Giriş

Son yıllarda mikrobiyota ve beyin üzerine yapılan araştırmalar, bağırsak mikrobiyotasının bağırsak-beyin eksenini üzerindeki etkisini ve bunun merkezi sinir sistemi ile ilişkili durumlar ve nöropsikiyatrik bozukluklarda potansiyel rol oynadığını vurgulamıştır ^[1]. Altta yatan biyolojik mekanizmalar tam olarak aydınlatılmamış olsa da araştırmalar bağırsak mikrobiyotası ve Santral Sinir Sistemi (SSS) arasında çift yönlü bir etkileşimin olduğunu düşündürmektedir. Bu etkileşim başlıca otonomik, nöroendokrin ve immün yollarla sağlanmaktadır. Bu yollardaki karşılıklı bilgi akışını ise vagus siniri, SSS sinyalizasyon sistemleri, nörotransmitter ve nörotrofinlerin üretimi-kontrolü sağlamaktadır ^[2].

İnsan ve hayvan çalışmaları sonucunda biriken kanıtlar bağırsak mikrobiyotasının normal beyin fonksiyonları, anksiyete bozuklukları, depresyon, şizofreni ve diğer psikotik bozukluklar, yeme bozuklukları ve otizm spektrum bozuklukları üzerinde rol oynadığını göstermektedir ^[3].

Her ne kadar probiyotik formülasyonların ruh sağlığını iyileştirebileceğine dair kanıtlardan 20. yüzyılın başlarından itibaren bahsedilse de, bağırsak mikrobiyotasının psikiyatrik bozuklukların patofizyolojisi üzerindeki rolü ancak DNA/RNA sekanslama teknolojilerindeki ilerlemelerin ardından fark edilmiştir ^[4, 5]. Aşağıda ayrıntılandıracağımız prelinik çalışmalar, çeşitli psikiyatrik hastalıklara sahip bireylerden alınan dışkı mikrobiyota örneklerinin, Germ free farelerde denenmesi sonrasında davranışsal ve fizyolojik profillerde değişimler ortaya çıkardığını tutarlı bir şekilde göstermiştir. Bu durum, psikiyatrik bozuklukların, bir biyobelirteç görevi görebilecek mikrobiyal bozulma modeli ile ilişkili olabileceğini düşündürmektedir.

Diğer yandan psikopatolojilerin ortaya çıkmasında mikrobiyota etkisi konusunda elde edilen tutarlı kanıtlara rağmen hastalıklara spesifik mikrobiyom türlerinin belirlenmesine yönelik çalışmalar oldukça yetersizdir. Bu bağlamda kültür temelli ve moleküler temelli mikrobiyom analiz sonuçlarının psikopatolojilere sahip bireylerde araştırılmasına yönelik çalışmalar son yıllarda artış göstermiştir ^[6].

Tüm dünyada milyonlarca insanın psikiyatrik hastalıklardan etkilenmesi nedeniyle bu hastalıkların mikrobiyota ile ilişkilendirilmesi büyük bir önem taşımaktadır. Bu bölümde major psikiyatrik hastalıkların mikrobiyota ile ilişkisinden ve bu konuda yapılmış olan güncel araştırmalardan bahsedeceğiz.

Mikrobiyota-Bağırsak Beyin Eksenini

Psikiyatrik hastalıklarla diyabet, kardiyovasküler hastalıklar ve metabolik sendrom gibi bozuklukların sıklıkla birliktelik gösterdiği bilinmektedir ^[7]. Fakat metabolik ve psikiyatrik bozuklukların birbirini etkilediği mekanizmalar hâlâ belirsizdir. Davranış ve metabolizmanın bağlantılı olabileceğini düşündüren

görülmüş ve bu bakterilerin Bipolar Bozukluğun patofizyolojisinde önemli bir rol oynamadığı öne sürülmüştür^[79].

Son olarak Bipolar Bozukluk ve bağırsak mikrobiyomu arasındaki bağlantıyı ortaya çıkarmak amacıyla 2021 yılında 13 araştırmanın dâhil edildiği sistematik bir derlemenin sonuçlarına göre; Bipolar Bozuklukta sağlıklı kontrol grubuna oranla bağırsaklarda daha az alfa çeşitlilik tespit edilmiş olup, raporlanan en belirgin taksonomik bulgu, dört çalışmada belirli bir mikroorganizma dalının (Ruminococcaceae familyası, Faecalibacterium cinsi ve Faecalibacterium prausnitzii türü) hasta ve sağlıklı grup arasında bağırsak mikrobiyotasını ayırt etmesiydi. Bütirat üretimi ile bilinen bu dalın üyeleri, üç çalışmada sağlıklı kontrol grubuna göre Bipolar Bozukluk grubunda düşük miktarda tespit edilmiş, ancak dördüncü çalışmada bu bulguların tam tersi elde edilmiştir. Ek olarak, Bacteroides-Prevotella grubu türleri iki çalışmada hasta grupta anlamlı olarak yüksekken, bir çalışmada daha düşük olarak bulunmuştur^[80]. Bu derleme ayrıca Faecalibacterium ve Bacteroides bolluğuna göre düşük α -çeşitliliğinin ve disbiyozisin Bipolar Bozukluğa karakterize mikrobiyal özellik olabileceğini düşündürmektedir. Azalan mikrobiyal zenginlik ve bütirat üretimi, aynı zamanda, Bipolar Bozukluğun altında yatan inflamatuvar patofizyolojiye dair kanıtları da beslemektedir^[80].

Sonuç olarak, hem metabolik hem psikiyatrik bozukluklarda bağırsak sağlığının önemli olduğu artık bilinmektedir. Fakat mikrobiyota konusunda araştırma yapmak metodolojik zorluklar nedeniyle nispeten güç gibi görünmektedir. Yeni çalışmaların mikrobiyota kompozisyonundaki dinamik değişimleri ve de bunların metabolik etkilerini kombine etmesi daha gerçekçi sonuçlar için yardımcı olacaktır. Mikrobiyom dalgalanmalarının günlük olarak haritalandırılması semptomlardaki dalgalanma ile ilişkilendirilebilirse bağırsak mikrobiyotasının beden zihin etkileşimine etkisi ortaya çıkabilir. Özetle mikrobiyotayı araştırmak için yeterli neden bulunmakla birlikte klinik uygulamalarda kullanmak için daha fazla kanıt ihtiyacı olduğu aşikârdır.

CİNSEL FONKSİYON BOZUKLUKLARI VE MİKROBİYOTA*Hacı İbrahim Çimen**Hasan Salih Sağlam*

İdrar yolunun steril olduğu dogması yüzyıldan fazla sürmüştür. Yeni nesil sekanslama teknolojileri ve mikrobiyom araştırmaları için modifiye edilmiş kültür protokolleri sayesinde idrar yolunda değişken bir mikrobiyal spektrum keşfedildi. Üriner sistem mikrobiyotasının varlığı üzerine yapılan çalışmalar sonucunda bazı ürolojik hastalıkların tedavisinde probiyotik ve prebiyotiklerin kullanılıp kullanılmayacağı sorgulanmaya başlandı. Cinsel fonksiyon birçok faktörden etkilenmektedir. Bu faktörler üzerine mikrobiyomun etkileri bu bölümde tartışılarak, ilerleyen dönemlerdeki çalışmalar için yol gösterici olmak amaçlanmıştır.

Giriş

Sağlıklı bir insan vücudunun bakteri, mantar, virüs ve protozoa gibi çeşitli mikroorganizmaları barındırdığı bilinmektedir. Aslında vücut kendi hücrelerinden yaklaşık 10 kat daha fazla mikrobik hücre barındırır. Mikrobiyota terimi bir bireyin içinde ve üzerinde yaşayan mikroorganizmaları belirtirken; mikrobiyom terimi ise belirli bir konakta bulunan mikroorganizmaların genomları, genleri ve tüm ürünlerinin toplamını belirtir¹⁻³. Bunların büyük çoğunluğu bağırsaklarda yaşar⁴. Fakat cilt, üst solunum sistemi ve ürogenital sistemde de bulunur⁵. Canlılar sınıflamasında üst grupta yer alan insanlarda mikrobiyota büyük ölçüde korunmuş iken daha alt sınıflara doğru gittikçe değişkenlik artmaktadır. Tarihsel gelişimi içinde insanoğlu barındırdığı bakteri sayısı ve çeşitliliği ile genetik ve epigenetik farklılığını biriktirmiştir⁶.

Sağlıklı yetişkinlerin mikrobiyotalarını kapsamlı bir şekilde belirlemek, mikrobiyotanın hastalığı ve sağlıktaki rollerini tespit etmek için 2008 yılında İnsan Mikrobiyom Projesi (HMP) kuruldu. Başlangıçta gastrointestinal sistem, oral kavite, cilt, solunum sistemi ve vajinadan örneklemeler yapıldı. Üretral kontaminasyon nedeniyle suprapubik aspirasyon ve mesane biyopsisi gibi yöntemlerle örnek toplamanın yaratacağı etik sorunlar, ayrıca şimdiye kadar steril olduğu düşünülen bir sistemde değişik mikroorganizmaları araştırmanın zorlukları nedeniyle ilk başta mesane mikrobiyotası çalışmaya dâhil edilmedi⁷⁻⁹. Ancak, moleküler biyolojideki gelişmelerle yapılan idrar analizlerinde 'idrarin steril olduğu' dogması çürütülmüştür¹⁰. Sonrasında yapılan çalışmalarda sağlıklı bireylerin üriner mikrobiyom kompozisyonu çıkarılmaya çalışılmıştır (Tablo 1).

Tablodaki çalışmalarda da görüldüğü gibi mikrobiyomlar cinsiyet ve yaşla birlikte farklılık gösterebilmektedir. Bunun yanında mikrobiyomların çevresel faktörlerle ilişkisi de tam olarak ortaya konmadığından bu konu çok önemli ve bakir bir çalışma alanı olmayı sürdürmektedir¹⁸.

laştığımız birçok faktörden etkilenen dinamik bir yapıdır. Cinsel fonksiyonların korunmasının temelinde gastrointestinal ve üriner mikrobiyotanın sağlıklı olması yatmaktadır, diye görünmektedir.

Giriş

İnsan mikrobiyotasının bakteri, virüs, mantar ve protozoa topluluklarından meydana geldiği bilinmektedir. Bu toplulukların genetik yükü ve çevre ile etkileşimi mikrobiyomu oluşturur. Bir başka ifadeyle mikrobiyom, mikrobiyotanın sahip olduğu genetik materyale verilen isimdir ve insan genomundan daha karmaşıktır. Moleküler biyolojideki yeni gelişmeler sayesinde şimdiye kadar steril olduğu düşünülen üriner sistemde dahi değişik seviyelerde mikrobiyal spektrumun olduğu gözlenmiştir. Mikrobiyotanın doğumdan önce bile insan fizyolojisini ve/veya patolojisini etkileyebileceği, infertilite de dâhil olmak üzere çeşitli hastalıklarda rol oynayabileceği saptanmıştır. Yapılan bazı çalışmalarda özellikle seminal vezikül mikrobiyotasının çiftlerin cinsel sağlığını, gebeliği ve yenidoğan sağlığını etkileyecek önemli bir faktör olduğu öne sürülmüştür. Sonuç olarak, son yıllarda mikrobiyomun daha ayrıntılı incelenmesiyle insan hastalıklarında mikrobiyotanın katkısı daha iyi anlaşılabilmiş ve hastalıkların tanı ve tedavisinde yeni yöntemlerin araştırılması daha fazla klinisyenin bu konuya ilgisini artırmıştır.

Erkek Genital Sistem Mikrobiyotası

İnsan vücudu kendi hücrelerinden 10 kat daha fazla mikrobik hücreye ev sahipliği yapmaktadır. Bunların çoğunun bağırsaklarda yaşadığı bilinmektedir ^[1]. Ayrıca cilt, üst solunum sistemi ve ürogenital sistemde de yaşayan mikrobik hücreler bulunur ^[2]. Daha öncesinde üriner sistemin steril olduğu düşünülse de yeni bakteri tanımlama yöntemlerinin gelişmesiyle burada da mikrobiyomların olduğu ifade edilmiştir ^[2]. Fakat, günümüzde üriner sistemde saptanan mikrobiyomların insanlar üzerindeki hastalıklar, çevresel ve mevsimsel faktörlerle ilişkisi henüz net olarak ortaya konulamamıştır ^{[3],[4]}.

Ejakülatta bakteri mikrobiyotasını göz önünde bulundurmadan seminal sıvı kültürü temel alınarak yapılan ilk çalışmalar; daha önce bilinen patojenleri tespit etmeye ve tanımlamaya odaklanmış ^{[5],[6],[7]} ve bakteriyosperminin fertilitiyi olumsuz yönde etkilediği fikri ortaya atılmıştır ^[8]. Bu çalışmaların semen mikrobiyolojisi hakkında önemli bilgiler sağlamalarına karşın, birçok bakteri türü kültürde ekime karşı dirençli olduğu için sınırlı kalmıştır. Bu sorunun üstesinden gelebilmek ve mikrobiyal çeşitliliği araştırabilmek amacıyla organizmaların tespitinde kültürde üretilmesine gerek duyulmayan yöntemlerin geliştirilmesine ihtiyaç duyulmuştur.

16S rRNA gen polimerazı tüm bakterilerde mevcut olan korunmuş bir bölgedir. Geniş aralıklı polimeraz zincir reaksiyonu (PCR) primerlerin kullanılmasıyla, 16S rRNA içinde bulunan korunmuş sekanslar tanımlanarak bakteriyel sınıflandırma ve filogenetik incelemelerde kullanılır. Bu yeni yöntem

Zeynep Cansu Çalışkan

Işkın Pınar Zarakolu

Mikroorganizmalar, 19. yüzyılın sonuna kadar hastalıkların etkeni olarak kabul edilmemişlerdir. Etken oldukları anlaşıldıktan sonraki ilk yüzyılda ise daha çok patojen rollerine odaklanılmıştır. Son yıllarda kommensal mikroorganizmaların insan fizyolojisine etkisini anlamaya yönelik çalışmalar hız kazanmıştır. Özellikle moleküler genetik ve tanısal mikrobiyoloji alanlarında yaşanan gelişmeler, sağlık ve hastalıkta kommensal mikroorganizmaların ve mikrobiyotanın rolünün daha iyi anlaşılmasında rol oynamıştır.

Mikrobiyota bir biyolojik nişte bulunan mikroorganizmaların tümü (bakteri, virüsler, arkea ve ökaryotik mikroorganizma); mikrobiyom ise bu mikroorganizmalar (kommensal, simbiyotik, patolojik) tarafından üretilen RNA, proteinler, metabolitler gibi gen ve gen ürünlerinin tamamı olarak tanımlanmaktadır. Bazı bilim insanları gen ürünlerini metagenom (plazmidler de dâhil olmak üzere bir popülasyonun tüm genetik materyali) olarak tanımlamakta, mikrobiyom ifadesini biyotik ve abiyotik faktörleri içeren; konakçı, mikroorganizma genomları ve çevresel koşulları kapsayan daha geniş bir tanım olarak kullanmaktadır. Mikrobiyomun insan genomundan yüzlerce kat fazla olduğu, milyonlarca farklı gen içerdiği bildirilmiştir. Sayısız çalışma, farklı doku ve organların (göz, ağız, orofarenks, nazofarenks, dış kulak yolu, mide, bağırsaklar, üretra, vajen, cilt...) işleve göre farklılık gösteren mikrobiyota ve dolayısıyla mikrobiyom içerdiğini göstermiştir.

Ulusal Sağlık Enstitüleri tarafından desteklenen İnsan Mikrobiyom Projesi (Human Microbiome Project; HMP) ve Avrupa Komisyonu tarafından desteklenen İnsan İntestinal Sistem Metagenomiği (Metagenomics of the Human Intestinal Tract; MetaHIT) gibi büyük projeler, bireylerin birden fazla vücut bölgesinden örnek alarak; insan vücudundaki tüm mikroorganizmaları belirleme, çevresel faktörlere göre bireysel mikrobiyom farklılıklarını saptama, disbiyozun hastalıklarla ilişkisini araştırma, mikrobiyom saptanmasında kullanılacak yeni biyoinformatik program ve yaklaşımlar geliştirilmesini sağlama gibi amaçlara sahiptir. Her iki proje de 2008'de başlatılmış olup HMP'de dışkı, oral ve nazal kavite, cilt, gastrointestinal sistem, vajina gibi çeşitli biyolojik nişlerdeki bakteri toplulukları, bunların sağlık ve hastalık durumundaki rolü analiz edilmiştir. Başlangıçta, standart mikrobiyolojik yöntemler kullanılarak üriner mikrobiyomun belirlenmesindeki teknik zorluklar ve steril örnekleme için gereken suprapubik aspirasyon örneklerinin alınması etik dışı bulunduğu için sağlıklı bireylerde üriner sistem uzun süre steril olarak kabul edilmiştir. Moleküler biyoloji teknikleri ve kültür yöntemlerindeki gelişmeler üriner sistem, meme, plasenta, beyin gibi daha önce steril olduğu düşünülen çeşitli biyolojik nişlerdeki mikrobiyomun tanımlanmasına olanak sağlamıştır.

Günümüzde mikrobiyomun çeşitli hastalıklara karşı gerek koruma gerekse tedavi amacıyla etkili bir şekilde kullanılabileceğine dair veriler umut vericidir. Yapılan çalışmalar, mikrobiyomun doğal

altın standart olmayıp dışlama teşhisidir. Yapılan çalışmalarda *P. mirabilis*, *A. vaginae* ve *Finegoldia magna* türlerinde artış, *Lactobacillus* türlerinde azalmayla ilişkili bulunmuştur. Yapılan bir çalışmada *Lactobacillus*, *Corynebacterium*, *Streptococcus*, *Actinomyces*, *Staphylococcus* ve *Bifidobacterium* türleri hem OAB hem de kontrol gruplarından izole edilirken *Aerococcus* ve *Actinobaculum* türleri sadece OAB hastalarından izole edilmiştir.

Kronik prostatit/ kronik pelvik ağrı sendromu, Bu sendrom üriner disbiyozla ilişkilidir. *Clostridia*, *Bacteroides* ve *Porphyromonas* türleri gibi anaerop türlerde artış, *Bacillus* türlerinde azalma gözlenmiştir.

Nörojenik mesane, merkezi sinir sistemindeki değişikliklerden kaynaklanan, idrarın depolanmasını ve boşaltılmasını bozan bir üriner disfonksiyondur. Hasta bireylerin ürobiyomunda *E. coli*, *E. faecalis*, *P. aeruginosa*, *K. pneumoniae*, *Actinobaculum massiliense* gibi patojenlerin arttığı gösterilmiştir.

İnterstisyel sistit/ağrılı mesane sendromu, ÜSE yokluğunda mesane ve alt üriner sistemde ağrı, rahatsızlık hissiyle karakterizedir. Kadınlarda daha sıktır. *L. gasseri*, *P. mirabilis*, *P. aeruginosa*, *Francisella tularensis*, *Mycoplasma hyorhinis*, *Helicobacter heaticus*, *Clostridium perfringens*'de artış, *Corynebacterium* spp.'de azalma saptanmıştır. *Saccharomyces* spp. ve Epstein Barr virüsünde de artış saptanmıştır.

Kronik böbrek hastalığıyla takipli bireylerin ürobiyomu, sağlıklı bireylerin ürobiyomlarına göre daha az çeşitlilik gösterme, kronik böbrek hastalarında evre-3'ten evre-5'e doğru ürobiyom çeşitliliği daha da azalmaktadır. **Renal transplant sonrası** bireylerde ise *Escherichia* spp.ve *Enterobacter* spp. gibi potansiyel üropatojen mikroorganizmaların varlığı gösterilmiştir. Ayrıca posttransplant hastalarda BK virüs nefropatiye sebebiyet vermesi nedeniyle önemli olup JC virüsün akut rejeksiyona karşı koruyucu olabileceği düşünülmektedir.

Mikrobiyomun düzenlenmesine yönelik pek çok uygulama mevcut olup probiyotikler bu amaçla kullanılan canlı mikroorganizmalardır. Laktik asit üreterek lümen içi pH'yı düşürür, koruyucu münin oluşumunu artırır ve sekretuar IgA yapımını uyarırlar. Prebiyotikler ise probiyotik özellikteki mikroorganizmaların çeşidini ve/veya aktivitesini olumlu yönde etkileyen besin bileşimleridir. Fruktooligosakkaritler (FOS), inülin ve galaktooligosakkaritler (GOS) en çok bilinen prebiyotiklerdir. Simbiyotikler hem probiyotik hem prebiyotik özelliği olan besinlerken, postbiyotikler probiyotiklerin ürettiği metabolik yan ürünlerdir. Bu uygulamalara yönelik yapılan pek çok çalışma içinde özellikle *Clostridiodes difficile* enfeksiyonlarında FMT sonrası başarıyla tedavi edilen olgular bildirilmiştir. Vajinal mikrobiyota transplantasyonu (VMT) ise bakteriyel vajinoz ve rekürren üriner sistem enfeksiyonlarının tedavisi amaçlanmıştır. Ancak bu konunun aydınlatılması için daha fazla çalışmaya ihtiyaç vardır.

Son 20 yılda hızla ilerleyen çalışmalar sağlıkta ve hastalıkta mikrobiyomun rolünün daha iyi anlaşılmasına olanak sağlamıştır. Sadece enfeksiyon hastalıklarının değil birçok kronik hastalığın etkeni ya da etki eden unsuru olarak değerlendirilen mikrobiyom daha iyi anlaşıldıkça profilaksi, tanı ve tedavi açısından ihtiyaç duyulan gelişmelere ışık tutacaktır. Ürobiyomun steril olmadığı anlaşıldıktan sonra yapılan pek çok çalışma ile sağlıkta ve hastalıkta etkisi incelenmiştir. Ancak yoğunluğunun az olması, kontaminasyon riskinin fazla olması sebebiyle daha kapsamlı çalışmalara ihtiyaç vardır.

Giriş

İnsan mikrobiyotasına ilgi ve mikrobiyota topluluklarının hastalıklarla ilişkisini anlama çabası, son yıllarda önemli ölçüde artmıştır. Günümüzde moleküler ve genetik teknolojilerdeki ilerlemeler, insan vücudundaki geniş mikroorganizma topluluklarının tanımlanmasına ve ayrıca bu bilginin terapötik çözümler geliştirmek için kullanılmasına izin vermektedir.

Gastrointestinal mikrobiyota ile ilgili çalışmalardan sonra, kadın üreme sağlığı ve mikrobiyota ilişkisine de artan oranda bir ilgi vardır. Mikrobiyomun insan fizyolojisindeki hayati rolü göz önüne alındığında, vajinal mikrobiyomun sadece ürogenital sağlık ve disbiyozda değil, aynı zamanda potansiyel olarak fertilizasyonda ve sağlıklı gebeliklerde de önemli bir rol oynadığı gösterilmiştir. Plasenta, meme, uterus ve fallop tüpleri gibi önceden steril kabul edilen dokularda da mikrobiyal toplulukların izole edilmesi, kadın sağlığında mikrobiyal floranın önemli bir rolü olduğunu, doğum öncesi, doğum ve doğum sonrası birçok faktörün, çevresel ve tıbbi müdahalelerle birlikte mikrobiyom aracılığıyla erken ve sonraki yaşamı etkilediğini düşündürmektedir.

Bu derlemede; kadın yaşamının tüm dönemlerinde üreme sistemi mikrobiyotasının yapısı, genel sağlık ve hastalıklarla ilişkisi literatürdeki son bulgular eşliğinde özetlenmiştir.

Vajinal Mikrobiyota

Vajinal mikrobiyomun araştırıldığı çalışmalarda farklı vajinal bölgelerden alınan örneklerde kadın vajeninde 200'den fazla filotipin mevcut olduğu gösterilmiştir. Ancak üreme çağındaki sağlıklı kadınlarda kadın üreme sisteminde, sağlıklı bir vajinal mikrobiyal toplulukta *Lactobacilli* baskınlığı mevcuttur⁽¹⁾. Araştırmacılar *Lactobacillus*'ların miktarı ve dağılımına göre farklılık gösteren beş çeşit mikrobiyal topluluk (CST) olduğunu tanımlamıştır. Gebe olmayan, doğurgan ve asemptomatik kadınlarda CST I (*Lactobacilli crispatus*), CST II (*Lactobacilli gasseri*), CST III (*Lactobacilli iners*) ve CST V (*Lactobacilli jensenii*) başta olmak üzere belirli bakteri toplulukları gösterilmiştir⁽²⁾.

Laktobasiller kadın alt genital traktüsünün savunma mekanizmalarının önemli bir parçasıdır. Kadın genital sağlığının korunmasında ve genitoüriner enfeksiyonların önlenmesinde çok önemli bir rol oynamaktadır⁽³⁾. Glikozun fermantasyonu yoluyla bol miktarda laktik asit ürettiği bilinen *Lactobacillus* suşlarının varlığı, vajen pH'sını düşürür (<4,5), vajinanın asit ortamının korunmasını sağlar⁽⁴⁾. Ayrıca, Laktobasiller, konağın genital enfeksiyonlara karşı korunmasında, laktik asit üretimine ek olarak, patojenlerin vajinal epitelyuma yapışmasını önleyerek, Hidrojen peroksit ve bakteriyosinler gibi antimikrobiyal bileşiklerin üretimi ile destekleyici bir ortam yaratırlar⁽⁴⁾. *Lactobacillus* türlerinin *Klebsiella* türleri, *Staphylococcus aureus*, *Escherichia coli* veya *Enterococcus faecalis* gibi istenmeyen türlerin büyümesini engellemek için antimikrobiyal bakteriyosinler ürettiği gösterilmiştir⁽⁵⁾ (Şekil 1).

bolizmasını artırabilir, serotonin sentezinin düzenlenmesini ve nöronların stabilize edilmesini sağlayabilir, dolaşımdaki insülin benzeri büyüme faktörü-1'i (IGF-1) artırabilir, kemik oluşumunu kolaylaştırır. Bu nedenle, *Odoribacter*'in neden olduğu kısa zincirli yağ asitlerinin artışı, postmenopozal kadınlarda obezite, hiperlipidemi, depresyon ve osteoporozu iyileştirebilir. Bununla birlikte, ürettiği hidrojen sülfür de inflamatuvar bir reaksiyona neden olabilir. Bu mekanizmalarla, *Odoribacter* sadece postmenopozal kadınlar üzerinde belirli bir koruyucu etki göstermekle kalmaz, aynı zamanda menopoz sonrası sendromla ilgili semptomları da tetikleyebilir ⁽⁴¹⁾.

Literatürde menopoz öncesi ve sonrası kadınlarda bağırsak florası farklılıklarının değerlendirildiği az sayıda ve heterojen çalışmalar mevcuttur. Menopoz sendromunun mekanizmasını açıklayacak, probiyotikler ve fekal mikrobiyota transplantasyonu gibi olası tedavi yöntemlerinin değerlendirildiği yüksek kalitede orijinal çalışmalara ihtiyaç vardır.

Sonuç

İnsan mikrobiyomu projesi, insan vücudunda dikkate değer bir mikrobiyal ekoloji çeşitliliği göstermiştir. Mikrobiyomun her insanın sağlık durumunun belirlenmesinde çok önemli bir rol oynadığı kabul edilmektedir. İnsan vücudundaki en basit kommensal bakteri topluluklarından biri olmasına rağmen, karmaşık dinamik yapısı ve konakçı immün modülasyonundaki önemli rolü gün geçtikçe anlaşılmaktadır. Kadın genital sisteminin mikrobiyomu da kadın sağlığı ve üremesi ile kritik bir şekilde ilişkilidir.

Genital mikrobiyom ve olumsuz sonuçlar arasında nedensel ilişkiler kurulabilmesi için servikojenital mikrobiyotayı daha iyi anlamak gerekmektedir. Kadınlar, diğer memelilere kıyasla, düşük çeşitlilik ile karakterize edilen ve genellikle *Lactobacillus*'un baskın olduğu benzersiz bir vajinal mikrobiyotaya sahiptir. Vajinal mikrobiyota, adet döngüsünde, cinsel aktivite varlığında, gebelikte, postpartum dönemde, menopoz sonrası ve farklı etnik kökenlere sahip kadınlar arasında da farklılıklar gösterebilir.

Yapılan moleküler temelli çalışmalar, üreme çağındaki sağlıklı kadının vajinal mikrobiyotasındaki laktobasil hâkimiyetinin enfeksiyona karşı ilk savunma hattı olarak önemini göstermiştir. Vajinal mikrobiyotayı oluşturan bakterilerdeki dengesizlikler, HIV de dâhil CYBH yakalanma riskinde artışa, fertilitenin azalmasına, infertilite tedavilerinin etkinliğinde değişikliklere, fetal mikrobiyomda bozulmaya ve ileri yaşam döneminde bazı hastalıkların gelişmesine yol açabilir. Bu nedenle kadın genital traktüs mikrobiyotası ile ilgili araştırmalar ve sonuçları, kadınlar, çocukları ve eşlerinin sağlığı için önemli etkilere sahip olacaktır.

Kadın üreme sağlığının vajinal mikrobiyotaya bağlı olduğuna dair önemli kanıtlara rağmen, mikrobiyom ve kadın üreme sisteminin işlevi arasındaki ilişki hâlâ büyük ölçüde bilinmemektedir. Kadın genital sistemi mikrobiyotasının fizyolojisinin tanımlanması, mikroorganizmalarla bağlantılı oluşabilecek hastalıkların uzun vadede daha iyi anlaşılabilmesi ve tedavi edilebilmesi için bu ilişkiyi daha iyi anlamak gereklidir. Bu konuda koruyucu ve iyileştirici stratejiler veya vajinal mikrobiyomu optimize etmek için kullanılacak tedavi modaliteleri geliştirmek için prospektif, iyi tasarlanmış, örnekleme ve araştırma yöntemlerinin standardize edildiği çalışmalara ihtiyaç bulunmaktadır.

HASTALIKTA SAĞLIKTA; KBB VE MİKROBİYOTA

Sena Genç Elden

Mikrobiyota insan organizmasının iç ve dış yüzeyinde bulunan kommensal, simbiyotik ve patojenik mikroorganizmaların oluşturduğu ekolojik topluluktur. Toplu olarak, insan vücudu yaklaşık 100 trilyon mikrop için bir ev sahibi görevi görür¹. Mikrobiyal topluluk yenidoğan, çocukluk, genel sağlık veya hastalık durumundan etkilenerek zamanla gelişir ve farklı bölgelerde kolonize olur. Örneğin; Cilt bölgesi daha çok Bacteroidetes filumları bulunurken vajen bölgesinde Firmicutes filumları bulunur².

İnsan mikrobiyomunun, bağışıklık sistemlerinin uyarılması ve olgunlaşması, mukozal yapı ve işlevin desteklenmesi ve çeşitli patojenlerden korunmada 'kolonizasyon direnci' sağlaması nedeniyle konakçıya faydalı olduğu varsayılır³. Mikrobiyotada bozulmaların olması insan hastalıklarıyla ilişkilendirilmiştir⁴. Örneğin, antimikrobiyaller, mikrobiyota bileşimini önemli ölçüde değiştirebilir ve bağırsak ve ağız mikrobiyotasının çeşitliliğini azaltabilir. Bağırsakta bakteri çeşitliliğindeki azalma, tekrarlayan *Clostridium difficile* enfeksiyonlarına neden olabilir veya değişen mikrobiyota inflamatuvar bağırsak hastalığı, nekrotizan enterokolit ve irritabl bağırsak sendromu ile ilişkilendirilmiştir⁵⁻⁷.

Günümüze kadar yapılan mikrobiyota çalışmalarında daha çok gastrointestinal sisteme odaklanılmış ve diğer sistemlerle olan ilişkisi incelenmiştir. Bu kitap bölümünde; Kulak Burun Boğaz ve Baş Boyun Cerrahisi alanında çeşitli mikrobiyota barındırdığı bilinen alanlar üzerinde durulacak ve KBB hastalıklarıyla ilişkisi derlenecektir.

Oral Mikrobiyota

Orafarenkste virüsler, protozoalar, mantarlar, arkeler ve bakterilerden oluşan yoğun mikroorganizma kolonize hâldedir. Tipik olarak konakçı ile uyum içinde yaşayan diğer vücut bölgelerinde bulunan kommensal mikrobiyotanın aksine, ağız normal mikrobiyotası insanda diş çürükleri, periodontal hastalıklar, tonsillit ile ilişkilendirilmiştir^{4,8}. Bu nedenle, ağız hijyeni oral enfeksiyonları engellemek için gereklidir. Örneğin; yaygın bir oral bakteri olan ve fermente olabilen şekerlerin düzenli olarak tüketilmesine bağlı olarak artabilen diş çürüklerinin iyi bilinen bir nedeni *Streptococcus mutans*'tır⁹.

Ağızda oral mikrobiyotanın basit varlığı, kolonizasyon direnci olgusu olan patojenler tarafından kolonizasyonu engeller¹⁰. Ağızın tüm yüzeyleri kommensaller tarafından kolonize edildiğinden, patojenler için çok az bağlanma yeri mevcuttur. Bu etkinin önemi, antimikrobiyaller tarafından kommensal mikrobiyota bozulduğunda görülebilir. Örneğin; *Candida* türleri ve *Staphylococcus aureus* gibi fırsatçı patojenler tarafından enfeksiyonlar meydana gelebilir⁸. Bazı bakterilerin oral patojenlere karşı antagonistik etki gösterdiği bilinmektedir. Örneğin, *Streptococcus salivarius* K12 suşu, in vitro periodontitis ve ağız kokusu ile ilişkili Gram negatif türlerin büyümesini engelleyen bir bakteriyosin üretir¹¹ ve in vivo olarak ağız kokusu üzerinde yararlı etkileri olduğu gösterilmiştir¹².

baskın olduğu bulunmuştur. Pseudomonadaceae, Streptococcaceae, Fusobacterceae ve Pasteurellaceae dâhil olmak üzere birden fazla bakterinin, adenoid mikrobiyotasına egemen olduğu gösterilmiştir. Orta kulak ve bademcik mikrobiyotası arasındaki örtüşme minimum düzeyde olmasına rağmen, adenoid mikrobiyotasının hem orta kulakta hem de bademcikte tespit edilen bakterileri kapsadığı görülmüştür. Çalışma sonucunda, incelenen bölgelerde daha önce bilinmeyen bakteri toplulukları olduğu ve adenoid dokusunun hem orta kulak hem de bademcik için bir kaynak bölge olabileceği sonucuna varılmıştır^{4,50}.

Adenoidlerin hiperplazisi uzun zamandır orta kulak hastalığı ile ilişkilendirilmiştir, ancak bu ilişkinin kesin patogenezi henüz bilinmemektedir⁵⁴. Genişlemiş adenoidlerin üstaki borusunun mekanik tıkanmasına neden olduğu düşünülmektedir. Bu anatomik ventilasyon tüpü tıkanığında orta kulakta negatif basınç oluşur ve hastalık ortaya çıkabilir. Orta kulakta oluşan negatif basıncın hiperplastik adenoid yastığının yüzeyinden patojenik bakterileri çektiği düşünülmektedir⁵⁵.

Yeni moleküler dizileme teknikleri ve metagenomik çalışmalar, insan mikrobiyomunun insan sağlığı ve bazı hastalık durumları için önemini altını çizmiştir. Tüm veriler hastalıkların sıklıkla bir veya daha fazla patojenin ortaya çıkmasına neden olan mikrobiyotanın bozulmasıyla ilişkili olabileceğini göstermektedir.

Kulak burun boğaz-baş boyun cerrahisinde, hastalığın yokluğunda, önce baş ve boyun mikrobiyomunun bileşimini oluşturmak ve daha sonra olası erken tanı ve etkili tedavi için hastalık durumlarında mikrobiyal bileşimdeki değişikliklere odaklanmak için daha fazla çalışmaya ihtiyaç vardır. Bu umut verici metagenomik tıp alanı, umarız yakın gelecekte tanı ve tedavi uygulamalarında daha iyi sonuçlar verecektir.

OKÜLER MİKROBİYOTA

Kübra Özata Gündoğdu

İsa Yuvaçı

Giriş

Belirli bir doku üzerinde bulunan bakteri, mantar, virüs, protozoa ve ökaryotların genetik materyaline mikrobiyom, bu dokuyu kolonize eden mikroorganizmalar topluluğuna ise mikrobiyota denir¹.

Normalde sağlıklı insan vücudunda bulunan mikroorganizmaları tanımlamak ve hastalıklarla olan ilişkisini incelemek amacıyla 2008 yılında başlanan İnsan Mikrobiyomu Projesi'nde insan vücudundaki 5 anatomik bölge çalışmaya dâhil edilmiş (gastrointestinal traktus, deri, ürogenital traktus, oral mukoza ve nazal mukoza), her vücut bölgesinin kendine özgü bir mikrobiyotası olduğu gösterilmiştir². İnsan mikrobiyotasına yönelik çalışmalar, hastalıkların patogenezi anlama ve yeni tedavi yöntemleri geliştirme açısından bize katkı sağlamaktadır.

Metagenomik dizileme, oküler mikrobiyomun çeşitliliği hakkında önemli bilgiler sunmasına ve geleneksel kültür temelli yöntemlerle daha önce tanımlanmamış mikrobiyal türleri ortaya çıkarmasına rağmen, benzer dizileme tekniklerini kullanan çalışmalar arasında tutarsızlık devam etmektedir. Bu nedenle bazen bir mikroorganizmanın varlığını kanıtlamak için kültür temelli yöntemlerin, kültür temelli olmayan yöntemlerle birleştirilerek kullanılması önerilmektedir³.

Göz anatomik olarak anterior kamara, posterior kamara, iris, lens, silier cisim, vitreus, retina, koroïden oluşan iç bölüm ve sklera, konjonktiva, kornea ve gözyaşı film tabakasından oluşan dış bölümden oluşmaktadır (Şekil 1)⁴. Göz, bu kapalı anatomik yapısı ve sıkı kan-retina bariyerinden dolayı steril kabul edilmiştir.

Oküler yüzey; kornea, konjonktiva, gözyaşı filmi ve göz kapaklarını içeren göz ile çevre arasındaki ara yüzdür. Oküler yüzey mikrobiyotası, kornea ve konjonktivada kolonize olan mikroorganizmalardan oluşur. Oküler yüzey mukozası doğrudan çevreye maruz kaldığından, potansiyel olarak patojenik mikroorganizmalara karşı bir savunma görevi görür. Bu süreçte gözümüz; mekanik (göz kırpma ve gözyaşı salgısı yoluyla oküler yüzeyin temizlenmesi), kimyasal (gözyaşı içindeki lizozim, laktoferrin ve defensinler dâhil antimikrobiyal elementler) ve immünolojik (nötrofiller ve Ig A) olarak kendini mikroorganizmalara karşı korur¹.

İlk olarak 1930 yılında Graham ve ark. tarafından yapılan çalışma sonucu oküler yüzey mikroorganizmalarının varlığına ilişkin kanıtlar ortaya çıkmaya başlamıştır⁵. Normalde enfeksiyona veya inflamasyona neden olmayan kommensal bakteriler, oküler yüzeyi kolonize ederek oküler mikrobiyotayı oluştururlar. Bu mikrobiyota, patolojik türlerin kolonizasyonunu engellemek ve oküler yüzey homeostazisini sağlamak açısından önemli bir yere sahiptir. Aynı zamanda bu kommensal mikrobiyotanın konak fizyolojisinin düzenlenmesinde ve bağışıklık sisteminin uyarılmasında temel roller oynadığı kanıtlanmıştır⁶.

KRONİK İNFLAMASYON VE MİKROBİYOM

Ayşe Caner

İnflamasyon, vücudun yaralanmalara, infeksiyonlara, ölü hücelere ve zararlı uyarılara karşı cevap verdiği bir savunma tepkisidir. İnflamasyon normalde patolojik bir durum olmasına karşın, evrimsel amacı vücuttan zararlı ajanları temizlemek ve dolayısıyla yeniden büyümeye veya iyileşmeye zemin hazırlayarak homeostazi yeniden sağlamaktır.^{1,2} İnflamasyon, internal ve eksternal faktörler (mikrobiyal veya mikrobiyal olmayan) tarafından tetiklenmektedir. Mikrobiyal olmayan faktörler arasında alerjenler, irritant maddeler ve toksik bileşikler bulunmaktadır.² İnflamasyonun en güçlü tetikleyicileri ise mikroorganizmalar olup, bunlar lokal ve/veya sistemik inflamasyonu indüklemeye potansiyeli taşımaktadır. Bu nedenle, bağışıklık sistemi, inflamatuvar doku hasarını sınırlandırmak ve konağı patojenik enfeksiyonlardan korumak için bir dizi mekanizma geliştirmiştir.³ İnflamasyon süreci, dokuda hâlihazırda bulunan bağışıklık sistem hücreleri olan makrofajlar, dendritik hücreler, nötrofiller ve mast hücreleri tarafından başlatılmaktadır. Tehlike sinyalleri bu hücrelerin aktivasyonunu tetiklemekte ve inflamasyonun klinik belirtilerinden sorumlu süreci başlatan inflamatuvar mediatörlerin salınmasına neden olmaktadır. Genel olarak bu belirtiler kızarıklık, şişme, ağrı, ısı ve bozulmuş vücut fonksiyonları ile karakterize olmaktadır.⁴ İnflamasyon başladıktan sonra, bu süreç inflamasyonun nedeni kaldırılıncaya ve iyileşme başlayana kadar belirli bir düzeyde ilerlemektedir. Bununla birlikte, inflamasyonun nedeni ortadan kaldırılamazsa, inflamasyon devam etmekte ve zamanla yoğunluğu da değişiklik göstermektedir.^{1,4}

Mikrobiyotaya ile inflamasyon arasında karmaşık bir ilişki bulunmakta ve epitel hücreleri ile mukozal bağışıklık sisteminin patojenik ve patojenik olmayan ajanları ayırt etmesi çok önemli olmaktadır.⁵ Mikrobiyotaya, patojenik türler ile rekabet ederek ve mukozal tabakayı destekleyerek, infeksiyonlara karşı doğal bir savunma sağlamaktadır.⁶ Aynı zamanda, bağışıklık sistemi, patojenlere karşı korumayı optimize etmek ve gereksiz bağışıklık faaliyetlerinden kaçınmak için güçlü bir kontrol sistemi geliştirmiştir.¹ Bağırsak epitel hücreleri, bakteriyel antijenleri tespit etme, hem doğal hem de adaptif bağışıklık tepkilerini başlatma ve düzenleme yeteneğine sahiptir.^{5,7} Bu mikrobiyotaya-bağışıklık sistem arasındaki ilişkiler inflamasyona neden olmakta veya önleyebilmektedir. Bazı mikrobiyal türler bağışıklık sisteminin düzenleyici hücrelerini uyararak anti-inflamatuvar mekanizmalar ile inflamasyonu inhibe etmektedir.¹ Öte yandan, mikrobiyotaya ilişkili bazı metabolitler, bağırsaktan ayrılıp kan dolaşımına girerek, sitokinler ve diğer moleküllerin oluşmasını sağlayarak etkili bir şekilde inflamasyon yanıtı başlatmaktadır.⁸ Benzer şekilde, epitel dokusundaki hücreler, bakteriyel metabolitleri bağışıklık hücrelerine ileterek hem lokal hem de sistemik düzeyde inflamasyonu teşvik etmektedir. Bu durumların kalıcılığı subakut veya kronik inflamasyona yol açabilmekte ve daha sonra inflamatuvar hastalıkların gelişmesine neden olabilmektedir.¹

Monositler/makrofajların inflamasyonun başlamasında rolleri olduğu kadar, bunun sürdürülmesinde ve ortadan kalkmasında da kritik görevleri bulunmaktadır.^{1,9} Bazı mikroorganizma molekülleri ve IL-1 β /IFN-y gibi mediatörler tarafından indüklenen makrofajlar (M1), pro-inflamatuvar sitokinleri (TNF-

yılmasını kolaylaştırmaktadır.^{112,113} Mikrobiyota, kemoterapi veya immünoterapinin anti-tümör etkinliği için de gereklidir.¹¹⁴ Kemoterapi ve kontrol noktası-inhibitörlerin blokajı, *Bacteriodes* veya *Bifidobacterium* gibi bağışıklık sistem uyarıcı mikrobiyotanın translyasyonunu veya aşırı büyümesini indükleyebilir. Özellikle bu bakteriler dendritik hücre fonksiyonunu ve tümöre özgü CD8+ T hücre yanıtını artırabilmektedir.^{115,116} Bu veriler, mikrobiyotanın modüle edilmesi ile kanser immünoterapi etkisinin artırılabilirliğini düşündürmektedir.

Diyet, hastalıklar, ilaçlar ve diğer birçok faktör, bağırsak mikrobiyotasında bir dengesizliğe, disbiyoz ve artan bağırsak geçirgenliğine neden olmaktadır. Mikrobiyota, epitel hücreler, antijen sunan hücreler, lenfoid hücreler, adaptif immünojenik hücreler ile direk ve dolaylı olarak ilişki hâlinindedir. Bunlar ile beraber çeşitli mikrobiyotadan türetilmiş biyoaktif moleküller, bağırsakta ve distal bölgelerde inflamasyona ve metabolik bozukluklara yol açabilmektedir. Diğer bir deyişle, inflamasyon, mikroorganizmaların, bunların yapısal elemanlarının ve metabolizma ürünlerinin varlığından kaynaklanmaktadır. Düşük dereceli kronik inflamasyon ve disbiyoz birbirini şiddetlendirerek bir kısır döngü oluşturmaktadır, kronik inflamasyon, kanser, otoimmün hastalıklara ve nörodejeneratif bozukluklara neden olmaktadır. Mikrobiyotanın inflamatuvar profil üzerindeki etkilerini ve mekanizmalarını anlamak bu hastalıkların tanısı, tedavisi ve prognozu açısından önemli katkılar sağlayacaktır. Bununla birlikte, konuyla ilgili mevcut bilgilerin yeterli olmaması nedeniyle, mikrobiyota-inflamasyon arasındaki ilişkileri anlamak için moleküler ve translyasyonel düzeyde daha fazla araştırmaya ihtiyaç bulunmaktadır.

FEKAL MİKROBİYOTA TRANSPLANTASYONU (FMT) (Dışkı Nakli & Gaita Nakli)

Ahmet Uygun

Giriş

FMT tanım olarak (= fekal bakteriyoterapi = fekal transfüzyon = gaita nakli= dışkı nakli) sağlıklı bir donörden alınan gaitanın, çeşitli işlemlerden geçirilerek, alıcının GİS'ne yerleştirilmesi işlemidir.

Tarihte ilk kez dışkı nakli 4. yüzyılda, ağız yoluyla “Sarı Çorba” adıyla Çin’de **Ge Hong** tarafından gıda zehirlenmesi ve ciddi diyare de oral olarak kullanılmıştır.

16. yüzyılda yüksek ateş, kronik diyare ve konstipasyonda kullanılmıştır.

17. yüzyılda veteriner tıbbında yaygın olarak kullanılmış,

20.yüzyılda “Sıcak deve feçesi” **Bedouins** tarafından tavsiye edilmiş, 2. Dünya Savaşı’nda, Afrika’da Alman askerleri tarafından kullanılmıştır.

1958’de insanda, modern tıpta, ilk kez **Eiseman B.** tarafından kullanılmıştır ^(1,2).

Son zamanlarda, çeşitli klinik durumlarda ve antibiyotiklere bağlı ishalin nedeni olan, *Clostridium difficile* enfeksiyonunun tekrarlayan ve dirençli ishal durumlarında yaygın olarak kullanılmaya başlanmış ve **2013’de FDA tarafından, Clostridium difficile** enfeksiyonunun tekrarlayan ve dirençli ishal durumlarının tedavisi için onaylanmıştır ⁽³⁾.

Bu onay gaita naklinin başka hastalıklarda da onaylanmasını gündeme getirmiştir.

İnsan oğlu nasıl sağlıklı bir şekilde ayakta kalıyor?.

İnsan oğlunun sağlıklı bir şekilde yaşaması için mutlaka;

1. GİS’in mukozal bütünlüğü tam olmalı,
2. İmmün sistem fonksiyonları yeterli olmalı ve
3. Sağlıklı bir mikrobiyotasının olması şarttır.

Çünkü bunlardan birisi eksik ya da yetersiz olursa, mutlaka çeşitli derecelerde ve çok çeşitli hastalıklar ortaya çıkmaya başlarlar.

Örneğin mikrobiyotamız; patojen bakterilerin ve virüslerin çoğalmasını inhibe ederek, biyolojik bir bariyer oluşturur, ayrıca patojen bakterilerin yapışmasını ve translokasyonunu inhibe eder.

Daha da önemlisi, Ig G, Ig A, Ig M’yi sentezleyerek kazanılmış immüniteye katkı sağlayarak, intestinal mukozayı korur.

MİKROBİYOM VE METABOLOM ARASINDAKİ ETKİLEŞİMİNİN İNSAN SAĞLIĞI İLE İLİŞKİSİ

Kurtuluş Buruk

"Mens sana in corpore sano" "sağlıklı bir vücutta sağlıklı bir zihin"

Romalı şair Juvenal

Giriş

Genler, yaş, cinsiyet, davranışlar (egzersiz, uyku düzeni ve yeme alışkanlıkları gibi) ve çevre (sosyal ve biyolojik çevre), bireylerin sağlığını etkileyen ve kişisel yönleri olan faktörlerdir. Kişiselleştirilmiş sağlık (precision medicine, precision health) bireylerin bu faktörlerinin belirlenerek ve ölçülerek sağlıklarını korumak üzere kullanılmasıdır ⁽¹⁾. Kişiselleştirilmiş tıbbın önemli veri kaynaklarından biri de genomiks, transkriptomiks, proteomiks ve metabolomiks gibi alanları içeren biyomedikal bilimlerdir. Bu bölümde, insan vücudunda biyolojik bir sıvıda, bir dokuda veya vücut bölümündeki metabolomun varlık, miktar ve çeşitliliğinin mikrobiyal genom özellikleri (miktar ve çeşitlilik gibi) ve insan sağlığı ile ilişkisi irdelenecektir.

Mikrobiyom ve Metabolom Tanımı

Mikrobiyom en genel tanımıyla bir canlının içinde veya üzerinde bir bölgede, dokuda veya biyolojik örneklem biriminde simbiyotik veya patojenik yaşayan tüm mikroorganizmaların (ki bu mikroorganizma topluluğu mikrobiyota olarak adlandırılır) genomunu ifade eder ⁽²⁾. Mikrobiyota, içinde veya üzerinde yaşadığı canlının metabolik, besinsel, fiyolojik ve immünolojik süreçlerinde önemli rol oynamaktadır ⁽³⁾. Mikrobiyomiks, bir biyolojik sistemdeki mikrobiyal genomların tümünün araştırılması olarak tanımlanmaktadır ve aslında genomiksin bir alt alanıdır ⁽⁴⁾.

Metabolitler, hüresel metabolizma faaliyetleri sonucu ortaya çıkan ara veya son ürünlerdir. Metabolitler, enerji üretimi, sinyal iletimi, transkripsiyonun ve apoptozisin yönetimi gibi işlevlerinin yanında kofaktör olarak da görev alırlar. Günümüzde çoğunlukla insanda kan glikozu düzeyi ile diyabet veya fenilalanin düzeyi ile fenilketonüri ilişkisinde olduğu gibi bazı hastalıkların tanısında biyomarker olarak kullanılmaktadırlar ⁽⁵⁾. Bir hücre, doku, organ veya daha geniş bir ifadeyle bir canlı biriminden alınan örnekteki metabolitlerin tamamına metabolom adı verilmektedir. Metabolomun içeriğinin kalitatif veya kantitatif olarak incelenmesine, bir başka deyişle metabolom içeriğinin profilinin çıkarılma çalışmalarına metabolomiks denmektedir ⁽⁶⁾.

Omiks'lerin Önemi ve Anlamları

Çevre koşullarındaki değişime bağlı olarak gerçekleşen biyolojik karşı tepkinin ölçülmesi, olayla ilgili neden sonuç ilişkisinin kanıta dayalı olarak kurulması adına son derece önemlidir. Örneğin, yeni bir ilaç kullanan bireyin karaciğer hücrelerindeki biyolojik davranışın izlenmesi ile ilacın karaciğerde

ve dolaşıma geçen metabolitlerinin MS gelişimi ile ilişkili olduğunu belirtmektedir. Bağırsak mikrobiyotası miyeline karşı aktive olmuş Th17 hücrelerinin ve CD4+ Th hücrelerinin yanında mikrogliya ve astrositlerin fonksiyonlarını da etkilemektedir. Mikrobiyota bu görevini en sık KZYA üretimi üzerinden yürütmektedir. Deneysel modellerde MS benzeri tablonun şiddeti ile KZYA düzeyleri arasında ters ilişki söz konusudur. Ayrıca, hayvansal proteinden zayıf diyet, IL-17A salınımının azalmasına ve belirtilerin şiddetinin azalmasına neden olmaktadır. Modellerle yapılan çalışmalarda, *L. reuteri*, *A. calcoaceticus*, *A. muciniphila*, *Streptococcus türlerinin* Th1 üzerinden IFN-gamma ve Th17 üzerinden IL-17A salınımı ile demiyelinizasyonu tetiklerken, *L. murinus*, *L. helveticus*, *P. histicola* ve *Bifidobacterium türleri* de Treg hücrelerinin düzey ve sayısını artırarak koruyucu etki gösterdiği vurgulanmaktadır⁽³³⁾.

Romatod artrit (RA), genetik ve çevresel faktörler etkisiyle yönetilen sistemik bir otoimmün hastalıktır. Yapılan çalışmalarda mikrobiyotanın, T lenfositlerde TLR-2 (Toll-like receptor-2) ekspresyonunu uyarması, Th17 yanıtı üzerinden IL-17 üretimini artırması, KZYA üretimini azaltması gibi olumsuz etkileri ile RA oluşumuna ve şiddetine destek verdiği saptanmıştır. KZYA, bir taraftan bağırsak hücrelerinin sağlığını desteklerken, diğer taraftan hem innate immün sistem hücrelerinin (dendritik hücreler, makrofaj ve nötrofil) hem de adaptif immün sistem hücrelerinin (Th1, Th17, Treg ve B hücreleri) aktivitelerinin düzenlenmesine katkıda bulunmaktadır⁽³³⁾.

Bir başka otoimmün hastalık da tirotropin reseptörüne karşı otoantikör oluşması sonucu gelişen **Graves hastalığıdır (GH)**. Yapılan çalışmalar *Prevotella* ve *Bacteroides türlerinin* baskınlığının GH ile ilişkili olduğunu göstermiştir. Diğer otoimmün hastalıklarda olduğu gibi GH'de de mikrobiyotanın da katkı sağladığı KZYA'nin üretiminin dengesizleştiği, IL-17 sentezinin arttığı ve IL-10 sentezinin azaldığı saptanmıştır⁽³⁶⁾.

Görüldüğü gibi birçok hastalık mikrobiyotanın bileşimi ile ilişkilendirilmektedir. Oluşum mekanizmaları açıklanırken mikrobiyal metabolitlerin etkisi net olarak ifade edilmektedir. Dahası, mikrobiyotanın modülasyonu ile hastalık belirtilerinde düzelme görülmektedir. Geline nokta, bilim dünyası son on yıllarda multidisipliner çalışmaları ile mikrobiyota ve sağlık/hastalık ilişkisini araştırırken, mikrobiyom verisinin yanına metabolom verisini ekleyerek kanıt düzeyi yüksek bilgiler elde etmektedir. İlerleyen süreçte sağlıklı yaşam ile mikrobiyota ilişkisi, metabolom verileri ile daha da derinlemesine ilişkilendirilebilecek ve bu veriler ışığında geliştirilecek yöntem, biyomarker, ilaç/ürün ve bilgiler sağlığın korunmasında kullanılmak üzere kılavuzlarda yer alabilecektir.

Bölüm A51

MİKROBİYOM VE MAKİNE ÖĞRENME

Uğur Sezerman

Ali Arslan

Pınar Onat

Berkay Yekta Ekren

Konak ve mikrobiyom

İnsan vücudu, mikroorganizmalarla simbiyotik bir ilişki içerisinde varlığını sürdürür¹. Bu mikroorganizmalar, vücudun çeşitli bölgelerinde mikrobiyom adı verilen kompleks ekosistemler oluşturur. Bu ekosistemler, vücudun dış çevre ile teması bulunan bölgelerde görülür ve mantarlar, virüsler, bakteriler gibi farklı organizmaları barındırabilir^{1, 7}. Oral, vajinal, intestinal, nazal ve deri mikrobiyotası insan vücudunda varlığını sürdüren mikrobiyom çeşitlerine örnek olarak verilebilir¹. Farklı bölgelerde kurulum gösteren bu mikrobiyota komüniteleri birbirleri ile etkileşim hâlinindedir dolayısıyla kompozisyonları birbirine bağlılık gösterir¹.

Mikrobiyotanın biyolojik aktiviteleri

Mikrobiyom komüniteleri, belirli proteinler, metabolitler ve RNA üretimi aracılığıyla hem konak-mikrop, hem de mikrop-mikrop etkileşimleri sağlar³. Bu etkileşimler bağışıklık sistemi, vitamin üretimi ve emilimi, metabolik süreçler gibi önemli fonksiyonları etkiler¹. Dolayısıyla mikrobiyotanın dengede bulunması, vücudun sağlığında büyük önem taşımaktadır. Mikrobiyota homeostazisinin bozulmasına “disbiyozis” adı verilir¹. Disbiyozis, insanlarda görülen Diyabet, Enflamatuvar Bağışıklık Hastalıkları (IBD) gibi birden çok hastalıkla ve bu hastalıkların seyri, ağırlığı gibi özellikleri ile ilişkili bulunmuştur^{3, 4}. Bu sebeple mikrobiyom verisinin, bazı hastalıkların tanısı, tahmini, hastalıklar için biyomarkör belirlenmesi ve hastalıkların seyri açısından bilgilendirici olarak kullanılabilceği düşünülmektedir⁶.

Mikrobiyotayı etkileyen faktörler

Mikrobiyom kompozisyonu, insan yaşamı boyunca değişiklik gösterir. Bu değişiklikler yaşla, diyetle, hastalıkla ilişkili olarak görülmektedir². İnsan hayatının ilk üç yılı, mikrobiyom kompozisyonunun gelecekteki dengesinin belirlenmesinde büyük rol oynamaktadır². Bu üç yılda hızlı ve büyük değişiklikler gösteren mikrobiyota kompozisyonu, yetişkinlik süresince diyetle ve yaşam tarzına bağlı olarak minimal değişiklikler gösterir, ama çoğunlukla stabildir². Sonrasında yaşlılık süresince daha belirgin ve kalıcı değişiklikler takip eder². Yaşlılıkta görülen bu değişikliklerin sebebinin de temelde kişinin yaşam tarzındaki mobilite, belirli hastalıklara bağlı ilaç kullanımı, beslenme farklılıkları gibi değişikliklerden kaynaklandığı düşünülür².

nobrevibacter miktarının gastrointestinal yoldaki gaz oluşumuyla positif korelasyona sahip olduğu incelenmiştir. Bunun yanında, *Methanobrevibacter*, *Bacteroides* cinsi ile ters orantıda buldukları görülmüştür³⁰.

Otoimünite ve tip 1 diyabet (T1D)

2018'de Vatanen ve ark. tarafından ele alınan ve farklı ülkelerden 763 bireyi içeren çalışmada, Random Forest sınıflandırması uygulanmış, IA kontrollerinde *Lactobacillus rhamnosus* ve *Bifidobacterium dentium* miktarının, IA hastalarının da daha fazla miktarda *Streptococcus mitis*, *Streptococcus oralis*, *Streptococcus pneumoniae* bulundurduğu gözlemlenmiştir. Bunun yanında, T1D hastalarında *Streptococcus thermophilus* ve *Lactococcus lactis* türlerinin daha az miktarda, *Bifidobacterium pseudicatenum*, *Roseburia hominis* ve *Alistipes shahii* türlerinin de daha fazla olduğu görülmüştür³¹.

Karaciğer hastalıkları

Skleroz kolanjit olarak da bilinen sclerosing cholangitis, 2017 yılında Pereria ve ark. tarafından ele alınmıştır. Çalışmada generalized linear model kullanılarak *Streptococcus* cinsinin hastalık şiddetinin artması ile arttığı gözlemlenmiştir³².

2020 yılının ilk yarısında Liu ve ark. tarafından karaciğer hastaları üzerinde yapılmış çalışmada, makine öğrenme yöntemi olarak gradient boosting kullanılmıştır. Acute-on-chronic liver failure, non-alcoholic fatty liver disease and cirrhosis hastalarında aile bazında, Erysipelotrichaceae, Streptococaceae, Enterobacteriaceae bakterilerinin daha fazla, cins seviyesinde, *Actinomyces*, *Lactobacillus*, *Veillonella*, *Prevotella* bakterilerinin hastalarda yüksek olduğu görülmüştür. Liver abscess ve sepsis hastalarında ise *Actinomyces*, *Escherichia*, *Klebsiella*, *Desulfovibrio*, bakterilerinin yüksek olduğu, fakat, *Faecalibacterium*, *Coprococcus* ve *Akkermansia* miktarlarının azaldığı gözlemlenmiştir. Çalışmada AU-ROCC uygulanmış, tür seviyesinde 0.895 ile en yüksek değere ulaşılmıştır. Tüm sınıflandırmalar ise %95 doğrulukla elde edilmiştir³³.

Mikrobiyom hastalık oluşum mekanizasında sadece bir faktörün etkisini incelememizi sağlamaktadır. Özellikle kompleks hastalıklar çok faktörlü hastalıklardır ve kişiye özel hastalık oluşum mekanizmalarını belirlemek ve kişiye özel tedavi adaylarını bulmak için farklı verilerin entegrasyonu gerekmektedir. Mikrobiyom verilerinin yanına da meta transkriptomik verilerinin entegrasyonu ve konak ile ilişkilerinin belirlemek ve konaktaki hastalık oluşumuna katkısı olacak diğer mekanizmaları belirlemek için hastanın genomik transkriptomik proteomik metabolomik verilerinin de entegrasyonu gerekmektedir (Figür 1). Makine Öğrenme yöntemleri kullanarak veri entegrasyonu ile kişiye özel hastalık oluşum mekanizmalarını aydınlatılması ve hastalık tetikleyen anahtar mekanizmaların belirlenmesi ve böylece tedavi adaylarının bulunması üzerine son yıllarda yeni çalışmalar yapılmayazşlanmıştır. Bu alan makine öğrenme yöntemlerinin Mikrobiyom ile beraber en önemli uygulamalarının geliştirileceği bir alandır.

B. PROBİYOTİKLER

Bölüm B1

PROBİYOTİKLER VE PREBİYOTİKLER

Meltem Yalınay

Günümüzde sağlıklı yaşam, beslenme ve tıbbi tedavilere katkıda bulunabilmesi için destek ürünlere ilgi ve farkındalığın çok arttığını görmekteyiz. Probiyotikler, prebiyotikler, bunları içeren çeşitli fonksiyonel gıdalar tüm dünyada yaygın olarak kullanılmaktadır. Probiyotik, prebiyotikler ve sinbiyotik ürünlerin sağlık koşuluna katkıları, yapılan binlerce araştırma ile de her geçen gün daha çok aydınlatılmaktadır. Bunların yanı sıra bu güncel alan, probiyotik bakterilerin canlılığını kaybetmesi durumunda paraprobiyotikler ve probiyotik bakterilerin metabolizmaları sonucu ulaşılan etkinin ortaya konulabilmesine ilişkin postbiyotik kavramları ile de daha kapsamlı bir boyuta ulaşmıştır. Psikobiyotik tanımı ise bağırsak beyin eksenine dikkate alındığında, kommensal bağırsak bakterileri ile etkileşime girerek mental sağlık katkısı oluşturan canlı probiyotik bakteriler için kullanılmaktadır.

Eski Asur dilinden gelen yoğurt için kullanılan “lebeny” sözcüğü yaşam için anlamına gelmektedir. Probiyotik sözcüğü de Yunanca pro: için, bios: yaşam “yaşam için” kelimelerinden oluşmuştur. Genel olarak probiyotikler dost bakteriler, iyi bakteriler olarak bilinir. Probiyotikler Dünya Sağlık Örgütü (World Health Organization-WHO) ve Gıda Tarım Organizasyonu (Food and Agriculture Organization-FAO) tarafından “yeterli miktarlarda alındığı zaman konakta sağlık yararı oluşturan canlı mikroorganizmalar” olarak tanımlanır⁽¹⁾. Probiyotik, prebiyotik ve sinbiyotik kavramları yapılan sayısız araştırma ile bakteriyel birlikteliğin insan sağlığına faydalı etkileri ile ortaya konmasını tanımlamaktadır⁽²⁻⁵⁾. İdeal bir probiyotik fizyolojik ve genetik olarak tanımlanmalı, alındıktan sonra bağırsağa canlı olarak ulaşmalıdır.

Konakta yararlı bakterilerin çoğu laktik asit bakterileridir (LAB) ve yoğurt, fermente süt ürünleri veya diğer fermente ürünlerde günlük hayatımızda tüketilmektedir⁽⁶⁾. LAB'nin bağışıklık sistemi üzerine birçok etkisi olduğu bilinmektedir ve “genel olarak güvenilir - generally recognized as safe (GRAS)” tanımlanması gerekmektedir. LAB grubunda genellikle laktobasiller, laktokoklar ve streptokoklar bulunmakla birlikte bağırsaklarımızdaki tek yararlı bakteriler bunlar değildir. *Bifidobacterium* cinsleri^(6,7) ve *Enterococcus*, *Streptococcus*, *Escherichia* gibi diğer bakteriyel cinsler ve mayalardan *Saccharomyces boulardii*⁽⁸⁾ bunlar içinde yer almaktadır.

En meşhur LAB'lerinin güvenli kullanımla ilgili oldukça eski bir hikâyeleri vardır⁽⁹⁾. 1907'de Rus mikrobiyolog Elie Metchnikoff fermente süt ürünlerindeki canlı mikropların düzenli tüketilmesinin sağlığa katkısını ve uzun yaşamla ilişkili olabileceğini öne sürmüştür^(9,10). Fermente sütü bol miktarda tüketen uzun yaşayan Bulgar köylüleri gibi kolonik mikroflorayı bu şekilde modifiye etmeye başlamışlardır. Günümüzde geleneksel yoğurt mayalamada kullanılan Bulgar basili olarak bilinen *Lactobacillus bulgaricus*'u şimdiki adıyla *Lactobacillus delbrueckii* spp. *Bulgaricus* ve *Streptococcus thermophilus*'u kullanılmıştır. Metchnikoff'un uzun yaşam teorisindeki yoğurt laktobasilleri ile başlayan hikâyede suşa bağlı konakta birçok faydalı etkileri bulunan probiyotik LAB'leri tanımlanmıştır⁽¹⁰⁻¹⁴⁾. Havenaar and

'Türkiye Probiyotik Rehberi' adı altında yapılan çalışmanın esas amacı, ülkemizde bulunan probiyotik destek ürünlerin dökümünü yapmak ve bilimsel bir alt yapı üzerinden kanıt düzeyleri ile destek kullanım alanlarını ortaya koyacak derli toplu bir veri tabanı ve kaynak oluşturmaktır. Bu çalışma hazırlanırken dünyada daha önce oluşturulmuş çeşitli rehberler incelenmiş ve probiyotik tanımlamalarının doğru esas ve kanıt düzeyinde değerlendirilmeleri dikkate alınarak metodoloji oluşturulmuştur. PRISMA rehberleri, PubMed, Cochrane veri tabanı esas alınarak yayınlanmış meta-analizler dikkate alınmıştır. Bildirilen ürünler; ticari marka, probiyotik mikroorganizma suşu, ticari formu, KOB /(koloni oluşturulan birim)(CFU)/ birim, günlük önerilen kullanım miktarı, yaş/cinsiyet, kaynağa dayalı destek kullanım alanı, kaynağa göre kanıt düzeyi esas alınarak değerlendirilmeye çalışılmıştır. Çalışmaya probiyotik bir bakteride olması gereken bakteri cins, tür, suş kodu bilgileri olan mikroorganizmalar dâhil edilmiştir. www.probiyotikrehberi.com adresinden çalışmanın internet sayfasına ulaşım sağlanmaktadır.

Sonuç

Probiyotik mikroorganizmaların sistemik hastalıkların destek tedavisinde kullanımı çok güncel bir konudur. Bağırsak mikrobiyotik metagenom analizleri ile kişiye özel probiyotik uygulaması ve kişinin bütüncül tıbbi yaklaşımıyla bir uzman kontrolünde sürecin yürütülmesi en faydalı sonucu sağlayacaktır. Probiyotiklerin mekanizmalarını ve işlevselliğini anlama çalışmaları, bu dost bakterilerin geleceğini şekillendirecektir. Gen teknolojisi kesinlikle sadece farmakokinetik ve farmakodinamik özellikleri açıklamakla kalmayıp yeni suşlar geliştirmede de rol oynayacaktır. Probiyotiklerin önleyici ve terapötik ajanlar olarak rolünü daha da tanımlamak için iyi tasarlanmış, çift kör, plasebo kontrollü klinik çalışmalarla uzun süreçlerde daha sağlıklı sonuçlar elde etmek mümkün olacaktır.

METABOLİK SENDROM TEDAVİSİNDE PROBİYOTİKLER

Gökhan GÜNGÖR

Metabolik sendrom, genetik ve çevresel faktörlerin etkisiyle meydana gelir. Artmış insülin direnci, glukoz intoleransı veya diyabetes mellitus, artmış bel çevresi, obezite, dislipidemi, hipertansiyon ile karakterize bir klinik sendromdur ve prevalansı giderek artmaktadır. Kardiyovasküler ve serebrovasküler olaylar, kronik böbrek hastalığı, non-alkolik yağlı karaciğer hastalığı, bununla ilişkili karaciğer sirozu, periferik arter hastalıkları gibi sekonder sistemik bozuklukların da eklenebileceği göz önüne alındığında dünyadaki önemli global sağlık sorunlarından birisidir.

Metabolik sendrom prevalansı erişkinlerde ortalama %22 olarak bildirilmekte ve prevalans yaş ile artmaktadır. Popüler beslenme alışkanlıkları ve sedanter yaşam tarzının yerleşmesiyle tüm dünyada prevalansının giderek artacağı tahmin edilmektedir. Ülkemizde metabolik sendrom görülme sıklığı, erkeklerde %28, kadınlarda ise %40 gibi oldukça yüksek değerlerdedir⁽¹⁾.

Metabolik sendromunda tanı kriterleri, Dünya Sağlık Örgütü, National Cholesterol Education Program (NCEP) Adult Treatment Panel III (ATP III)-2001 ve Uluslararası Diyabet Federasyonu tarafından kriter değerleri aynı olmakla birlikte bazı farklılıklar içermektedir. Tablo 1'de Metabolik Sendrom Tanı Kriterleri verilmiştir.

Metabolik sendrom tedavisinde, bugüne kadar bilinen konvasiyonel tedavi ve yaklaşımlar; düzenli fiziksel aktivite, yaşam tarzı değişiklikleri, alkol ve sigaranın bırakılması, diyetten şeker, tuz, doymuş ve trans yağların kısıtlanması, kilo verme, bunlar yeterli olmazsa oral antidiyabetik, insülin, antihipertansif, antihiperlipidemik ajanlar gibi çeşitli ilaçların kullanılmasıyla diyabet, hipertansiyon ve hiperlipideminin ilaçlarla kontrolünü içermektedir. Bu yaşam tarzı değişiklikleri ve ilaçlar en azından, metabolik sendromu oluşturan hastalık komponentlerinin hedef organ hasarlarını engellemekte ya da korumaktadırlar, ancak hastaların tümünde bu faydayı sağlayamayabilirler. Sadece %10'luk kilo kaybı bile metabolik sendromun bazı bileşenlerini kontrol altına alabilir. Düzenli fiziksel aktivite insülin direncini düzelterek glukoz, lipid ve kan basıncı kontrolünü sağlar ve kardiyovasküler riskleri azaltabilir. Birtakım gıda ve nutrientlerin içinde bulunan askorbik asit, hidroksitirozol, quercetin, resveratrol, tokoferol, antosiyaninler, katekinler, polifenoller gibi biyoaktif bileşenler, metabolik sendromun bazı bileşenlerini olumlu yönde değiştirebilirler. Metformin ve glutazonlar insülin direncini azaltırlar, diyabetin tedavisinde ilk seçilebilecek ilaçlardır, glisemik kontrolün sağlanamaması durumunda diğer oral antidiyabetikler ve insülinlere geçilebilir. Fibratlar serum trigliseridlerini azaltıp, High Density Lipoproteini (HDL) yükselterek kardiyovasküler riski azaltırlar, statinler total kolesterol ve Low Density Lipoprotein (LDL) düzeyini düşürmede etkili ajanlardır. Anjiyotensin converting enzim inhibitörleri ve anjiyotensin II reseptör antagonistleri hem antihipertansif etkileri, hem de kardiyoprotektif ve renoprotektif etkileri nedeniyle metabolik sendromda kullanılırlar. Kalsiyum kanal blokerleri ve alfa-blokerler metabolik sendromun diğer bileşenleri üzerinde olumsuz etki göstermeden hipertansiyonu kontrol edebilirler. An-

Son yıllarda *Verrucomicrobiota* filumunun bir üyesi olan *Akkermansia muciniphila* üzerine ilgi yoğunlaşmıştır. *Akkermansia*'nın lipopolisakkarit düzeylerini artırması; diyetteki lifleri glukoz ve lipid homeostazı üzerine etkileti olan asetat, propiyonat ve bütirata dönüştürmesi; IL-2, IFN-gama, IL-12p40, MCP-1 gibi inflamatuvar sitokinleri azaltması; intestinal permeabilite ve tight junction proteinlerini regüle etmesi; kısa zincirli yağ asidi üretimini artırması; LDL reseptör yolağı ilişkili aşırı lipid yükünü bas-kılaması gibi olumlu etkiler sonucunda, vücut ağırlığı, insülin direnci, kan basıncı, hiperglisemi ve lipid düzeylerinde azalma oluşturabileceği savunulmuştur⁽²³⁾.

Depommier C ve arkadaşları obez veya aşırı kilolu insanlarda, canlı veya pastörize edilmiş 1010 *Akkermansia muciniphila* bakterisinin, 3 aylık günlük oral takviyesinin güvenli ve iyi tolere edildiğini, bu süre sonunda plasebo ile karşılaştırıldığında, pastörize *Akkermansia muciniphila*'nın insülin duyarlılığını iyileştirdiğini, insülinemi ve plazma total kolesterolünü azalttığını, vücut ağırlığı, yağ kütlesi ve kalça çevresinde ise bazale göre hafif azalma sağladığını rapor etmiştir⁽²⁴⁾.

Akkermansia muciniphila'nın kızılçık ve üzüm özütü gibi diyet polifenollerini içeren prebiyotikler verilerek tetiklenmesinin, trofik etki ile *Akkermansia* için uygun ortam sağlayarak kolonizasyonunu artıracak ve metabolik sendromun bileşenlerine yönelik beklenen olumlu etkileri daha da artıracak ortaya konmuştur⁽²⁵⁻²⁷⁾.

Bu tip etkilerden yola çıkarak, prebiyotik ve probiyotiklerin nanoteknoloji yoluyla birlikte uygulanması da gündemdedir⁽²⁸⁾. Bu sayede probiyotikler için uygun ve trofik ortam sağlayacak prebiyotikler birlikte verilebilir, ayrıca mide bariyerini aşmak ve bağırsak seviyesinde yeterli bileşik konsantrasyonları elde etmek için çözümler sunulabilir.

Bütün bu çalışmalardan anlaşılmaktadır ki; probiyotiklerin bazıları metabolik sendromun insülin direnci, kan şekeri, lipidler, kan basıncı gibi bazı klinik bileşenlerini ve sendromla ilişkili bazı enflamatuvar biyobelirteçleri olumlu yönde iyileştirebilmektedir. Ancak bazıları da beklenildiği kadar olumlu bir etki göstermemektedir⁽²⁹⁾.

Daha da önemlisi, metabolik sendromun birden çok metabolik komponenti içermesi onu karmaşık hâle getirmektedir. Metabolik sendromdaki bu hasta çeşitliliği göz önüne alınırsa hangi hasta grubuna hangi probiyotiğin ne kadar dozda standardize edileceği ve ne kadar süre verileceği belirsizdir. Bu nedenlerle, probiyotiklerin metabolik sendromda kullanılabilirliği umut verici olmakla birlikte, rutin önerilere geçmesi zaman alacak gibi görünmektedir.

Dolayısıyla, şu ana kadarki bilgiler ışığında, metabolik sendromda probiyotiklerin tek başına kullanımları klinik olarak anlamlı değildir, ancak sağlıklı bir yaşam tarzı, diyet ve egzersiz önerileri, diğer ilaç tedavileri ile birlikte kombine kullanılması klinik olarak yarar sağlayabilir.

NÖROİNFLAMASYON VE MİKROBİYOTA

Meltem Yalınay

İnsan mikrobiyotası özellikle bağırsak mikrobiyotasının içeriği ve mikrobiyomun filogenetik dağılımı insan sağlığı üzerindeki etkilerinden dolayı gün geçtikçe daha çok dikkat çekmektedir. Bağırsak mikrobiyotası normal fizyolojiyi veya hastalıklara duyarlılığı, metabolik, immünolojik aktivite ve konak ilişkileri üzerinden oluşturmaktadır.

Bağırsak-beyin eksenini mikrobiyota ve beyin arasındaki ilişkileri ve bu etkileşimden merkezi sinir sisteminde (MSS) ortaya çıkan sonuçları tanımlamak için kullanılmaktadır. İnsan sindirim sisteminin beyin gelişmesindeki rolü birçok çalışmada ortaya konmuştur.

Beyin ve mikrobiyota arasındaki iletişim, epitelyal reseptör aracılı sinyal oluşumu, immün modülasyon bakteriyel metabolitlerle enterik nöronların stimülasyonunu kapsar. Mikrobiyota ve immün sistem arasındaki etkileşim, inflamazom sinyal yolağı, MSS'deki immün hücreler olan mikroglia ve astrositler, nörogenezis, beyin-kan bariyeri, vagus siniri, mikrobiyotanın nörotransmitter yapımına etkisi, serotoninerjik etki bağırsak-beyin eksenini birçok boyutuyla ortaya koymaktadır.

Gastrointestinal sistemin beyin gelişimindeki rolü bilinmektedir. Mikrobiyal türlerdeki disbiyozis, atipik immune sinyalizasyon, konak homeostazisindeki dengesizlik ve MSS hastalıklarında ilerlemeyi indüklemektedir. Kommensal mikroorganizmalar ve MSS'nin farklı komponentleri arasındaki çapraz konuşma immün sinyalizasyonda önem taşımaktadır.

Mikrobiyota ve İmmün Sistem Arasındaki Etkileşim

MSS sıklıkla bağışıklığı ayrıcalıklı bir bölge olarak kabul edilmesine rağmen, fonksiyonel lenfatik damarlar (beyni çevreleyen dural meningeal zarda bulunan) ve geçirgen beyin-kan bariyeri sinyal iletimi için bir geçit görevi görebilir ve böylece MSS'de bağışıklık hücrelerinin rolünü ortaya koymuş olur. Gliyal hücrelere ek olarak, yerleşik bağışıklık hücreleri (makrofajlar, CD8⁺ T hücreleri, Treg hücreler ve diğer CD4⁺ T yardımcı (Th) hücre alt-grupları gibi) doğuştan gelen ve / veya uyarlanabilir bağışıklık yanıtlarında aktif olarak yer alırlar⁽¹⁻³⁾. Bağırsak mikrobiyotasının antijen uyarımı ve bağışıklık sinyalleme yollarının aktivasyonu yoluyla CD4⁺ T hücrelerinin farklı alt kümelerini desteklediği bildirilmiştir.

İnsan merkezi sinir sisteminin olgunlaşması ve gelişimi hem içsel hem de dışsal faktörler tarafından düzenlenir. Çoğunlukla mikroorganizma içermeyen (Germ free-GF) hayvanlardan veya geniş spektrumlu antibiyotiklerle tedavi edilen hayvanlardan yapılan çalışmalar, spesifik mikrobiyotanın MSS fizyolojisini ve nörokimyasını etkileyebileceğini göstermektedir.

İlişkili mikrofloradan yoksun GF fareleri öğrenme, hafıza, tanıma ve duygusal davranışlarda nörolojik eksiklikler gösterir^(4, 5). Konvansiyonel farelere kıyasla önemli nörotransmitterlerde (örn., 5-Hydroxytryptamine-HT, N-Nitrosodimethylamine-NMDA ve Brain derived neurotrophic factor-BDNF)

Psikobiyotiklerin yanı sıra beslenmenin rolünü de dikkate almak gerekir. Nörodejeneratif hastalıklarda; Alzheimer, Parkinson, motor-nöron hastalıklar grubunda ketojenik beslenme destek tedavilerde önemli bir yerde bulunmaktadır⁽¹²⁸⁾.

Sonuç

Mikrobiyal türlerdeki disbiyozis atipik immün sinyali, konak homeostazındaki dengesizliği ve de MSS hastalıkları gelişmesini indükleyebilmektedir. Bağırsak bariyerindeki bozulma ile ilişkili değişen mikrobiyota, mukozal immün sistem aktivasyonu ile inflamatuvar ve nöroaktif mediatörlerin salınımına ve sistemik dolaşımına ulaştığı beyinde kognitif ve davranış değişikliklerine yol açmaktadır. Beyin ve bağırsak, enterik sinir sistemi, vagus siniri, immün sistem veya bağırsak mikroorganizmalarının metabolik süreçleri de dâhil olmak üzere çeşitli yollarla bağlanabilir. Bağırsak ve beyin arasındaki iletişimi doğrudan nöronal iletiler, endokrin sinyaller ve bağışıklık sistemi düzenler.

Bağırsak mikroorganizmaları direkt olarak bağışıklık sistemini etkileyebileceği için, bağışıklık aktivasyonu MSS mikrobik etkilerin iletilmesi için bir yol olabilir.

Bağırsak mikrobiyotasının mikroglial aktiviteyi, kan-beyin bariyeri bütünlüğünü, nöroenezisi ve nörotransmitterlerin üretimini etkilediği kabul edilmektedir.

Beyin bağırsak eksenini non-enteral hücreler ve nörotransmitterlerle oldukça hassas bir dengede çalışmaktadır. Bağırsak mikrobiyota değişiklikleri, başta serotonin olmak üzere birçok nörotransmitter salınımını ve nörolojik iletileri etkilemektedir. Nöroinflamasyon sistemik ve lokal inflamasyon süreçleri, proinflamatuvar ve antiinflamatuvar sitokin dengesizlikleri, bağırsak mikrobiyota değişiklikleri ile oldukça sıkı ilişkiler taşımaktadır.

Karmaşık etiyojiler ve insanlarda güvenilir biyobelirteç eksikliği nedeniyle, MSS hastalıkları için etkili tedavi stratejileri büyük ilgi görmüştür. Bağırsak-beyin eksenini kavramı aktif olarak araştırılmaktadır ve birçok çalışma bağırsak mikrobiyota bileşimindeki değişikliklerin bazı klinik durumlarla ilişkili olduğunu doğrulamıştır. Mikrobiyota, bağışıklık sinyali ve MSS arasında biyolojik bir bağın varlığı, beyindeki hem nörolojik hem de immünolojik aktivitelerin ya doğrudan mikrobiyal metabolitler tarafından ya da dolaylı olarak mikrobiyotadan türetilmiş sistemik sinyallerle belirlenebileceğini gösterir. Terapötik modülatörlerin uygulamaları, depresyon gibi çeşitli duygudurum bozukluklarında umut verici sonuçlar vermiştir. Bununla birlikte, bağırsak-beyin ekseninin ayrıntıları hâlâ belirsiz olduğundan, gelecekteki çalışmalar için bağırsak mikroplarının belirli patolojik koşulların ilerlemesine veya gerilemesine katkıda bulunduğu özel mekanizmaları açıklığa kavuşturmak önemlidir. Bu çalışmalar, SSS bozukluklarının erken teşhisi ve müdahalesi için, mevcut terapötik yöntemlerin yanı sıra yeni biyobelirteçlerin tanımlanması ile birlikte ileri terapötik yaklaşımlar için bir temel sağlayabilir.

Gastrointestinal sistem mikrobiyomunun beslenme, pre ve probiyotiklerle regülasyonu ve modifikasyonu beyin ilişkili hastalıkların önlenmesi ve tedavi edilmesinde önem taşımaktadır. Psikotropik tedavilerin gerçek gücü için gelecekte yapılacak çalışmalara gerek duyulmaktadır.

Bölüm B4

DERMATOLOJİDE PROBİYOTİKLER

Pelin Eşme

Ahmet Hakan Erbil

Giriş

Vücudumuzda patojenik, fırsatçı ve kommensal mikroorganizmalar tarafından oluşturulan doğal denge ‘mikrobiyom’ olarak adlandırılmaktadır. Patojenik bakterilerin çoğalması ya da kommensal bakterilerin azalması çeşitli hastalıkların ortaya çıkışına neden olmaktadır. Bu nedenle kommensal bakteriler, sağlıklı bir immün sistemin dengesinde oldukça önemli rol oynamaktadır¹.

Probiyotiklerin tanımı

Dünya Sağlık Örgütü’nün (2001)¹ tanımına göre ‘ekzojen olarak takviye edilebilen, floranın birer üyesi olan ve yeterli miktarlarda alınması konakçı sağlığı için gerekli lokal dengeyi olumlu yönde etkileyen kommensal ve canlı mikroorganizmalar’ *probiyotik* olarak tanımlanmıştır. Probiyotikler ise probiyotik mikroorganizmaların çoğalmasını destekleyen ve çoğunluğu oligosakkarid olan sindirilemeyen karbonhidratlardır². Öncelikle probiyotiklerin, gastrointestinal sistem hastalıklarındaki etkileri araştırılmıştır. Ancak günümüzde geniş meta analizler sayesinde probiyotiklerin artık sindirim sistemi hastalıklarındaki yararların ötesine geçerek infeksiyon hastalıklarının tedavisinde antibiyotik gereksinimini azalttığı, glukoz homestazını düzenlemeye yardımcı olduğu, inflamasyon parametrelerinde gerileme, kolesterol düzeylerinde düşme ve yara iyileşmesinin hızlandırılmasına kadar pek çok konuda fayda sağladığı bilinmektedir³. Probiyotiklerin, inflamatuvar deri hastalıklarından deri yaşlanmasına, derinin kandida enfeksiyonlarından kozmetik dermatolojiye varan etkileri konusundaki literatür de hızla büyüme göstermektedir⁴⁻⁹. Derimizin santimetre kare başına 1 milyon mikroorganizma içerdiği düşünülürse, probiyotiklerin deride bu denli önemli etkiler gösterebileceği aslında tahmin edilebilmektedir¹⁰.

Kutanöz mikrobiyom ve önemi

Kutanöz mikrobiyom, geniş mikrobiyal rezervuarı ile doğal ve kazanılmış immün yanıtta oldukça önemli rol oynamakta ve derinin bariyer bütünlüğünün devamlılığını sağlamaktadır. Kutanöz mikrobiyom yaş, cinsiyet, genetik, diyet, günlük temizlik rutinleri, deri pH’sı, fiziksel ve mental stress, cerrahi prosedürler, nem ve sıcaklık gibi pek çok çevresel faktörden etkilenebilmektedir^{11,12}. Derinin hidrasyonu ve sebum düzeyi ise kutanöz mikrobiyom kompozisyonunu ve çeşitliliğini belirlemede en önemli faktörler olarak kabul görmektedir¹³.

Kutanöz mikrobiyom, vücut bölgelerine göre de farklılık gösterebilir. Örneğin, Stafilokok ve Corynebacterium türleri nemli bölgeleri severken, Propionibacterium yağlı mikroçevrede daha çok bulunmaktadır. Bir bebeğin doğum şekli dahi kutanöz mikrobiyomu şekillendirebilmektedir. Normal vajji-

Kutanöz mikrobiyom bireye özgüdür ve intrinsik/ ekstrinsik faktörler ile kompozisyonu değişiklik gösterebilmektedir. Ancak bazı bireylerin kutanöz mikrobiyomdaki değişimlere neden daha eğilimli olduğu tam olarak bilinmemektedir. Kutanöz mikrobiyom kişiye özgü olduğundan her probiyotiğin her hastada fayda sağlaması olası değildir. Farklı deri tiplerinde ve farklı kutanöz hastalıklarda, ideal suş ve dozajlama konusu ise hâlâ soru işaretleri barındırmaktadır. Patojenik bakteriyi direk hedef alan probiyotiklerin takviye edilebileceği metodlar, bu konudaki gelişmelere ivme kazandıracaktır.

PROBİYOTİKLERİN BAKTERİYEL ENFEKSİYONLARDAKİ ÖNEMİ

Demet Teker Düztaş

Ödül Eğritaş Gürkan

Yaşamın başlangıcından beri kitlesel ölümlere neden olan bakteriyel enfeksiyonlar, insan hayatı için ciddi bir tehdit oluşturmuştur. Bu tehdit karşılığında insanoğlu çareler aramış ve Fleming'in 1928 yılında jelatin kapağında kontamine hâlde üremiş mantar kolonilerinin, yakınındaki bakteri kolonilerini yok ettiğini farkettiğinde aranan çözüm bulunmuştur. *Penicillium* cinsi bu mantarın tedavide kullanılacak biçimde saflaştırması 1940'lı yılların başında başarılmış ve 1944'te bakteriyel enfeksiyonların tedavisinde kullanılmaya başlanmıştır. Bu tarihten itibaren antibiyotik çağı başlamış ve yeni antibiyotikler art arda keşfedilmiştir¹.

Antibiyotiklerin tarihi oldukça eskidir. İlk defa sentezlendiği mikroorganizmalar tarafından yaşadıkları ortamda avantaj sağlamak için kullanılmıştır. Antibiyotik sentezleyen bu mikroorganizmaların, ürettikleri antibiyotiklere karşı doğal direnç mekanizmalarına sahip olduğu bilinmektedir. Medeniyetle tanışmamış, antibiyotik kullanmayan izole toplumlardaki insanlarda mevcut bakteriyel suşlarda antibiyotik dirençli mikroorganizmaların varlığı, antibiyotik direncinin eskiden beri var olduğunu ve antibiyotik kullanımıyla ilişkisinin olmadığını kanıtlamaktadır¹. Ancak antibiyotiklerin standart olmayan doz ve sürelerde, gereksiz endikasyonlarla kullanımının antibiyotik direncini arttırdığı ve antibiyotiklerin seleksiyon etkisi ile dirençli mikroorganizmaların daha fazla ürediği bilinen bir gerçektir².

Antibiyotiklerin keşfiyle enfeksiyonsuz bir hayat sürmeyi uman insanoğlu, ne yazık ki artan antibiyotik direnci neticesinde kitlesel ölümlere neden olabilecek bakteriyel enfeksiyonlar açısından risk altında bulunmaktadır. Dünya Sağlık Örgütü bu riske karşılık klinik yararlılığın maksimumda olduğu, ancak ilaç ilişkili toksisite ve antimikrobiyal direncin minimumda olduğu doz ve sürenin gözetilerek akılcı antibiyotik kullanımını önermektedir³. Günümüzde akut enfeksiyonlarda reçete edilen antibiyotiklerin çoğu medikal anlamda yararsız olmasına karşılık, sosyolojik ve duygusal sebeplerle yazılmaktadır. Geçirilen enfeksiyona karşı "bir şey yapma isteği" antibiyotiklerin gereksiz kullanımının en sık nedenidir^{4,5,6}.

Probiyotikler; yeterli miktarda uygulandığında, konakçıya sağlık yararı sağlayan canlı mikroorganizmalardır⁷. Probiyotik etkileri değişkendir ve bu etkiler probiyotik suşuna, miktarına, uygulama yoluna ve uygulandıkları kişilerin doğal mikrobiyota içeriğine bağlı olarak değişmektedir. Probiyotik etkili bakterilerden en sık *Lactobacillus*, *Bifidobacterium* türleri bilinmekle birlikte son yıllarda yapılan çalışmalarda *Saccharomyces*, *Escherichia coli* ve *Bacillus* türleri de tanımlanmıştır. Bakteriyel enfeksiyonlarla ilgili çalışmalarda bu bakterilere ait spesifik suşlar kullanılmıştır.

Probiyotiklerin Bakteriyel Patojenlere Etkileri

Probiyotiklerin patojen bakterilere yönelik konakçı yararını gözeten birçok etkisi bulunmaktadır. Esas etkisi ise mevcut mikrobiyal çevrede bulunan diğer bakteri türleri ile besin için rekabet etmesi

rarlayan akut otitis media tanısı alan çocukları içeren Cárdenas ve ark.⁶⁷ yaptığı çalışmada, hastalara 1×10^9 CFU/gün *L. salivarius* PS7 verilmiş ve bu hastalarda son 6 aya göre otitis media tekrarlama sıklığında %84 azalma ile birlikte potansiyel otopatojen oranında da azalma gösterilmiştir. Probiyotiklerin çocuklarda akut otitis media üzerindeki etkilerini inceleyen Scott ve ark.⁶⁸ meta-analizinde ise probiyotiklerin hastalığın semptom süresini ve tekrarlama riskini azalttığına dair verilerin olduğunu ancak değerlendirme için daha çok çalışmaya ihtiyaç duyulduğu belirtilmiştir⁶⁸.

7. Prematüre yenidoğanlarda bakteriyel enfeksiyonların önlenmesinde probiyotiklerin rolü

Sağlıklı, term yenidoğanın bağırsaklarında ilk olarak fakültatif aeroblar kolonize olurken, anne sütü alımı ile anaeroblar da kolonize olmaya başlamaktadır⁶⁹. Mikroflora dengesi intestinal defans sisteminin doğru çalışması için gereklidir. Bağırsakta mikrobiyota dengesi doğum şekline, gestasyonel yaşa, anne sütü alımına ve ilaç kullanımına bağlıdır⁷⁰. İmmün sistemi yeteri kadar gelişmemiş prematürelere geç başlangıçlı sepsis ve bakteriyel enfeksiyonlar önemli bir morbidite ve mortalite sebebidir⁷¹. Probiyotikler intestinal bariyer fonksiyonu destekleyerek patojen mikroorganizmaların mukoz membranı geçmesini ve sepsisi önlemektedir⁷². Kanic ve ark.⁷³ plasebo kontrollü bir çalışmada, *L. acidophilus*, *E. faecium* ve *B. infantis* (günde 2 defa 1.2×10^7 CFU/gün) verilen çok düşük doğum ağırlıklı yenidoğanlarda geç başlangıçlı sepsis ve bakteriyel enfeksiyon görülme sıklığının anlamlı olarak azaldığı ve daha erken dönemde taburcu edildikleri belirtilmiştir. Probiyotik alan grupta nekrotizan enterokolit (NEK) izlenmediği ve çocuklarda probiyotik verilmesinin yan etkiye sebep olmadığı özellikle belirtilmiştir. Prematüre sorunlarının başında gelen, mikrofloranın bozulması nedeniyle bağırsak geçirgenliğinin artması ile klinik tablonun ortaya çıktığı NEK prematürelere ciddi bir mortalite nedenidir. Prematürelere probiyotik kullanımının NEK üzerindeki etkisini göstermeyi amaçlayan Bi ve ark.⁷⁴ meta-analizinde *Bacillus*, *Bifidobacterium*, *Lactobacillus*, *Saccharomyces* türleri ve bu türleri içeren karışımların NEK'yi önlemede, aynı zamanda da mortaliteyi azaltmada etkili olduğu gösterilmiştir. *Bifidobacterium* türünün sepsis, NEK ve mortaliteyi azaltmada güçlü etkileri olduğu özellikle belirtilmiş ancak uygun doz belirtilmemiştir. Prematürelere probiyotiklerin kullanım dozu ile ilgili daha fazla çalışmaya ihtiyaç duyulduğu oldukça açıktır.

Son dönemin popüler konusu olan probiyotikler, bakteriyel enfeksiyonlarda artan antibiyotik direncine karşılık iyi bir çözümü vadetmektedir. Ekonomik İşbirliği ve Kalkınma Örgütü (OECD) verilerine göre Türkiye, üye ülkeler arasında antibiyotiklerin hastalara en az etki ettiği ülke olarak değerlendirilmiş ve antibiyotik direnç oranı %38.8 olarak belirtilmiştir. Bilinçsiz antibiyotik kullanımının yaygınlığı bu direncin esas nedeni olarak gösterilmiştir⁷⁵. Akılcı ilaç kullanımı eksikliğinin ülkemizde antibiyotik dirençli bakteriyel enfeksiyonların daha sık görülmesine ve bu enfeksiyonların ciddi salgınlara yol açabileceği göz önünde bulundurulmalıdır. Probiyotik stratejilerinin bakteriyel enfeksiyonlarda, hem bakterilere direkt etkileri hem de antibiyotik etkilerini arttırmaları nedeniyle, korunma ve tedavide önemli rolü olduğu oldukça açıktır. Ancak probiyotik etkilerinin suş, doz ve uygulama yolu bağımlı olması nedeniyle, bu alanda daha fazla çalışma ile tedavi stratejilerinin daha net çizilmesi gerekmektedir.

ÇOCUKLUK ÇAĞI VİRAL GASTROENTERİT, SOLUNUM YOLU VE DİĞER VİRAL ENFEKSİYONLARDA PROBİYOTİK KULLANIMI

Ayşegül Pala

Öner Özdemir

Giriş

Bu yazımızda öncelikle en sık görülen viral gastroenterit ve etkenlerinden bahsettikten sonra, probiyotiklerin bu hastalıkta ve diğer bazı hastalıklardaki kullanım ve yararı anlatılacaktır.

Viral Gastroenteritler ve Etkenleri

Akut gastroenterit daha çok virüslerin sebep olduğu gastrointestinal sistemde meydana gelen enfeksiyondur. Tüm yaş gruplarında görülmekle beraber dünyada morbidite ve mortalitenin en yaygın nedenlerinden biridir. Ateş, bulantı, kusma ve karın ağrısının eşlik ettiği veya etmediği ani ishal başlangıcı ile kendini gösterir. Viral ve bakteriyel gastroenteritin kliniğini ayırmak zor olsa da laboratuvar testleri ile kesin tanı konulabilir. ⁽¹⁾ Viral gastroenterit yeterli miktarda sıvı ve elektrolit desteği verilerek tedavi edilir. ⁽²⁾ Son yıllarda, akut viral gastroenterit vakalarında probiyotik kullanımını değerlendiren birçok araştırma ve klinik denemeler yapılmıştır ve çelişkili sonuçlar bildirilmiştir. Bu bölümde akut gastroenterite en sık neden olan bazı virüslere kısaca değinip akut viral gastroenteritte probiyotik kullanımından bahsedeceğiz.

Rotavirüsler

Rotavirüsler Reoviridae ailesinden olup çocuk yaştaki gastroenteritin ana sebebidir. Sekiz rotavirüs türünden (A'dan H'ye) A, B ve C insan ve hayvanlarda bulunurken D, E, F, G ve H sadece hayvanları enfekte eder. ⁽³⁾ Rotavirüs her yıl dünya genelinde 180.000-450.000 beş yaş altı çocuklar ölümünden sorumludur. Rotavirüs gelişmiş ve gelişen ülkelerdeki 3-5 yaş arası neredeyse tüm çocukları enfekte ettiği izlenmiştir. 3 aya kadarki bebeklerde annenin immün sisteminden dolayı enfeksiyonlar hafif geçerken 4-23 aylık çocuklarda hastalığın klinik insidansı en yüksek seviyeye ulaşır. Endüstriyel ülkelerde yapılan vaka kontrol çalışmalarında emzirme eksikliği, prematürite ve düşük doğum ağırlığının Rotavirüs gastroenteriti için risk faktörü oluşturduğu gösterilmiştir. ⁽⁴⁾ Rotavirüs kaynaklı gastroenterit gelişmiş ülkelerde daha çok kış aylarında görülürken gelişmekte olan ülkelerde mevsimsel farklılık azdır. Rotavirüsün bulaşması fekal-oral yoldan, kontamine el, su ve besinlerin tüketimi ile gerçekleşir. Enfeksiyon ve replikasyon intestinal villusların olgun enterositlerinde başlar ve böylece emilim ve sekresyon bozukluğu meydana gelir. ^(5,6) Klinik tablosu subklinik hastalık veya kısa süreli sulu ishalden kusma ve ateşin eşlik ettiği bol miktarda sık yapılan ishale kadar değişkenlik gösterir. Hastalık akut ateş ve kusma ile başlar ve 1-2 gün sonra bol sulu ishale devam eder. Kusma 1-2 gün sürerken gastrointestinal rahatsızlık 3-7 gün arasında seyredir. Bunun dışında Rotavirüsün konvülziyon, ensefalit ve serebellit gibi nörolojik sorunlara da sebep olduğu gösterilmiştir. ⁽⁷⁾ Rotavirüs gastroenteritinin akut yönetiminde amaç

Probiyotik Kullanımının Diğer Viral Hastalıklardaki Rolü

Probiyotik kullanımının pediatrik hastalarda viral gastroenterit ve solunum yolu enfeksiyonlarının dışında, literatürde çok kısıtlı da olsa bazı viral hastalıklarda kullanımına dair çalışmalar mevcuttur. Sakata ve arkadaşlarının⁽⁶⁵⁾ Japonya’da yaptıkları çalışmada, okul çağı çocuklarının *L. lactis* JCM 5808 şuşu içeren yoğurt tüketen çocuklarda influenza insidansının azaldığını göstermişlerdir. Luoto ve arkadaşlarının⁽⁶⁶⁾ 94 preterm süt çocuklarında randomize, plasebo-kontrollü yaptıkları çalışmada, LGG probiyotik kullanımının solunum yolları enfeksiyonu ve özellikle rinovirüs enfeksiyonu insidansını azalttığını bildirmişlerdir. Yazarlar probiyotik kullanımın rinovirüs enfeksiyonlarında hastalığın getirdiği maddi yükü azaltacağını da savunmuşlardır. Yeterli çalışma ve veri olmadığından bu hastalıklarda probiyotik kullanımına dair görüş birliği yoktur.

SARS-CoV-2 Enfeksiyonu / COVID-19 Hastalığında Probiyotik Kullanımı

COVID-19 hastalarının hastalık devam ederken ve iyileştikten sonra bile mikrobiyal disbiyozis ve intestinal rahatsızlıklar (diyare, bulantı, kusma) geçirmeye devam ettikleri bildirilmiştir. Wu ve arkadaşları⁽⁶⁷⁾ 13 COVID-19 hastası ve 15 sağlıklı hastada bağırsak mikrobiyotasını incelemişlerdir. Yazarlar COVID-19 hastalarında sağlıklı hastalara göre bağırsak mikrobiyotasının değiştiğini ve mikrobiota çeşitliliğinin azaldığını saptadılar. COVID-19 hastalarına 14 gün boyunca uygulanan probiyotik kullanımının 8 hastadan alınan örneklerden 6 (%75) hastada mikrobiyal içeriğinin iyileştiğini tespit etmişlerdir. Retrospektif bir COVID-19 çalışmasında, 58 COVID-19 tanısı almış ağır ve kritik hastada *Bifidobacterium* ve *Lactobacillus* probiyotik karışımı tedavisinin etkisi araştırılmıştır. Probiyotik ile beslenen COVID-19 hastalarında probiyotik ile beslenmeyen COVID-19 hastalarına göre diyare süresinin azaldığı kaydedilmiştir.⁽⁶⁸⁾ Tek merkezli, dört-kör, randomize bir klinik çalışmasında, COVID-19 hastaları plasebo ve probiyotik grubu olarak ikiye ayrılmış ve hastalara ayakta tedavi olarak *Lactiplantibacillus plantarum* KABP022, KABP023, KABP033 ve *Pediococcus acidilactici* KABP021 şuşları içeren probiyotik karışım verilmiştir. Probiyotik grubunda, 78/147 hasta komplet remisyona izlenirken plasebo grubunda bu oran 41/146 idi. Probiyotik tedavisinin ayrıca nazofaringeal viral yükü, akciğer infiltrasyon oranını, sindirim ve diğer sistemik semptomlarını plasebo grubuna göre azalttığı gözlenmiştir.⁽⁶⁹⁾ Kurian ve arkadaşları⁽⁷⁰⁾ probiyotiklerin intestinal kanalda biyolojik bariyeri kuvvetlendirdiğini, intestinal florayı düzenlediğini, innat ve adaptif immün sistemi modüle ederek immün sistemin gelişimine ve olgunlaşmasına katkı sağladığını, probiyotiklerin bu özellikleri ve COVID-19 enfeksiyonu-probiyotik kullanımı üzerindeki literatür çalışmaları da göz önüne alarak probiyotiklerin COVID-19’un önlenmesinde ve tedavisinde kullanılabileceğini iddia etmişlerdir.

Probiyotik alımının COVID-19 tedavisinde yararlı sonuçlar verdiği çalışmalarda gösterilmiştir, ancak daha fazla prelinik ve klinik çalışmaya ihtiyaç duyulmaktadır.⁽⁷¹⁾

PERİNATAL VE YENİDOĞAN DÖNEMLERİNDE MİKROBİYOTA VE PROBİYOTİKLER*Fahri Ovalı***Perinatal Mikrobiyota**

Bağırsak, gebeliğin 3. haftasından itibaren gelişmeye başlar ve bir yandan organogenez devam ederken bir yandan da kolonizasyonun başlaması ile fonksiyonel gelişim sürer. Bağırsakta; bakteri, virüs, mantar, ökaryotlar ve diğer tek hücreliler gibi birçok organizma bulunur. Erken kolonizasyon, konsepsiyonla başlar ve ilk 1000 gün devam eder. Yenidoğanın mikrobiyal çeşitliliği ve buna bağlı yaşamsal fonksiyonları, doğum şekli, annesinin derisiyle teması ve anne sütü ile şekillenir. Bağırsak mikrobiyotası bir organizmalar “topluluğu” olarak değil, bebeği metabolik, trofik ve immünolojik olarak destekleyen aktif bir “organ” olarak ele alınmalıdır.

Gebelik sırasında fetusun normal gelişimi ve sağlıklı doğumunu sağlayabilmek için bir dizi immünolojik, hormonal ve metabolik değişiklikler olur. Bu kapsamda bağırsak, vajinal, oral ve plasental mikrobiyota da değişir. Fetal mikrobiyotanın kaynağı tam belli değildir ancak vajinal asendan yolla veya maternal oral kavite, bağırsak veya kan dolaşımı yoluyla mikroplar bağırsağa ulaşabilir. Bu değişikliği etkileyen genetik, etnik, genetik ve çevresel faktörler bulunur. Annenin diyeti, bulunduğu coğrafi bölge ve araştırma yöntemine göre de mikrobiyota farklı görülebilir. Fetusun steril bir ortamda bulunduğu ve ancak doğumdan sonra mikrobiyotanın olduğu paradigması artık geçerliliğini yitirmiştir. Otuz yıldan uzun bir süredir yapılan çalışmaların sonuçlarına göre plasenta, amniyon sıvısı, mekonyum ve fetustan oluşan fetomaternal üniteye birçok mikrobun bulunduğu artık bilinmektedir.⁽¹⁾ Diğer bir deyişle, maternal-fetal-mikrobiyal triad, bir “holobiont” oluşturmaktadır. Intrauterin mikrobiyota epigenetik değişiklikler ile birlikte fetusun immünesini, metabolizmasını ve ileri dönemdeki sağlık durumunu belirlemektedir.

Plasenta, amniyon sıvısı ve mekonyumdaki mikrobiyota, gestasyon yaşına göre değişkenlik gösterir.^(2,3) İlk trimesterde plasentada, miktarı az olsa bile metabolik olarak aktif olan Firmiküt, Teneriküt, *Proteobacteria*, *Bacteroidetes* ve *Fusobacteria* gibi kommensal bakteriler bulunur. Oral mikrobiyoma benzeyen bu mikrobiyom antenatal enfeksiyon, antibiyotik kullanımı ve prematüre doğumda farklılıklar gösterir.⁽⁴⁾ Maternal mikrobiyom, in utero olarak fetusa geçmekte ve fetal bağırsağı kolonize etmektedir. Diğer bir görüşe göre kandaki baskın mikrobiyom, mikropların organlar arasındaki dağılımını belirlemektedir.⁽⁵⁾ Eğer gerçekten bazı mikroplar preterm doğumu tetikliyor ise maternal diyetin değiştirilmesi veya farklı mikropların verilmesi ile preterm doğumun önlenebileceği düşünülebilir.

Gebe kadındaki intestinal disbiyosisin preterm doğum, preeklampsi, intrauterin büyüme geriliği dâhil birçok gebelik komplikasyonunda rol oynayabileceği belirtilmiştir.⁽⁶⁾ Plasentadaki mikropların sistemik perinatal inflamasyona yol açarak intrauterin büyüme geriliği ve merkezi sinir sistemi hasarına neden olabileceği gösterilmiştir.^(7,8) Hatta bu bebeklerde öğrenme güçlükleri, dikkat eksikliği ve gelişimsel gerilikler de görülmüştür.⁽⁹⁾ İkizler kullanılarak yapılan genetik ve çevresel etkilerin incelenme-

lere probiyotik verilmesi preterm doğumu önlemediği gibi yeni doğum yapmış annelere probiyotik verilmesinin de bebeklere herhangi bir faydası gösterilememiştir. ⁽¹⁹⁰⁾

Sonuç

İnsan mikrobiyomu genetik yük, prematürite, sezaryen, beslenme, antibiyotik ve probiyotik kullanımı, perinatal stres ve enfeksiyonlar gibi birçok faktörden etkilenir. Gebelik ve yenidoğan döneminde bağırsak mikrobiyotasının değişmesi, infantil kolik, inflamatuvar bağırsak hastalığı, nekrotizan enterokolit, astım, atopik hastalıklar, çöliak hastalığı, diyabet, duyulanım bozuklukları ve otizm spektrum bozuklukları gibi birçok hastalık ile ilişkilendirilebilir. Bu hastalıkların ortaya çıkması ve devam etmesinde probiyotiklerin rolüne dair yeni çalışmaların yapılmasına ihtiyaç vardır. Herhangi bir probiyotik ürününe ait elde edilen verilerin diğer probiyotikler için kullanılması mümkün değildir. Günümüzde probiyotiklerin kullanımı ile ilgili standart öneriler bulunmamaktadır. Probiyotiklerin uzun dönemde bağırsak mikrobiyomu ile bağırsakların immün, metabolik ve anatomik gelişimi üzerindeki etkileri de bilinmemektedir. Probiyotikler ilaç olarak kabul edilmedikleri için farmasötik ajanların tabi oldukları kurallara uymamaktadır. Dolayısıyla bu ajanların güvenlik çalışmaları ve bilgileri yeterli değildir. Bu ajanların da farmasötik ajanlar gibi faz II ve faz III çalışmalarının uygun şekilde yapılması ve üretim, saklama, pazarlama ve kalite kontrol önlemlerinin de standart hâle getirilmesi gerekmektedir. İmmün sistemleri zaten immatür olan prematüre bebeklerde bu ajanların uygunsuz kullanımının bazı istenmeyen etkilere yol açma potansiyeli olduğu unutulmamalıdır.

OBSTETRİK PRATİKTE MİKROBİYOTANIN ÖNEMİ, PERİNATAL SONUÇLARA ETKİSİ VE PROBİYOTİK

Umit Yasemin Sert

Nuray Bozkurt

Giriş

Normal bir gebelik; anatomi, fizyoloji ve immün fonksiyonlar açısından dinamik değişimler ile karakterize bir süreçtir. Gebeliğin mikrobiyota ve mikrobiyotanın gebelik süreci, anne ve fetus üzerine olan etkileri bilinmezliğini korumakla birlikte, ilgi çeken bir çalışma konusu olmuştur. Dramatik bir hormonal değişimle ilişkili olan perinatal dönemde, bakteriyel kompozisyon, bağırsak fonksiyonu ve bağırsak geçirgenliğinde etkili immün ve inflamatuvar bir süreç başlar⁽¹⁾.

Östrojen ve progesteron, bağırsak mikrobiyotasının kompozisyonu, bakterilerin büyüme ve patojenitesi ile direkt ilişki içerisindedir. Progesteron yükselmesi ile artan *Listeria monocytogenes* enfeksiyonu ve preterm doğum ve ölü doğumla olan artmış birlikteliği bunun en güzel örneğidir⁽²⁾.

2015 yılında yapılan bir çalışmada, 40 gebenin gebelik esnasında ve gebelik sonrası erken dönem oral, vajinal ve bağırsak mikrobiyotasının haftalık incelenmesi ile yapılan çalışmada, normal sağlıklı bir kadın mikrobiyotasından çok farklı bir mikrobiyal çeşitlilik ile karşılaşılmıştır. Bu değişim bazı kadınlarda postpartum 1 yıla yakın bir süre devam etmiştir⁽³⁾.

Moleküler çalışmalar, gebelikte vajinal mikrobiyotada *Lactobacillus* dominant bir stabilite olduğunu göstermektedir (östrojen etkisi). *Lactobacillus*, patojen bakterilerin vajinadan asendan olarak maternal-fetal yüze ulaşması ve muhtemel etkilerine karşı koruyucu bir role sahiptir^(4,5).

Normalde steril olduğu düşünülmesine karşın yapılan çalışmalar sağlıklı bir gebelikte de bakteri ve virüslerin fetal-maternal ünite ve amniyotik sıvıda kolonize olabildiklerini göstermektedir. Bakteriyel ve viral kolonizasyon vajinadan uterusu asendan yolla, oral kaviteden plasentaya hemotojen yolla ve gastrointestinal mikrobiyomun etkisi ile olabilmektedir. Geçiş yolu her ne olursa olsun anneden bebeğe olan bu transfer gebelik, fetal gelişim ve fetal mikrobiyotanın postnatal döneme hazırlanması için fonksiyonel öneme sahiptir⁽⁶⁾.

Dysbiozis'in gebelik üzerindeki etki mekanizması net olmamakla birlikte kötü obstetrik sonuçlarla ilişkili olduğu ve gebeliğin farklı dönemlerinde meydana gelen etkilenimlerin gebelik sonuçlarını farklı etkilediği bilinmektedir⁽⁷⁾.

Gebelik sürecinde fetal ve maternal iyilik hâli ile yakın iletişim hâlinde olan 4 mikrobiyal çevreden bahsetmek mümkündür. Her biri farklı bir komplikasyon ve birbiri ile ilişkili olan bu sistemler: oral mikrobiyota, plasental mikrobiyota, bağırsak mikrobiyotası ve vajinal mikrobiyotadır.

Bağırsak mikrobiyotası ilk trimester'dan 3. Trimester'a dramatik bir değişim geçirir. Actinobacteria ve Proteobacteria artarken, Faecalibacterium adı verilen antiinflamatuvar aktiviteden sorumlu türde

Husein ve ark. 9-14 gestasyonel haftadan gebelik sonuna kadar günde bir kez oral *L. rhamnosus* GR-1 ve *L. reuteri* RC-14 verdikleri gebelerde, vajinal mikrobiyota restorasyonunun sağlanamadığı ve BV'in önlenmesine katkıda bulunmadığını göstermişlerdir⁽⁴⁵⁾. Husein ve ark. nin çalışmasına yapılan en önemli eleştiri ise Lamont ve ark.'nın kullanılan probiyotik içeriği ile ilişkili yorumlarıdır⁽⁴⁶⁾. Lamont ve arkadaşları, 180'in üzerinde *Lactobacillus* türü olduğunu, bu türlerin farklı miktarlarda laktik asit, H₂O₂ ve bakteriyosin sentezi ile ilişkili olduğunu ve kültür temelli çalışmaların moleküler temelli çalışmalara kıyasla bu türleri belirlemede yetersiz olduğunu vurgulamışlar ve sağlıklı bir vajinanın *L. crispatus*, *gasseri*, *iners* ve *jensenii* suşlarından en az birine sahip olması gerektiğini söylemişlerdir⁽⁴⁶⁾. Oysa Husein ve ark.'nın kullandıkları probiyotikte bu *Lactobacillus* türleri yer almamaktaydı⁽⁴⁵⁾. Lamont ve ark. gelecekte yapılacak probiyotik çalışmalarının *L. crispatus* üzerinde yoğunlaşması gerektiğini savunmuşlardır⁽⁴⁶⁾.

21 farklı çalışmanın incelendiği meta-analizde ise probiyotiklerin preterm eylemi azalttığına dair kanıt bulunamamıştır, gebelik sonuçları üzerine etkinin araştırıldığı daha kapsamlı çalışmalara ihtiyaç vardır⁽³²⁾.

Sonuç olarak, yapılan kültür bazlı ve moleküler çalışmalar obstetrik sonuçlar ile mikrobiyota arasında bir ilişki göstermekle birlikte, probiyotiklerin tedavi amaçlı kullanımı için probiyotik içeriği, kullanım süresi ve uygulanma şekli de göz önünde bulundurularak yapılacak daha kapsamlı, kanıta dayalı çalışmalara gereksinim vardır.

HASTANE ENFEKSİYONLARI VE ÇOKLU İLACA DİRENÇLİ ENFEKSİYONLARI ÖNLEMEDE PROBİYOTİKLERİN ROLÜ

Elmas Pınar Kahraman Kılbaş

Mustafa Altındış

Antibiyotiklerin aşırı ve yanlış kullanımı, çoklu ilaca dirençli (ÇİD) bakterilerin seçilimi ile sonuçlanmıştır. ÇİD mikroorganizma adlı önemli bir halk sağlığı tehdidi hastane kaynaklı bakteriyel enfeksiyonların büyük bir bölümünü oluşturmaktadır. Yüksek insidans nedeniyle, geleneksel olmayan tedaviler günümüzdeki tedavi yöntemlerine ideal alternatiflerdir ve bu enfeksiyonları önlemeye yönelik bir yol göstericidir. Mikrobiyota teriminin anlaşılması ve bu alanda çalışmaların artması ile mikrobiyomun restore edilmesinin ve bütünlüğünün sürdürülmesinin, kolonizasyonu ve ÇİD mikroorganizma kaynaklı enfeksiyonları önlemede bir seçenek olarak düşünülmektedir. Bu kompleks mikroorganizma topluluğu, yaşam alanı ve besin kaynakları için rekabet ve konak ile arasında gelişen immünolojik ve biyokimyasal etkileşimler yoluyla ÇİD mikroorganizmalarla kolonizasyonu önleyebilir. Enfeksiyon kontrolü ve antibiyotik tedavisinin gelecekteki yönü, alternatif tedavi yöntemlerine doğru ilerlemektedir. Bu alternatif terapilerin gelişimine rağmen araştırmacılar bu yöntemleri geliştirmek için gerekli olan translasyonel bilimi engelleyen düzenleyici kurallarla kısıtlanmaktadır.

Hastane kaynaklı veya sağlık bakımı ile ilişkili enfeksiyonlar, Dünya Sağlık Örgütü (WHO) tarafından, bir hastanede veya başka bir sağlık kuruluşunda, enfeksiyonun bulunmadığı veya başvuru sırasında kuluçka döneminde bulunduğu enfeksiyonlar olarak tanımlanmaktadır. Tanım, hastanede kalış sırasında edinilen ancak taburcu olduktan sonra ortaya çıkan enfeksiyonları da kapsamaktadır. 1 Sağlık kurumuna başvurudan 48 saat sonra meydana gelen enfeksiyonlar genellikle hastane enfeksiyonları olarak kabul edilmektedir. Hastane enfeksiyonları, hem gelişmiş hem de gelişmekte olan ülkeleri etkilemekte olan dünya çapında görülen bir sorundur. Sadece Amerika Birleşik Devletleri'nde akut bakım hastanelerine başvuran tüm hastanede yatan hastaların %5 ila %10'unun hastane enfeksiyonu ile karşılaşacağı tahmin edilmektedir¹. Kabaca %25'inin yoğun bakım ünitesi (YBÜ) hastaları olduğu tahmin edilmektedir. Hastane enfeksiyonlarında riski, gelişmekte olan ülkelerde daha da yüksek oranlarda görülmektedir ve WHO'ya göre, hastaneye yatırılan tüm hastaların yaklaşık %15'i bu tür enfeksiyonlardan muzdariptir. Bu durum, hastanede yatış süresinin uzaması, antimikrobiyal direncin artması ve mortalite oranının artması ile sonuçlanır².

İnsan bağırsağında yaklaşık 3 milyon farklı geni kodlayan yaklaşık 3 lbs'lik bakteri (insan ana genomundan 100 kat daha fazla) bulunur³. Van Leeuwenhoek'un mikroskopik hayvan tanımından dört asır sonra Joshua Lederberg tarafından ortaya konan mikrobiyom terimi, vücut boşluklarımızı tam anlamıyla paylaşan kommensal, simbiyotik ve patojen mikroorganizmaların ekolojik topluluklarını tanımlamaktadır⁴. Bu mikroorganizmaların çoğu, sağlık ve hastalık belirleyicileri olarak görmezden gelinmiştir⁵. Günden güne kendini genişleten bu tanım, vücudumuzu oluşturan insan ve insan dışı hücrelerden (ve genomlarından) oluşan bir "süperorganizma" olarak kabul edilebilir^{2, 3}. İnsan mikrobiyomu karşılıklı yarar sağlayan bir ilişki içinde bizimle birlikte gelişmiştir.

lar ve profilaktik amaçlı kullanım süresi hakkında çok sayıda soru cevapsız kalmaktadır. Bu tür konular gelecekteki çalışmalarda ele alınabilir,

- Mikrobiyom ve konak bağışıklık sistemi arasındaki karmaşık moleküler etkileşimlerin belirlenmesi,
- Konakçı-mikrobiyom etkileşimlerini taklit eden moleküler terapötiklerin geliştirilmesinin teşvik edilmesi şeklindedir.

Tüm bu mikrobiyota iyileştirme stratejilerine rağmen patojen biyofilmler tarafından ortaya çıkan ve yerli mikrobiyotanın homeostatik etkilerinin ötesinde görünen kalıcı problemler vardır ve bu problemler ÇİD mikroorganizma kolonizasyonu için güvenli yaşam alanları sunabilirler⁶¹. Bu nedenle, patolojik biyofilmlerin anlaşılması ve mikrobiyotanın iyileştirilmesindeki ilerlemeler ÇİD mikroorganizma kaynaklı enfeksiyonların kontrolü için birlikte değerlendirilmelidir.

Bölüm B10

PROBİYOTİKLERDE GELECEK

Tarkan Karakan

Probiyotikler insan sağlığı için faydalı olan mikroorganizmalar olarak özetlenebilir. Bu mikroorganizmalar günümüzde endüstrinin piyasada bulunan ürünlerinden ibaret gibi görünmektedir. Ama gelecek muhtemelen daha farklı olabilir.

İnsan vücudunda bulunan mikroorganizmaların-ki bunların büyük bir kısmı bağırsaklarda yer alır- ve bunların genomlarının toplamına **mikrobiyom** denilmektedir. Son 15 yıl insan mikrobiyomu ile hastalık ilişkisi araştırıldı ⁽¹⁾. Bu araştırmalar birçok hastalıkta sağlıklı insanlardan farklı bir mikrobiyom olduğu sonucunu bizlere gösterdi ⁽²⁾. Ancak tüm bu çalışmalara rağmen iki bilinmez gizemini korumaktadır:

1. Bu ilişki nedensel mi yoksa sadece birliktelik mi?
2. Diğeri ise konu ise sağlıklı mikrobiyomun tanımı nedir?

Bu soruların cevapları bu yıl içinde bazı çalışmalarla aydınlanmaya başladı ⁽³⁾. Mikrobiyotanın probiyotiklerle modülasyonu bazı hastalıklarda etkili olabilir. Bu hastalıklar akut gastroenterit, antibiyotik ilişkili ishaller, irritabl bağırsak sendromu (İBS) ve infantil kolik olarak sayılabilir. Kılavuzlarda bu hastalıklarda yüksek kanıt düzeyi bulunmaktadır. Diğer klinik senaryolarda ise probiyotiklerin etkisi hakkında sınırlı sayıda klinik çalışma bulunmaktadır ⁽⁴⁻⁷⁾. Probiyotiklerin nasıl etki ettiği ile ilgili daha çok prelinik çalışmalar bulunmaktadır ⁽⁸⁾. Genellikle patojen kolonizasyonunun engellenmesi, sekretuar IgA salgısının artması, immün regülasyonun sağlanması, toksinlerin nötralizasyonu gibi etkiler tanımlanmıştır. Ancak bu probiyotikler(genellikle Laktobasiller ve Bifidobakteriler) bağırsak mikrobiyota çalışmalarından önce de vardı ve yeni nesil dizileme yöntemleri ile keşfedilen mikroorganizmaların çok küçük bir kısmını oluşturmaktadır.

Gelecekte insan bağırsak mikrobiyotasında yeni keşfedilen bakteriler probiyotik olarak kullanılabilir. Buna en iyi örnek *Akkermansia muciniphilia*'dır. *A.muciniphilia* musin tabakası degrade eden bir bakteridir. Ancak obezite, diabetes mellitus ve metabolik sendromda azalmış olduğu bildirilmiştir ⁽⁹⁻¹³⁾. *A.muciniphilia* ile ilgili ilk klinik ön çalışma bu yıl içinde yayınlandı. Bu çalışmada 10^{10} CFU dozunda *A.muciniphilia*'nın canlı veya pastörize formu 3 ay boyunca 32 aşırı kilolu, insülin direnci olan deneklere verildi ⁽¹⁴⁾. Çalışmanın sonucunda bu probiyotiğin güvenli olduğu, insülin direncini, insülin seviyesini ve total kolesterolü azalttığı gösterilmiştir. Deneklerin vücut ağırlığında ve yağ kütlesinde de azalma saptanmıştır ⁽¹⁴⁾. İlginç olan sadece canlı *A.muciniphilia*'nın değil, pastörize yani canlı olamayan formunun da fayda etkili göstermesi olmuştur. Bu bilgi probiyotik bakteriler hakkında henüz bilmediğimiz mekanizmaların etkili olabileceğini göstermektedir.

Gelecekte bizi bekleyen neler var diye baktığımızda karşımıza üç farklı konsept çıkıyor:

1. Yapay mikrobiyotaya bileşenleri (mikrobiyotaya restorasyon tedavileri)
2. Bakteriofajlar
3. Post-biyotikler

Mikrobiyotaya restorasyon tedavilerinin öncüllerinden olan Rebiotix firmasının ürettiği RBX2660 isimli mikrobiyotaya bileşeni özellikle *Clostridioles difficile* (CD) tedavisinde faz çalışmalarını sürdürmektedir. Güvenlik çalışması ilk kez 2016 yılında tamamlanan ürünün, *C.difficile* profilaksisinde etkili olduğu gösterilmiştir^(15,16). Geçen yıl yapılan diğer bir çalışmada da benzer başarılı sonuçlar bildirildi. 2019 yılında da Faz 2b çalışması yapılmış bu hasta grubunun mikrobiyotaya profili ve bakteriyel çeşitliliğinde düzelme olduğunu bildiren bir çalışma yayınlandı⁽¹⁷⁾.

Bakteriofajlar bakterileri enfekte eden virüslerdir. Bakterileri kullanarak çoğalırlar ve bakteriyel mikrobiyotaya yön verebilirler. Bu özelliklerinden faydalanmak amacıyla hedeflenmiş bakteriofajların mikrobiyotaya modülasyonu için kullanılması hedeflenmiştir. Bu konuda birçok alanda çalışmalar devam etmektedir. Crohn hastalığında da benzer bir çalışma yapılmaktadır⁽¹⁸⁾.

Post-biyotikler probiyotiklerin veya bağırsak mikrobiyotasının ürettiği son ürünleridir. Bu ürünlerden konakçı için faydalı olan metabolitlere *post-biyotik* adı verilmektedir. En eski ve en iyi bilinen postbiyotikler kısa zincirli yağ asitleridir (Butirat, propriyonat ve asetat). Ancak son yıllarda metabolomiks ve proteomiks alanındaki gelişmeler sayesinde çok daha fazla son ürün saptanmıştır. Muhtemelen gelecekte bu ürünler içinden klinik uygulamaya geçebilecek postbiyotikler elimizde olacaktır⁽¹⁹⁾.

Sonuç olarak, probiyotiklerin geleceği gelişen analiz yöntemlerine paralel ilerlemektedir. Bu ürünlerin klinik kullanıma girebilmesi için ilaç benzeri bir regülasyon, analiz ve klinik çalışma dizaynlarına ihtiyaç vardır. Probiyotiklerin gıda takviyesi olmaktan çok daha öteye gidebilmesi için ilaç firmalarının bu ürünleri bu yönde dizayn etmeleri gerekmektedir. En önemli konuların başında da(çoğu zaman göz ardı edilen) güvenlik konusu yatmaktadır. Bu sadece enfeksiyon riski anlamında değil, mikrobiyotaya modülasyonunun gelecekteki riskleri (kanser, kronik inflamatuvar hastalıklar, psikiyatrik hastalıklar gibi) açısından da kayıt ve bildirimleri yapılmalıdır.

PROBİYOTİKLER-PREBİYOTİKLER VE ALLERJİK HASTALIKLARIN ÖNLENME VE TEDAVİSİNDEKİ ROLLERİ

Öner Özdemir

Giriş

Yirminci yüzyılın son dekatından itibaren ‘vücudumuza faydalı mikroplar’ olarak adlandırılan ve değişik gıda ürünlerinin içine konulan probiyotikler ve onlara yaşama ortamını sağlayan prebiyotikler üzerinde yapılan araştırmalar ve yazılan makaleler her geçen gün artmaktadır ⁽¹⁻³⁾.*

Bu derlememize öncelikle probiyotikleri ve prebiyotikleri tanımlayarak başlamak istiyoruz. Daha sonra her ikisinin insan vücudunda meydana getirdiği ve alerjik hastalıkların oluşum (toplumdaki prevalansını) ve tedavisini etkileyebilecek mekanizmalara kısaca değineceğiz. Alerjik hastalıkların (atopik dermatit (AD), besin allerjisi, alerjik rinit ve astım) önlenme ve tedavisi üzerine rolleri güncel literatür verileri, önce randomize kontrollü çalışma (RKÇ)’lerden başlanarak, sonra mevcut metaanalizler ve rehber görüşleri, ışığında anlatılacaktır.

Probiyotikler: Tanımlama

Asırlardır fermente sütle (*Streptococcus thermophilus* ve *Lactobacillus bulgaricus*) vücuda alınan probiyotikler ‘ağızdan alındığında, konağın mikrobiotasını değiştirebilecek ve potansiyel olarak sağlığına yararlı olabilecek canlı mikroorganizmalar’ olarak tanımlanmaktadır ⁽⁴⁾. En sık kullanılan ve en iyi bilinen probiyotik bakteriler laktik asit bakterileri (LAB) olan Laktobasil ve Bifidobakteri’dir. Laktik asit bakterileri dışında kullanılan diğer türler ise *E. coli*, *Bacillus* gibi bakteriler ve *Saccharomyces* gibi mantarlardır ⁽³⁾. Bilinen en temel üç özelliği; insan kaynaklı olmaları, mide-bağırsak sisteminde değişik etkenlere karşı dirençli ve konağa faydalı olmalarıdır ⁽²⁾. Günümüzde özellikle ticari olarak piyasada satılan yoğurtların probiyotik içeriğinin yeterli olmadığı bilinmektedir.

Prebiyotikler: Tanımlama

Vücutta yerleşik olarak bağırsaklarda yaşayan ve vücuda faydalı probiyotik türü (Bifidobakteri/Laktobasil vb.) canlı bakterilerin gelişmesi için zorunlu ve üst gastrointestinal sistemde sindirilemeyen fakat kolonda fermente olan besin bileşenleridir. Fermentasyon sonrası bağırsak mikrobiotasının bileşimini ve aktivitesini vücuda faydalı olacak şekilde değiştirerek, bağırsak hareketlerini düzenlemekte ve patojen mikroorganizmaların üremesini önlemektedir ^(2,5). Tanımlamaya göre sadece bilinen iki tür hazmedilemeyen oligosakkarit (OGS) kriterleri karşılamaktadır. Bunlar galaktanlar ve inülin tipindeki

* Kısaltmalar: **AD**: atopik dermatit; **Th2**: yardımcı (helper) 2 T hücresi; **LAB**: laktik asit bakterileri; **OGS**: oligosakkarit; **scGOS**: kısa zincirli galaktooligosakkaritler, **lcFOS**: uzun zincirli fruktooligosakkaritler, **LGG**: Laktobasil rhamnosus GG, **SCORAD**: atopik dermatit skorlaması, **OVA**: ovalbumin, **IL**: interlökin, **Treg**: regülatör T hücreleri, **TLR**: Toll-like reseptör, **OVA**: ovalbumin, **RKÇ**: randomize kontrollü çalışma.

herhangi bir allerjik hastalığın korunma veya tedavisi için rutin tavsiye edilir duruma gelememiştir ⁽¹¹⁸⁻¹²⁰⁾.

C. AKILCI BESLENME

Bölüm C1

BAĞIRSAK MİKROBİYOTASI VE MAKROBESİN ÖGELERİ

Murat Baş

Diyet, insan sağlığının çeşitli yönlerini etkiler ve obezite, tip 2 diyabet ve kardiyovasküler hastalıklar gibi kronik metabolik koşullarla ilişkilidir. Besin ögeleri sadece insan sağlığı için değil, aynı zamanda insan bağırsaklarında bulunan trilyonlarca mikroorganizmanın sağlığı ve sağkalımı için de gereklidir. Diyet; insanlar ve onların mikrobiyal sakinleri arasındaki ilişkinin temel bir bileşenidir; bağırsak mikroorganizmaları, temel biyolojik süreçler için beslenme ile alınan besin ögelerini kullanır ve bu işlemlerin metabolik çıktıları insan fizyolojisi üzerinde önemli etkilere sahip olabilir. İnsanlarda ve hayvan modelleriyle yapılan çalışmalar bu ilişkinin alt katmanlarını ortaya çıkarmaktadır ve sayısı giderek artan kanıtlar, diyetin insan sağlığı ve hastalıkları üzerindeki bazı daha geniş etkilerinin altını çizmektedir.

Sağlıklı bir diyeti neyin oluşturduğu konusundaki tartışmalar, beslenmenin bilimsel bir disiplin olarak ortaya çıkmasından ve devletlerin beslenme rehberleri oluşturmasından bu yana devam etmektedir ⁽¹⁾. Bağırsak mikrobiyotasının sağlık ve hastalığın önemli bir düzenleyicisi olarak ortaya çıkması bu sorunu daha da karmaşıklaştırmıştır. Diyet ile bağırsak mikrobiyotası arasında karşılıklı bir ilişki vardır, bu nedenle diyetel faktörler mikrobiyal bileşimin ve fonksiyonun en güçlü modülatörleri arasındadır. İntestinal mikroorganizmalar, konakçı fizyolojisi üzerinde potansiyel olarak derin etkiler yaratarak, alınan besin ögelerinin emilim, metabolizma ve depolanması süreçlerini etkiler.

İnsan bağırsak mikrobiyotası, trilyonlarca mikrobiyal hücre ve binlerce bakteri türünden oluşur. Özel kompozisyon içeriklerine göre bireyler arasında farklılık gösterir ve olgun mikrobiyota oldukça dirençli olmasına rağmen, hem iç, hem de dış uyaranlar tarafından bireysel olarak değişebilir. Bireylere özgü değişkenlik ve bağırsak mikrobiyotasının esnekliği, “sağlıklı” bir mikrobiyotayı tanımlamaya yönelik çabaları engellemiştir; ancak, zenginlik ve çeşitlilik gibi mikrobiyal stabilite belirteçleri, sıklıkla kronik hastalıklar ve metabolik disfonksiyon ile ters ilişkisi nedeniyle bağırsak sağlığının göstergeleri olarak kullanılırlar ⁽²⁾. Mikrobiyota esnekliği de ayrı bir fırsat yaratır; çeşitli dış etkenleri manipüle ederek, insan sağlığını iyileştirmek için bağırsak mikroplarının yapısal ve biyolojik çıktılarını yeniden şekillendirme potansiyeli vardır.

Diyet, bağırsak mikrobiyotasını etkileyen önemli bir dış etkidir ve diyetin mikrobiyal ekolojiyi değiştirme yeteneği uzun yıllar önce tanımlanmıştır ⁽³⁾. Kısa süreli-geçici diyet kaynaklı değişiklikler, vücut ağırlığından ve adipoz dokudan bağımsız olarak meydana gelir ve insan bağırsak mikrobiyotasındaki değişiklikler diyet manipülasyonundan sonraki 24 ila 48 saat içinde saptanabilir ⁽⁴⁾. Diyetin mikrobiyal ekoloji üzerindeki etkileri; insanlar gibi bağırsak mikroorganizmalarının da temel biyolojik süreçler için yakıt olarak alınan besin ögelerini kullandığı düşünülürse şaşırtıcı değildir. Bu nedenle, konakçı diyet örüntülerinde yapılan değişiklikler, bakteriyel metabolizma türlerini değiştirmekte ve tüketilen yakıt kaynaklarını kullanmak için en uygun türleri kayırmaktadır. Diyetin mikrobiyal yapıda yol açtığı

ri arasında, diyet sonrası kilo alımını öngörmek ve postprandial glisemik cevapların kontrolü için kişiselleştirilmiş diyet önerileri geliştirmek için mikrobiyota profilleri içeren algoritmaların geliştirilmesi yer almaktadır⁽⁵⁵⁾. Bu örnekler, potansiyel mikrobiyota-diyet etkileşimlerinin gerçekleştirilmesinin, beslenmeye gelecekteki yaklaşımları nasıl değiştirebileceğini göstermektedir.

BAĞIRSAK MİKROBİYOTASI VE MİKROBESİN ÖGELERİ

Saniye Sözlü

Efsun Karabudak

İnsanların sağlıklı bir şekilde hayatlarını sürdürmesinde enerji sağlayan makro besin öğelerinin yanı sıra enerji sağlamayan ancak metabolizmada hayati rolleri olan mikro besin öğeleri (vitaminler, mineraller, iz elementler) de önem taşımaktadır. Mikro besin öğelerin metabolizmada enerji metabolizması, hücrel büyüme ve farklılaşma, bağışıklık sistemi, organ fonksiyonlarının devam ettirilmesi gibi kritik rolleri bulunmaktadır. Metabolizmadaki bu etkilerini doğrudan ince bağırsaklardan emilip hedef hücre veya dokuya transfer edilerek veya dolaylı olarak bağırsak kanalındaki mikrobiyota aracılığı ile gerçekleştirildiği düşünülmektedir ¹.

Bağırsak mikrobiyotasıyla ilişkili bağışıklık sistemi ve bağırsak bariyer fonksiyonu ve makro besin öğeleri arasında birçok çalışma bulunsa da ^{2,3}, konakçı-mikroorganizma-metabolik eksen içinde mikro besin öğeleri ve sağlık üzerine etkileri konusundaki çalışmalar yok denecek kadar azdır ¹. Bu nedenle, bu bölümde diyet ile alınan suda veya yağda çözünen vitaminler ve minerallerin bağırsak mikrobiyotası ve konakçı sağlığı üzerine etkileri ele alınmıştır.

İntestinal Mikrobiyota ve Vitaminler

Vitaminler, vücudun normal gelişimini sağlayan ve sağlığı koruyan temel mikro besin öğeleridir. Vitaminler besinlerin sindirimi ve emilimi yoluyla, bazı maddelerin dönüşümü ve senteziyle veya bağırsak bakterileri ile elde edilebilirler ⁴. Makro besin öğelerinin yanı sıra bağırsak mikrobiyotası bazı mikro besin öğelerinin hem sentezini hem de metabolik işlevini düzenler ³. Bağırsak mikrobiyotası başlıca K vitamini, biotin, kobalamin, folat, nikotinik asit, pantetonik asit, pridoksin, riboflavin ve tiamin olmak üzere B grubu vitaminlerini sentezleyebilir ⁵. Örneğin, insan bağırsağında bulunan laktik asit bakterileri (LAB) ve *Bifidobacteria* B grubu vitaminlerinin çoğunu ve K₂ vitaminini tek başına sentezleyebilecek yapıya sahiptir ⁵. Mikrobiyota tarafından üretilen bu vitaminlerin bakteri metabolizması için öneminin yanı sıra memelilerde metabolik ve fizyolojik yollarda da önemli fonksiyonları olduğuna dair kanıtlar bulunmaktadır ⁴.

Yapılan araştırmalar sonucunda bazı vitaminlerin sentezinde tek bir mikroorganizmanın rol almadığı, bunun yerine sentez basamakları için birbirini tamamlayan organizma çiftlerinin var olduğu tespit edilmiştir. Bağırsak bakterileri arasında çapraz-beslenme olarak nitelendirilen bu durumda bir bakteri tarafından üretilen vitaminin bir kısmının vitamin üretmeyen diğer bakteri tarafından kullanıldığı böylece büyümesi için gerekli vitamini sağladığı gösterilmiştir ⁶. Bakteriler arasındaki bu dönüşüm üretilen vitaminlerin konakçı için kullanılabilirliğini sınırlar. Ayrıca, genel olarak diyetle alınan vitaminler ince bağırsaktan emilirken, mikroorganizmalar tarafından üretilen vitaminlerin kolondan emilmesi de konakçının vitaminlerden faydalanmasını kısıtlamaktadır ⁷.

Batı diyetinde yüksek tuz alımı kardiyovasküler hastalıklara neden olabilmektedir. Deney hayvanları ve insanlarda yapılan çalışmada yüksek tuzlu diyetlerin hipertansif etkisini *Lactobacillus* seviyelerini azaltarak ve ardından proinflatuar T yardımcı 17 hücrelerinde artışa neden olarak yaptığı gösterilmiştir⁹⁰. Toplu olarak, şimdiki kadar mikrobiyota ve mikro besin ögeleri arasında tespit edilen etkileşimler ve şüphesiz keşfedilmeyi bekleyen sayısız diğer etkileşimler gelecekteki araştırmaların önemli bir yolunu temsil etmektedir.

Sonuç

Diyet ile alınan vitamin ve mineral yetersizliği bağırsak mikrobiyota yapısını etkileyebilir. Bağırsak mikrobiyotası tarafından üretilen vitaminler bağırsak immün yanıtını aktifleştirmede ve dış patojenlerin neden olduğu enfeksiyona karşı savunmada önemli bir rol oynamaktadır. Ancak, mikrobiyal vitaminler ve patojenler arasındaki doğrudan etkileşimin mekanizması hâlâ belirsizliğini korumaktadır.

Veriler aynı zamanda mikrobiyota odaklı diyet müdahale çalışmalarında mikro besin ögelerinin bileşiminin izlenmesinin önemini vurgulamaktadır ve vitamin ve mineral eksiklikleri için risk altındaki popülasyonlarda klinik denemelere ihtiyaç duyulmaktadır.

PREBİYOTİK OLARAK FRUKTOOLİGOSAKKARİTLER METABOLİZMALARINI VE SAĞLIĞA FAYDALARINI

Hatice Bölükbaşı

Gamze Akbulut

Giriş

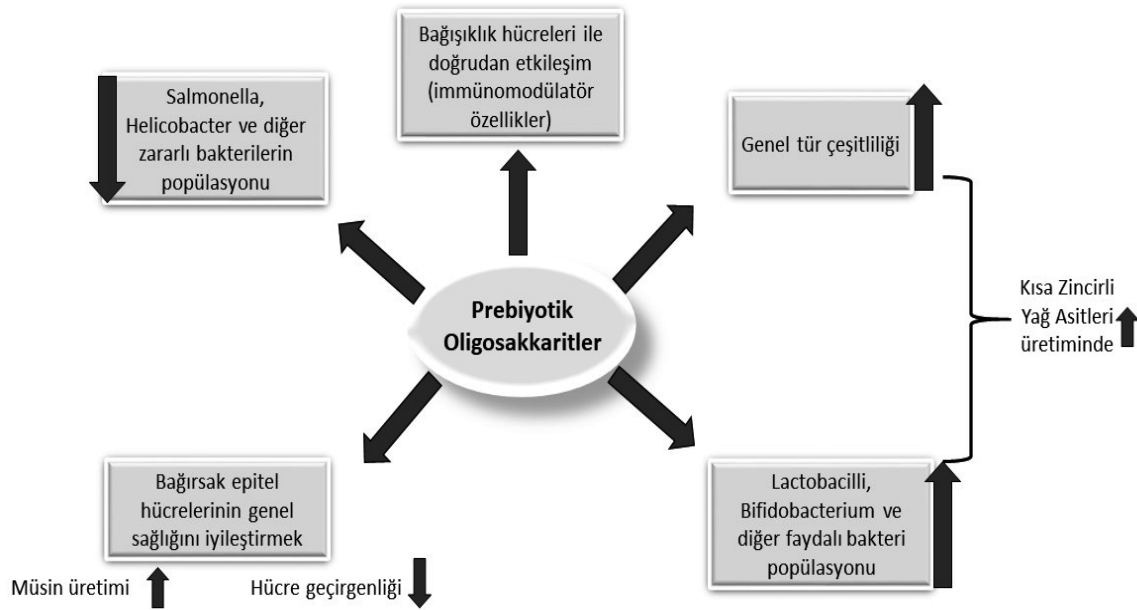

Prebiyotik; kolon mikrobiyotasındaki bakterilerin büyümesini ve/veya aktivitesini seçici olarak uyararak, konakçı sağlığını iyileştiren, sindirilemeyen besin bileşenleridir¹. Son yıllarda literatürde çeşitli sindirilemeyen oligosakkaritlerin (örneğin, fruktooligosakkaritler, galaktooligosakkarit, izomaltooligosakkaritler, ksilooligosakkaritler ve maltitol) mikrobiyota üzerindeki prebiyotik etkileri üzerine durulmaktadır. Başlıca prebiyotik özelliği taşıyan oligosakkaritlerden biri olan fruktooligosakkaritler (FOS) hem prebiyotik olma kriterlerini (1- mide asiditesine, memeli enzimleri tarafından hidrolize ve gastrointestinal absorpsiyona direnç gösterirler; 2- bağırsak mikrobiyotasında fermentasyona uğrarlar; ve 3- sağlığa katkıda bulunan bağırsak bakterilerinin büyümesinin ve/veya aktivitesinin seçici olarak uyarılmasını sağlarlar) karşılaması ile hem de sağlık üzerine olumlu etkileri ile diğer prebiyotiklerden daha fazla öne çıkmaktadır^{2,3}. Bu bölümde prebiyotik olarak fruktooligosakkaritlerin metabolizmaları ve sağlığa faydaları yer almaktadır.

Tanımı, Yapısal Özellikleri ve Besinsel Kaynakları

Fruktooligosakkaritler, ana bifidojenik oligosakkarit sınıflarından birini temsil eden sindirilemeyen karbonhidratlardır. Oligofruktoz, oligo fruktan, fruktoz oligomerleri, fruktanlar veya glukofruktanlar ortak adıyla da bilinmektedirler⁴. FOS'lar β (2-1) bağlarıyla bağlı fruktoz oligomerleridir. FOS'lar, 3 ile 10 arası monosakkaridin (en sondaki früktoz ve glukoz) α -glikozidik (1-2) bağlar ile bağlanması sonucu meydana gelmektedir (Şekil 1).

Fruktooligosakkaritler, yüksek oranda çözünür (oda sıcaklığında suda yaklaşık %80) ve düşük enerji içeriğine sahip karbonhidratlardır (1.0–1.7 kkal/g). FOS'ların saf formları, sakkaroz ile karşılaştırıldığında yaklaşık %30-35'lik bir tatlılığa sahiptir. Düşük pH'a kadar stabildirler ve 140°C'ye kadar ısıya dayanıklıdır. Teknolojik özellikleri nedeniyle FOS'lar; süt ürünlerinde, dondurulmuş tatlılarda, unlu mamullerde, ekmeklerde, kahvaltılık gevreklerde ve diyet ürünlerinde organoleptik özellikleri iyileştirmesi için kullanılmaktadır⁶.

Fruktooligosakkaritler; muz, sarımsak, soğan, domates, buğday, kuşkonmaz, enginar, pırasa, bal, çavdar, esmer şeker, arpa, marul, hindiba, yer elması, pancar, elma, muz, domates, çiçek soğanı gibi bitkilerde yüksek miktarda bulunmaktadır ve şeker otu bitkisi (Stevia rebaudiana Bertoni) atıklarından da elde edilebilmektedir^{5,7}.

Şekil 6. Oligosakkaritlerin prebiyotik aktivitesinin altında yatan farklı mekanizmalar⁹.

FOS takviyesi interlökin (IL)-1b, IL-6 ve interferon-gama (IFN-c) gibi proinflatuvar sitokinlerin seviyelerini azaltarak anti-inflatuvar yanıt göstermektedir. FOS, hepatik süperoksit dismutazın (SOD) azalmasını önlemekte ve potansiyel olarak glutasyon peroksidaz (GPx) aktivitesini modüle etmektedir²¹.

Etki mekanizmaları arasında;

- ~ lokal sitokin ve antikor üretimini modüle eden spesifik bağırsak bakterilerinde seçici artış/azalma sağlaması
- ~ bağırsakta KZYA üretiminde artış ve KZYA'nın lökositler üzerindeki G-bağlı protein reseptörlerine bağlanmasında artış sağlaması
- ~ bağırsak epitel hücreleri ve bağışıklık hücreleri üzerindeki karbonhidrat reseptörleri ile etkileşimi yer almaktadır²².

Sonuç olarak; FOS'lar diğer oligosakkaritler ile karşılaştırıldığında birçok özelliği ile ön plana çıkmaktadır. Prebiyotik olarak tanımlanan FOS'un, bifidobakterilerin ve laktobasillerin seçici büyümesini uyardığı ve bağırsak hücrelerine potansiyel olarak patojen olan mikroorganizmaların saldırısını engellediği için kolon sağlığı için faydalı olduğu doğrulanmıştır. İnsan gastrointestinal sisteminde yerleşik olan bakteri topluluğunun, bağırsak işleyişi ve insan sağlığı üzerinde temel bir etkiye sahip olduğu kabul edilmektedir. Fruktooligosakkaritler, gıda, tarım ve farmasötik uygulamalar dâhil olmak üzere birçok alanda kullanımı avantaj sağlamaktadır.

FARKLI BESLENME MODELLERİNİN BAĞIRSAK MİKROBİYOTASI ÜZERİNE ETKİSİ

Hilal Yıldırım

Feride Ayyıldız

Giriş

Bağırsak mikrobiyotası en az 1000'den fazla bakteri türünü içeren farklı tür ve suşlardan oluşmuş geniş bir ekosistemdir. Bu flora geniş sayı açısından ayrı bir endokrin organ olarak değerlendirilebilir ve karbonhidrat sindirimi, zararlı mikroorganizmaların baskılanması, vitamin sentezi, immün sistem aktivitesi ve ilaç metabolizması gibi birçok hayati fonksiyonda görev alır.^{1,2} Doğumdan itibaren genetik faktörler, batı tarzı diyet, sedanter yaşam, sigara ve alkol kullanımı gibi pek çok endojen ve eksojen faktör faktörler bağırsaktaki mikrobiyal çeşitliliği ve miktarı etilemektedir.¹ Bağırsak mikrobiyotasındaki değişiklikler disbiyozu neden olamakta ve bağırsak disbiyozisi metabolik sendrom, metabolik hastalıklar, inflamatuvar bağırsak hastalıkları, obezite gibi pek çok hastalık prognozu ile ilişkilendirilmektedir.³ Bağırsak mikrobiyotasında bulunan bakterilerin dağılımı, çeşitliliği, türleri ve metabolik ürünlerine bağlı olarak konak için fayda ve zarar dengesi belirlenmektedir. Mikrobiyota, sağlık ve hastalık ilişkisi Şekil 1'de özetlenmiştir.⁴

Bağırsak mikrobiyotasındaki bakterilerin %90'ından fazlasını Gram negatif Bacteroidetes ve Gram pozitif Firmicutes oluşturmaktadır.² Bağırsaktaki bakterilerin fermantasyonu sonucu oluşan kısa zincirli yağ asitleri (KZYA) (asetat, propiyonat ve bütirat), bağırsak mikrobiyotası üzerinde direk anti inflamatuvar etki göstermektedir. İnflamatuvar bağırsak hastalıkları (İBH) gibi bazı hastalıklarda bakteri çeşitliliğinin daha az, aynı zamanda Bacteroidetes ve Firmicutes sayılarının daha düşük olduğu gösterilmiştir. Bacteroidetes ve Firmicutes'in birlikte azalması ise mikrobiyal metabolit olan bütirat konsantrasyonunun da azalmasına neden olarak bağırsak sağlığını olumsuz etkileyebilmektedir.⁵ Obezitede ise *Bacteriodes-Firmicutes* oranı değişmektedir. Literatürde çelişkili sonuçlar olsa da genel olarak obezlerde *Firmicutes* sayısı artarken, *Bacteriodes* sayısının azaldığı gösterilmiştir.⁶

Bağırsak mikrobiyotasındaki bu değişiklikler sonucu bozulan bağırsak bütünlüğü sızdıran bağırsak oluşumuna neden olur. Gram negatif bakteriler olan *Bacterides* türündeki artış ile birlikte bu bakterilerin hücre duvarlarından salınan liposakkaritlerin artışı metabolik endotoksemnin başlamasından ve proinflamatuvar sitokinlerin sekresyonunun tetiklenmesinden sorumludur. Bu süreç pek çok hastalık oluşumuna zemin hazırlamaktadır.⁷

Bağırsak mikrobiyotasını etkileyen en önemli faktörlerden biri diyetdir. Bağırsak mikrobiyotasındaki değişikliklerin %12'sinden genetik faktörler sorumlu iken, %57'sinden de diyetin sorumlu olduğu savunulmaktadır.⁸ Farklı beslenme türleri bağırsak mikrobiyal kompozisyonunu ve Firmicutes ve Bacteriodes arasındaki oranın değiştirerek çeşitliliği etkileyebilmektedir.⁹ Bağırsak mikrobiyotasında bulu-

Barone ve arkadaşları ise 15 İtalyan bireye (3 kadın, 12 erkek) Paleo diyet (işlenmemiş ürünlerin yer aldığı, tahıl, süt ve ürünleri, tuz ve rafine şekerin çıkarıldığı diyet) vererek takip etmişler ve çalışma sonunda Paleo diyetle bakteriyel çeşitliliğin arttığını gözlemlemişlerdir.⁶¹ Ancak Paleo diyetinin etkisini modern zamanda yaşayan insanların genetiği ve çevresel koşullarını da gözetererek yapılacak uzun dönem çalışma sonuçlarına göre değerlendirmek gerekmektedir.

Sonuç olarak farklı diyet modellerinin içerdikleri besin çeşitliliği ve farklı oranlardaki besin ögesi konsantrasyonları göz önüne alındığında bu diyet modellerinin bağırsak mikrobiyotasını etkilemesinin yanı sıra insan sağlığını ve kronik hastalıkları farklı düzeylerde etkileyebileceği düşünülmektedir. Bu diyet modellerinin bağırsak mikrobiyotası üzerindeki etkileri bilimsel olarak netlik kazanmadığından, bireye özgü enerji ve besin ögesi gereksinmelerini karşılayacak yeterli ve dengeli beslenme sağlığını korunmasında oldukça önemlidir. Ancak sadece kişinin beslenme tarzı değil aynı zamanda yaşı, cinsiyeti, genetik özellikleri, fiziksel aktivite düzeyi, alkol ve sigara kullanımı gibi birçok faktörün de bağırsak mikrobiyotasını etkileyebileceği unutulmamalıdır.

FONKSİYONEL VE FERMENTE BESİNLERİN MİKROBİYOTA ÜZERİNE ETKİSİ

Sevinç Yücecan

İnsan sağlığı ve hastalıklarında bağırsak mikrobiyotası; konakçının metabolik, immünolojik ve nörolojik hatta fizyolojik durumunun belirlenmesinde kilit rol oynamaktadır. Hatta son çalışmalar organizmanın homeostazı ve homeorezinin modüle edilmesinde bağırsak mikrobiyotasının çok önemli rolü olduğunu göstermektedir. Bağırsak mikrobiyotası ile ilişkilendirilen fonksiyonel besin bileşenlerinin; örneğin polifenollerin, prebiyotik benzeri etki yaparak bağırsak mikrobiyota kompozisyonunu üzerinde etkili olabileceği belirtilmektedir. Yapılan çalışmalar polifenollerin; antimikrobiyal ve bakteriostatik etki göstererek seçici olarak patojen mikroorganizmaların büyümesini baskıladığını, probiyotikler gibi yararlı bakterilerin çoğalmasını uyararak mikrobiyotanın modülasyonunda etkili olduğunu göstermekte ve mikrobiyotada bulunan iyi huylu mikroorganizmaların da polifenoller katabolize ederek, doğal fenolik bileşiklerden daha aktif ve daha iyi emilen metabolitleri serbest bıraktığını belirtmektedir. Diyet polifenollerinin sağlığı geliştirici etkinliklerinin geniş bir yelpazesi araştırılmış olmakla birlikte, bağırsak ekolojisinin modülasyonu üzerindeki etkileri ve "polifenoller" "mikrobiyota" iki yönlü ilişkisinin etkileri hâlâ tam olarak anlaşılmamıştır. Bağırsak mikrobiyotasında üretilen ve sağlığı geliştiren polifenolik metabolitlerinin türü ve miktarı, bağırsak mikrobiyotasının kompozisyonuna ve işlevine bağlıdır. Polifenollerin sağlık etkilerinin tam olarak anlaşılması için klinik çalışmalarda bireylerin metabolizma tiplerine bakmak önerilmektedir. Fermente yiyecek ve içeceklerin etkileri de bağırsak mikrobiyota düzeyindeki etkisi ile değerlendirilmektedir. Sağlık, bağırsak mikrobiyotası ve fonksiyonel besinler ile fermente besinler arasındaki etkileşim özellikle mikrobiyota-bağırsak-beyin ekseninde irdelenmeye başlanmıştır. Günümüzde bu iletişimin birçok yol aracılığıyla iki yönlü olduğu anlaşılmıştır. Tam olarak mekanizma anlaşılmasa da immün faktörler, hormonlar, metabolitler, bazı transmitterler bu iletişime katkı sağlayabilmektedir. Fonksiyonel ve fermente besinlerin mikrobiyota üzerine etkileri anlaşılma-ya başlanmış olsa da konu ile ilgili daha ileri klinik çalışmaların yapılması salık verilmektedir.

Giriş

İnsan sağlığı ve hastalıklarında bağırsak mikrobiyotası; konakçının metabolik, immünolojik ve nörolojik hatta fizyolojik durumunun belirlenmesinde kilit rol oynamaktadır. Hatta son çalışmalar organizmanın homeostazı ve homeorezinin modüle edilmesinde bağırsak mikrobiyotasının çok önemli rolü olduğunu göstermektedir. Bu ekosistemdeki denge, konağın homeostazını yani metabolizma, enflamasyon, bağışıklık ve hücre proliferasyonunu korumada ve ayrıca beyin-bağırsak ekseninin düzenlenmesinde de kritik öneme sahiptir. Bu mikrobiyotayı diyet, antibiyotik alımı, ksenobiyotikler ve genetik faktörler gibi endojen ve çevresel faktörler etkilemektedir¹⁻⁵. Bu mikrobiyal ekosistemin bozulması'nın; enflamatuvar bağırsak hastalıkları, irritabl bağırsak sendromu, kolorektal kanser, obezite, diyabet, metabolik sendrom, kardiyovasküler hastalıklar, nörodejeneratif hastalıklar, şizofreni, otizm, anksiyete, depresyon gibi neuropsikiyatrik bozukluklar, alerji, astım gibi çeşitli sağlık sorunlarına yol açtığı belir-

ler, kalsiyum, magnezyum ve potasyumun kardiyometabolik risk faktörleri üzerinde yararlı etkisi olduğu da gösterilmiştir. Yoğurt ayrıca içerdiği bileşenleri ile kemik mineralizasyona katkıda bulunmaktadır. Fermente bir besin olan yoğurt tüketiminin akut direnç egzersizinden kaynaklanan kas ağrısını azalttığı da ileri sürülmüştür^{50,53,64-68}.

Fermente ürünler ile sağlık arasındaki ilişkiyi irdeleyen çalışmalarda; fermente besinlerin potansiyel antioksidan, hipokolesterolemik, antihipertensif, anti-inflamatuar, immünomodülatör, anti-karsinojenik, anti-allerjenik aktivite gösterdiği, kemik sağlığı, glisemik yanıt kontrolünde etkili olabileceği, ayrıca laktoz intoleransı ve konstipasyon gibi sindirim sistemi sorunlarına karşı kullanılabileceği, antibakteriyel ve antifungal özellikler gösterdiği bildirilmiştir. Fermente besinlerin sağlık üzerindeki etkisine yönelik mekanizmalar, içerdiği mikroorganizmalarla bağlantılı potansiyel probiyotik etkiler, fermentasyon türevli biyoaktif peptitler, biyojenik aminler ve fenolik bileşiklerin biyolojik olarak aktif bileşiklere dönüşümü ve ayrıca anti-nutrisyonel faktörlerin azalması ile ilintilidir⁵⁰⁻⁵⁶. Ancak fermente besinlerin sağlık üzerine etkileri ile ilintili daha ileri klinik çalışmalar yapılması, bu çalışmaların metagenomik, metatranskriptomik ve metabolomik yaklaşımlarla desteklenmesi salık verilmektedir.

Sonuç

Fonksiyonel ve fermente besinler ile bağırsak mikrobiyotası arasındaki sağlıklı ilgili potansiyel etki mekanizmaları henüz net değildir. Bu konularda; metagenomik, transkriptomik ve proteomik yaklaşımlarla daha ileri çalışmaların yapılması salık verilmektedir. Özellikle omik teknolojisinin yeni kültürlerinin gelişiminde önemli rol oynayabileceği, fonksiyonel besin bileşenleri ile probiyotik bakterilerin bağırsak mikrobiyotası üzerindeki işlevselliği ile etkinlik mekanizmalarının daha iyi belirlenebileceği ve açıklığa kavuşturulabileceği belirtilmektedir. Ayrıca fermente besinlerin sağlık üzerine etkileri ile ilintili de daha ileri klinik çalışmalar yapılması, bu çalışmaların metagenomik, metatranskriptomik ve metabolomik yaklaşımlarla desteklenmesi salık verilmektedir. Bu araştırmaların, fermente besinlerin insan diyetindeki önemini ve potansiyel olarak gerekliliğini ve ulusal beslenme kılavuzlarına dâhil edilmelerinin gerekçesini açıklığa kavuşturmada da çok yardımcı olabileceği öngörülmektedir.

BAĞIRSAK SAĞLIĞINDA POST- VE PARABİYOTİKLER

Yasemin Çakır-Gökkurt

Efsun Karabudak

Giriş

Probiyotiklerin ve prebiyotiklerin daha önce kullanılan tanımları yakın zamanda gözden geçirilmiş ve güncellenmiştir. Güncellenen kavramlara göre, probiyotik, yeterli miktarlarda alındığında konakçıya sağlık yararı sağlayan canlı mikroorganizmalar, prebiyotik ise sağlık yararı sağlayan, konakçı mikroorganizmalar tarafından seçici olarak kullanılan bir substrattır. Farklı bakteri suşları konakçının bağışıklık sistemini etkileyerek bağışıklık tepkilerini modüle edebilmektedir. Bununla birlikte, canlı mikrobiyal hücrelerin yaygın kullanımından kaynaklanan güvenlik problemleriyle ilgili ortaya çıkan endişeleri ve raf ömrü sorunlarını ortadan kaldıracakları, mikrobiyal translokasyon ve enfeksiyon risklerini azaltabilecekleri için, canlı olmayan mikroorganizmalara veya mikrobiyal hücre özütlerine olan ilgi artmaktadır. Canlı olup probiyotik özellik gösteren veya göstermeyen mikroorganizmaların fermantasyon yoluyla veya besin bileşenleri üzerindeki etkileriyle üretebilecekleri metabolitleri ve/veya hücre bileşenlerinin sağlığa etkileri konusunda artan kanıtlar bulunmaktadır. Probiyotik, prebiyotik veya sinbiyotik kategorilerine girmeyen bu probiyoaktif bileşikler ifade etmek için postbiyotik, paraprobiyotik gibi farklı terimler kullanılmaktadır. Uluslararası Probiyotik ve Prebiyotikler Bilimsel Kuruluşu (ISAPP) tarafından 2021 yılında postbiyotiklerin tanımına ilişkin yayınlanan konsensus bazı araştırmacılar tarafından kabul edilmemiş ve eleştirilmiştir. Bu nedenle bu terimlere henüz uluslararası fikir birliği ile ortak bir terminoloji kazandırılmamıştır. Bu bölümde, canlı olmayan mikrobiyal hücrelerin veya ham mikrobiyal hücre fraksiyonlarının ve metabolitlerinin bağırsak mikrobiyotası üzerindeki etkileri hakkında bilimsel literatüre genel bir bakış sağlanması amaçlanmıştır.

Probiyotiklerden Post- ve Paraprobiyotiklerin Doğuşu

Modern probiyotik tarihi, 1900'lerin başında, Paris'teki Pasteur Enstitüsü'nde çalışan Rus bilim insanı, Nobel ödüllü Elie Metchnikoff'un öncü çalışmaları ile başlamaktadır. Metchnikoff fermantasyon sürecinden sorumlu olan mikroorganizmaların insan sağlığı üzerindeki olası etkilerini araştırmıştır. Bulgaristan kırsal halkının sağlıklı uzun yaşamlarının, yoğurt gibi fermente süt ürünlerinin düzenli tüketiminden kaynaklandığını ileri sürmüştü ve bunu *Bulgarian bacillus* (*Lactobacillus delbrueckii* subs. *bulgaricus*) ile ilişkilendirmiştir¹. Metchnikoff, laktobasillerin tüketilmesi ile bağırsak mikroflorasının olumlu yönde etkilendiğini, bozulmanın ve toksik mikrobiyal aktivitelerin azaldığını öne sürmüştür². Yararlı bakteri alımını öneren ilk kişi olan Metchnikoff'un “bağırsak mikroorganizmalarının gıdaya olan bağımlılığını, bağırsak florasının değiştirilebilmesi için bazı gıdaların özellikle tüketilmesini ve zararlı mikropların yararlı mikroplarla değiştirilmesinin mümkün kılınabileceğini” belirtmesi probiyotik kavramını doğurmuştur³.

Tablo 1. Postbiyotiklerin potansiyel etki mekanizmaları ¹⁵.

Etki mekanizması	İlgili postbiyotikler
Bağırsak mikrobiyotasının modülasyonu	Soya peptitleri
Antimikrobiyal etki	Bakteriyosinler
Anti adezyon etki	Biosümfaktanlar
Antiinflamatuvar etki	Laktat ve KZYA
Antikarsinojenik etki	Bütirat
Antiproliferatif etki	KZYA
Antihipertansif etki	ACE inhibitörleri
İmmün sistem uyarıcı etki	Kefiran (kefir ekzopolisakkaritleri)
Enfeksiyonun önlenmesi	Fermente sütün cell-free fraksiyonu
İştah/doyunluk kontrolü	Opioid ve antiopoid peptitler
Bağırsak bariyerinin güçlendirilmesi	Gama aminobütirik asit bakımından zengin süpernatant
Duygu durum modülasyonu	Gama aminobütirik asit
Kemik mineralizasyonu	Kazein fosfopeptitleri

Sonuç

Mikrobiyal metabolitler ve bunların hücre bileşenleri, ayrıca bazı mikroorganizmaların besin bileşenleri üzerindeki etkisinden türetilen bileşikler; probiyotikler, prebiyotikler ve sinbiyotiklerin yaptığı gibi sağlığı teşvik edebilir. Bugüne kadar esas olarak postbiyotikler, aynı zamanda paraprobiyotikler, parapsikobiyotikler, hayalet probiyotikler veya sadece mikrobiyal metabolitler olarak adlandırılmış olan bu bileşenler için yeni bir tanımlama yapılmış olmasına rağmen günümüzde evrensel olarak kabul edilmiş kapsamlı bir tanım ve sınıflandırma mevcut değildir. Kritik hastalarda, küçük çocuklarda ve prematüre yeni doğanlarda postbiyotik kullanmanın diğer “biyotikler” için çekici bir alternatif olabileceği öne sürülmüştür. Postbiyotiklerin, konakçıdaki fizyolojik, immünolojik, nöro-hormon biyolojik ve metabolik reaksiyonlar açısından yararlı bir etki üretmesini sağlayan aktif yapı ve etki mekanizmaları henüz açıklığa kavuşturulmamıştır. Literatürde bildirilen postbiyotik ürünlerin yararlı sağlık etkilerini açıklamak için araştırmalar hâlen devam etmektedir. Bu sağlık etkileri antiinflamatuvar, antiproliferatif, antioksidan, hipokolesterolemik, antihipertansif, antiobezojenik, hepatoprotektif ve antimikrobiyal aktiviteleri ile ilişkilendirilmektedir. Bu alandaki bazı açık sorular, hangi yapıların postbiyotik veya paraprobiyotik olarak nitelendirileceği, postbiyotik ve paraprobiyotikler hakkında güvenlik kaygıları olup olmadığı ya da besin ve takviyelerdeki varlığının nasıl izleneceği, sağlık yararlarının görülebilmesi için alınması gereken uygun dozun/miktarın belirlenmesi ile ilgilidir. Uluslararası fikir birliğine sahip uygun bir tanım ile sınıflandırmanın yapılması ve benimsenmesi; çalışılmasını, üretilmesini, pazarlanmasını, kalite kontrolünü ve yasal düzenlemelerinin yapılmasını kolaylaştıracaktır.

GIDA KATKI MADDELERİ VE BAĞIRSAK MİKROBİYOTASINA ETKİLERİ

Duygu Ağagündüz

Giriş

Türk Gıda Kodeksi'ne göre gıda katkı maddeleri; “besleyici değeri olsun veya olmasın, tek başına gıda olarak tüketilmeyen ve gıdanın karakteristik bileşeni olarak kullanılmayan, teknolojik bir amaç doğrultusunda üretim, muamele, işleme, hazırlama, ambalajlama, taşıma veya depolama aşamalarında gıdaya ilave edilmesi sonucu kendisinin ya da yan ürünlerinin, doğrudan ya da dolaylı olarak o gıdanın bileşeni olması beklenen maddeleri” ifade etmektedir ¹. Bu tanımlama gıda kalitesini sürdürmek veya artırmak amaçlı eklenen gıdaları veya gıda kontaminasyonlarını kapsamamaktadır.

Modern dünyada gıda sanayiinde gıda katkı maddelerinin kullanımı kaçınılmazdır. Ülkemizde ve Avrupa Birliği (AB)'nde yaklaşık 300 civarında gıda katkı maddesinin çeşitli gıdalarda değişen miktarlarda kullanılmasına izin verilmektedir ². Amerika Birleşik Devletleri (ABD)'nde Gıda ve İlaç Dairesi (FDA)'nın kullanımına onay verdiği gıda katkı maddesi sayısı ise yaklaşık 3000'dir ³. Gıdalarda en yaygın kullanılan gıda katkı maddeleri; antioksidanlar, renklendiriciler, emülsifiyerler, stabilize edici maddeler, jelleştiriciler, koruyucular ve tatlandırıcılarıdır ⁴.

Gıda katkı maddelerinin kullanımına ilişkin ulusal ve uluslararası boyutta düzenlemeler bulunmaktadır. Ancak güvenilirlikleri her zaman sorgulanan bir konu olmuştur ⁵. Modern dünyada gıda katkı maddelerinin tüketimi arttıkça, alerjik reaksiyonlar, astım, migren, gastrointestinal sistem semptomları, çocuklarda hiperaktivite ve dikkat eksikliği vb. sağlık problemleri de artış göstermeye başlamıştır ^{6,7}. Son zamanlarda ise bağırsak mikrobiyotasına ve bununla ilişkili sağlık etkileri ilgi çekmeye ve önem kazanmaya başlamıştır.

İnsan, %10 insan ve %90 mikrobiyal hücrelerin birleşiminden oluşan bir süperorganizmadır. İnsan ve mikrobiyal genomların metabolizmaları ve varlıklarını sürdürebilme özellikleri ayrılmaz şekilde birbirlerine karışmıştır ⁸. Bağırsak mikrobiyotasındaki temel bakteri grupları Firmicutes, Bacteroidetes, Proteobacteria, Verrucomicrobia ve Actinobacteria'dır. Sayıca en baskın olarak bulunan bakteri grupları ise Gram pozitif Firmicutes ve Gram negatif Bacteroidetes gruplarıdır ⁹. Diyetel faktörler; probiyotikler, prebiyotikler, sinbiyotikler, antibiyotikler; stress, yaş, fiziksel aktivite durumu ve iklimsel faktörler gibi diyetel olmayan bazı faktörler bağırsak mikrobiyotası dengesine ve çeşitliliğine etki edebilmektedir ¹⁰.

Bağırsak mikrobiyotası ve konakçı arasındaki etkileşim insan sağlığı için önemli bir rol oynamaktadır. Birçok hastalığın etiopatogenezinde; disbiyoz, bağırsak mikrobiyotasındaki olumsuz değişimler ve inflamasyon önemli rol oynamaktadır ¹¹. Beslenmenin bağırsak mikrobiyotasının kompozisyonunda ve fonksiyonundaki rolü önemli ölçüde ortaya konmuştur ¹². Buna rağmen; gıda katkı maddeleri gibi minor gıda maddelerinin bağırsak mikrobiyotasına olan etkileri daha az ilgi çeken bir konu olmuştur ¹⁰.

Sonuç

Modern dünyada, işlenmiş gıdaların ve Batı tarzı diyetlerin tüketimlerinin bu kadar yaygınlaştığı bir çağda gıda katkı maddelerinin göz ardı edilmesi mümkün değildir. Gıda katkı maddelerinin olası sağlık etkilerinin yanında bağırsak mikrobiyotasını da etkileri bulunmaktadır. Bu etkilerini beyin bağırsak aksında sıklıkla nöroendokrin, metabolik ve genomik yollarla gerçekleştirebilmektedirler. Bir genelleme olarak gıda katkı maddelerin özellikle de sentetik olanlarının büyük otoriter kuruluşlar tarafından güvenli kabul edilmelerine rağmen; bağırsak mikrobiyotasında olumsuz yapı ve metabolik değişikliklerine neden olduğu, stress ve inflamasyon oluşturabildiği söylenebilir. Ancak tam tersine bağırsak mikrobiyotasının yapı ve çeşitliliği ile metabolizmasını olumlu etkileyebilen prebiyotik işlev gösteren doğal ve sentetik gıda katkı maddeleri de bulunmaktadır. Bu hususta; gıda sanayiinde ürünün reolojik, duyuusal ve teknolojik süreçleri göz önünde bulundurularak bağırsak mikrobiyotasını olumsuz etkileyenlerin daha az tercih edilmesinde ve/veya olumsuz etkilerin düzenlenmesini/azaltılmasını sağlayacak bir beslenme tarzının benimsenmesinde fayda olacağı düşünülmektedir. Yapay/sentetik katkı maddelerinin yerine doğal olan gıda katkı maddelerinin tercih edilmesi ancak bu hususta da doğal olsalar bile kullanılan doza dikkat edilmesi önemlidir. Ayrıca gıda katkı maddelerinin bağırsak mikrobiyotası üzerine etkileri çoğunlukla hayvan modellerinde değerlendirildiği için insanlar üzerinde yapılan geniş kapsamlı daha çok araştırmaya ihtiyaç bulunmaktadır. Ayrıca büyük otoriter kuruluşların gıda katkı maddelerinin güvenilirliklerini araştırırken bağırsak mikrobiyotasına olan etkilerinin de göz önünde bulundurulmasında fayda olacağı düşünülmektedir.

BAĞIRSAK GEÇİRGENLİĞİNDE SEBEP VE TEDAVİ OLARAK BESLENME

Rana Nagihan Akder

Özge Küçükerdönmez

Uzun yıllar boyunca gastrointestinal sistemin görevinin besin öğelerinin sindirimi ve emilimi ile elektrolit-su homeostazını sağlanması olduğu düşünülmüştür. Gelişen teknoloji ile yapılan çalışmaların artırılması sonucunda, gastrointestinal sistemin bir bariyer mekanizması aracılığıyla moleküllerin çevre ve konakçı arasındaki alışverişini düzenleme becerisine sahip olduğu da gösterilmiştir¹. Bu bölümde bağırsak bariyer mekanizması, bağırsak geçirgenliği ve bu terimlerin beslenme ile ilişkisi güncel literatür eşliğinde anlatılmaya çalışılmıştır.

Bağırsak Bariyerinin Yapısı

Gastrointestinal sistem 200 m²'den daha geniş yüzeyi ile besin ve besinlerdeki mikroorganizmalarla sürekli etkileşim hâlinindedir^{2,3}. Dış ortam ile en sık etkileşim hâlinde olan sistemlerin başında gelen gastrointestinal sistem, alt özofagus sfinkterinden anüse kadar vücudun içini dış ortandan ayıran hücre katmanına sahiptir^{2,4}. Bağırsak lümeninde epitel bariyeri geçerek mukoza iltihabına neden olabilecek çok çeşitli çevresel faktör bulunması sebebiyle bu ayırma fonksiyonu büyük önem taşımaktadır⁴. Bu katman ayırma fonksiyonunun yanı sıra besinlerin emilimini düzenleyen, su ve elektrolit kaybını önleyen, yerleşik mikrobiyota ile bağırsak bağışıklık sistemi arasındaki etkileşimlere de izin veren kompleks bir yapıdır^{2,5}. Mikrobiyota, mukus tabakası, doğal ve adaptif bağışıklık hücreleri, vasküler / lenfatik / endokrin / nöroenterik / enzimatik sistemden oluşan bu kompleks yapıya 'Bağırsak bariyeri' denilmektedir².

Bağırsak bariyeri (Bkz. Şekil 1), hücresel ve ekstraselüler kısımdan oluşmaktadır. Hücresel kısım epitel hücreleri ve bu hücrelerin altında yer alan lamina propriayı kapsamaktadır. Hücresel kısım 5 farklı hücre tipini içermektedir: Kök hücre, mukus salgısı yapan goblet hücreleri, antimikrobiyal peptit (AMP) üreten Paneth hücreleri, emilim sağlayan enterositler (tüm hücrelerin yaklaşık %80'i), hormon salgılayan enteroendokrin hücreleri. İntestinal epitel hücrelerinin görevleri Tablo 1'de özetlenmiştir. Lamina propria ise dendritik hücreleri, intraepitelyal dendritik hücreleri, makrofajları, intraepitelyal lenfositleri, T düzenleyici hücreleri, TCD4+ lenfositleri, B lenfositleri ve plazma hücrelerini içermektedir⁶⁻⁹.

Ekstraselüler alan dış faktörlere karşı ilk savunma mekanizması olarak görev alır. Goblet hücreleri tarafından üretilen mukus tabakası, Paneth hücreleri tarafından salgılanan AMP'ler ve plazma hücreleri tarafından salınan sekretuar IgA dimerleri bu kısımda yer almaktadır^{6,7}. Mukus tabakası besinlerin geçişini kolaylaştırmak, epitel hücrelerini lümeninde bulunan sindirim enzimlerinin etkisinden korumak ve bakterilerin epitel hücrelerine yapışmasını önlemek adına büyük önem taşımaktadır^{3,7}. Sağlıklı intestinal mukus tabakasının bulunmadığı durumlarda intestinal epitel ile bakteriyel temasın artmasına bağlı olarak kimyasal ya da patojen kaynaklı inflamasyonlara ve enfeksiyonlara yakalanma riski de artacaktır¹⁰.

SPORCU BESLENMESİNDE MİKROBİYOTA VE PROBİYOTİKLER

Ece Öneş

Duygu Sağlam

Giriş

Fiziksel aktivite, iskelet kaslarının enerji harcamasını sağlayan herhangi bir vücut hareketini kapsamakta olup günlük hayatta fiziksel olarak aktif olmak için çoğunlukla en çok tercih edilenler yürüyüş, koşu, bisiklet, yüzme ya da dans gibi aktivitelerdir. Dünya Sağlık Örgütü'nün (WHO) fiziksel aktivite kılavuzunda yetişkinler için haftada toplam 150 dk orta şiddetli veya 75 dk yüksek şiddetli egzersiz veya her ikisinin eşit sürede birlikte yapılmasını önermektedir ⁽¹⁾. Önerilen sürelerde ve düzenli olarak yapılan egzersizin;

- Kas ve kardiyorespiratuar fiziksel uygunluğu geliştirdiği,
- Kemik sağlığını geliştirdiği,
- Hipertansiyon, koroner arter hastalığı, inme, diyabet, depresyon ve bazı kanser çeşitlerinin (özellikle meme ve kolon kanseri) riskini azalttığı,
- Düşme olasılığını azaltarak özellikle kalça ve vertebra kırıklarını önlediği,
- Enerji dengesi ve ağırlık kontrolünde destekleyici rol oynadığı çalışmalarca gösterilmiştir.

Fiziksel inaktivite ise global olarak ölüm nedenlerinin başlıca risk faktörlerinden biridir. Bireyler için yeterli fiziksel aktivite seviyesine sahip olmamak, kanser, kalp hastalığı, felç ve diyabet riskini %20-30 oranında arttırırken yaşam beklentisini de 3-5 yıl kısaltmaktadır ⁽¹⁾.

Düzenli egzersiz; immünite, metabolizma ve mikrobiyom-bağırsak-beyin aksına odaklanmış birçok organın moleküler ve fizyolojik cevaplarını modüle ederek sistemik homeostazı etkilemektedir. Son zamanlarda, bağırsak mikrobiyotasının hastalıkların önlenmesi ve tedavisi üzerindeki etkilerinin yanı sıra sağlığın geliştirilmesi üzerindeki etkileri araştırılmakta ve egzersizin bu etkileri nasıl modüle edebileceği üzerine yoğun bir şekilde çalışılmaktadır. Örneğin, hayvan çalışmaları bağırsak mikrobiyotasındaki egzersize bağlı değişikliklerin, obezite ^(2,3), disbiyozis ⁽⁴⁾, metabolik sendrom ve diyabetin ⁽⁵⁾ modülasyonunda rol oynayabileceğini göstermiştir. İnsan çalışmaları ise düzenli egzersizin, bağırsak mikrobiyotasının yapısını ve çeşitliliğini etkileyerek sağlığın geliştirilmesinde yararlı bir rol oynadığını da bildirmiştir. Yüksek kardiyorespiratuar fitness düzeyine sahip olan katılımcıların bağırsak mikrobiyota çeşitliliğinin daha fazla olduğu ve bağırsak mikrobiyota homeostazında oldukça önemli olan bütirat üreten bakterilerin sayıca daha fazla olduğu gösterilmiştir ^(6,7).

Düzenli fiziksel aktivitenin her ne kadar hem mikrobiyota çeşitliliği hem de genel sağlık üzerine katkıları olsa da egzersizin yoğunluğunun arttığı özellikle dayanıklılık gerektiren sporlarda egzersize

yıl sonra yapılan bir diğer çalışmada ise bisikletçilerde *Lactobacillus fermentum* (PCC) (1×10^9 CFU/gün) suplementasyonunun VO₂max açısından herhangi bir iyileşme sağlamadığı vurgulanmıştır.

Sıcak hava koşullarında erkek koşucular ile yapılan bir çalışmada *L. acidophilus* 7.4×10^9 CFU/gün, *L. rhamnosus* 15.55×10^9 CFU/gün, *L. casei* 9.45×10^9 CFU/gün, *L. plantarum* 3.15×10^9 CFU/gün, *L. fermentum* 1.35×10^9 CFU/gün, *Bifidobacterium lactis* 4.05×10^9 CFU/gün, *Bifidobacterium breve* 1.35×10^9 CFU/gün, *B. bifidum* 0.45×10^9 CFU/gün ve *Streptococcus thermophilus* 2.25×10^9 CFU/gün içeren kapsül tüketimi sağlanmış ve diğer çalışmalardan farklı olarak probiyotik tüketen grupta plasebo grubuna göre treadmill testinde yorgunluğa ulaşma eşiğinin arttığı gözlemlenmiştir⁽⁵³⁾.

Sporcuların performansını da değerlendiren 2016 yılında yapılan iki probiyotik çalışmasından ilki sıcak hava koşullarında 7 gün boyunca *Lactobacillus casei* (1×10^{11} CFU/gün) suplementasyonunun performans açısından herhangi bir iyileşme sağlamadığını gözlemlerken⁽⁵⁶⁾, diğer çalışma 14 hafta boyunca *Lactobacillus helveticus* Lafti L10 (2×10^{10} CFU/gün) suplementasyonunun atletik performans etki etmediğini ancak sporcuların plasebo grubuna göre dinç olma hissine katkı verdiğini vurgulamıştır⁽⁵⁷⁾. Farelerle yapılan bir çalışmada 6 hafta boyunca *Lactobacillus plantarum* TWK10 (LP10) (2.05×10^8 CFU/gün veya 1.03×10^9 CFU/kg/gün) suplementasyonunun yüzme testinde %5'lik bir performans artışı sağlarken aynı zamanda toplam kas kütlelerinde ve tip I kas liflerinde artış; serum laktat, amonyak, kreatin kinaz, glukoz, albümin, üre, kreatinin ve trigliserid seviyelerinde azalmaya sebep olduğu gözlemlenmiştir⁽⁵⁸⁾.

Sonuç olarak yapılan çalışmalardaki katılımcı sayılarının az olması, suplementasyon sürelerinin genellikle kısa olması, performans etkilerinin doza bağımlı olması ve sporcular için henüz probiyotik kullanım önerilerinin bulunmaması ve çalışmalarda katılımcıların fiziksel aktivite düzeylerinin standartlaştırılmamış olması gibi birçok etken nedeniyle probiyotik kullanımının sporcularda atletik performansı arttırdığına dair kanıtlar yetersizdir ve ileri çalışmalara ihtiyaç duyulmaktadır.

Bölüm C10

COVID-19 VE AKILCI BESLENME

K. Esen Karaca Çelik

Giriş

Akut solunum yolu enfeksiyonları dünyada hem mevsimsel grip salgınları hem de SARS-CoV-2 enfeksiyonunun neden olduğu yeni koronavirüs hastalığı (COVID-19) ile ilişkilendirilen morbidite ve mortalitenin önemli bir nedenidir. Dünya Sağlık Örgütü, dünya çapında mevsimsel influenza'nın hastaneye yatmayı gerektiren 3-5 milyon ağır hastalığa ve yılda 290.000-650.000 ölüme neden olduğunu tahmin etmektedir⁽¹⁾. Toplamda, akut solunum yolu hastalıklarının 2016 yılında dünya genelinde yaklaşık 2.38 milyon ölümden sorumlu olduğu tahmin edilmektedir^(2,3). Gerçekten de, 1990-2017 yılları arasında küresel olarak sepsis ilişkili ölümün en yaygın nedeni şiddetli alt solunum yolu enfeksiyonları olarak bilinmektedir⁽⁴⁾.

Yeni bir koronavirüsün neden olduğu hastalık olan COVID-19 ise insan sağlığını büyük ölçüde tehdit eden bir pandemi hâline gelmiştir. Koronavirüs esas olarak solunum sistemini hedefleyen başlıca patojenlerden biridir. Aralık 2019'un sonlarında, başlangıçta etiyolojisi bilinmeyen bir pnömoni tanısı ile hastanelere hastalar kabul edilmeye başlanmış, ilk raporlar COVID-19 hastalığına neden olan olası bir koronavirüs salgınının başlangıcını öngörmüştür. Devam eden salgın sonucunda Dünya Sağlık Örgütü tarafından küresel halk sağlığı acil durumu olarak ilan edilmiştir^(5,6).

Düzenli el yıkama, enfeksiyon belirtileri gösterenlerden kaçınma ve öksürürken ağız kapatma gibi solunum virüslerinin yayılmasını ve etkisini sınırlamaya yardımcı olmak için bir dizi standart halk sağlığı uygulaması geliştirilmiştir⁽⁷⁾. Ancak önceki salgınlardan elde edilen deneyimler, bir salgın geliştikçe, halk sağlığı faaliyetlerini doğrudan klinik yöntemlerin ötesine genişletmenin acil bir ihtiyaç olduğunu göstermiştir⁽⁸⁾. Bu nedenle COVID-19'un ortaya çıkmasından itibaren, acil durum hazırlıkları ilk savunma hattı olarak düşünülse de bireysel ve toplumsal dayanıklılık ana kaynak olarak ortaya çıkmıştır. Aslında, hem bireylerin hem de toplumun psikolojik ve davranışsal önlemleri, hem dayanıklılığı ve hem de bir pandemi karşısında halk sağlığı yaklaşımlarının etkinliğini artırmak için hayati belirleyicilerdir⁽⁹⁾. Bireylerin beslenme durumu uzun süredir strese ve bağımsızlığa karşı dayanıklılığın bir göstergesi olarak kabul edilmekte, yetersiz beslenme sonucu gelişebilen önemli stres faktörlerinin sağlıkla ilişkili uzun süreli etkilere yol açabileceği bilinmektedir^(10,11). Aslında, yetersiz beslenme sadece fiziksel değil aynı zamanda ruh sağlığı ile de ilişkilendirilmiştir⁽¹²⁾. Optimal beslenme ve besin alımı, birey ve toplum için önemli bir kaynaktır⁽¹³⁾. Bireysel düzeyde, uzmanlarının çoğu ortak olarak, COVID-19 da dâhil olmak üzere viral enfeksiyonlarla mücadele için diyet ve bağımsızlık arasında ilişki olduğunu belirtmektedir⁽¹⁴⁾.

Beslenme ve COVID-19

COVID-19 dünya salgını, bireylerin sağlıklı bir diyet uygulaması için birçok yeni zorluk getirmiştir. Birincisi, dünyanın birçok ülkesinde açıklanan 'evde kal' durumu, sağlık hizmetleri ve sınırlı sayıda

Sonuç

COVID-19 pandemisi döneminde doğru beslenme önerileri şu şekilde özetlenebilir:

- Öncelikle mikro besinler ve omega-3 yağ asitleri takviyesi yapılmalı, beslenme eksiklikleri ortadan kaldırılmalı ve optimal bağışıklık fonksiyonu desteklenmelidir. Bu, enfeksiyon riskini ve sonuçlarını azaltmaya yardımcı olan güvenli, etkili ve düşük maliyetli bir yoldur. Ancak takviye ürünleri alırken Avrupa Gıda Güvenliği Otoritesi gibi uzman yetkililer tarafından belirlenen üst güvenlik sınırlarına uyulmalıdır.
- İkinci olarak C ve D vitaminleri için RDA'nın üzerinde takviye yapılmalıdır. Son metaanalizler, hastalığın şiddeti ve C vitamini takviyesi ile yaşlı hastalarda ölüm riskinin ilişkili olduğunu, D vitamini desteğinin hem çocuklarda hem de yetişkinlerde solunum yolu enfeksiyonu riskini azalttığını göstermektedir.
- Üçüncü olarak yeterli Omega-3 yağ asitleri EPA ve DHA alımı inflamasyonun düzenlenmesini destekler.

Aşılardan ve hijyen önlemleri gibi halk sağlığı uygulamaları, akut solunum yolu virüsleri de dâhil olmak üzere enfeksiyonların yayılması ve sınırlanmasına yardımcı olan önemli önlemlerdir. Ancak SARS-CoV-2 enfeksiyonu ve COVID-19'un ciddi sonuçları ve solunum yolu enfeksiyonlarının morbidite ve mortalite rakamları genel olarak bu uygulamaların tek başına yeterli olmadığını göstermektedir. Bu nedenle, güvenli ve düşük maliyetli bir yol olan “bağışıklık sistemini desteklemek” bireyleri ve toplumu zarardan daha fazla korumak için güvenli ve uygun maliyetli bir yoldur. Optimal besin alımı, optimal bağışıklık fonksiyonunu destekler ve enfeksiyonların etkisini kontrol etmeye yardımcı olur. Bu nedenle, sağlığı iyileştirmek, viral enfeksiyonların etkisini azaltmak için, beslenme stratejilerinin genişletilmesi ve iyileştirilmesi desteklenmelidir.

MİKROBİYOTA RESTORASYONUNDA BESLENME VE GIDA TAKVİYELERİNİN ROLÜ

Neslihan Yeşilyurt

Duygu Ağagündüz

Giriş

Mikrobiyota sağlık ve hastalık durumlarının düzenlenmesinde kritik bir role sahiptir ^[1]. Mikrobiyota; deri, ağız, solunum sistemi, gastrointestinal kanal ve vajinayı kolonize eden tüm mikroorganizmalardan (bakteriler, mantarlar, arkeler, virüsler ve protozoanlar) meydana gelmiş olan ekolojik komünitedir. Ancak mikrobiyotanın %70.0'inden fazlası geniş yüzey alanı ve besin ögesi miktarı-çeşitliliği açısından zengin olması nedeniyle bağırsaklarda yaşam döngülerini devam ettirmekte ve bir organ gibi işlevi görmektedirler ^[2-5]. Bağırsak mikrobiyotasının bileşimi hakkında mevcut bilgilerin çoğu, fekal örneklerin 16S ribozomal RNA (rRNA) dizilemesi elde edilen verilerden oluşmakta ve bu nedenle bizlere özellikle kalın bağırsağın distal lümeninin mikrobiyal çeşitliliği hakkında kapsamlı bilgiler vermektedir ^[4, 6-8].

Son zamanlarda bazı mikroorganizmaların sağlık üzerine olumlu etkileri kapsamlı bir şekilde tanımlanmış olup bu mikroorganizmalar “potansiyel olarak faydalı” olarak ifade edilmektedir. Bunlar başlıca; *Bifidobacterium*, *Lactobacillus*, *Akkermansia*, *Fecalibacterium*, *Eubacterium*, *Roseburia*, *Ruminococcus* ve *Blautia* cinsleridir. Bunların aksine bazı mikroorganizmalar özellikle bulaşıcı olmayan kronik hastalıkların gelişi ve prognozunda rol oynayabilmekte ve sıklıkla “potansiyel olarak zararlı” olarak anılmaktadır. Bunlar ise *Clostridium*, *Enterobacter*, *Enterococcus*, *Bacteroidetes* ve *Ruminococcus* cinsleridir ^[9]. Buna göre genel olarak sağlıklı bir mikrobiyota; *Lactobacillus*, *Bacillus*, *Clostridium*, *Enterococcus*, *Ruminococcus*, *Eubacterium*, *Faecalibacterium* ve *Roseburia* cinslerini içeren Firmicutes filumu, *Bacteroides* ve *Prevotella* cinslerini içeren *Bacteroidetes* filumu, *Actinobacteria* ve *Verrucomicrobia* filumunu ve bunların sağlığı destekleyecek şekilde orantılı olma durumlarını içermektedir ^[4, 6-8]. Bağırsak mikrobiyotasının baskın mikroorganizmaları olan bakterilerin oluşturduğu en büyük koloniye sahip *Bacteroidetes* ve *Firmicutes* filumlarının oranı sağlıklı bireylerde *Firmicutes*:*Bacteroidetes* 1:1 ile 1:3 arasında değişmektedir ^[10]. Bu denge (öbiyozis) sağlıklı olma hâli ile ilişkilendirilirken; bu dengenin bozulmasının (disbiyozis) obezite, diyabet, gastrointestinal ve kardiyovasküler hastalıklar gibi birçok hastalığın patogeneğinde rol oynayabildiği belirtilmektedir ^[11-13].

Dinamik bir yapıya sahip olan bağırsak mikrobiyotası; genetik faktörler, yaş, cinsiyet, beslenme, antibiyotikler başta olmak üzere ilaç kullanım durumları, yaşam tarzı alışkanlıkları gibi birçok çevresel faktörden etkilenmektedir ^[14, 15]. Bu faktörler bağırsak mikrobiyal komünitesi ile metabolizma değişiklikleriyle ilişkilendirilmekte ve bunlarda meydana gelen bazı değişimler çeşitli patolojik durumlara neden olabilmektedir ^[16]. Bağırsak mikrobiyal metabolizmasının yanı sıra mikrobiyal-konakçı ko-metabolizmasının da sağlık ve hastalık durumlarını büyük ölçüde etkilediği bulunmuştur. Bağırsak mikrobiyotasındaki denge hâlinin bozulması ile bazı hastalıkların patogenezelemlerinin ilişkilendirilmesi; yeni

yürütülen bir çalışmada 69 mg dozunda veya 15×10^9 CFU *Lactobacillus acidophilus* DDS-1, *Bifidobacterium lactis* UABla-12, *Bifidobacterium longum* UABl-14 ve *Bifidobacterium bifidum* UABb-10 + 5,5 g/gün prebiyotik bileşen (2,75 g GOS ve geri kalan basit şekerler) içeren sinbiyotik kapsül uygulanmasının bağırsak mikrobiyotasında *Bifidobacterium* ve *Lactobacillus* bolluğunu arttırdığı, *Prevotella* ve *Gardnerella* bolluğunu azalttığı görülmüştür^[119].

Son zamanlarda "konakçıya sağlık açısından fayda sağlayan cansız mikroorganizmaların ve / veya bileşenlerinin hazırlanması" olarak tanımlanan postbiyotik takviyelerden ısı ile inaktive edilmiş *Lactobacillus helveticus* DS 4183, *Escherichiacoli* DSM 4087, *Streptococcus faecalis* DSM 4086, *Lactobacillus acidophilus* DSM 414'ten elde edilen metabolik ürünleri (KZYA, amino asitler ve vitaminler) içeren postbiyotik sıvının bağırsak lümen pH'nı düşürerek patojenik bakterilerin büyümesinin engellediği için gastrointestinal sistemdeki bakteriyel dengesizliğin yanı sıra bununla ilişkili semptomları giderdiği belirlenmiştir^[120, 121]. Biyotiklerin mikrobiyota modülasyonu ve restorasyonundaki rollerine ilişkin bu kitap bölümünde verilenden çok daha fazla miktarda literatürde kanıt olduğu unutulmamalıdır.

Sonuç

Bağırsak mikrobiyotasının iyi sağlık durumu ve çeşitli hastalıkların patogenezindeki rollerinin daha iyi anlaşılması üzerine; mikrobiyota restorasyonu teröpatik bir yol olarak düşünölmeye başlanmıştır. Çeşitli çevresel faktörden etkilenen mikrobiyota için en etkili modölatör şüphesiz beslenmedir. Öbiyozis ve disbiyozis durumları özellikle beslenme modellerine, besinlere ve besin ögelerine büyük ölçüde bağlıdır. Farklı mikroorganizma komüniteleri farklı diyet bileşenlerini kullanmakta ve böylece dominant türleri, oranları ve metabolizmaları şekillenebilmektedir. Mikrobiyota restorasyonu söz konusu olduğunda ön plana çıkan Akdeniz Diyeti'nin sağlıklı ilişkilendirilen faydalı mikroorganizmaların bolluğunu arttırdığı ve *Firmicutes:Bacteroidetes* oranını azalttığını göstermektedir. Yine bazı hastalıklarda uygulanan tıbbi beslenme tedavilerinin mikrobiyotanın disbiyozis durumunu azalttığı ve mikrobiyotanın öbiyozis durumuna geçişini hızlandırdığı bildirilmektedir. Diğer bir yandan yeni bir yaklaşım olarak görölen; bir veya daha fazla besin ögesini içeren ağızdan alınmak üzere tablet, kapsül ve sıvı formda hazırlanmış ürünler olan gıda takviyelerinin mikrobiyota restorasyonundaki olası etkileri de henüz netlik kazanmamıştır. Olası etkiler; gıda takviyesinin türüne, dozuna, kullanım şekline ve kullanan bireyin özelliklerine ve sağlık durumuna göre değişkenlik gösterebilmektedir. Bu noktada gıda takviyelerinin doz aşımaları ile ilgili de güvenlik endişelerinin olduğu ve kullanımlarına ilişkin fayda/zarar oranlarının göz önünde bulundurulması gerektiği unutulmamalıdır.

İçindekiler

ÖN SÖZ	ix	
BÖLÜM I	MİKRODALGA TEKNİĞİNE GİRİŞ..... 1	
1.1. Giriş	1	
1.2. Elektromanyetik Spektrum ve Frekans Bantları	3	
1.3. Mikrodalga Uygulamaları	8	
1.4. Mikrodalgaların İnsan Sağlığına Etkileri	11	
BÖLÜM II	ELEKTROMANYETİK TEORİNİN TEMEL DENKLEMLERİ 17	
2.1. Giriş	17	
2.2. Maxwell Denklemleri	17	
2.3. Harmonik (Sinüzoidal) Elektromanyetik Alanlar.....	21	
2.4. Harmonik Maxwell Denklemleri	22	
2.5. Elektromanyetik Sınır Şartları.....	23	
2.5.1. İki Kayıpsız Dielektrik Ortam Arasındaki Sınır Yüzeyi	26	
2.5.2. Kayıpsız Dielektrik ile Mükemmel İletken Arasındaki Sınır Yüzeyi	26	
2.6. Poynting Teoremi	27	
2.7. Düzlemsel Dalgalar	28	
2.7.1. Kayıpsız Ortamda Düzlemsel Dalgalar.....	29	
2.7.2. Az Kayıplı Dielektrik Ortamda Düzlemsel Dalgalar.....	35	
2.7.3. İyi İletken Ortamda Düzlemsel Dalgalar.....	36	
Çözümlü Örnekler	38	
BÖLÜM III	İLETİM HATLARI	57
3.1. Giriş	57	
3.2. İletim Hatlarının Eşdeğer Devresi ve Analizi.....	58	
3.3. İletim Hatlarında Dalga Karakteristikleri.....	62	
3.3.1. Kayıpsız İletim Hattı.....	63	
3.3.2. Az Kayıplı İletim Hattı	64	
3.3.3. Faz ve Grup Hızı.....	65	
3.3.4. Distorsiyonsuz İletim Hattı	66	
3.4. İletim Hattı Parametreleri İçin Alan Analizi.....	67	
3.5. Sonlandırılmış İletim Hatları.....	68	
3.6. Duran Dalga Oranı (DDO)	72	
3.7. Yük Empedansının Hesabı	76	

3.8. İletim Hatlarında Özel Durumlar.....	76
3.8.1. Kısa Devre İletim Hattı	77
3.8.2. Açık Devre İletim Hattı	79
3.8.3. Uyumlu İletim Hattı.....	82
3.8.4. Saf Reaktansla Sonlandırılmış İletim Hattı	82
3.8.5. Yarım Dalgaboyu İletim Hattı	84
3.8.6. Çeyrek Dalgaboyu İletim Hattı	85
3.9. Güç İletimi	85
3.9.1. Uyumlu Yük	88
3.9.2. Uyumlu Kaynak	88
3.9.3. Maximum Güç Transferi.....	89
3.9.4. Az Kayıplı İletim Hattında Güç İletimi.....	90
3.9.5. Kayıplı İletim Hattında Güç İletimi	91
3.9.6. Desibel ve Neper	92
3.9.7. Mutlak Güç Seviyeleri (dBm ve dBW)	93
3.9.8. Geriye Dönme Kaybı.....	94
3.9.9. Araya Girme Kaybı.....	95
3.10.Paralel Plakalı İletim Hatları	96
3.11.Planar İletim Hatları	98
3.11.1.Mikroşerit Hat	98
3.11.2.Şerit Hat	100
Çözümlü Örnekler	102
BÖLÜM IV	EMPEDANS DÖNÜŞÜMÜ VE
EMPEDANS UYUMLAMA	123
4.1. Empedans Dönüşümü	123
4.2. Empedans Dönüştürücüler	124
4.3. Empedans Uyumlama için Analitik Yöntem	126
4.3.1. Çeyrek Dalgaboyu Dönüştürücüyle Empedans Uyumlama	126
4.3.2. Paralel Yan Hat Kullanarak Empedans Uyumlama	128
4.3.3. Seri Yan Hat Kullanarak Empedans Uyumlama	131
Çözümlü Örnekler	134
BÖLÜM V	SMITH DİYAGRAMI
5.1. Smith Diyagramının Oluşumu.....	141
5.2. Smith Diyagramında Hesaplamalar.....	146
5.3. Empedans Uyumlama	157
5.3.1. Paralel Tek Yan Hat Uyumlama Yöntemi.....	157
5.3.2. Paralel Çift Yan Hat Uyumlama Yöntemi.....	161
Çözümlü Örnekler	167

BÖLÜM VI	DALGA KILAVUZLARI	191
	6.1. Giriş	191
	6.2. Uniform Dalga Kılavuzlarında TEM, TM ve TE Dalgaları.....	192
	6.2.1. TEM Dalgaları	195
	6.2.2. TM Dalgaları	196
	6.2.3. TE Dalgaları	197
	6.3. Paralel Plakalı Dalga Kılavuzu	198
	6.3.1. TM Modları	199
	6.3.2. TE Modları	203
	6.4. Dikdörtgen Kesitli Dalga Kılavuzları	205
	6.4.1. TM Modları	205
	6.4.2. TE Modları	211
	6.5. Dairesel Kesitli Dalga Kılavuzları	214
	6.5.1. TM Modları	215
	6.5.2. TE Modları	219
	6.6. Dalga Kılavuzlarında Zayıflama.....	221
	6.6.1. TE_{10} Dominant Modunda Zayıflama	223
	6.7. Dalga Kılavuzu Bağlantı Elemanları.....	225
	6.7.1. E-Düzlem T	225
	6.7.2. H-Düzlem T.....	226
	6.7.3. Hibrit (sihirli) T	227
	6.7.4. Hibrit Ring	228
	6.7.5. Yönlü Kuplör.....	229
	6.7.6. Dalga Kılavuzu Dönüş Elemanları	231
	6.7.6.1. Dönüş Elemanları	231
	6.7.6.2. Kıvrılmış Dalga Kılavuzu Elemanı.....	233
	6.8. Dalga Kılavuzlarının Uyarılması	233
	6.8.1. Koaksiyel Sonda Anten Yoluyla Kuplaj	234
	6.8.2. Koaksiyel Halka Anten Yoluyla Kuplaj	236
	6.8.3. Açıklık Yoluyla Kuplaj.....	237
	Çözümlü Örnekler	238
BÖLÜM VII	MİKRODALGA REZONATÖRLERİ.....	263
	7.1. Giriş	263
	7.2. Dikdörtgen Mikrodalga Rezonatörleri	264
	7.2.1. TM Modları	264
	7.2.2. TE Modları	267
	7.3. Dairesel Silindirik Mikrodalga Rezonatörleri	271
	7.3.1. TM Modları	271

	7.3.2. TE Modları	274
	7.4. Kalite Faktörü	276
	7.5. Rezonatörlerin Uyarılması.....	278
	Çözümlü Örnekler	280
BÖLÜM VIII	İKİ KAPILI MİKRODALGA DEVRE ANALİZİ.....	291
	8.1. Giriş	291
	8.2. Devre Değişkenleri.....	291
	8.3. Açık Devre Empedans Parametreleri	293
	8.4. Kısa Devre Admitans Parametreleri.....	294
	8.5. ABCD Parametreleri	295
	8.6. Saçılma Parametreleri.....	296
	8.6.1. Saçılma Parametrelerinin Özellikleri	299
	8.6.1.1. Simetri Özelliği	299
	8.6.1.2. Birim Özdeşlik	300
	8.6.1.3. Sıfır Özdeşliği.....	301
	8.6.1.4. Faz Kayması.....	302
	8.7. Devre Parametrelerinin Dönüşümü	303
	8.8. Çok Kapılı Devreler.....	304
	Çözümlü Örnekler	307
KAYNAKLAR	329
EKLER		
EK A	SEMBOL VE BİRİM LİSTESİ	333

İÇİNDEKİLER

YAZARLAR LİSTESİ.....	iii
ÖN SÖZ	xiii
TEŞEKKÜR	xv
BÖLÜM 1 NANOTEKNOLOJİYE GİRİŞ.....	1
1. MAKRO'DAN NANO'YA: BOYUT NEYİ DEĞİŞTİRİR?	1
2. NANOTEKNOLOJİNİN TARİHSEL GELİŞİMİ.....	6
3. SİLİKON ÇAĞI: MOORE YASASI VE DAHA FAZLASI.....	11
4. NANOÜRETİM YÖNTEMLERİ.....	16
4.1. Yukarıdan aşağıya yaklaşımı.....	17
4.2. Aşağıdan yukarıya yaklaşımı.....	18
5. NANOTEKNOLOJİ VE NANOÜRETİMDE GELECEĞİN TRENDLERİ	19
5.1. Mikroeletromekanik (MEMS) ve nanoeletromekanik sistemler (NEMS).....	20
5.2. Kuantum hesaplama ve kuantum bilgisayarlar	23
5.3. Çip-Üstü-Laboratuvar teknolojileri: nanokanal ve nanogözenekler.....	24
5.4. Nanorobotik	27
5.5. Esnek elektronik.....	29
6. GENEL DEĞERLENDİRME	30
KAYNAKÇA.....	32
BÖLÜM 2 NANOMALZEMELERE GİRİŞ.....	35
1. NANOMALZEMELERE GİRİŞ	35
2. KAYNAĞINA GÖRE NANOMALZEMELER	35
2.1. Doğal nanomalzemeler.....	36
2.2. Yapay nanomalzemeler	37
3. BOYUTLARINA GÖRE NANOMALZEMELER.....	37
3.1. Sıfır boyutlu	38
3.2. Tek boyutlu.....	39

3.3. İki boyutlu	39
3.4. Üç boyutlu	40
4. YAPISAL KONFIGÜRASYONLARINA GÖRE NANOMALZEMELER	41
4.1. Karbon bazlı nanomalzemeler	42
4.2. Metal bazlı nanomalzemeler	53
4.3. Metal oksit bazlı nanomalzemeler	55
4.4. Moleküler bazlı nanomalzemeler	56
4.5. Kompozit bazlı nanomalzemeler	57
4.6. Yarı iletken kuantum noktaları	58
5. NANOMALZEMELERDE KUANTUM ETKİSİ	58
6. GENEL DEĞERLENDİRME	60
KAYNAKÇA	61

BÖLÜM 3 SIVI TEMELLİ YAKLAŞIMLAR İLE NANOYAPILARIN ÜRETİMİ.....67

1. GİRİŞ	67
2. TEMEL KAVRAMLAR	68
2.1. NP'lerin sentezi	68
3. SIVI ORTAMDA NANOYAPILARIN SENTEZ YÖNTEMLERİ	70
3.1. Çöktürme ve ikili-çöktürme	70
3.2. Sol-jel yöntemi	72
3.3. Sıvı-faz lazer ablasyon tekniği	73
3.4. Ultrasonik sentez yöntemleri	74
3.5. Mikrodalga-destekli sentez yöntemleri	75
3.6. Hidrotermal ve solvotermal yöntem	76
3.7. Sıcak-enjeksiyon sentez yöntemleri	78
3.8. Kolloidal sentez yöntemi	79
3.9. Elektrobiriktirme yöntemi	80
3.10. Kimyasal aşındırma yöntemi	81
4. SIVI ORTAMDA ÜRETİLEN NANOYAPILARIN UYGULAMA ALANLARI	82
4.1. Biyolojik ve medikal uygulamalar	82
4.2. Katalitik uygulamalar	87
4.3. Enerji ve çevre uygulamaları	88
4.4. Sensör uygulamaları	89
5. GENEL DEĞERLENDİRME	90
KAYNAKÇA	91

BÖLÜM 4 MOLEKÜLER KENDİLİĞİNDEN DÜZENLENME97

1. GİRİŞ	97
2. MOLEKÜLER KENDİLİĞİNDEN DÜZENLENME	100
2.1. Kendiliğinden düzenlenen tek tabakalar	100
2.2. Lipozomlar	104
2.3. Dendrimerler	107

2.4. Konak-Konuk Birlikteliği.....	110
2.5. Makrodöngüler.....	111
2.6. Katenanlar.....	113
2.7. Rotaksanlar.....	114
3. GENEL DEĞERLENDİRME	116
KAYNAKÇA.....	117

BÖLÜM 5 NANOMALZEMELERİN MEKANİK SÜREÇLER İLE ÜRETİMİ.....121

1. MEKANİK ÖĞÜTME	121
2. MEKANİK ALAŞIMLAMA	125
3. MEKANOKİMYASAL SÜREÇ.....	129
4. MEKANİK SÜREÇLERDE KULLANILAN DEĞİRMEN TÜRLERİ	135
4.1. Gezegenel bilyeli değirmen	136
4.2. SPEX (Çalkalayıcı) değirmen	137
4.3. Atritör (<i>Attritor</i> , Karıştırırmalı) değirmen	137
5. MEKANİK SÜREÇ PARAMETRELERİ	138
5.1. Öğütme ortamının malzemeleri.....	139
5.2. Bilye:toz oranı	139
5.3. Süreç kontrol kimyasalları	140
5.4. Atmosfer	140
5.5. Öğütme hızı	140
5.6. Öğütme süresi	140
5.7. Haznenin doluluk oranı	141
5.8. Sıcaklık.....	141
5.9. Kriyojenik çevre.....	141
6. GENEL DEĞERLENDİRME	141
KAYNAKÇA.....	142

BÖLÜM 6 LİTOGRAFİ.....145

1. GİRİŞ	145
2. FOTOLİTOGRAFİ	146
2.1. Fotomaske tasarımı ve imalatı	146
2.2. Fotorezistler ve fotorezist kaplama.....	149
2.3. Pozlama.....	152
2.4. Fotorezist geliştirme.....	154
3. DİĞER LİTOGRAFİ TEKNİKLERİ.....	154
3.1. Daldırma litografi (<i>Immersion lithography</i>).....	155
3.2. Faz Kaydırma Litografisi (<i>Phase shift lithography</i>)	156
3.3. Elektron ışını litografisi	156
3.4. Nano-baskı litografisi	157
3.5. Yumuşak litografi.....	158

4. LİTOGRAFI UYGULAMA ÖRNEKLERİ.....	159
4.1. Mikroakışkan sistemlerin üretimi.....	159
4.2. Düzlemsel elektrot üretimi	160
5. LİTOGRAFİDE ZORLUKLAR VE İYİLEŞTİRMELER	162
6. GENEL DEĞERLENDİRME	166
KAYNAKÇA.....	167

BÖLÜM 7 TARAMA PROBLU LİTOGRAFI TEKNİKLERİ 169

1. GİRİŞ	169
2. TARAMALI TÜNEL MİKROSKOBU.....	174
3. ATOMİK KUVVET MİKROSKOBU	179
4. SPM UYGULAMALI LİTOGRAFI TEKNİKLERİ.....	181
4.1. Lokalize oksit nanolitografi	181

EK 1 - Sİ PUL ÜRETİMİ.....	313
EK 2 - ÇÖZÜNÜRLÜK.....	315

1. MAKRO'DAN NANO'YA: BOYUT NEYİ DEĞİŞTİRİR?

“Nano” ön eki Yunanca cüce kelimesinden gelmektedir ve önüne geldiği parametrenin milyarda bir azalmasını ifade eder. Yani 1 metre (m), 1 nanometre (nm)'nin 10^9 katıdır. Atomların çaplarının genellikle 1-5 angstrom (Å , 10^{-10} m) olduğu düşünüldüğünde nanometrenin birkaç tane atomun yanyana dizilmesiyle oluşan küçük bir uzunluk olduğunu daha iyi gözümüzde canlandırabiliriz. Yahut insan saç telinin çapının 60-120 μm arasında değiştiği düşünülürse, nano dünyanın aslında bizim görebildiğimiz boyutlarla kıyaslandığında ne kadar büyük bir alanı kapladığını hayal edebiliriz. Şekil 1.1, bu kıyaslamanın daha iyi anlaşılması için doğal ve insan yapımı milimetre, mikrometre ve nanometre boyutundaki bazı nesnelere göstermektedir.

Nanoteknoloji (veya nanobilim) temel olarak bazı spesifik özelliklere sahip madde ve sistemleri ele almaktadır ve bunlar (i) 100 nm'den küçük en az bir boyuta sahip olmak, (ii) moleküler ölçekteki yapıların ve/veya süreçlerin fiziksel ve kimyasal özelliklerini ortaya koyan metodolojilerden yararlanmak ve (iii) yapıtaşlarını kullanarak daha büyük yapıların üretimine olanak sağlamak olarak sıralanabilir (1). Nanoboyuttaki malzemelerin (nanomalzemelerin) ve dolayısıyla nanoteknolojinin bu kadar ilgiyle karşılanmasının altında yatan temel sebep kütle (*bulk*) hâlinde nanoboyutlara inildiğinde malzemelerin kimyasal, fiziksel veya biyolojik özelliklerinde ortaya çıkması beklenen değişimlerdir. 100 nm'den küçük boyutlarda, özellikle 10 nm altında, ciddi farklılaşmalar olduğu daha önce gösterilmiştir (2). Bu değişimlerin ana nedeni, kuantum mekaniği tarafından ortaya konan şekliyle, nanometre boyutlarına inildiğinde maddelerin artık parçacık-benzeri (*particle-like*) değil de dalga-benzeri (*wave-like*) davranmaya başlamasıdır. Buna bağlı olarak maddelerin içeriği sabit kalmasına rağmen elektriksel ve termal iletkenlik, erime sıcaklığı, manyetik karakteristik, floresans, yüzey enerjileri gibi birtakım özellikleri değişebilmektedir (3). Kuantum düzeyindeki küçük maddelerin klasik mekanikteki parçacık ya da dalga konseptleriyle ayrı ayrı açıklanamaması sebebiyle ortaya çıkan dalga-parçacık ikiliği (*wave-particle duality*),

1. NANOMALZEMELERE GİRİŞ

Bugüne kadar, "nanomalzeme" terimi ile ilgili tek tip kabul edilmiş bir tanımı yoktur ve bu yüzden farklı tanımlar ve açıklamalar çeşitli birimler tarafından sunulmuştur. Örneğin, bu terim Paul Ehrlich tarafından "Sihirli Mermiler" olarak adlandırılmış ve nanoteknoloji olarak bilinen yeni bir bilim dalını doğuran yüzyılın en çok çalışılan materyallerinden biri olarak belirtilmiştir [1]. 2008 ve 2010 yıllarında Uluslararası Standardizasyon Örgütü (*International Organization for Standardization*, ISO), nanoteknoloji ile ilgili terimler için kapsayıcı teknik tanımlar sağlamıştır. ISO tarafından 'Nanomalzeme', nano ölçekte herhangi bir dış boyutu olan veya nano ölçekte iç veya yüzey yapısına sahip olan malzemeler olarak tanımlanmıştır [2, 3]. Avrupa Komisyonu ise bağlanmamış hâlde veya bütün olarak partiküller içeren doğal, tesadüfi veya üretilmiş bir malzeme anlamına gelen "nanomalzeme" olarak tanımlamıştır. Burada iç veya dış boyut dağılımındaki parçacıkların %50 veya daha fazlası 1-100 nm boyut aralığındadır [4, 5]. Bu malzemeler, küçük ölçekte üretilen veya kullanılan kimyasal maddeler veya malzemelerdir. Aslında malzeme terimi, toplu olarak ortalama bir istatistiksel davranış sergileyen neredeyse sonsuz sayıda bileşene atıfta bulunur. Bu nedenle bu tür malzemelerin davranışına belirli arayüz, tane boyutu, boyut dağılımı, tane sınırları, sınırlar arasındaki etkiler hâkimdir. Nanomalzemelerin ilgi çekici olma nedeni benzersiz optik, manyetik, elektriksel ve benzeri diğer özelliklere sahip olmasıdır [6].

Bu bölümde doğal ve yapay nanomalzemeler ve bu malzemelerin boyutları, yapısal konfigürasyonları, ve özellikle nanoboyutlu malzemelerin yarı iletkenler ile ilişkileri hakkında detaylı bilgi verilecektir. Ayrıca, karbon, metal, moleküler kompozit bazlı nanomalzemelerin türleri, gelişimi, sentezlenmesi ve uygulamaları ele alınmıştır.

2. KAYNAĞINA GÖRE NANOMALZEMELER

Nanomalzemeler, kaynaklarına göre doğal ve yapay olarak sınıflandırılır. Bu bölümde bu iki grup ile ilgili bilgi verilmiştir.

1. GİRİŞ

Yıllar içinde çevre, enerji, tıp, endüstri, havacılık ve uzay alanında yaşanan gelişmeler insanlığın hayatını önemli ölçüde kolaylaştırmıştır (1). Bu gelişmelerin en önemlilerinden biri olarak nanoteknoloji dikkat çekmekte ve her geçen gün hızla gelişip, farklı alanlardaki teknolojilere kayda değer yenilikler sunmaktadır. Nanoteknolojik çalışmalar kapsamında genellikle 1 ile 100 nm arasındaki çok küçük boyutta nano yapılar üretilmektedir (2). Teknolojik araçlara nanoyapılı malzemeler eklendikçe kullanılan bu araçların boyutlarında küçülmeler sağlanabilmektedir. Makroyapılı sistemlerin boyutları nanoboyutlara düşürüldükçe bu parçacıkların fiziksel, kimyasal ve optik özelliklerinde önemli değişimler görülmektedir (3). Bu değişimler, nanopartiküllere (NP) bambaşka yeni özellikler katmakta ve kullanım alanlarını genişletmektedir. Bu parçacıklar farklı biçimlerde düzenlenip kullanılarak, farklı çalışmalarda ve birçok alanda yeni uygulamalarda değerlendirilmektedir. Hâlihazırda gelişim sürecinde olan nanoteknoloji gelecek yıllarda insanlığa önemli imkânlar sunacaktır. Bundan dolayı devletler ve şirketler nanoteknoloji alanında araştırma ve geliştirme kapsamında büyük yatırımlar yapmaktadır. Örneğin; son yıllarda günümüzün en büyük problemlerinden biri olan kanserin tedavi ve erken teşhisi için nanoteknolojik yaklaşımlar yoğun bir şekilde çalışılmaktadır. Üretilen bir NP'ye kanserli hücreyi özelde tanıması için anti-kor, kanserli hücreyi ortadan kaldırmak için ilaç molekülü ve görüntüleme için floresans etiket ekleme gibi farklı stratejiler uygulanmaktadır (4).

Nanoyapılı malzemeler birçok farklı yöntemle üretilmekte ve buna bağlı olarak farklı morfolojilerde elde edilmektedir (5). Bu bölümde sıvı ortamda üretilen nanoyapılı sistemler ele alınacaktır. Bu kapsamda sıvı ortamda NP sentez yöntemleri özet şekliyle tanımlanacaktır. Burada literatürde verilen tüm yöntem ve malzeme türlerinin bu bölüm kapsamında verilmesi mümkün değildir. Bu noktanın okuyucu tarafından anlaşılması büyük önem arz etmektedir. Ayrıca üretilen NP'ler aynı atomlardan meydana gelmiş olsalar bile farklı özellikler gösterebilirler. Bu bağlamda elde edilen her

1. GİRİŞ

Fonksiyonel malzemeler insanlık için hemen her alanda büyük öneme sahiptir. Çok eski zamanlardan beri uygulanan dene-yanıl yaklaşımı ile başlayan fonksiyonel malzeme üretim serüveni günümüzde bilimsel yöntem kullanılarak hâlâ önemini korumaktadır. Bu hususta en önemli çıkış noktası doğadan esinlenme yolu ile gerçekleştirilebilmektedir. Doğa zorlayıcı koşullar ile minimum kaynak maksimum performans noktasına ulaşabilmiştir. Bu mükemmel özelliklere ve performansa sahip yapılardan ve canlılardan dersler çıkarmak ve onları taklit etmek günümüz teknolojisinde karşılaşılan sorunların çözümünde önemli bir role sahiptir. Biyo-esinlenme temelli (*bio-inspired based*) en önemli yaklaşımların başında kendiliğinden düzenlenen yapılar gelmektedir. Yıllar boyunca bilim adamları tarafından yeni moleküllerin sentezi atomlar arasında kovalent bağ olarak adlandırılan güçlü çekim kuvvetlerine dayalı olarak gerçekleştirilmiştir [1]. 1960'lı yıllarda yeni moleküllerin sentezi için kovalent bağların haricinde yapı içerisinde bulunan diğer zayıf etkileşimler ile yeni moleküllerin elde edilmesinin mümkün olacağı anlaşılmıştır. Bunun sonucunda moleküler kendiliğinden düzenlenme (*Molecular Self Assembly, MSA*) adı verilen ve herhangi bir dış müdahaleye gerek kalmadan bir veya birden fazla molekülün birbirine kovalent olmayan etkileşimler ile bağlanması ve yeni düzenli yapıların oluşması fikri ortaya çıkmıştır [2]. MSA olgusu moleküler seviyeden makroskopik düzeye kadar gerçekleşebilmektedir [1]. MSA olayında moleküllerin bağlanması kovalent olmayan zayıf etkileşimler örneğin dipol-dipol, iyon-dipol, hidrojen bağı, π - π etkileşimler, van der Waals kuvvetleri ve hidrofobik etkiler vb. ile gerçekleşebilmektedir [3, 4]. MSA doğada, biyolojik sistemlerde ve birçok moleküler yapıda sıkça rastlanan bir olgu olarak karşımıza çıkmaktadır. Biyolojik sistemlerde MSA çerçevesinde yeni moleküllerin bir araya gelerek daha karmaşık bir yapı oluşturduğu bilinmektedir [5]. Hücre zarının oluşması için iki tabakalı lipid yapısının birleşmesi, polipeptitlerin katlanarak protein hâline gelmesi, nükleotit zincirlerinin birleşerek işlevleştirilmesi veya reseptör-ligand etkileşimleri

sürdürmesine sebep olmuştur. Bununla birlikte transistörler daha küçük boyutlara küçüldükçe mevcut durumun ulaştığı limitler, yasanın artık sonunun geldiğini düşündürmektedir. Bununla birlikte, yeni malzemelerin ve 3 boyutlu karmaşık yapıların hayatımıza girmesiyle, yukarıdan aşağıya yöntemlerde ciddi zorluklar ortaya çıkmıştır. Bu nedenle, aşağıdan yukarıya tekniklerin, yukarıdan aşağıya prosesleri ile birleştirilmesinin gerekli olduğuna inanılmaktadır. Bu doğrultuda, heterojen ve monolitik 3B entegrasyonu sunan kimyasal ve biyolojik yöntemlerin, yüksek yoğunluklu ve çok işlevli olarak genişletmesi beklenmektedir.

MSA sahip olduğu eşsiz özellikler nedeni ile mikroelektronik, optik, manyetizma, akustik ve biyoteknoloji, vb. nanoüretimde vazgeçilmez bir yaklaşım olarak karşımıza çıkmaktadır. İleri teknolojik ürünler ve aynı zamanda tıp alanında birçok uygulamaya sahiplerdir. Elektronik endüstrisinde birkaç nm ölçeğinde transistörlerin fabrikasyonunda kullanılan malzemeler SAMs sayesinde gerçekleştirilmektedir. Bu küçülme çevre ve enerji açısından son derece önemli olmakla birlikte, SAMs fenomeninin dolaylı bir şekilde çevre ve enerji açısından büyük katkılarda bulunduğunu da göstermektedir. Biyosensörlerin gelişimi, bu yaklaşımların gelişimi ile birlikte ivmelenmiştir. Kanser tedavisinde ise hedefli bir şekilde paketlenmiş ilaçların hedef hücrelere ulaştırılması ise bu olgu sayesinde gerçekleştirilmiştir. Günümüzde bu kategoride sınıflandırılabilen moleküllerin tasarımı, sentezi ve kullanımı büyük bir çaba ile birlikte Türkiye dâhil olmak üzere dünya çapında birçok grup tarafından devam etmektedir. Bu çalışmalar sayesinde ortaya çıkacak yeni ve işlevsel yapıların nanoteknoloji çalışmalarına da büyük katkılarda bulunacağı beklenmektedir.

Nanomalzemelerin üretiminde ya kütleli malzeme ile başlayıp, daha sonra mekanik, kimyasal veya diğer enerji biçimlerini kullanarak (yukarıdan-aşağıya) daha küçük parçalara bölüdüğü ya da öncü parçacıkların büyümesine izin veren (aşağıdan-yukarıya) kimyasal reaksiyonlarla atomik veya moleküler türlerden sentezin gerçekleştiği iki farklı yaklaşım bulunmaktadır.

19. yy'ın başından bu yana uygulanan mekanik üretim süreçleri, mikro partikülleri ezmek için öğütmeyi kullanır. Ticari uygulanabilirliği sayesinde bu yaklaşım günümüzde metalik ve seramik nanoyapılı malzemelerin üretiminde başarılı bir şekilde uygulanmaktadır. Bu bölümde, mekanik etki temelli öğütme, mekanik alaşımlama ve mekanokimyasal sentez hakkında temel bilgiler ve söz konusu yöntemlerle ilgili yapılmış çalışmalara değinilmiştir.

1. MEKANİK ÖĞÜTME

Bu yöntem ilk keşfedildiğinde sadece kayaçları kırmak veya oksitli tozları karıştırmak için kullanılmıştır. Öğütme sırasında toz partiküllerinde aşırı plastik deformasyon ve partiküller arası soğuk kaynaklaşma oluşmamıştır. Dolayısıyla; işlem sırasında belirgin ve göze çarpan ilginç mikroyapısal değişime sebep olmayan bir süreç olarak bilinmiştir [1]. Bu alandaki ilk yayın 1892 yılında, M. Carey Lea isimli bilim adamı tarafından yapılan çalışmalar ile başlamıştır. Carey Lea, yapmış olduğu çalışmalarda altın, gümüş, platin ve cıva halojenürlerin, ince öğütme işlemi sırasında halojen ve metal olarak ayrıştırılabilir olduğunu göstermiştir. Bu çalışma, kimyasal değişikliklerin yalnızca ısıtılarak değil aynı zamanda bir mekanik müdahale ile de sağlanabileceğini göstermiştir [2].

Mekanik öğütme, toz metalurjisi ve maden işleme endüstrileri başta olmak üzere geniş bir uygulama alanına sahip; ısı veya kimyasal süreçlerden bağımsız gerçekleştirilen ekonomik bir yöntemdir. Diğer bir deyişle mekanik öğütme, başlangıç tozlarının

yöntem de mekaniksel kuvvetlerin etkisi altında öğütme, alaşımlama ve kimyasal reaksiyonlar gerçekleştirilir. Makro ölçekteki bir malzemenin nano ölçeğe (en az bir boyutu < 100 nm) dönüştürülmesi öğütme, elementel toz karışımlarının mekaniksel kuvvetler ile etkileştirilerek alaşımların elde edilmesi mekaniksel alaşımlama ve mekaniksel kuvvetlerin tetiklediği kimyasal reaksiyonlar ile ısı veya kimyasal işlemlere gerek olmadan katı hâl reaksiyonlarının gerçekleşmesi mekanokimyasal süreç olarak tanımlanmıştır. Bu yöntem nanoseviyede oksit/oksit dışı seramiklerin, nanoalaşımların ve birçok nanokompozit malzemenin üretilmesinde kullanılabilir. Bu yöntemler, nanomalzemelerin yeni ve inovatif bir sınıfı olan karbon ve iki boyutlu (MXene, MBenes, kalkojenitler vb.) malzemelerin ve kompozitlerinin elde edilmesinde yeni fırsatlar sunmaktadır. Süreç değişkenlerinin optimize edilmesi ve farklı öncül kimyasalların kullanılması ile elde edilen ürünlerin endüstriyel konuma gelmesi mümkün olacaktır. Özellikle de oda sıcaklığına yakın sıcaklıklarda kristal/kristal, kristal/amorf ve amorf/amorf yapıların oluşturulmasına izin vermesi avantajı ile gelecekteki yenilikçi nanomalzemelerin üretilmesinde ve endüstriyellesmesinde umut verici bir yaklaşım sunmaktadır.

1. GİRİŞ

1796'da Alman yazar ve aktör, Alois Senefelder, tiyatro eserlerinin yayınlanmasında ucuz bir yöntem olarak bir taştan veya metal bir plaka üzerinde kimyasal yöntemlerle oluşturulan desenlerin pürüzsüz bir yüzeye aktarılması yöntemini icat etmiştir (1) (Şekil 6.1.a). Yunanca'da taş ve yazma anlamına gelen *lithos* ve *graphein* kelimelerinin birleşiminden oluşturulan litografi terimiyle anlatılan bu yöntem, temel olarak bir desenin bir yüzeye aktarılması işlemi ifade etmektedir. Litografi yöntemi zaman içerisinde 1960'lardan itibaren Mikro Elektromekanik Sistemlerin (MEMS) ve yarı iletken endüstrisinde entegre devrelerin (*integrated circuit, IC*) üretilmesinde, mikro veya nano ölçekli desenlerin, üretimde kullanılan altta üzerine aktarılmasında kullanılan temel yöntem olmuştur (Şekil 6.1.b).

(a)

(b)

Şekil 6.1. (a) Taş üzerinde yer alan deseni bir yüzeye aktarmak için kullanılan litografik baskı presini gösteren gravür (2). (b) MEMS üretiminde litografi.

Mikro ve nano ölçekli desenlerin aktarılması işleminde kullanılan geleneksel litografi işlemi fotolitografidir. Fotolitografi işleminde, altlık üzerine kaplanan ışığa duyarlı bir

dezavantajları bulunmaktadır. Şekil 6.22, litografi tekniklerini çözünürlük, maliyet, katman hizalama, hata yoğunluğu, çıktı gibi farklı açılardan değerlendirmesini sunmaktadır. Avantaj ve dezavantajları göz önüne alınarak, uygulamaya özel uygun litografi tekniği seçilmelidir.

Şekil 6.22. Farklı litografi yöntemlerinin çözünürlük, maliyet, hizalama, hata yoğunluğu ve çıktı açısından değerlendirilmesi. Springer Nature tarafından yayınlanan Kaynak (6)'dan uyarlanarak tekrar yayınlanmıştır.

1. GİRİŞ

20. yüzyılın sonlarında nanoteknolojideki olağanüstü gelişmeler, malzemeleri atomik boyutlarda görüntüleyebilen cihazların ortaya çıkmasına yol açtı. 1980'lerden önce nano ölçekli görselleştirme işlemleri elektron demeti görüntüleme yöntemleriyle yapılıyordu. IBM laboratuvarlarından Binnig, Rohrer ve Quate'in çabaları, taramalı tünelleme mikroskobu (*Scanning Tunneling microscope*, STM) ve atomik kuvvet mikroskobu (*Atomic Force Microscope*, AFM) dâhil olmak üzere taramalı prob mikroskobu (*Scanning Probe Microscope*, SPM) kavramlarını ortaya çıkardı (1-5). İlk tasarlanan STM'in çalışma ilkesi, vakum altında numuneye oldukça yakın sivri bir uç üzerine gerilim uygulanmasına dayanıyordu. STM'in çalışma ilkesinde, numune ile uç arasındaki mesafe tünel akımının (*tunnelling current*) büyüklüğünü belirler. Bu akımın büyüklüğü, belirtilen mesafe ile ters orantılıdır. Ucun çalışılan malzemenin yüzeyini taraması ile görüntüleme ya da işleme yapılabilir. STM, vakum altında ve 5-1000 K sıcaklık aralığında, yüksek hassasiyetli görüntüler elde edilmesine olanak sağlamasına rağmen sadece iletken numuneleri görüntüleyebilir ya da işleyebilir olması bu yöntemin bir handikabıdır (1, 2).

SPM, daha yüksek çözünürlükle, çalışılan malzemelerin yüzey özellikleri hakkında fiziksel, elektriksel veya kimyasal bilgiler elde etmek için sivri bir uç ve numune yüzeyi arasındaki yerel etkileşimi izleyen bir cihazdır. Günümüzde, birçok bilimsel alanda, çeşitli uygulamalar için kullanılan farklı SPM türleri mevcuttur. Tablo 7.1'de farklı SPM türleri, bunların özellikleri, çözünürlükleri ve uygulandıkları materyal türleri sıralanmıştır.

AFM'nin çalışma ilkesi, küçük atomik ölçekli kuvvetleri tespit edebilen, esnek bir konsol aracılığıyla yüzeye etkileşime giren belirli bir alanda sınırlandırılmış bir probun kullanılmasına dayanmaktadır. Bu hassasiyet, bir lazer ışınının uç üzerinden yansıtılmasıyla ve ışındaki kaymaların hassas bir fotodedektör yardımıyla tespit edilmesiyle elde edilir. Yüzey topografyası, uç ve yüzey arasındaki kuvveti korumak için geri

1. GİRİŞ

İnce film biriktirme (*thin film deposition*) yöntemleri tarih boyunca insanlığın başvurduğu teknolojilerden biri olmuştur. İnce film biriktirme yöntemlerinin neredeyse 5000 yıllık bir geçmişi bulunmaktadır. İnce film biriktirme yöntemleri ilk yıllarında malzemelerin yüzeyinin estetik açıdan daha etkileyici olması için dekoratif amaçlı kullanılmıştır. Daha sonraki yıllarda ise ince filmler malzemelerin çevresel koşullara karşı dayanımının artırılması için korozyon direnci yüksek ve mekanik özellikleri geliştirilmiş kaplamalar oluşturmak için kullanılmıştır. Günümüzde ince film biriktirme yöntemleri teknolojide yapılan çalışmalarla özellikle vakum teknolojilerinin gelişmesi ve elektronik alanında meydana gelen bilimsel devrimlerle ileri teknolojinin vazgeçilmesi olmuştur.

Kitabın bu bölümünde günümüzde en çok kullanılan ince film biriktirme yöntemlerine yer verilmiştir. İlk olarak ince film biriktirme yöntemlerinin temelleri anlatılmış daha sonra da ince film biriktirme yöntemlerinin sınıflandırması yapılarak yöntemler detaylandırılmıştır. İnce film biriktirme yöntemlerini çeşitli şekillerde sınıflandırmak mümkündür. Bu kitapta ince film biriktirme yöntemleri kimyasal ve fiziksel biriktirme yöntemleri olarak ikiye ayrılmıştır. Kimyasal biriktirme yöntemlerinde kimyasal buhar biriktirme, elektrokaplama, sıvı faz biriktirme yöntemleri ve gaz faz biriktirme yöntemleri incelenirken, fiziksel biriktirme yöntemlerinde buharlaştırma, püskürtme ve elektrosprey biriktirme yöntemleri incelenmiştir.

1.1. İnce filmler ve eğik açılı biriktirme

1.1.1. Klasik ince film büyütme

İnce filmler, kimyasal buhar biriktirme (*chemical vapor deposition*, CVD) ve fiziksel buhar biriktirme (*physical vapor deposition*, PVD) olmak üzere iki farklı yöntemle biriktirilmektedir [1, 2] PVD yönteminde temel prensip, kaynak malzemesinin fiziksel bir yöntem kullanılarak (püskürtme, laser ablasyonu, elektron demeti) buharlaştırılması ve alttaş üzerine biriktirilmesidir. CVD yönteminde ise

1. GİRİŞ

Yarı iletken teknolojisinin 19. yüzyılın ikinci yarısından itibaren hızlıca gelişiminin en büyük göstergesinden biri üretilen çip miktarının ortalama her iki senede bir iki katına çıkmasıdır. Elbette ki bu gelişim, litografi tekniklerde kullanılan yöntemlerin her birinin gelişimi ile doğrudan orantılıdır. Üretimin genel anlamda gelişmesi için dađlama/aşındırma (*etching*) sürecinde kullanılan vakum ve plazma teknolojileri gibi alanlarda yeniliklerin ve kullanıcı kolaylıklarının artırılmasına yönelik çalışmaların kaçınılmaz olduđu anlaşılmaktadır.

Bu bölümde, ince filmlerde kullanılan dađlama/aşındırma mekanizma ve yöntemleri ile birlikte dađlama kimyasından kısaca bahsedilmiştir. Dađlama yöntemleri ve dađlamaya etki eden unsurlar, dađlama cihazları, plazma sistemleri, seçicilik için kullanılan dielektrik malzemeler, silisitler ve Al gibi malzemelerin nasıl dađlanacağı ile ilgili açıklamalara da yer verilmiştir.

2. DAĐLAMA/AŞINDIRMA

Dađlama/aşındırma, kimyasal veya fiziksel yöntemlerle önceden belirlenen malzeme yüzeyini belli amaçlar için temizlemek, damgalamak veya fotolitografi işleminin sonu istenmeyen malzemenin yüzeyden kaldırılması için kullanılan yöntemlerin genel adıdır. Her iki terim de literatürümüzde kullanılmakta olup bu bölüm içerisinde genel olarak '*etching*' için dađlama terimi kullanılacaktır.

Nanoüretim tekniklerinde sıkça kullanılmasına ek olarak, dađlama metalurjide yüzey parlatma işleminin sonu kuvvetli asit çözeltisi kullanılarak malzeme yüzey mikro yapılarının açığa çıkarılıp, gözlenebilmesine de yardımcı olmaktadır. Dađlama, kuru ve yaş dađlama olarak ikiye ayrılmaktadır. Dađlayıcı (*etchant*) malzeme olarak genelde sıvı kimyasalların kullanılmasının yanı sıra plazma hâline geçen seçilmiş iyonize gazlar gibi kinetik çarpışmayı artırıcı elementlerin de kullanımı yaygındır. Dađlama çeşit-

1. GENEL BİLGİ ve TARİHÇE

Bağlama işlemi herhangi bir deformasyon ve sızdırma olmadan en az iki adet aynı ya da farklı diskin, levhanın, kablunun ya da çipin geçici veya kalıcı olarak birleştirilmesi işlemidir. Mikroteknolojide levha (*wafer*, pul), tel (*wire*) ve çip (*chip*) gibi farklı yapıda malzemeler farklı bağlama teknikleri ile bir araya getirilmektedir. Bunlardan tel ve çip bağlama daha çok entegre devrelerin paketlenerek dış ortam ve korozyondan korunması ile baskı devre kartlarının kurulumunda sıklıkla kullanılmaktadır. Bu bölüm kapsamında pratik uygulamalarda çoğunlukla kullanılan levha bağlama teknikleri ele alınacak ve bu konu üzerinde ayrıntılı değerlendirmeler yapılacaktır.

Levha bağlama ile son derece karmaşık yapılar oluşturulabilmektedir (1). Ayrıca farklı cihaz ya da levha parçalarının damgalanması ve kapsüllenmesi yapılabilmektedir. Bunun yanında bu teknikle bir malzemedeki tabakaların farklı bir malzemeye aktarılması sağlanmakta ya da bir cihazın üretiminde destek malzemesi olarak levhalar doğrudan kullanılabilir. Günümüzde belirtilen yöntemler kullanılarak mikroeletromekanik sistemler (*microelectromechanic systems*, MEMS), nanoeletromekanik sistemler (*nanoelectromechanic systems*, NEMS), ışık saçan diyot sistemler (*light-emitting diode*, LED), bütüncü metal oksit yarı iletken sistemler (*complementary metal oxide semiconductor*, CMOS), radyofrekans (*radiofrequency*, RF) cihazları, mikroakışkan sistemler gibi çok farklı sistemler üretilmekte ve farklı alanlarda kullanılmaktadır. Bağlama işlemi termal, kimyasal veya yapışkan (*adhesive*) olabilir. Ayrıca seçilen bağlama tekniğine göre yüksek sıcaklık ve yüksek elektrik alanı gerekebilir. Bundan dolayı bağlama işlemi sırasındaki koşulların düzgün seçilmemesi cihazdaki elektronik parçalara zarar verebilir. Kullanılan malzemeye, malzemenin kalitesine ya da bağlama tekniğine bağlı olarak çeşitli bağlama dayanımları elde edilebilir.

Levha bağlama teknikleri, farklı kaynaklarda farklı şekillerde sınıflandırılmaktadır. Burada birçok kaynaktan verildiği üzere bu teknik iki temel sınıfa ayrılmıştır: Direkt

4. GENEL DEĞERLENDİRME

Bu kısımda anlatılan temel levha bağlama teknikleri entegre devrelerin paketlenerek dış ortam ve korozyondan korunması ile baskı devre kartlarının kurulumunda sıklıkla kullanılmaktadır. Sunduğu fırsatlar ile bağlama teknikleri 3D entegre devrelerin üretilmesinde önemli katkılar sunacaktır. Fakat burada temel sorun 3D entegre devrelerini oluşturmak için gereken altyapı harcamalarının oldukça yüksek olmasıdır. Gerekli altyapı oluşturulduktan sonra bu konuda önemli ilerlemelerin olacağı görülmektedir. 3D entegre devreler, ileri sistemlerin kısa sürelerde üretiminin sağlanması, klasik yaklaşımlarla üretimi mümkün olmayan sistemlerin eldesi ve farklı kullanım alanlarının ortaya çıkarılması gibi artı değerler sunmaktadır. Ayrıca farklı 3D sistemlere ek olarak, MEMS ve mikroakışkan sistemler bu kapsamda üretilebilecek başlıca yapılarıdır. Bu durum boyut küçültme ile bağlama tekniklerinin mikro ve nanoteknolojide farklı kullanım alanlarında önünü açmaktadır. Bu kapsamda sistemlerin geliştirilmesine yönelik olarak farklı şirketler tarafından önemli araştırma ve geliştirme çalışmaları yapılmaktadır. Bu çalışmalar sonucunda önümüzdeki yıllarda bu yapıdaki ürünlerin kullanıcıların arzına sunulacağı düşünülmektedir.

ANNE SAĞLIĞI VE EBENİN ROLÜ

Selma Şen

Öğrenim hedefleri

- Anne sağlığını kavrayabilmek.
- Güvenli annelik tanımlamasını yapabilmek.
- Güvenli anneliğin önemini açıklayabilmek.
- Anne sağlığında ebenin rolünü kavrayabilmek.

Gebelik ve doğum, riskli durumlardır. Gebelik ve doğuma bağlı yaşamı tehdit eden komplikasyonlar genellikle tahmin edilememekte ve acil obstetrik bakımın verilememesi ya da bu bakımı verecek kurumlara geç ulaşma nedeniyle önlenememektedir. Maternal mortalite önlenebilir bir durum olmakla birlikte anneliği güvenli hâle getirmek için girişimler bilinip kaynaklar sağlanmalıdır.

İnsan gelişmişliğini gösteren ölçütler bakımından gelişmiş olan ülkeler arasındaki en büyük farklılık, gebeliğe bağlı nedenlerle oluşan ölümlerdir. Gelişmekte olan bir ülkede yaşayan gebe, gelişmiş bir ülkede yaşayan gebeye göre 200 defa daha fazla ölüm riskiyle karşı karşıyadır. Daha düzenli ve daha güvenilir bilimsel yöntemlerle toplanan bilgiler nedeniyle 90'lı yıllarda, geçmiş yıllara göre gebelik, doğum ve güvensiz düşük gibi nedenlerle daha fazla kadının ölmüş olduğu görülmektedir. Bu olgu; sadece kadınların hayatlarını ilgilendirmekle kalmaz, çocukların hayatta kalma şansını, ailelerin ve toplumların sağlıklı olmalarını da etkiler.

Toplumların iyiliği, anne ve çocukların sağlığının iyi olmasıyla doğrudan ilişkilidir. Her yıl milyonlarca anne ve bebek, gebelik, doğum ve doğum sonrası erken dönemde yetersiz sağlık bakımı, beslenme yetersizliği ve hastalıklardan etkilenmekte ve ölmektedir.

Dünya Sağlık Örgütü, anne ölümünü gebeliğin başlangıcından doğumdan sonraki 42. güne kadar geçen süre içinde gebelik süresi ve durumuna bakılmaksızın doğrudan gebelikle ilgili veya gebeliğin şiddetlendirdiği dolaylı nedenler sonucu meydana gelen ölümler

- ✓ Gebe ve lohusalara bireysel ya da gruplar hâlinde eğitim verilmesi,
- ✓ Yüksek riskli gebeliklerin izlenmesi,
- ✓ Doğum eyleminin yönetimi,
- ✓ Doğum sonrası bakım verilmesi,
- ✓ Kadın sağlığını etkileyecek olası risk ve komplikasyonların erken tanısı,
- ✓ Temel ve acil obstetrik bakım hizmetlerinin verilmesi,
- ✓ Yenidoğanın bakımı ve emzirmenin desteklenmesi,
- ✓ Yenidoğan ve çocuğa yönelik bağışıklama ve sağlık hizmetlerinin yürütülmesinde anahtar rol oynamaktadır.

Sonuç olarak ebelerin; güvenli annelik hizmetlerinin yürütülmesi, anne ve çocuk sağlığının en üst seviyeye çıkarılmasında önemli sağlık çalışanları oldukları unutulmamalıdır.

GEBELİKTE SIK KULLANILAN TERİMLER

Benay Oğuz

Öğrenim hedefleri

- Gebelik döneminde kullanılan terimleri kavrayabilmek.
- Gebelik döneminde kullanılan terimleri açıklayabilmek.
- Gebelik dönemlerinin standart tanımlamasını yapabilmek.

Gebelik, kadın yaşamının en önemli dönemlerinden biri olup biyolojik ve psikososyal değişimlerin yaşandığı fizyolojik bir olaydır. Normal şartlar altında gebelik döneminin süresi 280 gün/10 lunar ay/40 hafta olarak tanımlanmaktadır. Bu dönemde kullanılan terimler uluslararası standartlar tarafından belirlenmiştir. Sağlık profesyonelleri arasında ortak bir dil oluşturmak için kullanılması önerilmektedir.

Abortus: Fetüsün uterus dışında yaşama yeteneğine sahip olmadan önce (<20. Gebelik haftası) herhangi bir nedenle gebeliğin sonlanması.

Adölesan Gebe: 10-19 yaş arası genç gebe kişi.

Amniyotik Kese: Bebeği ve amniyotik sıvıyı içeren uterus içindeki zar.

Amniyotik Sıvı: Gebelik boyunca amniyotik kese içinde bebeği çevreleyen ve koruyan sıvı.

Antenatal Dönem: Doğum öncesi dönem. Gebeliğin ilk gününden doğuma kadar geçen süre.

Doğum: 20. gebelik haftasından sonra gebelik ürününün anneden çıkması ya da çıkarılması.

Embriyo: İntrauterin yaşamın ilk 8. haftasındaki gebelik ürünü.

Fertilizasyon: Ovumun sperm hücresi tarafından döllenesi.

Arteria uterina: Hipogastrik arterden ayrılarak uterusun istmus yönünden girer, serviks, fundus, tubalar, overler ve vajinanın üst kısımlarına doğru dallanır.

Arteria overika: Abdominal aorttan ayrılır, overler ve tubalara doğru uzanır.

Arteria vajinalis: İnternal iliak arterden ayrılarak dallanır, vajinayı besler. Vestibüler bulbuslar, mesane ve retuma doğru dallara ayrılır.

Arteria perinealis: İnternal iliak arterden dallanır; labiaları, klitorisi, ön perineal bölgeyi besler (Resim 12).

Kadın Üreme Organlarının Sinirleri

Pelvik sinir uyarıları spinal kord ile beyne iletir. Bu impulslar, merkezî ve periferik sinir sistemlerinde çeşitli seviyelerde modüle edilir. Pelviste, vücudun diğer yerlerinde olduğu gibi somatik ve otonom (sempatik ve parasempatik sistem) sinir sistemleri yer alır. Somatik sinirler lomber ve sakral omurilikten çıkar, dış üretral ve anal sfinkter, alt karın duvarı ve organları dâhil olmak üzere pelvik taban kaslarına dallanır. Lomber ve sakral sempatik sinirler ise pelvis ve alt ekstremitelere yayılır. Alt mezenterik pleksus, üst hipogastrik pleksus, hipogastrik sinirler ve alt hipogastrik pleksus uterus ve vajinanın sempatik sinir sisteminin ana kaynaklarıdır. Parasempatik sinirler sakral medulla spinalisten çıkarak uterus, vajina, mesane ve rektuma ulaşır. Vagus siniri, diğer iç organların ve gonadların parasempatik beslenme kaynağıdır (Resim 10).

ERKEK ÜREME SİSTEMİNİN ANATOMİSİ

Esra Çevik

Öğrenim Hedefleri

- Erkek iç üreme organlarının yapısını ve özelliklerini bilmek.
- Erkek dış üreme organlarının yapısını ve özelliklerini bilmek.

Erkek üreme sistemi iç ve dış üreme organları olarak iki grupta incelenmektedir. Erkek üreme organlarının temel işlevi, sperm üretimini sağlayarak transportunu sağlamak ve erkeğe özgü cinsiyet hormonlarını salgılamaktır.

Resim 1. Erkek üreme organları-sagittal kesit

Kaynak: <https://www.healthdirect.gov.au/male-reproductive-system>

landinlerin en büyük konsantrasyonu ejakülattadır. Ejakülataın kokusunu testislerde üretilen aminler (amonyak türevleri) vermektedir.

ÜREME SİSTEMLERİNİN FİZYOLOJİSİ

Ayten Dinç, Remziye Gültepe

Öğrenim Hedefleri

- Kadın ve erkek üreme sistemleri fizyolojisini farklarıyla kavrayabilmek.
- Hipotalamus-hipofiz ve over ilişkisini açıklayabilmek.
- Üreme sürecinde endometriyal ve ovarial değişiklikleri kavrayabilmek.
- Hipotalamus-hipofiz ve testis ilişkisini açıklayabilmek.
- Oogenezis ve spermatogenezis süreçlerini kavrayabilmek.

KADIN ÜREME SİSTEMİ FİZYOLOJİSİ

Kadın bedeninde üreme işlevinin devam edebilmesi için özellikle genital organlarda, ilk âdet görme olarak tanımlanan “menarş”tan itibaren başlayıp âdetten kesilme olarak tanımlanan “menopoz”a kadar süren ve her ay düzenli olarak tekrarlanan değişiklikler görülmektedir. Görülen bu değişiklikler, “siklus” olarak adlandırılmaktadır. Her bir siklus, menstruasyonun (âdet kanaması) görüldüğü ilk günden başlayarak sonraki menstruasyonun başlangıcına kadar geçen dönemi kapsamaktadır. Yaşanan her siklusta bir primer oosit gelişerek kadın üreme hücresi olan ovuma dönüşerek fertilize olabilecek düzeye erişmektedir. Ancak fertilizasyon olayı gerçekleşmez ise endometriyum, menstruasyon kanamasıyla dışarı atılır ve yeni bir siklus hazırlığı başlar.

Sağlıklı kadınlarda normal bir siklus, ortalama olarak 28 ± 7 gündür. Menstrual siklus bazı durumlarda fizyolojik ve psikolojik faktörler nedeniyle değişebilmektedir. Ancak bu sürenin 21 günden daha az veya 35 günden daha fazla olması patolojik bir duruma işaret edebilir. Her bir siklusta menstruasyon 3 ile 7 gün arasında devam eder. Menstrual siklus süresi her kadında ve kadının doğurganlık çağının değişik dönemlerinde farklılık gösterebilir. Kanamanın 2 günden daha az, 7 günden daha fazla devam etmesi yine sağlıklı olmayan bir duruma işaret etmektedir. Her siklusta kaybedilen kan miktarı 30-180 ml arasında

GEBELİĞİN FIZYOLOJİSİ

Nursen Bolsoy, Esra Bozhan Tayhan

Öğrenim Hedefleri

- Fertilizasyon, fertilizasyon sonrası süreçleri ve implantasyonu açıklayabilmek.
- Hücresel değişimleri açıklayabilmek.
- Embriyonik/fetal membranların oluşumunu anlatabilmek.
- Plasentanın oluşumu ve işlevini söyleyebilmek.

Gebeliğin Fizyolojisi

Gebelik, ovumun sperm ile döllenmesiyle (fertilizasyon) başlayan ve yaklaşık kırk hafta sonra doğumun başlamasıyla sona eren bir süreçtir. Oosit ve spermin birleşmesiyle oluşan zigot bölünerek hücre bölünmesi, göçü, büyümesi ve farklılaşması ile çok hücreli bir yapıya yani insana dönüşür.

Fertilizasyon

Fertilizasyon, ovum ve sperm hücrelerinin tubaların ampulla kısmında birleşme sürecidir.

Ovumun etrafını saran iki zar mevcuttur (Resim 1). Dışta korona radiata, iç kısımda ise zona pellucida mevcuttur. Korona radiata hücreleri, hyaluronik asitle birbirine tutunmuştur. Zona pellucida ise oosit tarafından salgılanan glikoproteinlerden oluşan oosit ve gelişimini sürdüren embriyonun çevresini saran koruyucu bir tabakadır. Ovülasyon döneminde oositin matürasyonu devam etmektedir. Bu süreçte LH miktarındaki ani artış ile I. mayoz tamamlanır ve II. mayoz başlar. II. mayoz metafaz dönemine kadar devam eder. Ovülasyonla atılan sekonder oosit (oosit II). Ovülasyon sırasında oositi çevreleyen granuloza hücreleri ve oosit, folikül duvarından ayrılırlar. Ovülasyon sırasında kandaki yüksek östrojen düzeyi, fallop tüplerinin peristaltizmini artırarak hareketsiz olan oositin fimbriyal tarafından tuba içine çekilmesini ve siliaların ritmik hareketiyle 2-3 dakika sonra fallop tüpünün ampulla kısmına ulaşmasını sağlar. Ayrıca yüksek östrojen düzeyi sayesinde ser-

estriol düzeyinin yaklaşık 12 mg/l olması gerekirken 4 mg/l altına düşmesi fetal sağlığın tehlikede olduğunu göstergesidir.

Progesteron: Progesteron sentezi için gerekli olan kolesterol ya da pregnenolone an-neden alınır. Gebeliğin 7. haftasına kadar progesteron korpus luteum tarafından salgılanır-ken 7-10. haftalarda plasenta ve korpus luteum birlikte işlev görürler. Gebeliğin 10. hafta-sından sonra ise plasenta tek kaynaktır. Progesteron başta uterusu miyometriyum olmak üzere anne vücudundaki düz kasların tonusunu azaltır. Bazal vücut ısısını yükseltir. Ayrıca memelerde östrojenle birlikte alveolar gelişimi sağlayarak memeleri laktasyona hazırlar. Diğer yandan solunum merkezini uyararak solunumu artırır, karbondioksit düzeyini azaltarak dokuların oksijenasyonunu sağlar.

EMBRYO/FETÜSÜN BÜYÜME VE GELİŞMESİ, FETÜSÜN FİZYOLOJİSİ

Nurcan Çelik Odabaşı

Öğrenim hedefleri

- Embriyonel/fetal dönemi tanımlayabilmek.
- Embriyo/fetüsün gelişim sürecini açıklayabilmek.
- Gebelik haftasına uygun embriyonel/fetal dönemi ayırt edebilmek.

Gebeliğin ortalama süresi, fertilizasyondan itibaren doğuma kadar yaklaşık 266-280 gün veya 38-40 gebelik haftasıdır. Fertilizasyon sonrası implantasyonun gerçekleşmesiyle birlikte intrauterin yaşam, embriyonel ve fetal dönem olarak ikiye ayrılır.

Embriyonel dönem: Fertilizasyonun ardından geçen iki haftalık evreye preembriyonik dönem denir. İmplantasyon sonrası sekiz haftalık evre ise embriyonik dönem olarak adlandırılır. Bu dönemde hücre sayısında hızlı şekilde artış meydana gelir. Hücreler farklı tipte dokuları oluşturur. Organ ve sistemlerin taslaklarının oluştuğu **bu evre, organogenezis dönemi olarak** bilinir.

Fetal dönem: Embriyonel evrenin bitiminden doğuma kadar geçen süredir. Bu dönemde organ ve sistemler gelişimini tamamlayarak doğum sonrası dış dünyaya uyumu sağlamak için gelişimlerini devam ettirirler. Gebeliğin 36. haftasından sonra yenidoğanlarda dış dünyaya uyum ile ilgili sorunlara daha az rastlanır.

Embriyonel Gelişim

Erkek ve dişi pronükleusunun bir araya gelmesiyle oluşan diploid kromozomlu tek bir hücreye zigot adı verilir. Zigot, insan vücudunda yer alan en büyük hücredir (0,15 mm). Fertilizasyondan 30 saat kadar sonra mitoz bölünme başlar. Zigot bölünerek hücre sayısı 2-4-8-16 gibi katlanarak çoğalır. Her bir hücreye blastomer adı verilir. Blastomer sayısı 16 ve üzeri olan hücre kümesine morulla denir. Fertilizasyonun 3. gününde 128-256 blastomerden oluşan blastokist adı verilen hücre kümesi uterin kaviteye ulaşır. Bu evrede hücre kümesinin ortasında yer alan embriyoyu geliştirecek iç hücreler embriyoblastlara, plasen-

28. gebelik haftası

Baş-popo uzunluğu, yaklaşık 25 cm ve ağırlık 1100 g'dır. Cilt ince, vernik kazeoza ile kaplı ve kırmızıdır. Göz kırpm hareketleri başlamıştır. Akciğerler gaz değişimi yapabilecek düzeye gelmiştir. Vücut sıcaklığı kontrol edilebilecek durumdadır. Doğum gerçekleştiği takdirde yenidoğan hayatta kalma şansına sahiptir.

32. gebelik haftası

Fetüsün baş-popo mesafesi yaklaşık 28 cm, ağırlığı 1800 g'dır. Bu dönemin sonunda cilt pembe, pürüzsüz ve yoğun verniks caseosa ile kaplıdır. 32 hafta ve üzeri doğan yenidoğanların uygun bakımla hayatta kalma oranı yüksektir.

36. gebelik haftası

Baş-popo mesafesi yaklaşık 32 cm, ağırlığı 2500 g'dır. Cilt altında yağ dokusu depolanır. Bu nedenle gövde, daha dolgunudur. Kas tonusu gelişir. Baş ve karın çevresi ölçümleri birbirine yakındır.

38 ve 40. gebelik haftaları

Son âdet tarihinin başlangıcından itibaren 40. haftayı dolduran fetüs, term olarak kabul edilir. Fetüs tam olarak gelişmiştir. Yaklaşık 50 cm uzunluğunda ve 3400 g ağırlığındadır. Gebeliğin son haftasında ağırlığına günlük 14 gram yağ eklenir. Göğüs çıkık, memeler her iki cinsten de hafif çıkıntı oluşturacak şekildedir. Miyadında erkek fetüste testisler genellikle skrotuma inmiştir (Resim 5).

GEBELİKTE FETÜSÜN SAĞLIĞINI DEĞERLENDİRME

*Hülya Türkmen***Öğrenim Hedefleri**

- Hangi gebelere tarama testi yapılabileceğini açıklayabilmek.
- Fetal sağlığın değerlendirilmesinde kullanılan invaziv ve non-invaziv testleri sayabilmek.
- Birinci trimesterda hangi testlerin yapılabileceğini ve nasıl yapılacağını söyleyebilmek.
- İkinci trimesterda hangi testlerin yapılabileceğini ve nasıl yapılacağını açıklayabilmek.
- Üçüncü trimesterda hangi testlerin yapılabileceğini ve nasıl yapılacağını anlatabilmek.

Giriş

Antenatal dönemde fetal iyilik durumunun belirlenmesi için gebelerin taranması gerekmektedir. Böylece fetüsün büyüme ve gelişmesi açısından risk değerlendirilmesi yapılmış ve gerekli müdahalelerin zamanında uygulanması sağlanmış olur. Yenidoğanların %3'ünde doğumsal defektler görülebilmektedir. Konjenital anomalili bebekler, aile ve toplumda çeşitli problemlerin yaşanmasına yol açabilmektedir. Son yıllardaki bilimsel ilerlemeler, intrauterin dönemdeyken fetüs hakkında ayrıntılı bilgi edinmeyi ve gerektiğinde de intrauterin tedaviyi sağlamaktadır. Fetal iyilik hâli invaziv ve non-invaziv yöntemler ile belirlenebilir (Tablo 1). Tarama testi olarak uygulanan non-invaziv testlerin riski yüksek olan ya da olmayan tüm gebelere yapılması önerilmektedir. Tarama testi sonucunun pozitif çıkması sadece taranan durum konusunda riskin yüksek olduğunu göstermektedir. Kesin sonuç alınabilmesi için tanı testlerinin uygulanması gerekir. Tanı testi amacıyla genellikle invaziv testler uygulanmaktadır. Ancak invaziv testlerin bazı sakıncaları bulunmaktadır. Bu nedenle invaziv testlerin sadece tarama testlerinde riski yüksek bulunan gebelere uygulanması önerilmektedir. Tarama testlerinin basit, çabuk ve duyarlılığı özgünlü-

tus, gebelik hipertansiyonu, membranların erken rüptürü, plasental yetmezlik, tekrarlayan sezaryen gibi pek çok durum, gebeliğin erken sonlandırılması için endikasyon yaratabilmektedir. Birçok olguda akciğerler olgunlaşmaya kadar fetüsün doğumu ertelenir. Surfaktan maddesi fetal akciğerlerde yeterli miktarda oluşmadan önce doğum gerçekleşirse yenidoğanın alveollerinde kollaps gelişmesi sonucunda respiratuvar distress sendromu ortaya çıkmaktadır. Fetal akciğer olgunluğu Lesitin/Sfingomyelin (L/S) oranı ve Fosfatil Gliserol (PG) ile değerlendirilebilmektedir. Lesitin ve sfingomyelin, surfaktanı oluşturmaktadır. Gebeliğin erken dönemlerinde amniyotik mayideki lesitin konsantrasyonu, sfingomyelinden azdır. Komplikasyonsuz gebelerde 30-32. gebelik haftasından önce L/S oranı 1,0'dan küçüktür. Gebeliğin 35-36. haftalarında L/S oranı 2/1 olmalıdır. Bu oran, fetal akciğer olgunluğunu göstermektedir. PG ise surfaktanda bulunan bir fosfolipittir. PG gebeliğin 36. haftasında ortaya çıkmakta ve terme kadar artmaktadır. Amniyotik mayide PG varsa fetal akciğerler olgun durumdadır.

Mekonyum tanılanması

Mekonyumlu amniyotik mayinin rengi, amniyosentez sırasında ya da membran rüptüründen sonra vajinal drenajda görülebilir. Normalde amniyotik mayi berraktır fakat mekonyum, mayinin rengini yeşilimsi yapar. İntrapartum dönemde mekonyum, fetal olgunlaşma ile görülebilen normal bir olaydır. Ancak hipoksi sonucunda oluşan peristaltizm ve sfinkter gevşemesiyle ve umbilikal kord kompresyonuna bağlı vagal uyarı sonucunda da görülebilmektedir.

Kordosentez (perkutan umbilikal kan örneği)

Kordosentez, intrauterin olarak abdomenden girilerek umbilikal korddan fetal kan örneği alınması işlemidir. Bu işlem gebeliğin 14. haftasından terme kadar uygulanabilmektedir. Fetal sağlığın belirlenmesi, fetal karyotip, fetal kan grubu, fetal metabolik hastalıklar, trombosit hastalıkları, fetal enfeksiyon ve isoimmünizasyonun tanı ve tedavisi bu işlem ile yapılabilmektedir. İşlem sırasında abdomen antiseptik bir solüsyonla silinmeli, USG eşliğinde kordun plasentaya tutunduğu yerin 1-2 cm yukarisından 25-guage spinal iğne ile umbilikal vene girilmeli ve 2-3 ml fetal kan içinde antikuagülan olan enjektöre aspire edilmelidir. Kordosentez işleminde fetal kayıp, kanama, kordon hematomları, tromboembolizm, prematür membran rüptürü, prematür eylem, koriyoamniyonitis, fetal bradikardi ve fetomaternal transfüzyon gibi komplikasyonlar gelişebilmektedir.

Öğrenim Hedefleri

- Gebelik döneminde üreme sisteminde görülen değişiklikleri açıklayabilmek.
- Gebelik döneminde memelerde görülen değişiklikleri açıklayabilmek.
- Gebelik döneminde kas/iskelet sisteminde görülen değişiklikleri açıklayabilmek.
- Gebelik döneminde deride görülen değişiklikleri açıklayabilmek.
- Gebelik döneminde solunum sisteminde görülen değişiklikleri açıklayabilmek.
- Gebelik döneminde üriner sistemde görülen değişiklikleri açıklayabilmek.
- Gebelik döneminde gastrointestinal sistemde görülen değişiklikleri açıklayabilmek.
- Gebelik döneminde endokrin sistemde görülen değişiklikleri açıklayabilmek.
- Gebelik döneminde kardiyovasküler sistemde görülen değişiklikleri açıklayabilmek.

Gebelik, ovum (kadın üreme hücresi) ve sperm (erkek üreme) hücrelerinin birleşmesi sonucu başlayan bir olay olup gebelik süresi son menstruasyonun ilk gününden itibaren 9 ay 10 gün veya 10 lunar ay veya 40 hafta veya 280 gündür. Gebelik sürecinde kadının vücudunda önemli anatomik, sistemik, metabolik, psikolojik ve biyokimyasal değişiklikler görülmektedir. Çoğu değişiklik, fertilizasyon sonrası kısa sürede başlar ve gebelik süresince devam eder. Herhangi bir sağlık problemi olmayan bir kadın, meydana gelen bu değişikliklere kolaylıkla adapte olabilir.

Gebelikte Üreme Sistemindeki Değişiklikler

Gebelik sürecinde üreme sisteminde meydana gelen değişiklikler çoğunlukla damarlaşmada ve hormon yapımındaki artıştan kaynaklanır. Gebelik esnasında en belirgin değişiklik üreme sisteminde görülmekte olup en fazla değişikliğe uğrayan üreme organı uterusur.

Gebelikte plazma fibronejen (faktör I) düzeyi yaklaşık %50 artar ve pıhtı oluşumu eğilimini artırır. Gebelikte pıhtılaşma zamanlarında gebe olmayan kadınlara göre önemli bir farklılık olmamasına rağmen faktör VII, VIII, IX ve X miktarında artış, faktör XII ve XIII miktarında azalma görülür. Ayrıca protrombin zamanı (PT) ve pariyel tromboplastin (aPPT) zamanı hafifçe azalır. Bu durum, doğum esnasında kanamayı önlemede etkin rol oynamamakta fakat bacaklarda tromboflebit ve tromboz oluşma riskini artırmaktadır.

10. Bölüm

GEBELİKTE METABOLİK DEĞİŞİKLİKLER

Esra Bayram, Pelin Palas Karaca

Öğrenim Hedefleri

- Gebelikte olan metabolik değişiklikleri kavrayabilmek.
- Gebelikte olan kilo değişimlerini açıklayabilmek.
- Gebelikte karbonhidrat metabolizması değişikliklerini açıklayabilmek.
- Gebelikte insülin hassasiyetini açıklayabilmek.
- Gebelikte protein metabolizmasını açıklayabilmek.
- Gebeliğin fizyolojik anemisini açıklayabilmek.
- Gebelikte sıvı ve elektrolit dengesinin korunmasının önemini kavrayabilmek.
- Gebelikte lipit metabolizmasında olan değişiklikleri açıklayabilmek.

Gebelik, kadının yaşamında en özel deneyimlerden biridir ve her gebelik kendine özgü değişikliklerle karakterizedir. Bu dönemde görülen fiziksel, hormonal, psikolojik ve maternal metabolik değişiklikler ile fetüsün gelişimi desteklenmekte, fetüse gerekli besin maddeleri sağlanmakta, kadının vücudu doğum ve emzirme için hazırlanmaktadır.

Fetal büyümeyi sağlamak için maternal metabolik değişiklikler Şekil 1’de yer almaktadır.

Gebelikteki metabolik değişiklikler gebeliğin ilk yarısında ve ikinci yarısındaki fetal büyümeyi sürdürmek için yağ depolarında artış sağlamaya yöneliktir. Fetal büyüme, anne, plasenta, fetüs ve çevresel birçok etmenden etkilenmektedir.

Bu nedenle anne, bu dönemde büyüyen fetüsün gereksinimlerini karşılamak, daha sonrasında yenidoğanın gereksinimleri ve laktasyon dönemine hazırlanmak için majör fizyolojik ve metabolik adaptasyonlardan geçmektedir. Bu sürece adaptasyon, komplikasyonların önlenmesi açısından oldukça önemlidir.

- ✓ Artan aldosteron ve deoksikortikosteron,
- ✓ Atriyal natriüretik peptit.

Gebelikte kan sodyum konsantrasyonu ve ozmolalitesi daha düşüktür. Bu nedenle gebe kadınlarda sodyum 130 - 140 mmol/L arası normal olarak kabul edilirken gebe olmayan kadınlarda normal değer aralığı 135 - 145 olarak alınmaktadır. Gebelikte kalsiyum düzeyi ise gebelik boyunca azalma eğilimindedir.

11. Bölüm

GEBELİKTE PSİKOLOJİK DEĞİŞİKLİKLER

Hülya Demirci

Öğrenim Hedefleri

- Gebelikte görülen psikolojik değişiklikleri trimesterlere göre açıklayabilmek.
- Gebelikte görülen psikolojik değişikliklere uyumda ebeğin rolünü söyleyebilmek.

Gebelik, kadının yaşamındaki en kritik ve benzersiz olaylardan biri olmakla birlikte kadının dış görünüşünde, sosyal ilişkilerinde ve aile içi rollerinde değişikliklerle sonuçlanan bir durumdur. Bu nedenle stresli bir yaşam olayı veya uyum sağlanması gereken gelişimsel bir kriz olarak da nitelendirilebilir. Bu süreçte, fetüsün büyümesini desteklemek için belirli fizyolojik değişiklikler meydana gelirken gebeliğin başından sonuna kadar değişen psikolojik dalgalanmalar da görülür. Komplike olmayan gebeliklerde bile bu değişiklikler hem anne hem de bebek sağlığını etkileyebilir (gebelik kontrolleri, gebelik sonuçları, annenin doğum sonrası sağlığı ve bebeğin psikomotor gelişimi vb.).

Gebe, benlik kavramını etkileyen biyolojik kadınlığıyla karşı karşıyadır ve buna ek olarak gebeliğin seyri ve sonucuyla ilgili birtakım özel endişeler yaşar. Bu durum; kişilik özelliği, yaşam tarzı ve sosyal statüsü tarafından şartlandırıldığı için onu savunmasız hâle getirir. Bir kadının doğmamış çocuğuna karşı tutumu; gurur, heyecan, kabul veya reddetme olabilir. Normal gebeliklerin çoğunda kadınlar, heyecan ve umut gibi olumlu duyguların yanı sıra kaygı ve depresyon gibi olumsuz duygular da yaşayabilirler. Gebeliğin normal fiziksel değişiklikleri gebe için stres kaynağı olabilir. Bu değişiklikler mide bulantısı, yorgunluk, hazımsızlık veya sırt ağrılarını içerir. Değişen hormon seviyeleri uykusuzluk, ruh hâli değişimleri ve sinirlilik ile sonuçlanabilir. Ek olarak gebelik süresince kadın; doğum deneyimi, bebeğin sağlıklı olup olmayacağı ve kendi sağlığı hakkında tekrarlayan endişe ve korkulara sahiptir. Kadının gebeliğini kabullenme süreci, kendi inanç ve tutumları, geçmiş yaşam deneyimleri, çocuk sayısı, gebeliğin planlı olup olmadığı, gebelikten beklentileri, eş ve yakın çevrenin desteği, gebelikte yaşanan sorunlar, toplumsal bakış ve kadının statüsü, rol ve sorumluluk anlayışı gibi birçok faktörden etkilenebilir.

Bu süreçte ebeğin en önemli bağımsız rollerinden biri de duygusal destek sağlamaktır. Gebelik sürecinin gelişimsel bir kriz olmakla birlikte fiziksel, ruhsal ve sosyal uyumu gerektiren ve her kadının yaşayabileceği fizyolojik ve doğal bir olay olduğu anlatılmalıdır. Kadına gebelikte yaşanabilecek psikolojik tepkilerin neler olduğu açıklanmalı ve kadın, bu konuda duygularını ifade etmesi için cesaretlendirilmelidir. Yaşadığı duygusal dalgalanmaların sadece kendinde olmadığını bilmek gebeyi rahatlatacak ve sorunlarını çözmeye yöneltecektir.

Gebe kadın; kendini psikolojik olarak savunmasız hisseder ve daha fazla sosyal desteğe, özellikle eş desteğine ihtiyaç duyar. Eşinden ve ailesinden sürekli bakım ve destek alan gebeler stres, depresyon ve anksiyete bozuklukları gibi sorunlardan daha az etkilenir. Gebelikte sosyal destek, kadının gebeliğe uyumunu sağlar, çevresiyle olan ilişkilerini ve gebelikte yaşanan sorunlarla baş etmesini kolaylaştırır. Antenatal izlemlerde gebelerin sosyal destek sistemleri değerlendirilmeli, sosyal destek sistemlerini harekete geçirme konusunda gebeye yardımcı olunmalıdır. Gebenin eşi ve aile üyelerine, kadının yaşayabileceği duygusal dalgalanmalar ve desteğe ihtiyaç duyabileceği alanlar konusunda bilgi verilmeli, bu süreçte desteğin önemi vurgulanmalıdır. Yeterli sosyal destek alan kadınlar, gebeliklerinin sağlıklı geçmesi için çevresinden yardım talep edebilmekte ve yararlı sağlık davranışlarını arttırarak oluşabilecek gebelik komplikasyonlarını azaltabilmektedir.

Gebeler eşleriyle birlikte doğuma hazırlık sınıflarına katılmaları konusunda desteklenmelidir. Doğuma hazırlık eğitimleri kadınların gebeliğe uyum sürecini kolaylaştıracak, kendisinin ve bebeğinin bakımını sağlıklı olarak sürdürmesine, sosyal destek sistemlerinin artırılmasına katkıda bulunacaktır. Ayrıca doğuma hazırlık sınıflarının yaygınlaştırılması, gebe ve eşlerinin bu sınıflara katılmalarının desteklenmesi ile daha olumlu bir gebelik ve doğum deneyimi yaşamaları sağlanabilir.

Sonuç olarak gebelikte yaşanan psikolojik değişikliklere ilişkin farkındalık sağlanmış, doğuma ilişkin gerçekçi planlar yapılmış ve ebeveynler bebeğin yaşamlarını değiştireceği gerçeğini kabullenmişse başarılı bir ebelik yaklaşımından söz edilebilir. Sağlık profesyonelleri için gebelikte ortaya çıkan fiziksel ve psikolojik sorunlar bazen tedavi edilmesi gerekmeyen küçük durumlar olarak algılanabilir. Ancak önemli olan bu sorunların gebe ve ailesi tarafından nasıl algılandığıdır. Gebelik sürecinde sağlık ve hastalık çizgisinin birbirine yaklaştığı, sağlıklı olmak ile hasta olmak arasındaki farkı daraldığı da unutulmamalıdır.

Öğrenim Hedefleri

- Gebelik tanı yöntemlerini açıklayabilmek.
- Bireysel, olası ve kesin gebelik belirtilerini sayabilmek.
- Gebelik yaşını belirlemek için sonografik olan yöntemleri açıklayabilmek.
- Gebelik yaşını belirlemek için sonografik olmayan yöntemleri açıklayabilmek.
- Gebelik tanılanması ve gestasyonel yaş tayininin ebelik mesleğine katkısını açıklayabilmek.

Gebeliğin tanılanması bazı kadınlar için hoş bazıları içinse kötü bir durum olarak algılanabilmekte ve çoğu kadın gebeliğini öğrenmesiyle birlikte ambivalan duygular yaşayabilmektedir. Kadınların gebelik döneminde tecrübe edindikleri değişikliklerin birçoğu gebeliğin tanılanmasında kullanılmaktadır.

Gebelik tanısındaki belirtiler üç grup altında incelenmektedir. Bunlar, kadının kendi hissettiği bireysel/subjektif belirtiler, olası/objektif belirtiler ve sağlık profesyoneli tarafından saptanan bulgulara dayanan kesin gebelik belirtileridir (Şekil 1). Gebelik tanısının yanında gestasyonel yaş tayini de antenatal izlemler için son derece önemlidir. Gebelik yaşının doğru tayin edilmesi, gebelik süresince fetüs ve annenin çeşitli tarama testlerinin ve değerlendirmelerinin zamanlaması için önemli bir veri kaynağıdır. Gebelik yaşı; son adet tarihine (SAT) göre hesaplama, sonografik değerlendirme ve doğum eyleminden sonra yenidoğanın değerlendirilmesi yöntemleri ile belirlenebilmektedir.

lunun karşı koluna doğru çekilerek değerlendirilmesi ve kol germe testleridir. Skor sonucunda elde edilen nörolojik ve fiziksel bulguların toplam puanları gestasyonel yaşa denk gelmektedir. Ballard Skorum sistemi hem sağlıklı hem hasta yenidoğanlarda kolaylıkla uygulanabilmektedir. Bu skorum sisteminin çok düşük doğum ağırlıklı yenidoğanların gestasyonel yaşının hesaplanmasının yetersiz kalmasından dolayı Ballard ve arkadaşları skorum sistemlerini güncelleştirmişlerdir. Bu skorum sistemi Yeni Ballard Skorum sistemi olarak adlandırılmaktadır. Yeni Ballard Skorum sistemi ülkemizin en uç bölgelerinde görev yapan ebeler tarafından kolaylıkla uygulanabilmektedir. Mutlu ve arkadaşları (2010) çalışmalarında yardımcı üreme teknolojisi ile doğan bebeklerin gestasyonel yaşını Yeni Ballard Skorum sistemi ile belirlemişlerdir. Yeni Ballard Skorum sistemi ile hesaplanan gestasyonel yaş ile gerçekte olan gestasyonel yaşın birbiriyle aynı sonucu verdiği saptanmıştır.

Gebelik, kadın ve ailesi için özel bir dönemdir. Bu dönemde gebeliğin tanınması ve gestasyonel yaşın doğru tahmin edilmesi gebeliklerin yönetiminde ve fetal gelişimin değerlendirilmesinde büyük önem taşımaktadır. Bu noktada ebe ve diğer sağlık profesyonelleri anahtar bir role sahiptir.

13. Bölüm

GEBENİN SAĞLIĞINI DEĞERLENDİRME

Ayla Kanbur, Merve Çakıl

Öğrenim Hedefleri

- Gebenin sağlığını değerlendirebilmek.
- Gebeden ayrıntılı öykü alabilmek.
- Gebenin fizik muayenesini yapabilmek.
- Trimesterlere uygun gebe değerlendirmesi yapabilmek.

Sağlıklı bir gebelik dönemi için prekonsepsiyonel bakımın başlatılmış olmasıyla birlikte prenatal bakım ve psikososyal desteğin olması gereklidir. Gebelik döneminde ebe tarafından sunulan bakım hizmeti, temelde koruyucu bir sağlık hizmetidir. Gebelik ve doğum ile ilgili önlenabilir nedenlerden kaynaklı anne ölümleri nitelikli ebelik bakımının önemini göstermektedir.

Gebelik dönemi boyunca ebe nitelikli bir öykü alma ile birlikte, baştan ayağa bir fizik muayene ve gerekli testleri yaparak gebe hakkında tüm verileri toplar ve bu doğrultuda bakım, izlem ve danışmanlık hizmetlerini planlar. Gebelik dönemindeki ebelik bakımının amacı kadının sağlık durumunu yükseltmek, gebeliğe adaptasyonunu sağlamak, var olan ya da olabilecek sağlık problemlerini erken dönemde tespit etmek ve gerekli işlemleri yaparak kadın ve aileye destek olmaktır. Ebelik bakımı ile gebenin ve fetüsün sağlığını korumanın yanı sıra kadın ve ailesine kapsamlı danışmanlığın sağlanması, gebenin yanlış alışkanlıklarının düzeltilmesi, yeni bilgilerin kazandırılması, sağlığın geliştirilmesi ve ailenin bebeğin getireceği sorumluluklara hazırlanması amaçlanmaktadır.

Gebelik döneminde sunulan bakım hizmeti ile ebe hem kadını hem de ailesini gebelik, doğum ve doğum sonu döneme hazırlar.

Gebenin Sağlığını Değerlendirme

Gebenin değerlendirilmesi çok yönlü bir yaklaşımı gerektirir. Özellikle gebe ile ilk karşılaşmada kapsamlı bir değerlendirmeye ihtiyaç vardır. Genetik hastalık değerlendir-

Gebenin Sağlığını Değerlendirmede Ebenin Rolü

Ebeler, gebelik döneminde kadınları genetik hastalıklar, teratojen maddeler, aşılama, kronik hastalıklar ve beslenme gibi konularda bilgilendirmeli ve bu konuların önemini vurgulamalıdır. Gebelikte tehlike işaretleri, beslenme dâhil sağlık açısından dikkat edilmesi gereken durumlar, gebelikte bağışıklama, kötü alışkanlıklar (sigara, alkol, madde), ilaç kullanımı ve radyasyona maruz kalma hakkında danışmanlık verilmelidir. Ebelerin sağlığı iyileştirmek için olumlu yaşam tarzı davranışlarını teşvik etmedeki rolü anne, çocuk ve gelecek nesiller için giderek daha önemli hâle gelmektedir. Böylece geliştirilen ulusal sağlık programları ve ebelerin verdiği nitelikli bakım ve danışmanlık ile olası risklerin erken dönemde tespiti sağlanarak gebelik, doğum ve doğum sonu dönem maternal ve fetal sağlığın yükseltilmesine katkıda bulunulacaktır.

Öğrenim Hedefleri

- Sağlığın geliştirilmesi kavramını tanımlamak.
- Gebe sağlığının önemini açıklayabilmek.
- Gebelerin sağlığının geliştirilmesinin önemini açıklayabilmek.
- Gebelerin sağlığının geliştirilmesinde etkili olan sağlıklı yaşam biçimi davranışlarını açıklayabilmek.

Sağlığın geliştirilmesi

Tibbin ve teknolojinin gelişmesi, ticaretin artışı, küreselleşme ve seyahat kolaylığı gibi faktörler sağlığı pozitif yönde etkilerken, özellikle hareketsiz yaşam tarzı, sağlıksız beslenme alışkanlığı ve stresin artması gibi faktörler başta olmak üzere yaşam tarzında görülen olumsuz yöndeki değişiklikler sağlığı negatif yönde etkilemektedir. Ekonomik krizler, doğal afetlerin artması, çeşitli güvenlik tehditleri gibi faktörler diğer olumsuz etkileri ile sağlığı da olumsuz yönde etkilemektedir.

Geçmişte sağlık açısından en büyük risk olarak gösterilen bulaşıcı hastalıklar, günümüzde aşılanma ve diğer koruyucu önlemlerin varlığı nedeniyle eski etkisini gösteremese de göç gibi kitlesel nüfus hareketlerinin de etkisiyle yeniden yüksek risk faktörü olarak yaşantımızda yer almaya başlamıştır. Bunun yanında hastalık yükü de bulaşıcı olmayan kronik hastalıkların artması ve doğuştan beklenen yaşam süresinin uzamasıyla birlikte fazlasıyla artmıştır. Bu durum tedavi edici ve koruyucu sağlık hizmetleri sunanlar ve paydaşları içeren kapsamlı ve bütüncül yeni bir anlayışı doğurmuştur. Bu anlayış “Sağlığın Geliştirilmesi” olarak adlandırılmaktadır. Sağlığın geliştirilmesi insanların sağlık durumuna ulaşmaları için yaşam alanlarının olumlu hâle getirilmesi ve yaşam tarzlarını değiştirmeleri için yapılan bilimsel bir yaklaşımdır. Sağlığın geliştirilmesi toplumun sağlıklı olma, sağlıklı yaşam ve sağlığı destekleyen toplumsal aktiviteler konusunda daha duyarlı olmasını, kişilerin sağlıklı ve iyi olma hâlini sağlayan politikalar, sistemler, çevreyi geliştirme ve

minde anne adayına yeterli düzeyde destek vererek gebelik sürecini daha güçlü ve sağlıklı geçirmesi, stres düzeylerinin azaltılması konusunda destek verilmelidir. Bunu yapabilmek için sağlık profesyonelinin empatik anlayışa dayalı iletişim kurabilmesi önemlidir. Uluslararası Ebeler Konfederasyonu; bir ebeğin mesleki yetkinlik kriterleri arasında en temel kriterin empatik anlayışa dayalı iletişim olduğunu belirtmektedir. Ebeğin empatik iletişim becerisinin iyi düzeyde olması doğum eylemi ve doğum sonu döneme yönelik olumlu etki / katkıları sağlar. Etkili iletişim süreci, bütüncül bakım vermeyi, kadının duygularının, ihtiyaçlarının ve bakış açısının anlaşılmasını, empatik yaklaşım ile bireysel farklılıklarının (kültür, etnik köken, maneviyat vb.) değer kazanmasını, özel iletişim ihtiyaçları olan kadınlar ile uygun iletişim kurulmasını sağlar. Literatürde, kadınların ebelerden en büyük beklentilerinin empatik iletişim becerileri olduğu, bu becerinin hiçbir alet ya da girişimle yerinin doldurulamayacağı vurgulanmaktadır. Kadınların empatik iletişim becerileri yönündeki beklentilerin başlıcaları saygı, güler yüzlü olma, etkin dinleyici olma, samimi ve içten olma, yol gösterici ve cesaret verici olma, mahcup edici ve yargılayıcı kelimeleri kullanmama, kadını kendisi ve bebeğini ilgilendiren süreçlerde kararlara dâhil etme, geri bildirimde bulunma ve rahatlatmadır.

Doğal bir süreç olan gebelik döneminde maternal ve fetal iyilik durumu için sağlıklı yaşam davranışları kaçınılmazdır. Anne adayının bu süreçte sağlığını koruması ve gelişebilmesi için bu bölümde ele alınan önerilerin, yaşamın ve sağlık hizmetlerinin içinde yer alması, gebelik sürecinde olumsuz sağlık davranışlarının saptanabilmesi için farkındalık oluşturulması, saptanan olumsuz sağlık davranışlarının gebe ile birlikte değerlendirilmesi ve değiştirilmesi yönünde destek sağlanması gebelik sürecinin anne adayı ve bebek merkezinde aile ve toplum açısından sağlıklı, rahatlık ve mutluluk içinde tamamlanmasında önemli bir role sahiptir. Bireylere verilecek sağlık eğitimleri, sosyoekonomik durumlarının iyileştirilmesi, ekonomik maliyetlerin azaltılması ve sağlık hizmetlerine ulaşımın kolaylaştırılması gibi birçok girişim bireyin sağlıklı davranışlarını artıracaktır. Ülkemiz sağlık sisteminde ebeler ve hemşireler gebe kadınlara yararlı sağlık davranışları kazandırma konusunda kilit sağlık profesyonelleridir.

DOĞUM ÖNCESİ BAKIM

Seval Cambaz Ulaş, Seçil Köken Durgun

Öğrenim hedefleri

- Doğum öncesi bakımın tanımını yapabilmek.
- Doğum öncesi bakımın önemini kavrayabilmek.
- Doğum öncesi bakımın amacını öğrenebilmek.
- Yeterli doğum öncesi bakımı anlayabilmek.
- Doğum öncesi bakımın izlem basamaklarını öğrenebilmek.
- Doğum öncesi bakımında risk değerlendirme kriterlerini öğrenebilmek.

Doğum öncesi bakım (DÖB), gebeliğin, anne ve bebek yönünden en iyi biçimde yaşanması için gebenin izlenmesi, sorunların erken dönemde saptanması, tetanoz bağışıklamasının sağlanması, sağlık eğitimi verilmesi, gebenin doğuma ve lohusalık sürecine hazırlanması için eğitilmiş bir sağlık personeli tarafından verilen sağlık bakım hizmetidir.

Doğum öncesi bakımın önemi

Temelde koruyucu bir sağlık hizmeti olan DÖB, hem kadın sağlığı hem de çocuk sağlığı açısından gerekli müdahaleleri uygulamayı sağlayan önemli bir fırsattır. Mevcut kanıtlar DÖB almayan ya da yetersiz DÖB alan kadınların bebeklerinin erken doğma, düşük doğum ağırlıklı doğma ve yenidoğan yoğun bakım ünitesinde yatma oranlarının yüksek olduğu, aynı zamanda bu ülkelerde anne ölüm oranının ve perinatal ölüm hızının yüksek olduğu bildirilmektedir. Anne ölüm oranı ve perinatal ölüm hızı bir ülkedeki kadın sağlığı ve obstetrik hizmetlerin göstergesidir. Aynı zamanda bir kadının gebelik ve doğum sırasında aldığı yeterli sağlık hizmetlerinin kanıtıdır. Dünya Sağlık Örgütü'nün (DSÖ) 2019 yılında yayınladığı raporda; anne ölüm oranı yüz binde dünya ortalaması 211, Sahra altı Afrika'da 542, Güney Asya'da 157, gelişmiş ülkelerde ise 12'dir. Dünyadaki perinatal ölüm hızı ise gelişmiş ülkelerde binde 8 ile 10 arasında, gelişmekte olan ülkelerde binde 40 ve üzerinde olduğu bilinmektedir. Dünyadaki gebe kadınların %86'sı en az bir kez

DOĞUM ÖNCESİ EĞİTİM

Hanife Nurseven Şimşek

Öğrenim Hedefleri

- Doğum öncesi eğitim felsefelerinin çeşitlerini tanımlayabilmek.
- Doğum öncesi eğitimde kullanılan teknikleri tanımlayabilmek.
- Doğum öncesi eğitimleri kolaylaştırmak için ebelerin güvenini ve becerilerini geliştirmek.

Doğurganlık çağı, kadınlar, çocuklar ve aileler üzerinde derin ve uzun süreli etkileri olan deneyimleri kapsamaktadır. Bu nedenle sağlık profesyonelleri, eğitim ve hazırlığın başarılı gebelik ve doğum deneyimi için temel bileşenler olduğunu belirtmektedir. Doğum öncesi eğitim programlarının amaçları; sağlık davranışlarını etkilemek, kadınların doğum yapabileceğine dair güvenini arttırmak, kadınları ve eşlerini doğuma ve ebeveynliğe hazırlamak, sosyal destek ağlarını geliştirmek, ebeveynlerin kendilerine olan güvenini arttırmak ve perinatal morbidite ve mortaliteyi azaltmaktır. Bu nedenle doğum öncesi eğitim, ebeveynlerin ve ebeveyn adaylarının gebelik, doğum eylemi ve ebeveynlik sırasında kendi sosyal, duygusal, psikolojik ve fiziksel ihtiyaçlarını anlamalarına yardımcı olan bir dizi eğitici ve destekleyici yollardan oluşur.

1930'lu yılların sonlarına kadar doğumların çoğu evde gerçekleşmiştir. Doğum, kadınların yaşamında normal bir olay olarak görülmekteyken kadınların çoğunluğu gebelik ve doğumda anneleri, büyükanneleri veya kız kardeşleri tarafından desteklenmekteydi. Ancak doğumların hastane ortamına taşınmasıyla birlikte kadınların doğum ve doğuma katılanlarla ilişkisi değişmiş, sosyal desteği azalmış ve yalnızlaşmışlardır. Kadınlar savunmasız oldukları bu dönemde, hastane rutinleri ve prosedürlerine hazırlıksız oldukları için doğum süreci hakkında korku ve endişe yaşamaya başlamışlardır. Böylece geleneksel bilgi paylaşım yöntemlerinin azalmasıyla, doğum ve ebeveynliğe hazırlık eğitimleri ortaya çıkmıştır. Ancak bu programlar, katılımcıların ifade edilen ihtiyaçlarına değil, eğitimcilerin vermele-ri gerektiğine inandıkları mesaja dayanmaktadır.

Bireysel eğitimlerin uzunluğu, mekânın müsaitliğine göre belirlenebilir. Daha kısa eğitimler, ağır gebe kadınlar ve yorgun babalar için daha tolere edilebilir ancak eğitimlerin uzunluğu ne olursa olsun, yetişkin öğreniminin bazı temel özelliklerini tanımak önemlidir. Bir yetişkinin ortalama dikkat süresi yaklaşık 10 dakikadır. Beynin işlevini yerine getirebilmesi için suya, glikoza ve proteine ihtiyacı vardır. Eğitimlerin ortasında verilen bir mola, ebeveynlerin sosyalleşmesi, bir şeyler içmesi ve bir şeyler yemesi için zaman tanır ve böylece gruba döndüklerinde dikkatlerini ve öğrenme güçlerini artırır.

GEBELİKTE BESLENME

Hatice Gürgen Şimşek

Öğrenim Hedefleri

- Gebelikte beslenmenin anne ve çocuk sağlığına etkilerini tanımlayabilmek.
- Gebelikte artan kalori gereksinimini fark edebilmek.
- Gebelik öncesi vücut ağırlığına göre gebelikte önerilen kilo alım düzeylerini sayabilmek.
- Besin ögesi gruplarının işlevlerini ve gebelik üzerindeki etkilerini fark edebilmek.
- Gebelikte yeterli ve dengeli beslenmenin önemini fark edebilmek.
- Gebelikte yeterli ve dengeli beslenmek için öneriler sunabilmek.
- Gebelikte gıda güvenliğinin önemini ve dikkat edilmesi gereken durumları sayabilmek.

“Beslenme” kavramı, Beden Kitle İndeksi’ni (BKİ), vücut yapısını, tüketilen gıdayı ve bireyin tıbbi durumunu içerir ve vücut ihtiyaçlarının gerekli besinlerle karşılanıp karşılanmadığını yansıtır.

Gebelik dönemi hem anne sağlığı hem de fetüsün ileriki dönemde sağlığı için önemli bir belirleyicidir. Gebelik, maternal ve fetal ihtiyaçları karşılamak için yeterli enerji, protein, vitamin ve mineral alımını içeren sağlıklı bir diyet gerektirir. Sağlıklı ve dengeli beslenmek, gebelik sırasında yapılabilecek en iyi şeylerden biridir. Bu şekilde beslenmek, gebelik ilerledikçe vücudun ekstra taleplerini karşılamaya yardımcı olur. Buradaki amaç, fetüsün büyümesini desteklemek için yeterli besin almayı ve sağlıklı bir kiloyu korumayı dengelemektir. Gebelikte gereksinim duyulan enerji ve besin öğelerinin alınması, uygun vitamin/mineral desteğinin sağlanması, gebelikte risk oluşturabilecek gıdalardan kaçınılması, güvenilir gıdaların seçilmesi temel yaklaşımdır.

GEBELİKTE CİNSELLİK

Şule Gökyıldız Sürücü

Öğrenim Hedefleri

- Gebelikte cinsel işlev siklüsünde görülen değişiklikleri açıklayabilmek.
- Gebelikte cinsel aktivite değişikliklerinin nedenlerini açıklayabilmek.
- Gebelikte cinsel sağlık danışmanlığının önemini kavrayabilmek.

Biyolojik, sosyal, kişiler arası ve kültürel yönleri olan cinsellik; insan yaşamının önemli bir parçasıdır. Çok boyutlu ve komplekstir. Kültürel farklılıklar görülmekte birlikte aynı kültürde ve her bireyin yaşam dönemi içinde değişir.

Gebelik, genellikle bir cinsel ilişkinin sonucu oluşmasına karşın kadının cinsel yaşamı bundan sonra çoğunlukla unutulmaktadır. Gebelik, ebeveynlerin büyük uyumunu kapsayan fizyolojik bir olaydır. Her iki eş için birçok değişikliğin olduğu ve farklı hislerin yaşandığı bir dönemdir. Gebelik döneminde anatomik, fizyolojik ve ruhsal değişimlerin bir sonucu olarak cinsel yaşam etkilenmektedir.

Gebelikte Cinsel İşlev Siklüsü Değişiklikleri

Gebelikte cinsel yaşamda ortaya çıkan değişiklikler, cinsel işlev siklüsünün fazlarına göre aşağıda incelenmiştir.

İstek fazı

Gebeliğin farklı dönemlerinde cinsel istek azalır veya artar. Bireysel farklılıklar olmakla beraber genellikle gebelikte kadının cinsel isteği I. trimesterde azalır, II. trimesterde geri döner veya artar ve III. trimesterde tekrar azalır.

Uyarılma fazı

Gebelikte cinsel uyarı olmaksızın artmış vazokonjesyon mukoid akıntıyı artırır. Genel olarak cinsel uyarı sonucu vajinal lubrikasyon gebelikte daha çabuk ve daha çok miktarda olur.

Cinsel konforu artırma için gebenin kegel, pelvik sallama, çömelerek oturma egzersizleri yapması önerilir.

Cinselliğin sadece cinsel birleşme ile sınırlanamayacağı, özellikle vajinal ilişkinin yasaklandığı çiftlere öpüşme, karşılıklı erotik masaj ve mastürbasyon, oral seksle çiftlerin haz alabileceği cinsel aktiviteler önerilir.

Hekim tarafından cinsel ilişki kısıtlaması yapılan gebelere gebelikte yaşanan soruna göre danışmanlık ve bilgilendirme yapılmalıdır. Cinsel ilişkinin kısıtlanma nedenleri açıklanmalı ve gebenin/çiftin endişeleri giderilmelidir.

GEBELİKTE SIK RASTLANAN YAKINMALAR VE BELİRTİLERİ

Yonca Çiçek Okuyan

Öğrenim Hedefleri

- Gebelikte sık rastlanan yakınmaları kavrayabilmek.
- Gebelikte sık rastlanan erken dönem yakınmaları belirleyebilmek.
- Gebelikte sık rastlanan geç dönem yakınmaları belirleyebilmek.
- Gebelikte sık rastlanan yakınmaların nedenlerini sıralayabilmek.
- Gebelikte sık rastlanan yakınmalar için öneriler verebilmek.

Gebelik, normal bir fizyolojik olaydır. Gebelik sürecinde fizyolojik ve anatomik değişiklikler ortaya çıkmaktadır. Bu değişiklikler sonucunda oluşan, tedavi gerektirmeyen hafif rahatsızlıklar ve yakınmalar gebe kadın tarafından önemli olarak algılanabilmektedir. Gebeliğin birinci trimesterında olan yakınmalar erken dönem yakınmaları, ikinci ve üçüncü trimesterında olan yakınmalar ise geç dönem yakınmaları olarak adlandırılmaktadır. Bu yakınmaların fizyolojik, psikolojik, anatomik nedenlerinin bilinmesi; bunlara yönelik önerilerin anlaşılmasında, bakım planı yapılmasında kolaylık sağlamaktadır. Bu yakınmalara yönelik öneriler ülkemizde Sağlık Bakanlığının eğitim kitapçıklarında, Dünya Sağlık Örgütünün Antenatal Bakım Rehberi'nde bulunmaktadır. Günümüzde yapılan çalışmalarda bu önerilerin düzeyleri A,B,C,D,I olarak sınıflandırılmaktadır. Önerilere yönelik kanıtların kalitesi ise iyi, orta, zayıf olarak sınıflandırılmaktadır.

Birinci Trimesterde Sık Görülen Yakınmalar (Erken Dönem)

Bulantı / kusma (ilk üç ay)

Nedeni kesin olarak bilinmemektedir. Gebelikte HCG (Human Chorionic Gonadotropin) hormonu düzeyinin yükselmesinin, gastrointestinal sistemde peristaltik hareketlerin yavaşlamasının, annenin gebeliğe ve gebeliğin getireceği durumlarda gösterdiği psikolojik tepkinin, karbonhidrat metabolizmasındaki değişikliğin gebelikte bulantı ve kusmanın nedenlerinden olabileceği düşünülmektedir. Sabah erken saatlerde bulantı ve kusma daha

Öneriler

Kontraksiyon hissedildiğinde sol lateral pozisyonda dinlenmesi, gevşeme egzersizleri uygulaması önerilebilir.

Round ligament ağrısı

Büyüyen uterusun basısı, round ligamentlerde gerilmeye ve hipertofiyeye neden olur. Ani hareket durumunda alt abdomenin sağında ve solunda keskin ve ani ağrı hissedilmesine “round ligament ağrısı” adı verilir. Ektopik gebelikte de aynı bölgede ağrı hissedildiği için gebe ektopik gebelik açısından değerlendirilmelidir.

Öneriler

Round ligament ağrısının ani hareketlerde olabileceği, abdomenin altında inguinal alanda tutulma hissi yaşanabileceği, ağrı olmaması için oturur pozisyondan ya da yatar pozisyondan ayağa kalkma pozisyonuna hızlı geçmemesi, ani hareketlerden kaçınması, ağrı geliştiğinde abdomene sıcak uygulama yapması dizlerini abdomene çekerek dinlenmesi önerilir. Gebenin endişelenmemesi için üçüncü trimesterden önce gebeye bilgilendirme yapılabilir.

Terleme

İlk trimesterden sonra cilde kan akımının artması ve metabolizmanın artması terleme nedenlerindedir.

Öneriler

Gebeye bol su içmesi, bol ve pamuklu giysiler giymesi, sık sık banyo yapması, cildi nemli bırakmaması, iyi kurulanması, cilt bakım losyonları kullanması önerilebilir.

BÖLÜM 2 ÇOCUĞUN GELİŞİMİNDE MÜZİK ETKİNLİKLERİ	19
FİZİKSEL GELİŞİM	21
ÇOCUKLARDA MÜZİKSEL İLETİŞİM.....	22
ÇOCUKLARDA AİDİYET VE SINIRLAR	24
MÜZİKTE ARACILIK	26
BÖLÜM 3 ÖZEL GEREKSİNİMİ OLAN ÇOCUKLARDA MÜZİK ÖĞRETİMİ....	33
DAVRANIŞ SORUNU OLAN ÇOCUKLARDA MÜZİK ÖĞRETİMİ.....	33
DUYGUSAL ZORLUKLARI OLAN ÇOCUKLARDA MÜZİK ÖĞRETİMİ	36
DUYUSAL ZORLUKLARI OLAN ÇOCUKLARDA MÜZİK ÖĞRETİMİ	38
FİZİKSEL YETERSİZLİĞİ OLAN ÇOCUKLARDA MÜZİK ÖĞRETİMİ	40
DOWN SENDROMU OLAN ÇOCUKLARDA MÜZİK ÖĞRETİMİ	41
Down Sendromunda Müzikle İletişim ve	
Sosyal-Duyuşsal Gelişim Alanı.....	42
OTİZM SPEKTRUM BOZUKLUĞU (OSB) OLAN ÇOCUKLARDA	
MÜZİK ÖĞRETİMİ	44
OSB Olan Çocuklarda Müzikle İletişim	47
OSB Olan Çocuklarda Müzik ve Sözlü İletişim	48

	Ötizm Spektrumundaki Çocuklar için Şarkı Söyleme Deneyimleri	49
	Taklit ve Doğaçlamalar	53
	Basit Tekrarlı Heceleri Olan Şarkılar	54
	Şarkılar ve Dil Gelişimi.....	54
	MÜZİK ETKİNLİKLERİNİ PLANLARKEN DİKKAT EDİLECEK NOKTALAR	55
	Şarkı Söylemede Öğretmenin Model Olması	55
	Şarkı Dağarcığı Oluşturulurken Yararlanılabilecek Müziksel Öneriler	56
	Küçük Çocuklarda Ses Aralıkları	59
	Çocuklarda Şarkı Öğretimi (Basamaklı Öğretim).....	61
BÖLÜM 4	PROGRAMIN TANITIMI VE MÜZİK ETKİNLİKLERİ	63
	1. ETKİNLİK ADI: ÜÇ RENK (KIRMIZI- SARI- MAVİ)	69
	2. ETKİNLİK ADI: ÜÇGEN, KARE, DAİRE (GEOMETRİK ŞEKİLLER)	74
	3. ETKİNLİK ADI: ÜÇ KÜPLE KÖPRÜ YAPARIM	77
	4. ETKİNLİK ADI: ALTI PARÇALI YAPBOZ.....	79
	5. ETKİNLİK ADI: YAŞAM ALANLARI	81
	6. ETKİNLİK ADI: AY, GÜNEŞ, BULUT, YILDIZ	83
	7. ETKİNLİK ADI: SAYI SAYALIM	86
	8. ETKİNLİK ADI: UZUN-KISA	89
	9. ETKİNLİK ADI: AZ-ÇOK.....	91
	10. ETKİNLİK ADI: AİLEM VE HAYVANLARIMIZ.....	93
	11. ETKİNLİK ADI: BİRLİKTE ÖĞRENİRİZ.....	96
	12. ETKİNLİK ADI: BÜYÜK-KÜÇÜK (KARINCA LEYLEK)	99
	13. ETKİNLİK ADI: İNSAN ÇİZERİM	104
	14. ETKİNLİK ADI: KANADIM VAR BENİM	107
	15. ETKİNLİK ADI: MASALLAR VE GERÇEKLER (HAYALÎ KARAKTERLER)	110
	16. ETKİNLİK ADI: MERHABA.....	112
	17. ETKİNLİK ADI: MUTLULUK (DUYGULAR).....	115
	18. ETKİNLİK ADI: DÜN BUGÜN YARIN	119
	19. ETKİNLİK ADI: DENGE	123
	20. ETKİNLİK ADI: GÜNAYDIN ARKADAŞIM.....	126
	21. ETKİNLİK ADI: HEDEFLERİME ULAŞACAĞIM	128
	22. ETKİNLİK ADI: KAŞIK ÇATAL BIÇAK KULLANIRIM	132
	23. ETKİNLİK ADI: KURBAĞA BULMACASI	135
	24. ETKİNLİK ADI: KÜÇÜK ÇOCUĞUN HİKÂYESİ	138
	25. ETKİNLİK ADI: KÜÇÜK KARDEŞ.....	140
	26. ETKİNLİK ADI: NEFES ALIRIM	142
	27. ETKİNLİK ADI: OYNAYALIM BİRLİKTE	145

28. ETKİNLİK ADI: PAYLAŞIRIM HEPSİNİ.....	148
29. ETKİNLİK ADI: TEMİZ ÇOCUK	151
30. ETKİNLİK ADI: ZIPLA ZIPLA.....	152
EKLER	155
EK 1. MEYVE RİTİM KARTLARI	155
EK 2. HAYVAN RİTİM KARTLARI	156
EK 3. ÇİÇEK RİTİM KARTLARI	157
KAYNAKLAR	161
YAZARLARIN ÖZ GEÇMİŞLERİ	173

İÇİNDEKİLER

BİRİNCİ BÖLÜM

<i>OPTİMİZASYONA GİRİŞ</i>	1
1.1 GİRİŞ.....	1
1.2 TEMEL TANIMLAR.....	2
1.3 YÖNTEMLER	3
1.3.1 Türeve Tabanlı Yöntemler.....	4
1.3.2 Doğrudan Yöntemler	4
1.3.3 Yapay Zekâ Optimizasyon Yöntemleri	4
1.4 ALGORİTMALAR	5
1.4.1 Sayısal Optimizasyon Algoritmaları	5
1.4.2 Yapay Zekâ Temelli Optimizasyon Algoritmaları	5
1.5 MATEMATİKSEL TANIM	8
1.5.1 Maksimum ve Minimum Arasındaki İlişki	8
1.6 OPTİMİZASYONUN SINIFLANDIRILMASI	9
1.7 YAPAY ZEKÂ TEMELLİ OPTİMİZASYON YÖNTEMLERİNİN SINIFLANDIRILMASI	13
1.8 MATLAB'DA OPTİMİZASYON.....	15

İKİNCİ BÖLÜM

<i>OPTİMİZASYONDA TEMEL KAVRAMLAR</i>	17
2.1 GİRİŞ.....	17
2.2 MİNİMUMUN VARLIĞI.....	17
2.2.1 Weierstrass Teoremi	17
2.3 KUADRATİK FORMLAR	18
2.3.1 Hessian Matris ve Fonksiyon Arasındaki İlişki.....	19
2.4 KONVEKS VE KONKAV FONKSİYONLAR	21
2.4.1 Bölgesel Minimum ve Maksimum Noktalar	23
2.4.2 Konveks Fonksiyon	26
2.4.3 Konkav Fonksiyon.....	30
2.4.4 Konvekslik ve Konkavlığın Değerlendirilmesi	32

2.5	EŞYÜKSELTİ EĞRİLERİ İLE OPTİMİZASYON ARASINDAKİ İLİŞKİ.....	36
2.6	ÖZDEĞERLERLE OPTİMİZASYON ARASINDAKİ İLİŞKİ.....	39
2.7	KÖK İLE OPTİMİZASYON ARASINDAKİ İLİŞKİ.....	46
2.8	SAYISAL OPTİMİZASYONDA YAKINSAKLIK.....	50
2.9	KISITSIZ FONKSİYONLARDA OPTİMALLIK KOŞULLARI.....	51
2.9.1	Tek Değişkenli Optimizasyon	51
2.9.1.1	<i>N</i> . Türev Testi.....	54
2.9.2	Çok Değişkenli Optimizasyon.....	56
2.9.2.1	İki Değişkenli Fonksiyonlar için Gerek ve Yeter Koşullar	57
2.9.2.2	Üç ve Daha Fazla Değişken Olması Durumunda Gerek ve Yeter Koşullar	63

ÜÇÜNCÜ BÖLÜM

<i>MATLAB İLE OPTİMİZASYON</i>	67
3.1 GİRİŞ.....	67
3.2 HAZIR FONKSİYONLARLA OPTİMİZASYON	67
3.2.1 Tek Değişkenli Doğrusal Olmayan Kısıtsız Fonksiyonlar	69
3.2.2 Eşitlik veya Eşitsizlik Kısıtlı Doğrusal Olmayan Fonksiyonlar	73
3.2.3 Çok Değişkenli, Çok Fonksiyonlu Eşitlik veya Eşitsizlik Kısıtlı Sistemler.....	78
3.2.4 Çok Değişkenli Doğrusal Programlama Problemlerinin Çözümü	80
3.2.5 Kısıtsız Çok Değişkenli Problemlerinin Çözümü	81
3.2.6 Doğrusal Olmayan Tek Değişkenli Problemlerin İstenen Aralıkta Çözümü ...	82
3.2.7 Kuadratik Fonksiyonun Çözümü.....	83
3.3 GEREK ve YETER KOŞULLARLA OPTİMİZASYON	85

DÖRDÜNCÜ BÖLÜM

<i>KISITSIZ TEK DEĞİŞKENLİ FONKSİYONLARDA OPTİMİZASYON</i>	91
4.1 GİRİŞ.....	91
4.2 SAYISAL OPTİMİZASYON YÖNTEMLERİ	97
4.2.1 Grafik Yöntemle Optimizasyon.....	100
4.2.2 Bölgesel Eleme Yöntemleri.....	102
4.2.2.1 Eşit Aralık Arama Yöntemi.....	103
4.2.2.2 İkiye Bölme Yöntemi	111
4.2.2.3 Altın Oran Arama Yöntemi	117
4.2.2.4 Fibonacci Arama Yöntemi	128
4.2.2.5 Swann Yöntemi	135
4.2.3 Birleştirilmiş Yöntemlerle Optimizasyon.....	143
4.2.3.1 Dekker Yöntemi ile Optimizasyon.....	143
4.2.3.2 Brent Yöntemi ile Optimizasyon.....	151
4.2.4 Türeve Dayalı Yöntemlerle Optimizasyon.....	161
4.2.4.1 İkiye Bölme Yöntemi	161
4.2.4.2 Newton-Raphson Yöntemi	167

4.2.4.3	Kiriş Yöntemi	178
4.2.5	Model Tabanlı Optimizasyon Yöntemleri.....	185
4.2.5.1	Weierstress'in Polinom Yaklaşımı	186
4.2.5.2	Kuadratik Polinomla Optimizasyon	194
4.2.5.3	Kübik Polinomla Optimizasyon	209

BEŞİNCİ BÖLÜM

KISITSIZ ÇOK DEĞİŞKENLİ FONKSİYONLARDA OPTİMİZASYON.....223

5.1	GİRİŞ.....	223
5.2	SAYISAL OPTİMİZASYON YÖNTEMLERİ	224
5.2.1	Doğrudan Arama Yöntemleri	227
5.2.1.1	Rastgele Arama Yöntemi	236
5.2.1.2	Tek Değişkenli Yöntem.....	241
5.2.1.3	Powell'in Eşlenik Yönler Yöntemi	251
5.2.1.4	Nelder-Mead Yöntemi.....	258
5.2.2	İniş Yöntemleriyle Optimizasyon.....	265
5.2.2.1	En Dik İniş Yöntemi.....	266
5.2.2.2	Newton Yöntemi	276
5.2.2.3	Marquardt Yöntemi	280
5.2.2.4	Yarı-Newton Yöntemleri.....	285
5.2.2.5	Davidon–Fletcher–Powell Yöntemi	290
5.2.2.6	Broyden–Fletcher–Goldfarb–Shanno Yöntemi.....	295

ALTINCI BÖLÜM

DOĞRUSAL PROGRAMLAMA YÖNTEMLERİ.....301

6.1	GİRİŞ.....	301
6.1.1	Optimizasyon Probleminin Doğrusal Programlama Modeline Dönüşümü	302
6.1.2	Doğrusal Programlamanın Matematik Modeli	303
6.1.3	Doğrusal Programlama Modelinin Çözümünde Kullanılan Terimler	304
6.1.4	Doğrusal Programlama Modelinin Çözümü.....	305
6.2	KÖŞE NOKTASI YÖNTEMİ.....	305
6.2.1	Doğrusal Programlama Model Türleri	328
6.2.1.1	Primal Form.....	328
6.2.1.2	Kanonik Form.....	329
6.2.1.3	Standart Form	330
6.2.1.4	Dual Form.....	331
6.2.1.5	Dual Form.....	331
	Normal Maksimum/Minimum Problemlerin Dualinin Alınması	332
	Asimetrik DP Probleminin Dualinin Alınması.....	334
	Zayıf Duallik Özelliği.....	335
	Güçlü Duallik Özelliği.....	335
6.3	SİMPLKS YÖNTEMİ	339
6.3.1	Simpleks Tablosu ve Kullanılan Değişkenler	343

6.3.2	Aylaklığın Tamamlayıcı Özelliği	346
6.3.3	Simpleks Yönteminde Özel Durumlar	347
6.4	DUAL SİMPLEKS YÖNTEMİ	358
6.5	BÜYÜK M YÖNTEMİ	366
6.6	İKİ FAZLI YÖNTEM	374
6.7	DUYARLILIK ANALİZLERİ	379
6.7.1	Amaç Fonksiyonu Katsayılarındaki Değişiklikler	381
6.7.2	Sağ Taraf Sabitlerindeki Değişiklikler	388
6.7.3	Kısıt Fonksiyonlarındaki Değişiklikler	397
6.7.4	Amaç ve Kısıt Fonksiyonlarındaki Değişiklikler	399

YEDİNCİ BÖLÜM

<i>KISITLI FONKSİYONLARDA OPTİMİZASYON.....</i>		403
7.1	GİRİŞ	403
7.2	EŞİTLİK KISITLI FONKSİYONLARDA OPTİMİZASYON	403
7.2.1	Jacobi Yöntemi	404
7.2.2	Lagrange Çarpanları Yöntemi	413
7.2.2.1	Amaç Fonksiyonunun Kuadratik ve Tüm Kısıtların Doğrusal Olduğu Durumlarda Optimallik Şartları	414
7.2.2.2	Kısıtlı Optimizasyon için Yeter Koşul	416
7.2.2.3	Yeter Şart için Farklı Yöntem	417
7.3	EŞİTSİZLİK KISITLI FONKSİYONLARDA OPTİMİZASYON	430
7.3.1	Genişletilmiş Lagrange Yöntemi	431
7.4	KUHN-TUCKER KOŞULLARI	434
7.4.1	Maksimizasyon Problemleri	434
7.4.2	Minimizasyon Problemleri	436
7.4.2.1	Kuhn-Tucker Kuşullarının Yeterliliği	436

İÇİNDEKİLER

ÖN SÖZ	iii
İKİNCİ BASKIYA ÖN SÖZ	V
BÖLÜM 1 R'YE GİRİŞ	1
1.1. R Programını Hazırlama	1
1.2. Döngüler (for, while)	3
1.3. Koşul (If/ If-Else) Yapıları	5
1.4. Fonksiyon Oluşturma	7
1.5. R'de Bulunan Kullanışlı Fonksiyonlar	11
BÖLÜM 2 MATRİS CEBİRİ	15
2.1. Matris, Vektör ve Skaler	15
2.2. Bir Matrisin Transpozu (Devriği).....	22
2.3. İki Matrisin Eşitliği	23
2.4. Matris Türleri.....	23
2.5. Matrisin İz'i	25
2.6. Matrislerde Dört İşlem	26
2.6.1. Matrislerde toplama ve çıkarma	26
2.6.2. Matrislerin çarpılması.....	27
2.7. Matrisin Determinantı.....	30
2.8. Matrisin Tersi	32
2.9. Matrisin Rankı	39
2.10. Özdeğer ve Özvektör	41
2.11. Spektral Ayrışım	45
2.12. Pozitif Tanımlı Matris ve Cholesky Parçalanması	47

BÖLÜM 3	ÇOK DEĞİŞKENLİ VERİ VE İSTATİSTİKLER.....	51
3.1.	Çok Değişkenli Veri Yapısı ve Veri Matrisi	51
3.2.	Klasik Çok Değişkenli İstatistikler	52
3.3.	Dayanıklı (Robust) Tahmin Ediciler.....	65
BÖLÜM 4	ÇOK DEĞİŞKENLİ VERİ İÇİN GRAFİKLER.....	75
4.1.	Saçılım Grafiği.....	75
4.2.	Köpük Grafiği.....	80
4.3.	3 Boyutlu Grafikler	81
4.4.	Saçılım Grafikleri Matrisi	85
4.5.	Korelasyon Matrisleri için Grafikler	89
4.6.	Chernoff'un Yüz Grafiği ve Yıldız Grafikleri.....	95
4.7.	Çok Değişkenli Veriyi Haritalama	100
BÖLÜM 5	ÇOK DEĞİŞKENLİ DAĞILIMLAR.....	107
5.1.	Çok Değişkenli Normal Dağılım	107
5.1.1.	Normal Dağılım (Tek değişkenli).....	107
5.1.2.	Çok Değişkenli Normal Dağılımın Özellikleri.....	110
5.1.3.	Çok Değişkenli Normal Dağılımda Parametre Tahmini	114
5.1.4.	Çok Değişkenli Normal Dağılıma Uyum	118
5.1.5.	Çok Değişkenli Normal Dağılım için R Uygulamaları.....	119
5.2.	Çok Değişkenli t ve Cauchy Dağılımları.....	123
5.3.	Wishart Dağılımı	126
5.4.	X ve S İstatistiklerinin Dağılımı	128
5.5.	Kovaryans Matrislerinin Rastgele Üretilmesi	129
BÖLÜM 6	ORTALAMA VEKTÖRLERİ İÇİN HİPOTEZ TESTLERİ	131
6.1.	Tek Grup Ortalaması İçin Hipotez Testleri.....	136
6.1.1.	Tek değişkenli durumda tek grup ortalaması için hipotez testi.....	137
6.1.2.	Çok değişkenli durumda tek grup ortalaması için hipotez testi.....	142
6.2.	İki Bağımsız Grup Ortalaması İçin Hipotez Testleri.....	150
6.2.1.	Tek değişkenli durumda iki bağımsız grup ortalaması için hipotez testi	151
6.2.2.	Çok değişkenli durumda iki bağımsız grup ortalaması için hipotez testi	158

6.3. İkidenden Fazla Bağımsız Grup Ortalaması İçin Hipotez Testleri.....	171
6.3.1. Tek Yönlü Varyans Analizi (One Way ANOVA).....	172
6.3.2. Tek Yönlü Çok Değişkenli Varyans Analizi (One Way MANOVA)	177

BÖLÜM 7 KOVARYANS MATRİSLERİ İÇİN HİPOTEZ TESTLERİ205

7.1. Tek Grup Kovaryans Matrisi İçin Hipotez Testi.....	205
7.2. İki ve Daha Fazla Grup Kovaryans Matrisi İçin Hipotez Testleri..	208
7.3. Alt Vektörlerin Bağımsızlığı İçin Hipotez Testi	212

BÖLÜM 8 REGRESYON ANALİZİ.....217

8.1. Doğrusal Regresyon Analizi	220
8.1.1. Basit Doğrusal Regresyon Analizi	220
8.1.2. Çoklu Regresyon Analizi	234
8.1.3. Kategorik-Nitel Açıklayıcı Değişken Durumu: Kukla Değişken	240
8.1.4. Doğrusal Regresyonda Model Seçimi	244
8.2. Polinomiyal Regresyon Analizi.....	251
8.3. Robust Regresyon Analizi	255
8.3.1. En Küçük Mutlak Sapmalar Yöntemi (Lad, L1).....	257
8.3.2. En Küçük Medyan Kareler Yöntemi (LMS).....	258
8.3.3. Budanmış En Küçük Kareler Tekniği (LTS)	259
8.3.4. M- Tahmin Edicileri	260
8.4. Düzenlenmiş (Regularization) Regresyon Analizi	263
8.4.1. Ridge Regresyon.....	264
8.4.2. Lasso Regresyon	270
8.4.3. Elastic-Net	273
8.5. Lojistik Regresyon Analizi	276
8.6. Çok Değişkenli Regresyon Analizi	289

BÖLÜM 9 TEMEL BİLEŞENLER ANALİZİ.....297

9.1. Temel Bileşenler Analizinin Gerekliliği	297
9.2. Klasik Temel Bileşenler Analizi	298
9.2.1. Temel bileşenlerin elde edilmesi.....	298
9.2.2. Önemli temel bileşen sayısının belirlenmesi.....	302
9.3. Dayanıklı (Robust) Temel bileşenler Analizi Algoritması: ROBPCA	303
9.4. Temel Bileşenler Analizi için R Uygulamaları.....	303

BÖLÜM 10 FAKTÖR ANALİZİ	329
10.1. Dik (Ortogonal) Faktör Analizi Modeli	330
10.2. Faktör Çıkarım Yöntemleri	331
10.2.1. Temel Bileşenler Faktör Analizi	331
10.2.2. En Çok Olabilirlik Faktör Analizi	333
10.3. Faktör Döndürme	333
10.4. Faktör Analizi İçin R Uygulamaları	334
BÖLÜM 11 AYIRMA (DISKRİMİNANT) ANALİZİ	355
11.1. Doğrusal (Linear) Diskriminant Analizi	355
11.2. Karesel (Quadratic) Diskriminant Analizi	364
BÖLÜM 12 KÜMELEME ANALİZİ	369
12.1. Uzaklık Ölçüleri	369
12.2. Aşamalı (Hiyerarşik) Kümeleme Algoritmaları	378
12.2.1. Algoritmalar	379
12.2.2. Aşamalı Kümeleme Algoritmaları için R Uygulamaları	381
12.3. Aşamalı Olmayan (Bölünmeli) Kümeleme Algoritmaları	391
12.3.1. k-Ortalamalar Yöntemi	391
12.3.2. Medoid Ayırma Kümeleme Yöntemi (PAM)	395
12.4. Modele Dayalı Kümeleme-EM Kümeleme Algoritması	396
12.5. Robust Kümeleme Algoritmaları	402
12.5.1. Budanmış k-Ortalamalar Yöntemi	402
12.5.2. TCLUST Algoritması	407
12.6. Bulanık (Fuzzy) Kümeleme Analizi	412
12.7. Yoğunluğa Dayalı Kümeleme (DBSCAN)	414
12.8. Küme Geçerlilik İndeksleri ve Küme Sayısının Belirlenmesi	416
12.8.1. Yaygın Kullanılan Küme Geçerlilik İndeksleri	417
12.8.2. Küme Sayısının Belirlenmesi	419
BÖLÜM 13 KANONİK KORELASYON ANALİZİ.....	429
13.1. Klasik Kanonik Korelasyon Analizi	430
13.2. Düzenlenmiş (Regularized) Kanonik Korelasyon Analizi	448
13.3. Dayanıklı (Robust) Kanonik Korelasyon Analizi	450
BÖLÜM 14 ÇOK BOYUTLU ÖLÇEKLEME	455
14.1. Metrik Çok Boyutlu Ölçekleme	455
14.2. Metrik Olmayan Çok Boyutlu Ölçekleme	468

BÖLÜM 15 UYUM (CORRESPONDENCE) ANALİZİ	475
15.1. Basit Uyum Analizi.....	475
15.2. Çoklu Uyum Analizi.....	487
BÖLÜM 16 BAZI DAĞILIMLARA AİT TABLOLAR VE R	
PROGRAMINDA ELDE EDİLMELERİ	493
16.1. Standart Normal Dağılım Tablosu	493
16.2. Student t Dağılım Tablosu	495
16.3. χ^2 Dağılımı Tablosu	497
16.4. F Dağılımı Tablosu	499
16.5. Roy'un θ İstatistiği için Kritik Değerler Tablosu	503
EK-1 PAKET İNDEKSİ	507
EK-2 KİTABI OKUMADAN ÖNCE	
BİLİNMESİ GEREKENLER.....	511
KAYNAKLAR.....	517

Bölüm 1

SAĞLIK BİLGİ SİSTEMLERİ VE AMAÇLARI

Elif Dikmetaş Yardan

Hasan Fehmi Demirci

1. GİRİŞ

Dijital çağ evriminin geçmişi yıllar öncesine dayanmaktadır. Bu evrim, her geçen gün gelişerek ilerlemeye devam etmektedir. Bu evrim, bilgisayarlar, ağlar, platformlar, bulutlar, algoritmalar ve makine öğrenimi gibi dijital teknolojinin, toplum özelinde ve iş dünyasının her alanında kullanılmasıyla karakterize edilen küresel ekosistemler ortaya çıkarmıştır (Ruotsalainen & Blobel, 2020). Dijital çağın getirmiş olduğu yeniliklerin en önemlilerinden biri, bilgi ve iletişim teknolojilerinin tüm sektörlerde hızlı şekilde benimsenmesidir.

Birleşmiş Milletlerin Sürdürülebilir Kalkınma Hedefleri'nde bilgi ve iletişim teknolojilerinin yaygın kullanımının, bilimsel ve teknolojik yeniliklerin yanında insanlığın ilerlemesini hızlandırmak, dijital uçurumu kapatmak ve bilgi toplumlarını geliştirmek için büyük potansiyele sahip olduğu belirtilir (United Nations, 2015). Günümüzde bilgi ve iletişim teknolojileri, sağlık sektöründe en hızlı büyüyen alanlardan biri olarak dikkat çekmektedir (WHO, 2005).

Son yıllarda, sağlık verilerinin üretim hızı katlanarak artmaya devam etmektedir (Friedman ve ark., 2017). Veri artış hızının artması, sağlık sektöründe elde edilen verilerin etkili şekilde kullanımını sağlamak ve bu verileri bilgiye dönüştürmek için yeni sistemlere ihtiyacı ortaya çıkarmıştır. Sağlık bilgi sistemleri, bu ihtiyacı gidermek için kullanılan, veri zenginliğinin daha iyi kullanılmasına, yeni teşhis ve tedavi yöntemlerinin uygunluğunun doğrulanmasına ve bakımın iyileştirilmesine katkıda bulunan sistemlerdir (Winter ve ark., 2018). Sağlık bilgi sistemleri, sağlık kurumlarında verilerin toplanmasını, depolanmasını ve kullanılmasını sağlayan sistemler olarak adlandırılmaktadır. Bu yönüyle sağlık bilgi sistemleri, dijital çağda etkili hizmet sunumunun vazgeçilmez aktörleri arasında yerini almaktadır.

Bu bölümde, dijital çağın sağlık sektörüne getirmiş olduğu yeniliklerden biri olan sağlık bilgi sistemleri, amaçları, bileşenleri, faaliyet alanları ve faydaları ile ilgili bilgilere değinilmiştir.

Sağlık hizmetlerinde kalitenin temel bileşenlerinden biri olarak bilgi teknoloji ve sistemlerinin kullanımı, istenmeyen durumların yaşanmasını önlemenin yanında, daha güvenli bir sağlık sistemi kurmak için birçok potansiyel taşımaktadır. Ancak sağlık bilgi sistemlerinin faydalarının yanı sıra gizlilik, güvenlik ve mahremiyet ile ilgili sorunlar da ortaya çıkabilir. Bu nedenle, sağlık bilgi sistemlerinde gizliliği ve güvenliği sağlayacak çalışmalara da ihtiyaç bulunmaktadır.

Bilgi teknolojisi alanında yaşanan gelişmeler toplumu ve sağlık sektörünü güçlü şekilde etkilemektedir. Artan yaşam süresi, kronik hastalıkların çoğalması, salgın hastalıkların görülme sıklığında yaşanan artış, küreselleşme, kaliteli hizmet sunumu beklentisi ve bireylerin sağlıklı yaşam biçimi davranışlarına yönelik artan yönelimi sağlık bilgi sistemlerinin geliştirilmesini zorunlu kılmaktadır.

Sağlık bilgi sistemlerinin sürekli olarak hasta bakımı ve hizmet sunum kalitesini iyileştirmesi ve artırması beklenmektedir. Bu nedenle, sağlık bilgi sistemleri ve bu sistemlerin ortaya çıkardığı değerin araştırılması ve gerekli iyileştirmelerin yapılması gerekmektedir.

Bölüm 2

SAĞLIK BİLGİ SİSTEMLERİ İLE İLGİLİ STANDARTLAR

Elif Dikmetaş Yardan

Gizem Zevde Aydın

1. GİRİŞ

Çağımızda diğer sektörlerle birlikte sağlık sektöründe de bilgiye dayalı yönetim artarak önem kazanmaktadır. Gelişen bilgi ve iletişim teknolojilerinin hızlı şekilde sağlığa yansımaları, her geçen gün artan ve değişen hasta beklentileri ve yaşlanan nüfus sağlık hizmetlerine yeni bir bakış açısıyla yaklaşılması gerektiğini ortaya koymuştur (T.C. Sağlık Bakanlığı, 2004). Günümüzde bilgi teknolojilerinin kullanımının sağlık alanında giderek yaygınlaşması ve sağlık bakımının giderek teknolojiyle ilişkili hâle gelmesi (Işık & Akbolat, 2010) sağlık bilgi teknolojileri kavramını ön plana çıkarmaktadır. Sağlık hizmetlerinde ve teknolojiye yaşanan gelişmeler, tıbbi ilerlemelere katkı sunmaktadır. Tıp alanında yaşanan teknolojik gelişmelerle beraber hekimlerin işleri kolaylaşmakta, hastalıkların tanı sürecinin daha hızlı gerçekleştirilmesi fırsatı doğmaktadır (Ekiyor & Çimen, 2019). Sağlık bilgi teknolojilerinin kullanımı, sağlık hizmetlerinin etkinliğini ve verimliliğini de artırmaktadır (Işık & Akbolat, 2010). Bilginin öneminin giderek artmasıyla, bilginin doğru yöntemle elde edilmesi konusundaki ihtiyaç da artmıştır. Artan bu ihtiyacı karşılamak amacıyla çalışmalar gerçekleştirilmeye başlanmıştır (T.C. Sağlık Bakanlığı, 2022a). Bu doğrultuda farklı ortamlardaki yüksek düzeyde yapılandırılmış ve zengin anlamsallığa sahip klinik bilgileri dijital sistemler aracılığıyla kullanabilmek ve paylaşabilmek bilgi teknolojileriyle ilişkili sağlık alanındaki çalışmaların odağı hâline gelmiştir (Can ve ark., 2016).

Kurumların yoğun rekabetle baş edebilmeleri ve rekabet avantajı yakalayabilmeleri için bilgi sistemlerinin kullanımı gereklidir. Bilgi sistemleri, yöneticilere karar verme ve kontrol aşamalarında destek sağlamakta ve personelin işlemleri daha hızlı ve kolay gerçekleştirmelerini mümkün kılmaktadır (İleri, 2018). Sağlık bilgi sistemleri ise sağlık alanındaki gelişmelerle birlikte bilgi ve verilerin oluşturulması, düzenlenmesi, paylaşılması ve hastaların tanı ve tedavilerinin belirlenmesi ve geliştirilmesi gibi faaliyetlerin tamamını kapsamaktadır (Işık & Akbolat, 2010). Sağlık bilgi sistemleri; verilerin işlendiği, bilgi akışının sağlandığı, yönetsel açıdan karar vericilere ihtiyaç duydukları bilgilerin sağlandığı

sağlık bilgi sistemlerine uyarlanarak güçlendirilmesi önerilmektedir (WHO, 2008). Sağlık bilgi sistemleri standartları, diğer sağlık bilgi sistemleriyle birlikte çalışabilirliği ve veri alışverişinde bulunabilirliği sağlamaktadır. Sağlık bilgi sistemlerinin geleceğinde, birlikte çalışabilir elektronik sağlık kayıtları ve diğer sağlık bilgi sistemlerine uyum sağlamanın olduğu ifade edilebilir. Birlikte çalışabilirliğin de standartlarla sağlanabildiği görülmektedir. Bu kapsamda, sağlık bilişimi alanındaki ilerlemenin sürdürülebilmesi için gelişmelerin yakından takip edilmesi ve geliştirilen standartların tam anlamıyla benimsenmesi gerektiğine vurgu yapılabilir.

Bölüm 3

STRATEJİK BAKIŞ AÇISIYLA SAĞLIK BİLİŞİM POLİTİKALARI

Merve Tarım

Mehveş Tarım

1. GİRİŞ

Hızlı değişen bir dış çevre karşısında her örgüt ve sistem varlığını devam ettirebilmek adına sürekli olarak değişim sürecine tabi tutulmaktadır. Değişime adapte olamayan sistemler ve örgütler rekabet ortamından uzaklaşmakta ve gerek ürün gerek hizmet bazında üretim gerçekleştirememektedirler. Değişimin başarılı bir şekilde gerçekleştirilmesi bilgi yönetiminin doğru bir biçimde yapılmasını gerektirmektedir. Hem iç hem de dış çevreye ait bilgi akışının doğru olmasına, gelen bilginin doğru analizinin yapılmasına ve doğru sonuca ulaşılmasına ihtiyaç duyulmaktadır. Bu akışın istenilen biçimde sağlanabilmesi için yönetimin fonksiyonlarının doğru uygulanması ve bilgi yönetiminin doğru biçimde yapılması söz konusudur. Bilgiye doğru biçimde ulaşabilmek teknolojinin güncel olmasıyla ve gerek iç gerek dış çevrede bulunan paydaşlarla güçlü iletişim kanallarının oluşturulması ile sağlanmaktadır. Bu bağlamda bilginin dışarıdan doğruya en yakın hâliyle elde edilmesi için sosyal sermayeye ve gelen bilginin örgüt içindeki analizinin doğru yapılabilmesi için entelektüel sermayeye yatırım yapılmak zorundadır. Sürdürülebilir Kalkınma için 2030 Gündemi, bilgi ve iletişim teknolojisinin insani ilerlemeyi hızlandırma, dijital uçurumu kapatma ve toplumların bilgi kapasitesini artırma konusunda büyük bir potansiyele sahip olduğunu vurgulamaktadır.

Bilgi ve iletişim teknolojilerini sağlık alanında geniş çaplı kullanabilme becerisinin hem gelişmiş hem de gelişmekte olan ülkelerde önemi gittikçe artmaktadır. Sağlıklı bir toplum oluşturma ancak bilgiye dayalı bir örgütlenme ile mümkündür. Bilgi ve iletişim teknolojilerinin geniş çapta yayılımı, tümüyle ekonomik ve sosyal faaliyetlerde hizmetin rolü ile ilgili algıyı değiştirmiştir. Bu teknolojiler, hemen hemen her yerde, zamanında kaliteli sağlık hizmetlerine adil erişimi destekler; kaliteli, uygun maliyetli ve adil bakım sunulmasında sağlık sistemlerinin sürdürülebilirliğini sağlar; ve hasta mahremiyetine ve güvenliğine özen gösteren bir sistemde, sağlığın teşviki ve geliştirilmesi, hastalık önleme,

yenilikçiliğinde, toplumsal ve ekonomik zorluklara çözümler sunmasında ve istihdam piyasasının büyümesini teşvik etme yeteneğinde yatmaktadır.

Veri toplamada kullanılan yazılımlar birbirleriyle uyumlu olmalıdır, böylece veri değişimi kolaylıkla sağlanabilir. Klinik hizmetlerin kalitesi artar, tekrarlı işlemler azalır, maliyetler düşer. Farklı kaynaklardan elde edilen veri sağlık sisteminin farklı düzeylerinde çeşitli amaçlar için kullanılır.

- Klinik karar mekanizmalarında hasta profili, ihtiyaçları, tedavisi gibi bireysel düzeyde veri kullanılır.
- Sağlık tesisi düzeyinde veri, sağlık yöneticilerine kaynak ihtiyacını belirleme, satın almada rehberlik etme ve toplumun sosyal gelişimini sağlamada kullanılır.
- Nüfus düzeyinde veri, özellikle kamu sağlık karar vericileri için önemlidir.
- Halk sağlığı izlemeleri, problemleri tanımlama ve zamanında faaliyet sunmaya odaklanarak tesislerin ve toplulukların bilgilerini bir araya getirir.

Toplanan verinin güvenliğinin sağlanmalıdır. Hasta güvenliği açısından son derece yararlı olan sistem veri güvenliği açısından da güçlendirilmelidir. Hasta mahremiyetini ve etik açıdan sakıncaların ortadan kaldırılması gerekir. Bunun için elektronik sağlık kayıtları ile ilgili etik ve yasal düzenlemeler yapılmalıdır.

Toplanan veriler bilgiye dönüştürülmeli, bilgi paydaşlarla paylaşılmalıdır. Şu anda Sağlık Bakanlığı tarafından toplanan veri, dünyanın pek çok gelişmiş ülkesinde dahi bulunmamaktadır. Sağlık sektörünün her bir alanından ve paydaş grubundan veri havuzuna veri girişi olmaktadır. Önemli olan bu verilerin bilgiye dönüştürülmesi ve bilgidan bilgi üretebilmektir. Bu ise bilgi ve iletişim teknolojileri konusunda yetkin insan gücü ile gerçekleştirilir. Nitelikli insan kaynakları ile sistem etkili ve verimli olacaktır.

Sağlık sektörünün kalitesini arttırmak ve sağlığı geliştirmek için teknolojiye yenilik ve gelişme kadar önemli olan husus, insan kaynaklarının güçlendirilmesi ve kültürün bu yön- de değiştirilmesidir.

Bölüm 4

ULUSAL SAĞLIK BİLGİ SİSTEMLERİ

Elif Dikmetaş Yardan

Pelinsu Buket Doğanyığıt

Ebru Şahin

1. GİRİŞ

Bilgi sistemleri, veriyi bilgiye dönüştürmek amacıyla kaynakları kullanan ve girdi, süreç ile çıktı faaliyetlerini kapsayan sistemler olarak tanımlanmaktadır (Kavuncubaşı, 2000). Bilgi teknolojilerinde yaşanan hızlı değişimler, sağlık sektörünü de büyük oranda etkilemektedir (Haux ve ark., 2004). Sağlık sektöründe yoğun rekabetin yaşanması, beklentilerin artması, teknolojinin gelişmesi, yeniliklerin yaşanması ve sürekli yapılan yasal düzenlemeler sağlık bilgi sistemlerinin kullanımını zorunlu kılmıştır. *Sağlık bilgi sistemleri*; sağlık kurum ve kuruluşların sahip oldukları bilgileri işleyen, saklayan ve erişimi sağlayan bilgisayar yazılımı ile donanımdır (Tarcan ve Çelik, 2016). Sağlık hizmetleri sunumunda kullanılan bilgi sistemleri, bölgeler arası farklılıkları en aza düşürmeyi ve bireylere ihtiyaçlarına uygun, erişilebilir, etkili, hakkaniyet ve eşitlik ilkelerini gözeterek hizmet sunmayı amaçlamaktadır.

Bu bölümde sağlık bilgi sistemlerinin tanımı, amacı, tarihçesi ve Türkiye’de kullanılan ulusal sağlık bilgi sistemlerine değinilecektir.

2. SAĞLIK BİLGİ SİSTEMLERİ

Sağlık bilgi sistemlerinin kullanımı, 1960 tarihinden itibaren çevresel etkilerin ve teknolojik gelişmelerin etkisiyle önemli derecede değişmiştir. 1960’lı yıllarda az sayıda sağlık kurumunun bazı idari ve mali işlemlerinin otomatikleştirilmesiyle başlamıştır. Bu işlemler; analistler tarafından pahalı ve büyük merkezli ana bilgisayarların kullanımıyla gerçekleştirilmiştir. 1980’li yıllara gelindiğinde klinik ve idari uygulamalara yönelik veri tabanlarına ihtiyaç duyulmuştur. Bu nedenle hızlı şekilde çalışmalar yapılmaya başlanmıştır. 1980’li yılların ortalarında depolama kapasitesi bulunan ve bilgisayar gücüne sahip mikrobilgisayarlar (masaüstü) ortaya çıkmıştır. Daha sonra 1990’lı tarihlerde ücretsiz kullanılan internet ağ tarayıcıları oluşturulmuş ve www (the world wide web) ile e-posta araçları kullanılmıştır.

nin yapıldığı Yatırım Takip Sistemi ve ülke çapındaki sağlık istatistiklerini toplamak amacıyla kullanılan Temel Sağlık İstatistikleri Modülü bulunmaktadır. Türkiye’de faaliyette bulunan özel sağlık kurumlarının yaptığı işlemlerin takip edildiği sisteme, Özel Sağlık Kuruluşları Yönetim Sistemi adı verilmektedir (<https://dijitalhastane.saglik.gov.tr>, 25.06.2022).

SONUÇ

Son yıllarda, bilgi sistemleri sağlık bakım kalitesini, verimliliği ve hasta ile çalışan memnuniyetini arttırmak için daha fazla kullanılmaktadır. Türkiye’de sağlık bilgi sistemlerinin gelişimi 2003 yılında Sağlıkta Dönüşüm Programı ile hız kazanmıştır. Sağlıkta Dönüşüm Programı’nın sekiz bileşeninden biri olan Ulusal Sağlık Bilgi Sistemi, ulusal standartlara erişimde ve etkin bilgi ağının oluşmasını sağlamıştır. Sağlık kurumlarının sahip olduğu tüm bilgilerin korunmasını, transferini, standardizasyonunu ve kaydedilmesini mümkün kılmıştır.

Sağlık bilgi sistemlerini geliştirmek için sağlık hizmet sunumunun takip edilmesi, değerlendirilmesi ve kanıta dayalı uygulamaların geliştirilmesi önem taşımaktadır. Sağlık bilgi sistemlerine bireylerin kolay erişiminin olması, kolay kullanılması, veri güvenliğinin sağlanması ve kullanıcı memnuniyetinin ön planda tutulması önem arz etmektedir. Sağlık bilgi sistemleri hakkında kullanıcılarının bilgilendirilmesi, geri dönüşlerinin alınması ve ortaya çıkan sorunların çözülmesi gerekmektedir.

Bölüm 5

HASTANE BİLGİ YÖNETİM SİSTEMLERİ

Türker Yardan

Ferdane Betül Bölükbaşı

1. GİRİŞ

Teknolojinin, hasta bakım hizmetlerinin iyileştirilmesinde önemli rol oynadığı ile ilgili ortak görüşlerin artışı ile birlikte bilgi teknolojileri ve bilgi sistemleri, son yıllarda sağlık sektöründe hayati hâle gelmiştir (Ismail ve ark., 2015). Bununla birlikte, sağlık sektöründe bilgi sistemleri ihtiyacı geçmiş yıllardan beri küresel sağlık gündeminde yer almaktadır. Dünya Sağlık Örgütü (WHO), sağlık sistemlerinin güçlendirilmesi ile ilgili gerçekleştirdiği toplantıda sağlık sistemlerinin iyi yönetilmesi ve herkes için sağlık hedefine ulaşılabilmesi için sağlık bilgi sistemlerinin kritik önem taşıdığını belirtmiş ve iyi tasarlanmış bilgi sistemlerine olan ihtiyacı vurgulamıştır (WHO, 1987; WHO, 2000). Sağlık kurumlarının hizmet sunum süreçlerinde çeşitli birimlerinde gerçekleşen tüm işlemleri kapsayan Hastane Bilgi Yönetim Sistemleri de bilgi teknolojileri araçlarından biri ve bilgi sistemlerinin önemli bir parçasıdır (Rahimi ve ark., 2019).

En yalın hâli ile bilgi sistemleri, belirli sonuçları etkilemek için insanların, verilerin, süreçlerin ve teknolojinin entegrasyonudur (Smith, 2013). Hastane bilgi sistemleri, etkin hasta bakımı, hasta ve personel memnuniyeti gibi stratejik hedeflere katkıda bulunan, sistematik bilgi işleme ve bilgi depolama alt sistemi olarak ifade edilebilir. İyi yönetilen bilgi sistemleri, içinde bulunduğumuz yüzyılda sağlık kurumlarının başarısı için her zamankinden daha kritik rol oynamaktadır (Haux ve ark., 2004). Öyle ki sağlık teknolojilerinin gelişmesi ile birlikte yüksek kaliteli ve verimli hizmet sunumu için sağlık kurumunda çalışan profesyonellerin bilgi ihtiyacı olabilmektedir. Bunun yanı sıra hastane yönetimi, her zaman hastanenin maliyetleri ve hizmetleri hakkında güncel bilgilere ihtiyaç duymaktadır. İhtiyaç duyulan bilgilerin elde edilmesinin yanı sıra bilgi işlemenin kalitesi de bir hastanenin rekabet gücü için önemlidir (Haux ve ark., 2004).

Küresel düzeydeki araştırmalar, hastane bilgi yönetim sistemlerinin kullanılmasının bir yandan kaliteli, müşteri odaklı ve uygun maliyetli hizmet sunumunu sağlarken diğer yan-

SONUÇ

Bilgi ve bilgi yönetim süreçleri, sağlık sektörünün temel konusunun insan olması ve hata tolere edemeyecek yapısı nedeniyle kritik öneme sahiptir. Sağlık hizmetlerinin büyük kısmının sunulduğu hastanelerde hemen hemen tüm gruplarda ve tüm alanlarda hizmet kalitesi, bilgi işleme süreçlerinin kalitesi ile orantılıdır. Sağlık kurumlarının emek ve teknoloji yoğun kurumlar olması, uzmanlaşmanın fazla olması ve özellikle kamu hastanelerinde hasta sayısının fazlalığı bilgi işleme süreçlerini karmaşık hâle getirmektedir. Bu noktada ihtiyaç duyulan bilgilerin doğruluğu ve standardizasyonu için hastane bilgi yönetim sistemlerine ihtiyaç duyulmaktadır.

Hastane bilgi yönetim sistemleri ile tıbbi, idari ve mali süreçlerin hatasız yürütülmesi mümkün olmakta, hasta güvenliği uygulamaları desteklenmekte, zaman ve maliyet yönünden önemli ölçüde tasarruf sağlanabilmektedir. Bununla birlikte hastane bilgi yönetim sistemlerinden maksimum faydanın elde edilebilmesi için her hastanenin ihtiyacı olan hizmetlerin belirlenmesi ve tasarımın kurum içi ve kurum dışı süreçlere entegrasyon sağlanacak şekilde yapılması ve uzman personel ile desteklenmesi gerekmektedir. Bu noktada bilgi yönetim sistemlerinden sorumlu ekibin ve kurumdaki ilgili sağlık yöneticisinin güncel gelişmeleri ve Sağlık Bakanlığı tarafından belirlenen standartları takibi oldukça önemlidir.

HALK SAĞLIĞI BİLGİ YÖNETİM SİSTEMLERİ

Muhammet Ali Oruç

1. GİRİŞ

Teknolojik gelişmeler birçok sektörde olduğu gibi sağlık alanında da iyi yönde önemli etki sağlamıştır. Sağlık bilgi sistemlerinin sağlık hizmet sunucularında kullanılması hem hasta memnuniyetinde artış hem de yönetsel faaliyetlerde büyük kolaylıklar sağlamaktadır. Sağlık hizmeti sunum sistemleri, hizmet odaklı, maliyet etkin, hasta merkezli, kaliteli bakım sağlayıp optimal sağlık sonuçlarını teşvik etmelidir.

Geçmişten günümüze ülkemiz sağlık sektöründe yaşanan sorunlar teknoloji kullanımı ile en aza indirgenmeye çalışılmıştır. Sağlık sektörünün vazgeçilmez parçası olan halk sağlığı hizmet sunucuları sağlık bilişim sistemlerine çok önemli yatırımlar yapmak durumundadır. Türkiye bu konuda dünyanın birçok ülkesine nazaran oldukça iyi bir durumdadır. Ülkemizin, halk sağlığı hizmetleri ve vatandaş bütünleşmesinde hemen hemen her ihtiyaca yanıt verebilecek dijital uygulamaları bulunmakta, bu teknolojiler bulut ağ yapısında hasta mahremiyeti ve bilgilerinin gizliliği ve güvenliği konusunda oldukça özenli bir biçimde yürütülmektedir.

Sağlık bilişim sistemlerini yararlı bir şekilde kullanmak hem sağlık hizmetlerinin akmasını engellemekte hem de hastalara teşhis ve tedavi sürecinde büyük kolaylıklar sağlamaktadır. Bu sistemler sağlık hizmetlerinde ki maliyetleri azaltmakta, hizmetlerin kalitesini artırmakta ve klinik hataların daha az yapılmasına olanak sağlamaktadır. Sağlık bilgi teknolojileri, sağlık hizmeti sunumunun kalitesini iyileştirilmesi, hasta güvenliğinin artırılması, tıbbi hataların azaltılması ve hastalar ile sağlık hizmeti sağlayıcıları arasındaki etkileşimin güçlendirilmesinde büyük öneme sahiptir. Diğer taraftan sağlık bilgi sistemleri, nüfus sağlığının yönetilmesine ve sağlık bakım maliyetlerinin azaltılmasına yardımcı olmak için sağlık verilerinin toplanmasına, derlenmesine ve analiz edilmesine yardımcı olmaktadır.

kullanılmaktadır. Sistemin geliştirilme çalışmaları devam etmektedir (<https://hts.saglik.gov.tr/>, 101.09.2022).

4.20. Ulusal Tüberküloz Sistemi (UTS)

Tüm TB hastalarının kayıtları ve bildirimleri bu sistem üzerinden yürütülür. Tanıyı ko-yan kurumun bildirim görevlisi tarafından, hastanın TC kimlik nosu, ICD 10 kodu, sağ/ö-lü ve yatan/ayaktan hasta bilgileri girilerek bildirim yapılır.

DİJİTAL HASTANE

Elif Dikmetaş Yardan

Pelinsu Buket Doğanyığıt

1. GİRİŞ

Günümüzde bilim ve teknolojide yaşanan hızlı gelişmeler sağlık sektörünü etkilemiştir. Sağlık sektörü dijital bir dönüşüm yaşamış ve dijital hastane kavramı ortaya çıkmıştır. Dijital hastaneye kâğıtsız hastane de denilmektedir. Dijital hastane/kâğıtsız hastane, sağlık kurumlarında yapılan tüm işlemlerin geleneksel ve manuel yöntemler kullanılmayarak elektronik ortamda yapılmasına imkân vermektedir. Teknoloji ile bilgiyi birleştiren, uzun mesafelerde bulunan bireylerin entegrasyonunu sağlayan yüksek kaliteli sağlık hizmet sistemidir. Örneğin; hastanın sahip olduğu dijital kart sayesinde, hasta sağlık kurumuna girer girmez bütün sağlık bilgileri karta aktarılmaktadır. Tekrar test yaptırma ve yanlış tedavi olma olasılığı engellenmektedir. Dijital hastaneye diğer örnek ise hastanın röntgen, ultrason ve MR (manyetik görüntüleme rezonans) gibi görüntülemeye ait bilgileri veya test sonuçları bilgisayar ortamında saklanmakta ve izlenmektedir. Hekim, hastane dışında olsa bile bu verilere erişebilmektedir. Hatta farklı bir yerde yaşayan hastalar da kendilerine ait verilere internet ağı sayesinde ulaşabilmektedir. Dijital teknolojilerin kullanılması, hasta memnuniyetini ve çalışan memnuniyetini arttırmaktadır. Dijital hastaneler; tıbbi süreçlerin iyileştirilmesinde, hizmet alanlarının genişlemesinde ve maliyetlerin düşmesinde önemli rol oynamaktadır. Sağlık kurumlarının dijitalleşme sürecinde rekabeti sağlamak ve yeniliklere uyum göstermek amacıyla HIMMS (Healthcare Information and Management Systems Society-Sağlık Bilgi ve Yönetim Sistemleri Topluluğu) yol gösterici olmuştur. HIMSS, dijitalleşme sürecini yürütmekte ve bu çerçevede birtakım kriterler oluşturup sağlık kurumlarını değerlendirmektedir.

Bu bölümde, dijital hastane ve dijital hastanenin sağladığı avantajlar ve dezavantajlar anlatılacaktır. Daha sonra dijital hastanelerde kullanılan sistemler, dijital hastane sınıflandırılması ile dünyada ve Türkiye’de bulunan dijital hastaneler hakkında bilgi verilecektir.

2. DİJİTAL HASTANE NEDİR?

Dijital Hastane, sağlık kurum ve kuruluşlarında kullanılan bilgi sistemlerinin medikal ve medikal olmayan her türlü teknolojilerle tam entegre olduğu, güvenilir veri akışı standartla-

SONUÇ

Globalleşen ve dijitalleşen dünyada sağlık teknolojileri alanında önemli gelişmeler yaşanmıştır. Bu noktada sağlığın ve sağlık hizmetlerinin geliştirilmesi sürecinde dijital hastane uygulamaları, çağdaş bilgi ve iletişim teknolojilerinde dönüştürücü güç olarak ele alınmaktadır. Kâr amacı gütmeyen ve merkezi Chicago’da bulunan HIMSS (Healthcare Information and Management Systems Society-Sağlık Bilgi ve Yönetim Sistemleri Topluluğu) kuruluşu, dijital hastane standartlarını belirlemektedir. Dünya çapında kabul gören standartlara göre kuruluş; bir sağlık kurumunun dijital olup olmadığının kontrolünü yapmakta ve sertifikalamaktadır. Bu çerçevede farklı sağlık kurumları için farklı modeller oluşturulmuştur. Örneğin; yataklı sağlık kurumlarındaki dijitalleşme sürecinde “EMRAM” (Elektronik Tıbbi Kayıt Kabul Modeli), ayakta tedavi hizmeti sunan tesislerde “O-EMRAM” (Ayakta Elektronik Tıbbi Kayıt Kabul Modeli), dijital görüntüleme için “DIAM” (Dijital Görüntüleme Adaptasyon Modeli), bakımın sürekliliğinde “CCMM” (Bakım Olgunluğu Süreklilik Modeli), sağlık kuruluşunun teknolojik ve analiz yeteneklerinde “AMAM” (Analitik Olgunluk Benimseme Modeli), tedarik zinciri yönetiminde “CISOM” (Klinik Olarak Entegre Tedarik Sonuçları Modeli) ile teknolojik altyapılarını incelemeye “INFRAM” (Teknolojik Altyapı Benimseme Modeli) olmak üzere çeşitli modeller bulunmaktadır. Sağlık kurumları pazarda rekabet edebilmek, yeniliklere ayak uydurabilmek ve stratejik kararlar almak için dijitalleşme sürecini önem vermektedir. Bu nedenle hem Dünya’da hem de Türkiye’de dijital hastane sayıları günden güne artmaktadır. Türkiye, dijital hastane konusunda dünyada önde gelen ülkeler arasındadır. Dijital hastane; sağlık kurumuna, hastalara ve sağlık çalışanlarına avantajlar sağlamaktadır. Ek olarak sıfır hata, hasta güvenliğini sağlama, kâğıt israfını önleme, maliyetlerin en aza inmesi, sağlık çalışanı ve hasta memnuniyetini artırma ile daha etkili verimli, ve güvenilir hizmet sunumunu sağlama gibi faydaları da bulunmaktadır. Mahremiyet ihlali, siber saldırı ve suistimal risklerine yönelik etkili stratejiler geliştirilmelidir. Bu bağlamda etkili olacak stratejiler ve politikalar geliştirilmelidir. Hastane verilerinin teknolojik ortamda güvenliği sağlanmalı, veri paylaşımı ve gizliliği arasındaki dengenin oluşturulması önerilmektedir. Sağlık hizmetinden yararlanan kişilerin bilgilerinin saklanabilmesi için güçlü koruma yazılımları geliştirilmelidir. Elektronik kayıt sisteminde, veri şifreleme yöntemi kullanılarak kayıtlara erişimi bulunmayan kişilerin ulaşması engellenmelidir. Siber saldırılara karşı sistem yazılım ve donanım alt yapısının da güçlendirilmesine ve yeni yöntemlerin geliştirilmesine ihtiyaç duyulmaktadır.

Bölüm 8

HASTA MERKEZLİ TEKNOLOJİLERDE BİLGİ GÜVENLİĞİ, GİZLİLİĞİ VE MAHREMİYETİ

Türker Yardan

Hasan Fehmi Demirci

1. GİRİŞ

Teknolojik ilerlemeler ve bu alanda yaşanan değişim, teknolojinin sunmuş olduğu hız ve esneklik tüm sektörler tarafından göz ardı edilemeyecek boyuta ulaşmıştır. Her sektörde olduğu gibi sağlık sektörü de teknolojik gelişmeleri özümsemiş ve kendi yapısına dâhil etmiştir. Özellikle bilişim teknolojileri sağlık alanında yoğun şekilde kullanılmaktadır (İleri & Uludağ, 2017). Sağlık sistemleri içerisinde teknoloji gelişmeden önce teşhislerin kâğıt üzerinde okunaksız şekilde yazılması, hekimlerin hasta bilgilerine kolayca erişememesi ve hastaları izlemek için zaman, yer ve personel kısıtlamaları gibi sorunlar var olmuştur (Meingast ve ark., 2006). Teknolojinin gelişmesi ile birlikte bu sorunlar en aza indirilmiş ve sağlık hizmetlerinin sunumunda büyük değişiklikler yaşanmıştır. Bilgi çağına getirmiş olduğu teknolojik değişimler, her alanda çeşitli fırsatlar ortaya çıkarmıştır.

Son on yıldan fazla süredir, sağlık bilgi teknolojisi, sağlık hizmetlerinde güvenliği artırmanın ve kalitenin iyileştirilmesini sağlamanın yolu olarak tanıtılmaktadır (Furukawa ve ark., 2017). Sağlık bilgi yönetimi, tarihsel olarak tıbbi kayıtların yönetimine odaklanan disiplindir. Tıbbi kayıtların elektronik hâle gelmesiyle bu alan geçiş sürecine girmiş ve giderek bilişimle örtüşür hâle gelmiştir (Hersh, 2009). Sağlık hizmetlerinde bilgi sistemleri, sağlık hizmetlerinin daha iyi sunulmasını sağlamaktadır (Young & Klein, 2021). Sağlık hizmetlerinde bilgi sistemleri ile bilgi ve iletişim teknolojilerinin birleşiminden ortaya çıkan sağlık bilgi teknolojileri alanı, sağlık hizmetlerinin sunum şekillerinde birçok değişim meydana getirmiştir.

Sağlık bilgi teknolojileri, sağlık hizmetlerinin iyileştirilmesi ve dönüştürülmesi için insan hatalarının ortadan kaldırılmasını, klinik sonuçların iyileştirilmesini, bakım koordinasyonunun kolaylaştırılmasını, uygulama verimliliğinin artırılmasını ve zaman içinde verilerin izlenmesini içeren sayısız fırsat sunmaktadır (Dönmez ve ark., 2020). Bu teknolojiler hastayı merkeze alan teknolojilerdir. Dolayısıyla hastaya daha iyi hizmet sunmak için

SAĞLIKTA KALİTE YÖNETİMİ VE BİLGİ SİSTEMLERİ

Tunçay Palteki

1. GİRİŞ

Etkili ve verimli bir sağlık hizmeti sunumu, ekip çalışmasını, etkili bilgi paylaşımını, başarılı bir iletişimi ve işbirliğini zorunlu kılmaktadır. Bununla birlikte hizmetin standardizasyonu da önem arz etmektedir. Bu bağlamda sağlık hizmeti sunumunda bilgi teknolojilerinin ve enformasyon sistemlerinin kullanımı büyük önem taşımaktadır (Birinci, 2013).

Milenyumla birlikte sağlık hizmetlerinin yüksek kalitede ve uygun maliyette sunulması ile ilişkili hesap verebilirliğin ön plana çıktığı görülmektedir. Bunu sağlayabilmek için de sağlık politika yapıcısı konumundaki tüm tarafların bilgiye ve bilgiye dayalı karar verme araçlarına sahip olması gerekliliği ortaya çıkmıştır. Günümüzde anlamlı sağlık sonuçlarına ve verimli hedeflerine ulaşabilmek için hem nicelik hem de nitelik olarak uygun sağlık bilgi sistemlerinin varlığına ihtiyaç duyulmaktadır.

Sağlık hizmetlerinde kalite yönetimi yaklaşımının ortaya çıkışı ile bilgi sistemlerinin sağlık alanında kullanılmaya başlanması yirminci yüzyılın son yirmi yılına karşılık gelmektedir. Kalite yönetiminin başarı koşulları arasında işin yapılandırılması, karar süreçleri ve problem çözümlerinde nicel yöntem ve tekniklerinden faydalanma gerekliliği yer almaktadır. Bu bağlamda ölçüm, gözlem ve kontrollerin etkin yapılabilmesi için veri dizileri ve bu verilerin yorumlanmasına ihtiyaç vardır (Çetin & Arslan, 2017). Bunları gerçekleştirebilmenin en önemli yollarından biri de hiç kuşkusuz bilgi sistemlerinin uygun kullanılmasıdır.

Sağlık bilgi teknolojilerinin sağlık hizmet sunumunda giderek yaygınlaşması gerek klinik düzeyde gerekse yönetim düzeyinde kalite ve performans artışına neden olmuştur.

Bilgi sistemlerinin sağlık hizmetlerinin sunumundaki rolü ve vazgeçilmezliği herkes tarafından bilinen bir gerçektir. Zamanında, eksiksiz, doğru ve okunaklı bilgilere erişim sağlık hizmeti içerisinde yer alan tüm paydaşlar için kritik öneme sahiptir. İster yoğun bakımdaki bir hastaya ilaç veren bir hemşire, isterse herhangi bir diyabet tedavisi için hastaya en son araştırma bulguları hakkında tavsiyede bulunan bir hekim ya da geri ödeme kuruluşuna elektronik fatura kesen bir memur veya kurumunun maliyet etkinliğini izleyen

SAĞLIK SEKTÖRÜ TEKNOLOJİ UYGULAMALARI

Elif Dikmetaş Yardan

Birgül Yabana Kiremit

1. GİRİŞ

Günümüzde internet kullanımının artması ve teknolojiye meydana gelen önemli değişim ve gelişmelerle birlikte bireylerin ve toplumun mobil ve dijital beklentileri ve istekleri artmıştır. Özellikle sağlık hizmetleri bu gelişmelerden çok fazla etkilenmiş ve birçok hizmet dijital ve akıllı platformlara taşınmıştır. İnternet ve mobil iletişim teknolojileri, yapay zekâ, giyilebilir cihazlar, robotlar, nesnelerin interneti vb. sayesinde sağlıkta büyük dönüşüm yaşanmıştır.

Bu bölümde sağlık hizmetlerinde teknoloji kavramına değinilecek ve sağlık sektörü teknoloji uygulamalarından sağlık sektöründe yapay zekâ, sağlık sektöründe büyük veri, nesnelerin interneti, sağlıkta sanal ve artırılmış gerçeklik, sağlık sektöründe kullanılan robotlar, e-sağlık, mobil sağlık, teletıp, dijital hastane, kişiselleştirilmiş sağlık, giyilebilir teknoloji ve siber güvenlik konuları ele alınacaktır.

2. SAĞLIK SEKTÖRÜ TEKNOLOJİ UYGULAMALARI

Bilgi, ağ teknolojileri ve telekomünikasyonda yaşanan gelişmeler ve değişimler sağlık sektöründe önemli rol oynamakta ve medikal bilgi sistemlerinin gelişmesine katkı sağlamaktadır. Bilgi teknolojileri ve tıbbın bir araya gelmesiyle sağlık hizmetleri dönüşüm sürecine girmiştir. Bu durum, maliyet ve verimsizliği azaltmış ve bireylerin beklenen yaşam süresinin artmasını sağlamıştır (Dimitrov, 2016).

Teknolojik ve bilimsel alanlarda meydana gelen gelişmeler, insan yaşamının önemli derecede değişmesine sebep olmuştur. Sağlık hizmetlerinde teknoloji, profesyonellerin ihtiyaçlarıyla birlikte hastaların da ihtiyaçlarına çözümler sunan; yaşam kalitesini iyileştirmek için yöntem, sistem, ilaç, cihaz, aşı ve düzenli bilgilerin uygulanması şeklinde tanımlanmıştır (Arslan ve ark., 2020; WHO, 2011).

Sağlık personeli bu teknolojilerin nasıl kullanılacağına yönelik bilgi sahibi olması gerekir. Sunulan teknoloji tabanlı hizmetlerin hasta dostu, kullanımı kolay, uygun, verimli ve kolayca erişilebilir olması hastaların bu yeni tanıtilan teknolojik değişiklikleri reddetmelerini azaltacak ve teknolojilere aktif olarak katılımını sağlayacaktır (Yoon & Lee, 2019). Önemli olan başka bir konu da sağlık personelinin, kullanılacak olan teknolojileri ve uygulamalarının sağlık personeli tarafından kabul edilmesi ve uyumluluğudur. Aksi takdirde kullanılacak teknolojinin başarısı azalacaktır. Sağlık teknolojilerinin, hastalar, sağlık kurumları ve çalışanları için faydası her geçen gün artmaktadır.

Bölüm 11

SAĞLIK BİLGİ SİSTEMLERİNDE TELETIP VE TELETIP UYGULAMALARI

Dilaver Tengilimođlu

Alper Güzel

Son yirmi yılda, teknolojideki yaşanan hızlı gelişmeler, dijital olarak sunulan bakımın erişilebilirliğini ve kalitesini önemli ölçüde artırmıştır. Teletıp sağlık profesyonelleri için yardımcı araçlar ve zamanında hasta bilgisi, bir arşive veya veri tabanına anında erişim ve sağlık alanındaki uzmanlarla daha kolay etkileşim sağlayarak hasta bakımını kolaylaştıran, hızlandıran ve iyileştiren bir teknoloji olarak görülmektedir. Pandemi döneminde, teletıp, hasta bakımına erişimi artıran, tedavide gecikmeleri önleyen, hastaların ve sağlık hizmeti sunucularının SARS-CoV-2 enfeksiyonuna maruz kalma riskini azaltan uygulanabilir ve güvenli bir alternatif hâline gelerek aynı zamanda, pandeminin başında sınırlı olan kişisel koruyucu ekipman talebini de azaltmıştır (Montenegro, ve diğerleri, 2021).

Başlangıçta travma ve felç gibi acil durumların zamanında yönetimi ile uzak kırsal veya dezavantajlı nüfuslarla iletişim kurmak için kullanılan teletıp, hızla genişleyerek birden fazla tıbbi alanda kapsamlı bakım sağlama aracı hâline gelmiştir. Akuttan kroniğe ve ayrıca birincil bakımdan özel bakıma kadar uzanan teletıp, kalp yetmezliği, diyabet ve hatta hamilelik gibi çok çeşitli tıbbi durumlarda başarıyla uygulanmaktadır. Teletıbbın nihai amacı, uzaktan, zamanında ve kaliteli tıbbi bakım sağlamaktır. Ek olarak teletıp, özel bakıma daha iyi erişim ve işten daha az zaman kaybı nedeniyle yüksek hasta memnuniyeti sağlayabilir. Taşınabilir cihaz teknolojisindeki yenilikler ve artan geniş bant kullanılabilirliği ile teletıp, bu amaca ulaşmak için kullanılan yöntemlerde büyük ilerlemeler kaydetmiştir. Akıllı telefonlar, video konferans ve mobil kablosuz sensörlerin kullanımı sayesinde hastalar genellikle kendi evlerinin rahatlığında tıbbi bakım alabilmekte, bu da zamandan ve gereksiz maliyetlerden tasarruf sağlamaktadır. Klinik etkileşimlerin sınırlarının ötesine geçen bu araçlar, hastalığın ilerlemesi ve iyileşmesi hakkında daha iyi bilgi edinmek ve optimal tıbbi tedaviye ulaşmaya yardımcı olmak için kullanılmaktadır. Teletıp sağlık hizmeti sunumunun yeni ve yenilikçi araçlarını sağlamaya devam etmektedir (Barbosa, Zhou, Waddell, Myers, & Dorsey, 2021; Hoyt, 2009).

Sağlık turizmi sektörünün ayırt edici özellikleri, düşük maliyetle yüksek kaliteli sağlık hizmetleri sunma yeteneği ve sağlık ihtiyaçları açısından hastalara daha fazla seçeneğe sunma potansiyelidir. Teletıp hizmetlerinin kullanımı, bunları sağlama potansiyeline sahip olmakla birlikte, hastanın kendi sağlık hizmeti için bir sorumluluk üstlenmesi açısından güçlendirme potansiyeline de sahiptir. Bu tür hizmetler, hastalara uzun mesafeler katetmelerine gerek kalmadan sağlayıcılara ve tıbbi hizmetlere erişim sağlar. Sağlık turizmi sektörü ile teletıpın uygulanması, daha kişiselleştirilmiş bir hizmet sunma çabası içinde, mesafeler arasında köprü oluşturma konusunda önemli bir taahhüttür (Arnaert, tarih yok).

Bölüm 12

SAĞLIK BİLGİ SİSTEMLERİNDE ULUSLARARASI HASTALIK SINIFLANDIRMA SİSTEMLERİNİN ÖNEMİ

Aslan Kaplan

Aysel Köksal

Hastalıkların uluslararası sınıflandırılması sistemi sağlık bilgi sistemleri içerisinde kalite ve verimliliğin artırılmasında önemli bir role sahiptir. Hastalıkların uluslararası sınıflandırılması sistemi dünyada 1960'lı yıllardan beri kullanılmakta olan sağlık istatistiklerinin temeli olan ve epidemiyolojik değerlendirmeler için önemli olan bir sınıflandırma sistemidir. Sağlık hizmetlerinde hastalıkların ve işlemlerin tutarlı bir şekilde kodlanması, yalnızca muhasebe için değil, sağlık sisteminin her alanında büyük öneme sahiptir. Sağlık sisteminde güvenilir karşılaştırmalı analizler yapabilmek için standartlaştırılmış terminolojiye, uluslararası sınıflandırma sistemlerini kullanmaya ihtiyaç vardır. Sağlık sektöründe kodlama ve sınıflandırma sistemleri dünya çapında kullanılmaktadır. Birçok ülke Dünya Sağlık Örgütü'nün Uluslararası Hastalık Sınıflandırmasını kabul etmiş ve 10. Revizyonunu (WHO ICD-10) kullanmaktadır. 2022 yılı itibarıyla da ICD-11 kullanılmaya başlayacaktır.

ICD (International Statistical Classification of Diseases and Related Health Problems) Hastalıkların Uluslararası İstatistiksel Sınıflandırmasına ve İlgili Sağlık Sorunlarına dayalı elektronik sağlık kaydı (EHR) sistemleri, hastalıkların Onuncu Revizyon (ICD-10) kodlaması, analiz için büyük veri setleri oluşturmak için giderek daha fazla kullanılmaktadır. ICD-10 nun ülkemizde sağlık kuruluşlarında kullanımı 2005 yılından beri zorunlu hâle gelmiştir. Klinik kodlanmış veriler, kalite ve güvenlik, izleme ve finansman modellerinden sağlık hizmeti planlamasına ve altyapı geliştirmeye kadar sağlık sistemlerini çeşitli yönlerini etkilemektedir.

ICD, hastalıkları ve ölüm nedenlerini sınıflandırmak için kurulmuş küresel bir veri sistemidir. Son on yılda, Sağlık Bilgi Yönetimi (HIM) alanına entegrasyonuna paralel olarak ICD'nin kullanımında çarpıcı bir artış görülmüştür. Dünya Sağlık Örgütü (WHO) tarafından 1984'ten beri yayınlanan ICD, ICLD-5'in (Uluslararası Ölüm Nedenleri Listesi) yerine kullanılır ve her sağlık teşhisine kodlar atar. DSÖ Uluslararası Hastalık İstatistiksel Sınıflandırması ve İlgili Sağlık Sorunlarının 10. Revizyonu (ICD-10-CM) en son sürümdür ve 11. sürüm geliştirilme aşamasını tamamlamak üzeredir.

ICD kullanımı tedavinin seçimi, ölüm nedeninin raporlanması, uygunluk seçimi, sağlık sigortası taleplerinin kolaylaştırılması, verinin depolanması, sağlık hizmetinin değerlendirilmesi, sağlık politikalarının belirlenmesi, epidemiyolojik hastalıkların yönetimi, kaynak

Bölüm 13

SAĞLIK HİZMETLERİ FATURALANDIRMA SÜREÇLERİNDE SAĞLIK BİLGİ SİSTEMLERİNİN ÖNEMİ

Ayşe Keleş

Elif İşlek

Umut Beylik

1. GİRİŞ

Zamanımızda bilgi sistemleri sağlık kurumlarında gittikçe genişleyen bir kullanım yelpazesinde yaygınlaşmakta ve âdeta bilgi sistemleri vazgeçilmez bir konuma hızla ulaşmaktadır. Bununla birlikte insan ve bilgi teknolojileri arasındaki iletişim ve koordinasyon nispeten daha geriden gelmektedir. Sağlık kurumlarında kullanılan bilgi sistemleri sunulan hizmetin kalitesini, maliyetini ve zamanını doğrudan etkilemektedir. Bu çerçevede sağlık bilgi sistemlerinin etkililiği ile sağlık sonuçlarının arzulan düzeyde olması arasında önemli bir ilişki olduğu söylenebilir. Sağlık hizmetleri ile ilgili veri ve bilgi akışının ileriye ve geriye yönelik sağlanması yönetim, tıbbi, idari ve mali süreçlerin yürütülmesini doğrudan etkilemektedir. Bu kapsamda; sunulan sağlık hizmetlerinin geri ödemesi kapsamında kanıtlayıcı temel muhasebe belgesi olarak kısaca tanımlanan faturaların oluşumu süreçleri “Faturalama” olarak adlandırılmaktadır. Günümüzde sağlık kurumları faturalama süreçlerini sağlık bilgi sistemleri üzerinden gerçekleştirmekte, hatta sosyal veya özel sağlık sigorta kurumlarına entegre sistemler aracılığı ile faturalar gönderilebilmektedir. Bu bölümde öncelikle sağlık hizmetlerinde faturalama süreçlerinin alt yapısını oluşturan bireysel ve kurumsal hizmet sunucularına yapılan geri ödeme yöntemleri anlatılmış akabinde ülkemizde sağlık bilgi sistemleri üzerinden yürütülen faturalama süreçleri ele alınmıştır.

2. SAĞLIK HİZMETLERİNDE GERİ ÖDEME VE TÜRKİYE UYGULAMASI

Sağlık sisteminin nihai hedefleri toplumun sağlık düzeyini yükseltmek ve sağlık hizmetlerinden memnuniyeti sağlarken aynı zamanda vatandaşları sağlık hizmetlerinin yıkıcı harcamalarından korumaktır. Bu nedenle sağlık hizmetlerinin ihtiyaca uygun olarak herkese eşit sağlanabilmesi için sağlık sistemleri içinde o topluma en uygun finansman, sigorta ve geri ödeme mekanizmalarının tanımlanması gerekir.

düler paketler hâlinde tasarlamaları gerekmektedir. Bu paketler veri aktarımı için gerekli üç temel işlemi; aktarım işlem sırası(örneğin veriyi kaynaktan çıkar-dönüştür-hedef sisteme yükle), akış senaryosu (sürekli, grup hâlinde) ve veriyi gönderme-alma metodlarını içermesi gerekir. Modüler paketler sayesinde ödeyici kurumların yaptığı servis güncellemelerine yeniden komut dosyaları oluşturmaya gerek kalmadan entegre olmayı sağlayacaktır.

SONUÇ ve ÖNERİLER

Sağlık hizmet sunucuları tarafından sundukları hizmetin karşılığı ücretin hukuki olarak kanıtı olan faturalar ile ilgili faaliyetler olan faturalama süreçleri, sağlık bilgi teknolojilerinde yaşanan gelişim ve değişimle tamamen otomasyon sistemleri aracılığıyla yürütülmeye doğru hızla yol almaktadır. Sağlık sistemlerinde genel olarak hasta adına ödeme yapan sigorta kuruluşları ile sağlık hizmet sunucuları entegre sistemler aracılığıyla bu süreçleri hızlı ve etkili bir şekilde yönetmeye çalışmaktadır. Artan hizmet sunum çeşitliliği, geri ödeme kurumları, sigorta şartları ve yazılım platformları arasında tutarlı ve zamanında veri değişimi gerçekleştirmek için özellikle sağlık hizmet sunucuları arasında yoğun fatura kesen hastanelere ait HBYS'lerin entegrasyon modüllerini standartlaştırmaları ve otomatikleştirmeleri gerekir. Ödeyici kurumların ise hizmet sunucuların faturalama süreçlerini daha etkili izleyebilecek otomasyon sistemleri oluşturması konusu ise hâlen çözülmesi gereken bilgi sistemleri entegrasyonlarında görülen en önemli eksiklik olarak ön plana çıkmaktadır. Bu durum hâlihazırda örneklem üzerinden fatura kontrolleri çerçevesindeki fiziki incelemeler ile yönetilmektedir. Bu kapsamda faturalama süreçlerinin onamı veya izlemine doğrudan hizmet alanlarında katılabileceği sağlık bilgi sistemleri (HBYS ve/veya MEDULA tarafında) tasarlanması bir alternatif olarak önerilmektedir. Bununla birlikte böyle bir bilgi sisteminin gereksiz veya aşırı sağlık hizmetini azaltabileceği, sağlık hizmetlerinin arzulanacak sağlık sonuçlarına odaklı sunulmasını teşvik edeceği, sağlık hizmetlinin performans ve kalitesini azaltabileceği, sağlık kurumlarında israfın düşürülebileceği ve sağlık harcamalarını doğrudan azaltıcı yönde etkileyebileceği öngörülmektedir.

Okan Özkan

Özlem Özer

1. GİRİŞ

Bilgisayar, akıllı telefon gibi dijital cihazların yaygınlaşması ve çeşitli bilişim teknolojilerindeki hızlı gelişmeler nedeniyle internet, günlük hayatın ayrılmaz bir parçası hâline gelmiş, bilgi sistemleri giderek daha fazla kullanılmaya başlanmış ve elektronik belgeler hızla yaygınlaşmıştır. Bu gelişmeler, yargı sistemlerini de etkilemiş ve büyük değişimleri beraberinde getirmiştir (Lee ve ark., 2013).

Dijital çağın büyümesiyle birlikte keşif formatı, elektronik olarak saklanan bilgileri içerecek şekilde önemli ölçüde değişikliğe uğramıştır. Artık oluşturulan ve saklanan bilgilerin yüzde doksandan fazlasının elektronik olarak yapıldığı tahmin edilmektedir (Ward ve ark., 2012). Bu nedenle de elektronik olarak saklanan bilgilerin yönetimi, günümüzde çoğu işletmeler için büyük bir öneme sahip olmuştur. Elektronik olarak saklanan bilgiler şeklinde bilinen ve elektronik biçimde saklanan bilgilerin keşfedilmesi anlamına gelen e-keşif (Yuan ve ark., 2015), yeni yerlerden ve yeni kaynaklardan yeni biçimlerde yeni bilgiler elde etmeyi ve yeni bir şekilde kullanmayı gerektirmektedir (Smetana, 2009). E-keşif, sağlık kurumlarının günlük işlemlerini büyük ölçüde etkileyebilmesi nedeniyle üzerinde önemle durulması gereken bir kavram olarak değerlendirilmektedir (Vasudevan & Rao, 2011). Sağlık kurumları artık tüm hasta verilerini elektronik biçimde bilgisayar sunucularında depolamaktadır. Verilerin elektronik olarak depolanması ise sağlık kurumlarında davalar için keşfedilebilir yeni bir bilgi kaynağının ortaya çıkmasına neden olmuştur (Adams, 2014). Bu bölümde e-keşfin ne olduğu, e-keşfin olumlu ve olumsuz yanları, e-keşif süreci, sağlıkta e-keşfin tanımı ve sağlıkta e-keşif konusunda yaşanan zorluklar hakkında bilgiler sunulmaktadır.

SONUÇ

Sağlık hizmetleri, dava potansiyeli oldukça yüksek bir alandır. Bu nedenle riskleri ve oluşabilecek maliyetleri savunabilecek şekilde yönetme kabiliyeti giderek daha da önemli bir konu hâline gelmektedir (Proofpoint, 2011). Ayrıca sağlık kurumlarının e-keşfi başlatma ve uygulama konusunda kendisini eğitmesi, e-keşfi başlatmaya ve uygulamaya hazırlıklı olması da önemli bir gerekliliktir (Newton, 2016). Sağlık sektöründe yeni teknolojilerin ortaya çıkması, yeni veri kaynakları ve verileri uzun süreli saklama politikaları ve gereksinimleri nedeniyle sağlık hizmeti sunucuları oldukça yoğun veri istilasına ile baş etmek durumundadır (KPMG, 2019). Bu yüzden e-keşfin önümüzdeki yıllarda sağlık kurumlarında çok daha fazla kullanılacağı düşüncesinden hareketle verilerin uygun bir şekilde saklanması/depolanması ve davalara hazırlıklı olunması e-keşif sürecini daha iyi yönetebilmek adına oldukça önemlidir.

SAĞLIK BİLGİ SİSTEMLERİNİN HUKUKİ YÖNÜ

h.c. Hakan Hakeri

Dijital sağlık “bilgisayar bilimi, mühendislik, bilişim bilimi, gazetecilik, ekonomi, klinik tıp, halk sağlığı, epidemiyoloji gibi pek çok disiplini kapsamaktadır”.

Dijitalleşme ile beraber bilgi sistemleri artık sağlık alanında da ana unsurlardan biri hâline gelmiştir. Bu husus tıp hukuku açısından da konunun değerlendirilmesini gerekli kılmaktadır. Bu çalışmada, sağlık bilgi sistemlerinin uygulamada hangi yönlerden sorunlara yol açabileceği ve ne tür hukuki değerlendirme yapılması gerektiği tartışılacaktır.³

1. MAHREMİYET SORUNLARI

1.1. Sağlık Çalışanlarının Verilere Erişimi

Kişisel Sağlık Verileri Hakkında Yönetmelik’e göre, “sağlık hizmeti sunumunda görevli kişiler; ilgili kişinin sağlık verilerine ancak, verilecek olan sağlık hizmetinin gereği ile sınırlı olmak kaydıyla erişebilir” (md. 6/1).

E-Nabız hesabı bulunan kişilerin sağlık verilerine, kendi gizlilik tercihleri çerçevesinde erişim sağlanır. İlgili kişiler, gizlilik tercihleri ve sonuçları konusunda ayrıntılı şekilde bilgilendirilir. Gizlilik tercihi ve geçmiş sağlık verilerinin görüntülenememesi nedeniyle sağlık hizmeti sunumunda meydana gelebilecek aksaklık ve zararlardan Bakanlık sorumludur (md. 6/2).

E-Nabız hesabı bulunmayan kişilerin sağlık verilerine ise Kanunun 6’ncı maddesinin üçüncü fıkrasında yer alan istisnai amaçlarla sınırlı olmak üzere ancak;

a) Kişinin kayıtlı olduğu aile hekimi tarafından herhangi bir süre sınırı olmaksızın,

b) Kişinin sağlık hizmeti almak üzere randevu aldığı hekim tarafından, randevunun alındığı gün ile sınırlı olmak kaydıyla ve alınan sağlık hizmeti ile doğrudan bağlantılı işlemler sonlanana kadar,

³ Prof. Dr., Konu ile ilgili ayrıntılar, kaynakça ve atıflar için bkz, Hakeri, Hakan, Tıp Hukuku, 25. Baskı, Ankara 2022.

- ç) Sağlık riski artan veya ileri yaşlı kişilerin çok yönlü değerlendirmesi ve takibi yapılabilir.
- d) Teknolojik imkânların elvermesi ve Bakanlıktan gerekli izinlerin alınması koşuluyla kişilere, Bakanlıkça belirlenen girişimsel veya cerrahi operasyon hizmetleri sunulabilir.
- e) Endemik veya epidemik salgınlarda ulusal nitelikteki kılavuzlar doğrultusunda kişilerin sağlığının korunmasına yönelik gerekli tıbbi işlemler yürütülebilir.
- f) Giyilebilir teknolojiler ve diğer tıbbi cihazlar ile sağlık hizmeti talep eden kişinin sağlık verileri ölçülebilir ve takip edilebilir.
- g) Hekim tarafından değerlendirilen kişiye, hekimince e-reçete ve e-rapor tanzim edilebilir.

Bölüm 16

SAĞLIK BİLGİ SİSTEMLERİNDE İNSAN KAYNAKLARININ ÖNEMİ

Saffet Ocak

Sağlık hizmetlerinde verilerin doğru, güvenilir, kullanıma uygun, zamanında, yeterli biçimde kayıt altına alınması çok önem arz etmektedir. Eğer veriler doğru, eksiksiz ve gerektiğinde kullanılamıyorsa sağlık hizmeti sunumunda, hasta bakımında esasen işe yaramazlar. Dolayısıyla sağlık bilgi verilerini elektronik ortamda kayıt altına alacak olan personelin bu alanda yeterli eğitim almış olması, bilgi, beceri ve donanıma haiz olması sağlık bilgi sistemlerinin başarısında ön koşuldur. Ayrıca sağlık bilgi sisteminin önemini ve gerekliliğini kavramış personelin varlığı sistemin gelişimine katkılar sağlayacaktır. Diğer bir ifade ile sağlık bilgi sistemi kullanıcıları (sağlık çalışanları, yöneticiler vs.) bilgi teknolojilerini benimsemeleri, iş ve işlemlerinde kullanarak karar vermede yardımcı olan değerli bir varlık olarak görmeleri bu sistemin gelişimini daha da destekleyecektir. Sağlık bilgi sistemlerinde hem veriyi kayıt altına alan hem de veriyi kullanan personel çok önemlidir. Bu önemin gerekçeleri bu bölümün ana konusunu oluşturmaktadır.

Geleneksel sağlık hizmeti döneminden e-sağlık dönemine başarılı bir şekilde geçişle bile sağlık sektörünün veri yoğun özelliği değişmeyecektir (Tan, 2005). Tıp Enstitüsü (1999, 2001) araştırmaları, yüksek kaliteli hasta bakımının her hastanın tıbbi geçmişinin, sağlık durumunun, mevcut tıbbi durumlarının ve tedavi planlarının dikkatli bir şekilde belgelenmesine dayandığını ileri sürmektedir (Glandon ve ark., 2008). Sağlık hizmetlerindeki anahtar bilgiler arasında sistem hasta kayıdır. Hasta kaydı, genel sağlık bakım hizmetlerini planlama, organize etme, sağlama, yönlendirme, alma ve geri ödeme ile ilgili hemen hemen herkesin çalışmalarının merkezinde yer alır (Tan, 2005). Yalnızca hasta kayıtlarının elektronik ortamda kayıt altına alınması sağlık hizmetlerinin etkin ve verimli biçimde sunulması için yeterli değildir. Bilgi teknolojisi tek başına yönetim sorunlarının çözümü içinde yeterli değildir.

Sağlık hizmetlerinde yaşanan değişimi bakım maliyetleri, kanıta dayalı yönetim ve örgütsel değişim olmak üzere üç önemli faktör etkilemektedir (Glandon ve ark., 2008): Sağlık bakım maliyetleri, sağlık harcamaları hız kesmeden büyümeye devam ediyor. Tüm bunları bir perspektife oturtmak için, sağlık harcamalarındaki bu genel değişikliğin gerçek büyüklüğünü belirlemeye ve çözüm aramaya yardımcı olmak doğru, yeterli zamanında

SONUÇ

Sağlık hizmetleri sektöründe, maliyet düşürme, klinik sonuçlar, performansa göre ödeme, rekabet avantajı ve en iyi uygulama için iş modelleri, gelişmiş teknolojinin ve genişletilmiş veri varlıklarının sonucudur. Bilgi ve teknoloji daha zengin ve daha karmaşık hâle geldikçe, sağlık kuruluşlarında veri ve bilgiyi stratejik değer için bilgiye dönüştürmek için sistematik bir yaklaşım ihtiyacı duyacaktır (Cassidy, 2011). Bilgi sistemi insan kaynakları, sağlık sisteminin yüksek kaliteli sağlık verileri ve bilgi kaynaklarına yönelik artan ihtiyacını desteklemek için sürekli olarak iyileştirmeleri, değişiklikler yapmaları ve önemli katkılarda bulunmaları açısından önemlidir. Bilgi sisteminin amacı, doğru bilgiye doğru zamanda erişmeyi ve kullanmayı sağlamak, böylece kurumun doğru kararların doğru düzeyde alınmasına olanak sağlayacaktır. Bilgi sistemi insan kaynakları, bu ihtiyacı karşılamaya en uygun insan kaynaklarıdır.

SAĞLIK BİLGİ SİSTEMLERİNDE HASTA GÜVENLİĞİ

Saffet Ocak

Cansu Güler

1. HASTA GÜVENLİĞİ

Sağlık bakım endüstrisindeki değişiklikler, yeni düzenlemeler, artan rekabet, sigorta kurumlarının ve sağlık hizmet tüketicilerinin baskısı sağlık kurumlarını daha maliyet etkili daha yüksek kaliteli hizmet sunmaya zorlamaktadır. Sağlık kurumlarının hem kaliteli hem de en düşük maliyetle hizmet sunabilmesindeki kritik önem sahip uygulamalardan biri hasta güvenliğidir. Hasta güvenliği, sağlık hizmetlerinde kalitenin en önemli konusu, aynı zamanda nitelikli ve kaliteli hizmetin en önemli göstergelerinden birisi olarak kabul edilmektedir.

Günümüzde, teşhis ve tedavi yöntemlerindeki modern gelişmeler, yeni tıbbi teknolojilerin kullanımının artması ve sağlık hizmetlerinin karmaşıklığı, bakım kalitesi ve hasta güvenliği konusunda ciddi eksikliklere neden olmuştur. Klinik risklerin ve güvenlik olaylarının yüksek prevalansı, sağlık hizmetleri sistemleri için endişeleri ve zorlukları arttırmıştır (Farokhzadian ve ark., 2018). Sağlık hizmetinin karmaşıklığı ve riskleri arttıkça hasta güvenliğini sağlayacak iyi tasarlanmış sistemlere olan ihtiyaç artmaktadır. Bakım hizmetleri sisteminin merkezinde hasta güvenliği sağlanamadığında, sağlık hizmetlerinin başka özelliklerinin değeri kalmayabilir.

Sağlık bakımı komplekstir ve çıktıları pek çok faktörden etkilenmektedir. Her sağlık sistemi içerisinde hastaların zarar görmesi kaçınılmazdır ve hastaların sağlık kuruluşuna her başvurusunda zarar görme olasılığı vardır (Sandars, 2009). Her ne kadar ciddi zararlar önemli maliyetler, morbidite ve mortalite ile sık sık ortaya çıksa da kanıta dayalı hasta güvenliğinin uygulamaya dönüştürülmesi yetersiz kalmaktadır (Rutberg ve ark., 2014). Hastaya zarar veren olumsuz olaylarla sağlık kurumlarında sıklıkla karşılaşılmaktadır (Zadvinskis ve ark., 2018). Sağlık hizmeti sunumunun her aşamasında ve her alanında güvenli olmayan uygulamalar (Albrecht, 2015), tıbbi hatalar, riskler ve tehlikeler söz konusudur. Bu tür olumsuzlukların ortadan kaldırılması ya da azaltılması sağlık kurumları

dukça güçtür (Akalin, 2005; Manav & Karademirler, 2018). Güvenli hasta bakımının artık bilgisayarlı karar desteği olmadan mümkün olamayacağını ileri sürülmektedir (Bates & Gawande, 2003). Örneğin bilgi sistemi aracılığı ile bir hastanın ilaçları arasındaki etkileşim anında belirlenebilmektedir. Artık çok sayıda çalışma, bilgisayar tabanlı karar desteğinin doktorların performansı ve bazı durumlarda hasta sonuçlarının iyileştirilebileceğini gösteriyor (Chertow ve ark., 2001; Johnston ve ark., 1994; Bates ve ark., 2003). Barkodlu hasta kimlik bileklikleri, yanlış hastaya yönelik tıbbi müdahale ya da işlemin gerçekleştirilmesi gibi olumsuz durumları önleyebilmektedir (Chassin & Becher, 2002; Bates ve ark., 2003). Örneğin hastada dekompanasyon meydana geldiğini hemşire gözlemleyerek fark edemeyebilir. Akıllı monitörlerin verdiği sinyaller ile bu durum görülüp hemen müdahale edilir. Hekimlere önemli tetkik sonuçları için uyarı mesajlarının bilgi sistemi aracılığı ile yapılması tıbbi hata oranlarını azaltmaktadır. Hastane bilgi sisteminin tedavinin klinik yollar ile uyum sağlayıp sağlamadığını kontrol etme olanağı sağlaması, hastanın tıbbi bakımını planlamada yardım eden alarm ve uyarı sistemlerinin kullanılması (Ceylan, 2015) tıbbi hata oranlarında düşüşlere yol açmaktadır.

5. Diğer: Hastane enfeksiyonları, yanlış kan tranfüzyonu gibi hayati konular ise diğer tıbbi hataların kapsamındadır. Bilgisayar destekli hekim istemleri ve bilgisayarlı hekim karar destek sistemleri, hekimlerin el yazısını okuyamama başta olmak üzere birçok tıbbi hata kaynağını ortadan kaldırmakta böylece tıbbi hata oranlarında azalmalar görülmektedir (İntepeler & Dursun, 2012). Hekimin teşhis koymadaki en büyük hatalarından birisi laboratuvar kaynaklı hatalardır. Laboratuvar yapılan testlerin kimlik doğrulamasının uygun bir şekilde yapılmaması ve numunelere yanlış hasta barkodu yapıştirilmesi nedeniyle hastaların tetkik sonuçlarının karışması gibi sonuçlar ortaya çıkmaktadır (Grabau, 2011). Hastaların kimlik doğrulamasının bilgi sistemi yardımı ile yapılması da transfüzyon hatalarının önüne geçmede etkili olabilmektedir (Er, 2019). Chaudhry ve arkadaşları (2006), sağlık bilgi sistem ve teknolojilerinin; klinik rehber ve protokollere bağlılığı artırarak ve hastalık süreyanslarını geliştirerek tıbbi hataları azalttıklarını tespit etmişlerdir.

Bölüm 18

SAĞLIK BİLGİ SİSTEMLERİNDE ETİK

Demet Ünalın

Tuğba Baynal Doğan

1. GİRİŞ

Kökeni insanın var oluşuna kadar dayanan, toplumlarda doğru ve yanlış konusunda yol gösterici nitelik taşıyan etik kavramı iş kollarının artması ve kompleks hâle gelmesi ile çalışma ortamlarında oluşan ikilemlerin giderilmesi konusunda önem arz etmektedir. Sağlık hizmetleri; bünyesinde tıbbi, idari ve teknik olmak üzere pek çok meslek kolunu barındırması, acil ve ertelenemez olma özelliği, çalışma alanının insan hayatı oluşu ve ihlaller durumunda telafisi mümkün olmayan sonuçlara sebebiyet vermesi nedeniyle etik ilkelerin önemliliği açıktır. Bu önemlilik gereği meslek gruplarına ait etik ilkeler içerisinde öncü nitelik taşıyan sağlık etiği kavramı kapsamında sağlık hizmet sunumu esnasında uyulması gereken standartlar belirtilmekte ve bu süreçlerde sağlık profesyonellerinin yapması ve yapmaması gereken eylemleri içermektedir.

İçerisinde; yarar sağlama-zarar vermeme, adalet, aydınlatılmış onam ve hasta özerkliğine saygı ilkelerini de içersin sağlık etiği ilkeleri çerçevesinde şekillenen meslek uygulamaları Hipokrat'ın kökenine dayanmakta ve gün geçtikçe ihtiyaçlar dâhilinde revize edilmektedir. Dünya çapında bilgi iletişim teknolojisinde yaşanan hızlı dönüşüm de etik ilkelerin revize edilmesine yönelik yeni bir gerekçeyi de beraberinde getirmiştir. Bilgi iletişim teknolojisinde yaşanan bu gelişme ile birlikte, sağlık hizmetleri de farklı bir dönüşüm sürecine girmiştir. İlk olarak elektronik sağlık kayıtları ile başlayan dijitalleşme süreci, uzaktan sağlık hizmeti sağlayan teletıp teknolojisi, sağlık takibi yapan cihazlar, insan vücuduna yönelik gömülü teknoloji ile hızlı bir şekilde kâğıtsız dijital hastaneler doğmuştur.

Bu dönüşüm ile geçmişte tıbbi, idari ve teknik süreçlerde yaşanan rüşvet, yolsuzluk, çıkar çatışması, nepotizm, mahremiyet ve meslek sırrının ifşası gibi etik ihlallere ilaveten farklı ihlaller de ortaya çıkmıştır. Özellikle sağlık hizmet alıcılarının tüm verilerini depolayan sağlık bilgi sistemlerinde yaşanan etik ihlallerin tüm hastaneyi, hastayı ve tüm top-

Bölüm 19

SAĞLIK BİLGİ SİSTEMLERİNDE KRİTİK BAŞARI FAKTÖRLERİ

Demet Ünalın

Sermed Doğan

Bülent Çizmeci

1. GİRİŞ

Sağlık arzını gerçekleştiren tüm sağlık kurum ve kuruluşları için, hizmet sunumunda teknolojinin kullanımı her geçen gün daha fazla önem kazanmaktadır. Günümüzde bilgi teknolojisi, tıp ve sağlık bakımında gittikçe yaygınlık kazanmakta ve sağlık bakım hizmetleri giderek teknolojiye bağımlı hâle gelmektedir (Işık & Akbolat, 2010). Hastanelerin uluslararası standartlarda kabul edilebilir dijital hastane sınıflandırma sürecine girebilme, aynı zamanda kâğıtsız hastane ya da yeşil hastane gibi kavramlar ile ön plana çıkabilme, klinik ya da yönetsel tüm işlemlerde modern bilgi teknoloji ile destekli alt yapı imkânlarına daha fazla gereksinim duyulması söz konusu olmaya başlanmıştır.

Sağlık problemleri; sadece bir ili, bölgeyi ya da ülkeyi ilgilendiren olumsuzluklardan ibaret değildir. Herhangi bir sağlık sorunu söz konusu olduğunda; tüm ülke etkilenebileceği gibi diğer ülkeler hatta kıtaları aşarak dünyayı etkisi altına alabilecek bir boyuta erişebilir. Bu duruma; çevresel bir sağlık sorunu veya bir salgın örnek olarak gösterilebilir. İnsanlar üzerinde etki yaratacak bu gibi sağlık sorunlarında ülkelerin birlikte mücadele etmesi en etkili yöntemler arasında yer almaktadır. Bu durum ise, sağlık hizmetlerinin küresel bir boyuta sahip olduğunu gösterir. Çevresel sağlık problemleri ya da salgına neden olan hastalıklar, olumsuz küresel sağlık sorunları arasında yer alırken, teknolojiye yaşanan gelişmeler ise küresel sağlık hizmetlerini olumlu yönde etkilemektedir. Nasıl ki; çevresel etmenler ya da salgınlar tüm insanları etkisi altına alabilme potansiyeline sahipse, bilgi teknolojisinde yaşanan gelişmelerden de insanların yararlanması söz konusudur. İnsanlığın faydasına yönelik gerçekleştirilen sağlık alanındaki tüm gelişmeler toplum yararına kullanılacaktır. Sağlığın küresel bir boyuta sahip olması, insanların en son bilgi teknolojisinden yararlanma istekliliğini artırmasının yanı sıra, bilgiye hızlı bir şekilde erişimin sağlanması ile insanların tüm gelişmeleri yakından takip edebilmesine de olanak tanımaktadır. Bilgiye; istenilen ortamda, belirlenmiş yetkiler çerçevesinde hızlı bir şekilde erişim sağlamak,

Bilgi teknolojisi; sağlık hizmet sunumunda, etkili, verimli, güvenilir, doğru ve organize edilmiş bilgilerden yararlanma imkânı sağlamaktadır. Çıktısı insan sağlığı olan sağlık hizmetlerinde bu tür bilgiye ulaşmak hayati önem taşımaktadır.

Teknolojinin yaygınlığı tıp biliminde hızlı bir şekilde gelişim göstermektedir. Sağlık kurumlarında karmaşık ve değişkenlik gösteren hizmetlerin sunulması ayrıca tüm kademelerden edinilen bilgiye ihtiyaç duyulması bakımından bilgi teknoloji yoğun bir şekilde kullanım alanı bulmaktadır. Birimler arası etkili iletişim sağlamada, hizmetin devamlılık esasını göstermesinde, tıbbi hataların engellenmesinde ve bilgiye bütüncül bakılabilmesi gibi birçok alanda bilgi sistemlerinden yararlanılmaktadır. Bu bağlamda; sağlık teknolojisinde yaşanan gelişmelerle birlikte bireylerin, kaliteli sağlık hizmeti alması, yaşam süresinin uzatılması, sağlık düzeyinin daha üst seviyeye çıkarılması için sağlık bilgi sistemlerine yönelik yatırımlar gün geçtikçe artış gösterecektir.

Sağlık sistemlerinin kurulumunun bir ihtiyaç durumundan daha çok zorunluluk hâline gelmesi ile bu sistemlerden en yüksek düzeyde verimin sağlanması temel kriteri oluşturmaktadır. Hem hizmet üretimini gerçekleştiren hem de hizmetten yararlanan kişilerin bu sistemden yüksek düzeyde verim elde edebilmesinde ise sistemi oluşturan tüm parçaların uyum içerisinde işlerlik kazanması gerekmektedir. Bu bağlamda, bilgi sistemlerinin birçok unsurun katılımı ile bir araya gelen yapıyı temsil ettiği söylenebilir. Sağlık bilgi sistemlerinin başarısında ise her bir unsur farklı düzeylerde etki etmektedir. Bunlar sağlık bilgi sistemleri için kritik başarı faktörlerini ifade etmektedir. Sağlık kurumlarında, sağlık bilgi sistemlerinin başarısını etkileyen faktörler genel olarak; bilgi sistemlerinin özünü oluşturan yazılım ve donanım, bunları destekleyecek alt yapı imkanları, karar alımını kolaylaştıracak klinik ve yönetsel karar destek sistemleri, hastaya ait bilgilerin muhafaza edilmesinde güvenlik önlemleri, e-sağlık uygulamaları ile entegrasyon, güncellemeye uygunluk, sistemin kullanımının tüm çalışan tabanına yayılması, sistem kullanıcılarının sürekli eğitimi, bekleme süresini kısaltacak hıza sahip olması, kolay erişime imkan tanınması, bilgileri saklayacak yeterli düzeyde depolama alanının bulunması şeklinde özetlenebilir.

İnsanın en önemli varlığı sağlığıdır. Sağlıklı olmak ve yüksek kalitede bir yaşam sürmek tüm insanların en doğal hakkıdır. Sağlık hizmetlerinden en ücra noktada bulunan bireylerin dahi eşit bir şekilde yararlanması ise ancak sağlık bilgi sistemleri ile mümkün olabilmektedir. Bu durumun sağlanması ise sağlık bilgi sistemlerinin başarısını etkileyecek uygulamaların önceden tespit edilerek sisteme adapte edilmesinden geçmektedir. Bu bağlamda, sağlık hizmetleri sunumunun neredeyse her alanında sağlık bilgi sistemlerinden gün geçtikçe daha fazla yararlanılması beklenilmektedir.

Bölüm 20

SAĞLIK BİLGİ SİSTEMLERİNİN GELECEĞİ VE ENDÜSTRİ 4.0

Abdurrahman Yunus Sarıyıldız

1. GİRİŞ

Dünya nüfusunun artmasıyla birlikte, genel olarak daha iyi bir yaşam kalitesine ve etkili tedavilere ulaşmak için yükselen beklentiler, sağlık hizmetleri üzerinde artan bir baskı oluşturmaktadır. Bu nedenle sağlık hizmetleri; bilim, teknolojiye yeni ve daha gelişmiş çözümler talep ederek dünya çapında en önemli sosyal ve ekonomik zorluklardan biri olmaya devam etmektedir (Aceto ve ark., 2020).

Geleneksel sağlık hizmetleri, büyük nüfusu nedeniyle herkesin ihtiyaçlarını karşılayamaz. Mükemmel altyapıya, ileri teknolojilere rağmen, tıbbi hizmetler herkes için uygun fiyatlı veya erişilebilir değildir. Öte yandan sağlık hizmetleri operasyonları karmaşıktır ve büyük sistem görünürlüğü gerektirir. Sağlık personeli artan iş yükü ile hem sayıca yetersizdir hem de çalışma koşulları itibarıyla zor bir ortamda hizmet sunmaktadır. Ayrıca sağlık hizmetinin doğası gereği yüksek düzeyde bir belirsizlik vardır ve insan yaşamı söz konusu olduğundan riskler yüksektir (Yazıcı, 2014). Tüm bu zor koşullarda akıllı sağlık hizmetleri devreye girmektedir. Ayrıca akıllı sağlık hizmeti hedeflerinden birisi de insanların tıbbi durumları hakkında eğitmek ve sağlıkları hakkında bilgilendirmektir (Aghdam ve ark., 2021). Böylece insanların sağlık okuryazarlığı seviyesi yükseltilerek, sağlık sisteminin üzerindeki yükün bir nebze de olsa azaltılması hedeflenmektedir.

İnsanların yükselen yaşam beklentisi, hem sağlık hizmetleri maliyetlerini hem de sağlık hizmeti ihtiyaçlarını da farklılaştırarak artırmaktadır. Böylece sağlık hizmetleri, yüksek kaliteli hasta bakımı sunma baskısı, tıbbi personel eksikliği, tıbbi hatalar, verimsizlik gibi bir dizi sorunla da mücadele etmek durumundadır. Ayrıca sağlık hizmetlerinin doğası gereği 7 gün 24 saat esasına göre sürdürülen kesintisiz hizmet de sağlık hizmet sunumundaki zorlukları fazlalattırılmaktadır (Yazıcı, 2014).

Aslında sağlık, herhangi bir ulusun genel büyümesi için ana hedeflerden birisidir. Bu hedefe ulaşmak ve vatandaşlarını sağlıklı hâle getirmek gündemi olan bir ülke, vatandaşlarının gerçek zamanlı sağlık izlemesini sağlamayı amaçlamaktadır (Hathaliya ve ark.,

Sağlık bilgi sistemlerinin geleceği konusunu özetlemek gerekirse, özellikle, sağlık hizmetlerini destekleyen endüstriler, Endüstri 4.0'ı benimsemiş ve şimdi Endüstri 5.0'a doğru ilerlemektedir. Böyle bir devrim, modern dijital yüksek teknoloji şirketlerinin iş operasyonlarını nasıl iyileştirdiğini ve değer zinciri boyunca verimliliği nasıl artırdığını yeniden tanımlamaya devam etmektedir. Üretim sistemleri gibi, sağlık hizmeti sunumu da Sağlık 5.0'ın yeni çağına ulaşmak için bir paradigma değişikliğinin şafağındadır. Ortaya çıkan dijital teknolojiler, nanoteknoloji, 5G teknolojileri, drone teknolojisi, blok zinciri, robotik, büyük veri, nesnelerin interneti, yapay zeka ve bulut bilişim dâhil tüm bu gelişmeler Sağlık 5.0'da da kullanılacaktır. Günümüzde kullanımına başlanmış olan ve gelecekte sağlık teknolojilerinde kullanılacak dijital teknolojileri de şu şekilde belirtilmektedir:

- Nanoteknoloji
- Nesnelerin İnterneti
- Yapay Zekâ
- 5 G Teknolojisi
- Drone Teknolojisi
- Büyük Veri
- Bulut Bilişim
- Robotik
- Blok Zinciri (Mbunge ve ark., 2021).

Son olarak, geliştirilen her teknoloji insanlık yararına olduğu zaman belki de en çok faydayı sağlayacaktır. Sağlıklı olmak ve sağlıklı yaşamak, insanlığın vazgeçilmez bir amacı ve hedefidir. Bu çerçevede bilgi teknolojileri ve uygulamaları sağlık hizmetlerinde etkin, verimli ve amacına uygun olarak kullanılmalıdır. Yaşadığımız ya da gelecekte muhtemel yaşayacağımız pandemiler için de yardımcı birer araç olabilecek bu uygulamaların geliştirilmesi ve yaygınlaştırılması önemlidir.

Sağlık bilgi sistemlerinde uygulanan teknolojik yenilikler hayatımızı kolaylaştırırken aynı zamanda hem kurumsal hem de bireysel sorunları da beraberinde getirecektir. Bu teknolojinin getirdiği sorunları da bertaraf edebilecek politikalar geliştirilmelidir. Sağlık için teknolojiyi üretip, sağlıklı günlerde kullanmak hedefiyle bu alandaki yatırımlar teşvik edilmeli ve artırılmalıdır.

İÇİNDEKİLER

ÖN SÖZ	V
GİRİŞ	1
1. İbrani Alfabeti	2
1.1. Ünsüzlerin Özellikleri.....	3
1.1.1. BeGeD-KeFeT Ünsüzleri	6
1.1.2. Sofit Ünsüzler	10
1.1.3. Boğaz Ünsüzleri	10
1.1.4. Labial (Dudaksıl) Ünsüzler	11
1.1.5. Sibilant (Dil ve Diş) Ünsüzler	11
1.1.6. Alef ve Ayn Harflerinin Özellikleri	11
1.1.7. Ses Benzerliği Olan Ünsüzler	12
1.1.8. Yazı Benzerliği Olan Ünsüzler	12
1.1.9. İbrani Alfabetinde Bulunmayan Harflerin İfadesi	14
1.2. Ünlüler	14
1.2.1. Tam Ünlüler.....	14
1.2.2. Yarım Ünlüler	15
1.3. Harekeler.....	16
1.3.1. Dageş.....	16
1.3.2. Şeva/Şva.....	17
1.3.3. Meteg.....	19
1.3.4. Mappik	20
1.3.5. Makkef	20
2. İbranice Belirtilik: Artikel.....	20
2.1. Artikelin Fonetik Değişim Kuralları.....	22
2.2. Artikelin Kullanım Yerleri.....	24
3. İsim Kategorisi	26
3.1. İsimlerin Cinsi	26
3.1.1. Dişil İsimler	26
3.1.2. Eril İsimler	31

3.2. İsmiñ Çoğul Durumu.....	36
3.2.1. Dışıl İsimlerin Çoğul Durumu.....	36
3.2.2. Eril Kelimelerin Çoğul Durumu.....	38
3.2.3. İsmiñ Çift Durumu.....	39
4. Vav Bağlacı	40
5. İbranice İyelik Kategorisi	43
5.1. İyeliliğın İfade Şekilleri	44
5.2. İyelik Zamir Sonlukları ve İsimlerle Birlikte Kullanımı.....	46
5.3. İyeliliğın Smihutla İfadesi	49
6. Segolat İsimler	52
7. Sıfatlar.....	69
7.1. Sıfat Kalıpları	71
7.2. Fiillerin Şimdiki Zaman Çatılarının Sıfat Olarak Kullanılması	74
7.3. Sıfatları Oluşturan Son Ekler	76
7.4. Sıfatın Dereceleri.....	77
8. Zamirler	80
8.1. Kişi /Şahıs Zamirleri	81
8.2. İşaret Zamirleri.....	81
8.3. Cümlede İsim, Sıfat, Zamir Uyumu.....	84
8.4. Soru Zamirleri.....	86
9. Edatlar.....	88
9.1. Birleşik Yazılan Edatlar	88
9.1.1. ך Edatının Fonetik Özellikleri.....	88
9.1.2. ך Edatının Fonetik Özellikleri.....	92
9.1.3. ך Edatının Fonetik Özellikleri.....	96
9.1.4. ך/ך Edatının Fonetik Özellikleri	99
9.2. Ayrı Yazılan Edatlar.....	102
9.2.1. ך Edatı	103
9.2.2. ך Edatı	104
9.2.3. ך Edatı	105
9.2.4. ך Edatı.....	106
9.2.5. ך Edatı.....	106
9.2.6. ך Edatı	107
9.2.7. ך Edatı.....	108
9.2.8. ך Edatı	109
9.2.9. ך Edatı.....	109
9.2.10. ך Edatı	110
9.2.11. ך Edatı	111
9.2.12. ך Edatı	112
9.2.13. ך Edatı	112

9.2.14. בגלל Edatı.....	113
9.2.15. בלי Edatı.....	114
9.2.16. ל Edatı	115
9.2.17. ליד Edatı.....	115
9.2.18. בעד Edatı	116
9.2.19. מול Edatı	117
10. Zarf (Belirteç).....	118
10.1. Soru Zarfları.....	118
10.2. Zaman Zarfları	119
10.3. Sıklık Zarfları.....	120
10.4. Mekân Zarfları.....	122
10.5. Niteleme/Durum/Hâl Zarfları.....	122
10.6. Derece Zarfları.....	123
10.7. Zarfların Oluşum Şekilleri	124
11. Sayılar	126
11.1. Onlar Basamağındaki Sayıların İfadesi	129
11.2. Yüzler Basamağındaki Sayıların İfadesi	132
11.3. Binler Basamağındaki Sayıların İfadesi.....	133
12. İbranice Cümle Yapısı: İsim ve Fiil Cümlesi	134
12.1. Fiil Cümleleri.....	134
12.2. İsim Cümleleri	135
12.3. Olumsuz Cümleler: אל Kullanımı	136
12.4. Cümlede ו ve וי Kullanımı	137
12.5. Soru Cümleleri.....	148
12.5.1. Soru Sözcükleriyle Oluşan Soru Cümleleri	148
12.5.2. וה - “Meğer”, “Acaba” Sözcükleri Kullanılarak Oluşturulan Soru Cümleleri.....	151
12.5.3. Tonlama Yardımıyla Soru Cümlelerinin Oluşumu	153
TERİMLER LİSTESİ.....	155
KAYNAKLAR.....	159

İÇİNDEKİLER

ÖN SÖZ	İX
--------------	----

Bölüm 1 MÜHENDİSLİKTE MALZEME BİLGİSİNİN ÖNEMİ VE KULLANILAN MALZEMELER

1.1. Giriş	1
1.2. Mühendislik Malzemelerinin Sınıflandırılması	2

Bölüm 2 MALZEMELERİN TEMEL YAPISI

2.1. Atomik Yapı	5
2.2. Atomlar Arası Bağlar ve Bağ Yapıları	8
2.2.1. Metalik Bağ	9
2.2.2. Kovalent Bağ	11
2.2.3. İyonik Bağ	12
2.2.4. Zayıf Bağlar	13
2.2.5. Birincil (Kuvvetli) Bağların Karşılaştırılması	13

Bölüm 3 KATI MALZEMELERİN TEMEL YAPISI

3.1. Giriş	15
3.2. Kristalik Yapının Oluşumu ve Birim Hücre	18
3.3. Atomik Doluluk Faktörü ve Koordinasyon Sayısı	23
3.4. Metalik Malzemelerin Teorik Yoğunluk Değerlerinin Hesaplanması	27
3.5. Kristalik Kafes Sistemlerinde Nokta, Düzlem ve Doğrultuların Gösterilmesi	29
3.6. İzotropi, Anizotropi, Polimorfizm	32
3.7. Katı Malzemelerde Bulunan Hatalar	33
3.7.1. Noktasal Hatalar	34
3.7.2. Çizgisel Hatalar	36

3.7.3. Yüzeysel Hatalar	38
3.7.4. Hacimsel Hatalar	39

Bölüm 4 **MALZEMELERİN TEMEL ÖZELLİKLERİ**

4.1. Giriş	41
4.2. Elektriksel Özellikler.....	42
4.3. Isıl Özellikler	43
4.4. Manyetik Özellikler	51
4.5. Optik Özellikler	52
4.6. Yoğunluk ve Özgül Özellikler.....	52

Bölüm 5 **MALZEMELERDE ŞEKİL DEĞİŞTİRME VE** **MEKANİK ÖZELLİKLER**

5.1. Elastik Şekil Değiştirme	64
5.2. Plastik Şekil Değiştirme	70
5.3. Mekanik Özellikler ve Mekanik Deneyler	74
5.3.1. Çekme Deneyi.....	74
5.3.2. Çekme Deneyinden Elde Edilen Sonuçlar ve Bunların	
Değerlendirilmesi	77
5.4. Sıcaklığın Mekanik Özelliklere Etkisi.....	92
5.5. Gerçek Gerilme-Gerçek Birim Şekil Değiştirme	94
5.6. Hiperelastik Rezilyans (Geri Yaylanma).....	102
5.7. Basma Deneyi.....	107
5.8. Eğme Deneyi.....	110
5.9. Burulma Deneyi.....	113
5.10. Sertlik Ölçme Yöntemleri	115
5.10.1. Statik Sertlik Ölçme Yöntemleri	116
5.10.2. Dinamik Sertlik Ölçme Yöntemleri.....	128
5.10.3. Diğer Sertlik Ölçme Yöntemleri	130
5.11. Dinamik Özellikler ve Dinamik Deneyler	131
5.11.1. Darbe Deneyleri	133
5.11.2. Yorulma Deneyi	141

Bölüm 6 **FAZ (DENGE) DİYAGRAMLARI**

6.1. Temel Kavramlar ve Giriş	153
6.2. Birbiri İçinde Sıvı ve Katı Hâlde Tamamen Eriyebilen	
İkili Denge Diyagramları	155

6.2.1. Birbirini Tamamen Eriten İkili Alaşımların Mekanik ve Fiziksel Özellikleri	161
6.3. Katı Hâlde Birbiri İçinde Kısmen Eriyen Sistemlerin İkili Faz Diyagramları.....	162
6.3.1. Katı Hâlde Birbiri İçinde Kısmen Eriyen İkili Alaşımların Mekanik ve Fiziksel Özellikleri	164
6.4. İzotermal Reaksiyonlar	165
6.5 Gibbs Faz Kuralı	166
6.6. Demir-Karbon İkili Faz Diyagramı	167
6.6.1. Demir Sementit İkili Faz Diyagramında Fazların Oluşumu, Mikroyapılar ve Özellikleri	170
6.6.2. Fe-C Sisteminde Çelikler Kısmında Mevcut Fazlar, Fazların Oranları ve Kimyasal Kompozisyonlarının Bulunması.....	174

Bölüm 7

ÇELİK MALZEMELERE UYGULANAN ISIL İŞLEMLER

7.1. Giriş ve Genel Kavramlar	179
7.2. Tavlama Isıl İşlemleri.....	181
7.2.1. Çeliklere Uygulanan Tavlama İşlemleri.....	181
7.2.2. Tüm Metalik Malzemelere Uygulanan Tavlama İşlemleri.....	185
7.3. Sertleştirme Isıl İşlemi.....	190
7.3.1. Kademeli Sertleştirme İşlemleri	195
7.3.2. Temperleme Isıl İşlemi.....	198
7.3.3. Islah İşlemi	199
7.4. Yüzey Sertleştirme İşlemleri.....	199
7.4.1. Alevle ve İndüksiyonla Yüzey Sertleştirme	200
7.4.2. Sementasyon İşlemi.....	202
7.4.3. Sıvı ve Gaz Ortamda Karbürizasyon	203
7.4.4. Nitrürleme İşlemi	203
7.5. Çeliklerde Sertleştirilebilirlik Kapasitesinin Belirlenmesi	205

Bölüm 8

METALİK MALZEMELER

8.1. Giriş	211
8.2. Demir Esaslı Mühendislik Malzemeleri.....	211
8.2.1. Sade Karbonlu Çelikler	212
8.2.2. Alaşımli Çelikler	215
8.2.3. Kullanım Yerine ve Özelliklerine Göre Alaşımli Çeliklerin Sınıflandırılması	218
8.2.4. Dökme Demirler.....	223
8.3. Demir Dışı Metalik Malzemeler	229
8.3.1. Alüminyum Alaşımları.....	231
8.3.2. Alüminyum Alaşımlarının Kısa Gösterimleri	236

8.4. Bakır ve Alaşımları.....	241
8.4.1. Bakır Alaşımları	241
8.4.2. Bakır Alaşımlarının Kısa Gösterimleri.....	243
8.5. Magnezyum Alaşımları	244
8.5.1. Magnezyum Alaşımlarının Sınıflandırılması ve Kısa Gösterimleri	245
8.6. Titanyum ve Titanyum Alaşımları.....	246

Bölüm 9 POLİMERLER

9.1. Giriş	249
9.2. Polimerlerin Yapısı.....	252
9.3. Plastik Malzemelerin Sınıflandırılması	257
9.3.1. Termoplastikler	257
9.3.2. Termoset Plastikler.....	260
9.4. Plastiklere İlave Edilen Katkı Maddeleri.....	262
9.5. Plastiklerin Şekillendirilme Yöntemleri	263
9.6. Plastiklerin Mekanik Özellikleri	266
9.7. Elastomerler	270

Bölüm 10 KOMPOZİT MALZEMELER

10.1. Giriş	273
10.2. Polimer Matrisli Kompozitler	276
10.2.1. Güçlendirici Olarak Kullanılan Fiber Malzemeleri ve Özellikleri	277
10.2.2. Fiberlerin Boyutları ve Kullanım Şekilleri.....	280
10.2.3. Kompozit Malzemelerin Özellikleri.....	282
10.2.4. Fiber Takviyeli Kompozitlerin Hasar Şartları	287
10.2.5. Kompozitlerin Kullanım Alanları.....	290
KAYNAKÇA	291
DİZİN.....	293

YAZARLAR LİSTESİ	iii
------------------------	-----

BÖLÜM 1

TİCARİ GEMİLERİN SINIFLANDIRILMASI

Özet	1
1. Giriş	3
2. Veri ve Yöntem	4
2.1. Ticari Literatürde Varolan Gemiler ve Özellikleri	4
2.1.1. Yük Taşıyan Gemiler	4
2.1.3. Kombine Yük ve Yolcu Taşıyan Gemiler.....	38
2.1.4. Açık Deniz Gemileri	43
2.1.5. Balıkçılık Gemileri	50
2.1.6. Özel Hizmet/Servis Gemileri.....	54
2.1.7. Römorkör Gemiler	70
2.2. Yöntem	72
2.2.1. Ticari gemilerin yapısal ve fonksiyonel niteliklerinin karşılaştırılması.....	72
2.2.2. Ticari gemilerin nicelik olarak karşılaştırılması	73
3. Bulgular	73
3.1. Ticari gemilerin Sınıflandırılması ve Birbirleriyle Olan İlişkileri	73
3.2. Ticari Gemilerin Yapılan Sınıflandırmaya Göre Toplam Sayıları	75
4. Sonuç	81
Kaynakça.....	81

BÖLÜM 2

GEMİ MAKİNELERİ İŞLETME MÜHENDİSLİĞİNDE ETİK

Özet	85
1. Giriş	86
2. Etik Nedir?	89

3. Mühendislikte Etik	91
4. Gemi Makineleri İşletme Mühendisliğinde Etik	93
5. Sonuç.....	97
Kaynakça.....	99

BÖLÜM 3

GEMİ MAKİNELERİNİN TARİHÇESİ

Özet	101
Abstract	102
1. Giriş.....	102
2. Tahrik Sistemleri	104
2.1. Kürek	107
2.2. Rüzgâr ve Yelkenli	107
2.3. Buhar Motoru.....	110
2.4. Buhar Türbinleri	115
2.5. Gaz Türbinleri	118
2.6. İçten Yanmalı Motorlar	125
2.7. Gemi Dizel Motorları.....	128
2.8. Dizel-Elektrik Tahrik Sistemi	137
2.9. Turbo Elektrik.....	138
2.10. Gaz Yakıtlı, Çift Yakıtlı veya Üç Yakıtlı Tahrik.....	138
2.11. Hibrit Deniz Tahrik Sistemleri.....	139
2.11.1. Kombine Dizel veya Gaz (Combined Diesel or Gas-CODOG)	140
2.11.2. Kombine Dizel ve Gaz (Combined Diesel and Gas-CODAG).....	140
2.11.3. Kombine Dizel-Elektrik ve Dizel (Combined Diesel-Electric and Diesel- CODLAD)	142
2.11.4. Kombine Dizel-Elektrik ve Gaz (Combined Diesel-Electric and Gas- CODLAG)	142
2.11.5. Kombine Dizel ve Dizel (Combined Diesel and Diesel-CODAD) ..	143
2.11.6. Kombine Buhar ve Gaz (Combined Steam and Gas-COSAG).....	144
2.11.7. Kombine Gaz veya Gaz (Combined Gas or Gas – COGOG)	144
2.11.8. Kombine Gaz ve Gaz (Combined Gas and Gas-COGAG)	145
2.11.9. Kombine Gaz ve Buhar (Combined Gas and Steam-COGAS).....	146
2.11.10. Kombine Nükleer ve Buhar Tahrik Sistemi (Combined Nuclear and Steam Propulsion-CONAS)	147
2.12. Entegre Elektrikli Tahrik Sistemi.....	147
2.13. Yeşil Gemiler: Güneş Enerjisi.....	150
2.14. Hidrojen.....	151
2.15. Nükleer Tahrik	152
2.16. Yakıt Hücreleri	153

2.17. Stirling Motoru	154
2.18. Su Jeti Tahrik	154
2.19. Alternatif Yakıtlar	154
2.19.1. LNG	154
2.19.2. LPG	156
2.19.3. Biyodizel	156
2.19.4. Metanol	156
2.19.5. Amonyak	156
3. Tahrik Araçları.....	157
3.1. Kürekler	157
3.2. Yelken	157
3.3. Kanatlı çark	157
3.4. Caterpillar/Tırtıl	158
3.5. Pervane	158
3.6. Jet Pompa.....	159
3.7. Azipodlar	159
3.8. Dinamik Konumlandırma Sistemi (DPS)	160
3.9. Çok Yönlü Tahrik - Voith-Schneider Siklorotor	160
3.10. Salınan Kanatçıklar	161
4. Deniz Tahrikindeki Son Gelişmeler.....	161
4.1. Yakıt Tasarruflu Pervane	161
4.2. İnsansız Gemiler	161
4.3. SkySails-Modern Yelkenli	161
4.4. Motor, Gövde ve Pervane Tasarımları	162
4.5. Verimli Tahrik-Triple-E İki Pervaneli Sistem	162
4.6. Deniz Taşımacılığında Yeni Eğilimler	164
5. Sonuç.....	164
Kaynakça.....	165

BÖLÜM 4

GEMİ MAKİNELERİ TERMODİNAMIĞI

Özet	173
1. Giriş.....	174
2. Gemi Makinelerinin Çevrimleri.....	175
2.1. Buhar türbinlerinin termodinamik çevrimi	176
2.2. Gaz Türbinlerinin Termodinamik Çevrimi	178
2.3. Dizel Makinelerin Termodinamik Çevrimi	180
3. Termodinamik Yöntem.....	182

4. Çevrimlerin Termodinamik Analizleri	185
4.1. Buhar Türbinlerinin Termodinamik Analizi	185
4.2. Gaz Türbinlerinin Termodinamik Analizi	186
4.3. Dizel makinelerin termodinamik analizi	189
5. Bulgular ve Tartışma	192
5.1. Buhar türbinleri	193
5.2. Gaz Türbinleri	196
5.3. Dizel Makineler	198
6. Sonuç	204
Kaynakça	205

BÖLÜM 5

GEMİLERDE ENERJİ EKONOMİSİ VE VERİMLİLİĞİ

Özet	207
1. Giriş	208
2. Yöntem	216
3. Gemi Ana Makine Sistemi	218
3.1. Sistem Analizi	220
3.2. Sonuçlar ve Tartışma	221
4. Atık Isı Geri Kazanımı Sistemi	223
4.1. Sistem Analizi	225
4.2. Sonuçlar ve Tartışma	226
5. Sonuç	229
Kaynakça	231

BÖLÜM 6

GEMİ MAKİNE ARIZALARININ DENİZ KAZALARINDAKİ ROLÜ

Özet	235
1. Giriş	236
2. Gemi Ana Makine Arızaları	237
2.1. Arızaların Boyutları ve Arıza Tespitinin Önemi	237
2.2. Dizel Motorlarda Arıza Tür ve Sebepleri	241
3. Deniz Kazası Raporlarında Geçen Gemi Makine Arızaları	245
4. Sonuç	252
Kaynakça	252

BÖLÜM 7

GEMİ MAKİNELERİNDE OPERASYONEL BAKIM

Özet	257
Abstract	258
1. Giriş	258
2. BAKIM STRATEJİLERİ	259
3. GEMİLERDE BAKIM VE ONARIM	261
3.1. Gemi Bakım-Onarımında Konvansiyonel Yöntemler	262
3.1.1. Gemi Bakımında Havuzlama ve İmal Usulleri	263
3.2. Gemi Bakım-Onarımında Kestirimci Bakım Teknikleri.....	263
3.2.1. Kestirimci Bakım	264
3.2.2. Titreşim Analizi	270
3.2.3. Sinyal (İşaret) Görüntüleme Teknikleri.....	273
3.3. Örnek Mekanik Kusur Tipleri.....	275
3.3.1. Balanssızlık	275
3.3.2. Yağsızlık ve Rulman Etkileri	276
3.3.3. Eksen Kaçıklığı	277
3.3.4. Mekanik Gevşeklik.....	280
4. Sonuç	282
Kaynakça	283

BÖLÜM 8

GEMİ KÖKENLİ HAVA VE DENİZ KİRLİLİĞİ

Özet	287
1. Giriş	288
2. Hava Kirliliği	288
2.1. Hava Emisyon Türleri ve Etkileri.....	289
2.1.1. Karbonmonoksit (CO)	290
2.1.2. Karbondioksit (CO ₂)	290
2.1.3. Hidrokarbonlar (HC)	290
2.1.4. Azot oksitler (NO _x)	291
2.1.5. Kükürt Oksitler (SO _x)	292
2.1.6. İs ve Partiküller	292
3. Emisyon Azaltıcı Tedbirler	293
3.1. EGR (Egzoz Gazı Resirkülasyonu).....	293
3.2. Seçici Katalitik İndirgeme (SCR-) Sistemi	293
3.3. Scrubber (Yıkayıcı).....	294
3.3.1. Scrubber (Yıkayıcı) Sisteminin Çalışma Prensibi	294
3.3.2. Deniz Yıkayıcılarının Sınıflandırılması	294

4. Deniz Kirliliği	295
4.1. Gemilerden Kaynaklanan Deniz Kirliliği Kaynakları	296
4.1.1. Balast Suyu	297
4.1.2. Petrol Sızıntıları	297
4.1.3. Atık Su	297
4.1.4. Katı Atık	298
4.1.5. Sintine Suyu	299
4.1.6. Zehirli Boya	300
4.1.7. Gemi Kazaları	300
4.1.8. Terminal Yükleme Sırasında Kazayla Dökülme	300
5. Deniz Kirliliğinin Etkileri	301
5.1. Kirliliğin Deniz Ekosistemi Üzerindeki Etkisi	301
5.2. Balıkçılık Endüstrisi	303
5.3. Turizm Sektörü	304
5.4. Deniz Kirliliğinin Halk Sağlığına Etkisi	304
6. Uluslararası Anlaşmalar ve Düzenlemeler	305
7. Sonuç	309
Kaynakça	310

BÖLÜM 9

GEMİLERDE EMİSYON AZALTMA YÖNTEM VE TEKNOLOJİLERİ

Özet	313
1. Giriş	314
2. Emisyon Çeşitleri	314
2.1. Azot Oksit (NO _x)	315
2.2. Kükürt Oksit (SO _x)	315
2.3. Karbondioksit (CO ₂)	316
2.4. Karbonmonoksit (CO)	318
2.5. Partikül Madde (PM)	319
2.6. Hidrokarbonlar (HC)	319
2.7. Uçucu Organik Bileşikler (VOC)	320
3. Gemi Kaynaklı Emisyon Miktarı	320
4. Gemi Kaynaklı Hava Kirliliği ile İlgili Regülasyonlar	323
5. Gemi Kaynaklı Emisyon Azaltma Yöntem ve Teknolojileri	325
5.1. Enerji Verimliliği Sağlayan Yöntemler	326
5.1.1. Balb Optimizasyonu	326
5.1.2. Tekne Boyaları	327
5.1.3. Havayla Yağlama	327

5.1.4.	Hava Durumuna Göre Rota Belirleme	328
5.1.5.	Pervane Optimizasyonu	328
5.1.6.	Rüzgâr Gücü	329
5.1.7.	Atık Isı Geri Kazanımı	329
5.1.8.	Hız Düşürme	330
5.1.9.	Güçlendirme (Retrofit)	331
5.1.10.	Hız Kontrollü Pompalar ve Fanlar	331
5.1.11.	Güneş Enerjisi	332
5.1.12.	Ortak Hat Yöntemi	333
5.2.	SO _x İndirgeme Yöntemleri	333
5.2.1.	Scrubber	333
5.2.2.	Düşük Sülfürlü Yakıt	333
5.3.	NO _x İndirgeme Yöntemleri	334
5.3.1.	Seçici Katalitik Redüksiyon (SCR)	334
Kaynakça		336

BÖLÜM 10

GEMİ DİZEL MOTORLARINDA KULLANILAN YAKITLAR VE YAĞLAR

Özet	339
1. Deniz Taşımacılığında Kullanılan Yakıtlar	340
1.1. Gemi Dizel Motorlarının Yakıt Parametreleri	342
1.2. Dizel Motorlarda Yanma Süreci	344
1.3. Alternatif Yakıtlar	345
1.3.1. Sıvılaştırılmış doğal gaz (LNG)	346
1.3.2. Amonyak	347
1.3.3. Biyoyakıt	347
1.3.4. Metanol	348
1.3.5. Alternatif Yakıtların Karşılaştırması	349
2. Gemi Dizel Motorlarında Kullanılan Yağlar	350
2.1. Yağlama Yağının Özellikleri.....	353
2.2. Madeni Yağlarda Kullanılan Katkı Maddeleri	354
2.3. Yağların Bozulma Sebepleri	355
3. Sonuç	356
Kaynakça	356

BÖLÜM 11

DÜŞÜK SÜLFÜRLÜ DENİZ YAKITLARININ İKİ ZAMANLI GEMİ ANA MAKİNELERİ ÜZERİNDEKİ TRİBOLOJİK VE KORUZİF ETKİLERİ

Özet	361
1. Giriş	362
2. Tipik Rafineri Süreçleri ve Yakıttaki Sülfür Oranı	365
3. Yeni Deniz Yakıtları ve Gemilerde Yakıt Sistemleri	368
4. Düşük Sülfürlü Yakıtların İki Zamanlı Gemi Ana Makineleri Üzerindeki Tribolojik ve Koruzif Etkileri.....	370
4.1. Yağlama	370
4.2. Aşınma.....	373
4.3. Korozyon	378
4.4. Makine Aşınmasının İzlenmesi ve Değerlendirilmesi	381
5. Sonuç.....	384
Kaynakça.....	385

BÖLÜM 12

DENİZ ARAÇLARINDA GÜÇ SİSTEM MİMARİLERİ, GÜÇ KALİTESİ VE YÖNETMELİKLER

Özet	387
1. Giriş	389
2. Deniz Araçlarının Sınıflandırılması	392
2.1. Yolcu Gemileri	392
2.1.1. Yolcu Feribotları	392
2.1.2. Seyahat Gemileri	393
2.2. Ticari Gemi	394
2.2.1. Açık Deniz Gemileri	394
2.2.2. Kargo Gemileri.....	396
2.2.3. Tanker Gemileri	397
2.2.4. Özel Gemiler	397
2.3. Askerî Gemiler	399
2.3.1. Donanma Gemisi	399
2.3.2. Sahil Güvenlik Gemisi	399
3. AC Güç Şebekeleri: Üretim, Dağıtım ve Yükler.....	401
3.1. Enerji Üretimi	401
3.2. Güç Dağıtımı	402
3.2.1. Elektrik Dağıtım Panosu	402
3.2.2. Transformatör	405

3.3.	Yükler	405
4.	Gemilerde Kullanılan Güç Dönüştürücü Teknolojileri	405
4.1.	Tristörlü Doğrultucu (SKD) İçeren DC Motor Sürücüleri.....	406
4.2.	Akım Kaynaklı Evirici (AKE)	408
4.3.	Doğrudan Frekans Dönüştürücü ve Matris Dönüştürücü.....	409
4.4.	Gerilim Kaynaklı Evirici (GKE)	411
4.5.	Aktif Ön Uç (AÖU) Dönüştürücü.....	412
4.6.	Diğer Dönüştürücü Topolojileri	412
4.7.	Tek Fazlı Sistemler	413
5.	Güç Elektroniği Sistemlerinin Kontrol Mimarileri	414
6.	Koruma Sistemi.....	415
6.1.	Koruma Gereksinimleri	416
6.2.	Koruma İlkesi.....	416
7.	Gemi Şebekelerinde Güç Kalitesi ve Standartlar.....	418
7.1.	Gemi Şebekelerinde Güç Kalitesi Sorunları	418
7.2.	Gemi Şebekesinin Güç Kalitesi Analizi.....	418
7.3.	Güç Kalitesi Düzenlemeleri ve Standartları	420
7.3.1.	IEEE 1662-2008, Tasarım Kılavuzu ve Güç Elektroniğinin Gemilerdeki Güç Sistemlerinde Uygulanması	420
7.3.2.	IEEE 1826-2012 Standardı: Anma değeri 100 kW'ın Üzerinde Olan Bölgesel Elektrik Dağıtım Sistemlerinde Güç elektroniği Standartları.....	421
7.3.3.	IEEE 1709-2010, Gemilerde 1 kV-35 kV arasında DC Orta Gerilim Güç Sistemleri için Önerilen Uygulama	422
7.3.4.	IEC/ISO/IEEE 80005-1&2, Yüksek Gerilim Kıyı Bağlantısı (HVSC) Sistemleri – Genel Gereksinimler, İzleme ve Kontrol için Veri İletişimi	423
7.3.5.	IEEE 45-2002, Gemilerde Elektrik Tesisatları için Önerilen Uygulama	424
7.3.6.	Amerikan Denizcilik Bürosu (ABS), Elektrik Güç Sistemlerinde Harmoniklerin Kontrolü Üzerine Kılavuz Notlar ..	425
7.3.7.	Diğer Bazı Önemli Belgeler	427
7.4.	Diğer Konular	428
7.4.1.	Yüksek Frekanslı (2-150 kHz) Harmonikler	428
7.4.2.	Ara Harmonikler (Interharmonics)	430
7.4.3.	Gemilerde DC Şebeke Kullanımı	430
8.	Sonuç.....	432
	Kaynakça.....	433

BÖLÜM 13

GEMİ MAKİNELERİ İŞLETME MÜHENDİSLİĞİ (GMİM) EĞİTİMİ VE OTOMATİK KONTROL SİSTEMLERİ

Özet	437
1. Giriş	439
2. Tarihsel Gelişim.....	442
2.1. İlk Kontrol Sistemi Örnekleri	442
2.2. Analog-Dijital Kontrol	443
2.3. Bilgi İşlemeye Dayalı Kontrol ve Endüstri 4.0	444
2.4. Otonom Sistemler	446
3. GMİM Eğitim Hedefleri ve Otomatik Kontrol Sistemleri	448
4. Otomatik Kontrol Yöntemleri	450
4.1. Açık ve Kapalı Çevrim Kontrol Sistemleri.....	450
4.2. Dijital veya Sayısal Kontrol	452
4.3. Oransal (Proportional, “P”) Kontrol Yöntemi	454
4.4. İntegral (Integrative, “I”) Kontrol Yöntemi	455
4.5. Türevsel (Derivative, “D”) Kontrol Yöntemi	457
4.6. PID (“P” + “I” + “D”) Kontrol Yöntemi	460
4.7. Bulanık Mantık Kontrol Yöntemi	462
4.8. Makine Öğrenmesi	465
5. Otomatik Kontrol Elemanları.....	467
5.1. Dönüştürücüler (Transducers)	467
5.2. Aktüatörler (Actuators)	467
5.3. Algılayıcılar (Sensors)	468
5.4. Kontrol Ediciler	471
6. Gemi Makine Dairesi Kontrol Sistemi Örnekleri	472
6.1. Düşük Sıcaklık Soğutma Suyu Sıcaklık Kontrol Sistemi	472
6.2. Ana Makine Viskozite Kontrol Sistemi.....	474
7. Sonuç.....	475
8. Bilgilendirme.....	476
Kaynakça.....	476

BÖLÜM 14

MAKİNE DAİRESİ SİMÜLATÖRÜ İLE DENİZCİLİK EĞİTİMLERİ

Özet	479
1. Giriş.....	481
1.1. Hızlı Değişen Teknoloji ve MDS ile Eğitimlere İlgili.....	483
1.2. MDS ile Eğitim Zorunluluğu.....	483

1.3.	MDS Eğitimlerine Talep: Sektördeki Büyüme.....	484
1.4.	MDS Eğitimlerine Talep: Deniz Kazalarının Azaltılması	486
2.	Makine Sistemlerinin Modellemesi, Simülasyon ve Simülatör.....	487
2.1.	Modelleme	487
2.1.1.	Animasyon.....	488
2.1.2.	Simülasyon	489
2.1.3.	Simülatör ve Eğitim	490
3.	Makine Dairesi Simülatörü (MDS).....	491
3.1.	Genel Giriş: MDS ve Eğitim.....	491
3.2.	MDS ve IMO Regülasyonları.....	492
3.3.	MDS Çeşitleri ve Sınıflandırma	494
3.3.1.	Kategori 1 - Tam Kapsamlı.....	494
3.3.2.	Kategori 2 - Çoklu Görev.....	494
3.3.3.	Kategori 3 - Sınırlı	494
3.3.4.	Kategori 4 - Özel	496
3.3.5.	Kategori 5 veya "F" - Ortama Aşinalık ve 3-Boyutlu Ortam Simülasyonu	496
3.4.	MDS ile Eğitim Konfigürasyonları	497

Bölüm 1

TİCARİ GEMİLERİN SINIFLANDIRILMASI

Volkan Varışlı¹

Özet

Dünya gemi taşımacılığı endüstrisi, anakaralar arasında taşımacılığın en eski örneği olarak doğmuştur. Taşınan ürün miktarını saklayan unsur olarak gemiler, nicelikleriyle daima bu endüstride en büyük değişkeni temsil etmektedir. Gemi taşımacılığı ve gemi üretimi, global kriz dönemlerinde bile durağan kalamayan, sadece yavaşlayabilen ya da küçülebilen fakat daima işlevsel, ani ivmelenebilen dinamik bir yapıya sahiptir. Yeni kaynaklar ya da sermaye-meta ilişkilerinin konumlanış biçimine göre, yeniden şekillenebilen gemi üretimi ve alt sanayi dalları da düşünüldüğünde, bu alan maddi anlamda da dünyanın en zengin endüstrisi konumundadır. Bu düzeyde büyük bir endüstri, elbette harcanan enerji/yakıt ya da atmosfere salınan karbon endeksi dışında, dünyanın gerek sermaye akışı, gerekse ticari mal akışı üzerinden, her türlü ölçümleme, araştırma-geliştirme, simülasyon ve değerlendirme imkânını da büyük ölçeklerle ortaya koyabilen bir deneysel alandır. Diğer yandan, üretilen her gemi, bir öncekinin güçlü ve zayıf yönlerine bağlı olarak bir yeni gemi ihtiyacının doğumuna da neden olmaktadır. Bu nedenle bazı gemi türlerinin sayıları, global arz-talep ölçüğünde, dengeli bir artış gösteriyor olsa da yeni türlerin ortaya çıkışı ve sayısal yükselişi şaşırtıcı düzeyde hızlı gerçekleşebilmektedir. Bunun sonucu olarak varolan evrilme hızı, ekonomik değerlendirmelerin ötesinde, her türlü teknik, hukuki, eğitsel literatür değişimi açısından geri kalmaktadır. Bazı malzemelerin, uygulama ve üretim süreçleri açısından, klas ve bayrak kurallarının yeniden düzenlenmesine gerek doğurmakla birlikte, ortaya çıkan imkânsızlıklardan doğan kabullerle, bazı gemilerin ticari alan ve kapsamlarının dışına taşıdığı bilin-

¹ Girne Üniversitesi Gemi Makineleri İşletme Mühendisliği Deniz Ulaştırma İşletme Mühendisliği

4. Sonuç

Gemi türleri açısından, literatürün tanımladığı sınıflandırmaların, gerek işlev gerekse yeni yakıt, makine ve işletim teknolojilerine bağlı olarak geçmiş bileşenler dışına taşıdığı görülmektedir. En yakın zamanda literatüre eklenmesi gereken LNG mavnaları gibi gemilerin sayıca çoğalma olasılığı ya da literatürü en başından ikiye ayırabilecek olan otonom gemilerin varlığı düşünüldüğünde, bu çalışmada var olan yeni tür sınıflandırmasının şimdilik ihtiyacı karşılayabilecek nitelikte olduğu görülmekle birlikte, literatüre önerilen “canlı yolcu gemileri” ana sınıfı ve “açık deniz hizmet gemisi” alt sınıfları söz konusudur. Diğer yandan, sayısal verilerin incelenmesiyle, gemi türlerinde; bütün gezi teknelerinin, ticaret yapan süperyatlar ya da charter tekneleri dâhil hesap dışı tutulması hâlinde ve kayıtdışı balıkçılık teknelerinin sayısı bilinemediği bir durumda dahi, yapılmakta olan hesaplamayla güncel gemi sayısının, 179.228 adet olarak hesaplanabilmesi mümkün olmuştur. Bu durum, dünya üzerinde 2020 rakamlarına göre kaynaklarda görülen 119.999 adetlik gemi sayısının çok üzerinde bir rakama işaret etmektedir ve geçen iki yıllık sürede böyle bir üretimin gerçekleşmiş olması mümkün değildir (Equasis, 2020). Buna bağlı olarak gelişmiş ülkelerin ve Uluslararası Denizcilik Örgütü’nün (IMO) olası düşük karbon endeksi hedeflerinin beklenen sonuçları doğurmaması riski söz konusudur. Öte yandan RO-RO gemilerinin, konteyner gemileriyle benzer makinelere sahip olup sayıca 2,63 kat daha fazla olmalarına karşın, konteyner gemilerinin en yüksek karbon endeksine sahip gemiler olarak ifade ediliyor olması, yeniden değerlendirmeye açık görünmektedir. Yine aynı biçimde konteyner ve okyanus linerlerinin yüksek yakıt harcamına bağlı olarak en yüksek karbon endeksinde ifade ediliyor olmaları, rafineri görevi yapan 449 adet FPSO ve FPO’ların gemi sınıfında sayılmamasının çelişkinsini ortaya koymaktadır. Ticari gemi sayılarının daha doğru anlaşılabilmesi için, başta bayrak devletleri nezdinde kayıt dışılığın önlenmesi ve sayısal değerlendirmelerin, planlamalarla birlikte düzenli yapılmasına ihtiyaç olduğu anlaşılmaktadır.

Bölüm 2

GEMİ MAKİNELERİ İŞLETME MÜHENDİSLİĞİNDE ETİK

Kadir Çiçek¹, Ahmet Yaşar Canca²

Özet

Deniz yolu taşımacılığının emniyetli ve sürdürülebilir bir taşımacılık türü olmasını sağlayacak en önemli faktörlerden birisi nitelikli insan gücü eğitimi ve istihdamıdır. Öyle ki deniz yolu taşımacılığı gibi ticari ve operasyonel faaliyetleri uluslararası denizcilik kuralları ile düzenlenen, teknolojik gelişmelerden önemli derecede etkilenen, çok uluslu ve çok kültürlü çalışma ortamına sahip bir taşımacılık türünde istihdam edilecek insan gücünün sahip olması beklenen becerileri geniş bir yelpazede değerlendirebilmek gün geçtikçe zorunlu hâle gelmektedir. İlgili beceriler içerisinde *meslek etiği bilgi ve becerisine sahip olmak* günümüzde önemi daha da arttan bir beceri olarak karşımıza çıkmaktadır. İnsan faktörünün oldukça önemli bir yere sahip olduğu deniz yolu taşımacılığında istihdam edilen insan gücünün sahip olacakları mesleki etik bilgi ve becerisi yürütülen faaliyetlerin denizcilik organizasyonu paydaşlarının önceden belirlenmiş olan hedeflerine ulaşmasına katkı sağlayacak en önemli etkenlerden birisidir. Öyle ki farklı kültürel değerlere sahip insanların davranışlarını çok uluslu ve kültürlü çalışma ortamlarında da uygulamak istemesi herkes için çok ciddi sorunlar yaratmaktadır. Yerel olarak oluşturulmuş hedeflerin tüm denizcilik eko sisteminde yararlı olabilmesi için deniz insanlarının kapsamlı bir değerler bütününe sahip olmaları gerekmektedir. Bu çerçevede, bu bölüm içerisinde Gemi Makineleri İşletme Mühendisliği açısından mühendislik etiği kavramı kapsamlı bir şekilde ele alınmıştır.

¹ İstanbul Teknik Üniversitesi Denizcilik Fakültesi Gemi Makineleri İşletme Mühendisliği Bölümü

² İnce Denizcilik ve Ticaret A.Ş., TMMOB Gemi Makineleri İşletme Mühendisleri Odası (GEMİMO)

- Sorumluluk verme mazereti altında kendi sorumluluk ve görevlerini başkalarına aktarması: önemli ekipmanların bakımları veya planlanması sırasında yetkili mühendislerin iş bölgesinde olmaması ve ciddi arıza ve kazalarda şahsen olaya dâhil olmamaları.
- İş planlamasında ve performans değerlendirilmelerinde adil olmaması ve bu sebeple hakkaniyet olmadığı duygusunun personel üzerinde oluşmasına neden olmaları.
- Gemide olan eksiklik ve olayları şirkete doğru aktarmamaları.
- Arıza ve eksikliklerin “uygunsuzluk” olarak yazılmasından çekinmeleri.
- Olayları kişiselleştirilerek sonuçları üzerinden hesaplar yapıp eksik ya da farklı raporlamaları.
- Emniyet tedbirlerine kendisi uygulamadığı için, personele de uygulatamaması.

Sonuç olarak mesleki etik değerlere sahip olmayan bir gemi makineleri işletme mühendisinin sorumluluklarını yerine getirirken yaratabileceği sorunlar dikkate alındığında meslek etiği bilgi ve becerinin mühendisler açısından ne kadar önemli olduğu net bir şekilde görülmektedir. Buna bağlı olarak denizcilik eğitimi veren kurumların etik prensiplerin en üst seviyede kazanımı sağlayacak bir eğitim müfredatına ve uygulama çerçevesine sahip olmaları beklenmektedir. Ayrıca gemi armatörleri ve gemi işletmeciliği firmalarında ise istihdam etmiş oldukları nitelikli iş gücünün sahip olduğu mesleki etik bilgi ve becerilerini geliştirebilecek aksiyonları geliştirerek uygulamalarının yukarı da ifade edilen sorunların önüne geçilebilmesi için katkı sağlayacağı değerlendirilmektedir.

Bölüm 3

GEMİ MAKİNELERİNİN TARİHÇESİ

Tolga Berkay Şirin¹, Alper Kılıç²

Özet

Deniz tahrik gücünün ilk formu küreklerdi. Daha sonra yelkenler ortaya çıktı ve devamında kürekler ana kullanımda rol alamadılar. Bununla birlikte hem yelkenli hem de kürekli kadirgalar erken dönem denizciliğinde ve savaşlarında etkin bir rol oynadı. Deniz tahrikinde endüstriyel anlamda kullanılacak ilk mekanik sistem ise 19. yüzyılın başlarında tasarlanan deniz buhar motoruydu. 20. yüzyılda şimdiye kadar denizcilik sektörünü domine edecek olan iki zamanlı veya dört zamanlı dizel motorlar, dıştan takma motorlar ve daha hızlı gemilerde gaz türbini motorları buluşları ortaya konuldu. Bunlara ek olarak 1950'lerde denenilen ve ticari olarak başarısız olan deniz nükleer reaktörleri (savaş gemilerini ve buz kırıcıları itmek için buhar ürettiyordu), pil sistemlerine sahip elektrik motorları, alternatif yakıt türlerini kullanan motorlar (sıvılaştırılmış doğal gaz, biyodizel, amonyak gibi), daha sessiz çalışan Stirling motorları gibi birçok deniz tahrik türü kullanıldı. İçten yanmalı motorlardan veya güç türbinlerinden daha düşük toplam verimlilik nedeniyle birçok mühendislik tasarımı sivil deniz uygulamalarında kullanılmadı. Dahası, günümüzde güneş enerjisi, rüzgâr enerjisi, yakıt hücreleri, elektrikli sistemler, kombine sistemler gibi yenilikçi ve çevreci sistemler de geliştirilmekte ve kullanılmaktadır. Bu çalışmada geçmişten günümüze kullanılan deniz tahrik sistemleri ve bunların hangi aşamalardan geçtiği, ilk uygulamaları, mucitleri ve yeniliklerinden bahsedilmektedir.

Turgay Köroğlu¹

Özet

Gemilerin buldukları ortamda kendi kendini idame ettirebilen yüzer yapılar olmasından dolayı hareketinin sağlanması adına geminin direncini kırıp harekete geçebilmesi için bir güç ihtiyacı duyduğu bilinmektedir. Bu gücün sağlanması ise gemi ana makineleri sayesinde gerçekleştirilir. Geçmişten günümüze, gemi makinesi olarak kullanılan birçok sistem üretilmiştir. Sanayi devriminin getirmiş olduğu buhar makineleri ile başlayan hareketlilik daha sonra buhar türbinleri, gaz türbinleri ve dizel makineler ile devam ettirilmiştir. Günümüzde ticaret gemilerinin %85'inin ana makine olarak dizel makineleri kullandığı gözlemlenmektedir. Gemi makinelerinin önemini bu verilerden çıkarmak mümkündür. Ancak gemi makinelerinin tasarımı, üretimi, işletilmesi, bakım ve onarımlarının yapılabilmesi bu makinelerin temelleri bilinmeden gerçekleştirilemez. Bu sebeple, gemi makinelerinin temelini oluşturan temel termodinamik çevrimleri, günümüzdeki uygulamalarına ve bahsi geçen süreçlere ışık tutacağından bu bölümde termodinamik açıdan gemi makinelerinin incelenmesi gerçekleştirilecektir.

Anahtar Kelimeler: Termodinamik, Dizel, Buhar Türbini, Gaz Türbini, Verim.

Abstract

It is known that since ships are self-sustaining floating structures in their environment, they need a power to overcome the resistance of the hull in order to ensure its movement. This power is provided by the ship's main engines. From

¹ Bandırma Onyedü Eylül Üniversitesi Denizcilik Fakültesi Gemi İnşaatı ve Gemi Makineleri Mühendisliği Bölümü Gemi Hidromekaniği Anabilim Dalı

leştirilmiştir. Bunun neticesinde tüm sistemler için yapılan analizlerde tersinmezliklerin verimi düşürdüğü buna karşılık iş çıkışından sonra atılan ısıların arttığı tespit edilmiştir. Bununla birlikte gaz akışkan kullanan sistemlerin daha yüksek sıcaklıklarda çalışabildiği ve bu sayede verimlerinin daha yüksek olabileceği söylenebilir. Her sistemin geliştirmeye açık yönlerinin bulunduğu ve yakıtı daha verimli kullanmak için hem sistem içi hem de sistem dışı eklemeler yapılarak verimlerin daha da artabileceği yorumlanmıştır. Özellikle gaz akışkanlı sistemlerin egzoz sıcaklıklarının yüksekliği, buradan çıkan egzoz gazlarının çeşitli yöntemlerle daha fazla iş üretmek için kullanılabilmesi şeklinde bir sonuç çıkarılmasını sağlamıştır. Bu sebeple gaz türbini sisteminin arkasından bir buhar türbini sistemi yerleştirilmesinin uygun olabileceği, dizel makinenin ise arkasına eklenecek bir turboşarj sisteminin enerjinin daha verimli kullanılabilmesi ortaya çıkmıştır. Hatta bu sistemler eklendiğinde bile yeniden yapılacak analizler neticesinde sistemlere örneğin organik akışkanlı Rankine çevrimleri gibi farklı yaklaşımlarla daha da fazla güç elde edilebileceği söylenebilir.

Enerji analizleri gemi makinelerinde her ne kadar değerli bilgiler sunsa da sistemdeki tersinmezliklerin boyutları ve konumları hakkında çok bilgi veremediği göz önünde bulundurulmalıdır. Daha detaylı sistem incelemesi için termodinamiğin birinci ve ikinci kanununun birlikte kullanılarak oluşturulan ekserji analizlerinin gerçekleştirilmesi sistem hakkında işletme sorumlusuna veya tasarım ve yenileme aşamasında tasarımcıya çok daha değerli bilgiler sunacağı bilinmelidir.

Bölüm 5

GEMİLERDE ENERJİ EKONOMİSİ VE VERİMLİLİĞİ

Turgay Köroğlu¹

Özet

Gemilerin direncinin kırılıp sevk edilebilmesi için gerekli enerji ihtiyacını karşılamak adına enerji sistemleri kullanılmaktadır. Enerji sistemlerinin etkin kullanılmaması yakıt sarfiyatının yüksek olmasına ve bu nedenle işletme maliyetlerinin artmasına ve yaydığı emisyonlar neticesinde çevreye karşı zarara sebep olur. Enerjinin ekonomik kullanılması verimi artırırken bahsi geçen sorunların da azalmasını sağlar. Bu bölüme, enerji ekonomisi adına alınan bir dizi yöntemler ve bunların verimi nasıl etkilediğinin gösterilmesinin ardından hem inşa edilmiş hem de yeni inşa edilecek gemiler için uygun olan yaklaşımlar incelenecektir. Enerjinin daha verimli kullanılması adına gerekli olan önlemlerin değerlendirmeleri gerçekleştirilecektir. Değerlendirme sonucunda sistemlerdeki uygulama potansiyelleri tespit edilecek, bunların nasıl iyileştirileceği üzerine yorumlar verilecektir. Özellikle hem yeni inşa hem de üretilmiş gemilerde, atık ısı geri kazanımı sistemleri üzerine daha detaylı çalışmaların gösterilecektir. Enerjiyi inceleyen bilim dalı olan termodinamikten faydalanılarak bir enerjinin iş yapabilme potansiyeli olan ekserji üzerinde durulacaktır. Ekserji analizlerinin ne olduğu, nasıl uygulandığı ve uygulanma alanları üzerine bilgiler verildikten sonra, ekserji analizi sonucunda elde edilen ekserji yıkımının anlamı ve ekserji analizlerinin bir sistemi geliştirmede nasıl kullanılabileceği de gösterilecektir.

Anahtar Kelimeler: Gemi Güç Sistemleri, Enerji Verimi, Yakıt Tüketimi, Emisyon Azaltma, Ekserji.

¹ Bandırma Onyedü Eylül Üniversitesi Denizcilik Fakültesi Gemi İnşaatı ve Gemi Makineleri Mühendisliği Bölümü Gemi Hidromekaniği Anabilim Dalı

ve verimin artırılmasına değil, aynı zamanda bu yöntemlerin uygulanabilir olmasına da önem veren yapıdadır. Bu yüzden ekserji analizleri uygulanarak sistemin veriminin artırılması için nerelere odaklanılması gerektiği tespit edilirken bunu için gerekli olabilecek yatırımların da hesabının tutulması fizibilite açısından çok büyük önem arz eder.

Son olarak belirtmek gerekir ki sistemler artık tek bir nokta üzerinden değil yaşam döngüleri üzerinden değerlendirildiklerinde, parça imalatından sökülümünün sonuna kadar çevreye olan tüm etkileri analiz edildiği gibi enerji analizlerinin yapıp ona göre yöntemlerin uygulanması daha iyi sonuçlar doğurabilir.

Bölüm 6

GEMİ MAKİNE ARIZALARININ DENİZ KAZALARINDAKİ ROLÜ

Alper Kılıç¹ Tanju Kurtuluş²

Özet

Ticari denizcilikte yük ve yolcu taşımacılığında kullanılan gemiler günümüzde ana ve yardımcı makinelerle donatılarak işlevlerini gerçekleştirmektedir. Gemilerin ana makinelerin görevi geminin hareketini sağlayan pervaneyi çevirmek iken gemideki diğer tüm yardımcı makineler başta ana makine olmak üzere yük, yolcu ve mürettebatın çok çeşitli ihtiyaçlarını karşılamak amacıyla gemilere donatılmaktadır. Büyük miktarda yük ve yolcu taşıma kapasitesine sahip gemiler çeşitli faktörler sebebiyle zaman zaman deniz kazalarına konu olmaktadır. Dünyanın farklı coğrafyalarında devletlerin yetki sahalarında gerçekleşen deniz kazaları teknik olarak soruşturulmakta ve kaza raporları paylaşılmaktadır. Bu çalışmada çok sayıdaki kaza raporu içerisinde gemi makineleri arızalarıyla ilişkili kazalar arızalarla incelenerek gemi makinelerinin deniz kazaları üzerindeki etkisi araştırılmıştır.

Anahtar Kelimeler: Gemi Makineleri, Deniz Kazaları, Makine Arızaları, Operasyonel Kusurlar.

The Role of Marine Engine Failures in Marine Accidents

Abstract

Ships used in freight and passenger transportation in commercial maritime sector are equipped with main and auxiliary engines and machinery and perform

¹ Bandırma Onyedi Eylül Üniversitesi Denizcilik Fakültesi Gemi Makineleri İşletme Mühendisliği Bölümü Gemi Makineleri İşletme Mühendisliği Anabilim Dalı

² İstanbul Teknik Üniversitesi Denizcilik Fakültesi Gemi Makineleri İşletme Mühendisliği Bölümü Gemi Makineleri İşletme Mühendisliği Anabilim Dalı

Taşınan yük ve geminin türü, geminin boyutu ve yaşı, geminin standart altı bulunması gibi değişkenler ile gemilerin gövde ve makine arızaları arasında ilişki mevcuttur (Kilic ve Akdamar, 2020).

Gemi dizel motorları operasyonları en yaygın arızaların enjeksiyon sistemi, enjektörler, enjeksiyon pompaları, yakıt sistemi, hız kontrol cihazları, yağlama sistemi, zamanlama mekanizması ve ayrıca soğutma sistemi arızaları olduğunu göstermektedir (Krakowski, 2014).

4. Sonuç

Dünyada denizcilik sektörünün gelişmiş olduğu tüm bölge ve ülkelerde meydana gelen deniz kazaları ile ilgili kapsamlı ve detaylı kaza raporları tutulmakta ve yayınlanmaktadır. Bu kazaların sebep ve sonuçlarına bakıldığında deniz kazalarının oluşumunda gemi makineleri arızalarının önemli bir kaza faktörü olduğu görülmektedir.

Deniz kazaları ile ilgili gerçekleştirilen kaza raporları incelendiğinde, gemi makineleri ile ilişkili kazaların başta yangın ve makine dairesinin su alması olmak üzere, personel yaralanması, makine arızası, başka bir gemi ile çatışma, herhangi bir kıyı yapısıyla gerçekleşen çatma, geminin alabora olması, geminin karaya oturması ve/veya batması gibi çok çeşitli deniz kazalarıyla ilişkili olduğu anlaşılmaktadır.

Gemi makineleri teknolojisinin gün geçtikçe ilerlemesine rağmen deniz kazalarında gemi makineleri kaynaklı kaza oranlarının ve bu kazaların zarar boyutlarının ciddiyetini korumaktadır. Her ne kadar kaza türleri arasında makine arızaları ana bir bileşen olarak ele alınmakta ise de malzeme ve tasarım faktörü dışındaki diğer tüm arızaların sebebinin makinelerin uygun olmayan işletim, bakım, tutum ve onarım süreçleriyle ilişkilendirilebilecek insan hataları kaynaklı olduğu değerlendirilmektedir.

Bölüm 7

GEMİ MAKİNELERİNDE OPERASYONEL BAKIM

S. Seçkin Erol¹

Özet

Yüzer taşıtların uçsuz bucaksız okyanuslar üzerinde seyir ettiği düşünülürken, okyanusun ortasında arızalanıp plansız duruşa maruz kalması elbette ki hiç de istenecek bir durum değildir. Tıpkı bir uçağın motoru arızalandığında havada kalma şansı olmadığı gibi; bir geminin de okyanusun ortasında arızalanıp durma gibi bir lüksü bulunmamaktadır. Hele ki onarılamayan bir arızayla karşı karşıya kalındığında okyanusun ortasında yetkili servis ya da yedek parça temin etmek hiç de kolay olmayacaktır. Bu gibi istenmeyen durumların önüne geçebilmek için konvansiyonel bir yöntem olan periyodik bakım teknikleri uygulanmaktadır. Periyodik bakım; belirli zaman aralıkları ile tekrar edilen ve gerekli olup olmadığına bakılmaksızın yapılan kalıplaşmış uygulamalar olduğundan; genellikle zaman, işçilik ve ilgili maddi kayıplarla sonuçlanmaktadır. Modernist bir yaklaşımla öngörü yöntemi olan kestirimci bakım ise sadece bakım gereksinimi doğduğunda bunu tespit edip gerekli önlemlerin alınmasını ve düzeltici uygulamaların yapılmasını sağlayarak makine sağlığının nominal fonksiyonlarını sürdürülebilir hâle getirilmesini sağlar ve birçok yönden ciddi tasarruflar sağlar. Nominal fonksiyonlarını koruyan makine veya mekanik ekipman çalışmak için daha az enerji harcar ve daha uzun ömürlü olur. Bu çalışmada; gemilerde makine sağlığı yönetimi ve teşhis, tedavi teknikleri üzerinde durulmuştur. Konvansiyonel bakımın yanında modern kestirimci bakım uygulamalarının yaygınlaştırılması için önemi vurgulanmıştır.

¹ Bandırma Onyedü Eylül Üniversitesi Denizcilik Fakültesi Gemi İnşaatı ve Gemi Makineleri Mühendisliği Bölümü Gemi Makineleri Anabilim Dalı

analiz gibi farklı kestirimci bakım tekniklerinin beraber kullanılması da özellikle eş zamanlı oluşabilecek arızaların önüne geçilmesinde bu tekniğin verimliliğini arttıracaktır.

Bölüm 8

GEMİ KÖKENLİ HAVA VE DENİZ KİRLİLİĞİ

Arif Savaş¹, Tolga Berkay Şirin², Levent Bilgili³

Özet

Gemiler, büyük taşıma kapasiteleriyle dünya ticaretinin vazgeçilmez unsurlarıdır. Öte yandan, bu büyük faydalarına rağmen hem hava hem de deniz kirliliği konularında üzerinde ciddiyle durulması gereken etkiler üretirler. Gemi kökenli hava ve deniz kirliliği, çok çeşitli kökenlere sahip olmakla birlikte çoğunlukla gemi yakıtları ve gemilerde üretilen atıklarla ilişkilidir. Bu kirleticilerin miktar ve etki tespiti, çevresel sorunların aşılması için son derece önemlidir. Bu çalışmada, gemi kökenli kirleticilerin tanıtımı yapılarak bu kirleticilerin veya bunların etkilerinin azaltılması için yapılması gereken işlemler hakkında bilgi verilerek bu bağlamda gelecekte yapılması uygun görülen eylemlerden bahsedilmiştir.

Anahtar Kelimeler: Deniz Kirliliği, Hava Kirliliği, MARPOL, IMO.

Abstract

Ships are indispensable elements of world trade with their large carrying capacities. On the other hand, despite their great benefits, ships cause serious effects on both air and sea pollution. Ship-source air pollution and marine pollution has a wide variety of origins, but is mostly associated with ship fuels and ship waste. Determination of the amount and effect of these pollutants is extremely important for overcoming environmental problems. In this study, ship-source pollutants are introduced and information is given about the actions to be taken to reduce these pollutants or their effects, and in this context, the actions that are deemed appropriate to be taken in the future are mentioned.

GEMİLERDE EMİSYON AZALTMA YÖNTEM VE TEKNOLOJİLERİ

Mustafa Nuran¹, Nergis Özispa²

Özet

Deniz taşımacılığı, ölçek ekonomisi kapsamında taşınan birim yükte en düşük karbondioksit salımına sebep olan, en yeşil taşımacılık türü olmasına rağmen, küresel (CO₂) karbondioksit salımının %3,3'üne, azot oksit (NO_x) salımının %2'sine, sülfür oksit (SO_x) salımının %11'ine ve küresel sera gazı salımlarının %4'üne sebep olmaktadır (Tokuş ve Burak, 2021). Uluslararası deniz taşımacılığı gemi kaynaklı emisyonları ise dünyadaki toplam emisyon miktarının %2,5'ini oluşturmaktadır. Gemi baca gazı kaynaklı emisyonların her yıl özellikle Avrupa, Doğu Asya ve Güney Asya kıyılarında yaşayan (Corbett vd., 2007), yaklaşık 60.000 kişinin akciğer kanseri gibi hastalıklar sebebiyle erken ölümüne sebep olduğu (Anenberg vd., 2019) literatürde ifade edilmektedir. Bu sebeple gemi kaynaklı emisyon miktarlarının azaltılması hayati önem taşımaktadır. Bu çalışmada gemi kaynaklı emisyon çeşitleri ve azaltma yöntem/teknolojileri incelenmektedir.

Anahtar Kelimeler: Emisyon, Enerji Verimliliği, Deniz Taşımacılığı, Gemi Makine Teknolojileri.

Abstract

Despite being the most environmentally friendly form of transportation, due to economies of scale, maritime transportation nonetheless contributes 3.3% to

Bölüm 10

GEMİ DİZEL MOTORLARINDA KULLANILAN YAKITLAR VE YAĞLAR

Arif Savaş¹, Alper Kılıç²

Özet

Gemilerin gereksinim duyduğu büyük miktarlardaki güç ihtiyacı gemi dizel motorları ile sağlanmaktadır. Gemi dizel motorlarında yakıtın kimyasal olarak yanmasıyla güç elde edilmektedir. Motor silindirlerinde yakıtın uygun şekilde yanması hem güç üretimi hem de çevre ve meydana gelebilecek arıza ve bakım onarım hususları açısından önem arz etmektedir. Yanma süreci motorun tasarım ve parametrelerinin yanında yakıt parametrelerine de bağlıdır. Gemilerde kullanılan farklı tür yakıtların parametreleri standartlar ile belirlenmektedir. Bunun yanı sıra dizel motorlarda kullanılan yağlama yağları da hayati bir öneme sahiptir. Değişen teknoloji ve beraberinde zorunlu kılınan çevresel kurallar çerçevesinde gemi dizel motorlarında kullanılan yakıt ve yağların standart ve özellikleri de güncellenmektedir. Fosil yakıt rezervlerindeki azalma ve çevre kurallarına uyum sağlanması amacıyla geleneksel yakıtlara alternatif olarak farklı yakıt türleri önerilmektedir. Bu çalışmada günümüz koşullarında gemi dizel motorlarında kullanılan yakıt ve yağlama yağı özellikleri ve sistemlerinin yanı sıra bu alanlarda yapılan güncel çalışmalar ve gelişmeler tespit edilmiştir.

Anahtar Kelimeler: Gemi Dizel Motorları, Deniz Yakıtları, Yağlama Yağı.

Abstract

The large amount of power required by ships is provided by marine diesel engines. In marine diesel engines, power is obtained by chemical combustion of

¹ Bandırma Onyedü Eylül Üniversitesi Denizcilik Fakültesi Gemi Makineleri İşletme Mühendisliği Bölümü

² Bandırma Onyedü Eylül Üniversitesi Denizcilik Fakültesi Gemi Makineleri İşletme Mühendisliği Bölümü

bozulmasına sebep olur. Yağ filtresi, yağın içindeki parçacıkların bir kısmını temizlese bile zaman içinde yeterli olamaz. Bu nedenle araç kataloğunda tavsiye edilen sürelerde motor yağının yenilenmesi gerekir.

3. Sonuç

Gemi dizel motorlarının sorunsuz çalışabilmeleri ancak uygun standartlarda ve motora özgü yağ ve yakıt kullanımıyla mümkündür. Bir gemi dizel motorunun ekonomik açıdan en önemli harcama kalemlerini yağ ve yakıt oluşturmaktadır.

Yapmış olduğumuz araştırma neticesinde, gemi dizel motorları yakıtlarına ilişkin yapılan çalışmaların motor yağını konu alan çalışmalara nazaran çok daha fazla olduğu görülmüştür. Bunun nedeni gemilerin yakıt harcamasının yağlama yağlarına oranla çok daha fazla olması ve ekonomik yönünün ağır basmasıdır. Gemi kaynaklı egzoz emisyonlarına getirilen sınırlamalar, gemilerde enerji verimliliği anlamında yakıt tüketiminin azaltılması ve düşük emisyonlu yakıtların alternatif olarak sunulmasını beraberinde getirmektedir.

Özellikle çevre konusunda yeni getirilen kuralların yakıt standartlarıyla paralel şekilde ilerlemesi kaçınılmazdır. Ancak mevcut ticari gemi filosu göz önüne alındığında, alternatif yakıtlara yönelimin yakıt maliyetleri ve uygulanabilirlik anlamında sınırlı kaldığı, düşük kükürtlü yakıt kullanımı dışında önemli bir gelişme mevcut olmadığı sonucuna varılmıştır.

Bölüm 11

DÜŞÜK SÜLFÜRLÜ DENİZ YAKITLARININ İKİ ZAMANLI GEMİ ANA MAKİNELERİ ÜZERİNDEKİ TRİBOLOJİK VE KORUZİF ETKİLERİ

Sabri Alkan¹

Özet

Deniz taşımacılığı, Uluslararası Denizcilik Örgütü'nün (IMO) deniz yakıtlarındaki sülfür içeriğini sınırlayan Sülfür Üst Sınırı 2020 (Sulphur Cap 2020) yönetmeliğini yürürlüğe koymasıyla birlikte önemli bir zorlukla karşı karşıya kalmıştır. IMO, bu yönetmelikle ağır yakıttaki sülfür içeriğini sınırlandırarak gemilerin ana ve yardımcı makinelerinden ortaya çıkan egzoz gazındaki sülfür emisyonunu azaltmayı amaçlamıştır. Ancak, gerek gemilerde düşük sülfür içerikli yeni ağır yakıtların kullanılması, gerekse de bu yakıtların kullanımına bağlı olarak fiziksel ve kimyasal özellikleri değişen yeni yağlayıcıların devreye girmesi, motor tribolojisini, ekipman gereksinimlerini, nakliye ekonomisini ve gemi ana ve yardımcı makinelerinin işletme prosedürlerini etkilemiştir. Denizcilik endüstrisini etkileyen altı önemli emisyon (NO_x, CO₂, CO, HC, PM ve SO_x) olmasına rağmen, bu bölüm düşük sülfür içerikli deniz yakıtlarının iki zamanlı gemi ana makineleri üzerindeki tribolojik ve koruzif etkileri üzerine odaklanmıştır.

Anahtar Kelimeler: Gemi Dizel Makineleri, Düşük Sülfürlü Ağır Yakıt, Katalitik Partikül, Aşınma, Korozyon.

Abstract

Shipping has faced a significant challenge as International Maritime Organization (IMO) enacted the Sulfur Cap 2020 regulation, which limits the sulfur

her makinenin kendine özgü tasarım ve işletme koşulları olduğunu unutmadan makine üreticilerinin prosedürlerini ve gerçek işletme tecrübelerini göz önünde bulundurmaları gerekmektedir.

Bölüm 12

DENİZ ARAÇLARINDA GÜÇ SİSTEM MİMARİLERİ, GÜÇ KALİTESİ VE YÖNETMELİKLER

Fuat Kılıç¹, Serkan Sezen²

Özet

Denizcilik endüstrisinin, enerji verimliliğine, daha yüksek hıza, daha düşük işletme maliyetine, daha düşük çevresel etkiye, daha fazla manevra kabiliyetine, güvenilirliğe ve emniyete sahip, daha büyük her türlü gemiye yönelik talebi hızla artmaktadır. Bu nedenlerden dolayı deniz tahrik sistemleri, elektrikli tahrik kullanımına ve sevk gücü sistemlerinin entegrasyonuna yönelik önemli ve hızlı bir gelişimden geçmektedir. Her çeşit deniz aracı için çok esnek, sağlam ve kompakt güç sistemlerine olan ihtiyaç her geçen gün artmaktadır. Bu ihtiyaç, güç elektroniği teknolojisinde meydana gelen son gelişmeler ile karşılanmaktadır. Bununla birlikte, IGBT, Mosfet gibi anahtarlama elemanları, dönüştürücü topolojileri ve kontrolünde sürmekte olan gelişmeler, deniz elektrik güç sistemlerinde devam etmekte olan gelişmeler için temel teşkil etmektedir. Güç elektroniği malzeme ve cihaz fiyatlarının 1990'lerden bu yana önemli ölçüde azalması bu donanımların enerji endüstrisi uygulamalarında hızlı büyümeyi körüklemiştir. Güç elektroniği teknolojisi, gemilerdeki veya karadaki elektrik enerjisi endüstrisinde çok büyük değişimlere neden olmuştur ve hâlâ gelecekte iyileştirmeler sağlama potansiyeline sahiptir. Günümüzde birçok deniz taşıtı, güç elektroniği teknolojilerini fazlaca kullanan elektrikli tahrik sistemlerine sahiptir. Dünyanın önde gelen donanmaları, sunduğu sayısız faydalar nedeniyle güç elektroniği esaslı elektrikli tahrik sistemlerine yönelmiştir. Bahsi geçen sistemlerle ilgili olarak bu kitap bölümünde şu konulara değinilmektedir;

¹ Balıkesir Üniversitesi Mühendislik Fakültesi Elektrik-Elektronik Mühendisliği Bölümü Elektrik Makinaları ve Güç Elektroniği Ana Bilim Dalı

²⁰ Kocaeli Üniversitesi Uzunçiftlik Nuh Çimento Meslek Yüksekokulu Elektrik ve Enerji Bölümü

elektrik şebekesinin bir parçası olacaktır, bu durum yeni zorlukları beraberinde getirecektir.

GEMİ MAKİNELERİ İŞLETME MÜHENDİSLİĞİ (GMIM) EĞİTİMİ VE OTOMATİK KONTROL SİSTEMLERİ

Ismail Cicek¹

Özet

Gemi Makineleri İşletme Mühendisliği (GMIM) lisans eğitimlerinde Otomatik Kontrol Sistemleri IMO STCW sözleşmesi kapsamında zorunlu derslerdendir. Aynı zamanda yeni nesil gemi sistemlerindeki teknoloji uygulamalarının neredeyse tamamı, performans artırımı veya daha iyi bir verim sağlama, insan hatalarının ve kazaların minimize edilmesi, işletim maliyetlerinin azaltılması ve benzeri amaçlarla otomatik kontrol sistemleri, hatta ileri seviye bilgiye dayalı kontrol sistemleri içermektedir. İnsansız makine dairesi örnekleri görülmeye başlanmış, otonom sistemlerin uygulanacağı, bununla ilgili tasarım ve işletim kurallarının yayınlanacağı tarihler çok uzak görülmemelidir.

Bu gelişmelere ayak uydurabilecek eğitim sistemi otomatik kontrol sistemi odaklı eğitim ve öğretimlerin müfredat programlarındaki adaptasyon ile mümkündür. Ancak, otomatik kontrol sistemlerinde kullanılan metot ve yöntemlerin modern sistemlerin tasarım ve işletim bakımından anlaşılması için hâlen büyük oranda geçerli olduğu söylenebilir. Dersin amacı otomatik kontrol sistemleri ile ve bu sistemleri oluşturan birimler ile ilgili temel bilgi edinilmesini sağlamak, gemilerdeki otomatik kontrol uygulamaları hakkında bilgi ve deneyim kazandırmak ve bu bilgiler ile öğrencinin kontrol sistemlerine bağlı oluşabilecek problemler hakkında doğru tespit edebilme yetkisini kazandırmak olarak özetlenebilir. Bunun yanında otomatik kontrol sistemleri temel prensiplerine bağlı kalınsa da özellikle bilgi teknolojilerini kullanabilen yeni yöntem ve metot uygulamaları da Endüstri 4.0 çağı ve getirdikleri ile beraber, yenilikçi, akıllı ve

MAKİNE DAİRESİ SİMÜLATÖRÜ İLE DENİZCİLİK EĞİTİMLERİ

İsmail Çiçek¹, Burak Çavuşoğlu², Çağrı Berk Güler³

Özet

Makine Dairesi Simülatörü (MDS) ile eğitim ve öğretimin, Uluslararası Denizcilik Teşkilatı komitelerinde görüşülüp tüm dünya ülkeleri tarafından imzalanan sözleşmeler ile denizcilik eğitimlerinde bir zorunluluk olması üzerinden 30 yıldan fazla zaman geçmiştir. Bu süre içinde denizcilik eğitim kurumlarında simülatör ile eğitim verilmesi bir klasik eğitim yöntemi olarak standartlaşmıştır. Son yıllarda, hızla gelişen teknoloji sonuçları ile hızlı uygulamalar gelişmesi ve sistemlerin daha kompleks hâle gelmesi ile eğitim içerikleri ile uygulamada farklılıklar ortaya çıktığı daha fazla görülmeye başlanmıştır. Bu süreçte, yeni kurallara göre hızla değişen teknolojileri de içermesinden dolayı, makine dairesi simülatörleri ile eğitim hem lisans öğrencilerinin eğitimlerinde hem de vardiya zabitlerinin, hatta baş mühendislerin, sürekli eğitimlerinde doğru bir eğitim aracı ve yöntemi olarak görülmeye başlanmıştır. Klasik eğitimler yerine uygulamadaki teknolojiyi ve mesleği daha zor hâle getiren yeni kurallar, lisans ve sonrası sürekli eğitimlere de ilgiyi arttırmış; denizcilik eğitimlerinde MDS kullanılması kaçınılmaz hâle gelmiştir. Son yıllarda kazaların da artmasıyla özellikle sektörün de eğitime ilgisi önceki zamanlardan çok daha fazla olmaya başlamıştır.

Bu çalışmada, gemi makine dairesi simülatörü ile gemi makineleri işletme mühendislerinin lisans seviyesi eğitim ve öğretimi konu edilmiştir. Bu çalışma, geniş bir literatür taraması, yazarın 20 yıldan fazla eğitim tecrübesi, ders içi

³ GDS Mühendislik ARGE San. Tic. Ltd. Şti., Ar-Ge Direktörlüğü

yapılması ve bunların simülator uygulamalarında standartlaştırılması doğru olacaktır.

- 2) Makine dairesi kaynak yönetimi eğitiminin tek bir model kursa bağlı olmaması eğitim yönteminin standart olmamasına yol açmaktadır. MDS ile kaynak yönetimi eğitimi, akademik çalışmalara ve gelişime açık bir alandır.
- 3) Klas sertifikasyonunun içerik çeşidi ile birlikte eğitim konfigürasyonunu da içerecek bir sınıflandırma önermesi yazar tarafından önerilmiştir.

9. Bilgilendirme

Yazıda, GDS Mühendislik ARGE firması tarafından geliştirilen Ship Engine Room Simulator (SERSTM) ürününe ait görseller, tanımlar ve diğer materyaller firmanın yayın müsaadesi ile, örnek olarak kullanılmıştır. Diğer görseller ve materyaller ise referans verilerek metin içerisinde anlatılmıştır.

GEMİ MAKİNELERİNDE YENİ ÇEVRE DOSTU VE EKONOMİK TEKNOLOJİLER

Deniz Unsalan¹ Volkan Varışlı²

Özet

Gemi sevk sistemleri, bir yandan yakıt tüketiminin düşürülmesi, diğer yandan çoğu kez ekonomik taleplerle ters düşen atmosfere zararlı gaz salınımının sınırlandırılması, diğer taraftan yeni ve akıllı teknolojilerin yaygınlaşması nedenleri ile hızlı bir değişim içine girmiştir. Son yıllarda yakıtların yanma proseslerinin daha iyi anlaşılması, malzeme bilimi, triboloji, yakıt hücresi, yenilenebilir ve nükleer enerji teknolojileri, akıllı teknolojiler ve nanoteknoloji gibi alanlarda kaydedilen hızlı gelişmeler ve Uluslararası Denizcilik Örgütü (IMO) tarafından önerilen sınırlayıcı kurallar, gemi makineleri mühendisliği alanında hızlı gelişimlere yol açmıştır. Bu çalışmanın amacı, bu gelişmelere sınırlı da olsa bir bakış getirmektir.

Anahtar kelimeler: Gemi Makineleri, EEDI İndeksi, Miller, Kalina, Stirling, Otto Çevrimleri, Sıvı Pistonlu Motor, Yakıt Hücresi, Erimiş Tuz Reaktörü, LNG, Amonyak, Methanol, Biyodizel Yakıtı, Sıvı Hidrojen EEXI

Abstract

Marine propulsion systems have recently undergone into a phase of rapid and substantial developments due to the quest for reduced fuel consumption, often contradicting with the demand for a cleaner exhaust emissions with lesser amounts of obnoxious exhaust gas contents and developments in the field of digital (smart) technologies. Recent advances in the understanding of combustion phenomenon, materials science, tribology, developments in the fields of fuel cells, renewable and nuclear energy technologies, smart systems and nano-

¹ GİRNE ÜNİVERSİTESİ DENİZCİLİK FAKÜLTESİ GEMİ MAKİNELERİ İŞLETME MÜHENDİSLİĞİ BÖLÜMÜ

² GİRNE ÜNİVERSİTESİ DENİZCİLİK FAKÜLTESİ GEMİ MAKİNELERİ İŞLETME MÜHENDİSLİĞİ BÖLÜMÜ

enerjisinin bataryalarda depolanması ile kısa süreli yolculuklarda kullanılması düşünülebilir.

4. Sonuç

Günümüzün gittikçe artan ekonomik ve çevresel kısıtlamaları, denizcilik sektörü ve gemi makinelerinde de kendini göstermektedir. Az veya sıfır karbon salımlı, azot ve kükürt oksit salınımı ortadan kaldırılmış motor sistemleri ile direkt elektrik enerjisi sağlayan güç sistemleri yaygınlaşmakta ve hemen her gün yeni bir teknoloji bu alanda uygulanmaya konulmaktadır. Hemen her gün literatürde yeni teknolojilerden veya mevcut teknolojilerdeki iyileştirmelerden söz edilmektedir. Her biri ayrı olarak en az bir makale kapsamında olan bu konularda erişebildiğimiz ve bildiğimiz dâhilinde olan yeniliklere ana başlıklar hâlinde değinmeye çalıştık. Sözü edilen teknolojilerden hangilerinin yaygınlaşacağı veya hangi yönde değişim göstereceğini ise öncelikle maliyet-etkinlik faktörleri belirleyecektir.

ÖN SÖZ	iii
TOPRAK-SU KORUMA	1
1. Giriş.....	1
2. Dünyada ve Türkiye’de Erozyon Sorunu	3
3. Toprak Kalitesi.....	5
3.1. Görsel Belirteçler	6
3.2. Fiziksel Belirteçler.....	8
3.3. Kimyasal Belirteçler	8
3.4. Biyolojik Belirteçler.....	8
4. Toprak-Su Koruma Stratejileri.....	12
5. Türkiye’nin Su Kaynakları Potansiyeli.....	15
6. Arazi Kullanımı ve Uygunluk Durumu	19
6.1. Türkiye’nin Arazi Varlığının Genel Durumu	19
6.2. Tarım Arazilerinin Sınıflandırılması.....	21
6.2.1. Mutlak Tarım Arazileri.....	22
6.2.2. Özel Ürün Arazileri	22
6.2.3. Dikili Tarım Arazileri	23
6.2.4. Marjinal Tarım Arazileri.....	24
6.2.5. Örtü Altı Tarım Arazileri veya Seralar	25
6.2.6. Diğer Araziler	25
6.3. Arazi Kullanma Kabiliyet (Yetenek) Sınıflaması	25
6.4. Kabiliyet sınıfları	27
7. Toprak Erozyonu.....	41
7.1. Doğal (Jeolojik) Erozyon	42
7.2. Hızlandırılmış Erozyon	43
7.3. Su Erozyonu	44
7.3.1. Su Erozyonuna Etki Eden Faktörler	45
7.3.2. Su Erozyonu Tipleri.....	59
7.3.3. Su Erozyonunun Şiddet Derecesine Göre Sınıflandırılması	68

7.4. Rüzgâr Erozyonu	70
7.4.1. Rüzgâr Erozyonuna Etki Eden Faktörler	70
7.4.2. Rüzgâr Erozyonunun Aşamaları.....	72
7.4.3. Toprak Taşınmasında Hareket Tipleri.....	72
7.4.4. Rüzgâr Erozyonunun Şiddet Derecesine Göre Sınıflandırılması	74
8. Toprak Kayıplarının Belirlenmesi.....	75
8.1. Gözlemsel İlişkiler ve Deneysel Çalışmalar	75
8.2. Toprak Erozyonunu Tahmin Modelleri	77
8.3. Su Erozyonuna İlişkin Modeller	78
8.3.1. Yüzeysel Akış Miktarının Saptanması	78
8.3.2. Toprak Kayıplarının Modellerle Saptanması	87
8.4. Rüzgâr Erozyonuna İlişkin Modeller	101
9. Toprak Erozyonunu Kontrol Yöntemleri	105
9.1. Su Erozyonuna Karşı Alınacak Önlemler	105
9.1.1. Bitkisel/Kültürel Önlemler.....	106
9.1.1.1. Ekim Nöbeti.....	106
9.1.1.2. Anız Örtülü Tarım	108
9.1.1.3. Düzeç Eğrili Tarım.....	111
9.1.1.4. Şeritsel (Şeritvari) Ekim	113
9.1.2. Mekanik Önlemler.....	115
9.1.2.1. Kontür (Yatay) Bentleri.....	115
9.1.2.2. Kontrol Bendi (Barajı).....	117
9.1.2.3. Çevirme Kanalları	119
9.1.2.4. Otlandırılmış Su Yolları	120
9.1.2.5. Teraslama ve Teras Sistemlerinin Planlanması	122
9.1.2.5.1. Terasların Sınıflandırılması	123
9.1.2.5.2. Teras Sistemlerinin Planlanması.....	130
9.1.2.5.3. Tarla Teraslarının Boyutlandırılması.....	130
9.1.2.5.4. Teras Çıkış Ağızlarının Seçimi.....	133
9.1.2.5.5. Toprak Seki Terasların Boyutlandırılması	135
9.1.2.5.6. Taş Seki Terasların Boyutlandırılması	138
9.2. Rüzgâr Erozyonuna Karşı Alınacak Önlemler	140
9.2.1. Bitkisel ve kültürel önlemler.....	140
9.2.2. Fiziksel önlemler.....	143
9.2.3. Kumul (Barkan) Stabilizasyonu.....	143
10. İklim Değişikliği ve Arazi Degradasyonu (Bozulması).....	144
10.1. İklim Değişikliği Projeksiyonları	144
10.2. Toprak Degradasyonunun Önlenmesi	145
KAYNAKLAR.....	147

Giriş

Bireyler yaşamlarını devam ettirebilmek için beslenmeye ihtiyaç duymaktadır. Beslenme insan yaşamının sürdürülebilmesi adına gereksinim duyulan en önemli noktalardan birini oluşturmaktadır. Kişilerin gelir düzeyleri yükseldikçe ve teknolojinin gelişmesiyle birlikte ise beslenme ihtiyaç halinden çıkıp bir zevk halini almıştır ve gastronomi kavramı ortaya çıkmıştır (Cömert ve Çavuş, 2016:119). Toplumlar da yaşamış oldukları bölgelerdeki coğrafi ve kültürel özelliklere uygun olarak bir takım kurallar ile birlikte kendine has beslenme tarzları ve mutfak kültürlerini oluşturmuşlardır (Beşirli, 2010:160). Her toplum kendi geleneksel ürünlerini, mutfak kültürlerini son yıllarda beklenti ve ihtiyaçların çeşitlenmesiyle birlikte gastronomi turizmi aracılığıyla küreselleştirmektedir. Turistleri destinasyonlara çekmek için önemli bir bileşen olan gastronomi turizminin gelişebilmesi adına bölgelere çeşitli gastronomi rotaları ve turları düzenlemektedir.

Bu bölümde gastronomi kavramının ilk çağlardan günümüze kadar olan yolculuğu, bu süreçte kavramı açıklayabilmek adına yapılan çeşitli tanımlamalar, literatürde kullanıldığı eserler ve insanoğlunun en temel gereksinimlerinden olan beslenme ile başlayıp bir sanata dönüşen gastronomiyi tarih içerisinde etkileyen önemli olaylar yer almaktadır. Gastronomi bilimiyle ilgili temel kavramlar betimlenerek gastronomi kavramı üretim ve tüketim boyutuyla incelenmiştir. Toplumların yemek kültürleri, gastronomi turizmi, gastronomi turizminin gelişim gösterdiği bölgeye katkıları örnekler verilerek açıklanmıştır.

1. Gastronomi Kavramı ve Gelişimi

Gastronomi kavramının kökenine inmek için yazılı kaynaklar incelendiğinde bu terimin geçmişinin günümüzden yaklaşık 2000 yıl öncesine kadar dayandığı görülmektedir. Günümüzde Mısır toprakları içerisinde yer alan Naucratis şehrinde yaşamış olan Athenaus tarafından kullanılan bu terim mide anlamına gelen *gaster* ve yasa anlamına gelen *nomos* kelimelerinin bir araya gelmesinden oluşmuştur. M.S. 2. yy. ve 3. yy. arasında yazıldığı

re birçok bilim dalı ile etkileşim içerisinde olmasından dolayı disiplinler arası bir bilim dalı olarak kabul görmektedir.

Kimya, fizik, antropoloji, sosyoloji pazarlama vb. gibi bilimlerle etkileşim içinde bulunması ve bu vesileyle multidisipliner bir alan olmasından dolayı akademik bir disiplin olarak görülme süreci yavaş ilerlemiştir. Ancak 1900'lü yılların ortalarına doğru Avrupa'daki bazı üniversitelerde aşçılık eğitimlerinin ve diplomalarının verilmesi, 1990'lı yıllarda ise ABD'de yüksek lisans ve doktora programlarının açılması bu süreci hızlandıran gelişmeler arasında yer almaktadır. Ülkemizde ise 1980'li yıllarda ön lisans düzeyinde başlayan bu eğitimler 21.yy. da lisans eğitimi ile üniversitelerde yer almaya başlamıştır.

Günümüzde tüketicilerin beklentilerinin değişmesi, turizm endüstrisinde talep ve arz bakımından farklılıklarının olması ve turistlerin yenilik arayışları, gastronomi turizminin gelişmesine olanak sağlamıştır. Son yıllarda turistler tatil seçimlerini yaparken, bu seçimlerde bölgeye ait yiyecek ve içecek kültürüne önem göstermektedir. Bu nedenle destinasyon gastronomi kültüründeki farklılaşma ve ülkeler için imaj yaratması konusunda bölgeler için dikkat çeken noktalardandır. Bölgeye gelen yerli ve yabancı ziyaretçiler, bölgenin sahip olduğu mutfak kültürünü, yöresel yiyecek ve içecekleri deneyimleyebilmenin yanında çeşitli gastronomik etkinliklere de katılabilmektedirler. Bu durum da yerel kimliğin ve kültürün güçlenmesine yardımcı olmaktadır. Bölgelerin gastronomi turizmini bir çekicilik unsuru olarak kullanması, gastronomi alanındaki gelişmeleri yakından takip etmesi, coğrafi işaretleme sistemi ile gastronomik miraslarını koruma altına alması bölge mutfak kültürünün korunmasına ve gelişmesine katkıda bulunacaktır.

PEYNİRİN TARİHÇESİ ve PEYNİR TURİZMİ

Erkan Denk

Giriş

Türkiye'nin tarih boyunca birçok medeniyete ev sahipliği yapmış olması mutfağına kültürel zenginlik ve geleneksel ürün çeşitliliği olarak yansımaya sebep olmuştur. Yerleşik hayata geçtikten sonra insanoğlu yaşamını sürdürürebilmek adına temel yiyecek ve içeceklerini belirlemeye çalışmış, devamında ise belirlediği bu ürünleri nasıl koruyabileceğini araştırmaya başlamıştır. Günümüzde de temel gıda maddesi olarak adlandırılan ürünlerden birisi saklanması ve taşınması zor olan süttür. Sütten daha fazla yararlanabilmek ve onu daha dayanıklı yapabilmek için insanoğlu zamanla süt ürünlerine yönelmiştir. Bu ürünlerden birisi de peynirdir. Dolayısıyla bu bölümde öncelikle peynirin tarihi hakkında bilgiler verilecek, peynir türleri sınıflandırılacak, Dünyadan peynir türleri örneklerine değinilecek, Türk mutfak kültüründe peynirin önemi ortaya konularak gastronomi turizminin önemli niş pazarı ve turizm türü olarak peynir turizmi hakkında literatürde yer alan çalışmalar ile birlikte bilgiler verilecektir.

1. PEYNİR TARİHİ

Gastronomi turizmi, destinasyon ile kuvvetli bağı olan ve kültürel kimliği temsil eden özgün, otantik ve eşsiz yerel ürünlere dayalı gerçekleştirilen seyahatler ile etkinlikleri kapsayan bir turizm türüdür. Aynı zamanda yöresel lezzetler, gastronomi turizmi destinasyonlarının önemli bir simgesi ve o yörenin özüne dayanan güçlü bir çekim unsurudur (Fusté-Forné, 2020).

Turistik destinasyonların rekabet gücünü artırmak ve turizmin olumlu etkilerini en üst düzeye çıkarmak, olumsuz olanları en aza indirmek, turizm talebinin ihtiyaç ve zevklerindeki değişiklikleri öngörmek, destinasyondaki eksiklikleri azaltmak ve mevsimsellikle mücadele etmek için uygun planlama yapmaktan geçmektedir. Bu planlamada ise yörenin gastronomik ürünleri ve unsurları yardımcı olabilmektedir (UNWTO, 2019). Peynir ise, gastronomi turizminin bir bileşeni olarak köklü geçmişe sahip, üretildiği yörenin kültürel

3. BÖLÜM

EGE BÖLGESİ-1

(İzmir, Manisa ve Muğla)

Yıldız Ünlü, Kansu Gençer

Giriş

Kültür, toplumun tarihsel süreçleri içinde şekillenen ve nesiller boyunca aktarılan maddi manevi değerlerini gösteren bir bütündür (Karakaya ve Tiske, 2009). Kùltürler yaşanan toplumun bir benliğidir. Kùltürlerin oluşmasında da birçok unsur yer almaktadır. Bu unsurların başında ise toplumların mutfak kùltürleri gelmektedir (Şanlıer vd., 2010). Mutfak kùltürü, bir ülkenin bir bölgenin zenginliklerini ortaya çıkaran paha biçilmez bir unsurdur (Köten vd., 2014). Bölgesel mutfak ürünleri ile toplumların kùltürleri çeşitlenmekte ve her geçen gün geleneksel gıdalar ile birlikte de kùltürlerin yaşatılması sağlanmaktadır. Geleneksel gıdalar saklı kalmış lezzetlerin gün yüzüne çıkarılmasına, geçmişten gelen alışkanlıkların günümüzde de devam ettirilmesine aynı zamanda gıdaların üretiminde kullanılan metotların kalıcı hale gelmesine olanak sağlamaktadır. Her medeniyetinde farklı geleneksel ürünlere sahip bir kùltürü vardır. Türk toplumunda ise geleneksel gıdalar mutfaklarda oldukça fazla yer almaktadır (Çoşkun, 2010).

Zengin kùltüre sahip, medeniyetlerin karması olan Türk toplumu mutfaklarında çeşitli ürünlere rastlamak mümkündür. Her bölgenin hatta her il ve ilçelerinin kendine özgü yiyecekleri bulunmaktadır. Bu sayede mutfaklarda geleneksel gıdaların tüketimi devam etmekte ve gelişen gastronomi dünyası ile birlikte ürünlerin devamlılığı sağlanmaktadır. Fakat bu devamlılığın sağlanması için daha fazla çalışmaların yürütülmesi gerekmektedir. Çünkü geleneksel gıdaların varlığının devam ettirilmesi son derece önemlidir. Böylesine zengin bir kùltüre sahip, çok çeşitli mutfağı olan bu toplumun gün yüzüne çıkarılmamış birçok geleneksel gıdaları da mevcuttur. Bu yüzden her yörenin ürünleri daha özenli bir şekilde araştırılarak gün yüzüne çıkartılmalı ve mutfaklarda gelecek nesillere aktarılacak şekilde öğretilmelidir (Albayrak ve Güneş, 2010).

Geleneksel gıdalar denilince akla bölgede yetişen ot türlerinden tutun mutfaklarda bir yemeğin pişirilme şekline kadar olan tüm süreçler gelmektedir. Oldukça geniş bir yelpazesi olan geleneksel gıdaların değeri de gün geçtikçe anlaşılmaktadır. Çalışma hayatındaki

3.3. Geyve Yörük Peyniri

Muğla'nın Fethiye ilçesinde Yörükler tarafından üretilen bir peynirdir. Peynir yapımında keçi ve koyun sütü kullanılır. Sağılan sütler süzülerek el yakmayacak kadar ısıtılır. Süt miktarına göre peynir mayası eklenerek sütün pıhtı oluşturması beklenir. Oluşan pıhtı koyu yoğurt kıvamındadır. Daha sonra pıhtı temiz bir beze alınır. Üzerine baskı yapması için ağırlık konularak suyunun süzülmesi sağlanır. Ağırlıkla 1 gün bekleyen peynir, parçalara ayrılarak içerisine isteğe göre yörenin otları ilave edilir. Peynir tuzlanıp bidonlara basılır ya da otlar ilave edilmeyip salamura içerisine konularak peynirin olgunlaşması beklenir (K6, K7, K8).

4. BÖLÜM

EGE BÖLGESİ-2

(Aydın, Denizli, Uşak, Kütahya ve Afyonkarahisar)

Yıldız Ünlü, Kansu Gençer

Bu bölümde Ege Bölgesinde yer alan Aydın, Denizli, Uşak, Kütahya ve Afyonkarahisar yörelerine ait geleneksel peynirlerden bahsedilecek olup üretim yöntemleri hakkında bilgi verilecektir.

1. AYDIN

Aydın, Ege Bölgesi'nin hem yoğun turizm faaliyetlerinin hem de tarım ve ticaretin gerçekleştiği bir diğer güzel şehridir. İnciri ve efeleriyle ün kazanmış il, bölgenin konum olarak her yere yakınlığıyla avantajlı durumdadır. Zeytinyağı, keşkeği, kestanesi, börülcesi gibi birçok lezzeti bulunan şehrin peynir çeşitliliği de dikkat çeken diğer lezzet zenginliklerindedir. Bölgede İzmir'den sonra peynir çeşidi en fazla olan il sıralamasında Aydın ikinci sırada yer almaktadır.

1.1. Çörek Otlı Peynir

Aydın ve çevresinde üretimi gerçekleşen çörek otlı peynir, lor peynirinin içerisine yöre halkı tarafından "karacaotu" olarak adlandırılan çörek otunun ilave edilip bidonlara basılarak olgunlaştırılması ile elde edilmektedir. Beyaz peynir ve kaşar peyniri yapımı sonrasında oluşan peynir altı suyuna isteğe bağlı olarak taze süt ilave edilerek pıhtı oluşturulur. Oluşan pıhtı süzdürülerek parçalara ayrılır. Elde edilen lorun içerisine çörek otu ilave edilir ve karıştırılır. Uzun süre muhafaza etmek için peynire %2-3 oranında tuz eklenmektedir. Devamında bidon veya küplere hava almayacak şekilde peynir sıkıştırılarak doldurulur. Serin yerde saklanarak olgunlaşmaya bırakılır. Üzerine zeytinyağı dökülerek kahvaltılarda, ara öğünlerde tüketilir (Dere,2006).

leri vardır. Ancak peynirleri tanıtmak konusunda eksik bir tarafın olduğu da bir gerçektir. Ege Bölgesi de geleneksel peynirler açısından zengin çeşitliliği olan bölgelerden biridir. Bölgede tulum peyniri, çökelek, lor gibi keçi ve koyun sütünden yapılan peynirlere ağırlık verilirken inek sütü ile yapılan peynirler de mevcuttur. Yörede her şehrin kendisine özgü en az bir peynir çeşidi bulunmaktadır. Bazı illerde peynir çeşitliliği oldukça fazlayken bazı illerde birkaç tane ile sınırlıdır. Fakat bunlardan yalnızca birkaçı bilinmekte ve ekonomik değer oluşturmaktadır. Oysa bu çeşitliliğin sürdürülebilir olması başta bölgenin olmak üzere ülkenin ekonomisi için oldukça değerlidir. Ege Bölgesi tarihi ve doğası ile ön plana çıkan, yüksek sayılarda kendisine turist çeken bir bölgedir. Bunlara ek olarak geleneksel gıdaları bakımından da oldukça zengindir. Bu zenginliğin ön plana çıkarılırken diğer çekiciliklerin yanında yöresel çeşitliliğin de dahil edilmesi önemli görülmelidir. Tüm bu fikirler ışığında yapılan çalışmada Ege Bölgesi'nde yapımı gerçekleşen geleneksel peynirlere değinilmiştir. Bölgede meşhur olan peynirlerin yanı sıra unutulmaya yüz tutmuş ya da sadece yöre halkı tarafından evlerde üretimi süren peynirler de ele alınmıştır. Geleneksel peynirlerin yapım aşamalarından bahsedilerek sürdürülebilirlik açısından kayıt altına alınmış ve standart bir reçetenin oluşumu sağlanmıştır. Son zamanlarda bu tür çalışmalara da daha çok önem vermeye başlanmış hem turizm endüstrisi hem de akademik camia bu alanda tanınırlığın artması için büyük uğraşlar vermeye başlamıştır. Ülkenin her bir olgusu değerlidir ve bu değerlerin sahip çıkılıp, korunmaya ihtiyacı vardır. Bu da yöresel mutfaklara, geleneksel gıdalara ve kültürel mirasa öncelik vererek, gastronomi turizmini iyileştirip aynı zamanda halkı teşvik ederek sağlanmalıdır.

AKDENİZ BÖLGESİ-1

(Adana, Antalya, Burdur ve Isparta)

Rıfat Pir

Giriş

Akdeniz bölgesi Anadolu'nun güneyinde Antalya'dan Kahramanmaraş'a kadar olan il ve ilçeleri kapsamaktadır (Web_1a). Tarih boyunca birçok kültür ve medeniyete ev sahipliği yapmış olan bölge günümüzde uluslararası boyutta turistik destinasyonları ve gastronomik unsurları ile ön plana çıkmaktadır. Bölgenin mutfak kültürü ve beslenme alışkanlıkları doğu ve batı kuşaklarında farklılık göstermektedir. Batı Akdeniz'de yer alan Isparta, Burdur ve Antalya illerinde İç Anadolu mutfağı; Doğu Akdeniz'de yer alan Mersin, Adana, Osmaniye, Hatay ve Kahramanmaraş illerinde ise Güneydoğu Anadolu ve Arap mutfağı kültürlerinin etkileri görülmektedir (Şengül ve Türkay, 2016). Ayrıca Toros dağlarında yer alan yaylalarda geçmişten günümüze yaşatılan Yörük kültürünün de geleneksel mutfağı destekleyici konumda olduğu söylenebilir. Bölgede yaylacılığın Yörük kültürünün etkisi ile yoğun yaşanıyor olmasından dolayı süt ve süt ürünleri üreticiliği de gelişmiş düzeydedir. Bölgede başta keçi olmak üzere koyun ve inek yetiştiriciliği yapılmaktadır. Bu çeşitlilik içerisinde keçi sütünden elde edilen ürünler ise oldukça önemli bir yere sahiptir. Bölge mevcut turizm faaliyetleri dışında gastronomi turizmi kapsamında Hatay ve Adana illeri başta olmak üzere son yıllarda adından oldukça fazla söz ettirmektedir. Günümüzde geleneksel turizm faaliyetlerinin belirleyici unsur olduğu; kum, deniz, güneş üçlüsü artık popülaritesini yitirmeye başlamıştır. Bunun yerine gastronomi turizmine eğilimin arttığı bu kapsamda gastro turist kavramının ortaya çıktığı bununla birlikte gastronomi destinasyonlarının oldukça yaygın hale geldiği ve bölgeler için çekicilik unsuru oluşturduğu yapılan birçok çalışmada ortaya konulmuştur (Aslan vd., 2014). Akdeniz bölgesi tüm şehirleri ile ele alındığında gastro turist kapsamında mevcut turizm faaliyetlerine dâhil edilebilecek bölgeyi ziyarete gelen yerli ve yabancı turistlere sunabileceği oldukça önemli gastronomik argümanlara sahip olduğu açıkça ifade edilebilir. Bu gastronomik argümanlar içerisinde bölgenin zengin peynir çeşitliliği oldukça önemli bir yere sahiptir. Bölgede gastronomik ürüne dönüştürülebilecek geçmişten günümüze geleneksel teknik ve yöntemler kullanılarak elde edilen farklı aroma ve dokuları sahip peynir çeşitliliği oldukça fazladır. Bu çeşitli-

Isparta ili genelinde farklı teknik ve yöntemlerle yapılan oldukça değerli peynir çeşitleri bulunduğu görülmektedir. İl genelinde geleneksel yöntemler kullanılarak üretimi gerçekleştirilen bu peynirlerin kültürel miras kapsamında değerlendirilebilecek potansiyele sahip olduğu açıkça ifade edilebilir. Yalvaç Küp Peyniri üretim ve olgunlaştırma teknikleri açısından diğer ürünlerden ayrılmaktadır. Bu üretim sürecinin gastro tur kapsamında ele alınarak bölgede oluşturulabilecek peynir rotalarına dâhil edilebileceği ve bölgeye ziyarete gelen yerli ve yabancı turistler için çekicilik unsuru oluşturabileceği öngörülmektedir.

6. BÖLÜM

AKDENİZ BÖLGESİ-2

(Kahramanmaraş, Mersin, Osmaniye ve Hatay)

Rıfat Pir

Bu bölümde Akdeniz Bölgesinde yer alan Kahramanmaraş, Mersin, Osmaniye ve Hatay yörelerine ait geleneksel peynirlerden bahsedilecek olup üretim yöntemleri hakkında bilgi verilecektir.

1. KAHRAMANMARAŞ

Kahramanmaraş ili doğal, tarihi ve kültürel unsurları ile bölgenin öne çıkan şehirleri arasında yer almaktadır (Web_1). Zengin bir geleneksel mutfağa sahip olan ilde süt ve süt ürünleri içerisinde peynir önemli bir yere sahiptir. İlin sahip olduğu endemik bitki çeşitliliği ve bu çeşitlilikten yararlanılarak yapılan hayvancılık bu süreci destekleyici en önemli unsurların başında gelmektedir. Doğu Anadolu'ya geçiş konumunda yer alan il genelinde geleneksel kültürü yansıtan, tat ve aroması ile ön plana çıkan ve geleneksel mutfakın karakteristik özelliklerini yansıtan peynirleri şu şekilde sıralayabiliriz.

Tablo 1. Kahramanmaraş İli Geleneksel Peynirleri

No	Geleneksel Adı	Hammadde	Ambalaj Tipi	Kullanım Yeri
1	Elbistan Kelle Peyniri	Koyun Sütü	Plastik Bidon	Genel Kullanım
2	Maraş Parmak Sıkma Peyniri	Keçi, Koyun Sütü	Plastik Bidon	Genel Kullanım
3	Maraş Tulum Peyniri	Keçi, İnek Sütü	Tulum	Genel Kullanım

1.1. Elbistan Kelle Peyniri

Kelle peyniri Kahramanmaraş'ın Elbistan ilçesi ve çevre köylerinde geçmişten günümüze geleneksel yöntemlerle yapılan bir peynir çeşidi olarak bilinmektedir. Genellikle son görünümü yumruk büyüklüğünde ya da örgü şeklindedir. Geleneksel kelle peyniri koyun

gastro turist kavramının ortaya çıkartmıştır. Bu kapsamında ortaya çıkan gastro turist iyi gıdaya ulaşabilmek adına deniz aşırı ülkelere seyahatler gerçekleştirmekte ve ziyaret ettiği bölge kültürlerini daha yakından tanımak için o kültüre ait gıda ürünlerini deneyimlemektedir (Hatipoğlu, 2010). Son yıllarda İtalya ve Fransa gibi ülkeler sahip oldukları zengin peynir çeşitliliğini gastronomi turizmi kapsamında turizm ürününe dönüştürmeyi ve bölgeleri ziyarete giden yerli ve yabancı turistlerin beğenisine sunmayı başarmışlardır (Kesici, 2012).

Araştırmaya konu olan Akdeniz Bölgesi turizm alanında Antalya, gastronomi turizmi alanında ise Hatay ve Adana illeri başta olmak üzere birçok marka şehri içerisinde barındırmaktadır. Bu şehirlerin sahip oldukları gastronomik kültürel birikimler bölgede zengin bir peynir profilinin oluşmasına önemli ölçüde katkı sunmuştur. Hatay ili bu profil içerisinde diğer illere nazaran ön plana çıkmaktadır. Bölgede yer alan illerin çoğunda geleneksel yöntemler kullanılarak hazırlanan ulusal ve uluslararası manada bilinirliği oldukça yüksek, turistik ürün kapsamında gastro turistin beğenisine sunulabilecek 5 adet coğrafi işaretle olmak üzere toplamda **48** adet peynir çeşidi bulunmaktadır. Turizm potansiyeli oldukça yüksek bir bölge için mevcut peynir çeşitliliğinin gastronomi turizmi kapsamında değerlendirilebilmesi, yapılacak bir takım çalışmalarla mümkün görülmektedir. Bu çalışmaları; Özgün özelliklere sahip başta Cimi Peyniri ve Girdev Yaylası Yörük Peyniri gibi obruklarda fermentasyon süreci gerçekleştirilen ürünlerin coğrafi işaretli ürünler kapsamına dahil edilmesi, yaylalarında dahil edildiği peynir rotalarının belirlenmesi, pilot illerde peynircilik müzelerinin kurulması, geleneksel peynir üretim atölyelerinin faaliyete geçirilmesi ve peynir tadım etkinliklerinin yanı sıra festivallerin düzenlenmesi şeklinde açıklayabiliriz. Hayata geçirilmesi muhtemel bu çalışmalar bölgenin peynircilik konusundaki potansiyelinin ortaya çıkmasına büyük ölçüde katkı sunacaktır. Aynı zamanda yapılacak olan bu çalışmalar bölgede gastronomi turizmi bileşeni olarak geleneksel peynirciliğin değerlendirmeye alınarak ulusal ve uluslararası manada bilinirliği yüksek turizm ve gastronomi alanında olduğu gibi peynircilik konusunda ihtisaslaşmış yeni marka şehirlerin ortaya çıkmasına olanak tanıyacaktır.

7. BÖLÜM

İÇ ANADOLU BÖLGESİ-1

(Eskişehir, Ankara, Çankırı, Kırıkkale, Kayseri ve Kırşehir)

Münevver Kaya, Hilal Keskin

Giriş

Peynir geçmişi çok eskiye dayanan ve insan beslenmesinde önemli yer tutan bir gıda maddesidir. Peynirin ortaya çıkışı ile ilgili çeşitli kaynaklarda farklı hikayeler yer almaktadır. Herodot, ilk peynirin İskit Türkleri tarafından kısırak sütünden yapıldığını öne sürmüştür. Kosikowski'ye göre peynir, Türklerin ve Moğolların ataları tarafından üretilmiştir. Türkler Anadolu'ya göç etmeden önce de peynir yapmaktadır (Kamber, 2007). Peynir anlamına gelen saf Türkçe kelimelere ilk defa Uygur Türkleri arasında rastlanmaktadır. Bereketli Hilal'den başlayan tarım ve hayvancılık, Türkiye'nin güneyinden Akdeniz kıyısı boyunca uzanan bölgede 8000 yıl önce peynir üretimi geliştirmiş ve çeşitlendirmiştir (Fox ve McSweeney, 2017; Karaca, 2016). Peynir, dünya çapında çok çeşitli tatlarda ve formlarda üretilen bir grup fermente süt bazlı gıda ürününe verilen genel adı tanımlamaktadır. Peynir yapımının temel amacı, sütün temel bileşenlerini koruyarak ek gıda ürününü çeşitlendirerek tüketmek ve nispeten dayanıksız olan sütün yıl boyunca tüketimini sağlamaktır. Sandine ve Elliker (1970), 1000'den fazla peynir çeşidi olduğunu öne sürmüştür. Walter ve Hargrove (1972) ise 400'den fazla peynir çeşidi tanımlamıştır.

Gastronomi turizminin ön plana çıkmasıyla birlikte rekabetçi turizm ortamında destinasyonlar, bölgelerini farklılaştıracak turistik ürün arayışına girmektedir. Yöresel gıdalar, gastronomi turizminin lokomotifini oluşturmakta; yöresel peynirler de bu kategoride ele alınmaktadır. Peynir üretimi açısından zengin olan Türkiye'de, "peynir turizmi" kavramı oldukça yeni bir kavramdır. Fransa, İtalya, İsviçre ve Hollanda gibi ülkelerde çizilen peynir rotaları ve apelyasyon uygulamalarının bölge ekonomisine sağladıkları katkılar da göz önünde bulundurulduğunda, yöresel peynirlerin turistik ürün olarak ele alınması ve gastronomi turizmine dahil edilmesi büyük önem arz etmektedir.

Türkiye'nin İç Anadolu bölgesinde, yoğun olarak; çömlük, küp ve testi peynirleri üretilmektedir. Yapısal olarak tulum peynirine benzeyen bu peynirler, içine basılan materyal ile birlikte mağara, depo veya toprak altı gibi 6-10°C'deki alanlarda olgunlaştırıldıkları

pılmaktadır. Çeşni maddesi olarak çörekotu kullanılmakta ve çömlek içinde olgunlaştırılmaktadır (Durlu-Özkaya ve Gün, 2007).

8. BÖLÜM

İÇ ANADOLU BÖLGESİ-2

(Niğde, Aksaray, Karaman, Konya, Sivas, Nevşehir ve Yozgat)

Münevver Kaya, Hilal Keskin

Bu bölümde İç Anadolu bölgesinde yer alan; Niğde, Aksaray, Karaman, Konya, Sivas, Nevşehir ve Yozgat illerine ait yöresel peynirlere değinilmiş olup; bu peynirlerin yapıları ve özellikleri hakkında bilgiler verilmiştir.

1. NİĞDE

Anadolu'nun dört bir yanında, binlerce yıllık gelenekler ve ritüellere sahip yüzlerce peynir türü bulunmaktadır. İç Anadolu bölgesinin güneydoğusunda yer alan Niğde ilinde, en çok bilinen ve tüketilen dört adet peynir türü bulunmaktadır. Niğde'nin bu meşhur peynirlerinin özellikleri ve yapıları aşağıda anlatılmaktadır.

1.1. Niğde Mavisi

Niğde mavisi olarak adlandırılan bu peynir, mavi rengini henüz tulumdayken hava alarak oluşan bakterilerden almaktadır. Oldukça ender bulunan bu peynir, koyun sütünden yapılıyor olmasına rağmen mavi renkte olan ilk peynir olma özelliğini taşımaktadır. Kendine has lezzeti ile Niğde rokfor peyniri olarak da anılmaktadır (Karaaslan ve Demircan, 2001; Durlu-Özkaya ve Gün, 2007).

Yapılışı ise aşağıdaki gibidir:

- Pastörize edilen süt mayalanarak teleme halini alır.
- Çavdar veya buğday unundan yapılan ekmeğe mağarada bekletilip küflenmesi sağlanır.
- Tuzlama işlemi yapılan peynir telemesine, küflendirilen ekmekten starter kültür olarak bir miktar eklenir.
- Özel diktirilen keçi veya koyun derisinin içine bu karışım sıkıca basılır.
- Basım işleminden sonra deri, çelik sivri şişler ile delinir.

9. BÖLÜM

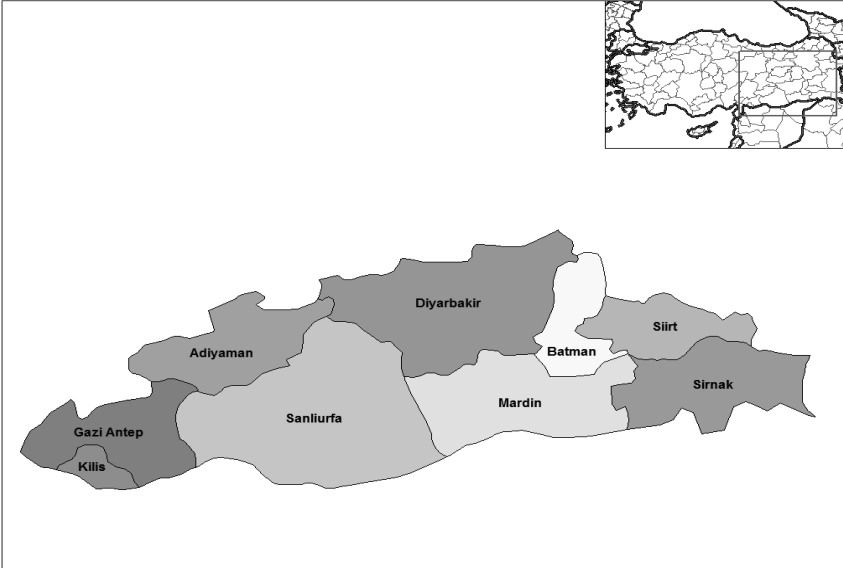

GÜNEYDOĞU ANADOLU BÖLGESİ

(Adıyaman, Batman, Diyarbakır, Gaziantep, Kilis, Mardin, Siirt, Şanlıurfa ve Şırnak)

Aslı Çelikel Güngör

Giriş

Güneydoğu Anadolu Bölgesi Gaziantep, Diyarbakır, Şanlıurfa, Batman, Adıyaman, Siirt, Mardin, Kilis, Şırnak illerinden oluşan ve ülkemizin güneydoğusunda yer alan bölgedir (Şekil 1). Bölgenin kuzeyinde ve doğusundan Doğu Anadolu Bölgesi, batısında Akdeniz Bölgesi ve güneyinde Irak (küçük bir bölümünde) ve Suriye'nin bir bölümü yer almaktadır (Anonim 2023a).

Şekil 1: Güneydoğu Anadolu Bölgesi

Kaynak: Anonim 2023a.

Ülkemiz tam bir peynir cenneti olarak nitelendirilebilirken Güneydoğu Anadolu bölgesinin de bu cennetin eşsiz lezzetlerine sahip olduğu unutulmamalıdır. Ancak bölgedeki her peynir çeşidi ya yeterince bilinirliğe sahip değil ya da komşu illerle benzerlik göstermesi nedeniyle gereken değeri görememiştir. Oysaki peynir üretiminde üretim şeklinin dışındaki önemi bir unsur olan hammadde yöreden yöreye, hatta köyden köye bile farklılık gösterebilmektedir. Üretimde kullanılan sütün temin edildiği hayvanın cinsi, ırkı, beslenmesi, laktasyon dönemi gibi birçok unsur sütün bileşimini etkilemektedir. Ayrıca üretimde kullanılan çeşitli otlar peynirinin bileşim, tat ve aromasını etkilemektedir.

Genel olarak Güneydoğu Anadolu bölgesinde üretilen yöresel peynirler incelendiğinde her ilde peynir üretimi yapıldığı görülmektedir. Bölümde 9 farklı yöresel peynire değinilmiştir. Fakat bölgede coğrafi işaretle tescillenmiş peynir sayısı son derece azdır. Tescil almış Diyarbakır örgü peyniri, Antep peyniri ve Urfa peyniri turistik açıdan tanınmış peynirlerdir. Adıyaman peyniri ve Siirt otlu peynirinin son yıllarda bilinirliği artmış fakat coğrafi işaret tescilli almamışlardır. Şırnak ilinde üretilen otlu peynir üzerine yapılan araştırmalar son yıllarda artış göstermiştir. Bu durum bu peynir çeşidine olan ilginin arttığının göstergesi olarak değerlendirilebilir. Ancak Mardin, Batman ve Kilis illerine ait peynir çeşitleri üzerine yapılan çalışmalar yok denecek kadar az sayıdadır. Bu nedenle yerel yönetimlerin, üreticilerin ve akademisyenlerin bu peynir çeşitleri üzerine yapacakları çalışmalar hem ürünün standardize edilmesi hem de bilinirliğinin artmasına katkıda bulunacaktır.

10. BÖLÜM

DOĞU ANADOLU BÖLGESİ-1 (Erzincan ve Bingöl)

Tülay Polat Üzümcü, Necibe Şen

Giriş

Peynir, ülkemizin doğal ve kültürel zenginliğini gösteren ürünlerden biri olup, özellikle hayvancılığın ve süt ürünlerinin üretiminin en yoğun yapıldığı Doğu Anadolu Bölgesinde geleneksel 50 tür peynir üretimi yapılmaktadır. Bu peynirlerin üretiminde genellikle inek sütü kullanılmakla birlikte keçi ve koyun sütü de yaygın olarak kullanılmaktadır. Ülkemizdeki peynir türlerinden ilk coğrafi işaret tescil belgesini alan Erzincan tulum peyniridir (Güzeler ve Koboyeva, 2020). Bingöl ilinde üretilen köy peyniri ve Tomas peynirine ilişkin coğrafi işaret tescili ise henüz bulunmamaktadır (Web_1).

“*Türkiye'nin Geleneksel Peynirleri ve Peynir Turizmi Potansiyeli*” isimli bu kitapta, Doğu Anadolu bölgesinde yer alan Erzincan ve Bingöl illeri peynirlerine ilişkin bilgi verilecektir. Özellikle ülkemizde ilk coğrafi işaret alan Erzincan tulum peyniri ile Doğu Anadolu bölgesinde Tunceli, Bingöl, Elazığ, Erzurum, Kars, Sivas ve Muş illerinde yapılan Tomas peyniri ile Bingöl köy peyniri öne çıkmaktadır. Erzincan ve Bingöl peynirleri ve bu peynirlerin bölge ekonomisine katkıları ile bölge gastronomisi ve gastronomi turizmine etkilerine de değinilecektir.

malzeme olarak da kullanılmaktadır. Peynir; börek, çörek, poğaç, tost, meze, pizza, omlet vb. yapımında, çorbaların tatlandırılmasında, salatalara güzel görünüm ve lezzet kazandırılmasında, peynir helvası, künefe ve Kemalpaşa, cheescake gibi tatlılarda kullanılmaktadır (Badem, 2021:323).

Günümüzde gastronomi turizmi kavramı yanında, yeme-içme ile ilgili turistik deneyimleri tanımlamak için mutfak turizmi ve yemek turizmi gibi farklı kavramlar kullanılmaktadır. Hatta giderek büyüyen ve çeşitlenen gastronomi deneyimleri; şarap, bira, çikolata; zeytin, peynir gibi daha özel ilgi alanlarına ayrılmakta ve şarap turizmi, bira turizmi, çikolata turizmi, peynir turizmi olarak adlandırılmaktadır. Dünyada bu konuda yani peynir turizminde; Fransa, İsviçre, İtalya ve Hollanda öne çıkan ülkeler arasındadır (Şahin, 2015: 82). Peynir turizmi, peynir yapımı ve süt üretimi alanlarının ziyaret edilmesini, bu ürünlerin müze vb. alanlarda sergilenmesi, peynir ve peynirden yapılmış ürünlerin satışı ve tadımını içermektedir. Bu tipoloji kırsal dağlık bölgelerde uygulanmaktadır (Forne, 2015). Bu kapsamda Bingöl kırsal ve dağlık b.r bölge olup, hayvansal ürünlerin üretimi yaygındır. Pestigen peyniri, Bingöl köy peyniri gibi yöresel ve geleneksel peynirlerin Bingöl ili gastronomisine kazandırılması önemlidir. Gastronomi turizmi kapsamında, bu peynirlere coğrafi işaret alınarak, peynirlerin turistik ürün olarak alınabileceği, tadılabileceği satış yerleri ve restoranların oluşturulması gerekmektedir.

11. BÖLÜM

DOĞU ANADOLU BÖLGESİ-2 (Bitlis, Hakkari, Muş ve Van)

Özkan Demir

Bu bölümde Bitlis, Hakkari, Muş ve Van illerinde yer alan yöresel peynirler ve bu peynirlerin üretim metodu ile bilgilere yer verilecektir.

1. BİTLİS

Van gölü havzasında yer alan Bitlis bulunduğu coğrafi konumun dağlık ve engebeli olması hayvancılığın yapılmasına olanak sağlamıştır. Bitlis'te hayvancılığın yaygın olması ise yemeklerde koyun, sığır, kuzu ve teke gibi hayvanların etlerinin kullanılmasına imkan sağlamıştır (Yıldız ve Dalagan, 2021a, s. 132). Bitlis'in gastronomik zenginliğinin kökeni büyük ölçüde doğanın sunduğu çeşitlilik ve tarihi nedenlerle ilgili olup (Arıncı, 2017, s. 97) bu çeşitlilikte süt ve süt ürünleri de önemli bir yer tutmaktadır.

1.1. Bitlis Tulum Peyniri

Bitlis tulum peyniri üretiminde daha çok koyun sütü ve keçi sütü kullanılmakta fakat tüketici tercihlerine göre inek sütünden de faydalanılmaktadır. Bazen bu söz konusu üç çeşit sütün karıştırılması ile de üretim yapılabilmektedir (Sancak, vd., 2018, s. 383). Coğrafi İşaret tescil sürecinde bulunan Bitlis tulum peyniri Bitlis dağlarının zengin bitki örtüsünde otlatılan hayvanların sütünden elde edilmektedir. Aroması çok hafif olan Bitlis tulum peynirinin yağ ve kuru madde oranı da yüksektir. Tamamen iç piyasaya satılan bu peynirin 1 kilogramı için ortalama 10 kilogram süttten kullanılmaktadır (Yöresel Ürün Envanteri Raporu, 2016, s. 26).

Üretim Yöntemi: Bitlis tulum peynirinin üretiminde sağım sonrasında süzülen süt genellikle herhangi bir pastörizasyon işlemi uygulanmadan sağım sıcaklığı ile veya 30-40 derece civarına kadar ısıtılıp ticari maya kullanılarak mayalanır. Mayalama işleminden 2-3 saat sonra oluşan pıhtı parçalanır ve serin bir yerde önce süzme bezinde yaklaşık bir gün daha sonra da altı delinmiş şeffaf poşetlerde yaklaşık olarak 3-4 gün suyunu tamamen salması amacı ile bekletilir. Bu sürenin sonunda el veya tahta sopalar yardımı ile ufalanan peynir %3-4 oranında kaya tuzu ile karıştırılarak bez çuvalara basılıp ağız kısmı sıkı bir

üretim metotları ve fiziksel özellikleri ile ilgili bilgi vermeyi amaçlamıştır. Hastaoğlu ve arkadaşları (2021), çalışmalarında bölgelere göre farklılık gösteren peynir çeşitlerinin özelliklerini belirlemeyi ve iç turizmde yeni destinasyonların belirlenmesinde etkili olacağı düşünülen peynir rotalarının oluşmasını amaçlamıştır. Elde edilen sonuçlara göre gastronomi faaliyetlerine katılan turistler için rotalar belirlenmiştir. Saygılı ve arkadaşları (2019), çalışmalarında Türkiye’de bulunan coğrafi işaretli peynirleri tanıtmışlardır.

Albayrak (2020), kitabında Türkiye’nin geleneksel peynirlerinin piyasa yapısını incelemiş ve üretimde kullanılan malzeme ve süt çeşidine göre kategorize ederek coğrafi işaretli peynirleri de ayrıca incelemiştir. Croxford (2010) ise Türkiye’nin Peynirleri isimli kitabında peynirin kısa tarihine değinerek bölgelere göre peynirleri ayrı ayrı incelemiş ve bu peynirlerin üretim aşamaları ile ilgili bilgiler vermiştir.

Ulusal alanyazın incelendiğinde Türkiye’de üretilen peynir çeşitleri ile ilgili çok sayıda çalışmanın bulunduğu görülmektedir. Fakat yapılan çalışmaların birçoğunun tek şehirde üretilen peynirlere veya tek bir peynir çeşidine odaklandığı görülmektedir. Türkiye’nin tamamında veya bir coğrafi bölgesinde üretilen peynir çeşitleri ve üretim metotları ile ilgili çalışmaların ise sınırlı olduğu söylenebilir. Özellikle gastronomi turistlerinin ilgisini çekmesi muhtemel olan peynir turizmi ile ilgili çalışmaların sayısının da çok sınırlı olduğu söylenebilir. Bu anlamda bu araştırmanın hem geleneksel peynirlerin üretim metotlarının kayıt altına alınıp tanıtımının yapılması hem de gastronomi turizmi ve peynir turizmi açısından alanyazına katkı sağlayacağı düşünülmektedir.

12. BÖLÜM

DOĞU ANADOLU BÖLGESİ-3 (Ağrı, Iğdır, Kars ve Ardahan)

Leyla Eren Karahan, Seher Arslan

Bu bölümde Doğu Anadolu bölgesi illeri arasında yer alan Ağrı, Iğdır, Kars ve Ardahan yörelerine ait yöresel peynirlere değinilmiş olup; bu peynirlerin yapıları ve özellikleri hakkında bilgiler verilmiştir.

1. AĞRI

Türkiye peynir çeşitliliği açısından zengin bir ülkedir. Doğu Anadolu bölgesi endemik bitki örtüsü ve yüksek rakıma sahip olmasıyla kıymetli sütlerden çeşitli peynirlerin üretildiği bir bölgedir. Bu bölgenin en önemli peynirleri Erzurum Civil peyniri, Kars Gravyeri, Van Otlu peyniri, Saçak peyniri, Şavak Tulum peyniri, Erzincan Tulum peyniridir.

Ağrı ilinde bitkisel ürün çeşitliliği hayvansal üretime bağlı olarak şekillenmiştir. Buna göre buğday, arpa, şekerpancarı, yonca ve korunga yetiştirilmektedir (Kaya, 2013; Temelli, 2018). İlin fiziki coğrafyası, ova köylerinde bitkisel üretimi ve dağ köylerinde de hayvansal üretimi, dağ eteklerinde ise hem bitkisel hem de hayvansal üretimi olanaklı kılmıştır (Kaya, 2013). Hayvansal üretim açısından il genelinde yonca, korunga, fiğ ve burçak ekimi 1960'lardan sonra önem kazanmıştır (Anonim, 1982). Yörede “kes” adıyla bilinen yonca hayvanlarda süt verimini arttırmaktadır (Ceylan, 2021). Bölgede yaygın olarak koyun, keçi, inek ve manda sütü üretimi ve işlenmesi gerçekleştirilmektedir (Ceylan, 2021). Ağrı'da her ne kadar hayvansal üretim yapılırsa da 1960'lı yılların ortalarına kadar hayvansal üretimden katma değer yapabilecek ve marka üretebilecek bir işletme yoktur. 1965 yılında Doğubayazıt'a bağlı Üçgöze köyünde Aladağ'ın Kandilli yaylalarında geliştirilen tam yağlı Edirne tipi Ağrı beyaz peyniri Erzurum Et Balık Kombinası çatısı altında rağbet görmüştür (Ceylan, 2021).

1.1. Ağrı Küp Peyniri

Ağrı ilinin Yüzüncüyıl mahallesinde yaşayan sakinler sadece kendi tüketim ihtiyaçlarını karşılamak için peynir ve lor karışımından ürettikleri Ağrı küp peyniri olarak adlandırdıkları peynir çeşidini kendi yetiştirdikleri ineklerin sütlerinden elde etmektedirler. Peynir,

13. BÖLÜM

DOĞU ANADOLU BÖLGESİ-4 (Malatya, Elazığ, Tunceli ve Erzurum)

Mevlûde Daşbaşı, Erkan Denk

Bu bölümde başta Malatya ilinde üretilen geleneksel peynirlere yer verilecek olup devamında Elazığ, Tunceli ve Erzurum illerine ait peynir çeşitleri hakkında bilgiler verilecektir.

1. MALATYA

Malatya mutfağı için geçmişten elde ettiği kültürel zenginliğini yöreye ait otantik ürün çeşitliliği ve bu çeşitliliğin tam kapasiteyle kullanılıp değerlendirilebilme açısından bölgede öncülük ettiği söylenebilir. Diğer bir deyişle fazla ve farklı malzeme kullanmadan da yani aynı malzemelerle birbirinden lezzetli yemeklerin hazırlanabildiği söylenebilir (Kılıç vd., 2013). Çoğu yörede olduğu gibi Malatya yöresinde de özel peynir türlerine rastlamak mümkündür. Ön plana çıkan yöresel peynirlerden Malatya peyniri, Malatya karışık deri peyniri, Malatya çökeleği peynirlerine değinilecektir.

1.1. Malatya Peyniri

Coğrafi işaret tescili bulunan Malatya peyniri salamura özelliğindeki peynirlerden birisidir. Kahvaltının yanı sıra böreklerde ve yemeklerde kullanılan Malatya peyniri, her mevsim bulunabildiği gibi akşam yemeklerinde dahi pide ile birlikte sofralarda aranan bir lezzettir. Salamura yöntemi ile saklanan bu peynir, ekonomik olduğu gibi sağlık açısından da faydalı olarak değerlendirilmektedir (Kılıç vd., 2013).

Malatya peynirinin tescili 06.07.2022 tarihinde Malatya Ticaret Odası tarafından mahreç işaretli olarak alınmıştır. Geçmişi 100 yıldan daha fazla bir süreye dayanan peynirin yöre mutfak kültürü ile ün bağı bulunmaktadır. İnek veya koyun sütü ya da bu sütlerin karışımından yapılabilen Malatya peynirinin özelliklerine bakıldığında 10-15 cm çapında, 2-3 cm kalınlığında silindirik şekilli, üst kısmı oluklu olup ağızda çiğnenirken ses çıkaran, yarı sert yapıda, hafif sarıya bakan renkte olan bir peynirdir (Resim 1). 85°C üzerindeki su veya peynir altı suyunda haşlanarak üretildiği için ağızda çiğneme sırasında ağızda ses

var olan peynir potansiyelini ortaya çıkarmıştır. Bundan sonraki aşama peynir ve peynir turizmi üzerine planlamalar yaparak yerel halkı da içine alan politikalar geliştirmektir. Bu bölgeye sadece peynir çeşitliliği ve yüksek peynir potansiyeli olarak da bakmamak gerekir. Her şehrin kendisine özgü peynirlerinin dışında ayrı gastronomik lezzetleri, tatları ve yemekleri de bulunmaktadır. Genel anlamda gastronomi turizmine ilgi gösterilip önem verilmesiyle bölgede ön planda olan turizm türleri desteklenebileceği gibi yeni turizm türleri de keşfedilebilir ve bunda belirleyici olacak olan da peynirdir. Peynir türlerine verilen Türkiye'deki tesciller değerlendirildiğinde bu bölgede mutlaka peynir rotaları oluşturulmalı, butik peynir atölyeleri açılabilceği gibi festivaller ile peynir turizmi potansiyeli ekonomik kazanca dönüştürülmelidir.

14. BÖLÜM

KARADENİZ BÖLGESİ - Batı Karadeniz Bölümü (Bolu, Düzce, Sinop, Karabük, Kastamonu, Zonguldak ve Bartın)

Semra Gürbüz

Giriş

Karadeniz Bölgesi, kuzeyinde bulunan ve ismini aldığı Karadeniz boyunca uzanan, doğuda Gürcistan sınırından Sakarya ovasının doğusuna kadar devam eden, 1400 km uzunluk ile kuzey ve güney sınırlarında 100-200 km arasında değişen genişlikte bir yapıya sahiptir. Sınırları içerisinde 18 şehir bulunduran ve 122.121 km² yüzölçümüne sahip bölge, alan büyüklüğü açısından Türkiye'nin 3'üncü büyük bölgesidir (TOB, 2021; Anonim, 2023a).

Karadeniz Bölgesi; coğrafi özellikleri, konumu, iklimi ve ekonomik yapısı açısından birbirinden farklılık gösteren Batı, Orta ve Doğu Karadeniz olmak üzere üç bölüme ayrılır.

Şekil 1: Karadeniz Bölgesi Coğrafi Haritası

Kaynak: Web_1.

Kızılırmak deltasının batısından Adapazarı ve Bilecik ilinin doğusuna kadar olan alan Batı Karadeniz bölümüdür. Karadeniz Bölgesinin bu bölümünde Düzce, Karabük, Kastamonu, Bolu, Zonguldak, Sinop ve Bartın illeri bulunur. Engebeli bir arazi yapısının varlığı nedeniyle farklı iklim özelliklerinin görüldüğü bölge tarımsal ürün çeşitliliği açısından zengindir. En fazla yetiştirilen ürün sırasıyla mısır ve buğdaydır. Meyve üretiminde fındık,

Günümüzde; turizm endüstrisi içerisinde önemli bir itici gücü olan gastronomi turizmi, turizm faaliyetleri içerisinde giderek daha da ağırlıklı bir öneme sahip olmaya başlamıştır (Ermolov, Yashalova ve Ruban 2019). Gastronomi turizmi genel olarak, bir destinasyonun kültürel mirasları aracılığıyla kültürünün ve doğasının kendine özgü özelliklerini keşfetmek için yapılan ziyaret olarak tanımlanmaktadır (UNWTO, 2019). Gastronomi turizminin içerisinde bireysel bir turizm alanı olarak peynir turizmi; peynir yapımı ve süt üretim alanlarını ziyaret etmeyi içerir, bu nedenle de genellikle kırsal, dağlık ve doğal alanlarda uygulanmaktadır (Fusté-Forné, 2020). Peynir rotalarının oluşturulması; yeni destinasyonların oluşmasına, ya da mevcut destinasyonların gelişmesine katkı sağlayacaktır. Peynir turizmi aktiviteleri kapsamında; üretim işletmelerine yapılacak geziler yanında, düzenlenecek festivaller, fuarlar, kurulacak müzelerin ziyareti gibi etkinlikler turizmin geliştirilmesine katkı sağlayacak faaliyetlerdir. Aynı zamanda üretilen peynirlerin dükkânlarda, çiftçi pazarlarında, yerel üretici tarafından direkt satılması; otellerin, restoranların bu peyniri bulundurması ekonomik gelirin artmasına katkı sağlayacaktır. Bu nedenle de bu yöndeki faaliyetler ebetteki yerel ekonomik kalkınmaya katkıda bulunularak kırsal yaşamın gelişmesine vesile olacak ve kırsaldaki geleneklerin, kültürel mirasın korunmasını destekleyecektir.

Yerel ekonomik kalkınmayı sağlamak isteyen destinasyonlar potansiyellerini değerlendirmek için planlı çabalar göstererek hedeflerine ulaşabilirler. Batı Karadeniz Bölgesindeki Bolu ve Düzce illeri, takiben Sinop ile Karabük illerinde bu konudaki çabalar daha da yoğunlaştırılabilir. Bolu'da yiyecek içecek sektörü çalışanlarının katılımı ile yapılan bir çalışmada; çalışanların, yerel peynirleri kullanma konusunda istekli olmakla birlikte, peynirler hakkında yeterli bilginin bulunmadığını belirttikleri ifade edilmektedir (Kayış, 2017). Bu kapsamda festivaller, fuarlar, medya haberleri, akademik çalışmalar gibi enstrümanları kullanarak tanıtım çalışmalarının yapılması, üretimde standardizasyonun sağlanması, tedarik zincirinin güçlendirilmesi, gıda güvenliğinin sağlanmasına yönelik tüm ilgili paydaşların katılımı ile gerçekleştirilecek ortak çabalarla bu ürünlerin turizme kazandırılması sağlanabilir.

15. BÖLÜM

KARADENİZ BÖLGESİ-Orta Karadeniz Bölümü (Ordu, Samsun, Amasya, Çorum ve Tokat)

Semra Gürbüz, Erkan Denk, Emine Yazan

Giriş

Coğrafi olarak Batı, Orta ve Doğu Karadeniz olmak üzere üç bölüme ayrılan Karadeniz Bölgesinin Amasya, Samsun, Çorum, Tokat ve Ordu illerinin bulunduğu kısmı Orta Karadeniz bölümüdür. Bu bölümde dağlar sahilden daha içtedir ve yüksek değildir, kıyı ve iç kısımlarda iklim özellikleri benzerdir. Bölge ağırlıklı olarak tarım alanında ülke ekonomisine katkı sağlamaktadır. Bölgenin iklim koşullarının uygun olması ve zengin bitki örtüsü hayvancılık için uygun ortam oluşturmaktadır. Bölgede hayvancılık küçük ölçekli, aile işletmesi şeklinde bitkisel üretimle birlikte yapılmaktadır. Türkiye mada yetiştiriciliğinin yaklaşık % 25'i bu bölgede gerçekleştirilmekte, aynı zamanda önemli ölçüde sığır yetiştiriciliği de yapılmaktadır (OKA, 2011).

Şekil 1: Orta Karadeniz Bölgesi Coğrafi Haritası

Kaynak: Web_1.

Orta Karadeniz Bölgesi illeri; geçmişten günümüze çok sayıda medeniyete ev sahipliği yapmaları dolayısıyla tarihi ve kültürel zenginliğe sahip oldukları gibi, coğrafi yapıları ve iklimin de etkisi ile eşsiz doğal güzelliklere sahiptirler. Tarihi dokusunun yanı sıra, sarp kayalıkların arasından akan Yeşilirmak Nehri'nin oluşturduğu manzara ile Amasya, ilk medeniyetin doğduğu Hattuşa Antik Kenti'ne ev sahipliği yapan Çorum, mavi ve yeşilin tonlarıyla oluşan doğal güzellikleri ile birlikte Amazonlara uzanan tarihi ve Kurtuluş Sa-

değerleri ile özel turistik çekiciliğe sahiptir. Tokat'ta üretilen peynirler özellikle Tokat küp peyniri ve Tokat tulum peyniri, turistik bir ürün olarak ele alınmasında fayda olan özelliklere sahip yerel peynirlerimizdir. Bu bölgede üretilen peynirin turistik çekicilik olarak bir motivasyon faktörüne dönüşmesine en yakın peynir çeşidi Çorum Kargı tulum peyniri olarak ön plana çıkmaktadır. Bu değerlendirmede; coğrafi işaret olarak üretim yönteminin belirlenmiş olması, peynir hakkında internet ortamında rahatlıkla bilgi bulunabilmesi, yerel kurumların peynire ilişkin bilgileri paylaşması, sahiplenmesi gibi hususlar etkili olmaktadır.

Öncelikle yerel kültürü yansıtan ürünlerin reçetelerinin araştırılması, üretim standardizasyonu ve üretimdeki farklı tekniklerin ortaya konulması, festivaller, şenlikler, tanıtım günleri, sosyal medya ve web sitelerinde bilgi paylaşımı gibi faaliyet ve etkinliklerle tanıtımın yapılması ve bu ürünlere yönelik hedef ve stratejilerin yerel paydaşların katılımı ile belirlenmesi çok önem taşımaktadır. Konuya ilişkin bilimsel çalışma sayısının da artırılmasına, ürünlerin her yönüyle analiz edilmesine, tedarik edilebilirliğinin, peynirin turizm kapsamında nasıl değerlendirilebileceğinin araştırılmasına da ihtiyaç vardır.

16. BÖLÜM

KARADENİZ BÖLGESİ-Doğu Karadeniz Bölümü (Artvin, Rize, Giresun, Trabzon, Gümüşhane ve Bayburt)

Semra Gürbüz, Erkan Denk

Giriş

Karadeniz Bölgesinde Artvin, Rize, Giresun, Trabzon, Gümüşhane ve Bayburt illerinin bulunduğu bölge Doğu Karadeniz bölümüdür. Bu bölüm, Karadeniz Bölgesinin en dağlık ve en yağışlı kısmıdır, çay, fındık ve mısırın en fazla yetiştirildiği (TOB, 2021) ve Karadeniz'in diğer bölgelerine göre büyükbaş hayvancılığın daha fazla yapıldığı bölgedir (Anonim, 2012).

Şekil 1:Doğu Karadeniz Bölgesi Coğrafi Haritası

Kaynak: Web_1.

Türkiye ekonomisi için önemli bir faaliyet olan hayvancılık, kültürel yaratım ve aktarım süreçlerinin de önemli bir parçasını oluşturmaktadır. Doğu Karadeniz Bölgesinde düzenli hayvancılık faaliyetlerinin Çepni Türklerinin bu bölgeye gelmesi ile başladığı kabul edilmektedir. Bölgenin Türk hâkimiyetine girmesinden itibaren önceki kültürel birikimlerini yeni yurtlarına taşımaları ile bölgenin en önemli geçim kaynaklarından biri hal-

Giriş

Coğrafi konum itibarıyla orta kuşakta yer alan ve yılda dört mevsimi yaşayan Türkiye, mevcut fauna ve bitki örtüsü çeşitliliği gibi doğal güzelliklerinin yanı sıra tarihi ve kültürel mirasıyla turistlerin çekim alanı bir ülke konumundadır. Yedi bölgeye ayrılan topraklar üzerinde her bölgenin kendine özgü birbirinden lezzetli ürün çeşitliliği bulunmaktadır. Bir bölge ya da yöreyi yerel yiyecek ve içecekleri deneyimleme amacıyla ziyaret gerçekleştiren turistler açısından alışılmıştın dışında olan bu lezzetleri deneyimleme gastronomi turizmi açısından önemlidir. Ülkemiz mutfak kültüründe çeşitlilik açısından zengin bir yapıya sahip olduğundan gastronomi turizmi bakımından ön plana çıkmaktadır.

Bu lezzetlerden biri olan peynir çok eski dönemlerden bu yana ülke mutfaklarında kendine yer edinerek önemli bir değere sahip olmuştur. Hem insan beslenmesindeki önemi hem de halk kültüründeki yeri ile vazgeçilemeyen peynir, gastronomi turizmi açısından da önemli bir üründür. Özellikle gastronomi amaçlı seyahat eden kişilerin geleneksel peynirleri deneyimleme isteği yöre ve ülke tanıtımlarında etkili olduğu gibi geleneksel ürünlerin pazarlanmasına da katkı sağlamaktadır.

Türkiye'nin geleneksel peynirlerinin hem tanıtımı hem de gastronomik yönünü konu alan **kitabın bu bölümünde**; hayvansal, bitkisel ve sanayi ürünleriyle ön plana çıkan Balıkesir ve Bilecik yöreleri ele alınmıştır. Peynirin mutfak kültürü ve beslenmedeki önemine değinilirken Dünya ve Türkiye özelinde ünlenen peynirler, Balıkesir ve Bilecik yörelerinin coğrafi konumu, tarihi özellikleri, mutfak kültürleri ile coğrafi işaret tescilli peynirler hakkında bilgiler verilmiştir.

Ayrıca Balıkesir yöresinde geleneksel yollarla peynir üretimi ve/veya yöreye özgü geleneksel peynirlerin satışını yapan D.V., M., Ö.Y. ve S.M. adlı işletmelerin yetkilileri ile görüşerek yöreye özgü peynirler hakkında bilgi alınmıştır. 2020 yılında Balıkesir Valiliği öncülüğünde gerçekleştirilen ve Güney Marmara Kalkınma Ajansı (GMKA) tarafından desteklenen “Gastronomi Şehri Balıkesir” projesinin en önemli çıktısı olan “Balıkesir

ilinin inanç turizm potansiyelini ortaya koyarak yöre halkının turizm konusundaki bilinç ve farkındalığını araştırmıştır. Vatan (2015) ise çalışmasında Bilecik'te var olan turizm paydaşlarının bakış açısıyla Bilecik'in bir turizm destinasyonu olarak daha etkin nasıl pazarlanabileceğini araştırmıştır.

18. BÖLÜM

MARMARA BÖLGESİ-2 (İstanbul, Yalova ve Sakarya)

Büşra Meltem Türkmen

Bu bölümde Marmara bölgesinde yer alan İstanbul, Yalova ve Sakarya yörelerine ait geleneksel peynirlerden bahsedilecek olup üretim yöntemleri hakkında bilgi verilecektir.

1. İSTANBUL

Türkiye'nin en önde gelen şehirleri arasında yer alan İstanbul, coğrafi konumu sebebiyle de oldukça önemli bir metropoldür. Dünyanın en eski şehirlerinden biri olan İstanbul, Asya ve Avrupa kıtasını birleştirmesi, Roma, Bizans ve Osmanlı İmparatorluğuna başkent olma etkisini barındırması ve hemen hemen dünyanın metropol şehirleri arasında ilk sıralarda yer alması yer küre üzerindeki konumu itibarıyla de dünyanın en önemli noktalarından biridir. İstanbul, kuzeyinde Karadeniz, doğusunda Kocaeli sıradağlarının yüksek tepeleri, batıda Ergene havzası ve güneyinde Marmara denizi ile sınırlandırılmaktadır. İstanbul'un iklim koşulları ise coğrafi konumu sebebiyle Karadeniz ve Akdeniz iklim tipleri arasında geçiş ikliminin görülmesinin yanı sıra güneyinde ve kuzeyinde farklı sıcaklık ve yağış eğilimleri görülmektedir. Yaz aylarının sıcak ve kurak, kış aylarının ise soğuk ve yağışlı olarak seyretmektedir (Türkeş, 2020; Çeler ve Serengil, 2021; Altınok, 2022).

Peynir turizmi, son yıllarda giderek popüler hale gelen bir turizm türüdür. Bu turizm türü, peynir üretimi ve tüketimiyle ilgili kültürel deneyimler sunar ve turistlere peynirin üretim sürecini, farklı peynir çeşitlerini ve lezzetlerini tanıtmayı amaçlar. Peynir turizmi, dünya genelinde birçok ülkede uygulanmaktadır ve giderek daha fazla insan tarafından tercih edilmektedir. İstanbul, Türkiye'nin en büyük şehirlerinden biridir ve hayvancılık açısından oldukça zengin bir tarihe sahiptir. Ancak, son yıllarda kentleşme ve sanayileşme nedeniyle hayvancılık faaliyetleri azalmıştır. İstanbul'da halen süt, et ve kümes hayvancılığı yapılmaktadır (Swan, 2005; Saygılı, Demirci ve Samav, 2020; Cihangir ve Demirhan, 2020).

İstanbul'da süt hayvancılığı, özellikle Büyükçekmece, Çatalca ve Silivri ilçelerinde yapılmaktadır. Burada genellikle sığır ve manda sütü üretilir. Süt, hem iç piyasada hem de dış piyasada satılmak üzere işlenir. Yoğun kentleşme sebebiyle de süt ve süt ürünleri üre-

3.5. Ferizli Kaşarı

Sakarya'nın Ferizli ilçesindeki yöre halkı tarafında üretilen bu peynir, inek sütünden yapılı ve tuzlu bir tatlılığı vardır. Evlerde ve küçük işletmelerde yöre hayvanlarının sütünden yapılan bu peynir sulu haşlama yöntemiyle üretilmektedir. Peynirin yapısı orta sertliktedir (Bolat ve Erbay, 2022, Sözlü Anlatıcı 5).

3.6. Hendek Peyniri

Sakarya'nın Hendek ilçesinde üretilen peynir, inek sütünden yapılmaktadır. Hendek ilçesinin köylerinde yapılan bir köy peyniri çeşididir. Hendek peyniri, yumuşak bir dokuya sahiptir. Klasik peynir yapım süreci işlenmektedir. Hayvandan sağılan süt kaynatılarak mayalanır ve fazla suyu süzdürülür. Genellikle taze olarak tüketilir ancak uzun süre tüketmek için tuzda da bekletilmektedir (Hastaoğlu, Erdoğan ve Işkın, 2021; Sözlü Anlatıcı 2).

3.7. Taraklı Peyniri

Sakarya'nın Taraklı ilçesinde üretilen bu peynir, inek, keçi ve koyun sütünden yapılmaktadır. Taraklı yaylalarında taze kekiklerle beslenen hayvanların yedikleri kekiklerin de aromasının süte geçer ve tadını etkiler. Klasik yöntemlerle üretilen tuzlu bir peynir çeşididir. Sert bir dokusu vardır ve uzun süre dayanıklıdır (Keskin ve Dağ, 2020; Sözlü Anlatıcı 3).

19. BÖLÜM

MARMARA BÖLGESİ-3 (Edirne-Kırklareli-Tekirdağ-Kocaeli)

Ömür Alyakut

Giriş

Türkiye; köklü tarihi, coğrafi yapısı, kültürel ve doğal varlıkları ile zengin turizm potansiyeline sahip bir ülkedir. Bu nedenle turizm gelirinden payını arttırmak ve küresel pazarda rekabet avantajı sağlamak adına sahip olduğu bu potansiyeli en iyi şekilde geliştirmesi ve kullanması gerekmektedir. Günümüzde değişen turist davranışları ile kitle turizmine olan ilgi alternatif turizm çeşitlerine yönelmektedir. Gastronomi turizmi, son yıllarda yükselen bir trend olarak turizm pazarlaması ve tanıtımında önemli bir yere sahip alternatif turizm çeşitlerinden biridir. Bu kapsamda Türkiye’de her bölge yerel lezzetleri ile öne çıkmakta ve turistlere farklı tat, lezzet ve ritüelleri ile çeşitli deneyimler sunmaktadır (Hacıbebekoğlu vd., 2018:16). Özellikle Türklerin, Orta Asya’dan gelen birikimi ile Anadolu ve Mezopotamya beslenme alışkanlığının birleşiminden ortaya çıkan zengin peynir çeşitliliği ve kültürü bulunmaktadır. Bu zengin peynir çeşitliliğine “peynir medeniyeti” de denilebilmektedir. Yurdumuzda üretilen peynirin tipi, üretim yöntemi, kullanılan sütün niteliği, işletme koşulları, sütün bakteri içeriği, nem ve sıcaklık düzeyine göre değişen yağ, protein bileşenleri ile farklı özelliklerde çeşitli peynirler üretilmektedir (Tattersall, 2021). Bu peynir çeşitliliği gastronomi turizmi kapsamında ayırt edici özellik olarak kullanılmalı ve rekabet avantajında stratejik bir fark olarak görülmelidir.

Peynir üretimi denilince akla ilk gelen yer Trakya Bölgesi özelinde Marmara Bölgesi’dir. Özellikle Trakya illeri; Edirne, Kırklareli, Tekirdağ ile Marmara Bölgesi’nin doğusunda yer alan Kocaeli ili peynir üretimi çeşitliliği açısından zengindir. Peki bu iller özelinde üretilen peynir çeşitleri, kullanılan peynirlerin üretim ve tüketim pratikleri nelerdir, yerel ekonomiye katkısı ve gastronomi turizmine etkisi gibi konuları merak uyandırmaktadır. Buradan hareketle yapılan bu çalışma; bir saha çalışmasıdır. Çalışmada öncelikle literatür taraması yapılmış, ardından peynir üretimi yapan tanınmış bir yerel tesis ile Edirne, Kırklareli, Tekirdağ ve Kocaeli illerinde yaşayan dokuz yöre insanına ulaşılarak yarı yapılandırılmış görüşmeler eşliğinde sorular sorulmuştur. Elde edilen tüm veriler; betimsel analiz kullanılarak her yörenin peynir çeşidi için temalara ayrılarak açıklanmıştır. Çalış-

lanmalı ve turistlerin yörenin kültürü ile bağ kurmasına aracılık etmelidir. Çünkü günümüzde değişen turizm paradigması ile deniz-kum-güneş üçlüsü yerini kültür turizm çeşitlerine, değişen turist profili de yerini post modern turistlere bırakmıştır. Özellikle turistler, tüm duyularına hitap eden, deneyimlemeye dönük seyahat tercihleri yapmaya başlamıştır.

Kültür turizmi çeşitlerinden biri olan gastronomi turizmi son yıllarda bu tercihler nedeniyle rağbet görmeye başlayan turizm çeşitlerinden biri olmuştur. Bu nedenle turistik turlara destinasyonların geleneksel lezzetleri, lezzetlerin üretildiği ve sunulduğu mekanlar, yerel pazarlar, gastronomi festivalleri gibi unsurları da ilave edilmiş hatta sadece gastro turistlerin olduğu gastronomi turları oluşturulmaya başlanmıştır. Bu durum yöre mutfaklarının ve destinasyonların güçlenmesinde, tanınmasında ve öne çıkarılmasında önem arz etmektedir (Dağ, 2020).

Her ülke veya bölge mutfağının geleneksel gıdaları içinde geleneksel peynirleri vardır. Türkiye, kültürel mozaigine uygun olarak farklı tat ve lezzetteki peynir çeşitleriyle zengin bir peynir kültürüne sahiptir. Peynir kültürü somut olmayan kültürel miras olarak korunmalı, yaşatılmalı ve aktarılmalıdır. Özellikle Marmara Bölgesi'nde yer alan Trakya illeri (Edirne, Kırklareli, Tekirdağ) ile bölgenin doğusunda yer alan Kocaeli ili yöreye özgü peynir çeşitleriyle öne çıkmaktadır. Bu illerin her birinin coğrafi yapısı, bitki örtüsü, yöre hayvanlarının sütleri, kullanılan maya, üretim teknikleri, olgunlaştırma, haşlama, kaynatma, tuzlama, fümeleme gibi farklı teknikler, yöre halklarının kimlikleriyle ve kültürleriyle özdeşir başka bir ifadeyle o yörelerin gastronomik kimliğinin bir göstergesidir. Bu nedenle geleneksel gıda olan peynirler özelinde, destinasyonlarda gastronomi turizminin öncelenerek, turizmin 12 aya yayılması, Edirne beyaz peyniri, Kırklareli beyaz peyniri, Malkara eski kaşar peyniri ile Abhaz ve Çerkez peynirlerinin turistik ürün olarak öne çıkarılması önemlidir. Böylece turistler kültürel miras olan bu özel peynirleri deneyimlemek ve tatmak isteyecekler ve seyahat tercihlerini gastronomi destinasyonlarına yönlendireceklerdir. Bu durumda destinasyon rekabet avantajı sağlayacak, yerel kalkınmanın önü açılacak, çarpan etkisiyle ülke ekonomisine katma değer sağlanacak ve hem gastronomi turizminin hem de peynir kültürünün sürdürülebilirliğine katkı sağlanacaktır. Buradan hareketle şu öneriler getirilebilir: Edirne, Kırklareli, Tekirdağ ve Kocaeli gastronomi destinasyonlarında; peynir rotaları oluşturulmalı, peynir festivalleri yapılarak ulusal ve uluslararası alanda peynirlerin ve destinasyonların daha fazla tanınır ve bilinir olması sağlanmalı, reklam ve tanıtım çalışmaları yapılmalı ve yörelerin geleneksel peynirleri turistik ürün olarak gastronomi turizminde kullanılmalıdır.

20. BÖLÜM

MARMARA BÖLGESİ-4

(BURSA ve ÇANAKKALE)

Ecem İnce Karaçeper

Bu bölümde Marmara bölgesinin iki önemli şehri olan Bursa ve Çanakkale’de üretilen geleneksel peynirler hakkında bilgiler verilecektir.

Toplumların yemek kültürlerinin gelişebilmesi ve beslenme alışkanlıklarının sürdürülebilir bir şekilde sağlanabilmesinde geleneksel gıdalar büyük role sahiptir. Geleneksel gıdalar aynı zamanda kültürel mirasın devamlılığı açısından da önemlidir (Köten ve Ünsal, 2014; Demirci vd., 2014). Özellikle, Türkiye sahip olduğu coğrafi konum ayrıcalığı ile dört mevsimi yaşayabilen nadir ülkelerden birisidir. Zengin tarihi geçmişi, kültürel mirası ve iklimsel avantajı ile elde ettiği gıda çeşitliliği ülke olarak Türkiye’yi bir adım daha ön plana çıkarmaktadır (Cumhur, 2017). Son dönemlerde gastronomi turizmi kapsamında düzenlenen birçok etkinlik destinasyonların kültürel farklılıklarını vurgulamakta ve turistlerin davranış eğilimlerini daha yöresel olan gıdaları tatma ve deneyimleme olarak açıklamaktadır. Turistlerin seyahat etme niyetlerinde ise gıdasal çeşitliliğin önemli bir itici güç olduğu vurgulanmaktadır (Deveci vd., 2013).

Ülkelerin geleneksel gıdaları arasında yer alan peynirlerin bölge, yöre görünürlüğü ve bilinirliği açısından önemi büyüktür (Karaca, 2016). İnsanoğlunun uygarlığa geçişinin ilk simgelerinden biri olarak kabul edilmektedir. Bununla birlikte toplumda yer alan kültürel zenginlik ile kültürel mirası temsil etmektedir. Kuşaktan kuşağa aktarılan ve yaşamsal deneyimler sonucu tesadüfi bir şekilde öğrenilen geleneksel bir üründür. Türkiye’nin yedi bölgesinde çeşitli tat ve lezzette üretilen ve toplum tarafından da sevilerek tüketilen birçok geleneksel peynir çeşidi bulunmaktadır. Özellikle, Marmara bölgesi iklim ve coğrafi avantajları nedeniyle peynir çeşitliliğinin fazla olduğu coğrafi bölgelerin başında gelmektedir. Bölgede yer alan her yörede de kendine özgü bilgi, görgü, gelenek ve göreneklerine göre birçok farklı peynir üretilmektedir. Türkiye’nin sahip olduğu geleneksel peynir varlığı kültürel zenginliğinin en önemli göstergesidir (Türkoğlu vd., 2003; Demirbaş vd., 2006).

Giriş

Serhat Karaođlan & Tayfun Arar

Türk Dil Kurumu'na göre “Bir iş veya sorun hakkında düşünülerek verilen kesin yargı” olarak tanımlanan karar, alternatifler arasından bir tanesini seçmektir [1]. Karar problemindeki seçenekleri gösteren alternatifler arasından en iyisinin nasıl seçileceğinin sorgulanması ise karar verme problemidir [2]. Bir karar alabilmek için karar vericiye, amaca, karar kriter(ler)ine, alternatife, olaya ve sonuca ihtiyaç bulunmaktadır [3]. Herhangi bir konuda karar verebilmek için karar üzerinde etkileri olan çeşitli bilgi, birikim ve teknik karar vermenin gerekli olduğu problem hakkında detaylar, karar aşamasında yer alan insan veya aktörler, bu kişilerin amaçları ve ilkeleri, çıktıları değiştiren etkiler ile zaman tercihi, tasarılar ve kısıtlardan oluşan veriye ihtiyaç vardır [4].

Karar verme süreci aşamaları araştırmacılar tarafından çeşitli şekillerde tanımlanmıştır. En genel kabul görenlerinden bir tanesi ise

- Problemin tanımlanması
- Gerekli bilginin toplanması
- Mümkün çözümlerin üretilmesi
- Çözümlerin değerlendirilmesi
- Performans için stratejinin seçilmesi ve kararın uygulanması
- Öğrenme ve revize etme

Şeklinde sıralanmaktadır [5]. Karar verme teknikleri problemlerin çözümüne sezgisel ve öznel yanıtlar yerine analitik ve nesnel sonuçlar getirmektedir. İşletmeler fayda ve maliyet hesabı yaparak zaman çerçevesinde Tablo 1'de görüldüğü şekilde analitik kararlarını stratejik, taktik veya operasyonel olarak

Bir ÇKKV problemi, matris düzeninde Eşitlik 1'deki gibi gösterilmektedir. D matrisinde;

A_1, A_2, \dots, A_n ; karar aşamasında yer alan alternatifleri,

C_1, C_2, \dots, C_n ; alternatifleri değerlendirmek üzere kullanılan kriterleri

X_{ij} ; alternatif A_i 'nin C_j kriterine göre değerini

belirtmektedir [9,10,11].

$$D = \begin{matrix} & C_1 & C_2 & \dots & C_n \\ A_1 & X_{11} & X_{12} & \dots & X_{1n} \\ A_2 & X_{21} & X_{22} & \dots & X_{2n} \\ \vdots & \vdots & \vdots & \ddots & \vdots \\ A_n & X_{n1} & X_{n2} & \dots & X_{nn} \end{matrix} \quad (1)$$

Kriterlerin ağırlıklandırılması durumunda ise kriterlerin önem derecesini gösteren matris yani ağırlıklar matrisi $W = [W_1 \ W_2 \ \dots \ W_N]$ şeklinde gösterilmektedir.

Çok Kriterli Karar Verme yönteminden sosyal bilimler, fen bilimleri ve mühendislik gibi pek çok alanda yararlanılmaktadır. Çünkü tüm bu disiplinler içinde farklı sayıdaki alternatifler arasında farklı önem derecelerine sahip kriterlere göre bir seçim yapılması ve karar alınması gerekmektedir. Sosyal bilimler kapsamındaki işletme disiplini içindeki alt konulardan olan insan kaynakları yönetimi, pazarlama, üretim ve finansa da karar verme adına yapılan uygulamalarda ÇKKV tekniklerine rastlanılmaktadır.

Bu eserde de belli başlı çok kriterli karar verme teknikleri yönetim, pazarlama ve finans alanındaki uygulamalar yer almaktadır. Her bir bölümde öncelikle ilgili teknik ve uygulama adımları detaylıca anlatılmıştır. Ardından da gerçek veriler ile uygulamalara yer verilmiştir.

Bölüm 1

AHP Tekniđi ve alıřan Performansı Deđerlendirme Uygulaması

Tayfun Arar & Latif Öztürk

GİRİŐ

İŐletmelerin faaliyetlerini başarılı bir şekilde sürdürebilmeleri için yönetici konumundaki kiŐilerin çeŐitli konularda sıklıkla karar verme durumları bulunmaktadır. Bu kararlar iŐletmenin stratejik faaliyetleri ile ilgili olabileceđi gibi taktiksel operasyonları hakkında da olabilmektedir. Alınacak kararların kapsamı ve bu kararları hayata geçirecek olanlar ise genellikle iŐletmenin iŐgücünü oluŐturan personeli olmaktadır. Bir iŐletmenin personelinin niteliđi ise o iŐletmenin başarısında büyük rol oynamaktadır. Dolayısıyla personelin gösterdiđi performans, kümülatif bir şekilde iŐletmenin performansını oluŐturmaktadır. Hâliyle alıŐan personelin iŐyerinde göstereceđi performans ve bu performansın nasıl deđerlendirildiđi önem arz etmektedir. Bu sebeple iŐletmeler, alıŐanlarının performanslarını deđerlendirme için çeŐitli sistemler geliŐtirmiŐtir. Literatür incelendiđinde alıŐan performansının deđerlendirilmesi için 360 derece performans deđerlendirme, kritik olay yöntemi ve amalara göre deđerlendirme yöntemi gibi uygulamalar yer almaktadır [1]. Bununla birlikte iŐletmelerin bazı spesifik pozisyondaki alıŐanlarının performanslarını ölçme/deđerlendirme için çeŐitli kriterler geliŐtirdiđi görülmekte ve bu kriterler temelinde puanlandırarak ölçüm yaptıđı görülmektedir. Buradaki önemli nokta ise ilgili kriterlerin eŐit önem derecesine sahip olup olmama durumudur. Farklı önemdeki kriterlerin ađırlıklarının belirlenmesi için farklı yöntemler bulunmaktadır. Literatür incelendiđinde alıŐanların performanslarının ađırlıklandırılmasında AHP tekniđinin kullanıldıđı görülmektedir. Bu alıŐmalar Tablo 1’de özetlenmiŐtir. Bununla beraber ađrı merkezlerinde performans deđerlendirme alıŐmalarının sayısının oldukça az olduđu görülmektedir. Örneđin KiŐi (2016) [2] alıŐmasında ađrı merkezi müŐteri temsilcisi yetkinliklerini AHP tekniđi ile önceliklendirmiŐ ve alıŐma bulgularına göre en

Tartıřma ve Sonu

alıřanların performanslarının dođru řekilde lümü, alıřanı dođru řekilde deđerlendirmeye, iřletmenin misyonunu ve amalarını en etkin řekilde gerekleřtirmesini sađlamaya ve diđer İK uygulamalarındaki verimliliđi elde etmeye zemin hazırladıđı iin iřletmeler iin olduđa nemli bir konudur [1]. Bununla birlikte bir iřletmenin ncelikleri amaları arasında yer alan müşteri tatmini, iřletmenin sürdürülebilirliđinin belirleyicilerindedir. Dolayısıyla müşterilerle dođrudan iletiřim kuran alıřanların gösterecekleri performansın iřletmenin sürdürülebilirliđi ve itibarı üzerinde daha ok etkisi bulunmaktadır. Bu sebeple bu alıřmada Ankara ilinde faaliyet gsteren ve biliřim sektründe bulunan bir iřletmenin ađrı merkezindeki alıřanlarının performans deđerlendirmesinde kullanılacak kriterler iřletmedeki yneticiler tarafından belirlenmiř ve ikili karřılařtırılmıřtır. AHP tekniđi ile nem dereceleri belirlenen kriterler iinde performans deđerlendirmede en nemli kriter iletiřim becerileri ve akabinde zmlenme becerisi olarak bulunmuřtur.

alıřmanın iki temel kısıtı bulunmaktadır. Bunlardan ilki alıřmanın bir vaka alıřması niteliđinde olması dolayısıyla sonularının genellenebilirliđinde dikkat edilmesi durumudur. İkinisi ise AHP tekniđinin temel varsayımı olan bađımsızlıktan dolayı kriterlerin birbirini etkilemediđi varsayımıdır. Bundan sonraki alıřmalarda, kriterlerin birbirlerini etkileme durumu da gz nnde bulundularak Analitik Ađ Prosesi (ANP) uygulanabilir.

Bölüm 2

Türk Mevduat Bankalarının 2021 Yılı Finansal Performanslarının Entropi Temelli Aras Tekniğiyle Değerlendirilmesi

Mehmet Öksüzakaya

GİRİŞ

Küresel finans piyasalarında oldukça önemli bir yere sahip olan bankalar gelişmiş ve gelişmekte olan ülke ekonomileri için bir fon aktarımı mekanizması görevini üstlenmektedir [1]. Finansal sistem içerisinde ekonomik birimler arasında birçok finansal araç yardımıyla tasarrufları yatırımlara yönlendirmesi, reel sektördeki firmaların büyümesi, ülke ekonomilerinde büyümeyi ve kalkınmayı desteklenmesi açısından son derece önemli bir rol üstlenmektedir [2,3]. Bankalar bir taraftan tasarruf sahiplerinden fon toplayarak bu fonlara ihtiyaç duyan yatırımcı ve tüketicilere kredi olarak aktararak karlı bir şekilde faaliyetlerini sürdürürken diğer taraftan finansal piyasaların gelişimi ve ülke ekonomilerinin istikrar tesis edilmesine önemli bir katkı sağlamaktadırlar [4,5]. Ülke ekonomilerinin uzun vadede sürdürülebilir bir büyüme ve kalkınmanın ön şartlarından biri bankacılık sisteminin kaynaklarını etkili ve verimli bir şekilde kullanmasıdır [1,6]. Küreselleşme ve giderek artan rekabet ortamı altında finansal sistemin merkezinde olan bankalar başta kendi ülke ekonomileri olmak üzere yabancı ülke ekonomilerini etkileyebilecek bir unsur hâline gelmiştir [1]. Bu sebeple bankaların sergilemiş olduğu finansal performanslarının denetleyici ve düzenleyici otoriteler tarafından düzenli olarak takip edilerek herhangi bir olumsuz bir durum veya kriz durumundan etkilenmeden bankacılık işlemlerini sürdürebilmesi için gerekli olan düzenleme ve iyileştirmelerin yapılması oldukça önem arz etmektedir [1,2,7].

Bu çalışma 2021 yılında Türk Bankacılık sisteminde faaliyet gösteren ve aktif büyüklük açısından en yüksek paya sahip 10 mevduat bankasının finansal performansının değerlendirilmesi amaçlanmıştır [4]. Bu çalışmanın literatüre iki önemli açıdan katkı sağlayacağı düşünülmektedir. Bunlardan ilki çalışmada

birbirlerine oldukça benzer olduğu görülmüştür. Kamu sermayeli bankalar içinde Vakıflar Bankası finansal açıdan en başarılı bankadır.

Özel sermayeli bankalar finansal skorları birbirine benzer olduğu görülmüştür. Özel sermayeli bankalar içinde Yapı Kredi Bankası finansal performans bakımından en başarılı bankadır. Yabancı sermayeli bankalar finansal skorları birbirinden oldukça farklı olduğu tespit edilmiştir. Garanti Bankası yalnızca yabancı sermayeli değil aynı zamanda tüm mevduat bankalarının arasında en yüksek finansal performansa sahip bankadır.

Bu tür çalışmaların sonuçlarını yorumlanırken oldukça dikkat edilmesi gerekmektedir. Çünkü çalışmanın sonuçları belirlenen kriterlere, yöntemlere, kriterlerin ağırlıklarına ve son olarak alternatiflere bağlı olarak değişebilmektedir. Bu tür çalışmalarda yalnızca tekniği veya kriterleri değiştirerek tamamen farklı sonuçları ulaşılabilmektedir.

Bölüm 3

BIST Teknoloji Sektöründeki Firmaların CoCoSo Tekniđi ile Finansal Performans Analizi

Bahadır Fatih Yıldırım

GİRİŞ

İşletmelerin finansal performanslarının değerdendirilmesi ve izlenmesi, yoğun rekabet ortamında işletmelerin varlığını sürdürebilmesi için kritik öneme sahip bir süreçtir[1]. Finansal performans analizi, işletmenin finansal raporlar ve tabloları ile muhasebe kayıtlarından elde edilen veriler kullanılarak işletmenin yönetim performansı, verimliliđi, faaliyet ve finansal yapı özelliklerinin belirlenmesi olarak tanımlanabilir[2,3]. Finansal performans, işletmenin belirlediđi hedefler doğrudusunda mevcut kaynakları ne kadar etkin ve ne kadar verimli kullanabildiđinin bir göstergesidir[4].

Finansal performans ölçümünde literatürde kullanılan birçok farklı yaklaşım bulunmaktadır. Bu yaklaşımlardan en çok kullanılanlarında biri finansal oranları esas alan oran analizi yaklaşımıdır. Oran analizi yaklaşımının temelini işletmenin finansal tablolarında yer alan unsurlar arasındaki ilişkiler dikkate alınarak oluşturulan finansal oranlar yardımıyla işletmenin likidite, faaliyet ve finansal yapısının analiz edilmesi oluşturmaktadır[5].

Finansal oranların kullanılması yoluyla işletmenin finansal performansının analizi, işletme yöneticilerinin yanı sıra işletmenin paydaşı konumundaki ortaklar, yatırımcılar ve çeşitli finansman kurumları tarafından da kullanılmakta ve işletmenin finansal performanslarını değerdendirmenin yanında işletmenin değeri belirlenmesi ve yatırım politikalarının oluşturulmasında bir referans oluşturması için kullanılmaktadır. Finansal performans analizinde işletmenin faaliyet koluna göre belirlenen finansal oranlar ve bu oranlara ait sektörel ağırlıklandırılmalar kullanılarak oran analizine dayalı bir değerdendirme yapılabilmektedir. İşletmelerin finansal performanslarının değerdendirilmesinde işletmenin kendi

belirlenmiştir. Tablo 12’de alternatif sıralamasında kullanılan $\lambda=0,5$ değerinin yanı sıra farklı λ değerleri (0,25 ve 0,75) içinde k skorları hesaplanmış ve sıralamalar elde edilmiştir.

Tablo 12. Farklı λ Değerlerine Göre Alternatif Sıralamaları

	$\lambda = 0,75$		$\lambda = 0,50$		$\lambda = 0,25$	
	k	Sıralama	k	Sıralama	k	Sıralama

İncelenen karar probleminin farklı λ değerlerine duyarlılığının raporlandığı Tablo 12’de yer alan alternatif sıralamalarının sırasıyla 0,75, 0,50 ve 0,25 λ değerlerine göre farklılık oluşturmadığı ve elde edilen sıralamaların bu bağlamda tutarlı olduğu görülmektedir.

CoCoSo tekniği literatüre yeni kazandırılmış bir teknik olmasına rağmen, işlem adımlarının kolaylığı, her türden karar problemine uyarlanabilmesi ve paket program gereksinimi bulunmadan kolaylıkla uygulanabilmesi gibi avantajlarından ötürü kısa sürede literatürde kabul görmüş ve birçok çalışmada başarı ile kullanılmıştır. Bu çalışmada CoCoSo tekniği kesin sayılardan oluşturulmuş bir karar matrisi üzerinde uygulanmıştır. CoCoSo tekniği kesin sayıların yanı sıra Bulanık Sistem Teorisi, Nötrosofik Teori ve Gri Sistem Teorisi gibi sistem teorileri ile genişletilerek ve diğer ÇKKV yöntemleri ile bütünleşik ve karşılaştırmalı kullanılabilir.

Bölüm 4

CRITIC Tekniđiyle Robot Süpürge İin Kriter Ađırlıklandırma

Muhammet Burak Kılı & Behi etin

GİRİŐ

ok kriterli karar verme yöntemleri uygulanırken, kriterlerin ađırlıklarının belirlenmesi önemli bir problemdir. Kriter ađırlıklandırılmasında objektif veya sübjektif yöntemler kullanılabilir. Objektif veya nesnel yaklaşımlar olarak da adlandırılan yöntemlerde karar vericilerinin görüşleri yerine karar matrisindeki bilgiler matematiksel modellerle birlikte kullanılarak, kriterlerin ađırlıkları belirlenir. Sübjektif yaklaşımlarda ise işletmelerin karar verme süreçlerinde yer alan uzman kişiler veya ilgili sektörde çalışan kişilerden alınan görüşlerden elde edilen bilgilere dayanarak kriter ađırlıkları belirlenir [1].

Kriter ađırlıklandırılmasında nesnel bir yaklaşım sunan ve yaygın kullanıma sahip olan CRITIC (The CRiteria Importance Through Intercriteria Correlation) tekniđi Diakoulaki vd. [2] tarafından önerilmiştir. Teknik, kriterler arasındaki zıt yoğunluğu ve uyumsuzluğu inceleyerek kriterlerin ađırlığını belirlemek için kullanılan bir yaklaşımdır. CRITIC tekniđi, karar vericilerin karar verme sürecinde kriterlerin önemini veya ađırlıklarını belirlemelerine yardımcı olmak için tasarlanmıştır. Bu teknik, kriter ađırlıklarının belirlenmesi amacıyla, blok-zincir değerlendirme [3], deniz yatırımı kararlarında risk seviyesinin belirlenmesi [4], mobil telefon seçimi [5], sađlık alanında, hasta bakımı için uygun yöntemlerin seçimi [6], finansal riskin belirlenmesi [7], endüstriyel robot seçimi [8] vb. problemlerde uygulama alanı olarak kullanılmıştır. CRITIC tekniđi tabanlı, korelasyon katsayısının hesaplama adımında önerilen KAPULA-CRITIC ve D-CRITIC teknikleri de literatürde yer almaktadır [9,10].

$> C_8 > C_1 > C_6 > C_3 > C_9 > C_5$ olarak, Spearman korelasyon katsayıları kullanılarak elde edilen ağırlık sıralamaları $C_2 > C_4 > C_7 > C_8 > C_3 > C_1 > C_6 > C_9 > C_5$ bulunmuştur. Kriterlerin ağırlıkları Şekil 7’de gösterilmektedir. Her iki korelasyon katsayısı yöntemi kullanılarak elde edilen CRITIC hesaplamalarında, en fazla ağırlığa sahip olan ilk dört kriter sırasıyla C_2 (Şarj süresi), C_4 (Emiş gücü), C_7 (Çöp kutusu boyutu) ve C_8 (Tırmanma yüksekliği) olduğu gözlenmiştir.

Bu bölümde, robot süpürge seçiminde kullanılan kriterlerin ağırlıklandırılmaları nesnel yaklaşım olan CRITIC tekniği ile hesaplanmıştır. Burada kriter ağırlıklandırma probleminde diğer nesnel yaklaşımlar uygulanabileceği gibi karar vericinin görüşlerini dikkate alan öznel yaklaşımlarda tercih edilebilir. Bu çalışmada ayrıca Pearson ve Spearman sıra korelasyon katsayıları hesaplanarak kriterlerin ağırlıklandırılması yapılmıştır. Spearman sıra korelasyon katsayısı sıralama ölçme düzeyine sahip kriterler için korelasyon katsayısının hesaplanmasında kullanılacağı gibi, ölçme düzeyi eşit aralıklı veya oranlama ölçme düzeylerine sahip kriterlerin korelasyon hesaplanmasında da kullanılabilir [17]. Kriterler için korelasyon katsayısı hesaplanırken, kriterlerin ölçme düzeylerine göre uygun olan korelasyon katsayıları da kullanılabilir.

Bölüm 5

Entropi Tekniđi: Pazarlama Alanına İlişkin Bir ÇKKV Kriter Ağırlıklandırması

İsa Gürkan Meral

GİRİŞ

Karar alma, bulunduđumuz dönem göz önüne alındığında, geçmişe kıyasla daha karmaşık ve zor bir durumdadır. Geçmişte, daha az seçenek arasından daha az kriter hesaba katılarak karar alıcılar kararlarını verirken, günümüzde hem seçenek hem de kriter sayısı fazlalaşmıştır. Bu durum sonucunda geçmişe oranla günümüzde karar problemlerinde karar alıcılar çok daha fazla bilimsel yöntemleri tercih etmektedirler. Karar alma süreçlerinde bilimsel teknik olarak, 1990'lı yıllara kadar fayda maliyet analizi, balık kılçığı diyagramı, çoklu oylama, 5N 1K gibi teknikler kullanılırken, 1990'lı yıllar ve sonrasında bu tekniklere ek olarak kriter ağırlıklandırma yöntemleri ve çok kriterli karar verme yöntemlerinin (ÇKKV) kullanımı giderek daha yaygın hâle gelmiştir.

ÇKKV, bir yönetim seviyesi ve bir mühendislik seviyesi içeren karmaşık ve dinamik bir süreç olarak tanımlanabilmektedir [1]. Yönetim seviyesi, karar problemini belirlemede ve optimal olan alternatifi seçmektedir. Ancak alternatiflerin optimalinin belirlenmesi sürecinde yönetim seviyesi herhangi bir işlem yapamakta ve burada mühendislik seviyesi devreye girerek en optimal olan alternatifi belirlemektedir. ÇKKV sürecinin mühendislik seviyesi, alternatifleri tanımlamakta ve bunlardan herhangi birini seçmenin sonuçlarına ilişkin bilgiler vermektedir.

ÇKKV adımları,

1. Karar alıcı tarafından karar probleminin tanımlanması,
2. Karar verme problemine ilişkin kriterlerin oluşturulması,
3. Karar verme problemine ilişkin alternatiflerin oluşturulması,

Bölüm 6

Gri İlişkisel Analiz Tekniğiyle Taşımacılık Firması İçin Treyler Çekici Araç Seçimi

Yusuf Şahin & Kenan Karagül

GİRİŞ

Karar verme, farklı seçenekler veya eylem biçimleri arasında seçim yapma sürecidir. Bu süreç, farklı seçenekleri belirlemeyi ve değerlendirmeyi ve ardından en uygun olanı seçmeyi içerir. Karar verme, özellikle dikkate alınması gereken birçok faktör olduğunda ve farklı kararların potansiyel sonuçları belirsiz hâle geldiğinde karmaşık ve zorlu bir süreç olabilir. Bazı yaygın karar verme stratejileri arasında, farklı seçeneklerin artılarını ve eksilerini karşılaştırmak, her seçimin olası sonuçlarını göz önünde bulundurmak ve ilgili bilgi veya uzmanlığa sahip olabilecek başkalarından veri elde etmek yer alır. Bir başka deyişle, karar vermenin amacı, mevcut bilgi ve kaynaklar göz önüne alındığında mümkün olan en iyi seçeneği bulmaktır.

Karar verme sürecindeki zorlukların aşılabilmesi ve bu türde problemlerin daha hızlı ve etkili bir şekilde çözülebilmesi için yıllardır araştırmalar yapılmaktadır. Yapılan bu araştırmaların sonucunda ise eldeki verilere ve problemin türüne bağlı olarak birçok yöntem ve yaklaşım geliştirilmiştir. Rasyonel karar verme, sezgisel karar verme, grup karar verme, beyin fırtınası ve yanal düşünme, çok kriterli karar analizi, maliyet-fayda analizi ve karar ağacı analizi gibi yöntem ve yaklaşımlar karar verme süreçlerinde sıklıkla kullanılır. Belirli bir problem için kullanılacak en uygun yöntem, mevcut durum ve eldeki bilgiler ile karar vericinin amaç ve hedeflerine bağlı olarak değişiklik gösterecektir. Bu yöntemlerden, seçim, sınıflandırma ve sıralama problemlerinde kullanılabilen çok kriterli karar analizi yöntemlerinin temel mantığı, birden fazla kritere göre değerlendirilmesi istenen alternatifler için tek bir referans noktası oluşturmaktır [1].

MOORA Tekniđi ve Lojistik Merkez Seçimi Problemine Uygulanması

Gülşah Sezen Akar & Veli Rıza Kalfa

GİRİŞ

Karar verme, belirlenen amaçları en etkin şekilde yerine getiren birçok alternatif arasından seçim yapma süreci olarak tanımlanabilir. Çođu durumda, en iyi seçeneđin bulunması veya kesin olarak belirlenmesi, çođunlukla birbiriyle çelişen birden çok kriterin etkilerine dayanır ve bu nedenle bu karar verme türüne Çok Kriterli Karar Verme (ÇKKV) adı verilir. 20. yüzyılın ikinci yarısında ÇKKV, yöneylem araştırmasının en hızlı büyüyen alanlarından biri olmuş ve bunun sonucunda birçok ÇKKV yöntemi önerilmiştir [1].

Çok kriterli karar verme teknikleri, karar alternatif setinin önceden belirlendiđi, sınırlı alternatifle çalışılan Çok Nitelikli Karar Verme (ÇNKV) ve sınırsız alternatifle çalışılan Çok Amaçlı Karar Verme (ÇAKV) teknikleri olmak üzere ikiye ayrılmıştır [2]. ÇAKV Teknikleri, birden çok, bazen birbiriyle çelişen hedeflere dayalı olarak mevcut seçenekler kümesinden bir veya daha fazla alternatifini sıralamak veya seçmek için uygun bir araç gibi görünmektedir. Çok az bilgi gerektiren basit yaklaşımlardan, her hedef ve paydaşların tercihleri hakkında kapsamlı bilgi gerektiren matematiksel programlama tekniklerine dayalı yöntemlere kadar çeşitlilik göstermektedir [3]. Sınırlı sayıda alternatifini değerlendirmesine rağmen literatürde “Çok Amaçlı” karar verme modeli olarak değerlendirilen MOORA (Multi - Objective Optimization By Ratio Analysis) metodu da bunlardan birisidir [4].

Bu bölümde MOORA tekniđi, türleri ve çözüm adımları detaylı olarak ele alınmıştır. Teknik, lojistik merkez yer seçim problemine uygulanmıştır.

uygulanmıştır. Her bir MOORA tekniği değerlendirildiğinde Alternatif 2'nin uygun lojistik merkez olduğu sonucuna ulaşılmıştır. Karar verme süreçlerinde, MOORA tekniği diğer çok kriterli yöntemlerle karşılaştırıldığında kolay uygulanabilir ve güvenilir olma gibi üstünlükleri nedeniyle birçok alanda kullanılabilir. Kriterlerin farklı değerlendirilmesi gereken durumlar için ağırlıklanma yöntemleri de dâhil edilerek daha güçlü hâle getirebilir.

Bölüm 8

PROMETHEE Tekniđi ve Personel Seçimi Uygulaması

Tayfun Arar

GİRİŞ

Karar verme hayatın her alanında karşımıza çıkan bir sorunsaldır. Kararın yapılacağı alternatiflerin sayısı arttıkça bu durum daha karmaşık bir hâl almaktadır. Seçim yapılacak alternatifler arasından birine karar vermek için ise kararımızı etkileyecek çeşitli faktörler bulunmaktadır ve bu faktörlerin önem dereceleri kişiden kişiye farklılık gösterebilmektedir. Bu gibi farklı ya da aynı ağırlıktaki faktörlerin/kriterin rol oynadığı ve birden fazla alternatif içinden bir tanesine karar vermemiz gerektiği durumlarda bu kararımızı daha rasyonel kılacak matematiksel tekniklere Çok Kriterli Karar Verme (ÇKKV) teknikleri denilmektedir.

Bireysel olduğu gibi işletmelerin de sürdürülebilirliklerini koruma ve başarıya ulaşma adına kısa ve uzun dönemli kararlar almak durumunda olduğu zamanlar bulunmaktadır. Kısa dönemli kararlar daha çok taktiksel ve operasyonel kararlar iken; uzun dönemli başarının sağlanması için alınan kararlar ise stratejik kararlar olarak nitelendirilmektedir. Eğitim ve geliştirme gibi çeşitli maliyetlerinden dolayı, bu uzun dönemli kararlardan biri de işletmenin amaçlarına ulaşabilmesi için gerekli ve en önemli kaynaklardan biri olan, işgücünün seçimidir.

Personel seçimi işletmeler için sürdürülebilirlik adına hayati önem taşımaktadır [1]. Farklı türdeki işlerin ifa edilebilmesi için ise çeşitli kriterler ile ölçülebilecek farklı becerilere sahip işgücüne ihtiyaç duyulmaktadır [2]. Literatür incelendiğinde personel seçimi için çeşitli ÇKKV tekniklerinin kullanıldığı görülmekle birlikte (bknz. Tablo 1) bu teknikler arasında PROMETHEE'nin de kullanıldığı çalışmalara rastlanmaktadır. Bu çalışmalar içinde dış pazarlama yöneticisi seçimi [2, 3], bilişim sektörü çalışanı seçimi [1], tekstil sektöründe çalışacak makine operatörü seçimi [4], proje yöneticisi seçimi [5], satış danışmanı seçimi [6],

durumuna göre Analitik Hiyerarşi Prosesi (AHP) ya da Analitik Ağ Prosesi (AAP/ANP) kullanılarak daha sistematik bir istihdam süreci sağlanabilir. Ayrıca diğer ÇKKV teknikleri ile karşılaştırma yapılarak farklı sonuçlar çıkması hâlinde ilgili işletmenin İK yöneticiler ile durum tartışılabilir.

Bölüm 9

SWARA Tekniği ve Bir Üretim İşletmesi Uygulaması

Engin Çakır

GİRİŞ

Çok kriterli karar verme yöntemleri arasında yer alan SWARA tekniği, “Adım Adım Ağırlık Değerlendirme Oran Analizi” olarak birçok çalışmada Türkçe karşılık bulmuştur. İlk kez Keršulienė, Zavadskas ve Turskis (2010) [1] tarafından geliştirilen teknik, karar vericilere çevresel ve ekonomik durumları da dikkate alarak, kendi önceliklerini seçme konusunda fırsatlar sunmaktadır.

SWARA tekniği ile ilgili literatür incelendiğinde, birçok problemin çözümünde kullanıldığını görmek mümkündür. Tablo 1’de SWARA tekniğinin uygulandığı bazı çalışmalara yer verilmiştir.

Tablo 20. SWARA Yöntemi Literatür İncelemesi

Kaynak	SWARA ile Çözüm
[1] Keršulienė ve diğerleri, 2010	Uyuşmazlık çözümü
[2] Keršulienė ve Turskis, 2011	Mimar seçimi

[4] Alimardani, Hashemkhani Zolfani, Aghdaie ve Tamošaitienė, 2013	Tedarikçi seçimi
[5] Hashemkhani Zolfani, Zavadskas ve Turskis, 2013	Ürün dizaynı
[6] Aghdaie, Hashemkhani Zolfani ve Zavadskas, 2013	Makine parçası seçimi
[7] Hashemkhani Zolfani ve Saparauskas, 2013	Enerjide sürdürülebilirliği değerlendirme göstergeleri

Tablo 7’de yer alan kriter ağırlıkları iki karar verici için ayrı ayrı hesaplanmıştır. İki karar vericinin kriterler düzeyindeki ağırlıklarının ağırlıklandırılmış aritmetik ortalaması alınarak grup kararı alınabilmektedir. Bu çalışmada iki karar vericinin eşit önemde olduğu kabul edildiğinden kriter ağırlıklarının aritmetik ortalaması alınmıştır. Hesaplanan grup kararı sonucu nihai kriter ağırlıklarına Tablo 8 ‘de yer verilmiştir.

Tablo 27. Grup Kararı ile Elde Edilen Kriter Ağırlıkları

Kriterler	KV1	KV2	Grup Kararı	
	w_{1j}	w_{2j}	w_j	
C1	$w_{11} = 0,2613$	$w_{21} = 0,1735$	$w_1 = \frac{w_{11} + w_{21}}{2} = \frac{0,2613 + 0,1735}{2}$	$= 0,2174$
C2	$w_{12} = 0,1490$	$w_{22} = 0,2516$	$w_2 = \frac{w_{12} + w_{22}}{2} = \frac{0,1490 + 0,2516}{2}$	$= 0,2003$
C3	$w_{13} = 0,0636$	$w_{23} = 0,1055$	$w_3 = \frac{w_{13} + w_{23}}{2} = \frac{0,0606 + 0,1055}{2}$	$= 0,0846$
C4	$w_{14} = 0,1241$	$w_{24} = 0,0844$	$w_4 = \frac{w_{14} + w_{24}}{2} = \frac{0,1241 + 0,0844}{2}$	$= 0,1043$
C5	$w_{15} = 0,0955$	$w_{25} = 0,1510$	$w_5 = \frac{w_{15} + w_{25}}{2} = \frac{0,0955 + 0,1510}{2}$	$= 0,1233$
C6	$w_{16} = 0,0606$	$w_{26} = 0,0365$	$w_6 = \frac{w_{16} + w_{26}}{2} = \frac{0,0606 + 0,0365}{2}$	$= 0,0486$
C7	$w_{17} = 0,0449$	$w_{27} = 0,0603$	$w_7 = \frac{w_{17} + w_{27}}{2} = \frac{0,0449 + 0,0603}{2}$	$= 0,0526$
C8	$w_{18} = 0,2010$	$w_{28} = 0,1372$	$w_8 = \frac{w_{18} + w_{28}}{2} = \frac{0,2010 + 0,1372}{2}$	$= 0,1691$
Toplam			$\sum_{j=1}^n w_j = 1,0000$	

Grup kararı ile elde edilen nihai kriter ağırlıklarına göre en önemli kriterin %21,74 ağırlık değeriyle “C1 - Aflatoksin Varlığı” kriteri olduğu; diğerlerine göre önemsiz görülen kriterin %4,86 ağırlık değeriyle “C5 - Kontinü Sistem ile Çalışılmaması” kriteri olduğu sonucuna ulaşılmıştır.

Bölüm 10

TOPSIS Tekniđi ve Pazarlama Alanında Bir Uygulama

Serhat Karaođlan

GİRİŞ

TOPSIS tekniđi (Technique for Order Preference by Similarity to an Ideal Solution) seçilmesi gereken alternatifin Pozitif İdeal Çözümüne (PIS - Positive Ideal Solution) en yakın ve Negatif İdeal Çözümüne (NIS - Negative Ideal Solution) en uzak mesafe temeline dayanarak Yoon ve Hwang tarafından 1980 yılında geliştirilmiştir [1]. Bu teknik kullanılırken alternatifler en iyi çözüme en yakın ve en kötü çözüme en uzak öklidyen mesafede bulunması temelinde sıralanmaktadır [2]. TOPSIS, ideal çözüme görelî yakınlığı dikkate alarak hem ideal hem de negatif ideal çözümlere olan mesafeleri aynı anda değerlendiren pratik ve kullanışlı bir tekniktir [3,4]. Tekniđin üstün yanları ölçülebilir olması gereken alternatiflerin birbirlerinden bağımsız olmasının gerekmeyişi, performans ölçütlerinin çift yönlü olarak ele alınabilmesi, pozitif ve negatif değerlerin hesaba katılabilmesi ve mantığı temsil edebilmesi ile yapılan hesaplamaların kolay olmasıdır [3,5,6]. İlk olarak alternatifler arasından en iyisini seçebilmek amacıyla kullanılmasına karşılık [7] sayılan sebeplerle geniş kullanım alanı bulmuş ve en sık kullanılan çok kriterli karar verme tekniklerinden birisi hâline gelmiştir [8]. Şekil 1’de TOPSIS tekniđinin çalışma prensibi verilmektedir [6].

TOPSIS tekniđinin kullanım alanı bulduđu disiplinlerden birisi de pazarlamadır. Yükseköğretim [9] ve bankacılık [10] gibi sektörlerde hizmet kalitesinin ölçümü ve boyutlarının değerlendirilmesi, pazarlama yönetimine destek olması amacıyla reklam stratejilerinin belirlenmesi [11] ve kampanya performansının değerlendirilmesi [12], dijital pazarlama kapsamında otel web sitelerinin [13] ve dijital içerik bileşenlerinin değerlendirilmesi [14], tüketici istek ve ihtiyaçlarına göre ürün tasarımı yapılması [15] ve yeni geliştirilecek olan ürünün risklerinin

Böylelikle de pazarlama uygulamalarının etkisini ölçmek için karşılaştırmalı analizler yapılabilir.

Bölüm 11

VIKOR Tekniđi ve Finansal Performans Üzerine RStudio Uygulaması

Özgür Engelođlu

GİRİŞ

Çok kriterli karar verme (ÇKKV), hem nicel hem de nitel faktörleri içeren karmaşık bir karar verme aracı olarak kabul edilmektedir. Yıllar içerisinde optimal alternatifleri seçmek için çeşitli ÇKKV teknikleri ve yaklaşımları önerilmiştir [1]. Bu tekniklerin en önemlilerinden bir tanesi, aynı zamanda bu çalışmanın odaklandığı VIKOR tekniđidir.

Tüm ÇKKV teknikleri gibi belirli kriterler ışığında en iyi alternatifleri belirlemeye çalışan VIKOR tekniđi, kendisini diğer tekniklerden farklılaştıran çeşitli özelliklere sahiptir. Dolayısıyla VIKOR, ÇKKV teknikleri aracılığıyla çalışma yapmak isteyenler için dikkate alınması gereken başlıca tekniklerden bir tanesidir. Opricovic (1998) [2] ve Opricovic & Tzeng (2004) [3] çalışmalarıyla temelleri atılan teknik, günümüzde çok sayıda çalışmada ve birbirinden farklı alanlardaki karar alma süreçlerinde tercih edilmektedir. Birbirinden farklı, çok sayıda ÇKKV tekniđini inceleyen bu kitapta, doğal olarak incelenen tekniklerden bir tanesi de VIKOR tekniđidir. Bu bölümde VIKOR tekniđi ve süreci hem teorik olarak ele alınmış hem de finans üzerine bir uygulama yapılmıştır.

Çalışmada ilk olarak VIKOR tekniđinin prensipleri üzerinde durulmuş ve aşama aşama VIKOR skoru hesaplama süreçleri anlatılmıştır. Takip eden kısımda, incelenecek konudan bahsedilmiş ve ele alınan alternatifler ile kriterler listelenmiştir. Burada ayrıca incelenen konu üzerine daha önce yapılmış çalışmalara da değinilmiş ve bu çalışmalarda kullanılan teknikler ile elde edilen sonuçlar özetlenmiştir. Sonraki kısımda uygulama gerçekleştirilmiş olup, RStudio programı kullanılarak yapılan uygulamanın aşamaları detaylı olarak gösterilmiş ve

Bilişim sektöründeki firmaların finansal performansına yönelik yapılan ve ÇKKV tekniđinin kullanıldığı çok sayıda çalışma mevcuttur. Yapılan literatür taramasında bu çalışmalar içerisinde VIKOR tekniđini kullanan bir çalışmaya rastlanılmamıştır. Genelde, başta TOPSIS olmak üzere PROMETHEE ve Gri İlişkiyel Analiz tekniklerinin tercih edildiđi gözlenmiştir. Burada unutulmaması gereken önemli bir durum, tüm çalışmalarda elde edilen sıralamaların, belirlenen kriterler ışığında gerçekleştiđidir. Farklı kriterlerin tercihi ile farklı şekilde sonuçların gerçekleşmesi mümkündür. Bununla birlikte bu çalışmada kriterler yani finansal oranlar, sektörün yapısı dikkate alınarak belirlenmiştir. Hizmet ağırlıklı bir sektör olan ve genellikle yazılım üzerine faaliyet gösteren firmaların yer aldığı bilişim sektöründe işler, genel olarak kamu ve kamu dışı kurumlarla yapılan sözleşmeler aracılığıyla yürütülmektedir. Dolayısıyla alacakların tahsil performansının, bu firmalar için önemli olduđu düşünölmüştür. İşletmelerin temel amacının kâr elde etmek olduđu gerçeğinden hareketle, birden fazla kâr oranı yine kriter olarak belirlenmiştir. Yine firmaların likidite ve borçluluk durumları da kriter olarak dikkate alınmıştır.

2021 yıl sonu verileri kullanılarak yapılan analiz sonucunda, VIKOR tekniđine göre uzlaşık çözüm grubunu MIATK, PAPIL ve LINK firmaları oluşturmuştur. Bu sonuç, diđer tekniklerle aynı sektör üzerine ölçüm yapan ve yakın dönemi inceleyen çalışmalarda benzerlik arz etmektedir. VIKOR tekniđinin önemli bir özelliđi de sıralamayı belirleyen VIKOR skorlarına göre en iyi çözümün hangisi olduđunu ilan etmeden önce, bazı koşulları test etmeyi zorunlu kılmasıdır. Bu koşullara göre uzlaşık çözümün tek bir alternatif olması yerine birden fazla alternatiften oluşan bir grup şeklinde olması mümkündür. Nitekim çalışmada bu koşullar test edildiğinde, uzlaşık çözümün tek bir firma açısından gerçekleşmediđi ve üç firmanın birlikte uzlaşık çözüm grubunu oluşturduđu tespit edilmiştir.

Alternatifleri sıralarken, alternatifler arasındaki skor farklılıklarının da dikkate alınması ve fayda-maliyet özelliklerine göre ölçeklendirme yapılabilmesinin yanı sıra uygulama kolaylıđı da düşünöldüğünde, VIKOR tekniđinin, ÇKKV uygulamalarında kullanmak için ideal bir teknik olduđu söylenebilir.

İÇİNDEKİLER

ÖN SÖZ	xiii
BİRİNCİ BÖLÜM - ANADOLU'NUN FELSEFE MİRASI	1
1. DÜŞÜNCEDE DÖNÜŞÜM	2
Kozmolojiden Ontolojiye Dönüşüm	2
Suyun Canlılığı	4
Sınırsızlığın Belirlenimi	4
Havanın Dönüşümleri	5
Aristoteles'te <i>Arkhe</i>	5
Bilgi ve Sanatta Dönüşüm	7
Bilginin Birikimi	8
2. ANADOLU'DA FELSEFİ BİLGELİĞİN KÖKENLERİ	9
Thales: Milet'te Başlayan Bilgelik	9
Hellen Bilgeliğinin Öne Çıkarılışı	12
Yunan Felsefesinden Önce Anadolu'da Doğan Bilgelik	14
3. MAVİ ANADOLU, FELSEFİ MİRAS VE ÖNEMİ	22
Anadolu'da İyon Uygarlığı ve Etkileri	22
Anadolu'da Felsefe	25
4. <i>PARRHESİA</i> KAVRAMI VE ANADOLU'DAKİ KÖKENLERİ	34
Anaksagoras'ın Euripides Üzerindeki Etkisi	37

5. ANAKSİMANDROS DÜŞÜNCESİNDE <i>ÁPEIRON</i> VE TANRISAL OLAN İLİŞKİSİ	41
Miletos Filozofları ve Düşüncede Yeni Bir Yol	41
Anaksimandros'un <i>Ápeiron</i> 'u Belirlemesi	42
<i>Ápeiron</i> 'un Özellikleri	44
<i>Ápeiron</i> ve Tanrısallık İlişkisi	45
6. FELSEFEDE, SANATTA VE POLİTİKADA ANAKSAGORAS	49
Felsefede Anaksagoras	49
Sanatta Anaksagoras	51
Politikada Anaksagoras	53
7. ANADOLU'NUN FELSEFE MİRASI	55
Kolofonlu Ksenophanes	56
Hierapolisli Epiktetos	58
Sinoplu Diogenes	60
Samsatlı Lukianos	60
Tarsuslu Khryssippos	61
8. MACİT GÖKBERK DÜŞÜNCESİNDE BATI ANADOLU FELSEFESİNİN DEĞERİ	63
Batı Anadolu Felsefe Geleneği ve Önemi	63
Batı Anadolu'daki Filozoflar	66
İKİNCİ BÖLÜM - ORTA ASYA TÜRK DÜŞÜNCESİNDE FELSEFE MİRASI	71
9. HOCA AHMED YESEVİ İLE DÜNYA PROBLEMLERİ ÜZERİNE DÜŞÜNMEK.....	72
Sahip Olmak ve Olmak	72
Hoca Ahmed Yesevi, <i>Fakr-Name</i> ve <i>Divan-ı Hikmet</i>	74
10. <i>KUTADGU BİLİĞİ</i> FELSEFİ AÇIDAN YENİDEN ANLAMAK	80
<i>Kutadgu Bilig</i> 'de Felsefi Tartışmalar	82
Adalet ve Doğru Yasa	83
Bilgi ve Akıl	85
Diğer Felsefi Konular	86
11. 21. YÜZYILDA <i>KUTADGU BİLİĞİ</i> YENİDEN ANLAMAK	90
İnsan, Mutluluk ve Adalet	92

12. KUTADGU BİLİG'DE İNSAN VE DEĞERLER	97
<i>Kutadgu Bilig</i> 'de İnsanın Değeri	100
<i>Kutadgu Bilig</i> 'de İnsanın Değerleri	102
13. TÜRK FELSEFESİNİN DOĞUŞU	105
<i>Kutadgu Bilig</i> : İnsanın Kendini Tanımalarının Bilgisi	105
<i>Kutadgu Bilig</i> 'de Dört Karakter ve Dört Değer	107
<i>Kutadgu Bilig</i> 'de İnsan Gerçekliği	107
14. BİR UYGARLIK ESERİ OLARAK <i>KUTADGU BİLİG</i>	110
Avrupa Merkezci Uygarlık Anlayışı ve Eleştirisi	110
Bilgelik Yapıtı Olarak <i>Kutadgu Bilig</i>	112
ÜÇÜNCÜ BÖLÜM - CUMHURİYET DÖNEMİNDE FELSEFE MİRASI	117
15. ATATÜRK VE CUMHURİYETİN FELSEFESİ	118
Çağdaşlaşmanın Ön Koşulu: Laiklik	119
Eğitim ve Kültür Devrimi Olarak Cumhuriyet	122
Çağdaş Türk Düşünürlerinde Dönüm Noktası Olarak Cumhuriyet	123
16. ZİYA GÖKALP'İ YENİDEN ANLAMAK	126
Üç Felsefi Vasiyet	126
"Yeni Hayat" İdeali	129
17. DÖNÜŞÜMDE HASAN-ÂLİ YÜCEL MİRASI	132
18. HASAN-ÂLİ YÜCEL VE İÇTEN-DIŞTAN	138
"Özü olanın izi olur"	138
"En güç ilim, şüphe edebilmesini öğrenmektir"	140
19. EĞİTİM DÜŞÜNÜRÜ: HASAN-ÂLİ YÜCEL	143
Canan Yücel'in Anlatımıyla Hasan-Âli Yücel	143
Kendi Kaleminden Hasan-Âli Yücel	147
Eğitim ve Kültür Alanında Dönüşümler	151
20. HİLMİ ZİYA ÜLKEN'DE MİLLÎ BİRLİK DÜŞÜNCESİNİN TEMELİ OLARAK VATAN	158
Hilmi Ziya Ülken Kimdir?	159

Millet ve Vatan Kavramları.....	163
İnsani Vatandaşlık.....	165
21. GEZGİN BİR FİLOZOF: ULUĞ NUTKU.....	169
Felsefe ve Dünya Görüşü Kavramları	169
Felsefe Tarihine Bakış.....	171
İnsan Üzerine.....	174
22. VEHBİ HACIKADİROĞLU DÜŞÜNÇESİNDE EĞİTİM.....	176
Eğitim ve İş Birliği	177
Atatürk ve <i>Üniversite Reformu</i>	180
23. VICTOR HUGO'NUN SEFİLLER ROMANI VE TAKİYETTİN MENGÜŞOĞLU'NUN FELSEFİ ANTROPOLOJİSİ	184
<i>Sefiller</i> Romanında İnsan Doğası Tartışması.....	186
Ontolojik Temelli İnsan Felsefesi Açısından <i>Sefiller</i>	191
24. GEÇMİŞİNİ BEKLEYEN İNSANLIK DURUMU.....	198
Geçmişin Tekrarı ve Mengüşoğlu.....	202
25. BİR EĞİTİM FİLOZOFU: TAKİYETTİN MENGÜŞOĞLU	204
Esas baktığı yer insan varlığıdır	205
“Eğitim öğütlerle sağlanamaz”.....	206
26. TÜRK DÜŞÜNÇESİNDE HÜMANİZM TARTIŞMASINA KISA BİR GİRİŞ	208
<i>Hümanizm</i> Düşüncesinde Tercümenin Rolü.....	208
Ahmet Mithat Efendi ve Klasiklere Dönüş	209
Türk Düşüncesinde <i>Nev-Yunanilik</i>	211
<i>Yücel</i> Dergisi	213
Hilmi Ziya Ülken ve <i>Hümanizm</i>	215
Hasan-Âli Yücel ve <i>Hümanizm</i> Düşüncesinin Yükselişi	217
GENEL KAYNAKÇA.....	221
DİZİN	237
