun hâle getirmek, çalışanları çalışma ortamlarının tüm zararlı etkilerinden koruyarak işin ve işçinin birbirine uyumunu sağlamak üzere kurulmuş mühendislik ve tıp disiplinlerini temel alan entegre bilim dalıdır.

Hızlı sanayileşme ve teknolojik gelişmeler ile doğru orantılı olarak özellikle iş yerlerinde çalışan kişilerin güvenliği ile ilgili bazı sorunlar da açığa çıkmıştır. Bu sebeple birtakım önlemleri önceden alarak iş yerlerini güvenli hâle getirmek gerekmekte olduğundan iş güvenliği oldukça önem kazanmıştır.

İşçi sağlığı ve güvenliğin temel ilkeleri, iş yerlerinde işin yürütülmesi ile ilgili olarak oluşan tehlikelerden, sağlığa zarar verebilecek şartlardan korunmak ve daha insanî bir iş ortamı meydana getirmek için yapılan metotlu çalışmaları; genel anlamda, hem çalışanları korumayı hem de bütün işletmenin ve üretimin güvenliğini, yani etraftakilerin ve çevrenin korunmasını esas alan tedbirleri; iş yerinde çalışan işçilerin sağlığını ve iş güvenliğini sağlamayı, bir başka ifadeyle, iş yerinde doğabilecek, iş kazası ve meslek hastalıkları gibi her türlü riske karşı gerekli tedbirleri almayı, bu husustaki şartları yerine getirmeyi, bu hedefleri yerine getirmeye yardımcı olabilecek araç-gereçlerin eksiksiz bulundurulmasını öngören, genelde bunların uygulanmasından işverenin sorumlu tutulduğu ve/fakat işçilerin de, öngörülen tedbirlerle ilgi olarak usul ve şartlara uymalarını içermektedir.

$$0.1143 = 1 / [1 + 4/(24.87)^2 [x - 37.85]^2]$$

$$1197 = [x - 37.85]^2$$

$$X = 72.44 \text{ m}$$

Sonuç olarak tesiste depolara en yakın bina en az **75 metre** olmalıdır.

İçindekiler

Ön Söz	v
Giriş	1

BİRİNCİ BÖLÜM

1. Temel Kavramlar	5
1.1. Birim.....	5
1.2. Değişken (Karakter, Vasıf).....	6
1.2.1. Değişken Tipleri	6
1.2.1.1. Nitel (Kalitatif) Değişken.....	6
1.2.1.2. Nicel (Kantitatif) Değişken	7
1.3. Popülasyon (Evren, Kitle, Ana Kütle).....	7
1.4. Örnek	8
1.5. Örneklem	8
1.6. Örneklem Yöntemleri	10
1.6.1. Olasılıklı Örneklem Yöntemleri	11
1.6.1.1. Basit Tesadüfi Örneklem.....	11
1.6.1.2. Sistematik Örneklem	11
1.6.1.3. Tabakalı Basit Rastgele Örneklem	12
1.6.1.4. Küme Örneklemesi	13
1.6.2. Olasılıksız Örneklem Yöntemleri	14
1.6.2.1. Gönüllülerin Seçilmesi.....	14
1.6.2.2. Kolayda Örneklem	14
1.6.2.3. Kartopu Örneklemesi	15

İKİNCİ BÖLÜM

2.1. Hata Tipleri.....	17
2.2. Testin Gücü	20
2.3. Etki Büyüklüğü.....	21
2.4. Gruplara Dağıtım Oranı (Allocation Ratio, N_2/N_1)	25

ÜÇÜNCÜ BÖLÜM

3.1. Bilimsel Çalışmalarda Örnek Büyüklüğünün Hesaplanması (Sample Size)	27
3.1.1. G*Power Programı	27
3.2. A Priori Power Analizi ile Örnek Büyüklüğü Hesaplaması	40
3.2.1. Referans Çalışmanın İstatistik Değerleri Kullanarak Örnek Büyüklüğü Hesaplanması	40
3.2.2. Pilot Çalışma İstatistik Değerleri ile Örnek Büyüklüğü Hesaplanması	40
3.2.3. Standart Değerleri Kullanarak Örnek Büyüklüğü Hesaplanması	41

DÖRDÜNCÜ BÖLÜM

4. Korelasyon ve Regresyon Analizleri İçin Örnek Büyüklüğü Hesaplaması	43
4.1. Korelasyon Analizleri İçin Örnek Büyüklüğü Hesaplaması.....	43
4.1.1. Correlation: Bivariate Normal Model.....	43
4.1.2. Nokta-Çift Serili Korelasyon Katsayısı (Point Biserial Correlation).....	49
4.1.3. Tetrakorik Korelasyon Analizi (Correlation: Tetrahoric Model).....	52
4.2. Regresyon Analizleri İçin Örnek Büyüklüğü Hesaplaması.....	57
4.2.1. Linear Bivariate Regression: One Group, Size of Slope	58
4.2.1.1. Örnek Büyüklüğü Hesaplaması (A Priori: Compute required sample size)	58
4.2.1.2. Testin Gücünün Hesaplanması (Post Hoc: Compute achieved power)	66
4.2.2. Linear Multiple Regression: Fixed Model, R^2 Deviation From Zero	68
4.2.2.1. Örnek Büyüklüğü Hesaplaması (A Priori: Compute required sample size)	68
4.2.2.2. Testin Gücünün Hesaplanması (Post Hoc: Compute achieved power)	79
4.2.3. Logistic Regression	81
4.2.3.1. Logistic Regression (Bağımsız Değişken İki Önermeli Nitel Değişken).....	81
4.2.3.2. Örnek Büyüklüğü Hesaplaması (A Priori: Compute required sample size)	83
4.2.3.3. Testin Gücünün Hesaplanması (Post Hoc: Compute achieved power)	93
4.2.4. Logistic Regression (Bağımsız Değişken Sürekli Nicel Değişken).....	95
4.2.4.1. Örnek Büyüklüğü Hesaplaması (A Priori: Compute required sample size)	97
4.2.4.2. Testin Gücünün Hesaplanması (Post Hoc: Compute achieved power)	99

BEŞİNCİ BÖLÜM

5. Ortalama Karşılaştırmaları İçin Örnek Büyüklüğü Hesaplaması.....	103
5.1. One group: Difference from Constant (one sample case).....	104
5.1.1. Örnek Büyüklüğü Hesaplaması (A Priori: Compute required sample size)	104
5.1.2. Testin Gücünün Hesaplanması (Post Hoc: Compute achieved power)	110
5.2. Two Dependent Groups (matched pairs).....	112
5.2.1. Örnek Büyüklüğü Hesaplaması (A Priori: Compute required sample size)	112
5.3. Two Independent Groups	119
5.3.1. Örnek Büyüklüğü Hesaplaması (A Priori: Compute required sample size)	120
5.3.2. Testin Gücünün Hesaplanması (Post Hoc: Compute achieved power) ...	134
5.4. Many Groups: ANOVA: One-way (one independent variable).....	140
5.4.1. Örnek Büyüklüğü Hesaplaması (A Priori: Compute required sample size)	140
5.4.2. Testin Gücünün Hesaplanması (Post Hoc: Compute achieved power) ...	153

ALTINCI BÖLÜM

6.1. Repeated Measures	157
6.1.1. Repeated Measures: Between Factors, ANOVA-approach	158
6.1.1.1. Örnek Büyüklüğü Hesaplaması (A Priori: Compute required sample size).....	158
6.1.2. Repeated Measures: Within Factors, ANOVA-approach.....	165
6.1.2.1. Örnek Büyüklüğü Hesaplaması (A Priori: Compute required sample size).....	166
6.1.3. Repeated Measures: Within-Between Interactions, ANOVA-approach.....	175
6.1.3.1. Örnek Büyüklüğü Hesaplaması (A Priori: Compute required sample size).....	175

YEDİNCİ BÖLÜM

7. Ki-Kare Testi.....	183
7.1. Ki-Kare Uygunluk Testi (Goodness-of-fit tests: Contingency tables)	184
7.1.1. Örnek Büyüklüğü Hesaplaması (A Priori: Compute required sample size)	184
7.1.2. Testin Gücünün Hesaplanması (Post Hoc: Compute achieved power) ..	190

RADYO DALGALARI İLE YAYINIM

1.1. Radyo Dalgaları Temel Kavramlar

Elektromanyetik dalgalar, yüklü bir parçacığın ivmeli hareketi sonucu oluşan bir enerji türüdür. Biri elektrik alan, diğeri manyetik alan olmak üzere aynı fazda birbirine dik iki bileşenden oluşmaktadır ve her ikisi de sinüs fonksiyonu formundadır. Elektromanyetik dalga ise bu iki alanın oluşturduğu düzleme dik doğrultuda ilerler (Şekil 1.1). Elektromanyetik dalgaların yayılmaları için ortam gerekmezken, boşlukta ışık hızı ($c = 3 \times 10^8$ m/s) ile yayılırlar.

Şekil 1.1. Elektromanyetik dalga

YERE DAYALI SEYRÜSEFER SİSTEMLERİ

2.1. Yön Bulucu (Gonyometre)

Hava taşımacılığında, uçağı yayın yapan istasyona veya havaalanına doğru yönlendirme amacına hizmet eden *VDF* (VHF Direction Finder) ve *ADF* (Automatic Direction Finder) olmak üzere iki tip yön bulucu seyrüsefer sistemi kullanılmaktadır. *Gonyometre* olarak da isimlendirilen bu iki sistem pilota, Şekil 2.1’de görüldüğü gibi uçaktan istasyona olan QDM (manyetik kerteriz) ve istasyondan uçağı olan QDR (gerçek kerteriz) açılarını verir. Bilindiğı üzere radyo dalgaları dünyanın manyetizmasından etkilendikleri için bu açılar gerçek kuzeye göre değil, manyetik kuzeye göre belirlenir. Gerçek kuzeye göre uçaktan istasyona olan açı QUJ ve yine gerçek kuzeye göre istasyondan uçağı olan açı ise QTE olarak isimlendirilir. Pilotun istasyona veya havaalanına yönelmesi için ihtiyaç duyduğu açı, QDM değeridir.

IAS/Mach No gibi bilgilerin de ilave olarak iletilmesi öngörülmektedir. Bu sayede olası çarpışma tehlikelerinin önceden tahmin edilerek çözülmesi ve emniyetin yüksek oranda artırılması planlanmaktadır.

UÇAK ÜZERİNDEKİ SEYRÜSEFER SİSTEMLERİ

3.1. Doppler Radarı

Uçak üzerinde bulunan ve uzun menzilli uçuşlarda pilotlara yer hızı ile sürüklenme açısı bilgilerini sağlayan bir seyrüsefer yardımcısıdır. Doppler radarının yerini daha modern sistemler almasına rağmen, eski nakliye uçaklarında ve helikopterlerde hâlen kullanılmaktadır.

3.1.1. Çalışma Prensibi

Doppler radarının hassasiyeti ve doğruluğu yayın frekansı ile artar. Frekansın artması sinyalin yansıma, saçılma ve emilim etkilerini daha fazla artırır. Bu nedenle operasyonel kullanım yüksekliği, güç çıkışı ve uçağın hızı gibi faktörler dikkate alınarak çalışma frekansı SHF bandında 8800 MHz ve 13300 MHz olarak tanımlanmıştır. Bu sistemin çalışma prensibi, adından da anlaşılacağı üzere Doppler etkisine dayalıdır. Daha önce detaylı bir şekilde açıklandığı üzere bir verici ve alıcı arasında göreceli bir hareket olduğunda, bunların hareketiyle orantılı bir frekans kayması meydana gelir. Frekanstaki bu değişiklik Doppler kayması ya da Doppler frekansı olarak adlandırılır. Bu etki Doppler radarına uyarlandığında uçağın hareketinin bir sonucu olarak yerden yansıyan sinyaldeki frekans kaymasının sürekli ölçülmesiyle uçağın yol boyunca yere göre hızı ve sürüklenme açısı belirlenir.

İşlem ve durum bildirim tuş grubu FMS'in etkin hâle getirilmesi, uçuş planının görüntülenmesi ve modifikasyonu, uçuş planının hazırlanması veya güncellenmesi için kalkış, düz uçuş ve iniş aşamalarına ait bilgilerin seçilmesi amacı ile kullanılır. Örneğin 'DEP ARR' tuşu ile pilot, kalkış ve iniş yapacağı meydanlara ait ilgili prosedürleri ve uygun pisti seçebilir. Satır seçim tuşları ise seçilen satıra alfa nümerik tuş grubu kullanılarak veri girişi yapılmasını sağlar. Ekranın her iki tarafında altışar tane olmak üzere 12 adet satır seçim tuşu bulunmaktadır. FMC kabin ekibinden veri talep ettiğinde ilgili satırda soru işareti belirir. Örneğin FMC'nin kalkış yapılacak meydandaki yolcu yükleme için tanımlanmış kapı numarasını talep ettiğini varsayalım. Bu durumda pilot hızlı işlem belleği satırına istenen bilgiyi alfa nümerik tuş grubunu kullanarak girer. Yedinci satırda görünen bu bilgiyi ilgili satır seçim tuşuna dokunarak aktif hâle getirir ve satırda görüntülenmesini sağlar.

Bunlara ek olarak tuş takımının iki yanında 4 adet uyarı ışığı da bulunmaktadır. Şekil 3.34'de görüldüğü gibi sağ üstteki beyaz ışık (MSG) bir uyarı veya öneri mesajı olduğunu, altındaki beyaz ışık (OFFSET) uçağın uçuş planında tanımlı yola paralel uçtuğunu göstermektedir. Tuş takımının sol üst kısmındaki beyaz ışık (DISPLAY) ekranda görünen bilgilerin aktif uçuş planı veya seçilen operasyonel uçuş modu ile ilgili olmadığını, son olarak sol alttaki amber renkli ışık ise FMC'de bir arıza tespit edildiğini göstermektedir.

UYDUYA DAYALI SEYRÜSEFER SİSTEMLERİ

4.1. Giriş

Günümüzde kara, hava ve deniz taşımacılığında çok yaygın bir şekilde kullanılan ve uygulama alanları her geçen gün artan uydu seyrüsefer sistemlerinin tarihsel gelişim süreci 1950’li yıllara kadar uzanmaktadır. Sovyetler Birliği’nin 1957’de *Sputnik I*’i yaklaşık bir ay sonrasında da *Sputnik II* ve *Sputnik III* uydularını uzaya başarılı bir şekilde göndermesinin ardından, dünyanın uzaydan incelenme fikrinin oluşması ile başlayan çalışmalar, bugün tüm dünya ülkeleri tarafından kullanılan evrensel bir teknolojiye dönüşmüştür. Sovyetler Birliği’nin ardından Amerika da 1958 yılında ilk yapay uydusu olan *Explorer I* ile *Vanguard-1*’i başarılı bir şekilde yörüngeye oturtarak uzay çalışmalarına hız kazandırmıştır. Sputnik I’in radyo sinyallerini inceleyen bilim adamları, Doppler etkisi nedeniyle iletilen sinyalin frekansındaki değişiklikleri gözlemlemişlerdir. Uydu konumunun radyo sinyalinin frekansındaki kayma yolu ile yerden belirlenebilmesi durumunda, bir alıcının yerdeki konumunun da uyduya uzaklığına göre belirlenebileceğini tespit etmişlerdir. Bu fikir çerçevesinde 1959 yılında dünyanın ilk uydu seyrüsefer sistemi olarak tarihe geçen *Transit*, Amerika Birleşik Devletleri Donanması tarafından kullanılmaya başlamıştır. Başlangıçta güdümlü füzelerin hassasiyetini artırmak ve gemilerin konumlarını belirlemek amacıyla kullanılan bu sistem, 1964 yılından 1996 yılına kadar iki boyutlu konum belirleme amacıyla kesintisiz bir şekilde hizmet

CNS-ATM SİSTEMLERİ

5.1. Tarihçe

Haberleşme, Seyrüsefer, Gözetim ve Hava Trafik Yönetimi (*CNS-ATM*: Communication, Navigation, Surveillance and Air Traffic Management), 1980'li yıllarda hava taşımacılığına olan talebin artmasıyla birlikte mevcut hava seyrüsefer hizmet ve altyapısının yeterliliğinin değerlendirilmesi neticesinde ortaya çıkmış bir kavramdır. İlk olarak Geleceğin Hava Seyrüsefer Sistemleri (*FANS*: Future Air Navigation Systems) olarak adlandırılan bu kavram ile teknolojik gelişmelere paralel olarak hava trafiğinin daha emniyetli ve etkin bir şekilde yönetilmesi, hava sahası kapasitesinin ve operasyonel verimliliğinin artırılması hedeflenmiştir. Veri hattı uygulamaları, uydu seyrüsefer sistemleri gibi modern teknolojilerin kullanımı sayesinde gerek uçak, gerekse yerdeki sistem kabiliyetlerinin artırılması ve bu kapsamda bir takım yenilikçi prosedürlerin uygulanması öngörülmüştür.

CNS-ATM kavramının gelişimi iki aşamada gerçekleşmiştir. İlk olarak 1983 yılında Uluslararası Sivil Havacılık Teşkilatı (*ICAO*: International Civil Aviation Organization), uzun vadeli hava trafik tahminlerine dayalı olarak mevcut hava seyrüsefer alt yapısının değerlendirilmesi amacıyla özel bir FANS komitesi kurmuştur. ICAO'ya üye ülkelerden ve uluslararası organizasyonlardan oluşan bu Komitenin 1988 yılında yayınladığı raporda; dünya genelinde hızlı bir büyümenin yaşandığı hava taşımacılığında mevcut haberleşme, seyrüsefer ve gözetim sistemlerinin belirli kapsama alanı ve kapasite dâhilinde çalışması, sesli haberleşmeden

ve taktiksel olarak planlanması amacıyla oluşturulan hava trafik yönetim fonksiyonlarından biridir. Hava sahası yönetiminin temel amacı, hava sahalarının daha esnek ve dinamik olarak yönetilebilmesi, uçuş operasyonlarını kısıtlayan faktörleri en aza indirgeyecek şekilde hava sahası hacminin boyut, şekil ve zaman olarak düzenlenmesi ile hava sahalarının yapısal ve trafik akış karakteristiklerine bağlı olarak karmaşıklığının azaltılması için gereken düzenlemeleri sağlamaktır. Stratejik ve taktiksel olmak üzere iki tip hava sahası yönetimi söz konusudur. Stratejik hava sahası yönetimi, hava sahalarının uzun vadede daha esnek kullanımına yönelik planlamaları, taktiksel hava sahası yönetimi ise hava sahalarının dinamik kullanımını ve sivil-asker koordinasyonu gibi konu başlıklarını kapsar.

BÖLÜM I.

KALSİT

[Calcite]

Kalsit ve Ürünleri

[Calcite and Its Products]

1. Kalsit

[Calcite]

Dünyanın en faydalı (kullanışlı/çok yönlü) **minerali** olarak bilinen kalsit (CaCO_3) (kalsiyum karbonat), çeşitli şekillerde ve kristal yapıda bulunan, camsı parlaklığa sahip, renksiz, sertliği orta, yoğunluğu düşük ve kolay öğütülen bir *endüstriyel mineraldir* (Şekil 1.1).

Endüstriyel mineral, fazla bir ön işlemden geçmeden, maden ocağından çıkartıldığı şekliyle sanayide veya günlük hayatta kullanılabilen doğal kaynaktır.

Şekil 1.1: Kalsit minerali [1].

Saf kalsit kristali; %56 kalsiyum oksit (CaO), %44 karbondioksit (CO_2) içerir. Saf olmayan kristallerde ise kalsiyumun bir kısmı Fe, Mg ve diğer elementlerle yer değiştirmiş olabilir.

Kalsit iri tek kristal form hâlinde bulunabilir. İlk defa Doğu İzlanda'da rastlanmasından dolayı buna **İzlanda sparı** denilir ve yüksek optik kaliteye sahip, kalsitin en saf ve transparan (şeffaf) hâlidir. Işık polarizasyon özelliğinden dolayı da eskiden Vikingler tarafından bulutlu günlerde yön bulmada (navigasyon) kullanılmıştır [2].

Dünyada ve Türkiye’de Kalsit

[Calcite in the World and Türkiye]

1. Dünyada Kalsit

[Calcite in the World]

Kalsitin dünya rezervleri hakkında düzenli ve yeterli bilgi bulunmamaktadır. Özellikle, metamorfik kireçtaşlarında açılmış olan **mermer ocaklarının artıkları** ile ayrıca **blok alınamayan mermer sahalarında** üretim yapıldığı bilinmektedir (Tablo 1.20). Dolayısıyla dünyada bir rezerv problemi olduğu söylenemez. Ancak yine de çok beyaz, saf ve öğütülebilirliği yüksek olan, limanlara ve tüketim merkezlerine yakın olan kalsiyum karbonatlar her zaman aranmaktadır.

Rezerv, bir maden yatağında ya da havzasında henüz işletilmemiş maden miktarının kısa vadede ekonomik olan ve belirlenlik gösteren kısmıdır.

Dünya kalsit piyasa büyüklüğü;

2012 yılında 15.6 milyar \$ karşılığı 86.5 milyon ton olarak rapor edilmiştir. Bu rakamların 2025 yılı tahmini ise 35 milyar \$ seviyelerinde öngörülmektedir.

Tablo 1.20: Dünyadaki kalsiyum karbonat oluşumları [1].

Bölge	Kalsit oluşumu
ABD-Georgia ve Great Lake Bölgesi	Mermer ve kireçtaşları öğütülmekte ve daha çok PCC üretimi yapılmaktadır.
İngiltere	Mermer yatakları bulunmamaktadır. Güney kesiminde tebeşir yatakları ve Norveç’ten temin edilen mermerler öğütülerek değerlendirilmektedir.
Almanya	Beyaz renki kireçtaşları öğütülmektedir.
Fransa	Tebeşir ve beyaz kireçtaşları öğütülmektedir.
İtalya	Carrara bölgesindeki mermer ocaklarının atıkları değerlendirilmektedir.
İspanya	Beyaz mermerler öğütülmektedir.
Yunanistan	Az miktarda beyaz mermer kırıkları ve kriptokristalen yapıda oluşan kalsiyum karbonat yatakları değerlendirilmektedir.
Mısır	Beyaz renkli kireçtaşları öğütülmektedir.
Tayvan, Endonezya	Mermer ve amorf kalsiyum karbonat yatakları değerlendirilmektedir.

BÖLÜM II.

KALSİT MADENCİLİĞİ

(Calcite Mining)

Kalsit Madenciliđi ve Arazi İyileřtirme

[Calcite Mining and Land Rehabilitation]

1. Açık Ocak Madenciliđi

[Open Pit Mining] [Surface Mining]

Genel olarak, *açık işletme* şevli basamak üretim yöntemi ile çalıştırılan ocaklardaki kazı işlemleri iki şekilde yapılmaktadır:

- *Sert* formasyonlarda **delme-patlatma** (drilling-blasting) yöntemiyle gevşetilerek
- *Orta sert ve yumuşak* formasyonlarda ise kepçeli ekskavatörler ile doğrudan **kazı** (excavation) yapılarak

Açık işletme, madenin üzerindeki örtü tabakasını almak ve bu sayede madeni açığa çıkarmak için uygulanan maden ocağı üretim metodudur.

Gevşetilen malzeme daha sonra kamyonlara yüklenmekte olup (Şekil 2.1) kırma-eleme ünitelerine ve daha sonrasında ise öğütme ve zenginleştirme ünitelerinin bulunduğu cevher hazırlama tesislerine nakledilmektedir.

Şekil 2.1: Niğde'deki kalsit açık işletmelerinden görünüm [1].

- ♦ Rekreasyon
(Eğlence ve dinlenme yerleri, parklar, halka açık alanlar vs.)
- ♦ Su kullanımı
(Balıkçılık, gölet vs.)
- ♦ Bayındırlık ve inşaat
(Hafif endüstriyel yapılar, konut, hizmet binaları, yol vs.)
- ♦ Yaban hayatı gibi toplumsal amaçlar
(Biyotop, doğal koruma alanları vb.)

Biyotop (biyo-topluluk) (habitat), bitki ve hayvanların belirli bir bileşimi için bir yaşam alanı sağlayan tek tip çevresel koşulların bir alanıdır [18].

Madencilik sonrası arazi rehabilitasyonu olarak ülkemizde, genellikle ilgili sahalarda sadece teraslama, çapalama ve ağaçlandırma faaliyetleri yapılmaktadır. Fakat son yıllarda gerek yasal mevzuatlar gerekse artan çevre bilinci dolayısıyla, ülkemizde de modern, toplumsal beklentileri karşılayan çok başarılı **maden kapatma ve doğaya yeniden kazandırma** faaliyetleri sürdürülmektedir (Şekil 2.5).

Şekil 2.5: Açık işletme sonrası örnek arazi rehabilitasyon çalışması: a) önce, b) sonra [19].

Taş Seçme (Ayıklama)

[Sorting]

1. Elle Ayıklama

[Manuel Sorting]

Ayıklama (taş seçme) veya **Triyaj** madenciliğin ilk uygulamalarındandır. Ayıklama ister insan gücü (el) ile olsun ister otomatik cihazlarla (el değmeden) olsun minerallerin bazı fiziksel özelliklerinden (*şekil ve renk* gibi) yararlanmak gerekmektedir.

Ayıklama nispeten *iri* (**3-30 cm**) mineral parçaları üzerinde uygulanır. Özellikle elle ayıklamanın ekonomik olması bakımından büyük parçalar hâlinde değerli ve değersiz cevher parçalarının birbirinden ayrılabilmesi gerekir [1].

Minerallerin aşağıdaki bazı farklılıklarından yararlanarak, elle seçilerek birbirinden ayrılmasına, “*Elle Zenginleştirme*” de denilmektedir:

- Renk
- Parlaklık
- Floresans (*ışık verme, ışıma*)
- Radyoaktivite
- Özgül ağırlık
- Genel görünüm

Ülkemizde cevherlere uygulanan elle ayıklamaya ayrıca “*tavuklama*”, kömüre uygulanan ise “*kriblaj*” adı verilmektedir.

Madenciliğin ilk uygulamasından beri kullanılan ve en eski cevher hazırlama yöntemi olarak bilinen **elle ayıklama** (elle triyaj) çağdaş teknolojilerde de yer almaktadır. İşçiliğin ucuz olduğu yerlerde, küçük maden işletmelerinde nihai zenginleştirme işlemi olarak zenginleştirme tesisleri öncesinde de iri boyutta konsantre üretimi veya artık atmak amacıyla uygulanmaktadır.

Kayaç/Agregalara Uygulanan Testler

[Applied Tests on Rock / Aggregates]

Agrega, mineral kökenli, belirli boyutlardaki doğal taş ya da ufalanmış kaya(ç) parçalarıdır. Beton üretiminde kullanılan kum, çakıl, kırmataş gibi malzemelerin genel adıdır. Betonun %60-75'ini oluşturur.

Yer kabuğundaki kayaçlardan çok eski yıllardan beri yararlanılmaktadır. Son yıllarda kayaçların **agrega (kırmataş) ve yapı taşı** olarak işletilmesi amacıyla dünyada ayrı bir endüstri gelişmiştir. Dünyanın en zengin doğal taş oluşumlarının bulunduğu Alp-Himalaya kuşağında yer alan Türkiye, çok çeşitli ve büyük miktarda doğal yapıtaşı ve agrega rezervlerine sahiptir. Dünya doğal taş rezervlerinin yaklaşık %40'ına sahip olan Türkiye'nin rezervi yaklaşık 13.9 milyar tondur [1]. Türkiye'nin doğal taş üretimi son yıllarda gelişen sanayisi ve üretimde kullandığı teknoloji ile büyük bir artış göstermiştir. Agreganın türü, mineralojik bileşimi, dokusu gibi önemli jeolojik faktörler; betonun dayanımında, aşınmasında, kimyasal etkilere karşı davranışında ve hacimsel deformasyonunda etkin rol oynamaktadır [2]. Depreme dirençli yerleşimlerin, binaların yapımında betonun dolayısıyla içerisinde yer alan agregaların önemi gittikçe artmaktadır.

Agregayı oluşturan kayacın mineralojik bileşimi, tanelerin dokusal ve yapısal özellikleri, tamamen agreganın fiziksel ve mekanik özelliklerini yansıtır [3].

Bu bölümde kalsiyum karbonat kökenli kayaçlara uygulanan fiziksel ve fiziko-mekanik testler ayrıntılı olarak ele alınmakta ve numune azaltma yöntemlerine değinilmektedir.

1. Fiziksel Testler

[Physical Tests]

Kalsiyum karbonatlı kayaçlara uygulanan belli başlı fiziksel testler şunlardır:

- Özgül ağırlık
- Ağırlıkça su emme
- Birim hacim ağırlık
- Porozite (*gözeneklilik*)
- Sertlik

Şekil 2.32: Rotari (döner) numune bölücü (lab tipi) [72].

Bu cihazda, numune besleme ünitesinin hunisine boşaltılan numune, elektrik motoru tarafından üretilen **titreşim** sayesinde bir kanal boyunca sabit hızda ilerleyerek numune bölme ünitesindeki sabit hızla dönen kavanozların (bazı cihazlarda kapların) içerisine dökülmektedir. Bu yöntemde de bölünen her bir parçanın ağırlığı, numunenin bölünmeden önceki toplam ağırlığının parça sayısına bölünmesiyle elde edilen değerden $\pm 10\%$ 'dan fazla sapma göstermemesi, aksi durumda bölünen parçaların birleştirilmesi ve tekrar bölme işlemine tabi tutulması gerekmektedir [73].

BÖLÜM III.

KIRMA ve ELEME

[Crushing and Screening]

Kırma Teknolojileri ve Kırıcı Seçimi

[Crushing Technology and Crusher Selection]

1. Kırma

[Crushing]

Kırma, büyük katı maddelerin (kayaç, cevher ve mineral gibi) az veya çok sayıda küçük parçalara ayrılması işlemidir.

Boyut küçültme olarak da isimlendirilen bu işlemin mümkün olabilmesi için dıştan uygulanacak bir kuvvetle (*darbe, makaslama, baskı veya kesme gibi*) katı maddeleri bir arada tutan iç kuvvetlerin yenilmesi gerekmektedir.

Yeraltı (underground) ve yerüstü (açık işletme) (open-pit) madencilik faaliyetleri ile açığa çıkarılan/kazanılan kayaç, cevher ve minerallerin kullanım alanına bağlı olarak boyut küçültme işlemine tabi tutulması gerekmektedir. Bu ise genellikle büyük ekipmanları içeren, enerji ve bakım masrafları yüksek bir işlem olmaktadır.

Kırma işlemi sadece hammadde hazırlanması bakımından değil, aynı zamanda *kimya, gıda, seramik, döküm, boya* gibi çeşitli endüstriyel uygulamaların da etkin bir proses aşamasıdır. Bu proses;

- Düşük mekanik verim ve
- Yüksek enerji harcamasına

karşın aynı zamanda **ilk (ön) işlem** adımı/basamağı olarak vazgeçilmezdir [1,2].

Madencilikte cevher hazırlama/zenginleştirme işleminin ilk adımı olan kırma genel olarak dört amaç için yapılır [3]:

- Mineralleri serbest hâle getirmek
(Cevher içindeki kıymetli minerallerin kıymetsizlerden ayrılması) (Ör. *Kompleks bakır cevheri*)
- Yüzey alanını büyütme
(Cevherin tane boyutu küçüldükçe yüzey alanı artmakta bu da kimyasal işlemlerin etkinliğini arttırmaktadır) (Ör. *Altın cevheri*)
- İstenilen tane boyutunda ürün elde etmek
(Ör. *Kalsit minerali*)

Eleme Teknolojileri

[Screening Technologies]

1. Eleme

[Screening]

Eleme; malzemelerin boyutları belirlenmiş bir açıklıktan geçenler ve geç(e)meyenler olarak sınıflandırılmasıdır.

Cevher hazırlamada eleme ana amacı şunlardır [1];

- İri malzemeyi ayırarak kırmak,
- İnce malzemeyi ayırarak gereksiz yere uflanmayı ve enerji sarfiyatını önlemek,
- Cevheri tüketim yerinin teknolojik ihtiyacı olan boyut gruplarına ayırarak (sınıflandırarak) tüketimi kolaylaştırmak veya mümkün kılmak ve
- Ayırma işlemlerinde bir kademe oluşturarak ayırmayı mümkün kılmak.

Eleme işleminin başarılı olabilmesi için;

- Tanelerin birbirlerinden **serbest hâlde olmaları**,
- Sarsıntı, sallantı veya dönme gibi hareketler sonucu birleşerek **topaklanmamaları**,
- Her bir tanenin deliklerle temas etmesi ve burada kontrole tabi tutularak elek altına geçmesi veya **elek üzerinde kalması**,
- Elek altına geçenlerin bir ürün, elek üstünde kalanların **ayrı bir ürün olarak alınabilmesi** gerekir [1].

Tablo 3.5: Bazı elek temizleme toplarına ait performans özellikleri [9].

İndeks	Malzeme		
	NB (kauçuk)	Silikon	Poliüretan (PU)
Sertlik (Shore A)	55 - 85	55 - 85	70 - 85
Çalışma sıcaklığı (°C)	- 25 + 100	0 + 220	- 40 + 120
Yağ direnci	Orta	Orta	İyi
Elastisite	İyi	Orta	Orta
Aşınma direnci	Orta	İyi	İyi

Tablo 3.6’da ülkemizde elek temizleme topu imal eden bazı firmalar gösterilmektedir.

Tablo 3.6: Ülkemizde elek temizleme topu imal eden bazı firmalar [10].

Üretici firma	Ürünler ve özellikleri	Yer
Ada Elek ve Metal San. A.Ş. Karadirek Makina Ltd. Şti.	Elek tıkanmasına karşı kauçuk elek topları, doğal kauçuk, NBR, SPR, EPDM, silikon, poliüretan, aşınmaya karşı yüksek dayanım, 80-180°C arası ısıya dayanımlı, 10-60 mm çaplı	Aydın
Plassan Değirmen Plastik ve Fırça San.	Çeşitli boylarda elek topu	İstanbul
Aspar Kauçuk Plastik Makina	Temizleme topu	Ankara

BÖLÜM IV.

MİKRONİZE ÖĞÜTME

[Mikronized Grinding]

Öğütme ve Değirmenler

[Grinding and Mills]

1. Öğütme

[Milling] [Grinding]

Ufalama (kıırma ve öğütme) (*comminution*) bir malzemenin tane boyutunu düşürmek, istenilen tane boyut dağılımını (*PSD*) sağlamak, istenen tane şeklinde malzeme üretmek, aglomeraları dağıtmak, çözünme kinetiğini artırmak için kullanılan en yaygın yöntemdir.

Katı maddelerin ufalanma karakteristiklerini belirleyen unsurlar ise şunlardır [1]:

- **İçyapılarındaki kuvvetlerin varlığı**
- Kristal yapılarındaki atomların dizilişleri, bunları birlikte tutan **bağlar ve kafes yapısı**
- Mekanik özellikleri (**yapısal kusurlar, çatlak ve yarıklar**)

Bazı cevherlerin ufalama yönünden fiziksel özellikleri Tablo 4.1'de verilmiştir.

Tablo 4.1: Çeşitli endüstriyel hammaddelerin ufalanma yönünden bazı fiziksel özellikleri [1].

Cevher	Özelliđi	Ort. ađırlık (lb/ft ³) *
Barit	Aşırı aşındırıcı, akıcılığı iyi	140-180
Dolomit	Hafif aşındırıcı, biraz gevrek, akıcılığı iyi	90-100
Alçıtaşı (jips kayası)	Hafif aşındırıcı, biraz gevrek, akıcılığı iyi	90-100
Kireçtaşı	Hafif aşındırıcı, biraz gevrek, akıcılığı iyi	90-110
Talk	Az aşındırıcı, biraz gevrek	40-50

* 1 lb/ft³ = 16.02 kg/m³tür.

Tablo 4.3: Farklı bilyalı değirmenlerin karakteristik özellikleri [6].

Değirmen	Bilye hareketi	Soğutma potansiyeli	Ölçek büyütme	Maksimum ivmelenme	Çarpışma frekansı	Stres Enerjisi (SE)
Aktarılan ortam (tambur) bilyalı değirmen	Dönen tambur	Çok zayıf	Çok iyi	$1 \times G$	Düşük	Yüksek
Yörüngesel bilyalı değirmen	Santrifüj alanda dönen tambur	Genellikle çok zayıf	Çok zayıf	$< 150 \times G$	Orta	Çok yüksek
Titreşimli bilyalı değirmen	Titreşen değirmen haznesi	Orta	Orta	$< 30 \times G$	Yüksek	Yüksek
Karıştırmalı bilyalı değirmen	Sabit haznede dönen karıştırıcı	Çok iyi	Çok iyi	$< \text{Bir kaç } 100 \times G$	Çok yüksek	Çok yüksek

Konuyla ilgili daha ayrıntılı bilgi “*Mikronize Öğütme*” kitabında [7] yer almaktadır.

Bilyalı Değirmenler

[Ball Mills]

1. Bilyalı Değirmenler

[Ball Mills]

Cevher hazırlama, ilaç, boya ve çimento gibi geniş bir alanda *boyut küçültme* işlemlerinde kullanılan, **tambur değirmen**, **yatay değirmen**, **aktarılan ortam değirmen** (tumbling ball mill) ve **konvansiyonel (geleneksel, klasik) değirmen** olarak da isimlendirilen **bilyalı değirmenler** aşağıdaki temel özelliklere sahip öğütücü ekipmanlardır:

- *Yatay* pozisyonda yerleştirilir,
- (İç kısmı aşınmayı önleyici plakalarla kaplanmış) **silindirik gövdeden** oluşur,
- Çeşitli düzeneklerle kendi eksenini etrafında dairesel olarak hareket ederken *öğütücü ortam* olarak kullanılan **çelik bilyalar** ile besleme malzemesini çok ince tane boyutlarına indirir.

Bilyalı değirmenler neredeyse yaklaşık 100 yıldan beri uygulanmaktadır. Ancak hâlâ enerji verimi %1-2 civarındadır. Gelişen sensör teknolojileri ile çalışma şartlarının optimize edilmesi ve uygun izleme ile bu değirmenlerin enerji verimliliği %10'lara çıkarılabilme imkânı bulunmaktadır [1].

Bilyalı değirmenlerin genel özellikleri şu şekildedir [2]:

- İkinci kademe ve ince öğütme devrelerinde kullanılır,
- Değirmene beslenen malzeme boyutu **9.5-2.5 mm** arasında ve ürün boyutu ise **600-45 mikron** arasında değişmektedir,
- Bilya şarjı doluluğu değirmen hacminin %35-45'ine denk gelmektedir,
- Bilya doluluk oranı %40'tan çok olduğu durumda, değirmenin besleme girişi geriye taşmayı ve çıkış ağzı ise bilyaların dışarı çıkmasını önleyecek şekilde seçilmelidir.

Karıştırılmalı Bilyalı Değirmenler

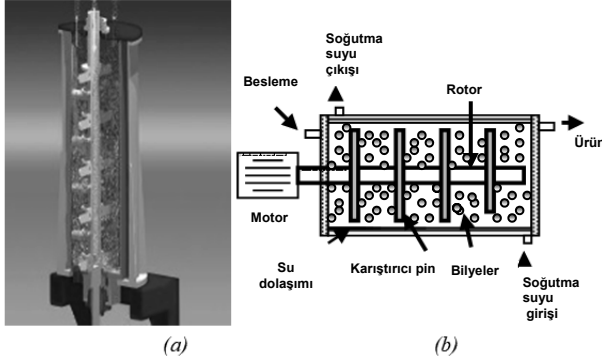

[Stirred Media Mills]

1. Karıştırılmalı Değirmenler

[Agitated Mills]

Karıştırılmalı değirmen, karıştırılmalı ortam değirmen olarak da isimlendirilirler.

Karıştırılmalı bilyalı değirmenler; öğütücü ortam şarjının bir shaft (mil) etrafına monte edilmiş **çubuk (pin), disk veya spiral** vasıtasıyla silindirik bir hazne içerisinde shaftta verilen dönme hareketi ile çalışmakta (Şekil 4.4) ve malzemenin öğütücü ortam ve cevher taneleri arasındaki **sürtünme, aşınma ve darbe** ile ufalanması prensibine dayanmaktadır [1]. Ancak, bilyelerin *serbest düşme* ihtimalleri pek olmadığından darbe etkisi pek oluşmamaktadır.

Şekil 4.4: a) Disk tipi ve b) Pin tipi karıştırılmalı değirmen [4].

Temel tasarımı 1920'lere kadar uzanan (*Klein ve Szegvar-1928*) bu değirmenler, ilk kez 1960'larda kaolinin öğütülmesinde kullanılmıştır [2].

Öğütme Devreleri ve Tesis Örnekleri

[Grinding Circuits and Plant Examples]

1. Öğütme Devreleri

[Grinding Circuits]

Öğütme devreleri iki şekilde olabilir;

- Açık devre
- Kapalı devre

Açık devre malzemenin değirmenden tek seferde geçerek istenen ürünün alındığı devredir ki uygulamada nadiren uygulanır. Zira bu devrede ürünün *PSD*'ni kontrol etmek mümkün değildir.

Kapalı devre ise ürün olarak alınan kısım içerisindeki kaba (iri) malzeme yeniden değirmene (devreden yük) beslenir. Bu sayede *PSD* kontrolü sağlanmış olur. Devreden yük (circulating load) taze besleme malına göre 1-3.5 kat olabilir [1].

Öğütme devresi tasarlanırken aşağıdaki bazı faktörler dikkate alınmalıdır [2]:

- Değirmen boyutu
- Değirmenin gücü, özgül öğütme enerjisi
- Öğütme şartlarının etkisi
- Devreden yük ve seperatör etkinliği

Değirmenin performansını etkileyecek malzeme özelliklerinin de bilinmesi gerekmektedir. Bunlar;

- Özgül ağırlığı
- Yığın yoğunluğu
- Kırılma indeksi
- Besleme boyutu
- Beslemedeki ince malzeme oranı
- İş indeksi (*BWI*)
- Kırılganlık
- Akışkanlık, yapışkanlık vb. [3].

BÖLÜM V.

SEPERASYON

[Seperation]

Seperatörler (Havalı Ayırıcılar)

[Seperators] [Air Classifiers]

1. Sınıflandırma

[Classification]

Sınıflandırma genellikle cevheri *boyutuna göre* gruplandırmak amacı ile uygulanan bir prosestir.

Havalı sınıflandırma (ayırma) ise hava akışı ile taneleri **boyut, şekil ve özgül ağırlık** farkına göre ayırma işlemidir ve kuru olarak gerçekleştirilmektedir. Ayırma işlemi d50 *ayırma* boyutu ile karakterize edilmektedir. d50'nin üzerindeki taneler **iri fraksiyonu**, altındakiler ise **ince fraksiyonu** ifade eder. Ayırmanın performansı elde edilen üründeki her bir fraksiyonun kütle içerikleriyle belirlenir [1].

Havalı sınıflandırma <2 mm'den mikron boyutuna kadar uygulanır.

Beslenen malzeme + Hava \longrightarrow *SEPERATÖR* \longrightarrow *İri malzeme + [İnce malzeme + Hava]*

Havalı ayırıcılar dört farklı amaç için uygulanabilir [1]:

- İri boyutlu malzemeler ile istenilen boyuta öğütülmüş malzemeyi ayırmak,
- Homojen olmayan bir karışımdaki malzemeleri boyutlarına göre sınıflandırmak,
- Belirli boyuta öğütülmüş malzeme içindeki tozu almak ve
- Birbirine yakın boyuttaki malzemeyi ayırmak.

Ayırma işlemi şu aşamaları kapsar:

- Malzeme ve hava karıştırılarak sınıflandırıcıya (seperatör) beslenir.
- Hava-malzeme karışımı seperatörde (yerçekimi, merkezkaç ve sürüklenme kuvveti sayesinde) ayrışır.
- Küçük taneler hava ile sürüklenir (daha sonra ikisi de ayrılır), iri taneler ise ortamdaki uzaklaştırılır [1].

BÖLÜM VI.

KAPLAMA

[Coating]

Yüzey Modifikasyonu

[Surface Modification]

1. Yüzey Modifikasyonu

[Surface Modification]

Ülkemizin önemli endüstriyel minerallerinden olan kalsit (CaCO_3), ucuz dolgu maddesi olarak ve ürünlere çeşitli özellikler kazandırılması amacı ile sanayinin bir birçok alanında yaygın bir şekilde kullanılmaktadır.

Özellikle *kâğıt, plastik, kauçuk ve boya* sanayinde kullanılan bu endüstriyel mineralin bazı fiziksel ve fizikokimyasal özelliklere sahip olması istenmekte ve aşağıdaki üç özellik öne çıkmaktadır:

- Mikronize boyutlara öğütme (*incelik*)
- Hidrofob (*su sevmez*) yapı
- Yüksek beyazlık derecesi

Kalsitin dolgu maddesi olarak kullanılabilmesi için öncelikle mikronize boyutlara öğütülmesi gerekmektedir. Bu süreçle birlikte, d50 oldukça geniş bir aralığı (**1-100 mikron**) kapsamaktadır.

Dolgu (filler) terimi esasında polimer kullanımını azaltmaya müsaade eden ve maliyet azaltıcı malzemelere vurgu yapan bir terimdir. **Fonksiyonel mineral dolgular** (FMD) ise aşağıdaki gibi belirli spesifik özelliklere göre sınıflandırılabilir [1]:

- Alev geciktiriciler
- Mekanik özellikleri modifiye eden dolgular
- Elektrik ve manyetik özelliği modifiye eden dolgular
- Yüzey özelliklerini modifiye eden dolgular

FMD'ler ayrıca, inşaat ve otomotiv sanayinde ısı ve ses yalıtımı için kullanılan kompozit malzemelerde de kullanılır.

Şekil 6.12: Karıştırılmalı bilyalı değirmen [26].

Mekanokimyasal yüzey modifikasyonu ile kalsiyum karbonatın karıştırılmalı bilyalı değirmende kuru ve yaş koşullarda çeşitli modifikasyon çalışmaları yapılmıştır. Söz konusu çalışmalarda dodesil sülfat (DSS) [7], sodyum stearat (SDS) [27-30] ve sodyum oleat [27,31] kullanılmıştır. Wu ve Lu [31] tarafından karıştırılmalı değirmende kalsiyum karbonatın polimer grafting (aşılama) tekniği ile yüzey modifikasyonu kuru olarak gerçekleştirilmiştir. Kimyasal reaktif olarak benzen (C_6H_6), stiren ($C_6H_5C_2H_3$) ve benzil peroksit ($C_{14}H_{10}O_4$) kullanılmıştır. Modifikasyon deneyleri ön öğütme sonrasında gerçekleştirilerek bazı çalışma parametreleri aktive oranı ve dispersiyon oranı kullanılarak optimize edilmiştir.

Endüstriyel Kaplama Sistemleri

[Industrial Coating Systems]

1. Kaplama Sistemleri

[Coating Processes]

Günümüzde mikronize (ince/çok ince) kalsitin kaplanmasında dört farklı değirmen ve sistem kullanılmaktadır:

- **Pinli** değirmen
- **Raymond** (*çekikli veya rotor tipi*) değirmen
- **Turbo** değirmen
- **Karıştırmalı** sistem

Aşağıda bu değirmenler ve kaplama proseslerinden uygulama örnekleri sunulmaktadır.

1.1. Pinli Değirmen

[Pin Mill]

Çivili değirmen olarak da isimlendirilen **pinli değirmen** madencilik endüstrisinde daha çok ince kırma ve/veya kaba öğütme amacıyla kullanılan makinelerdir [1]. Bu değirmene ait görünüm Şekil 6.13'te verilmiştir. Söz konusu değirmenlerde tasarım değişikliğine gidilerek kaplama amaçlı (modifiye) pinli değirmenler üretilmiştir.

Şekil 6.13: Ufalamada kullanılan pinli değirmen [2].

Şekil 6.28: Isıtmalı + karıştırmalı kaplama sistemi [5].

Tank cidarında ısıtma ve tank içi sıcaklığın korunmasını sağlayan yağ ceketi (oil jacket) bulunmaktadır. Mikronize kalsit ve stearik asit (granül) tank içerisine birlikte besleme yapılmakta, karışım belirli sürelerde ve hızlarda karıştırılarak kaplama işlemine tabi tutulmaktadır.

Karıştırma tankları alternatif hızlarda döndürülebilirken karıştırma düzenekleri farklı yapıda (*pervane, kanat, vb.*) imal edilebilmektedir. Bu sistemler genellikle kesikli (batch) olarak çalıştırılmaktadır.

Bu sistemin en önemli dezavantajı;

- Kesikli çalışması ve
- Kapasitesinin düşüklüğü

gösterilirken

- Kompakt-basit yapıda olması,
- İlk yatırım-işletme maliyetinin düşüklüğü ve
- Yerli üretiminin yapılabilmesi

avantajları olarak kabul edilmektedir [23].

Kaplı Kalsitin Plastikte Kullanımı

[Coated Calcite Usage in Plastic]

1. Plastik

[Plastic]

Maddenin en küçük yapı taşı olan atomların bir zincirin halkaları gibi birbirine bağlanarak oluşturduğu büyük molekül yapılı *sentetik* maddelere plastik adı verilir.

Plastiğin en küçük yapı taşını oluşturan bu tür büyük moleküllere de “makro molekül” denilmektedir. Her atom birleşme değeri ile yanındaki atoma bağlanır. Bu yapı, bir zincire benzetilebilir.

Plastik terimi genelde sanayide kullanılan bir terimdir, bilimsel olarak **polimer** ile aynı anlama gelir. Birçok plastik, esas yapıyı oluşturan *reçine* ile belirtilir. Bunlar saf polimerlerdir. Reçineler doğrudan son ürün üretiminde kullanılabilirdiği gibi, son üründe istenen bazı özelliklere bağlı olarak bünyesine birçok katkı maddeleri katılarak da işlenebilir [1].

Polimer en basit tanımıyla çok sayıda aynı ya da farklı grupların kimyasal bağlarla az veya çok düzenli bir biçimde bağlanarak oluşturduğu uzun zincirli yani **yüksek molekül ağırlıklı bileşikler**dir. Polimer çok sayıda monomerin bir araya gelerek bağlanması ile oluşan büyük moleküllerdir. Monomer birimleri **polimerleşme** (polimerization) reaksiyonları ile birbirine bağlanarak polimer molekülüne dönüşürler. Bir polimer molekülünde onlarca, yüzlerce hatta binlerce monomer birimi bulunabilir (Şekil 6.29).

Şekil 6.29: Monomer molekülleri polimerizasyon reaksiyonu ile birbirine bağlanması [2].

Plastik = Polimer + Katkı maddeleri

BÖLÜM VII.

PAKETLEME ve İSG

[Packaging and OHS]

Paketleme İşlemleri ve İş Güvenliği

[Packaging Processes and Work Safety]

1. Maden Paketleme İşçisi (Kalsit)

[Mine Packaging Worker (Calcite)]

Paketleme; endüstriyel ürünleri satış/pazarlamaya uygun boyutlarda *kâğıt, karton, plastik, cam veya metalden* yapılmış kapların içine yerleştirerek pazara sürülebilir hâle getirme işlemidir [1].

Bu bölümde aşağıdaki paketleme çeşitlerinden bahsedilecektir:

- Kâğıt (Kraft) torba
- PP (Polipropilen) torba
- Big-Bag
- Sling-Bag
- Palet

Maden paketleme işçisi şunları kapsamaktadır [2]:

- Meslek Ana Grubu: Sanatkârlar ve ilgili işlerde çalışanlar
- Meslek Alt Ana Grubu: Maden çıkarımı ve inşaatla ilgili işlerde çalışan sanatkârlar
- Meslek Grubu: Madenciler, Ateşleyiciler, Taş Kesiciler ve Oymacılar
- Meslek Birim Grubu: Madenciler ve taşocağı çalışanları
- Gereken Minimum Eğitim Düzeyi: Okuryazar
- Meslek Tanımı: Kalsit madenini paketleme makinesinde paketleyen ve istifleyen kişidir

Görev ve İşlem Basamakları:

Maden Paketleme İşçisi (Kalsit), işletmenin genel çalışma prensipleri doğrultusunda, araç, gereç ve ekipmanları etkin bir şekilde kullanarak **işçi sağlığı, iş güvenliği ve çevre koruma** düzenlemelerine ve mesleğin verimlilik ve kalite gereklerine uygun olarak aşağıdaki görevlerden sorumludur [2]:

BÖLÜM VIII.

MİKRONİZE KALSİTİN ÖZELLİKLERİ, KULLANIM ALANLARI VE ÜRÜN STANDARTLARI

[Properties of Micronized Calcite,
Usage Areas and Product Standards]

Mikronize Kalsitin Özellikleri ve Kullanım Alanları

[Properties of Micronized Calcite
and Usage Areas]

1. Mikronize Kalsitin Özellikleri

[Properties of Micronized Calcite]

Ocaklarda açık işletme metodu ile üretilen ve tesiste;

Kırma \implies Eleme \implies Öğütme \implies Boyuta göre sınıflandırma

sonrası mikron boyutlarında (*1, 3, 5, 10, 50 ve 100 mikron gibi*) “**toz ürün**” olarak elde edilen mikronize kalsitin başlıca kullanım alanları şu şekildedir:

- Boya
- Plastik
- Kâğıt
- İnşaat/seramik
- Diğer (*Tarım, gıda, kozmetik, ilaç vb.*)

Pigment pazarına bakıldığında kalsiyum karbonat ile birlikte kaolin, talk ve titanyum dioksit gibi mineraller de talep görmektedir. Öncelikle ucuz oluşu, yüksek oranda CaCO_3 içermesi ve yüksek beyazlığa sahip oluşu sebebiyle CaCO_3 kökenli kayalar çok daha yaygın bir şekilde kullanılmaktadır [1].

Mikronize kalsitin özellikleri genel olarak aşağıda sıralandığı şekliyle karakterize edilebilmektedir [2]:

- Ağır metalleri içermemesi ve yüksek kimyasal saflığa sahip olması sayesinde polimer yaşlanmasına sebep olacak herhangi bir katalitik etkiyi ortadan kaldırır.
- Yüksek beyazlık derecesi ile pahalı beyaz pigmentlerden (örneğin TiO_2) tasarruf sağlar.

Kalsit ve Nanoteknoloji

[Calcite and Nanotechnology]

1. Nanoteknoloji

[Nanotechnology]

Nano terimi cüce anlamındaki “**nanos**”tan gelir, teknik alanda bir şeyin bir milyarda biri anlamındadır. Temel olarak nanometre, diğer ölçüm skalaları gibi bir ölçüm skalasıdır. Bir nanometre, bir metreden bir milyar kere küçüktür. Bir nanometre aşağı yukarı orta boyutta bir molekülün, örneğin 60 karbon atomu içeren bir molekülün boyutundadır.

Yaklaşık olarak **50 nm**'nin altındaki boyutlarda bir madde söz konusu olduğunda *kuantum fiziği* kanunları geleneksel fizik kurallarının yerini alır. Bunlar bir maddenin iletkenliğinde, elastisitesinde, reaktifliğinde, sertliğinde, renginde ve sıcaklıkla, basınca olan dayanıklılığında değişimlere neden olurlar.

Nanoteknoloji yaşantımızı kolaylaştırıp güzelleştirirken madencilik sektörüne de birçok fırsat sunmaktadır. Nanoteknoloji ile hammadde ton fiyatı 10-15 \$ olan ham parça kalsiti nano boyutlara indirerek 400 \$'dan daha pahalı ürünlere dönüştürmek mümkündür [1].

2. Nanoteknolojiye Uzanan Süreç

[The Process Extending to Nanotechnology]

Nanoteknolojiye uzanan sürecin 20. yüzyılın başlarında maddeyi oluşturan parçacıklardan örneğin elektronların, hem parçacık hem de dalga gibi davrandığının, yine bu ölçeklerde belirsizlik kuramının geçerli olduğunun saptanmasına kadar gittiği söylenebilir. Bu temel öğelerden doğan kuantum mekaniği sayesinde atom ve moleküller doğru olarak algılanıp anlaşılabilir, temel bilimler ve ilgili teknolojiler hızla gelişmiştir. Özellikle *silisyum* teknolojisi önem kazanmış ve mikroelektronik sanayi hızla gelişmiştir.

Kalsit Test, Analiz ve Ürün Standartları

[Calcite Test, Analyzes and Product Standards]

1. Test ve Analizler

[Test and Analyzes]

Kaplama öncesi (mikronize) veya sonrasında elde edilen nihai ürün üzerinde çeşitli test ve analizler gerçekleştirilmektedir.

Farklı sektörler açısından mikronize kalsite uygulanan mineralojik-fiziksel-kimyasal-termal testler Tablo 8.17’de toplu bir şekilde verilmiştir.

Tablo 8.17: Farklı sektörler açısından mikronize kalsite uygulanan testler [1].

Analiz	Amaç
Kimyasal analiz (XRF)	Kalsit örneğinin içerik analiz değerlerinin (CaO, SiO ₂ , MgO, Fe ₂ O ₃ , Al ₂ O ₃ , Na ₂ O, K ₂ O, SO ₃) belirlenmesi
Kayaç yapısı (XRD)	Kayaç yapısında kalsit, tebeşir, kalker veya aragonit olup olmadığı ve diğer mineralleri içerip içermediğinin tespit edilmesi
Mineraloji (Polarize mikroskop)	Minerallerin kristal yapısı, rekristalisasyonu ve büyüklüğü, kristallerin dilinimli olup olmaması, mineral dağılımının homojen veya heterojen olması ve eser oranda bulunan diğer minerallerin belirlenmesi
Termal Gravimetrik Analiz (TGA) ve Diferansiyel Termal Analiz (DTA)	Malzeme bünyesinde meydana gelen ağırlık değişimleri (su kaybı, organik madde uzaklaşması gibi) belirlemede TGA, ekzotermik ya da endotermik reaksiyonlar sonucu meydana gelen sıcaklık değişimleri DTA cihazı ile tespit edilmesi
Morfoloji (SEM)	Çok ince öğütme sonrası kalsitin ufalanma şekilleri (kübik, çubuksu, pulsu vb.) farklılığının ortaya konması ve öğütme sonrasında yüzey pürüzlülüğü oluşumu ve mekano-kimyasal etki ile kristal yapısında dönüşümün olup olmadığının belirlenmesi
Öğütülebilirlik	Öğütme maliyetleri açısından Bond İş İndeksi (W_i) ve Bond öğütülebilirlik (G_{bg}) ile Hardgrove öğütülebilirlik (HGI) değerlerinin belirlenmesi

İÇİNDEKİLER

ÖN SÖZ.....	vii
GİRİŞ	ix

1. BÖLÜM

KEMAN, İNSAN VE BEDEN FARKINDALIĞI.....	1
Doğallık ve Müdahalesizlik İlkesi	4
Doğal Durumda Kollar, Eller ve Parmaklar	7
Sol Eli Güçlendirmek İçin Bazı Egzersiz Önerileri	12
Duruş ve Oturuş (Postür)	16
Doğal Durumda Boyun ve Baş	20

2. BÖLÜM

YOGA NEDİR?	23
Yoganın Kökenleri.....	23
Yoganın Amacı ve Faydaları	24
Yoga Türleri.....	25
Hatha Yoga	26
Menuhin'in Yoga Uygulamaları	26

3. BÖLÜM

ASANALAR.....	31
Keman Çalmaya Hazırlık İçin Temel Oturuş ve Esneme	32
Sukhasana	32
Siddhasana	33
Padmasana	34
Baddha Konasana.....	35
Sukhasana (Boyun Esnetme)	36
Parshva Sukhasana.....	37
Parivritta Sukhasana.....	38
Marjaryasana/Bitilasana (Kedi/İnek)	39
Dört Ayak Üzerinde Denge ve Esneme	41
Eka Hasta Eka Pada Bitilasana	41
Vyaghrasana (Kaplan Duruşu).....	42
Ashva Sanchalanasana (Binici Pozu).....	43
Anjaneyasana (Hilal Pozu).....	44

Bhujangasana (Kobra Pozu).....	45
Ardha Shalabhasana.....	46
Adho Mukha Svanasana (Aşağı Bakan Köpek).....	47
Ayakta Denge ve Postür.....	48
Tadasana (Dağ Duruşu).....	48
Urdhva Hastasana.....	49
Indudalasana (Hilal Pozu).....	50
Eka Hasta Parshvasana.....	51
Baddha Hasta Tadasana.....	52
Tadasana Paschima Namaskarasana.....	53
Gomukhasana.....	53
Vrikshasana Namaskar (Ağaç Duruşu).....	55
Garudasana (Kartal Pozu).....	56
Natarajasana.....	57
Utkatasana (Sandalye Pozu).....	58
Parivritta Utkatasana.....	59
Utthita Hasta Ardha Uttanasana.....	60
Uttanasana.....	61
Baddha Hasta Uttanasana.....	62
Kalyasana.....	63
Malasana (Çömelme).....	64
Omurga Farkındalığı.....	65
Dandasana.....	65
Janu Sirsasana.....	66
Paschimottanasana.....	67
Navasana/Ardha Navasana.....	68
Setu Bandha Sarvangasana (Köprü Pozu).....	69
Dinlenme.....	70
Ananda Balasana (Mutlu Bebek Pozu).....	70
Balasana.....	71
Shavasana (Ceset Duruşu).....	72

4. BÖLÜM

NEFES.....	75
Nefes Teknikleri.....	77
Diyafraam Nefesi.....	77
Dönüşümlü Burun Nefesi (Nadi Sodhana).....	79
Okyanus Nefesi (Ujjayi Pranayama).....	80
4-7-8 Nefes Tekniği.....	81
Dengeli Nefes (Sama Vritti).....	81

5. BÖLÜM

MEDİTASYON	83
Duvar Meditasyonu.....	86
Beden Tarama Meditasyonu	87
Dinamik Meditasyon.....	88

6. BÖLÜM

MUDRALAR	91
Anjali Mudra.....	94
Lotus Mudra.....	99
Chin Mudra	100
Akasha Mudra.....	100
Pritvihi Mudra.....	101
Varuna Mudra	102

7. BÖLÜM

İLGİLİ ARAŞTIRMALAR.....	103
SON SÖZ.....	109
ÖZ GEÇMİŞ.....	111
KAYNAKLAR.....	113
DİZİN	121

Yazar Hakkında v

Ön Söz vii

1.

Makine Mühendisliği Tasarımı 1

- 1.1. Kavramlar 1
- 1.2. Konstrüktör ve konstrüksiyon departmanı 9

2.

Yaratıcı Fikirler Geliştirme Yöntemleri 15

- 2.1. Yaratıcı düşünce geliştirmede insanlık mirasının etkisi, literatür araştırması yapma 15
- 2.2. Yaratıcı fikirler geliştirmede insanın düşünce gücünün katkısı 19
- 2.3. Benzetim yöntemleri 21
 - 2.3.1. Doğal sistemlerin analizi yöntemi 21
 - 2.3.2. Mevcut teknik sistemlerin analizi yöntemi 23
 - 2.3.3. Benzerlik (Analoji) yöntemi 24
- 2.4. Sezgisel yöntemler 24
 - 2.4.1. Beyin fırtınası 24
 - 2.4.2. 635 Yöntemi 27
 - 2.4.3. Sineklik Yöntemi 28
 - 2.4.4. Delfi yöntemi 31
 - 2.4.5. Galeri Yöntemi 31
 - 2.4.6. Yöntemlerin birleştirilmesi 33
- 2.5. Mantıksal yöntemler 33
 - 2.5.1. Fiziksel ilişkilerin sistematik incelemesi 33
 - 2.5.2. Tasarım katalogları kullanma 34

2.5.3. TRIZ yöntemi.....	36
--------------------------	----

3.

Yeni Ürün Geliştirme..... 85

3.1. Bir ürünün yenilik derecesi.....	88
3.2. Ürün yaşam döngüsü	90

4.

Mühendislik Faaliyetlerinde ve Tasarımda Kullanılan Yöntemler 93

4.1. Mühendislik yöntemleri.....	93
4.1.1. Geleneksel yöntem	94
4.1.2. Çevik mühendislik yöntemi.....	97
4.1.3. Tasarım odaklı düşünme yöntemi	101
4.1.4. Tersine mühendislik yöntemi	102
4.1.5. Eş zamanlı mühendislik yöntemi.....	106
4.2. Tasarım yöntemleri.....	108
4.2.1. Geleneksel tasarım	109
4.2.2. Algoritmik tasarım	110
4.2.3. Aksiyomatik Tasarım	114

5.

Sistematik Tasarım..... 121

6.

Kavramsal Tasarım 123

6.1. Tasarım görevinin netleştirilmesi ve tasarım şartnamesi oluşturma	124
6.2. Kavramsal tasarım alternatiflerini geliştirme.....	130
6.2.1. Fonksiyon yapısı oluşturma.....	130
6.2.2. Seçim tabloları hazırlama ve konsept tasarım için çözüm alternatiflerini belirleme	136
6.3. Kavramsal tasarımı belirleme	144

7.

Şekillendirme Tasarımı 151

7.1. Ürünün tasarım şeklini geliştirme.....	153
7.1.1. Ürün yapısının fonksiyona göre şekillendirilmesi.....	157
7.1.2. Estetik ürün yapısı oluşturma.....	161
7.2. Şekillendirme tasarımının temel kuralları.....	165
7.2.1. Açıklık kuralı.....	166
7.2.2. Basitlik kuralı.....	172
7.2.3. Emniyet kuralı.....	177
7.3. Şekillendirme tasarımının ilkeleri.....	186
7.3.1. Kuvvet aktarma ilkesi.....	187
7.3.2. Görevlerin ayrılığı ilkesi.....	197
7.3.3. Kendine yardım ilkesi.....	199
7.3.4. Kararlılık İlkesi.....	202

8.

Konstrüksiyonda Malzeme Seçimi 205

8.1. Teknik malzemelerin genel tanıtımı.....	205
8.2. Teknik malzemelerin özellikleri.....	219
8.3. Bilgisayar ortamında malzeme seçimi prosesi.....	237
8.3.1. Malzeme seçimi indekslerinin bulunması.....	238

9.

Teknik Resimler ve Tolerans Analizleri..... 257

9.1. Teknik resimler.....	257
9.2. Ölçü toleransları.....	262
9.2.1. Tolerans tasarımı.....	262
9.2.2. Tolerans kaliteleri ve tolerans cetvelleri.....	263
9.2.3. Alıştırılmalar.....	267
9.2.4. Temel tolerans analizi teknikleri.....	271
9.2.5. Boyut toleranslarının tasarımın farklı yönleri ile ilişkisi.....	278
9.2.6. Tolerans sentezi.....	284
9.2.7. Toleransların gerçekleşmesi ve kontrolü.....	284
9.3. Geometrik toleranslar.....	285
9.3.1. Şekil ve konum toleransları için tanımlar.....	286

9.3.2.	Form toleransları	291
9.3.3.	Profil toleransları.....	296
9.3.4.	Yön toleransları.....	297
9.3.5.	Konum toleransları.....	300
9.3.6.	Salgı (yalpa) toleransları	303
9.3.7.	Geometrik tolerans örnekleri.....	305
9.3.8.	Geometrik toleranslar için tolerans yığılması analizi	307
9.4.	Yüzey kalite toleransları	312
9.4.1.	Yüzey kalitesinin temel parametreleri ve kullanım alanları	312
9.4.2.	Yüzey kalitesi sembolleri	320
9.4.3.	Yüzey kalite toleranslarını ölçme araçları	325

10.

İmalata Uygun Tasarım	329
10.1. İmal usullerinin seçimi	330
10.2. Döküm yöntemine uygun tasarım.....	341
10.3. Döküm sonrası ısıl işlemler	346
10.4. Döküm sonrası test ve kontroller.....	347
10.5. Döküme uygun tasarım, uygulamalar	348
10.6. Kaynak yöntemine uygun tasarım	358
10.6.1. Çelik malzemelerin kaynak kabiliyetleri.....	362
10.6.2. Kaynağa uygun tasarım.....	363
10.6.3. Teknik çizimlerde kaynak dikişlerinin standarda uygun olarak gösterilmesi	370
Kaynaklar	373

1.8. Devre Çözüm Teknikleri	12
1.8.1. Düğüm Gerilimleri Yöntemi	12
1.8.2. Çevre Akımları Yöntemi.....	14
1.8.3. Kaynak Dönüşümü Yöntemi.....	16
1.9. Thevenin ve Norton Eş Değer Devreleri	19
1.10. Maksimum Güç Aktarımı.....	26

Bölüm 2

Yarı İletkenler	29
Giriş	30
2.1. Enerji Bantları	30
2.2. Saf Yarı İletkenler	32
2.3. Katkılı Yarı İletkenler.....	33
2.3.1. n Tipi Yarı İletken.....	33
2.3.2. p Tipi Yarı İletken.....	34
2.4. p-n Eklemi, Diyotlar	36
2.4.1. p-n Ekleminin Enerji Seviyesi	36
2.4.2. Gerilim Uygulanmadığı Durum	38
2.4.3. Gerilim Uygulandığı Durum	40
2.4.4. Gerilim-Akım Grafiği	41
2.5. Metal/Yarı İletken Yapılar, Schottky Diyotlar	44
2.6. Zener Diyot.....	46
2.7. Foto Diyot	47
2.8. Işık Yayan Diyot-Light Emitting Diode (LED).....	48
2.9. Güneş Hücreleri.....	49
2.10. Akım Çeşitleri	49

Bölüm 3

Diyot Devreleri.....	51
Giriş	52
3.1. Doğrultucu Devreler	52
3.1.1. Yarım Dalga Doğrultucu Devreler.....	52
3.1.2. Tam Dalga Doğrultucu Devreler.....	54
3.2. Kırpıcı Devreler.....	58
3.3. Kenetleme Devreleri.....	68
3.4. Zener Diyotlu Devreler.....	74

Bölüm 4

Bipolar Jonksiyonlu Tranzistör	87
4.1. BJT Yapısı.....	88
4.2. BJT Karakteristikleri	90
4.3. Early Olayı	91
4.4. BJT DC Analizi	92
4.4.1. Sabit Kutuplamalı Devre.....	92
4.4.2. Sabit Kutuplamalı Emetör Dirençli Devre	96
4.4.3. Baz Bölücü Devre	98

4.4.4. Geri Beslemeli Devre.....	103
4.5. BJT Küçük Sinyal Analizi.....	110
4.6. Kuvvetlendirici Devrelerin Küçük Sinyal Analizi.....	111
4.6.1. Sabit Kutuplamalı Devre.....	114
4.6.2. Sabit Kutuplamalı Emetör Dirençli Devre.....	118
4.6.3. Baz Bölücü Devre.....	122
4.6.4. Geri Beslemeli Devre.....	126
4.6.5. Emetör İzleyici Devre.....	130

Bölüm 5

MOSFET.....	155
5.1. MOS Tranzistör Yapısı.....	156
5.2. MOS Karakteristikleri.....	159
5.3. İkincil Etkiler.....	162
5.3.1. Gövde Etkisi.....	162
5.3.2. Kanal Boyu Modülasyonu (Kanal Kısılması).....	163
5.3.3. Kısa Kanal Etkisi.....	164
5.3.4. Sıcak Taşıyıcı (Hot Carrier) Etkisi.....	164
5.3.5. Sıcaklık Etkisi.....	165
5.4. CMOS Yapısı.....	165
5.5. MOS DC Analizi.....	166
5.5.1. Ortak Source'lu Devreler.....	167
5.5.2. Ortak Gate'li Devreler.....	172
5.5.3. Ortak Drain'li Devreler.....	173
5.6. MOS Küçük Sinyal Analizi.....	174
5.7. Kuvvetlendirici Devrelerin Küçük Sinyal Analizi.....	175
5.7.1. Ortak Source'lu Devreler.....	175
5.7.2. Ortak Gate'li Devreler.....	180
5.7.3. Ortak Drain'li Devreler.....	184
5.8. Yeni Nesil Tranzistörler.....	206
5.8.1. Floating Gate MOS (FGMOS).....	206
5.8.2. Dynamic Threshold MOS (DTMOS).....	208
5.8.3. FinFET.....	209
5.8.4. High Electron Mobility Transistor (HEMT).....	210
5.8.5. Organic FET (OFET).....	211
5.8.6. Carbon Nanotube FET (CNFET).....	212
5.8.7. SpinFET.....	213

Bölüm 6

Fark Kuvvetlendiricileri	215
Giriş	216
6.1. BJT Fark Kuvvetlendirici Yapısı	216
6.2. MOS Fark Kuvvetlendirici Yapısı	221
6.3. Ortak İşareti Bastırma Oranı-Common Mode Rejection Ratio (CMRR)	227
6.3.1. R_C Direncinin Eşitsizliği	227
6.3.2. Akım Kaynağının İdeal Olmaması	229

Bölüm 7

İşlemsel Kuvvetlendiriciler	239
Giriş	240
7.1. Tampon (Buffer) Devresi	243
7.2. Eviren (Inverting) Yükselteç Devresi	243
7.3. Evirmeyen (Non-Inverting) Yükselteç Devresi	245
7.4. Toplama Devresi	245
7.5. Çıkarma Devresi	247
7.6. İntegral Alıcı Devre	248
7.7. Türev Alıcı Devre	249
7.8. Logaritma Alıcı Devre	250
7.9. Üs Alıcı Devre	251
7.10. Schmitt Tetikleyici Devreleri	251
7.10.1. Eviren Schmitt Tetikleyici Devre	251
7.10.2. Evirmeyen Schmitt Tetikleyici Devre	254

Bölüm 8

OTA	271
Giriş	272
8.1. OTA Yapıları	273
8.1.1. Basit OTA	273
8.1.2. Simetrik OTA	274
8.2. Tampon (Buffer) Devresi	275
8.3. Eviren (Inverting) Yükselteç Devresi	276
8.4. Evirmeyen (Non-Inverting) Yükselteç Devresi	277
8.5. Toplama Devresi	278
8.6. Çıkarma Devresi	278
8.7. İntegral Alıcı Devre	279
8.8. Türev Alıcı Devre	279
8.9. Alçak Geçiren Filtre	281

8.10. Yüksek Geçiren Filtre.....	282
8.11. Bant Geçiren Filtre	283
8.12. Bant Durduran Filtre.....	284
8.13. Direnç Yapıları	285
8.13.1. Topraklı Pozitif Direnç	285
8.13.2. Topraklı Negatif Direnç	286
8.13.3. Yüzen Uçlu (Floating) Pozitif Direnç	287
8.13.4. Yüzen Uçlu (Floating) Negatif Direnç.....	287
8.14. İndüktans Yapıları	288
8.14.1. Topraklı Pozitif İndüktans	288
8.14.2. Yüzen Uçlu (Floating) Pozitif İndüktans	289
8.14.3. Yüzen Uçlu (Floating) Negatif İndüktans	290
8.15. Jirator.....	292

Bölüm 9

Akım ve Gerilim Kaynakları.....	293
Giriş.....	294
9.1. Akım Aynaları.....	294
9.1.1. Basit Akım Aynası.....	294
9.1.2. Wilson Akım Aynası.....	296
9.1.3. İyileştirilmiş Wilson Akım Aynası	297
9.1.4. Kaskot Akım Aynası.....	298
9.2. Referans Akım Üreteçleri.....	298
9.2.1. Basit Akım Referansı	299
9.2.2. Kendinden Kutuplamalı Akım Referansı.....	299
9.2.3. V_{BE} Akım Referansı	302
9.3. Referans Gerilim Üreteçleri.....	303
9.3.1. Gerilim Bölücü Referansı	303
9.3.2. Diyot Bağlı MOS Tranzistör Referansı.....	305
9.3.3. Zener Diyot Referansı.....	307
9.3.4. Band Aralığı Referansı.....	307
9.3.5. Kendinden Kutuplamalı Gerilim Referansı.....	311
9.3.6. V_{GS} Gerilim Referansı.....	311

Bölüm 10

Frekans Cevabı.....	313
Giriş.....	314
10.1. Desibel Kavramı.....	315
10.2. Kutup ve Sıfır Kavramı	316

10.3. Basit RC Devresi	331
10.4. Düşük Frekans Cevabı.....	332
10.4.1. BJT Tabanlı Yükselteç Devresi	332
10.4.2. MOS Tabanlı Yükselteç Devresi	341
10.5. Yüksek Frekans Cevabı.....	344
10.5.1. BJT'nin Yüksek Frekans Eş değeri.....	344
10.5.2. MOS Tranzistörün Yüksek Frekans Eş değeri.....	345
10.5.3. Miller Teoremi	345

Bölüm 11

Geri Besleme	357
Giriş.....	358
11.1. Geri Besleme Kavramı	358
11.1.1. Giriş Sinyaline Daha Az Bağlılık.....	359
11.1.2. Yüksek Giriş Empedansı.....	360
11.1.3. Düşük Çıkış Empedansı	360
11.1.4. Daha İyi Frekans Cevabı.....	361
11.1.5. Daha Fazla Lineerlik.....	362
11.1.6. Daha Az Gürültü	363
11.2. Temel Geri Besleme Yapıları	363
11.2.1. Gerilim Yükseltici (Seri Gerilim).....	363
11.2.2. Akım Yükseltici (Paralel Akım).....	369
11.2.3. Geçiş Direnci (Transrezistance) Yükseltici (Paralel Gerilim).....	375
11.2.4. Geçiş İletkenliği (Transconductance) Yükseltici (Seri Akım).....	380

Bölüm 12

Osilatörler	403
Giriş.....	404
12.1. Rezonans Devreleri	405
12.1.1. Seri LC Rezonans Devresi	405
12.1.2. Paralel LC Rezonans Devresi.....	406
12.1.3. Seri RLC Rezonans Devresi.....	407
12.1.4. Paralel RLC Rezonans Devresi	408
12.2. Osilatör çeşitleri.....	409
12.2.1. Sinüzoidal Osilatörler	409
12.2.1.1. RC Geri Beslemeli Osilatörler	409
12.2.1.2. LC Geri Beslemeli Osilatörler.....	415
12.2.3. Kristal Osilatörler.....	421

MİKROMOBİLİTENİN TARİHİ

Selim Dündar

25 km/sa'ın altındaki hızlarla gidebilen, küçük boyutlu ve bireysel araçların kullanıldığı ulaşım sistemleri olarak tanımlanan mikromobilitenin tarihi açıdan değerlendirilmesi aslında oldukça karmaşık bir konudur. Bunun temel nedeni mikro yani küçük boyutlu olarak tanımlanabilecek hareketliliğin gerçekte ne zaman başladığını ya da mikro olmayan hareketlilikten hangi noktada ayrıldığını net olarak belirleyebilmenin zorluğudur. Bu nedenle ulaşım sisteminin tarihsel gelişimi ile birlikte incelenmesi daha faydalı olacaktır.

2.1. Ulaşım Sisteminin Kısa Tarihsel Gelişimi

Bilinen insanlık tarihi göz önüne alındığında, insanlar paleolitik çağda dünyanın farklı noktalarında topluluklar hâlinde organize olmaya başlamışlar ve özellikle içme suyu kaynaklarına yakın olan bölgelerde barınmaya başlamıştır. Barınma ihtiyaçları için ağaç kovukları, mağaralar gibi dış etkilerden korunaklı yerleri tercih eden topluluklar, su ya da yiyecek ihtiyaçları için hareket etmek zorunda kalmıştır. İlk başta bu hareketlerini yürüyerek gerçekleştirirken, binek hayvanlarının evcilleştirilmesiyle bu hayvanların daha yüksek güç ve hız gibi üstünlüklerinden faydalanmaya başlamışlardır. Yine bu dönemde farklı özellikteki taşları birbirine vurarak ya da sürterek sivrileştirilen insanlar, avlanmak için kullanılan silahların ilkel biçimlerini ortaya koymuştur. Neolitik çağa gelindiğinde obsidiyen ve çakmaktaşı gibi maddelerin kullanımıyla avcılık olanakları artarak, besin kaynakları çeşitlenmeye başlamıştır. Tunç çağına ulaşıldığında ise daha sağlam ve dayanıklı silahlar oluşturulmaya başlanmış ve daha büyük boyuttaki hayvanların avlanması kolaylaşmıştır. Büyük boyuttaki hayvanların avlanması, av etlerinin barınma merkezlerine taşınması sorununu da ortaya çıkarmıştır. Önceleri avlarını tamamen iterek ya da çekerek barındıkları yerlere taşıyan insanlar, ulaşım alanındaki belki

Her ne kadar düşük düzeyde de olsa ülkemizde bireysel e-skuter kullanımı bulunmakta idiye de, Türkiye'nin e-skuterlerle gerçek anlamda tanışması 2018 yılında ilk paylaşımlı e-skuter firmasının piyasaya girmesiyle oldu. 2020'nin mart ayında Çin'in Wuhan eyaletinde başlayıp, tüm dünyaya yayılan COVID-19 salgınının etkileriyle insanların toplu taşımadan uzaklaşması, bireysel ulaşım türlerine olan talebin artmasına neden oldu. Bu sayede e-skuterlerin kullanımına olan talep de gün geçtikçe artmaya başladı. Bunun üzerine e-skuterlerin trafikte işletilmesine ilişkin yasal düzenlemelere ihtiyaç duyulmaya başladı. Gerek ülkemizde, gerekse de diğer ülkelerde e-skuterlere ilişkin yasal düzenlemeler kitabımızın 14. Bölümünde detaylı bir biçimde incelenmektedir.

3. BÖLÜM

MİKROMOBİLİTE ARAÇLARI

Selim Dündar, Tanzer Kantık

Mikromobilite temel olarak 25 km/sa'ın altındaki hızlarda işletilen, boyutu küçük olan ve genellikle elde taşınabilen, kısa mesafelerde bireysel ulaşım amaçlı kullanılan sistemlere verilen isimdir. Mikromobilite kavramı çoğunlukla bisiklet, e-bisiklet, e-skuter gibi popüler olmuş ulaşım sistemlerini çağrıştırmaktadır. Buna karşın, gerek ülkemizde gerekse yurt dışında kullanılan bu tanıma uygun farklı araç tipleri de bulunmaktadır. Bununla birlikte az önce belirttiğimiz tanıma tam olarak uymasa da yine de mikromobilite sistemi olarak değerlendirilen farklı araç tipleri de mevcuttur. Bu bölüm kapsamında kısaca bu araçlara değinilecektir.

3.1. Mikromobilite Araç Türleri

3.1.1. Bisiklet

Bisiklet aslında tarihi olarak ilk ortaya çıkan mikromobilite aracıdır. Ancak mikromobilite kavramının ortaya çıkması bisikletin ortaya çıkmasından çok daha geçtir. Dağ bisikleti, BMX, yarış bisikleti gibi farklı türleri bulunan bisikletin tarihine kitabımızın 2. bölümünde detaylı bir biçimde değinildiğinden bu bölümde detaylara girilmeyecektir. Kendine özgü bir yol üzerinde hareket etmekte olan bir bisiklet Şekil 3.1'de görülmektedir.

derece popüler hâle gelmişler ve pek çok büyük şehirde paylaşımlı olarak kullanıma sunulmuşlardır.

2. **Elektrikli Bisikletler:** Elektrikli bisikletler, geleneksel bisikletlere benzer ancak elektrik motoru tarafından desteklenirler. Pedal çevrildiği esnada elektrik motorunun devreye girmesi prensibi ile çalışır. Elektrik desteği 25 km/sa'e geldiğinde otomatik kesilir. Şehir içi ulaşım için hem eğlenceli hem de pratik bir seçenektir.
3. **Elektrikli Mopedler:** Elektrikli mopedler, biraz daha büyük elektrikli araçlardır ve skuterlerle bisikletlerin bir kombinasyonudur. Bir koltuğa ve daha büyük pile sahiptirler, bu sayede daha rahat ve daha uzun mesafeli bir sürüş imkanı sunarlar.
4. **Elektrikli Kaykaylar ve Hoverboard'lar:** Elektrikli kaykaylar ve hoverboard'lar, genellikle gençler arasında popüler olan eğlenceli ulaşım araçlarıdır. Ayaklarınızın altına aldığımız sensörlere göre hareket ederler.
5. **Elektrikli Tek Tekerlekli Araçlar:** Bu, özellikle denge konusunda yetenekli olan kullanıcılar için uygundur. Elektrikli tek tekerlekli araçlar, hareket etmek için vücut ağırlığınızı kullanır ve çevik bir şekilde manevra yapabilirler.

Bu tür paylaşımlı mikromobilite araçlarını kullanmak için genellikle bir mobil uygulamayı indirip kaydolmanız gerekecektir. Uygulama, size en yakın araçları ve kiralama sürecini gösterir. Kiralama işlemi tamamlandığında, aracı belirli bir bölge içinde kullanabilirsiniz. Kiralama süresi sona erdiğinde, aracı uygun bir park alanına bırakarak işlemi tamamlayabilirsiniz. Bu sistem, hızlı ve çevre dostu ulaşım seçenekleri sunarak şehir içi trafiği azaltmaya ve çevreyi korumaya yardımcı olur. Ancak, kullanıcıların güvenliği ve trafik kurallarına uymaları da önemli bir konudur.

4. BÖLÜM

MİKROMOBİLİTEYE (MİKROHAREKETLİLİK) UYGUN ŞEHİRLER

Gizem Erdoğan Aydın, Elçin Mert

İnsanın yolculuk ihtiyacını gidermek amacıyla mekânlar arası yer değişimi ulaşım olarak tanımlanır. Ulaşım, insanların veya nesnelerin bir yerden başka bir yere hareket etmesini sağlamak için iş, eğitim, ticaret, turizm gibi çeşitli amaçlarla gerçekleştirilen harekettir. Ulaşım zaman, hız, maliyet, güvenlik, hareketlilik gibi çeşitli bileşenlerden oluşmaktadır. Mal ve hizmetlerin taşınması, lojistik faaliyetleri, kamu hizmetleri gibi alanlarda da ulaşım büyük öneme sahiptir ve insan hayatının en temel unsurlarındandır. Toplumların ekonomik, sosyal ve kültürel gelişiminde büyük bir rol oynayan ulaşımın sürdürülebilir ve etkili olması önemlidir. Bütün yolculuk türleri insanın hareket etmesi ile başlar ve son bulmaktadır. İnsanların günlük yaşamlarında iş, eğitim, alışveriş, sağlık hizmetleri gibi faaliyetler için gerçekleştirdiği seyahatleri kapsayan kavram ise kentsel hareketliliktir. İnsanların konut, işyeri, okul, sağlık merkezleri, alışveriş bölgeleri ve diğer önemli noktalara kolayca ulaşabilmesini sağlayan ulaşılabilirlik, insanların kent içinde seyahat etmelerini kolaylaştıran iyi bir toplu taşıma ağı, insanların bisiklet veya yürüyerek seyahat etmelerini teşvik eden bisiklet yolları, yaya yolları, kaldırımlar ve güvenli geçitler gibi altyapı önlemleri, sürdürülebilirlik ve teknolojik inovasyonları içermektedir.

İnsan, ulaşım ihtiyacı en temel organik hareketini yaya ulaşımı ile sağlamaktadır. Kentsel hareketlilik, üç farklı büyüklükteki ölçekte değerlendirilerek, ulaşım talebinde bulunan yolcunun fiziksel hareketi, taşıt hareketliliği ve çevresel, sosyal parametreler ile birlikteliği sentezlenmesi sonucunda ortaya çıkmaktadır (Rupperecht Consult, 2019). Kentsel hareketliliğin üç ölçüğü [1] makromobilite, [2] mezomobilite ve [3] mikromobilite olarak sınıflanmaktadır:

mobilité araçlarını etkin ve sürdürülebilir kullanıma uygun hâle getirmek kentler için birer fırsat olabilir.

Görüntü kirliliği, güvensiz yolculuk vb negatif etkileri indirebilmek için toplum yaklaşımını yönlendirmeli ve aidiyet duygusu yaratılmalıdır. Mahallelerle bütünleşmiş bir mikrohareketlilik sistemi kullanıcılar tarafından sahiplenilmesini sağlayacaktır. Kullanıcıya rağmen hiçbir planlama kararı sürdürülebilir olamaz.

Her kentin kendi kimliği bulunmaktadır. Sürüş alışkanlıkları, araç kullanım türleri, araç kullanım şekilleri, yaya hareketliliği toplumun kimliğine göre şekillenmektedir. Aitlik hissedilmeye yerde barınmak çok güçtür. Dolayısıyla aidiyet duygusu, zorunlu olarak yaşanan mekanlarda bile istemli/istemli kazanılan ilk duygudur. Kullanılan araçlar da bu kimliğe ve duyguya ait bir parça hâline gelmeye başlarlar. Özellikle mikromobilité araçları araçların otonomla birleşmesi ve inovatif bir hâl alması ile hayatı kolaylaştırıp benimsemeyi de beraberinde getirecektir.

5. BÖLÜM

MİKROMOBİLİTENİN SOSYOKÜLTÜREL ETKİLERİ

Gürkan Günay, Pelin Alcan Gezginci

Mikromobilité kullanımı, özellikle e-skuterler, son yıllarda dünyada ve ülkemizde artış eğilimindedir. Ülkemizdeki artış eğilimi oldukça göze çarpıcıdır; öyle ki, bu araçların sayısı zaman zaman kara yolu trafiği ve kaldırımlardaki yaya trafiğini tehlikeye sokabilecek düzeye ulaşmaktadır. Sözü edilen mikromobilité kullanım artışı ve buna bağılı oluşan tehlikeler, mikromobilité sistemlerinin toplum tarafından kabul edilme seviyesini tartışma açısından önemli bakış açılarından birini oluşturur.

Mikromobilité araçlarının karıştığı kazalar dikkate alındığında yaralanmalı ve hatta ölümlü kazaların olduğu bilinmektedir. Yaya kaldırımındaki kazalarda daha çok yaralanmalı kazalar meydana gelmekteyken, kara yolunda e-skuterlerle motorlu araçların karıştığı kazalarda ne yazık ki hayatını kaybeden insanlar olabiliyor. Bu araçların bu şekilde gündeme gelmesi, özellikle basın-yayın yoluyla insanlara kaza bilgilerinin gitmesi, insanlarda bu araçlara karşı ister istemez olumsuz bir yargı oluşturmaktadır. Bu yargının kırılması ise ancak bu araçların güvenli olduğunun algılanmasıyla gerçekleşecektir. Bu bağlamda, mikromobilité araçlarının yalnızca bisiklet yolunda kullanımı ve maksimum hızının düşürülmesi uygun çözümler olabilir. Mikromobilité araçlarının bisiklet yolundan çıkmamaları ve düşük hızda seyretmeleri sayesinde kazaların sayısı azalacak ve insanlar arasındaki olumsuz algı kırılacaktır. Bu olumsuz algının kırılması sayesinde daha fazla insan mikromobilitéyi tercih etmeye başlayabilir, dolayısıyla da mikromobilité bu açıdan bakıldığında toplum tarafından kabul edilmiş olabilir.

Nitekim 2023 yılının Nisan ayında İstanbul Büyükşehir Belediyesi (İBB), e-skuter kullanımı ile alakalı yeni kararlar almıştır. Bu kararlar doğrultusunda mevcut 15

yönelik ürünler tasarlamak bu anlayışlardan sadece birisidir. Ayrıca bu ürünlerin tasarlanması için yaratıcılıklarını kullanmaları adına kadınları işe almak, erkek egemen mobilite endüstrisini de geliştirecektir (Sallah and Caesar, 2020).

6. BÖLÜM

MİKROMOBİLİTE VE TRAFİK

Selim Dündar, Ecem Şentürk Berkaş

Trafik sıkışıklıkları ve kara yolu trafik kazaları günümüzde tüm gelişmiş ülkelerin yaşadığı toplumsal sorunların başında gelmektedir. Trafik sıkışıklıkları temel olarak yolların hizmet verebileceği taşıt sayısından, diğer bir deyişle yolların *kapasitesinden* daha fazla sayıda taşıtın yolu kullanma talebi göstermesi olarak tanımlanabilir. Trafik kazası ise 2798 sayılı Karayolları Trafik Kanunu'nda, "Kara yolu üzerinde hareket hâlinde olan bir veya birden fazla aracın karıştığı ölüm, yaralanma ve zararlar sonuçlanmış olan olaydır." şeklinde tanımlanmıştır (Karayolları Trafik Kanunu, 1983). Trafik sıkışıklıkları, yaşandığı bölgede kirletici egzoz gazı salımları, yakıt tüketimindeki artış, zaman kaybı gibi hem çevreye hem de yerel ve ulusal ekonomiye olumsuz etkiler yaratmaktadır. Trafik kazaları da benzer şekilde maddi hasarın yanı sıra yaralanma ve can kayıplarıyla sonuçlanabilmektedir. Bu nedenlerle günümüzde gerek trafik sıkışıklıklarını, gerekse de trafik kazalarını azaltmak için çok sayıda çalışma yapılmaktadır. Örneğin Birleşmiş Milletler 2015 yılında 193 ülke tarafından 2030 sonuna kadar ulaşılmak üzere kabul edilen 17 adet "Sürdürülebilir Kalkınma Amacı" tanımlamıştır (Birleşmiş Milletler, 2015). Tanımlanan bu amaçlar Şekil 6.1'de görülmektedir.

6.3. Mikromobilite Araçlarının Trafik Akımına Etkileri

Mikromobilite taşıtlarının kara yolu trafik akımına etkileri konusunda gerçekleştirilen bilimsel çalışmalar henüz yeterli düzeye ulaşmamıştır. Ancak, bu taşıtların kara yolunun bir şeridini taşıtlarla paylaştığı durum göz önüne alındığında, gerek en yüksek hızları, gerekse de bu taşıtlar için belirlenmiş olan yasal hız sınırları diğer motorlu taşıtlara göre çok daha düşük kalmaktadır. Bu durum trafik akımının homojenliğinin bozulmasına yol açmakta, mikromobilite araçlarıyla aynı şeridi kullanan taşıtların daha fazla fren yapma ihtiyacı duymasına ya da şerit değiştirme manevraları gerçekleştirmesine neden olmaktadır. Dündar, vd. (2022) tarafından gerçekleştirilen çalışmada, e-skuterların Bağdat Caddesi'nin sağ şeridini kullandıkları durum incelenmiş ve e-skuter talep düzeyi arttıkça yolun özellikle sağ şeridindeki serbest akım hızının, tıkanıklık yoğunluğunun ve maksimum hacim değerinin azaldığı görülmüştür. Bu durum da e-skuterların kendine özgü bir yolda ya da yaya kaldırımında yolculuk etmedikleri sürece, trafik akımını olumsuz etkilediğini göstermektedir. Bu durum şüphesiz diğer mikromobilite taşıtları için de geçerlidir. Ancak bu konuda farklı yol kesimleri için farklı trafik talep düzeylerinde araştırmalar gerçekleştirilerek, bu durumun daha somut bir biçimde ortaya konulması gerekmektedir. Bu konuya ilişkin bilimsel araştırmalar başlamış olup, hâlen sürdürülmektedir.

Henüz yeterli bir biçimde yasal altyapısı düzenlenememiş olan mikromobilite araçlarının hem kara yolu trafik güvenliğini hem de trafik akım özelliklerini olumsuz olarak etkilediği görülmektedir. Bu nedenle mümkün olan kesimlerde motorlu taşıt trafiği ve yaya trafiğinden fiziki engellerle ayrılmalı, bunun mümkün olmadığı kesimlerde ise güvenli bir biçimde işletilmelerine ilişkin yasal düzenlemeler geliştirilmelidir. Ancak yasal düzenlemeler ne yazık ki tek başlarına yeterli olmadığından, verimli çalışan bir denetleme mekanizmasının kurulması ve işletilmesi de oldukça önemlidir. Böylece kamuoyunun bazı kesimlerince mikromobilite taşıtlarına karşı olan olumsuz ön yargı da yıkılabilecektir.

7. BÖLÜM

MİKROMOBİLİTENİN ÇEVRESEL ETKİLERİ

Agne Karlikanovaite Balıkçı

7.1. Giriş

Çevre dostu davranışın temel ön koşullarından biri biyosferik değerler olarak da bilinen çevresel değerlerdir (Steg, vd., 2012). Güçlü biyosferik değerlere sahip olan insanlar, doğanın insanlara fayda sağladığı için değil, kendi başına önemli olduğuna inanırlar. Bu tür insanlara göre, doğal kaynaklar korunmalı ve muhafaza edilmelidir. Araştırmalar, insanların çevresel değerleri ne kadar güçlüyse, atıklarını ayırma, çevre dostu ulaşım türlerini seçme, daha az araç kullanma, daha az tek kullanımlık plastik şişelerde su kullanma, çevre politikalarını destekleme, daha az et yeme vb. olasılıklarının da o kadar yüksek olduğunu göstermektedir (Balundé, vd. 2019; Balundé, vd., 2020a; Balundé, vd., 2020b; Hiratsuka, vd., 2018). Dünya toplumlarında yaygın çevre dostu davranış ve kaynakların korunması, ekolojik krize uyum sağlanmasına ve ekolojik krizin aşılmasına önemli katkı sağlayacaktır. Ancak bu basit bir iş değildir çünkü insan davranışı, kişisel özellikler ve çeşitli çevresel faktörler tarafından etkilenir ve belirlenir.

Dünya Çevre ve Kalkınma Komisyonu (WCED, 1987), sürdürülebilir kalkınmayı, gelecek nesillerin ihtiyaçlarını karşılama fırsatlarını azaltmadan, toplumun mevcut ihtiyaçlarını karşılayan bir gelişme olarak tanımlamaktadır.

8. BÖLÜM

MİKROMOBİLİTENİN SAĞLIĞA ETKİLERİ

Ahmet Cüneyt Akgöl, Begüm Okudan

Dünya nüfusundaki artışa paralel olarak, ekonomik ve teknolojik gelişmelerin etkisiyle büyük şehirlerde yaşayan insan popülasyonu giderek artmaktadır (United Nations, 2023). Çok sayıda insan bir gün içinde bireysel, sosyal veya ticari gereksinimleri için yoğun şekilde yer değiştirmek zorunda kalmaktadır. Bu durum ulaşımda ekonomik hızlı ve kullanışlı çözümlere gereksinim doğurmıştır.

Mikromobilite araçları, özellikle şehir içi transferler için ekonomik ve kullanışlı alternatifler oluşturmaları nedeniyle tüm dünyada giderek popüler hâle gelmiştir (Bozzi ve Aguilera, 2021). Özellikle büyük kentlerde ve sınırlı lokasyonlarda kullanılırken, gereksinimlerin oluşturduğu ivmelenmeyle her lokasyondaki araç sayısı ve çeşidi artmakta, yeni lokasyonlar açılmaya devam etmektedir (New Urban Mobility Alliance). Bu nedenle, giderek daha fazla insanın mikromobilite araçlarını kullanacağı tahmin edilmektedir.

Giderek büyüyen mikromobilite kullanıcı kitlesi doğal olarak, insan sağlığıyla ilgili meslek profesyonellerinin ilgi alanındadır. Bu kitlenin gereksinimlerini saptayabilmek ve bunlara çözüm bulabilmek için bilimsel çalışmalar yapılmaktadır. Bu çalışmalardan bir grubu mikromobilite araçlarını kullanan kişilerin insan bedeninin sınırlarından kaynaklanan bireysel risklerini konu almaktadır. Bir diğer grup çalışma da toplum sağlığı risklerini ele almaktadır. Toplum sağlığının dolaylı olarak zarar görmesine neden olabilecek sosyal ve ekolojik etkenleri saptayarak önleyebilmek için farklı disiplinlerde çalışmalar yapılmaktadır (Bretones, vd., 2023).

Bu bölümde, güncel bilimsel araştırmalar doğrultusunda, mikromobilite araçlarını kullanan kişilerin olası sağlık riskleri ve bu risklerin oluşturabileceği bireysel ve toplumsal etkiler ele alınmıştır.

9. BÖLÜM

MİKROMOBİLİTENİN ERGONOMİSİ

Pelin Alcan Gezginci

9.1. Giriş

Mobilite sistemleri ilerlemeye devam etmektedir. Yıllardır otomotiv çevrelerinde her daim söylenen "daha büyük, daha güçlü ve daha hızlı olan, çok daha iyidir" düşüncesi artık değişmektedir. Bu tanım belki de birkaç sene içerisinde "daha küçük araçlar ve daha fazla mikromobilite çok daha iyidir" tanımına dönüşebilecektir.

Avrupa'da ve özellikle Türkiye'nin büyük şehirlerinde yolların e-bisikletler, e-skuterler ve daha pek çok farklı mikromobilite aracı tarafından fethedildiği söylenebilir. Geleceğe dair Kentsel Ulaşım perspektiflerine bakılırsa, şehirlerin en büyük ihtiyaçlarından birisinin daha az araba trafiği olduğu görülmektedir. O zaman motorlu araç trafiğinde kısıtlayıcı önlemlerin uygulandığı bir ulaşım politikasına ihtiyaç olduğu rahatlıkla söylenebilir. Bazı bilim çevreleri ise, araç trafiğini mümkün olduğunca şehirle uyumlu hâle dönüştürmenin önemini hatırlatmaktadır. Elbette sadece mikromobilitenin yeterli olduğu söylenemez. Yeni araç kategorileri, farklı hareketlilik merkezleri ve yasal kuralların her ülke ve şehirde mutlaka uygulanıp, o ülke ve şehre göre uyarlanması diğer önemli hususları oluşturmaktadır.

En genel tanımıyla *Ergonomi*, insanlar, araçlar ve bir sistemin diğer alt yapıları arasındaki ilişkilerin anlaşılmasıyla ilgili bilimsel bir disiplindir. Çalışmanın sistemli bir şekilde düzenlenmesi ve hem makinelerin hem de donanımın çalışan kişinin yatkınlıklarına/özelliklerine göre hesaplanması ve uyarlanması amacıyla yapılan tüm inceleme ve araştırmaları kapsamaktadır. İş çevresi ve içerdiği tüm etkenler, insanın psiko-fizyolojik ve sosyo-kültürel bütün limitleriyle uyumlaştırılmalıdır. Ancak bu şekilde üretimsel verimliliğe ulaşmak mümkün olacaktır. İşte, çalışmanın düzenli bir şekilde ilerlemesini amaçlayan ergonomi aynı zamanda

Mikromobilite alternatifleri kesinlikle ve artarak ufukta yerini hazırlamaktadır. Yeni mobilite çözümlerini ergonomi ve insana uygun tasarım olmadan düşünmek neredeyse imkansızdır. Mikromobilite araçları çok çeşitli yapıda, tasarımda ve farklı özelliklerdedir. Ergonominin en temel konusu olan donanım ergonomisinde mühendislikte var olan bazı tasarım hataları araştırılırken, ayrıca ürünlerin, iş istasyonlarının, ofis donanımının ve taşımacılığın bütün farklı kollarında teknolojinin kullanımı da mümkün kılınmaktadır. Ergonomide tasarımın önemi yukarıda da anlatıldığı gibi, oldukça önemlidir.

Bu bölüm sonucunda anlaşılmaktadır ki, mikromobilite araçlarının güvenli kullanımını için fren sistemleri ve daha pek çok noktaya dikkat edilmeli ve ergonomik tasarımlarına önem verilmelidir. Yasama organları ve mobilite araçlarının sağlayıcıları mikromobilite kullanımının güvenliğini artırmak için bu bulguları dikkate almak zorundadır.

Yapılan çalışmalardan, mikromobilite kullanıcılarında önemli bir bilgi eksikliğinin olduğu da görülmektedir. Yürürlükteki yasalar ve düzenlemeler hakkında mobilite sağlayıcılarına büyük görevler düşmektedir. Kullanıcılara daha iyi bilgi verilebilmesi için bazı halk eğitim kampanyaları, TV ve internet ortamında yapılabilecek online tanıtımlar önemli olabilir. Kullanıcıların mobilitenin yolda güvenli bir şekilde kullanımına ilişkin bilgilerini arttırmaları çok önemlidir.

13. BÖLÜM

MİKROMOBİLİTE VE YÜK TAŞIMACILIĞI

Gürkan Günay

Mikromobilité çoğu zaman insanların ulaşımı ile ilişkilendirilmiştir ve bu ilişkilendirmenin çok yanlış olduğu söylenemez. E-skuter ve e-bisiklet gibi araçlar büyük çoğunlukta insanlar tarafından kendi ulaşımaları için kullanılıyor. Ancak, mikromobilitenin sadece bireylerin ulaşımı ile alakalı olduğunu düşünmek de doğru değildir. Nitekim, sınırlı da olsa, mikromobilitenin yük taşımacılığında da rol alması konusunda bazı girişimler mevcuttur. Ama öncelikle, yük taşımacılığının kendine özgü özelliklerini anlamak gereklidir.

Yük taşımacılığı birçok açıdan insanların ulaşımından farklıdır (Günay vd., 2016) ve çoğunlukla ekonomik şartlardan etkilenir (Holguín-Veras, 2002; Holguín-Veras vd., 2011). Örneğin, kişiler ulaşım türü seçerken konfor, fiyat veya seyahat süresi gibi etmenleri değerlendirirken yük taşımacılığında ise gönderi yapan işletmeler lojistik maliyetlerin minimizasyonunu düşünmektedir (Holguín-Veras vd., 2021). Lojistik maliyeti dört alt maliyet kategorisi oluşturmaktadır. Bunlar sipariş maliyeti, taşıma maliyeti, envantere taşıması sırasındaki yatırım maliyeti ile depolama maliyetleridir. İşletmeler teslimat yapacakları gönderilerin büyüklüklerini ve ulaşım tür seçimlerini maliyet minimizasyonunu düşünerek yaparlar (Abate ve De Jong, 2014). Bu seçimler sadece deniz yolu, kara yolu, demir yolu gibi kategorilerde olmaz, aynı zamanda kara yolu yük araçları türleri kategorisinde (kamyonet, kamyon ve treyler) de yapılmaktadır (Günay, 2023).

Ayrıca, kentsel alanlarda yapılan yük taşımacılığı dinamikleri ile daha geniş coğrafik ölçekte yapılan taşımacılığın dinamikleri farklılık göstermektedir (Cambridge Systematics, 2007). En belirgin farklardan birisi de kentsel alanlarda yükler daha küçük hacimlerde taşınırken, daha uzun menzilli yük seyahatlerinde yükler daha büyük hacimlerde taşınır. Dolayısıyla, kentsel alanlarda yükler daha çok kamyonet

yapılması gerektiği ortadadır. Yine de her ne kadar şu an için payı az olsa da, yük taşımacılığında gelecekte dron araçları vasıtasıyla mikromobilite hatırı sayılır bir yer tutacaktır.

14. BÖLÜM

MİKROMOBİLTE SİSTEMLERİNİN YASAL DURUMU

Saadet Deveci

14.1. Mikromobilitte Sistemlerinde Yasaları Gerekli Kılan Gelişim

Artan nüfus ve araç sahipliliğiyle doğru orantılı olarak büyüyen trafik sorunu özellikle büyükşehirlerde büyük önem arz etmektedir. Artan trafik; hava kirliliği, gürültü kirliliği, tıkanıklık ve trafik kazalarını beraberinde getirmekte, insan hayatını birçok yönden tehlikeye atmakta, yaşam standartlarını düşürmektedir. Yürüme ve bisiklet gibi seçenekler ve hatta toplu taşıma araçları bu sorunları azaltmaya yönelik sunulan çözüm önerileri arasında olmakta, çevreyi daha az kirleten, daha az enerji gerektiren, trafik sıkışıklığını azaltacak hareketlilik alternatifleri üzerine çalışmalar uzun yıllardır sürdürülmektedir.

Ulaşımındaki ihtiyaçlar, trafik yoğunluğu ve karbon salımı oranları şehirlerde mobilite alanında yeni arayışların ve hizmetlerin oluşmasının zeminini oluşturmuştur (Gössling, 2020). Küresel iklim değişikliğine neden olan çevresel sorunların gündeme gelmesi ve ülkelerin sera gazı salımlarını stabilize etmeleri konusunda bağlayıcı olmayan yükümlülüklerin tanımlandığı Kyoto Protokolü (1997) sonrasında çevre dostu ulaşım seçenekleri arayışları gündeme gelmiştir (Ertoy Sarıışık ve Yalçiner Ercoşkun, 2021). Özel araç sahipliliğindeki pozitif ivme ve kent içi yollarda görülen trafik sıkışıklığı, fosil yakıt tüketmeyen ve trafik sıkışıklığı durumunda bile ulaşım imkânı sağlayan mikroulaşım araçlarına olan ilgiyi kısa sürede arttırmıştır. Mikromobilitte olarak sınıflandırılan paylaşımlı bisiklet, e-skuter, moped, mobilet, tekerlekli kızak, elektrikli kayak son yıllarda kent içi ulaşım türleri olarak ciddi oranda tercih edilen sistemler hâline gelmiştir.

ler geliştirilmeye çalışılmıştır. E-skuterlerin özellikle trafiğe, trafik güvenliğine, çevreye ve sağlığa olan etkileri konusunda araştırmacılar çalışmaya devam etmektedir. Gerekli yasal düzenlemelerin tüm bu etkileri bir arada değerlendireceği şekilde gerçekleştirilmesi e-skuterler için en uygun işletme koşullarının tanımlanması açısından büyük önem taşımaktadır. Bu hususta her ülkenin kendi yerel koşullarını da göz önüne alarak, konuyla ilgili halk, e-skuter firmaları, paylaşımlı e-skuter işletmecileri, diğer taşıt sürücüleri gibi farklı paydaşların da katılımını sağlayarak, kendilerine has yönetmelikler geliştirmesi, evrensel bir yönetmeliğin oluşturulup, tüm ülkelerce aynı yönetmeliğin kullanımından çok daha yararlı olacaktır.

15. BÖLÜM

AFET VE MİKROMOBİLİTE

Hilmi Evren Erdin, Ziya Çakıcı, Pelin Alcan Gezginci, İrem Merve Ulu

15.1. Afetler ve Afet Türleri

Kelime anlamı olarak, “doğa olaylarının sebep olduğu yıkım” ve “önlenmesi elde olmayan büyük felaket, bela, musibet” anlamına gelen afet; doğa, insan veya teknoloji kaynaklı bir tehlikenin can, mal, ekonomi, çevre, kültürel varlıklar üzerinde yarattığı kötü etkileri önlemek için yerel imkânların yetersiz kaldığı durumlardır (AFAD, 2014; Dikmenli ve Gafa, 2017). Afetler, normal hayatı ve insan faaliyetlerini durdurup kesintiye uğratarak, etkiledikleri kesim için fiziksel, ekonomik ve sosyal kayıplar oluşturmaktadır. Bu nedenle, bir olayın afet olarak değerlendirilebilmesi için maddi ve/veya manevi kayıplar meydana getirmesi, eldeki mevcut imkân ve kaynaklar ile üstesinden gelinememesi, günlük olağan yaşamı bozarak yerleşim birimini derinden etkilemesi gerekmektedir (Çoşkun, 2021). Bir afetin büyüklüğü, meydana getirdiği can kayıpları ve yaralanmaların yanı sıra yol açtığı sosyal ve ekonomik kayıplar ile de doğrudan ilişkilidir.

Doğa, teknoloji ve insan kaynaklı tehlikeler yüksek risk faktörü ile birleştiğinde, afetin meydana gelmesi kaçınılmaz olmaktadır. Doğal ve/veya yapay tehdit ve tehlikelerin afete dönüşmesinde insan faaliyetlerinin etkisi de oldukça fazladır. Olayın fiziksel büyüklüğü ile birlikte tasarım hataları, bilinç eksikliği, yerleşim ve sanayi bölgesi seçiminde yapılan yanlışlar (yanlış yapılaşma), yeterli tedbir ve önlemlerin alınmaması, çevre tahribi ve yanlış kullanım, ihmaller, planlama hataları vb. afetlerin olumsuz sonuçlarını arttıran önemli etkenler olarak karşımıza çıkmaktadır (Erkal ve Değerliyurt, 2009). Afetler ile ilgili değerlendirmeler, genel olarak, sıklık ve tehdit, başlangıç ve yayılma hızı, etki süresi ve alanı, tahrip gücü, tahmin edilebilme, kontrol edilebilirlik gibi farklı faktörler göz önünde bulundurulabilir (Üneri, 2010).

Örneğin, 6 Şubat 2023'te Kahramanmaraş'taki depremler sonrasında meydana gelen yolların kapanmasıyla birlikte bisikletli müdahale ekipleri afet bölgesine ulaşmışlardır. Bu durum, insan gücüyle ya da elektrikle çalışan mikromobilité araçlarının afet durumundaki önemini vurgulamaktadır. Ayrıca, mikromobilité taşıtları, iklim değişikliği ve pandemi gibi afetleri önleme ve etkilerini azaltmaya da katkı sağlayabilirler. COVID-19 pandemisi nedeniyle insanların seyahat tercihleri değişmiş ve mikromobilité araçlarının kullanımı artmıştır. Kısa yolculuklarda sosyal mesafenin korunduğu mobilité çözümleri daha çok tercih edilmiştir. Bunun yanından çevresel kaygılarla mikromobilité taşıtlarının kullanıldığı bilinmektedir. Bunlara örnek olarak 1995 Kobe depremi ve 2012 yılında yaşanan Sandy kasırgasında erişimin kısıtlandığı alanlarda mikromobilité taşıtları tahliye, acil yardım, yardım malzemesi taşıma amacıyla kullanımı alternatif bir ulaşım biçimi sunulmuş ve kısıtlanmış erişilebilirliği iyileştirmişlerdir.

Ülkemizde afetlerden sorumlu resmi birim olan AFAD tarafından 2022 yılında sunulan Türkiye Afet Müdahale Planı'nda afet durumunda ulaşım sisteminin uğrayabileceği zararlar ve talebin nasıl etkilenebileceği ele alınmıştır (AFAD, 2019). Ancak çalışmada mikromobilité taşıtlarının kullanımına yönelik bir planlama yer almamaktadır. Hâlbuki mikromobilité araçlarının afetler ile oluşan kriz durumunda erişim ve afet lojistiği açısından sağladığı fırsat ve olanaklar bulunmaktadır. Sonuç olarak, afet yönetimi konusunda karar vericiler, mikromobilité taşıtlarını risk azaltma, hazırlık, müdahale ve iyileştirme aşamalarında etkili bir şekilde kullanmalarının, afetlerin neden olduğu zorlukların üstesinden gelinmesi ve etkilerinin azaltılmasında önemli bir potansiyele sahip olduğunu ve kritik rol üstlenebileceğini dikkate almak durumundadırlar.

16. BÖLÜM

GELECEKTE MİKROMOBİLİTE

Gürkan Günay, Ersoy Soyer

Bir büyük metropolde yaşıyorsanız muhtemelen en büyük derdimiz aynı. Ulaşım. Zamanımızın büyük kısmını bir yerden diğer bir yere gitmek isterken tüketiyoruz. İhtiyaçlarımız değişiyor beklentilerimiz birbirinden farklı. Bu sebeple farklı ulaşım seçeneklerine daha çok ihtiyaç duyuyoruz. Ulaşım araçlarımız da çeşitlenmeye devam ediyorlar. Bir yandan da iklim krizleri sebebiyle toplum farkındalığını yükseltmek adına tüm ülkeler canla başla yeni ve temiz ulaşım sistemlerine geçiş için çabalamaya devam ediyorlar. Paris İklim Anlaşması gibi ülkelerin geleceğe dair oluşturdukları hedefler birçok ülkenin ulaşım planlarını değiştirmesine olanak sağladı. Ülkelerin yüksek enerji talebi, yenilenebilir enerjiye geçiş isteği ve karbon emisyonlarını azaltmaya çabalamaları sebebiyle, temiz enerjiye olan talep her geçen gün yükselmeye devam ediyor. Tabiki bu değişim ulaşım araçlarının ve şekillerinin de değişimini beraberinde getiriyor. Mikromobilite araçları tüm bu süreçler sebebiyle karar vericilerin özellikle destekledikleri ulaşım yöntemlerinden biri hâline geldi.

Mikromobilite her ne kadar toplumda yeni ortaya çıkmış bir ulaşım türü gibi gözüksün de, yaklaşık 140 yıldır hayatımızda olan bir konsept. Bölüm 2’de (Mikromobilite Tarihi) değinildiği üzere mikromobilite ilk kez 1800’lü yılların sonunda hayatımıza girdi. 1916’da günümüzdeki e-skuter’in atası olarak nitelendirilebileceğimiz ilk araç da Londra’da ortaya çıktı (Şekil 16.1) (Wild, 2015). Daha sonra ilerleyen yıllar içerisinde bu araç evrildi ve günümüzde kullandığımız e-skuter araçlarına dönüştü. Şekil 16.1’de yer alan bu ilk araçla kıyasladığımızda, günümüzde kullanılan e-skuterlerin en azından şekil olarak çok farklı bir şekilde evrildiğini söyleyebiliriz.

munda. Bu deęişim Őu anda mevcut kullandıđımız havalimanlarını veya ulaşıım noktalarını biraz daha merkeze ve Őehrin orta noktalarına çekecek. Bu merkezi hub'lar sayesinde paylaşımlı mobilite araçlarımızla bu hub'lardan hareketle evlerimize ulaşacağız. Toplu taşımanın yeni boyutunun bu olacağını söyleyebiliriz. Bu noktalardan da kesintisiz ulaşıım çeşitliliđiyle daha hızlı erişim alternatiflerine sahip olacağız.

BÖLÜM I.

MİKRONİZE ÖĞÜTME

(Micronized Grinding)

Öğütme ve Değirmenler

[Grinding and Mills]

1. Öğütme

[Milling] [Grinding]

Ufalama (kıırma ve öğütme) (comminution) bir malzemenin tane boyutunu düşürmek, istenilen tane boyut dağılımını (*PSD*) sağlamak, istenen tane şeklinde malzeme üretmek, aglomeraları/topak(lanma)ları dağıtmak, çözünme kinetiğini artırmak vb. için kullanılan en yaygın yöntemdir. Katı maddelerin ufalanma/boyut küçülme karakteristiklerini belirleyen unsurlar şunlardır [1]:

- İç yapılarındaki kuvvetlerin varlığı,
- Kristal yapılarındaki atomların dizilişleri, bunları birlikte tutan bağlar ve kafes yapısı,
- Mekanik özellikleri (yapısal kusurlar, çatlak ve yarıklar).

Bazı cevherlerin ufalama yönünden fiziksel özellikleri Tablo 1.1'de verilmiştir.

Tablo 1.1: Çeşitli endüstriyel hammaddelerin ufalanma yönünden bazı fiziksel özellikleri [1].

Cevher	Özelliđi	Ort. ađırlık (lb/ft ³)*
Barit	Aşırı aşındırıcı, akıcılığı iyi	140-180
Dolomit	Hafif aşındırıcı, biraz gevrek, akıcılığı iyi	90-100
Alçıtaşı (jips kayası)	Hafif aşındırıcı, biraz gevrek, akıcılığı iyi	90-100
Kireçtaşı	Hafif aşındırıcı, biraz gevrek, akıcılığı iyi	90-110
Talk	Az aşındırıcı, biraz gevrek	40-50

*1 lb/ft³=16.02 kg/m³'tür.

Tablo 1.8: Farklı bilyalı değirmenlerin karakteristik özellikleri [25].

Değirmen	Bilye hareketi	Soğutma potansiyeli	Ölçek büyütme	Maksimum ivmelenme	Çarpışma frekansı	Stres enerjisi (SE)
Aktarılan ortam (tambur) bilyalı değirmen	Dönen tambur	Çok zayıf	Çok iyi	1 x g	Düşük	Yüksek
Yörüngesel bilyalı değirmen	Santrifüj alanda dönen tambur	Genellikle çok zayıf	Çok zayıf	<150 x g	Orta	Çok yüksek
Titreşimli bilyalı değirmen	Titreşen değirmen haznesi	Orta	Orta	<30 x g	Yüksek	Yüksek
Karıştırmalı bilyalı değirmen	Sabit haznede dönen karıştırıcı	Çok iyi	Çok iyi	<Bir kaç 100 x g	Çok yüksek	Çok yüksek

Bilyalı Değirmenler

[Ball Mills]

1. Bilyalı Değirmenler

[Ball Mills]

Cevher hazırlama, ilaç, boya ve çimento gibi geniş bir alanda *boyut küçültme* işlemlerinde kullanılan, **tambur değirmen**, **yatay değirmen**, **aktarılan ortam değirmen** (tumbling ball mill) ve **konvansiyonel (geleneksel, klasik) değirmen** olarak da isimlendirilen **bilyalı değirmenler** aşağıdaki temel özelliklere sahip öğütücü ekipmanlardır:

- *Yatay* pozisyonda yerleştirilir,
- (İç kısmı aşınmayı önleyici plakalarla kaplanmış) **silindirik gövdeden** oluşur ve
- Çeşitli düzeneklerle kendi ekseni etrafında dairesel olarak hareket ederken öğütücü ortam olarak kullanılan **çelik bilyalar** ile besleme malzemesini çok ince tane boyutlarına indirir.

Bilyalı değirmenler neredeyse yaklaşık 100 yıldan beri uygulanmaktadır. Ancak yine de enerji verimi %1-2 civarındadır. Gelişen sensör teknolojileri ile çalışma şartlarının optimize edilmesi ve uygun izleme ile bu değirmenlerin enerji verimliliği %10'lara çıkarılabilme imkânı bulunmaktadır [1].

Bilyalı değirmenlerin genel özellikleri şu şekildedir [2]:

- İkinci kademe ve ince öğütme devrelerinde kullanılmakta,
- Değirmene beslenen malzeme boyutu **9.5-2.5 mm** arasında ve ürün boyutu ise **600-45 mikron** arasında değişmekte,
- Bilya şarjı doluluğu değirmen hacminin %35-45'ine denk gelmekte ve

Öte yandan, bilyalı değirmenin çalışma ortamının stabilitesini temin etmek, değirmen çalışma kapasitesini sağlamak için gerekli koşuldur. Bu amaçla şu iki hususa dikkat edilmelidir [53]:

- Değirmene beslenen malzeme uniform olmalıdır. Besleme hızı çok yüksek olduğunda tane boyutu irileşecek ve şişkinliğe (bulging) neden olacaktır. Bu durumda besleme durdurulmalı ve uygun ayarlamalar yapılmalıdır. Besleme için *titreşimli besleyici* tavsiye edilmektedir.
- Bilyalı değirmen iyi bir güç kaynağına sahip olmalı, ani elektrik kesintisi veya arızalardan kaçınmak için rulman motorun normal şekilde çalıştırıldığından emin olunmalıdır.

Karıştırırmalı Bilyalı Değirmenler

[Stirred Media Mills]

1. Karıştırırmalı Değirmenler

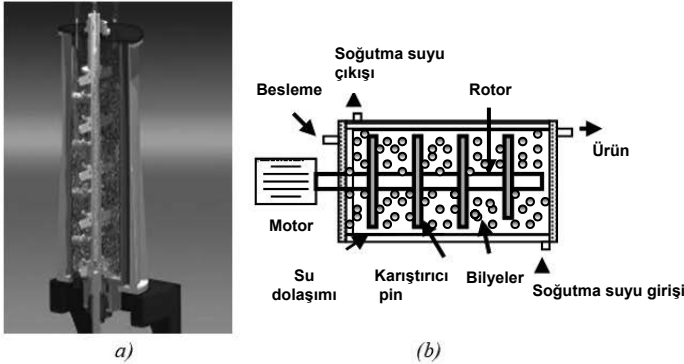

[Agitated Mills]

Karıştırırmalı değirmen, karıştırırmalı ortam değirmen olarak da isimlendirilirler.

Karıştırırmalı bilyalı değirmenler; öğütücü ortam şarjının bir shaft (mil) etrafına monte edilmiş **çubuk (pin), disk veya spiral** vasıtasıyla silindirik bir hazne içerisinde shaftta verilen dönme hareketi ile çalışmakta (Şekil 1.21) ve malzemenin öğütücü ortam ve cevher taneleri arasındaki **sürtünme, aşınma ve darbe** ile ufalanması prensibine dayanmaktadır [1]. Ancak, bilyelerin serbest düşme ihtimalleri pek olmadığından darbe etkisi pek oluşmamaktadır.

Temel tasarımını 1920'lere kadar uzanan (*Klein ve Szegvar, 1928*) bu değirmenler, ilk kez 1960'larda kaolinin öğütülmesinde kullanılmıştır [2].

Karıştırırmalı bilyalı değirmenlerde klasik değirmenlere göre daha düşük stres enerjileri elde edilmesine karşın, çok daha yüksek sayıda bilye-bilye temasından dolayı stres olayının sıklığı çok daha fazladır [3]. Bu yüzden de daha yüksek enerji yoğunluklarına sahiptir ve sürekli öğütmede öğütücü ortamın nihai türünden ayrılması sorunsuz bir şekilde gerçekleştirilmektedir.

Şekil 1.21: a) Disk tipi ve b) Pin tipi karıştırırmalı değirmen [4].

Ölçek büyütmede iki yol izlenebilir [26]:

- Sabit kütle spesifik enerji metodu
- Değirmen boyutları arasında *sabit faktör* metodu (Tablo 1.50)

Uygulamada dikkat edilecek diğer hususlar ise şunlardır [30]:

- Lab değirmeni ile üretim değirmeni aynı tasarıma sahip olmalı
- Aynı bilya boyutu ve bilya malzemesi (aynı yoğunlukta)
- Aynı bilya şarj derecesi
- Benzer bilya sıkıştırması

Tablo 1.50: Ölçek büyütme sabit faktörü [26].

Değirmen tipi	Kapasite faktörü (f)	Örnek kapasite (kg/saat)
Lab ölçekli	-	27
Küçük üretim boyutlu değirmene	8.5	229
Orta üretim boyutlu değirmene	1.75	400
Büyük üretim boyutlu değirmene	1.65	660

Diğer Değirmenler

[Other Mills]

1. Yüksek Basıncılı Merdaneli Değirmenler

[High Pressure Roller Mills] [High Pressure Grinding Rollers] [HPRM] [HPGR]

Merdaneli pres, yüksek sıkıştırılmalı veya yüksek basınçlı merdaneli değirmen isimleri ile de anılır.

Alman bilim adamı ve mucit *Prof. Dr.-İng. Klaus Schönert* (1927-2011) tarafından tasarlanan ve 1982’de patenti alınan [1] **yüksek basınçlı merdaneli değirmen** (HPGR) (Roller Mill, Roller Pres), 1980’lerin ortasından itibaren özellikle çimento sanayiinde *farin* ve *klinker* öğütülmesi (ön-öğütücü olarak) başta olmak üzere *kömür*, *kireçtaşı*, *kurşun-çinko*, *demir*, *elmas* ve *krom* gibi cevherlerin boyut küçültme devrelerinde kaba ve ince öğütmede kullanılmaya başlanmıştır (Tablo 1.51). Günümüzde özellikle çubuklu ve yarı otojen değirmenlerin yerini aldığı söylenebilir.

Farin, çimentonun yarı mamulüdür (pişme öncesi).
Klinker, çimento fırınından çıkan pişmiş iri taneli üründür.
Çimentonun bir önceki aşamasıdır.

Tablo 1.51: HPGR’lerin başlıca endüstriyel kullanım alanları [2].

Uygulama	Oran (%)
Klinker	62.8
Kireçtaşı	18.0
Cüruf	7.7
Cevher	6.8
Diğer	4.2

Bu değirmenlerde birbirine doğru dönen iki adet geniş çaplı (0.75-2.5 m) **merdane** (roller) bulunur. Bu merdanelerden biri sabit bir yatağa oturtulmuş-

AUBERA titreşimli değirmen (Şekil 1.70) uygulama kapsamı Tablo 1.70’de verilmektedir.

Şekil 1.70: AUBERA titreşimli değirmen [51].

Tablo 1.70: AUBERA titreşimli değirmen uygulama kapsamı [51].

Parametre	Birim	Değer
Kapasite	m ³ /saat	12’ye kadar
Besleme boyutu	mm	~ 16
Nihai ürün boyutu	mikron	<25’e kadar
Boyut küçültme oranı	-	1:30
Güç	kW	132

İki tüplü (öğütme silindirli) yanı sıra üç tüplü değirmenler de özellikle daha yüksek kapasiteler için imal edilebilmektedir.

BÖLÜM II

SINIFLANDIRMA

(Classification)

Seperatörler (Havalı Ayırıcılar)

[Seperators] [Air Classifiers]

1. Sınıflandırma

[Classification]

Sınıflandırma genellikle cevheri *boyutuna göre* gruplandırmak amacı ile uygulanan bir prosestir.

Havalı sınıflandırma (ayırma) ise hava akışı ile taneleri **boyut, şekil ve özgül ağırlık** farkına göre ayırma işlemidir ve kuru olarak gerçekleştirilmektedir. Ayırma işlemi d50 *ayırma* boyutu ile karakterize edilmektedir. d50'nin üzerindeki taneler iri fraksiyonu, altındakiler ise ince fraksiyonu ifade eder. Ayırmanın performansı elde edilen üründeki her bir fraksiyonun kütle içerikleriyle belirlenir [1].

Havalı sınıflandırma <2 mm'den mikron boyutuna kadar uygulanır.

Beslenen malzeme + Hava \longrightarrow *SEPERATÖR* \longrightarrow *İri malzeme + [İnce malzeme + Hava]*

Havalı ayırıcılar dört farklı amaç için uygulanabilir [1]:

- İri boyutlu malzemeler ile istenilen boyuta öğütülmüş malzemeyi ayırmak,
- Homojen olmayan bir karışımdaki malzemeleri boyutlarına göre sınıflandırmak,
- Belirli boyuta öğütülmüş malzeme içindeki tozu almak ve
- Birbirine yakın boyuttaki malzemeyi ayırmak.

Ayırma işlemi şu aşamaları kapsar:

- Malzeme ve hava karıştırılarak sınıflandırıcıya (seperatör) beslenir.
- Hava-malzeme karışımı seperatörde (yerçekimi, merkezkaç ve sürüklenme kuvveti sayesinde) ayrışır.
- Küçük taneler hava ile sürüklenir (daha sonra ikisi de ayrılır), iri taneler ise ortamdaki uzaklaştırılır [1].

Gerçek performans eğrisinin hesaplanmasında aşağıdaki yol izlenmelidir [29]:

- Seperatör beslemesinden, iri ve ince aşısından **numune alınması** ve PSD'lerinin hesaplanması,
- Deneysel verilerdeki hataları gidermek ve her akıştaki malzeme miktarını belirlemek amacıyla **madde denkliği** çalışmalarının yürütülmesi,
- Beslemedeki her fraksiyonun iri ya da ince akıştaki bulunma oranlarının belirlenmesi.

Gerçek sınıflandırıcı etkinliği, beslemenin alt ve üst akımdaki sınıflandırılmamış bölümünün de hesaba katılması ile belirlenmektedir.

ANTROPOSEN ÇAĞIN KİRLETİCİLERİ

Kadir Gedik*, Nilay Doğan, Parisa Akbari Dana, Zhala Gachayzade

1.1. GİRİŞ

İnsanoğlu, toplumsal ihtiyaçları karşılamaya yönelik attığı endüstriyel adımlar neticesinde doğal çevreyi ve biyojeokimyasal döngüleri etkileyen güç haline gelmiştir. Son birkaç yüzyıl içerisinde dünyamızın değişim ve dönüşümüne neden olan bu durum, mevcut jeolojik dönemin “Antroposen” terimiyle tanımlanmasını sağlamıştır (Logemann vd., 2022). Etimolojik köken olarak Yunanca "insan" (Antropo-) ve "yeni" (-cene) kelimelerinin birleşiminden oluşan antroposen terimi, insan etkilerinin ve faaliyetlerinin hâkim olduğu bir gezegene doğru geçişi yansıtmaktadır. Kavramın ortaya çıkışı incelendiğinde; 1873 gibi erken bir tarihte İtalyan rahip, jeolog ve paleontolog Antonio Stoppani tarafından "Antropozoik dönem" teriminin kullanıldığı (Allenby, 2014; Crutzen ve Stoermer, 2014), 2000 yılında ise “Antroposen” başlıklı bir makale ile popüler hale geldiği görülmektedir (Crutzen ve Stoermer, 2014). Antroposen kavramı, sınırının nerede olması gerektiği sorusunu da beraberinde getirmiştir. “İnsan çağı” olarak da kullanılan terim, insan faaliyetleri sonucunda dünyadaki doğal süreçlerin bozulmasını yansıtmak için önerilmiş ve başlangıç olarak James Watt'ın buhar makinesi icadından sonra 19. yüzyılın başlarındaki Sanayi Devrimi ile ilişkilendirilmiştir (Zalasiewicz vd., 2016).

Jeolojik dönem olarak Uluslararası Stratigrafi Komisyonu'nun bir bileşeni olan Kuaterner Stratigrafi Alt Komisyonu'nun Antroposen Çalışma Grubu tarafından Uluslararası Kronostratigrafik Çizelge içinde potansiyel yeni bir birim olarak incelenmektedir (Waters vd., 2014). Antroposen zamansal bir kavram olarak, doğası gereği tarihlenememektedir. Jeologlar tarafından çeşitli başlıklarda tartışılan kavram için “Büyük Hızlanma” ifadesi daha fazla tercih edilmeye başlanmıştır (Steffen vd., 2015). İçerisinde bulunduğumuz çağ, ‘antroposen çağı’ veya ‘insan çağı’ olarak isimlendirilmekte veya insan etkisiyle şekillenen önemli ölçüde zor-

2. BÖLÜM

GEÇMİŞTEN GÜNÜMÜZE POLİMERLERİN TARİHÇESİ

Rumeysa Yıldırım, Gizem Urtekin, Güralp Özkoç, Mehmet Kodal*

2.1. GİRİŞ

Yaşamın modernleşmesi ile birlikte her geçen gün plastik tüketim hızı artmaktadır. Bu durum ise ciddi bir çevre kirliliğini beraberinde getirmektedir. Dünyadaki katı atıkların yaklaşık %40'ı plastik temelli atıklardan oluşmaktadır. Endüstriyel olarak kullanılan polimerlerin birçoğu sentetik olduğundan bu polimerlerin mikroorganizmalar tarafından parçalanarak doğaya geri kazandırılması çok uzun yıllar sürmektedir. Bu süreçte, küçük parçacıklara ayrılarak mikroplastik olarak adlandırılan polimerler havada askıda ve toprakta bozunmadan kalarak, ayrıca su kaynaklarına karışarak canlı yaşamını her geçen gün daha da ileri boyutta tehdit etmektedir. Bu bölümde, yaşamımızın değişmez bir parçası olan polimerleri daha yakından tanımak için polimerler hakkındaki temel bilgiler ve polimerlerin geçmişten günümüze gelişimine dair süreç yer almaktadır.

2.2. POLİMER NEDİR?

“Polimer” kelimesi, Antik Yunanca’da poli (çok anlamına gelen) ve meros (birim anlamına gelen) kelimelerin birleşimidir. Polimer yerine büyük molekül anlamına gelen makromolekül terimi de kullanılabilir. Polimerlerin en küçük yapıtaşına “monomer” adı verilmektedir. Bir polimer zincirindeki her molekül tek bir birim olarak kabul edilir ve bunların her birine "mer" adı verilir. Uzun zincirler oluşturmak için birbirine bağlanma yeteneğine sahip olan bu merlerin bir araya gelmesi ile polimerler oluşur (Crawford & Quinn, 2017). Polimerik bir malzemeye ilgili yapılabilecek en güzel benzetme bir tabak spagettidir. Polimer zincirleri aynı spagettide olduğu gibi birbirine dolaşık bir halde bulunurlar. Malzemenin özellikleri, zinciri oluşturan atomlar ve yan zincirler tarafından belirlenir (Gerdeen & Rorrer, 2012). Polimerlerin endüstriyel olarak kullanılabilmesi için yeterli fiziksel ve mekanik özellik sergilemeleri gerekmektedir. Bu ise doğrudan molekül

2.4. SONUÇLAR ve ÖNERİLER

Ambalaj, otomotiv, yapı-inşaat, tekstil, elektrik-elektronik ve ev eşyaları gibi birçok alanda oldukça yaygın bir şekilde kullanılan plastikler veya genel adıyla polimerler her geçen gün daha fazla uygulama alanı bulmakta ve üretim kapasiteleri artmaktadır. Örneğin, eşya plastikleri olarak adlandırdığımız, bir poliolefin olan ve plastik tabak, çatal, kaşık ve ambalaj sektörü gibi geniş bir kullanım alanına sahip olan polietilenin küresel pazardaki üretim hacminin 2021 yılında 109 milyon ton olduğu bilinmektedir. Bu pazarın yakın gelecekte yaklaşık olarak %25 oranında büyümesi beklenmektedir. Ayrıca, toplam plastik pazarının 2029 yılında yaklaşık 645 milyar USD olacağı öngörülmektedir. Tüm bu durumlar göz önüne alındığında plastiklerden kaynaklanan atık probleminin daha da ileri seviyelere taşınabileceği kaçınılmazdır. Günümüzde hem akademi hem de endüstri tarafından bu durumu bertaraf etmek için çözüm yolları aranmaktadır. Hâlihazırda mevcut plastiklerin yaklaşık %25'i geri dönüştürülmektedir. Son yıllarda çevre kirliliğinin artmasıyla plastiklerin geri dönüşümü oldukça önemli bir konu haline gelmiş ve gelişmiş devletler tarafından yüksek fonlu projelerle bu tür ürünlerin geri dönüştürülebilirlik çalışmaları artarak desteklenmeye başlamıştır. Ayrıca, plastik atık sorununa çözüm olabilecek bir diğer konu ise biyobozunur polimerlerin üretiminin ve kullanımının yaygınlaşmasıdır. Biyopoliesterler olarak adlandırılan poli(laktik asit) (PLA), polihidroksialkanoatlar (PHA) ve poli(bütilen süksinat) (PBS) gibi polimerlerin kullanımının yaygın hale gelmesi oldukça önem arz etmektedir. Bu polimerler kontrollü çevre koşullarında, aerobik mikroorganizmalar tarafından parçalanarak CO₂, H₂O ve biyokütleye dönüşebilmektedir. Daha yaşanılır bir çevre oluşturmak bakımından oldukça önemli malzemelerdir. Sentetik polimerlerin geri dönüştürülebilirlik çalışmalarının yaygınlaşması, biyobozunur polimerlerin endüstriyel olarak daha yaygın ticari ürünlere dönüşmesi ve insanlara çevre bilincinin ileri boyutta kazandırılması yoluyla plastiklerden kaynaklanan çevre kirliliğinin önemli derecede önüne geçilebileceği düşünülmektedir.

3. BÖLÜM

DÖNGÜSEL EKONOMİ BAĞLAMINDA PLASTİK ATIKLARIN YÖNETİMİ

Müfide Banar*, Aysun Özkan, Zerrin Günkaya, Alp Özdemir

3.1. GİRİŞ

Plastik atıkların yeryüzündeki dağılımı doğrudan veya dolaylı olarak insan nüfusu ile bağlantılıdır. Tüm Dünya’da 1970’li yıllarla birlikte plastik üretimi ve buna bağlı olarak, plastik ambalaj atığı miktarı artmıştır. Plastik ambalajlara örnek olarak; su ve meşrubat kutuları, sıvı yağ şişeleri, deterjan kutuları, şampuan kutuları, yoğurt ve peynir kapları vb. verilebilir.

Dünya’daki plastik üretimi artışına paralel olarak Türkiye’de de her geçen yıl bu miktar artmakta, ülkemizdeki plastik endüstrisi yıllık 10 milyon ton üretim ve 250.000 kişiye sağlanan istihdamla Dünya’da 6. sırada bulunmaktadır. Türkiye’nin ithal ettiği hurda plastiğin tonu 400 USD iken, orijinal ham maddenin fiyatı 2000 USD’dir. Bu bağlamda ithal edilen hurda plastiğin geri dönüştürüldükten sonra 1000 USD’ye satılması ülkemizdeki geri kazanım tesislerinin ithalata ağırlık vermelerine sebep olmaktadır (http-1, 2023). Nitekim, 2013 yılında yapılan plastik atık ithalatı 11 bin ton iken 2020 yılında 775 bin tona ulaşmıştır. 2019 yılında 1200 adet olan lisanslı plastik geri kazanım tesisi, 2020 yılında 1300’lere çıkmış, Mart 2021 itibariyle lisanslı tesis sayısı 1593’e ulaşmıştır.

Dünya’da toplanan atık plastikler 2019 yılına kadar Çin tarafından alınıyor-ken, Çin’in 2019 yılı itibariyle atık plastik ithalatına yasak getirmesi, atık plastik ticaretinde tüm dengelerin bozulmasına neden olmuş ve lojistik olarak Avrupa ülkelerine en yakın olan ülkemiz, atık plastik ithalatında Malezya’dan sonra ikinci sıraya yükselmiştir. Özellikle atıklarından kurtulmak isteyen Avrupa ülkeleri, ülkemizdeki geri kazanım potansiyelinden faydalanmaya başlamış, bazı atıklarını bedelsiz veya üstüne para vererek ülkemizde bulunan geri kazanım tesislerine göndermeye başlamıştır. İthalatın artmasıyla yurtiçi toplama faaliyetlerinin olumsuz yönde etkilenmemesi amacıyla ülke ekonomisine katma değer sağlayacak ve

toplanması ve ayrılması için, yapay zeka ve makine öğrenmesi gibi uygulamaların kullanılması, tüm belediyelerde çoklu sensörler (ultrasonik ve kızılötesi) ile birleştirilmiş akıllı atık kutularının tercih edilmesi önemlidir. Akıllı atık kutularının kullanılması, insan gücünü, atık kutusu sayısını azaltır, emisyonları ve ulaşım araçlarının yakıt kullanımını azaltarak pozitif çevresel dışsallıkları artırır. Bunun yanı sıra, özellikle gelişmekte olan ülkelerde, plastik atıkların toplanmasındaki en önemli sorun, kayıt dışı atık toplama sektörüdür. Atığın resmi bir şekilde toplanması ve geri dönüştürülmesi için kayıt dışı sektörün kontrol altına alınması gerekir ve böylelikle nihai olarak ürünlerin piyasadaki geri dönüşüm oranı hızlanacak ve plastik atıkların verimli bir şekilde kullanılması sağlanacaktır. Ayırma tesislerinde kullanılacak yakın kızılötesi (near infrared, NIR) gibi ileri teknoloji sistemler plastik ambalaj atıklarını, manuel ayırma işleminden daha doğru ve daha hızlı algılar ve sınıflandırır. Ayrıca, özellikle ambalaj üreticilerine/piyasaya sürenlere, plastik atıkların geri dönüşümünü sağlamak ve eşdeğer miktarda geri kazanılmış ve geri dönüştürülmüş plastik kullanmak zorunluluğu gibi belirli hedefler koymak da yerinde olacaktır. Plastik atıkların geri dönüşümünde de temiz olarak toplanacak atıklarla katma değeri yüksek ürünlerin üretileceği proseslerin tercih edilmesi ve bu ürünler için bir pazar oluşturulması önem arz etmektedir. Plastiklerin oluşumundan bertarafına kadar sürdürülebilir atık yönetim ilkelerine göre yönetimiyle hem oluşturdukları çevresel etkilerin minimize edilmesi hem de yeni bir ürün üretimiyle kaynakların korunması mümkün olacaktır.

4. BÖLÜM

PLASTİKLERİN YAŞAM DÖNGÜSÜ DEĞERLENDİRMESİ

Müfide Banar*, Aysun Özkan, Zerrin Günkaya, Alp Özdemir

4.1. GİRİŞ

Plastikler ambalajlamadan tekstile, inşaattan otomobil sektörüne çok geniş bir ürün yelpazesinde kullanılmaktadır. Plastiklere olan bu büyük talep, üretimde kullanılan ham madde kullanımını, enerji tüketimini ve atık plastiklerin neden olduğu çevresel etkilerin bütüncül bir şekilde düşünülmesini, söz konusu çevresel etkileri belirlemek ve sistematik olarak azaltmaya yönelik çalışmalar için tüm tedarik zincirini kapsayacak bir yaşam döngüsü düşüncesinin benimsenmesini gerektirmektedir. Diğer yandan küresel çapta plastik üretimindeki artış, plastik atık oluşumunda da büyük artışa neden olmaktadır. Bu atıklar, sürdürülebilir ve dögüsel bir yaklaşımla yönetilmediklerinde çevrede sürekli birikmekte, biyolojik olarak bozunamadıkları için gözle görülemeyen parçalara (örn. nanoplastik) dönüşseler bile çevre ve insan sağlığını etkilemeye devam etmektedirler. Bu noktada, plastik ürünlerin üretim sürecinde ve atık haline geldikten sonraki aşamalarda neden oldukları çevresel etkilerinin belirlenmesinde Yaşam Dögüsü Değerlendirmesi (Life Cycle Assessment, LCA) yaklaşımı, ürünlerin ve süreçlerin sürdürülebilirliğinin ölçülmesinde kullanılan çevresel boyutların ele alındığı önemli bir araçtır. LCA, şirketlerin ürünleri için stratejik kararlar almak amacıyla kullanılabilmele birlikte atıkların çevresel akıbetlerinin belirlenmesinde de sıkça uygulanan bir yöntemdir.

4.2. YAŞAM DÖNGÜSÜ DEĞERLENDİRMESİ

LCA, bir eylemin tüm çevresel boyutlarını; ham maddenin doğadan eldesinden, tüm atıklar tekrar doğaya dönene kadar değerlendiren bir sistemdir. Bu değerlendirme, ürünün işlenmesinde olduğu kadar enerji dahil olmak üzere ham maddenin üretilmesi, kullanılması, atıkların yeniden kullanım, geri dönüşüm, geri kazanım, arıtım ve bertarafı sırasında havaya, suya ve toprağa olan tüm etkileri içerir. LCA'lar hem doğrudan (üretim aşamasında oluşan emisyonlar ve kullanılan enerji

lımlarında bulunan veri tabanlarındaki arka plan veri ile ilişkilendirilmesi gerekir. Bu şekilde hazırlanan veri setleri yazılımda bulunan etki değerlendirme yöntemleri ile çevresel etkilere dönüştürülür. Diğer yandan, etki değerlendirme yöntemlerinde plastik atıklardan kaynaklanacak olan mikroplastik emisyonları ve mikroplastiklerin çevresel etkileri ile ilgili karakterizasyon faktörleri bulunmamaktadır. Bu verilerin olmaması, LCA aracılığıyla mikroplastik emisyonlarının çevresel etkilerinin değerlendirilmesinde sınırlayıcı bir faktördür. Bu yönde sınırlı sayıda literatür çalışması bulunmakta olup bu çalışmalarda araştırmacılar, kendi hesapladıkları karakterizasyon faktörü değerleri ile ele aldıkları ürün için mikroplastiklerin çevresel etkisini hesaplamaktadır. Bu nedenle, LCA veri tabanlarına ve etki değerlendirme yöntemlerine mikro ve nano plastik gibi yeni emisyonların dahil edilmesi, yayılan mikro ve nano plastik miktarı ile insan veya ekotoksikolojik etki kategorileri arasındaki ilişkiyi temsil eden gerekli karakterizasyon faktörlerinin oluşturulması gerekmektedir. Böylece, plastik ürünlerle ilgili yapılan tüm LCA çalışmalarında, mikroplastik gibi önemli bir etki gözden kaçırılmamış olacak ve LCA'nın bütünselliği sağlanmış olacaktır.

5. BÖLÜM

MİKROPLASTİKLER VE NANOPLASTİKLER

Ülkü Nihan Tavşanoğlu*, Tamer Çırak, Gökben Başaran Kankılıç

5.1. GİRİŞ

Son yüzyılda insan faaliyetlerinin artmasıyla birlikte küresel ölçekte plastik kullanımı da benzer şekilde bir artış eğilimi sergilemektedir ve günümüzde artık plastikler yaşadığımız çağın bir göstergesi olarak nitelendirilmektedir (Waters vd., 2016). Bu bölümde plastiklerin temel kullanım alanları, dönüşüm ve bertaraf süreçleri ile çevresel etkileri mikroplastikler ve nanoplastikler özelinde fayda-zarar değerlendirmesi de yapılarak açıklanmıştır.

İnsanlık tarihinin başlangıcından itibaren beslenme, barınma, ulaşım ve savunma temel ihtiyaçların özünü oluşturmuş ve buna bağlı olarak araç ve gereç gereksinimi gelişmiştir. Zamanla nüfus artışı, refah seviyesinin yükselmesi, popülasyonlar arası etkileşimlerin artması gibi nedenlerle birlikte buluşlar ve teknolojik gelişmeler de dikkate alındığında daha dayanıklı, daha çok miktarda ve kısa sürede üretilebilen materyallere ve üretim yöntemlerine talep oluşmuştur. Tüm bu süreç ve ihtiyaçlar doğrultusunda polimer kimyası alanındaki bilgi birikimi ve teknolojik gelişmeler sayesinde plastik olarak tanımlanan polimerik materyaller ortaya çıkmıştır. İhtiyaçlar doğrultusunda düzenlenebilir geniş elastik karakter, yüksek mukavemet ve işlenebilirlik gibi özellikler düşük üretim maliyeti ile birleştiğinde plastikler günümüzde birçok alanda en yaygın kullanılan malzemelerden birisi haline almıştır. Plastiklerin en yaygın olarak kullanıldıkları uygulamaların başında %44'lük bir payla ambalajlama bulunmakta ve devamında sırasıyla yapı-konstrüksiyon, otomotiv, elektrik-elektronik, ev gereçleri, eğlence-spor ekipmanları ve tarımsal uygulamalar gelmektedir (Plastics Europe, 2022). Alternatif malzemelerle karşılaştırıldıklarında birçok alanda düşük maliyetli ve hızlı üretimleri nedeniyle plastikler son tüketici açısından da daha kolay temin edilebilmekte ve tercih edilmektedir. Tek kullanımlık plastiklerin yaygınlaşması gibi toplumda oluşan alışkanlıklar, plastik atıkların depolanma, bertaraf edilme ve geri dönüşüm gibi

6. BÖLÜM

PLASTİK PARTİKÜL ÖRNEKLEME TEKNİKLERİ

Akif Arı, Pelin Ertürk Arı

6.1. GİRİŞ

Dünya genelinde insan nüfusunun ve buna bağlı olarak sayısız ihtiyacın artmasıyla ilişkili olarak plastik üretim, kullanım ve tüketimi artmaya devam edecektir (Choong vd., 2021). Buna paralel olarak pek çok araştırmacının hemfikir olduğu küresel istatistiklere göre, 1950 ile 2018 yılları arasındaki toplam plastik üretim miktarları 1,5 tondan 359 tona ulaşmıştır. Küresel arz eğiliminin benzer şekilde devam edeceği varsayıldığı takdirde ise 2050 yılında toplam birikimli plastik üretiminin 34 milyar ton seviyesine ulaşacağı hesaplanmıştır (Zhang vd., 2021). Bu yüksek üretim istatistiklerine karşın, nispeten zayıf enerji içeriği ve düşük geri dönüşüm verimleri sebebiyle üretilen toplam plastik kütesinin sadece küçük bir kısmı enerji üretimi ve/veya çeşitli süreçlerle geri kazanılırken, çok büyük bir kısmı ise atık olarak çevresel sistemlere karışmaktadır (Sutherland vd., 2010).

Çevresel alıcı ortamlarda büyük boyutlu olarak atılan bu plastik atıklar, ultraviyole foto-bozunum, mekanik aşınma/ayırışma, biyolojik bozunma ve hidroliz gibi uzun süreli bozunma ve parçalanma basamakları şeklinde tanımlanabilen süreçler neticesinde mikro ve nano boyutlara parçalanmaktadırlar. Her ne kadar bu parçalanma ürünlerinin boyutsal dağılımına göre farklı sınıflandırmalar bulunsun da boyut aralığı 5 mm ve altında olan fraksiyon ilk kez 2004 yılında “mikroplastik” olarak isimlendirilerek çevresel izleme çalışmalarına yeni bir kavram olarak dahil edilmiş (Thompson vd., 2004), ve bu tarihten sonra konuyla ilişkili bilimsel çalışmaların sayısı logaritmik olarak artmıştır (Du ve Wang, 2021). Öyle ki, konuyla ilgili güncel literatürde, hatta oldukça prestijli yayın organlarında, çeşitli çevresel kompartmanlardaki mikroplastiklerin dağılımı, kaynakları ve sağlık etkilerine odaklı çalışmaların yanında, ayrıca bilimsel veri tabanlarında yayınlanan “mikroplastik (MP)” başlıklı çalışmaların zamansal (yıllara göre artışı) ve mekânsal (hangi ülke/kıtada gerçekleştirildiği) değerlendirmelerini özetleyen makalelere de rast-

atmosfer, su ve toprak ortamlarında mikroplastik kirleticilerin miktar ve türlerinin yüksek doğrulukta belirlenmesi ve mümkün olan en yüksek temsiliyet, ve aynı zamanda en düşük girişim/kirlenme potansiyeli bulunan numune alma yöntemleri özetlenmiştir. Aynı zamanda söz konusu her bir çevresel ortam veya matris için mevcut alternatif mikroplastik numune alma yöntemleri de tartışılarak, bilinen avantaj ve dezavantajları listelenmiştir. Bu sayede okuyucu için özellikle numune alma yaklaşımının belirlenmesi konusunda daha hızlı ve sağlıklı, aynı zamanda ekonomik ve efektif yöntem tercihlerinin hızlı şekilde seçilmesine yardımcı olmak amaçlanmıştır.

7. BÖLÜM

MİKROPLASTİK NUMUNE HAZIRLAMA VE ANALİZ TEKNİKLERİ

Mansoor Ahmad Bhat, Fatma Nur Eraslan, Gülay Ertaş, Eftade O. Gaga*

7.1. GİRİŞ

Plastikler tarım, sanayi, tıp, askeriye, günlük ihtiyaçlar ve havacılık gibi çok sayıda farklı alanlarda yaygın olarak kullanılmaktadır. Bunun bir sonucu olarak plastik ürünler herhangi bir işlem görmeden ekolojik çevrede atık olarak ortaya çıkmaktadır ve bu atıkların önemli bir kısmını mikroplastikler (MP'ler) oluşturmaktadır. Makro plastikleri (>5 mm) sucul ortamlar başta olmak üzere diğer çevresel matrislerde tespit ve karakterize etmek amacıyla kullanılan metotlar, boyutları daha küçük olan birincil ve ikincil mikroplastikler için kullanılanlara kıyasla daha basittir (Bhat vd., 2023). Çıplak gözle görülebilen bu plastik parçacıklar mikroskopa gerek duyulmadan buldukları matristen kolaylıkla ayırt edilerek spektroskopik yöntemler ile karakterize edilebilirler. Öte yandan karasal, sucul ve hava ortamlarında belirlenen MP'ler çoğunlukla ikincil mikroplastikler olup boyutları çok daha küçüktür (Wong, vd., 2020). Bu durum MP'lerin buldukları matristen ayrılmasını, tespitini ve karakterize edilmesini zorlaştırmaktadır. Makro plastikler için kontaminasyon önemli bir analitik problem olmazken, mikroplastikler için kontaminasyonu engelleyecek ve izleyecek detaylı analitik prosedürlere ihtiyaç vardır (Akanyange vd., 2021). Bu bölümde, mikroplastiklerin çevresel matrislerde belirlenmesi için kullanılan ön işlemler ve yaygın olarak kullanılan analitik tekniklere yer verilecektir. Bu sürecin önemli bir parçası olan örnekleme ise çevresel örneklerin çeşitliliği dikkate alındığında ayrıca dikkat edilmesi gerektiğinden ayrı bir bölümde tartışılmıştır. MP'ler, çapı 5 mm'den küçük olan plastik parçacıklardır (Thompson vd., 2004). Son yıllarda, atık MP miktarı giderek artmakta ve bu artış çevre ve canlılar için tehdit haline gelmektedir (Bhat vd., 2022a, 2022b; Eraslan vd., 2021, 2023; Guo vd., 2020). Ek olarak, çevreye yayılan MP'ler süreç içerisinde biyotoksisiteye sahip ve plastiklerin üretimi esnasında farklı amaçlarla eklenen katkı maddelerinin salınmasına sebep olabilmektedir. Ayrıca, MP'lerin geniş yü-

8. BÖLÜM

MİKROPLASTİK MEVZUATI VE YASAL DÜZENLEMELER

Merve Özkaleli Akçetin, Perihan Binnur Kurt Karakuş*

8.1. GİRİŞ

Tek kullanımlık ürünlerin yapımında sıklıkla kullanılan plastikler, yapısında barındırdıkları çeşitli kirleticiler sebebiyle son zamanlarda üzerine pekçok araştırmanın yoğunlaştığı en büyük kirletici grubunu oluşturmaktadır. Doğal süreçlerle bozunmaları uzun yıllar süren plastikler; değişen çevresel koşullarla birlikte nitelik değiştirmektedir. Makro boyutlardan mikro ve hatta nano boyutlara parçalanması ve mikro/nano boyuttaki plastiklerin makro boyuttakilere kıyasla daha tehlikeli ve zararlı olduğu ve bu sebeple de kontrol altına alınması gerektiği birçok ülkede tartışılmakta, bu durum ülkemiz için de önem arz eden konular arasında bulunmaktadır.

Çevresel ortamların sağlığı hiç kuşkusuz bütün canlılar için önemlidir. Tabiatın bütün canlılara yaşam ortamı sağladığı farklı çevresel ortamlarda bulunan olumlu ve olumsuz bütün etkenler en küçük organizmadan en gelişmiş organizmaya kadar birçok canlıyı etkilemektedir. Bu sebeple aslında sağlıklı bir çevresel ortam, gelecek nesillere de sağlıklı bir şekilde bırakılması esas olan bir miras niteliğindedir.

Organik/inorganik kirleticilerin, çevresel ortamlara salıverilmesini/mevcudiyetini kısıtlayan, kalitesi azalmış çevresel ortamlardaki kirleticilerin belirlenmesi ve iyileştirme çalışmalarını kapsayan çeşitli yönetmelikler ve yasal düzenlemeler bulunmaktadır. Çevresel ortamlarda bulunan kirleticilerin niteliklerinin değişmesi ile birlikte bu düzenlemeler güncellenmekte ve kapsamı içerisine alınan kirleticiler ve bu kirleticilere yönelik kontrol mekanizmaları arttırılmaktadır.

Plastik ve plastik türevi atıklar, 21. yüzyılın en çok maruz kaldığı kirletici grubu içerisinde bulunmaktadır. Günlük kullanım ürünleri baz alındığında plastik-

lerle bertarafını sağlayacak yasal yaptırımların oluşturulması gerekmektedir. Uygulanabilirlikten uzak yönetmeliklerle mevcut atık sistemi içerisindeki MP'lerin kontrol altına alınabilmesi zorlayıcıdır. Ek olarak MP'lerin bünyelerinde başka kirletici gruplarını da bulundurduğu veya kirleticileri adsorbe/absorbe ederek konsantre hale getirdiği de bilinmektedir. Bu sebeple MP'ler hayli karmaşık ve içinden çıkılması zor bir kara kutu niteliğindedir. Buradan hareketle, MP'ler için hazırlanacak yasal düzenlemelerin yapısındaki kirletici gruplarını barındırması açısından diğer yasal düzenlemeleri de kapsayarak daha kontrol edici bir hale getirilmesi gerekmektedir.

- **Sınır Aşan Uygulamalar:** AB çevresel uygulamalara yatırım yapan öncü bir organizasyondur. Çapı geniş ülkelere yayılan AB uygulamaları, kendi sınırları içerisinde kalmayıp üye veya aday ülkeler bazında da uygulama yapılmasını dayatmaktadır. Bu sayede aslında bölgesel/küresel bazda bir hareketlilik sağlanmakta ve aslında bir kelebek etkisi niteliğinde küresel ölçekli sonuçlar ortaya çıkmaktadır. MP kirliliğinin önlenmesi için de AB başta olmak üzere ortak hareketle yapılan düzenlemelerin, ortak geliştirilen projelerin etkileri de yine geniş ölçüde olacaktır.
- **Standartlaştırma:** MP'lerin kontrol altına alınmasının etkili bir şekilde sürdürülebilmesi için tüm çevresel ortamlara ve gerekirse faaliyet kapsamına yönelik standartların geliştirilmesi faydalı olacaktır. Örneğin MP'lerin tanımlanması için tek bir standardın oluşturulması kavramlarla ilgili çeşitliliğin ortadan kaldırılması ve tanımlama ile ilgili belirsizliğin sonlanmasını sağlayacaktır. Standartlaştırma hem çevre sağlığı hem de toplum sağlığı açısından önem arz etmektedir. Bu sebeple küresel ya da bölgesel nitelikli olacak şekilde standartların oluşturulması gerekmektedir.

9. BÖLÜM

SU KAYNAKLARINDA (YER ÜSTÜ VE YER ALTI) MİKROPLASTİKLER

Emine Can Güven, Kadir Gedik*

9.1. GİRİŞ

Nüfus artışı, iklim değişikliği ve endüstriyel faaliyetler ile paralel olarak artan su kıtlığı sonucunda su kirliliği, küresel ölçekte acilen izlenmesi ve önlem alınması gereken ciddi bir sorun haline gelmiştir. Temiz suya erişimin sorunlu olduğu bölgeler başta olmak üzere su ile ilişkili hastalıklar Dünya’da en önemli sağlık problemlerinden birisi olmaya devam etmektedir. Bu nedenle, su kaynaklarının korunmasına yönelik en iyi arıtma teknolojilerinin geliştirilmesi için sulardaki kirleticilerin detaylı şekilde belirlenmesi gereklidir. Su ortamında özellikle son yıllarda tespit edilen mikroplastikler (MP), kirlilik izleme ve önleme çalışmalarında dikkat çeken kirleticiler haline gelmiştir. Su ortamındaki MP kirliliği sadece sucul ekosistem için değil aynı zamanda insanların yaşamsal faaliyetleri ve sağlığı için de bir risk teşkil etmekte olup insanlar plastik kirliliğinin sadece kaynağı değil, aynı zamanda bu kirliliğe maruz kalan tarafıdır.

Plastiklerin su ortamında, özellikle de akarsu ve denizlerde oluşturduğu kirlilik ve buna bağlı olarak kamuoyunun dikkati, 1950'lere dayanan seri plastik üretiminin başlangıcından bu yana önemli ölçüde artmıştır (Uzun vd., 2022). Su ortamında MP'lere yönelik yapılan çalışmaların birçoğu MP mevcudiyeti, boyutu, şekli, türü ve dağılımına yöneliktir. MP'lerin akıbeti, kaynakları, biyolojik birikimi, diğer maddeler için vektör kirletici olması ve su ortamlarında dağılımının modellenmesi üzerine sınırlı sayıda çalışma olmakla birlikte son yıllarda bu çalışmalar artış göstermiştir (Uzun vd., 2022). MP'lerin sulara yayılımı ve miktarı zamanla arttığından çeşitli su ortamlarına yönelik araştırmalar artarak devam etmektedir. Bu çalışma kapsamında su kaynaklarındaki MP'ler içme suyu, tatlı su kaynakları (akarsular, göller ve yer altı suyu) ve tuzlu su kaynakları (denizler ve okyanuslar, kıyı lagünleri) başlıklarında detaylı olarak değerlendirilmiştir.

tespit çalışmalarında sedimanlar da değerlendirmeye alınarak daha bütüncül bir yaklaşım ortaya konabilir.

Denizler ve okyanuslar MP mevcudiyeti, dağılımı ve taşınımının en fazla araştırıldığı su ortamlarıdır. Deniz ve okyanus suyunda MP'lerin mevcudiyeti su yüzeyinde veya çeşitli su derinliklerinde, sedimanda ve deniz canlılarında yapılan araştırmalara konu olmuştur. Ancak örnekleme ve analiz yöntemlerindeki bazı farklılıkların sonuçların değerlendirilmesinde sorun teşkil etmesi, deniz ve okyanuslar için de standart yöntemlere olan ihtiyacı göstermektedir. Denizlerdeki MP kirliliğinin büyük bir kısmı sahillerdeki plastik atıklardan kaynaklandığı için sahillerde plastik kirliliğinin önlenmesi ve mevcut atıkların parçalanma sürecine maruz kalmadan yok edilmesi denizlerde ve okyanuslardaki MP kirliliğinin önlenmesinde önemli bir faktördür. Ayrıca denizcilik faaliyetleri, atık su deşarjları, turizm, balıkçılık vb. gibi faaliyetlerden denizlere ve okyanuslara MP girdisinin önlenmesi uzun vadede deniz ve okyanuslardaki kirliliğin azaltılması ve yok edilmesi bakımından önemlidir.

10. BÖLÜM

ARITMA ÇAMURLARINDA MİKROPLASTİKLERİN VARLIĞI VE AKİBETİ

M. Dilara Hatinođlu, İrem ŐimŐek, F. Dilek Sanin*

10.1. GİRİŐ

Atık su arıtma tesisleri (AAT'ler) Őekil 1'de gösterildiđi gibi evsel ve endüstriyel atık sular, yağmur suyu ve çöp sahası sızıntı suyu deŐarjlarıyla yüksek miktarda MP içeriđine sahip atık sulara maruz kalırlar (Ou ve Zeng, 2018). AAT'ler %99,9'a varan MP giderim verimine sahip olmalarına rađmen giriş atık suyundaki yüksek MP miktarları nedeniyle çıkıŐ suyuyla birlikte günlük ortalama 10^5 - 10^8 MP'yi dođaya deŐarj etmektedirler (Sun vd., 2019; Ziajahromi vd., 2016). Ayrıca, atık sudan uzaklaŐtırılan MP'ler arıtma süreçleri sırasında giderilmek yerine çamura aktarılmaktadır (Okoffo vd., 2019). Arıtma çamuru, sürekli olarak ve yüksek miktarlarda üretildiđinden ve içinde bulunan faydalı bileŐenlerinden dolayı pek çok ülkede atık yerine kaynak olarak deđerlendirilmeye başlanmıŐtır. Çamurun daha uygun maliyetli bir Őekilde yönetilebilmesi için yoğunlaŐtırma, susuzlaŐtırma ve kurutma yoluyla yüksek miktarda suyunun giderilmesi gerekmektedir. Yüksek organik ve besin içeriđi nedeniyle, toprak Őartlandırıcı veya gübre olarak arazi uygulaması, çamur için başlıca geri dönüŐüm yolu olmuŐtur. Kuzey Amerika ve Avrupa'da üretilen arıtma çamuru, arazide geri dönüŐtürülerek %50'ye kadar faydalı bir Őekilde kullanılmaktadır (Nizzetto vd., 2016). Öte yandan, uygun Őekilde arıtılmamıŐ arıtma çamurunun araziye uygulanması, patojenlerin varlıđı ve daha da önemlisi toksik organikler ve MP'ler de dahil olmak üzere bazı eser kirleticilerin ekosistemde birikmesi nedeniyle artan bir endiŐe yaratmaktadır (Chen vd., 2020). Atık sudaki MP'lerin %90'ından fazlasının çamurda birikmesi nedeniyle, AAT'lerin çevresel MP kirliliđi için fazladan bir kaynak oluŐturduđu açıktır (Zhang vd., 2020). Yıllık ortalama 10^6 - 10^{14} MP'nin yakma, düzenli depolama ve çamurun araziye uygulanması yoluyla çevreye salındıđı gösterilmiŐtir.

artırabileceği göz önünde bulundurulduğunda çamurdaki diğer birçok kirletici gibi MP'lerin de çamur kütlesi bazında raporlanması önerilmektedir.

MP analizinde standardizasyonun yanı sıra, çamur arıtma süreçleri sırasında MP'lerin akıbeti ve etkilerine ilişkin daha çok araştırma yapılmasına gerek olduğu görülmektedir. Çamur arıtımındaki fiziksel, kimyasal ve biyolojik stres faktörlerinin MP'ler üzerinde bir miktar bozunmaya sebep olduğu ve eş zamanlı olarak MP'lerin de bu işlemlerin verimliliği üzerinde etkisi olduğu sınırlı sayıda çalışmada gösterilmiştir. Özellikle çamur dezentegrasyon işlemlerinin (örn. termal hidroliz, alkali, ultrasonikasyon, ozonlama ve enzimatik) MP'lerin pek çok fiziko-kimyasal özelliklerini değiştirebileceği öngörülmektedir. Dolayısıyla, anaerobik çürütme öncesinde uygulanan dezentegrasyon işlemleri MP'lerin çürütme sırasında bir dereceye kadar biyobozunmasına yardımcı olabilmekte ve toksisite mekanizmaları da dahil olmak üzere mikroorganizmaların süreç sırasındaki hareket tarzlarını değiştirebilmektedir. Ayrıca, MP'lerin çamurdaki diğer mikrokirleticilerle birlikte çamur arıtma süreçleri üzerindeki birleşik etkisinin araştırılması, MP'lere adsorplanma yoluyla doğaya taşınan toksik kirleticilerden kaynaklı uzun vadeli çevresel risklerin öngörülmesi açısından önem arz etmektedir. Sonuç olarak, MP'lerin akıbetini ve etkilerini sistematik olarak araştıran daha fazla çalışma yapılması, anlayışımızı büyük ölçüde geliştirecek ve çamur bazlı MP kirliliğine yönelik çözümlere odaklanmamızı sağlayacaktır.

11. BÖLÜM

MİKROPLASTİKLERİN TOPRAK EKOSİSTEMİNDEKİ ÖYKÜSÜ

Ece Tuğba Mızık, Zehra Yiğit Avdan*

11.1. GİRİŞ

Teknolojik gelişmeler ve sanayileşmeyle birlikte insan yaşamını kolaylaştırmak amacıyla her yıl tonlarca plastik üretimi gerçekleştirilmektedir. Plastikler yüksek kimyasal kararlılık, yüksek plastisite, hafiflik, iyi süneklik ve elektrik yalıtımı özelliklerine sahip düşük maliyetli malzemelerdir. Bu özellikleri nedeniyle plastikler ambalaj, inşaat, tekstil, ilaç, tarımsal üretim ve elektronik imalatı gibi sektörlerde yaygın olarak kullanılmaktadır (Thompson vd., 2009). Avrupa Plastik Üreticileri Birliği (Plastics Europe) tarafından yayımlanan plastik üretimi istatistiklerine göre 2016 yılında 335 milyon ton olan plastik üretimi, hayatımızı değiştiren COVID-19 pandemisinin de etkisiyle birlikte 2020 yılında 367 milyon tona kadar yükselmiştir (Plastics Europe, 2022). Ancak, yüksek düzeyde üretilen ve kullanılan sentetik bazlı polimerler grubunda yer alan plastiklerin kullanım/atık yönetimi modelleri ve düşük geri kazanım oranları atık plastiklerin büyük oranda birikimine neden olmaktadır. Biriken plastik atıklar mikroorganizmalar, hava koşulları, morötesi (UV) ışık ve hidroliz gibi mekanizmalar tarafından bozunmaktadır. Bozunan plastik atıklar parçacık boyutlarına göre makroplastik, mikroplastik (MP) ve nanoplastik (NP) olarak adlandırılmaktadır. Günümüzde MP'ler yüksek miktarda bulunmaları, küçük parçacık boyutları ve uzun mesafelere taşınabilme özellikleri nedeniyle hem su, toprak ve hava ortamı hem de canlı sağlığı için zararlı etkiler oluşturabilecek kirleticiler arasında yer almaktadır (Li vd., 2020; Guo vd., 2020).

Önemli bir çevresel bileşen olan toprak, gezegenimizdeki temel ekolojik işlevlerin yerine getirilmesini üstlenen ve diğer çevresel ortamlarla etkileşime giren doğal bir kaynaktır (Helmerger vd., 2020). Ancak toprak ekosistemi teknolojik gelişmeler, nüfus artışı ve endüstriyel faaliyetler nedeniyle pek çok kirleticiye maruz kalmaktadır. Bu kirleticilerden bir tanesi de parçacık boyutu ve uzun mesafelere taşınma özelliğine sahip olan MP'lerdir. MP'ler toprak ekosistemine atmosferik çökme, tarımsal faaliyetlerde sulama suyu olarak atık su kullanımı, arıtma çamuru bertarafı sonucu oluşan biyolojik katıların gübre niteliğinde kullanımı ve

risklerin azaltılması konusunda fikir alışverişinde bulunmaları, küresel bir tehdit haline gelen toprak MP'lerinin yönetimi açısından oldukça önemlidir.

12. BÖLÜM

HAVADAKİ MİKROPLASTİKLER

Fatma Nur Eraslan, Mansoor Ahmad Bhat, Eftade O. Gaga*

12.1. GİRİŞ

Hava kirliliği, insan sağlığına yönelik en büyük tehditlerden biridir ve her yıl Dünya çapında 7 milyon erken ölüme neden olmaktadır (Ashmore & Dimitroulopoulou, 2009). Son yıllarda yapılan çalışmalar, atmosferdeki küçük plastik partiküllerin yeni antropojenik kirleticiler olarak karşımıza çıktığını göstermektedir (Chen et al., 2020; Dris vd., 2017a; Enyoh vd., 2019; Prata, 2018). Bu plastik partiküller boyutlarına göre makroplastik, mikroplastik (MP) ve nanoplastik olarak sınıflandırılmaktadır. Evrensel olarak belirlenmiş bir tanımı olmamasına rağmen, makroplastikler 5 mm'nin üzerinde boyuta sahip plastik parçalar olarak ifade edilirken, MP'ler genel tanımlanmış bir alt boyut sınırı olmaksızın 5 mm'ye kadar olan plastik partikülleri ve nanoplastikler ise mikron altı aralığında, yani $<1 \mu\text{m}$ olan plastik partikülleri temsil etmektedir. MP'ler kaynaklarına göre (Cole vd., 2011) birincil (mikroskobik boyutlarda üretilen plastikler) ve ikincil MP'ler (çevresel ortamlardaki nispeten daha büyük plastiklerin bozunma ve parçalanma süreçlerinden kaynaklanan plastik parçacıklar) olarak tanımlanmaktadır. MP'lerin her türlü çevresel ortamda bulunması, bu kirleticileri çevre ve insan sağlığı açısından endişe verici hale getirmektedir.

Yapılan çalışmalar MP'lerin okyanuslarda (Fries vd., 2013; Hidalgo-Ruz vd., 2012; Liu vd., 2020), nehirlerde (Duan vd., 2020; Kettner vd., 2017), göllerde (Anderson vd., 2017; Fischer vd., 2016; Su vd., 2016), dağlarda (Ambrosini vd., 2019; Dong vd., 2021; Zhang vd., 2019), toprakta (Corradini vd., 2019; Vermeiren vd., 2020) ve biyotada (Cole vd., 2013; Rezanian vd., 2018; Torre vd., 2016) bulunduğu dair birçok kanıt sunmaktadır. Ayrıca, atmosferik MP'lerin diğer çevresel ortamlar için önemli kaynak olduğu ve uzak bölgelere, okyanuslara (Allen vd., 2019; Brahney vd., 2020; Dong vd., 2021; Evangelidou vd., 2020; Liu vd., 2020; Liu vd., 2020) ve Arktik bölgelere (Ambrosini vd., 2019; Bergmann vd., 2019;

barındırmaları gibi fiziksel ve kimyasal özellikleri ile ilgilidir (Wright ve Kelly, 2017). Bu nedenle, özellikle solunum yoluyla istemsizce iç ve dış ortamlarda maruz kaldığımız MP'lerin nicel ve nitel olarak karakterizasyonu, kaynaklarının belirlenmesi ve azaltımı için önlemlerin alınması son derece önemlidir.

12.6. SONUÇLAR ve ÖNERİLER

Havadaki mikroplastiklerin doğru bir şekilde belirlenmesi, karakterize edilmesi, solunumun önemli bir maruziyet yolu olması ve MP'lerin sağlık etkilerinin anlaşılması açısından son derece önemlidir. Bununla birlikte atmosferik çökeltme, MP'lerin alıcı ortamlara ulaşması için de önemli bir mekanizmadır ve bu bakış açısıyla alıcı ortamlardaki MP'lere katkısının belirlenmesi gereklidir. Henüz standart örnekleme ve analiz protokollerinin oluşmadığı havadaki MP'ler için iç ortamların da ayrıca değerlendirilmesi, iç ortam MP kaynaklarının belirlenmesi ve derişimlerinin azaltılması için önlemlerin alınması faydalı olacaktır. İnsanların iş ortamları başta olmak üzere vakitlerinin çoğunu iç ortamlarda geçirdiği düşünülürse sağlık riski açısından da bu husus önem kazanmaktadır. Literatür incelendiğinde havadaki MP'ler ile ilgili çalışmalarda diğer hava kirleticilerin örnekleme için kullanılan yöntemlerin kullanıldığı görülmektedir ve MP'lerin seçici olarak örnekleme imkân veren örnekleycilere yönelik araştırmaların yapılmasına ihtiyaç vardır.

13. BÖLÜM

MİKROPLASTİKLERİN ORGANİK VE İNORGANİK KİMYASALLARLA VEKTÖREL ETKİLEŞİMİ

Filiz Karakaş*, İlker Balcılar

13.1. GİRİŞ

Mikroplastikler (MP), inorganik ya da organik kirleticilerin doğada taşınmasında ya da canlıların dokularında birikmesinde vektörel bir rol oynamaktadırlar ve ağır metaller, pestisitler ve her geçen gün ortaya çıkan yeni kimyasallarla etkileşime geçebilmektedir. Bu etkileşim sonucu, MP'ler doğadaki diğer kimyasalların biyolojik birikimini (biyobirikim) artırmakta ve kirlilik potansiyelini etkilemektedir. Diğer kimyasallarla sinerjisi daha tehlikeli bir karışım yaratacağından canlıların sağlığı açısından risk teşkil etmektedir.

MP'ler potansiyel olarak toksik olan kimyasalların organizmalara ve diğer canlılara iletilmesi ya da taşıyıcı rol oynayarak bir vektör olarak davranmasıdır. MP'ler bu kimyasalları besin ağına taşınması için önemli bir taşıma yolu veya vektör olabilir. MP'lerin yüzeyinde adsorbe olan kimyasallar ve plastiklerden salınan plastikleştiriciler veya katkı maddeleri, organizmaya partiküllerle birlikte girer ve desorpsiyon süreçleri aracılığıyla lezyonlar gibi etkilere neden olabilir ve nihayetinde insanlara kadar etki edebilir.

İnsanoğlunun ihtiyacı ve yararı gözetilerek sentezlenen ya da üretilen organik ve inorganik kimyasallar doğaya salındıktan sonra insan sağlığına ve doğaya zarar veren kirleticiler haline gelmektedir. MP'lerin polimerik yapısındaki organiklerin salımı ya da farklı çevresel ortamdaki kirleticilerin MP'lerle etkileşimi sonucu canlılar için daha zararlı bir yapıda kokteyl oluşmaktadır. Dolayısıyla, bu kokteylin oluşumunda etkili olan desorpsiyon, absorpsiyon ve adsorpsiyon mekanizmalarının özellikleri ve aralarındaki farklılıklardan bahsedilmiştir. Ayrıca, bu mekanizmaları etkin kılan etkileşim ve bağların (hidrofobik etkileşim, ayrışma etkisi, hidrojen bağları) mekanizmalar üzerindeki etkilerine de değinilmiştir. Bunlara ek olarak, organik/inorganik-MP etkileşimini belirleyen faktörler içerisinde MP'lerin

olan vektörel etkileşimin irdelendiği bölümde ulaşılan önemli sonuç ve öneriler aşağıda sıralanmıştır:

- Literatürde, ağır metallerin MP'lerle etkileşimini ve mekanizmalarını anlatan laboratuvar haricinde çok fazla çalışmaya yer verilmemiştir. Daha fazla saha çalışması ve denge katsayılarının araştırılması bu kirleticilerin çevresel risklerinin belirlenmesi açısından önemlidir.
- MP'lerin çevresel risklerinin (örneğin, çevresel davranış ve ekotoksisite) kapsamlı ve doğru bir şekilde değerlendirilmesi, etkili çevre politikaları geliştirilmesi açısından önemlidir.
- Denge katsayılarının deneysel olarak belirlenmesi zaman alıcı, maliyetli ve hataya açık olabileceğinden in-silico modellerle tahmin edilmesi daha pratiktir. Böylesi, farklı ortamlardaki kirleticilerin MP üzerindeki adsorpsiyon kapasitesi hızlı bir şekilde tahmin edilebilir ve MP'lerin ekolojik risk çalışmaları için gerekli bilgiler sağlanabilir.
- In-silico yaklaşımı her geçen gün ortaya çıkan yeni kimyasallarla MP'lerin etkileşimini belirlemeye yardımcı olabilir ve elde edilen veriler, kirlenmiş sahaların remediasyonuna yönelik modellerin geliştirilmesine katkı sağlayabilir.

14. BÖLÜM

MİKROPLASTİKLERLE KİRLENMİŞ SAHALAR: İHTİYAÇLAR VE ZORLUKLAR

Hale Demirtepe*

14.1. GİRİŞ

İnsan hayatını kolaylaştırmak adına üretilen ürünler, evsel, tarımsal ve endüstriyel kullanım sırasında ve sonrasında ömrünü tamamlayınca atık haline gelir ve/veya atık sulara karışır. Bu atıklar eğer uygun ve planlı bir şekilde yönetilmezse, çeşitli yollarla doğaya karışarak çevre kirliliğine sebep olurlar. Su ve toprak kirliliği, insan sağlığına ve ekosisteme karşı risk teşkil ettiğinden, küresel çapta hayati öneme sahiptir. Birleşmiş Milletler tarafından belirlenen Sürdürülebilir Kalkınma Amaçlarının neredeyse hepsi, su ve toprak kirliliği ile bağlantılıdır (Birleşmiş Milletler, 2021). Çevre ve insan sağlığına yönelik belirlenen amaçların yanı sıra; toplumların gelişmesi, ülkeler arasındaki eşitsizliklerin azalması, adil bir şekilde tüm toplumların sürdürülebilir kalkınmaya dahil edilmesi amaçları da temiz su kaynaklarının ve temiz tarımsal toprak alanlarının sağlanmasına bağlıdır. Bu sebeple, Sürdürülebilir Kalkınma Amaçlarına ulaşmada en önemli konulardan biri kirlenmiş su kaynaklarının ve toprak alanlarının belirlenmesi ve bu kirliliğin giderilmesi için gerekli faaliyetlerin gerçekleştirilmesidir. Bunun için de ilk adım, birincil öneme sahip kirleticilerin yönetimsel çerçevede ele alınmasıdır.

Son yıllarda öncelik kazanan kirleticilerden biri mikroplastiklerdir. Fosil bazlı, biyo-bazlı ve geri dönüştürülmüş plastik üretimi 2021 yılında Dünya çapında 391 milyon tona ulaşmıştır (PlasticsEurope, 2022). Ancak bu sayıya tekstil için kullanılan, sızdırmazlık ürünlerinde, yapııştırıcılarda, boyalarda bulunan, kozmetik ve ilaç üretiminde kullanılan plastikler dahil edilmemiştir (PlasticsEurope, 2022). Kullanımları sırasında ve sonrasında bu plastikler atık haline gelmektedir. Ekonomik Kalkınma ve İşbirliği Örgütü (OECD) tarafından yayımlanan rapora göre kişi başına üretilen yıllık plastik atık miktarı 69 kg (Japonya ve Kore ortalaması) ile 221 kg (ABD) arasında değişmektedir (OECD, 2022). 2019 yılı için küresel çapta üretilen plastik atık miktarı tahminen 353 milyon tondur. Aynı raporda, ortaya

Çevresel ortamlarda mikroplastiklerin örneklenmesi, örneklerin saklanması, işlenmesi ve analizleri için standart ve ulaşılabilir yöntemler geliştirilmeli ve araştırmacıların bu yöntemleri kullanmaları teşvik edilmelidir. Ayrıca, mikroplastik derişimlerinin raporlanmasında da standart bir birim kullanılması, çalışmaların karşılaştırılabilir olması ve risk değerlendirmelerinde belirsizliğin azaltılması açılarından önemlidir.

Toksikolojik çalışmalarda son yıllarda çevresel ortamlardaki derişimlere yakın değerler kullanılmaya başlanmış olsa da (Allen vd., 2022), bundan sonra yapılacak çalışmalarda bu konuya özellikle dikkat edilmeli, ne tip polimerlerin hangi çevresel ortamlarda hangi derişimlerde bulunduğu taklit edilerek ve canlıların maruziyet yolları tüm olasılıklar göz önüne alınarak çalışma planı oluşturulmalıdır. Ayrıca, mikroplastikleri oluşturan sınıfın şekil, boyut ve polimer tipi açılarından büyük bir varyasyon oluşturduğu ve bunların çevresel ortamlarda bir arada bulunduğu düşünüldüğünde, farklı mikroplastiklere maruz kalınması durumunda olası sinerjik/antagonistik etkilerin değerlendirilmesi büyük önem taşımaktadır. Mikroplastiklerin diğer kirleticilerle de etkileşim halinde olması durumu ise risk değerlendirmesinde, kümülatif risk hesaplamalarının yapılması gerekliliğini getirebilir. Bununla birlikte, tehlike katsayılarının hesaplanabilmesi için mikroplastikler için referans doz değerlerine ihtiyaç vardır. Bu değerlerin belirlenmesinde kullanılacak yöntemler de standart bir hale getirilmeli, tutarlı risk değerlendirmelerin yapılmasına olanak sağlanmalıdır. Ayrıca, mikroplastiklere maruz kalma yollarından biri olan deriyle temas yoluna yönelik araştırmalar geliştirilmelidir.

Son olarak, kirlenmiş sahaların tanımlanmasının ardından uygulanacak iyileştirme yöntemleri saha koşullarına uygun olarak seçilmelidir. Ancak, bu aşamada seçilen yöntem aynı zamanda sürdürülebilir olmalıdır. Bir kirleticinin giderimi için uygulanan yöntemlerin başka çevre sorunlarına sebep olmaması adına, uygulanacak iyileştirme yöntemlerinin çevresel, sosyal ve ekonomik açılardan en az hasara sebep olacak ve en çok yararı sağlayacak yöntemler arasından seçilmesi önemlidir. Böylece, mikroplastiklerle kirlenmiş sahaların sürdürülebilir yönetimi ile Sürdürülebilir Kalkınma Amaçlarına ulaşmada bölgesel ve küresel çapta en yüksek katkı sağlanmış olacaktır.

15. BÖLÜM

GIDA ÜRÜNLERİNDE MİKROPLASTİKLER

Kadir Gedik*

15.1. GİRİŞ

Yirminci yüzyılın başından itibaren küresel çapta her alanda çok hızlı gelişmeler ve ilerlemeler yaşanmaktadır. Çeşitli etkenlerin ivmelendirdiği bu itici güç, yeni teknoloji ve üretim tekniklerinin bulunması ile beraber geleneksel gıda üretimlerinin endüstriyel olarak gerçekleştirilmesini sağlamıştır. Yeni gıda ürünlerinin geliştirilmesi, deniz hava ve kara yolu taşımasındaki fiziksel şartlar ve araçların gelişmesi ile beraberinde iletişim ve internet teknolojisindeki gelişmeler ile dünyadaki farklı üreticiler ve tüketiciler arasındaki mesafenin kısılması sonucu uluslararası ticarete pek çok yeni aktör katılmış ve böylece dünyanın herhangi bir ülkesinde istenilen bir ürüne ulaşım kolay hale gelmiştir. Özellikle B2B (Şirketten Şirkete) tarzı ticaretin yaygınlaşmasıyla beraber pek çok üretici dünya gıda ticaretinde yerini almak için çaba sarf etmektedir.

Yaşanan gelişmeler insanoğluna çeşitli kolaylıklar ve avantajlar sağlamasına rağmen bazı dezavantajları da beraberinde getirmektedir. İnsan nüfusunun ve endüstriyel ürünlerin tüketimindeki bu artış ve de diğer etkenler “kirlilik” olarak adlandırılan bir sorunu ortaya çıkarmaktadır. İlk başta sadece çevre kirliliği aklı gelmesine rağmen, çevre kirliliğinin çarpan etkileri, türevleri göz ardı edilmemelidir. Gıda maddelerinin yapısal özelliklerine bağlı olarak gıda ham maddeleri üretimi, gıda işleme teknolojileri ve uygulamaları, taşımacılık, depolama, perakendecilik, gıdaları hazırlama ve tüketme gibi pek çok aşamada gıdalar çeşitli kirletici unsurlarla kirlenmekte, Dünya genelinde milyonlarca insan kontamine gıda ve su tüketimi nedeniyle hastalanabilmektedir. Sonuç olarak ise gıda güvenliği terimi öne çıkmaktadır. Gıda güvenliği; Codeks Alimentarius Uzmanlar Komisyonu tarafından “sağlıklı ve kusursuz gıda üretimini sağlamak amacıyla gıdaların; üretim, işleme, muhafaza ve dağıtımları sırasında gerekli kurallara uyulması ve önlemlerin alınması” şeklinde tanımlanmıştır. 5179 sayılı Gıda Kanununa göre de gıda güvenliği; “Gıdalarda olabilecek fiziksel, kimyasal, biyolojik ve her türlü zararların ber-

insan sağlığı üzerine direkt etkileri hakkında çok az şey bilindiği, tedarik zinciri boyunca mikroplastik gözlemlene teknikleri üzerine yeni araştırmalara odaklanması gerektiği, MP'lerin varlığı ile gıda güvenliğinin nasıl etkilendiği konusunda da bilgi eksikliğinin olduğu ve son olarak plastik atık yönetimi bağlamında mikroplastik mevzuatının geliştirilmesi gerekmektedir (De-la-Torre 2020, Usman vd. 2020, Kadac-Czapska vd. 2022, Sánchez vd. 2022).

TEŞEKKÜR

Bu çalışma, Eskişehir Teknik Üniversitesi Bilimsel Araştırma Projeleri Komisyonu tarafından kabul edilen 22ADP055 no.lu proje kapsamında desteklenmiştir.
